By far the commonest of the three terms is *manāra*, the source via Turkish of English and French *'minaret'*; lit., "place of fire" (*mār*), a word used in pre-Islamic Arabia to denote an elevated place from which signals of fire or smoke were made. Whence the frequent education of the minaret with the lighthouse [see preceding article MANAR]; the cylindrical towers attached to Islamic fortresses along parts of the North African littoral, e.g. in Tunisia, not only served as beacons and lighthouses but were actually called *manāra*. One should, on the other hand, avoid any temptation to connect *manāra* with nīr "light" and to discern a basis for symbolic interpretation of the minaret as an emanation of divine light or as an image of spiritual illumination. The original term *manāra* soon lost its necessary connection with fire, and became used to designate signposts, boundary stones or markers, and watch-towers when no particular association with fire was intended. Hence there emerges that *manāra* came to involve the two distinct notions of fire and of a marker, neither of which, however, had a specific role in Islamic ritual. The lighting of a fire on the minaret of a mosque was an event of utmost rarity in early Islam (it is recorded as having occurred in the case of the Manārat al-ʿArūs in the Damascus mosque), though it is self-evident that the minaret had a value as marker of the principal building of the Islamic community. It seems therefore safe to assume that, in the context of religious architecture, the association between the minaret and fire is irrelevant.

The second term frequently used to designate the minaret—indeed, it is the standard usage in North Africa—is *sawma‘a*. The word means the cell in which a person (usually a monk) secluded himself, with the particular gloss that the cell has a slender pointed apex. Such cells were a regular feature of pre-Islamic Byzantine architecture; they were incorporated into the tall rectangular towers with which churches, monasteries and houses were furnished. Once again, however, as in the case of *manāra*, the etymology is apt to mislead—for while the basic meaning of *sawma‘a* is indeed "hermitage", the word has come to designate, by a process of *pars pro toto*, the entire structure of which the cell was a small part. The specific connotation of *sawma‘a* in the present context is perhaps a "sentry-box" minaret, and eventually a tall, rectangular minaret, rather than the minaret genre itself. For this reason, it is an entirely appropriate term for the minarets of North Africa. Moreover, unlike the word *manāra*, its connotations are religious, albeit with a Christian tinge. Possibly as a result of its association with the minaret, the word is also used more generally to mean "a higher place" or even "a high building", and in this less specific since its connection with *manāra* in the sense of signal tower or marker is plain. In North Africa, however, a distinction clearly exists, for *manāra* is used for signal towers and lighthouses. Appropriately enough in view of its Christian connotations, *sawma‘a* has found a lodging in Europe, in the Spanish word *soma* meaning "minaret".

It is a challenging reflection that the two Arabic words most frequently used to designate the minaret give no clue to the ritual function commonly associated with the building. Instead, they evoke respectively pre-Islamic and Christian associations. The term that does accurately render the ritual function of the building—*mi‘ḥāna*—is, ironically enough, much rarer than the other two, suggesting, perhaps, that earlier "minarets"/"manarās" had functions not ex-
clusively ritual. It derives of course from adhan, hence literally ‘place from which the call to prayer is made’, whose root further gives mu‘adhdhin ‘muezzin, he who gives the call to prayer’. Even this last has pre-Islamic connections, for in the Dāhil al-harīd al-hafrā‘ who made important announcements was known as the mu‘adhdhin. Before leaving the problem of etymology, it may be worth noting that several other words occur sporadically in literary or epigraphic texts as synonyms for at least some of the meanings of manāra: salām/al’ama (‘signpost’, ‘boundary maker’, ‘standing stone’, ‘flag’), mil (positive), mu‘adhdhin (‘tower’, ‘ruin’, ‘ruled’), and sa‘at, ‘a place of watching’, a term especially popular in the Maghrib. The mere mention of these words in the context of the foregoing discussion is enough to emphasise yet again that etymology is a somewhat treacherous guide in determining the function of the minaret. It can safely be asserted, however, that the review of Arabic terminology given above establishes that the minaret performed not one function but several in the medieval Islamic world. Whilst the rarer Arabic words for ‘minaret’ may well reflect the function of the building in the particular context concerned, the most commonly employed word, manāra, was obviously a blanket term which does not readily lend itself to precise elucidation, unless the context offers further, more specific, clues.

The third possible approach to determining the function of the minaret in the early centuries of Islam is by way of morphology. The briefest survey of the formal characteristics of mediaeval minarets is enough to yield one very significant result: that virtually the whole body of surviving minarets belongs to one of two categories. One category comprises minarets with ample interior space; the other, minarets in which the interior space is reduced to the bare minimum required for a spiral staircase to ascend the structure. Minarets with external staircases obviously belong in neither category. Useful as this division is, it cannot shed light on the crucial first century of Islam. Any attempt to explain the function of the minaret by means of its form has to take some account of the earliest recorded minarets, even though none of these has survived. The interpretation placed on the tantalising brief literary accounts which refer to the earliest minarets is therefore crucial.

These accounts are unfortunately either ambivalent or too short to throw any light on the problem. For example, the historian al-Baladhuri refers to the minaret at Basra as a stone minaret. Since stone is specified and the rest of the mosque was of mud brick, it seems legitimate to conclude that the minaret was important enough to have special care taken over its construction. This, then, seems to be a fairly straightforward case. The same cannot be said for the minarets of the mosque of ʿAmr at Fustāţ. The source here is the 9th/15th century author al-Makrizi, who states that Mu‘āwiyah ordered the building of four sa‘awmīs (pl. of sa‘awmā‘) for the call to prayer, and that Maslama placed four sa‘awmīs in the corners of the mosque. Since this is not, in all probability, the first word for minaret that would have come naturally to the Ma młāk historian’s mind, its use in this passage needs some explanation. It is possible that al-Makrizi used it deliberately because it connoted to him tall, rectangular minarets of the Syrian or Maghribi type (very unlike those which he saw all around him in Egypt). His choice of word would in that case have come naturally to the historian’s mind, its use in this passage requiring for a spiral staircase to ascend the structure. While this detail could be no more than abrupt excrescences at roof level, possibly articulated a little further by crenellations. They would indeed resemble Christian towers, but only in a somewhat stunted fashion. They could not aspire to dominate the skyline or indeed make any marked physical impact on the urban landscape. If this motive had loomed large in the mind of al-Walid at the time that he was building the Damascus mosque, it would have been a simple process to heighten the existing corner towers accordingly. That he chose not to do so is clear evidence that the symbolic role of the minaret was not yet generally accepted. Indeed, the mosques of Baṣra and Fustāţ are more prophetic of later developments, even though they were built earlier. At Baṣra, the minaret, whatever its form may have been, was clearly distinguished by its different material of construction, while at Fustāţ the sa‘awmīs were solid up to roof level, necessitating access by ladders. While this detail reflects the early Islamic practice of delivering the adhān from the roof, it is also conceivable that such corner sa‘awmīs had an architectural function as buttresses for the whole building. Their location and strength in turn invites a symbolic interpretation of their function as cornerstones of the faith. The impact of their placing can be gauged from the statement of al-Makrizi that, at the time of the dawn prayer, a muezzin was stationed at each sa‘awmā‘ and that their combined adhān resonated like thunder through the silent city. It might fairly be said, then, that despite the probably rather truncated nature of their resemblance to Christian towers, the sa‘awmīs of the Mosque of ʿAmr did operate as markers of the mosque. This function was certainly performed more
effectively and elegantly by later minarets, but the crucial point is that it is already implicit in the earliest buildings of this genre.

As evidence of the relationship between the Christian towers of Syria and the early minaret, the earliest surviving Islamic monument, at Bosra [q. v.] in southern Syria, is often cited and certainly its minaret fits naturally into a long series of similar towers erected in pre-Islamic times as part of Christian churches, monasteries and houses, often with a defensive function. Yet, this Bosra minaret, notable for its bold projection from the otherwise regular perimeter wall of the mosque, a feature not explicable by e.g. any peculiarity of the site or structural consideration, is actually Mamluk. The Umayyad ma’dqama, according to recent research by Jonathan Bloom, is the staircase minaret along the west wall.

Hence already in the first Islamic century, the religious role of the minaret had been defined in essentials; later times were to bring refinements, but it is in first centuries of the development of the minaret proceeded rather on the lines of variations in form and new secular functions.

For some time, the square form, already well established in Syria, continued to dominate in the Islamic world. Recent excavations have confirmed that the square substructure of the minaret of the Mosque of Sidi ‘Ukhâ at al-Kayrawân in Tunisia is of Aglabid date though some of the upper parts are later (thus weakening a once-popular theory that this minaret reflects the influences of the Pharos of Alexandria, which had a three-tier elevation, each tier smaller than the previous one), but it is quite possible that in its original form the minaret looked much as it does now. Lézine suggested that the lighthouse at Salakta was the formal model, but it is also possible that the Arab conquerors of North Africa, coming westwards as they did from Egypt, should have used the most celebrated tower of Egypt as a model for the minaret of the first mosque built in the newly-Islamised territory. In this mosque of al-Kayrawân, the minaret was placed opposite the musallâ, and it was only a matter of time before the last refinement was added and the minaret aligned exactly with the mihrab [q. v.].

Hence already in the first Islamic century, the minaret had a new and imposing location. It is placed some distance from the entrance, hence may have had the function of a marker, of course the helicoidal towers attached to the Great Mosque of Damascus is the earliest and best preserved example of this type. The substantial enclosed space of the al-Kayrawân minaret (base ca. 10m. square and height ca. 35m.) encouraged the possibility of provision of chambers within the minaret. For some reason, this was not done there, hence the minaret has inordinately thick walls; but later Maghrib and Andalusian minarets, such as the Almohad examples in Seville, Rabat and Marrakesh, employed such chambers and also gave them decorative vaults in stone or brick.

These three minarets of the later 6th/12th century mark the zenith of this genre in Western Islam, perpetuating the outer shell of pre-Islamic and early Islamic Syrian towers, and of the minaret at Cordoba, but they are much larger than their distant Syrian models (approaching 65m. in height) and display rich decoration on all four sides, with cusped, horseshoe or mulfoil arches, often generating a lattice-work design, and also with single or paired windows on each storey. Eventually, too, the Andalusian minarets were to exert an influence on the campaniles of Spanish churches of the period—the wheel coming full circle, as it were, after these towers’ Syrian Christian origins. So strong was the tradition of the tall, square-shafted minaret in the Maghrib, that in the eastern Maghrib it survived the coming of the Ottomans; and in Ottoman Tunis, a novel type of octagonal minaret, with each face richly tiled and the whole crowned by a projecting balcony and steeped pavilion, enjoyed special popularity.

An unexpected and distant by-product of the Syrian tradition is the Saharan or West African minaret. The Saharan type, often very high (e.g. the fairly recent example of the Waldât Djalal at Zibane) has a marked batter to its walls—a feature which had occurred at al-Kayrawân but had not been exploited subsequently in the mediaeval period—and is crowned by an open-plan kiosk. In West African minarets, most of which date from the last four centuries (e.g. Timbuktu and Agades), the later is so pronounced that the minaret resembles a truncated cone, studded with projecting palm beams. These facilitate the constant repairs that such mud-brick structures require. Similar minarets are found as far north as the Mzâb region in Algeria.

The minarets of the Maghrib and Andalusia form a school unique in the Islamic world for its fidelity to an imported model and for its innate conservatism, which maintained a broadly consistent form throughout a vast area for over a millennium. The history of the minaret in the rest of the Islamic world, sc. in Egypt and Turkey and in the area to the east of them, is somewhat more varied. It embraces a very wide range of forms, of alien influences, and of functions both secular and religious.

This wider canvas is immediately apparent in the immediately post-Umayyad minarets which survive in the eastern Islamic world. These are principally to be found in ‘Irâk. Possibly the earliest among them is the so-called Manârât al-Mudjîda, which departs from the norms of the first century by being a slender cylindrical structure of baked brick, with a winding interior stair and sparing external decoration in baked brick; hence it is prophetic of the minarets erected in Iran during the Sâlджîk period. Moreover, it is entirely freestanding, with no sign of there ever having been a building adjoining it. It lay strategically on the route between the ‘Abbâsid princely palace of al-Ukhâyder [see Architecture and pl. XIV there] and Kûfû, hence may have had the function of a marker, with its peculiar form a reflection of watchtowers which had now appeared along the former Sâlджîk times of the Abbasids. It is somewhat more varied. It embraces a very wide range of forms, of alien influences, and of functions both secular and religious.

The most celebrated of early ‘Abbâsid minarets are of course the helicoidal towers attached to the Great Mosque of Sâmarrâ (234-7/848-52) and the mosque of Abî Dulaîf (245-7/859-61) [see Architecture and Pls. XVII-XVIII there]. Although their precise origin is a matter of dispute, the question of a classical or Christian source does not arise. Their forms are deeply rooted in ancient Near Eastern architecture. In both cases, a square base carries an external ramp which spirals upwards, at first gently but then with increasing steepness, around a solid central cylinder. In the case of the minaret at Sâmarrâ (the malûwiyya) the ramp ends after five complete revolutions at an arced kiosk. A similar aedicule probably crowned the minaret of the Abî Dulaf mosque after the ramp had completed four revolutions. The Sâmarrâ minaret is therefore substantially larger, and with a height of 53m. is indeed one of the highest minarets in the Islamic world. As befits its importance, the minaret has a new and imposing location. It is placed some 30m. outside the mosque and is precisely on the axis of the mihrab. By this means, its integration with the mosque and its liturgical function in relationship to the rest of the building is appropriately stressed, while its isolation is sufficiently marked for the minaret to invite attention as a separate structure. The practice of
placing the minaret on the mihrab axis was copied throughout the Islamic world. There seem to be two possible origins for this bizarre helicoidal form for a minaret. Firstly, an Iranian one. There survives at Firuzabad in Fars, the first capital of the Sasanids, a square-shafted tower with the remains of an external ramp winding round it (called a tirbal by the Arabs), and this monument has been interpreted as a Zoroastrian one, which had a fire burning at its summit; and we have noted the Arabs’ readiness to take over architectural forms sanctioned by earlier faiths. Secondly, there is the ancient Mesopotamian form of the zigurat or tower-temple. Whilst most of these had stepped elevations made up of superimposed squares of decreasing size, a few had a square base which carried a huge central cylinder encircling by a rising ramp; a four-storeyed building of this type has been excavated at Khorsabad [q.v.] in northern ‘Irak. To have adopted either of these types as a basis for minarets would have accorded with the anti-Syrian attitudes of the ʿAbbasids. In the event, however, the maluuyya form seems to have been too eccentric to serve satisfactorily as a minaret, and it remained virtually without progeny.

The sole important descendant of the ʿIrakī maluuyya, specifically that of the Mosque of Abū Dulaf, was indeed the minaret of the mosque built by a member of the AbūSulaymān family at Tūnūs, not far from Khoms in Egypt (263-5/876-9) [see ARCHITECTURE and Pls. XXI-XXIV there]. Unfortunately, the present minaret is a reconstruction of the late 7th/13th early 8th/14th century, but earlier historians agree that its original form was spiral.

But these spiral minarets, though fascinating, represent a by-way in the history of the minaret. In the eastern Islamic world, the dominating tradition was henceforth to be that of I rān, where an entirely different form, that of the lofty, cylinder type, developed; this obviously owed nothing to Syria, but might well have owed something to the regions on Iran’s northern and eastern fringes, sc. India, Central Asia and even China (E. Schroeder speculated that the pillar form is an immemorial symbol of “the axis of the universe, and the direct way to Heaven”). Even so, such fragmentary evidence as survives suggest that the very earliest Iranian minarets, e.g. at Dāmghān and Sīrāf, followed the Umayyad square-towered form, but judging by the minaret of the Nāyīn mosque, which has a square, ground-level format surmounted by an octagonal shaft merging into a tapering cylinder, this form was soon modified. The Nāyīn minaret seems to be pre-Saljūq, and the literary evidence confirms that, by the 4th/10th century, extremely tall minarets were a feature of Iranian towns.

The tallies of surviving 5th/11th and 6th/12th century buildings in Iran shows that this was a time of unprecedented building activity, with mosques being, like madrasas [q.v.], expressions of official Saljūq patronage often executed by their amīrs (as at e.g. the mosques of Kāzwin and Burujdār). These soaring Saljūq minarets—often around 30m. high, with a pronounced taper which accentuates their height, internal stairways, and lavish external brick geometric or calligraphic decoration contrasting with the plainness of the mosque walls—are of such assurance and completeness in their form that a previous period of development must surely be postulated. Within this context of Saljūq patronage, one notes that the rich decoration of such minarets testifies to its patron’s readiness to recommend it to less wealthy patrons. That these minarets did not necessarily have a straightforward liturgical function is suggested by the case of 6th/12th century ʿIraqi. In that city it is clear that the Friday mosque that according to custom (not dogma) requires a minaret, it is remarkable to note that this city, one of the Saljūq capitals of Iran, had over a score of minarets in this period. In nearly every case, the mosque for which the minaret was originally intended has vanished. It is tempting to speculate that these mosques were very much simpler and humbler structures which had earlier not had minarets. One may justifiably assume that some evidence besides the minarets themselves would have remained if these minarets had been built contemporaneously with their adjoining mosques as integrated building projects.

The case of the mausoleum traditionally associated with the Sāmānid ʿIsāfī b. Ahmad at Buhkārā shows that by ca. 900 A.D. the effectiveness of brick decoration as a mantle for a building, one of relatively small surface area and therefore cheap, had been discovered, and was now transposed to the minaret (overall brick decoration on contemporary tomb towers, with their much larger diameters, occurs only on larger buildings of that genre). The cylindrical Iranian minaret generated a surprising variety of forms, mostly in the 6th/12th century, with variations in the number and proportions of stages, the cylindrical shaft; two or three tiers of tapering cylinders (e.g. at Zīvār near Isfahān and at Dījām in Ghūr in central Afghanistan); staircases might revolve round a central column or be built into the thickness of the exterior wall and carried on small vaults. Paired minarets probably date from this period, as a means of lending extra importance to the entrance gate of a building (e.g. at Ardistan and Nakhkhiwān), eventually to be brought into the mosque proper in order to flank the entrance to the musalla. There seems to have been no consistent practice governing the location of single minarets within the mosque. When the minaret was erected as an integral component of the mosque, provision was often made for it to be entered not at ground level but from the roof of the mosque. The otherwise at Ardistan, and Dījām might be noted: the comparatively high up the shaft of minarets which are now free-standing are clear evidence that they were originally intended to be part of a mosque.

A few minarets of this period raise searching problems of function. Some are located along major routes or at the edge of the desert (Khusrawgirrī; Zīvār; Mīl-i Nādirī), which would lend support to the theory that they served, no doubt ʿantar ala, as signposts. Since much caravan travel was by night, a lamp at the top of a minaret would allow the building to serve as a landlocked lighthouse. A chance literary reference establishes that in 581/1185 the practice of placing a lamp at the top of a minaret was sufficiently familiar in Khorāsān to occasion no comment. Perhaps the most enigmatic, as well as the most splendid, minaret of the period is that of Dījām, with a height of ca. 30m. unprecedented among Iranian minarets, and its main lower shaft principally decorated by a whole Kurʾānic sūra (XIX, Maryam) plus other, mainly historical, inscriptions, lauding the achievements of the Ghūrid sultan Ghivaš al-Dīn Muhammad b. Sām [see GRORISO]; clearly, there is a motive here of prestige and victoriousness, with the Kurʾānic text perhaps emphasizing the Islamic faith in a land which had not long emerged from paganism. In the eastern Islamic world, the Iranian minaret never recovered the importance it had had under the Saljūqs, but even so, new uses and new types of
MANĀRA, MANAR

decoration were found for it. In Il-Khanid times, the
device of paired minarets flanking an important ... facade of the Mosque of al-
Hakim in Cairo, built between 380/990 and
401/1010. With their massive—but later—embattled

minaret architecture, one which became largely fixed,

earliest buildings at Iznik (Yesil Garni) and Bursa

pencil, after the capture of Istanbul. In the Ottoman

minaret, the main cylindrical shaft rises from a square
or polygonal base and is punctuated by one, two or
even three circular balconies carried on mukarnas [q. v.]
vaunting, the whole being capped by elongated conical
roofs, sheathed in lead and ending in finials. Muez-
zins on each balcony would deliver the call to prayer
in the form of a canon; and the acoustic impact of
these many voices would of course be significantly in-
tensified in a mosque with multiple minarets, the
voices interweaving in different sonorities depending
on the height and distance separating the muezzins.
Whether such musical refinements were entirely audi-
ble is another matter.

Perhaps the most celebrated feature of Ottoman
minarets was not their outward form but their use in
pairs, quartets or sextets as a device to proclaim the
royal status of the building—for it seems that only a
reigning sultan could erect more than one minaret per
mosque. There can be little doubt that these mosques
represent the most sustained attempt in all of Islamic
architecture to reconcile the divergent aims of royal
and religious iconography. These gigantic, needle-
sharp lances clustered protectively, like a guard of
honour, around the royal dome, have a distinctly ag-
gressive and ceremonial impact, largely dependent on
each some 70m. high. Such minarets function simultane-
ously to enrich the exterior silhouette of the mosque—
in the case just cited, for instance, the outer minarets
flanking the principal façade of the building are shorter
than those flanking the dome. Thus a pyramidial effect
is achieved which is still further em-
phasised by the choice of a sloping site. The gently
rolling skyline of Istanbul, with its rural views, was
ideally suited for this kind of display, and the political
significance of the city as the Ottoman capital may
partly have motivated this new use of the minaret as
a component of urban design on a mammoth scale.

Such minarets were also used in a more symbolic way
as markers of the courtyard of the musallah, or of the en-
tire mosque, staking out the boundaries of the
religious domain within a secular environment. Dome
chamber and minaret alike thus acquire extra
significance as symbols of faith. This development
was not new, but only in Ottoman architecture is it
pursued with such singlemindedness. It is therefore
totally appropriate that these minarets should, like
the domes over the misbah, also bear the emblem of the
cresent, supported on a series of superimposed orbs.

If conservatism is the hallmark of the Ottoman
minaret, its counterpart in Egypt is above all varied.
This variety is all the more remarkable because the
Egyptian school is to all intents and purposes concen-
trated on the buildings of Cairo, though it is
represented in some small measure in the provincial
towns of Egypt and in the architecture of the
Mamlûks in Syria and the Levant. Unfortunately,
very few surviving pre-Mamlûk minarets have
escaped extensive alteration. Moreover, the most
important examples to fall within this category are not
metropolitan work at all but are found in various pro-
vincial towns—Ema, Luxor, Aswan and nearby
Shallal, all dating from the late 5th/11th century and
already displaying the characteristic Egyptian division
of the minaret into separately conceived superimposed
tiers, though Hidżâz influences are at work also.

Interesting as these minarets are stylistically, they
are insignificant in comparison with the great corner
towers marking the main façade of the Mosque of al-
Hakim in Cairo, built between 380/990 and
401/1010. With their massive—but later—embattled
square bases, whose taper, like that of an ancient Egyptian pylon, is so pronounced that it is almost a slope, they have all the appearance of bastions. That this military quality was to some degree present in the original layout of the Mahdiya mosque, built in Tunisia early in the previous century, which too had the corners of its main façade heavily emphasised by bastions which matched the main entranche of the mosque in projecting some 3m. from it and moreover projected a full 7m. from the lateral walls. In its original layout, the Hakim mosque maintained the consonance between corner projections and portal already established at Mahdiya, although the projection was twice as marked. Very soon, however—by 401/1010—each minaret was enclosed by a huge salient some 17m. square which allotted it a revolutionary and portentous role. Finally, in 480/1087, Badr al-Djamâl enlarged the northern salient to gigantic proportions—some 25m. square. He thereby not only incorporated the principal façade of the mosque into the expanded fortifications of the city—a clear indication of the essentially military flavour of this mosque—but managed to make the minarets play a major part in this process without noticeable strain or incongruity.

Since the minarets of al-Hakim survive only in an altered state, it is not easy to see where they belong in the corpus of Egyptian minarets. This is all the more regrettable in view of the once-vigorous controversy over the role of the Pharaos of Alexandria, which stood intact until it was partially ruined by an earthquake in 180/796-7, in the evolution of the Egyptian minaret. Pace Creswell, who argued against any connection between the two building types, it can scarcely be overlooked that the surviving Egyptian minarets which date before 1100 all attest a pronounced multipartite division of the elevation. Since this feature is absent alike in the Syrian, Iranian and Maghribi traditions (with two significant exceptions), some rationale for this unusual feature must be proposed, and a probability here seems to be the Pharaos, with the Egyptian minarets as free variations on the Pharaos theme. (One should note that the Pharaos was repeatedly rebuilt by the Muslims until its final disappearance between the early 7th/13th and the mid-8th/14th centuries. Indeed, as Butler noted, the account of 'Abd al-Latif indicates that in ca. 1200 the Pharaos comprised successively square, octagonal and round storeys and was crowned by a lantern or small cupola. It may well be, therefore, that this semi-Islamic Pharaos rather than the original building was the means of establishing the tradition of the multi-staged minaret in Egypt.)

But if the Pharaos did, in one or other of its successive guises, exert some influence on early Egyptian minarets, this does not seem to have been continuous. In the early versions of certain towers, the emphasis was on a tall, square shaft of Syrian type, which may be very plain (mausolea of Abu 'l-Ghadanfar, 532/1137, and Fāṭima Kātbūn or richly decorated (minaret in madrasa of Sultan al-Nāṣir Muhammad), with the so-called makhkara (because it resembled the top of an incense burner), a two-storey octagonal pavilion, crowning it. Subsequently, the makhkara was accorded more emphasis, and its interior divisions made more marked, with differing ground plans, octagonal and circular, and decorative patterns. In later times, the principle persisted of altering the ratio of the component tiers. The main shaft was reduced to the point where it was lost in the surrounding walls of the mosque, leaving the visible part of the minaret as an octagonal shaft with a cylindrical superstructure (minarets of Shaykh n and Sarghānī, both mid-8th/14th century). The transitions between the tiers were often marked by multiple balconies on mukarnas corbelling, recalling Ottoman minarets, and these were indeed used to secure the same antipodal effects in the chanting of the adhāj in as in Turkey. There was an emphasis on absolute height, with the southeastern corner minaret of the Sultan Hasan mosque soaring to 90m., the tallest in Cairo. The makhkara was now replaced by the kūla, so-called because of its resemblance to the upper half of the typical Egyptian water container, pear-shaped and with a flange-like lip. The tip was often orientated towards the kibla. In the final decades of Mamlūk rule, the minaret is crowned by a pair of square-plan pavilions crowned by a cluster of kūlas (funerary complex of Kānstīn al-Ghūrī).

Finally, the popularity of the minaret in Mamlūk architecture invites explanation. In the 8th/14th and 9th/15th centuries, the main building type in Cairo appears to have been the composite ensemble. Its constituent parts could vary from one ensemble to another, but their main functional elements were the mosque, madrasa, khānkhān and mausoleum. Similar complexes had already become popular in Seldījik Anatolia. In Egypt, however, unlike Anatolia, the minaret was from the first regarded as an integral part of such complexes. Whether this was entirely for functional reasons may be doubted. In the dense urban fabric of Cairo, nothing could more appropriately designate such a complex from afar than a minaret; and in this sense, it could be regarded as a public affirmation of its patron's munificence. Their placing varied. Sometimes they were located at the two corners of the principal façade, or flanking a gateway (e.g. Bāb Zuwayla); these were traditional locations. But many of the locations were unusual or even unprecedented. The madrasa of al-Sāliḥ has a single minaret above the central porch of the façade, and the two minarets in the mosque of al-Nāṣir Muhammad on the citadel are at the corner of the kibla wall and to one side of the main entrance. The latter location recurs in the funerary complex of Kāntī Bay. In this unpredictable positioning of the minaret, one may recognise similar concerns to those of Ottoman architects. Now the minaret was, it seems, valued less for its actual or symbolic religious function and more for its role as a marker or articulating feature, both within the complex to which it belonged and more broadly within the cityscape itself. Once again, then, the flexibility of the forms developed by Islamic architects asserted itself.

2. In India.

The minaret in India, commonly referred to by the imāda form minār, may be either (a) a free-standing or (b) an integral part of a mosque or other building. In the second category, it is convenient to distinguish the (actually or potentially) functional from the non-functional forms. With rare exceptions, in some regional styles [see VIND. vii. Architecture] no form of the minār is used at all; Dāwpur; Māwwā; the Dihli sultanates and the pre-Mughal Pandjāb; Sind; Kashmīr, the ‘Imād Shāhī, Nizām Shāhī and Barid Shāhī sultanates in the Deccan. (It might be objected that the non-functional forms do not properly qualify to be called minārs at all; but these forms, with others to be mentioned below, are certainly derived from minār prototypes, and there is no other recognised term by which they may conveniently be described. The term minār is regularly applied to towers of many types and functions.)

(a) The free-standing minār first appears in India as an adjunct to the earliest mosque ("Kuwwat al-Islām") in Dihli, standing outside the original mosque compound, commenced by Kutb al-Dīn Aybak (whence, possibly, its sobriquet of "Kutb Minār" [q.v.]) about 595/1199, and completed before 634/1236 by Ilutmish [q.v.] to a height of some 230 feet. The taper of its profile is very pronounced, nearly 5° from the vertical and it was divided into four stages by encircling balconies supported by madaras cornices. The upper stages show different designs of vertical fluting, the flutes on the lowest stage being alternately rounded and angular, those in the second all rounded, those in the third all angular (the original fourth stage was rebuilt into two storeys in 770/1368 under Firuz Shāh the Tughluq). The occurrence of the Kūrān, LXII, 9-10, in an inscription on the second storey affords presumptive evidence for the use of the minār as a mihrāb. The assertions s.v. Dīth (II, 260) and hindi (III, 441) above, that the fluted storeys develop the polygonal outline of the minārs of Ghazna, taken as the prototype of the Dīth minār, now need modification in the light of later research: A. Hutt, in Three minarets in the Kirman region, in JRAS (1970), 172-80, shows that the section of the base of the minaret of the Masjīd-i Dīāmī of Zaranq shows precisely the same disposition of alternate rounded and angular flutes; this is therefore a more exact exemplar for the Kutb Minār than the minārs at Ghazna, whose section is stellate, based on two interlaced squares. A minār in the Sīstān region, described by K. Fischer in Afghanistan, xii/3-4 (1970), 91-107, of similar form, suggests a nearer prototype on the probable line of transmission to India. (There is thus now even less need to cite the form of the Duddabasappu temple in Dambal, Dharwar district, as a possible prototype of the Kutb Minār plan, as has been advocated by some Hindu enthusiasts.) The characteristic taper of the Kirman examples, and of the minaret of Dīāmī in Āfghanistān, is also closer to that of the Kutb Minār than are the Ghazna examples. These details are emphasised here because of their persistence in certain aspects of mosque architecture, described under (b) below. Other free-standing minārs stand or stood at Kōḍī ("Allāgir") (inscr. 652/1254; erected by Balbān as governor to commemorate victories of the sultan Nāṣīr al-Dīn Māhmūd; tapering with square base and external galleries supported by cornices, with internal spiral stair, but dem. 1862 without any record; Bayānā, cylindrical with slight entasis but unfinished, in city near Ukhārī masjid and Ukhārī masjid, 9th/15th century, and tall minār in hilltop fort, tapered with cobbled balcony, inscr. 871/1466 (?), possibly with a double staircase (entrance blocked on my visit in 1972); Dawlatabad, "Cānd Minār" in inner city, ca. 649/1445, three encircling galleries supported by elaborate brackets, similar profile to minārs of madrasa in Bidar, see below; Bidar town, "Cāwbārā", low cylindrical tower at crossing of main thoroughfares, early 9th/15th century; Čhotā Panduā Bengali: massive minār 50m. from Bāfī masjd, early 8th/14th century, five diminishing tiers resembling half-drawn-out telescope, lowest three flattened; Gaur: Fīrūz Minār, ca. 895/1490, no taper, polygonal form, minaret, 849/1445, three encircling galleries supported by elaborate brackets, similar profile to minārs of madrasa at Bād, see below; Bidar town, "Cāwbārā", low cylindrical tower at crossing of main thoroughfares, early 9th/15th century; Dīžāhārī's favourite elephant, but often attributed to Dārā Shukhā. Finally, the Kos Minārs of the early Mughal period, solid towers of similar profile to the Kutb Minār but only 6-8 m. high, were set at intervals of a kōs [see MISHA. 2. India] along the major thoroughfares. Many purposes are involved in the above: mihrāb; observation post to command dead ground; possibly, following Hindu examples, "victory tower"; other commemoration; platform for shooting or observation game; execution displays; distance markers. The purposes are frequently combined.

(b) Minārs attached to a mosque or other building, however, are provided primarily as mihrābs, although since they are almost always multiplied symmetrically, they obviously have also an important aesthetic function (the single minār in the south-east corner of the courtyard of the Bahmānī Ėk minār ki masjid at Rāyūr [q.v.] is a striking exception). Only in Gudjārāt under the Ahmad Shāhī
sultanate, and in Burhānpur in Khalīdshāh, are paired functional minārs used regularly before the Mughul period; here they are cylindrical, their internal staircase, opening on to one or more encircling balconies supported on heavy corbels as well as to the mosque roof, and are capped by conical roofs with no suggestion of an open turret. The earliest Ahmad Shāhī examples flank the central arch of the liwān, although later they may be placed at the north and south ends of the façade. The latest mosques of the Ahmad Shāhī period, e.g. Rānī Sambārī's mosque and the Īsāpur one, have solid pseudo-minārs at the ends of the façade.

This sudden reintroduction of the miṣīdghana-minār, with an immediate secondary aesthetic function, is not fully explained. Gūḍārāt mosques in Dīhilī Sultanate times such as Hīlāl Khān's one at Dīhilā, the Dājmīnī mosque at Cambay, have only solid conical or cylindrical pillars over the parapet flanking the central bay of the liwān; but earlier Dīhilī Sultanate examples outside Gūḍārāt may show the connection with the Kutb Minār; e.g. the Afhānī din kā gāompūrā mosque at Aḏīmīnār carries two cylindrical turrets, solid and some 2m. tall, over the makṣūra arch, with vertical flutes alternately circular and angular exactly as on the lowest storey of the Kutb Minār (similar fluting occurs on the external corner buttresses of the mosque courtyard). The Dājmīnī Minār profile is perpetuated in the solid buttes of (which flank) mosque gateways, the central bay of the liwān façade, the external minābrāt—projection, and external corners of courtyards, in the Tughluk and Lōḍī periods; these show at least one band of Kutb Minār-like fluting, and their profile is carried up above parapet level to end in a guldasta; especially when flanking the central propylon-like arch of the liwān façade, these suggest paired miṣīdghana towers, and may thus have a psychological purpose. This would seem to be the explanation for many of the examples which follow. In the Bahānī Sultanate, the minār is not used regularly with mosques; that at Rāyūrī mentioned above is an exception, and the Čānd Minār at Daulatābād is doubtless sited with the old Dājmīnī mosque in mind although physically separated by some 100 metres—Dīhilī in every way. A view of broken ground to the east. The profile of both resembles that of the remaining one minār of two at the ends of the entrance façade of the mādrasa of Māhmūd Gāwān [q.v.] at Bīdar, inscr. 877/1472, although the balconies of the latter are carried out from the main shaft in a curvilinear form rather than being supported on brackets in the usual Indian manner. All are crowned with a dome-shaped cap, with no open room at the top. The old brick minārs attached to the courtyard of the much later Makkā Masjid at Bīḍjāpur, also of Bahānī date, have lost their upper parts; their balconies seem to have been supported on wooden brackets. Other Bahānī minārs, all of similar profile, are the pairs flanking the gateways of the barad of Shāh Shāhī Sirāj al-Dīn Dūnaydī and the so-called house of Gēsū Dāriz, both in Gūlbārgā, and those flanking both the outer and inner gateways of the barad at Aːlānd; but these are crowned with foliated domes of three-quarter sphere shape, as in the ʿĀdil Shāhī and Kutb Shāhī styles, and those of the outer gateway have moreover an encircling band of open arches in the Kutb Shāhī manner. Of possible relevance to the designs in north India referred to above are the guldastās which stand at the corners of the parapets of Bahānī tombs in Gūlbārgā, both with the barad very high; these are fluted, although fluting does not extend to the minār. The minār proper is not used at all in the Bahānīs' successor states. The skyscrapes of mosques and tombs of the ʿĀdil Shāhīs in Bīḍjāpur and elsewhere are so liberally provided with vertical pillars as to resemble a burgeoning asparagus patch; and at best pseudo-minārs which may psychologically suggest the miṣīdghana-minār but whose real function is merely artistic. Turrets, charātās and guldastās are also freely used, but the relation between these forms cannot be pursued here. The minār-like structures of the Kutb Shāhīs of Haydārābād and Golkonda, similarly, are usually solid shafts, cylindrical, with characteristic encircling arced galleries, although in a late offshoot of the Kutb Shāhī style in the Dājmīnī mosque of Sīrahgāpattana [q.v.] ("Serengapatam") an internal staircase is provided. That the bases of the pseudo-minārs of the Tōlī Māsji (1082/1671) outside Haydārābād city stand in pot-shaped bases should not be taken as representing any connexion with ancient Indian pillars.

Under the Mughals, the functional minār returns to north India; this is possibly inspired by Gūḍārāt examples, since other typically Gūḍārāt features are introduced into Mughal architecture after the conquest of Gūḍārāt in 980/1573. The first example is that of the four minārs at the corners of the gateway of Akbar's tomb at Sīkandāra, completed in the early years of the 11th/17th century: tapering, white marble (the lowest stage fluted), two intermediate balconies supported on corbel brackets, topped by a conical roof, and are capped by conical roofs with no suggestion of an open room at the top. That the bases of the pseudo-minār-like corner turrets; the mosque of Wazīr Khān at Lāṁbāvar; the Bādüshāhī mosque of Lāṁbāvar, which is also short minār-like corner turrets; the tomb of Rābīʿa Dāvarānī ("Bībī kā makbara") at Awrangbāgzāh; Awrangzīb's mosques in Bānārās, Mathurā, etc.; short corner staircased minārs also at the tomb of Iʿtimād al-Dawla at Āgrā, little more than turrets, seem to be the model for the engaged corner turrets at e.g. the tomb of Saṭṭār Dāngī at Dīhilī, and Mughal mosques in Bengal e.g. Dhākā, Murshidābād, etc. Since there is no necessity for the adāq in tombs, many of these Mughal minārs are thus also principally decorative.

Plates II-III, IX-X., and see also _sirangapatana_. For the 'Adil Shahi decorative forms, see _Bidl._ to _bijapur_. Monuments. For the Mughal minar and associated structures, see _MUGHALS_. Architecture. A fully-illustrated study by the author of _minas, guldstas_ and associated structures is in preparation. (J. Burton-Page)

3. In _East Africa_, the word (Swahili, _mnara_, pl. _minara_), has three connotations:

(1) Before the late 19th century minarets were of extreme rarity. The Great Mosque of Kilwa in Tanzania, the largest of all, did not have one. The only examples are the Great Mosque (1238) and the Mosque of Arba'a Rukun (1268) at Mogadishu, and the Friday Mosque at Merca (1609), all in Somalia and dated by inscriptions; a late 14th century mosque at Ras Mokumbu, Pemba Island; and the Malindi Mosque in Zanzibar Town built in 1831, of which the minaret is reputedly of greater age. Many mediaeval mosques, however, possess an external staircase, sometimes part of the structure of the abutments, from which the call to prayer was given. The earliest such example is at Kaole, near Bagamoyo, Tanzania, while the Great Mosque at Kilwa, Tanzania, has two such staircases outside the mosque proper in its north and south courts respectively.

(2) The word is also used, both in Arabic and Swahili, for the pillar tombs which are an architectural peculiarity of the eastern African coast. Situated generally on the north of _kibla_ side—for Mecca lies almost due north of the eastern African coast—these tombs are formed by a roofless square or rectangular walled structure, providing space for two up to five or six burials, the distinguishing pillar being cylindrical or tapered, square, hexagonal or octagonal, and usually with a string course or some other form of decoration near the top that markedly suggests a phallic origin. (In this connection it should perhaps be noted that at Mtimira, some 12 miles north of Kilwa, a representation of a phallus the size of a man’s forearm surmounts the _mihrab_ arch in a mosque that was abandoned in the 14th century.) The height of the pillars varies greatly from some 10 to 20 feet, but at Mombasa an extreme example reaches some 60 feet and has a base which actually spans the entire tomb. It is alleged today by some Sunni Muslims amongst the Swahili that these pillar tombs are the work of _Shi'i_, but this has never been confirmed.

The only reference to a pillar tomb in literature is in the Arabic _History of Kilwa_, B.L. Or. ms. 2666, which refers to the burial ca. 1364 of sultan _tallit_ b. al- _Husayn_ of Kilwa in a pillar tomb on Mafia Island which was already occupied by the burials of two _fakhis_. This is the earliest date that we possess for these structures, but regrettably the tomb in question seems to have fallen into ruin and disappeared. Pillar tombs are distributed from as far north as Koyama in the _Bajun_ Islands off the east coast of Somalia to as far south as Mboamaji, a few miles south of Dar es Salaam, Tanzania. Their walls are frequently panelled and often elaborately decorated with different motifs sculptured in coral, and sometimes inlaid with plates of Chinese porcelain, rarely celadon, but chiefly blue and white of the Ming dynasty. This practice already existed in the 14th century, as witness Yuan porcelain that was abandoned in the 14th century, as witness Yuan porcelain—see _Mboamaji_, a few miles south of Dar es Salaam, Tanzania. Their walls are frequently panelled and often elaborately decorated with different motifs sculptured in coral, and sometimes inlaid with plates of Chinese porcelain, rarely celadon, but chiefly blue and white of the Ming dynasty. This practice already existed in the 14th century, as witness Yuan porcelain that was abandoned in the 14th century.

(3) A structure on Songo Mnara Island near Kilwa, which gives the island its name, is built on a platform of four steps some sixteen yards offshore. Visiting it in 1950, the late Gervase Mathew found the skeletal remains of a goat which had apparently been sacrificed on top of it. It is described by P. S. Garlake as a mosque, but an Arabic treaty between the then Sultan of Kilwa and a French slave-trader, Jean-Vincent Morice, dated 12 _Shaf'bân_ 1190/4 November 1776, clearly refers to it as _bayt manar_ (sic). Garlake prints a plan of the structure showing a small mosque with a raised platform, but H.N. Chittick, who partly cleared the building in 1961, founds it to be “a truncated pyramid with stepped sides, surmounted by a rectangular chamber”, with doors at the north and south. The present writer did not distinguish the remains of a _mihrab_ when he visited it in 1955. Morice’s two maps of ca. 1776 show it as a three-storeyed building, the three storeys tapering towards the top; he refers to it as _la pagode_. Chittick found only two storeys remaining, the second storey being decorated with numerous large 15th century celadon bowls. J. Crassons de Medeuel, another slave-trader, writing in 1784, says that _la pagode_ which “was very curious looking”, had fallen down at some time during the preceding three years. This sentence follows immediately upon the description of a mosque, thus clearly differentiating it therefrom. M. H. Dorman thought the structure might be an ancient 14th century _deir_ or _kiosk_. It is unlikely because these are unknown in eastern Africa at the period indicated by the celadon bowls, and indeed until the later 19th century. The elaborate decoration suggests rather that the building was domestic, even if the lowest of the three rooms was used for prayer, and that perhaps it was a tower kiosk built so as to take advantage of the evening breeze on what is a hot sticky island. This explanation would satisfy the meaning both of _mnara_ and of _pagode_ in 18th century French.

_MANAS_, the name of the paramount hero of the Kirghiz oral epic tradition and also of the totality of the epics which accreted about him and his kindred by the process of cyclisation, in this case very marked.

Some 4,000,000 lines of _Manas_ are said to have been recorded in Kirgizia in this century, but not one scholarly edition of a self-contained performance has appeared, or, if it has, has yet reached the West. A recording of an episode from _Manas_ was made by R. Dor in the Pamir in 1973, of which a philological edition, with an introduction, translation, and full index; and recordings of _Manas_ in Xinjiang by members of the Institute for Minorities, Peking, are reported to...
have been made during the last decade. In 1911-12, G. von Almasy published 72 lines critically, with recorded by W. Radloff (V. Radzvon and C. Manaske, in 'Tagish-Kazakh' a
tauzrakh of Sat al-Din, attributed to the 16th century, has been accepted as evidence of the flourishing of Manas at that time; yet the two mss. of the Magjma so far cited are dated respectively 1792-3 and 19th century, so that the (likely) possibility that the Manas passage was interpolated to serve the political ends of Khokand requires convincing disproof before it can be considered as evidence for Manas in Kirghiz at so early a date. However, Manas, as it appears in Kirghiz verse for the first time in the Valikhanov recording of Kokojooyun aghi ("The memorial feast for Kokoby)", in 1856, reflects a mature and truly epic tradition which is obviously the product of many generations. Surprisingly, if one goes back to this earlier tradition from the patriotic and at times stridently nationalistic material of the 20th century, one finds that the heroes are not Kirghiz but Noghay; on the very rare occasions when "Kirghiz" are named, it is with irony. Nevertheless, the connection between the mid-19th century epic tradition and the life of the Kirghiz as it has been supplied by the situation of Manas, his son Semetey and his grandson Seytel: all are only sons forming a fragile line of qans that is threatened with extirpation in manhood, boyhood, in the very womb. And such, mutatis mutandis, was the situation of the scattered Kirghiz tribes themselves, dangerously hemmed in as they were on their high pastures by the Chinese, the Kalmik, the Khokanders and the Russians. The "Noghay" of mid-19th century Kirghiz epic are, as were the Kirghiz themselves, only superficially touched by Islam, their treacherous Kalmik antagonist least even by the Kazak Beshkirs. The plots of the various self-contained episodes of the abstraction Manas that were recorded in 1856-69 are clear-cut, stark and existential. The style is rapid, graphic and abounding in beautifully-structured epithets and formulae aimed at connoisseurs. It provides a touchstone by which the published 20th-century material, despite its enrichment by Persian narrative poetry and the European novel, must be pronounced inflated, distorted and, qua epic, decadent.

 Al-Manasir, Banu (sing. Al-Mansuri), the name of half-a-dozen tribes, or branches of a single tribe, residing in eastern and southern Arabia, Irak, Jordan, the Sudan and Algeria. The Arabian tribe or branch, at least, claim descent from Kahtan through Ghwaynim, and they are thus, in the Arabic genealogical scheme, al-Arab al-'Irabi, or true Arabs. Both they and the Jordanian branch boast of having been originally Christian, hence the derivation of the name from Nasarä. Presumably therefore, the tribe originated in the Yemen, although the name does not appear in any of the South Arabian genealogical works.

 Little has been written about those residing in the Fertile Crescent or in the Sudan, aside from the statements that those in Jordan (al-Balka) are affiliated with the Banu Dhurumiya and those in Irak with the large and important Banu Shammar. In Algeria, the al-Manasir, living along the coast between Tenes and Cherchell, have apparently been Berberised.

 In eastern and southern Arabia, the Banu 'l-Manasir share the entire southern edge of the Rubü al-Kalhi from the border of 'Unan to Nadjran, a distance of about a thousand miles, with the Banu Murra, noted, until modernisation, for their particularly fine herds of camels. Although supporters of the Su'di family, the al-Manasir are not Wahhabis and follow the Mâliki school of law.

 MANASTIR. The name Manastir (Greek monas-

 tiroon) is not an uncommon toponym (cf. Goljman Manastir in Bulgaria and Manastir near Beyshir in Turkey). However, it usually occurs as the Turkish designation for the modern town of Bitola in the Socialist Republic of Macedonia in Yugoslavia. Bitola is situated near the site of the ancient town of
Heraclea where the eastern foothills of the 2,601m. high Mt. Pelister merge in the old style and published in various newspapers and periodicals, his sira and Kisas-l enbiya\(^\text{a}\) in verse and his statistical data of the town under Ottoman rule are extant only since the seventh decade of the century, and only last (as far as is known) until the seventh or eighth decade of the following 10th/16th century (M. Sokoloski, Turski izvorni podatoci od XV i XVI sek za gradit Bitola, in Glasnik INI, viii [1963], 127-56; idem (ed.), Turski dokumenti za istorijata na makedonskot narod. Otpori popisni defteri od XV sek, i, Turks dokumenti za makedonsko istdtistik-i ^umumisi, 5 vols. Skopje 1973, 141-5). The sigduls of the kaflis of Manastir, which offer a penetrating view into almost all aspects of urban life, document the period from 1016/1607 to the end of Ottoman rule in Macedonia (1912) and beyond. They also witness the development of Manastir first into a residence of the walis of Rümeli (in the course of the second half of the 12/18th century), and then to the official residence of the provincial governor (1725-1800). The walis of Rümeli which was redefined in 1836 (M. Sokoloski, A. Starova, V. Boškov and F. Ishak (eds.), Turks dokumenti za istorijata na makedonskot narod, Serija proa: 1607-1699, 4 vols. Skopje 1963-72; i-7, 1627-35, iii (1636-9), iv (1640-2); A. Matkovski (ed.), Turski izori za ajdutstvoto i aramistvoto vo Makedonija, 3 vols. Skopje 1961-80; i (1650-1700), iii (1700-25), iv (1725-75), v (1775-1810); P. Dlambazovski, and A. Starova (eds.) Skopje 1951-8: i (1800-3), ii (1803-8), iii (1809-17), iv (1818-27), v (1827-39). In addition, documents from the archives of the metropolitan of Manastir pertaining to the first half of the 13th/19th century have been published (I. Snegarov, Gručki kodeks na Pelagonejska mitropolija/Griechische Kodexe der Pelagonischen Metropolie, in Godnšk na Sofiskija universitet, Bogoslovski fakultet, xxv [Soﬁa 1948], 2-20. Since the beginning of the 13th/19th century, when numerous European consulates were established in Manastir, consular reports comprise one of the most important historical sources. As a result of its importance, Manastir became the capital of a vilayet of the same name in 1874 and again in 1879 (A. Birken, Die Provinzen des Osmanischen Reiches, Wiesbaden 1976, 71 f.). Its population in 1900 was 37,000, and in 1971, 65,035 (M. Panov, Geograﬁja na SR Makedonija, i, Skopje 1976, 303).

**Bibliography:** A first, uncritical, sketch of the history of Manastir from its beginning is given by Mehmed Tewfik, Manastir vilayetinin tarihçesi ve i\(\text{t}^\text{i}st\)at\(\text{k}^\text{\imath}\)i "um\(\text{a}\)m\(\text{\imath}\)ti, Manastir 1327/1909, Serbo-Croat tr. Glisa Elezovic, Kratka istorija biološkog vilaje\(\text{t}^\text{n}\), in Bratstvo, xxvii (1955), 190-244. Although no comprehensive, scientific treatment of Manastir’s history has been undertaken as yet, a general abstract, based in part on more recent research, has been undertaken by Apostolos E. Vakalopoulos, History of Macedonia 1534-1833, Thessaloniki 1973 (cf. index s.v. "Manastir"). The first, tentative, contributions to a bibliography of "Bitola and environs up to World War I" have been begun by Koço Sidovski, Prilog kon bibliografijata za Bitola i Bitolsko do pravta svetka voina, in Istoriija, ix/6 (Skopje 1973), 264-70; x/1 (1974), 405-8; x/2 (1974), 571-3; xii/1-2 (1976), 329-7. (M. URSINUS)

**MANA\(\text{\imath}\)STIRLI MEHMED RIF\(\text{\imath}\)T (1851-1907),** Ottoman Turkish officer, writer, poet and playwright of the younger Tanzim\(\text{\imath}\)it generation. Born in Monastir [see MANASTIR], son of a regimental secretary and inspector of schools. During the Crimean War situation on the old Via Egnatia even before it was conquered by Tim\(\text{\imath}\)r\(\text{\imath}\)t Pasha in the eighth decade of the 8th/14th century. While documents pertaining to the history of the town under Ottoman rule are extant from as early as the first half of the 9th/15th century (H. Kalez\(\text{i}, Najstarija arapska vakufnama u Jugoslaviji, in POF, v-xii [1961], 55-75), statistical data reflecting the development of Manastir are extant only since the seventh decade of the century, and only last (as far as is known) until the seventh or eighth decade of the following 10th/16th century (M. Sokoloski, Turski izvorni podatoci od XV i XVI sek za gradit Bitola, in Glasnik INI, viii [1963], 127-56; idem (ed.), Turski dokumenti za istorijata na makedonskot narod. In addition, documents from the archives of the metropolitan of Manastir pertaining to the first half of the 13th/19th century have been published (I. Snegarov, Gručki kodeks na Pelagonejska mitropolija/Griechische Kodexe der Pelagonischen Metropolie, in Godnšk na Sofiskija universitet, Bogoslovski fakultet, xxv [Soﬁa 1948], 2-20. Since the beginning of the 13th/19th century, when numerous European consulates were established in Manastir, consular reports comprise one of the most important historical sources. As a result of its importance, Manastir became the capital of a vilayet of the same name in 1874 and again in 1879 (A. Birken, Die Provinzen des Osmanischen Reiches, Wiesbaden 1976, 71 f.). Its population in 1900 was 37,000, and in 1971, 65,035 (M. Panov, Geograﬁja na SR Makedonija, i, Skopje 1976, 303).

**Bibliography:** A first, uncritical, sketch of the history of Manastir from its beginning is given by Mehmed Tewfik, Manastir vilayetinin tarihçesi ve i\(\text{t}^\text{i}st\)at\(\text{k}^\text{\imath}\)i "um\(\text{a}\)m\(\text{\imath}\)ti, Manastir 1327/1909, Serbo-Croat tr. Glisa Elezovic, Kratka istorija biološkog vilaje\(\text{t}^\text{n}\), in Bratstvo, xxvii (1955), 190-244. Although no comprehensive, scientific treatment of Manastir’s history has been undertaken as yet, a general abstract, based in part on more recent research, has been undertaken by Apostolos E. Vakalopoulos, History of Macedonia 1534-1833, Thessaloniki 1973 (cf. index s.v. "Manastir"). The first, tentative, contributions to a bibliography of “Bitola and environs up to World War I” have been begun by Koço Sidovski, Prilog kon bibliografijata za Bitola i Bitolsko do pravta svetka voina, in Istoriija, ix/6 (Skopje 1973), 264-70; x/1 (1974), 405-8; x/2 (1974), 571-3; xii/1-2 (1976), 329-7. (M. URSINUS)
verse translations of many Arabic and Persian kasidas, etc., have not been collected into book form. His other poems, mostly of a personal nature, which he collected in a small divan (divanec) remain unedited. Manastirli Rifat is mainly remembered because of his remarkable contribution to the Turkish theatre in writing, translating and adapting many plays. Some of these plays were written in collaboration with this close friend, Hasan Bedreddin (later Paşa) [q.v. in Suppl.].

Although it is customary to begin the modern Turkish theatre with İbrahim Şinasi’s Şhe’er eserleri (1859), there may probably be many indications that this date should be adopted (see Fahir Iz, Pabuçcu Ahmed in gərgin maceraları, Istanbul 1961, and Metin And, 100 soruda Türk tiyatrosu, Istanbul 1970). However, modern Turkish theatre had a speedy development soon after Şinasi’s play, and reached the proportions of a boom, particularly in the late 1860s and early 1870s, one which lasted until the inauguration of the anti-lirical, reactionary period after 1878. Nâmis Kemal, Şenreddin (Shems al-Din) Sâmi, Ali Bey, Ahmed Wefik Paşa, Teodor Kâsâb and others contributed to this activity. Early modern plays were considerably inspired by the Turkish traditional or folk theatre (Karaköz, Orta oyunu, Meddah [q.v.] and ) to some extent, the techniques of French comedy and farce (Molière being the favourite author). Often Western (mainly French) plays were translated or adapted.

Manastirli Rifat and Hasan Bedreddin joined this movement and published together, in fascicles, between 1875 and 1879, 16 plays, under the general title Temâszî ("Spectacle"), which eventually made up two volumes (Vol. i, fasc. 1-9; vol. ii, fasc. 1-7) of nearly a thousand pages. The majority of these plays, including two comic-operas and one opera-bouffe, of little interest, are translations from the French or via the French. The following 7 plays are original: Vol. i, Fasc. 2, Delîle yahut kântî intikâm ("Delîle or bloody vengeance"), 1875, an historical drama of Eastern Anatolia; fasc. 4, Ebu l-’Ali yahut maviüret ("Abû l-’Ali or humaneness"), 1875, a play on Islamic history; fasc. 6, Ebu l-Fidâî ("Abû l-Fidâî"); a comic opera, in three acts, 1875; fasc. 7, Nâdâmet ("Repentance"), 1875, a comedy; Vol. ii, fasc. 1, Kulemler, a historical drama in five acts; fasc. 4, Fakire yahut mûkâfâât-i îfsît ("The poor girl, or the reward of virtue"), 1876; fasc. 6, Ahmed-i yetim yahut natsiğî-yi sadakât ("Ahmed the orphan, or the result of loyalty"), 1879, an historical drama of the Egypt under the Ťulûnids.

All these plays were performed in the famous Gedik Paşa Theatre in Istanbul. Apart from these plays, written in collaboration, Manastirli Rifat published the following plays independently: Görenek ("Social practice, custom"), 1873, social criticism satirising over-lavish weddings, where families try to outdo one another; Oghmân Ghażî, 1873, Ya ghazi yâ shehid, 1874, two patriotic plays, possibly inspired by the enthusiastic reception of the performance of Nâmis Kemal’s famous Watan ("Fatherland"), which caused such a furor at the time; and Psâdâmên ("The chastest one") which seems to have been inspired by Reçâjâr’s Ekrem’s [q.v.] Afsî Anfelîk (1870), with non-Turkish dramatis personae, about a married woman’s resistance to the valet’s overtures during her husband’s absence. Manastirli Rifat’s other works worth mentioning include: Meğdâmî el-edeb, in four volumes, 1890, a detailed treatise on the art of literature, rhetoric, poetry, prose, etc., and Hıkâyât-i man tâkhabî ("Selected stories"), 1876, a striking example of the spoken Turkish of the time used as written Turkish.

MANât, name of one of the most ancient deities of the Semitic pantheon, who appears in the Pre-Sargonic period in the form Menûmûm and constitutes one of the names of Ishtar (J. Bottéro, Les divinités sémitiques anciennes en Mésopotamie, in S. Moscati (ed.), Le antiche divinità semitiche, 30; Tallqvist, Götterglaube, 373-4); the Kur'ânic scriptio of her name preserves the primitive Âw, which also appears in the Nabatean manûtu (Lizbarski, Handbuch, 319; Wellhausen, Reste, 28). The word changes to i in the Bible (Isa. lxv, 11), as in the Sailler IV papyri, verso, i, 5-6 (in J.B. Pritchard, Ancient Near Eastern Texts relating to the Old Testament, Princeton 1950, 250), where Menî is presented as a Semitic deity forming part of "the Ennead which is in the house of Pharaoh." The difference of gender poses no obstacle to this identification, due to the fact that the i is not radical in the two forms and that the Arabic sources regard it as a feminine termination referring to sakhrû, the stone or rock emboding the deity (cf. Yâkût, iv, 652, 1. 15; Tâl, x, 351 in fine; Ibn al-Kalbi speaks of Manât in the masculine (K. al-Anâm, ed. and Fr. tr. W. Atallah, Paris 1969, 9), thinking in this case of ٢٧٢١. Originally, the two names had the root mwî which is to be found in all Semitic languages with the meaning of "to count", "to apportion", being applied in particular to the idea of "to count the days of life", hence death (manîya), and "to assign to each his share", hence, lot, destiny (cf. C. Bezold, Babylonisch-Assyrisches Glossar, ed. Görze, Heidelberg 1926, 176; Gesenius-Buhl, Hebräisches und aramäisches Handwörterbuch über das Alte Testament, Berlin 1949, 436 ff.; TA, x, 347 ff.; Yâkût, iv, 652).

The Greco-Roman equivalents given to Manât testify to this meaning, since she is identified with Tōxâ or the Fortuna, the dual respectively the form Manâwât (a false plural used for the dual manawûn (Yâkût, iv, 652, 1.12), as in Thamudic, where she is called st stîm "the Lady of Peace", see A. van den Branden, Les inscriptions thamoudiennes, 110 (Haber, 195), and in Nabatean (CIS 198). In Palmyra she is represented on a mosaic, seated and holding a sceptre in her hand, after the fashion of Nemesis, goddess of destiny (J. Starky, Palmyre, Paris 1952, 103 and pl. xii, nos. 5 and 6).

Lîkâl-l-Lât [q.v.] and al-’Uzzâ [q.v.] who form with her the Arab triad (Kur’ân, LIII, 19-20), Manât was worshipped by all the Arabs. It was [originally] a rock for Hudhayl in Kudayd (Yâkût, iv, 652, 1.15 f.), ‘Amr b. Luḥayy [q.v.], who substituted for the cult of belters that of idols, erected for her, in Kudayd, a statue imported from the north, like that of Hubâl [q.v.]. The sacred site of al-Mushallal in Kudayd, about 15 km. from Yathrib, became the gathering place of the Awa’s and Khazraj’, who were the most ardent worshippers of Manât, to such an extent that they considered their pilgrimage to Mecca as incomplete if they had not been to her to shave their
heads. All the tribes of the surrounding area took part in her cult. Before the arrival of the Aws and Khazraj, coming from the south, she was worshiped by the Hedjâhî who led a nomadic life in the region of Yathrib and by the Khuhî‘a in that of Mecca.

Also, from being a simple rock in Kudayd, the third divinity of the Arab triad, following the normal evolution process, ended up by being sculpted to suit the root from which she derives her name, representing one of the faces of the Asiatic Venus, i.e. Fortune, who, according to the testimony of Pausanias (vi, 24, 9), was represented on the banks of the Euphrates. Al-Lált, with whom Manät shared the title of Tāgîyâ (Yâkût, i, 236, 1,11), and al-Uzza represented the two others volets of the triptych.

The destruction of the sanctuary of Manât in Kudayd gave rise to a legend of the same interpretation as that which is associated with the destruction of al-Uzza (cf. T. Fahd, Panthéon, 173).

Sa‘d b. Zayd al-Ashâril (Ibn Sa‘d, i/i, 106, and al-Tahâri, p. 1649), whereas Yâkût states that it was 'Ali b. Tâlib who found in his treasury the two famous swords, Mikhdâm and Rasûb, which Ibn Sa‘d, ii/1, 118, places in the treasury of al-Fals), ordered by the Prophet to go to destroy Manât, in the year 8/629, accompanied by twenty horsemen, appeared before the sâdîn and announced to him her intention to destroy her. "Go on!" he said to him in an ironic tone. Sa‘d went towards her and at once saw a nude black woman rise up with her hair disheveled, uttering curses and beating her breast. The sâdîn called out: "Come on! O Manân, show the anger of which you are capable!". Sa‘d began to beat her to death; then he approached the idol with his companions and they destroyed it.

(1. T. Fahd) MANÂZGERD (see MALÂZGERD)

AL-MANÀZIL (A. or more fully manâzîl al-kamar, the lunar mansions, or stations of the moon (sing. manazîl or manzion), a system of 28 stars, groups of stars, or spots in the sky near which the moon is found in each of the 28 nights of her monthly revolution.

The system seems to be of Indian origin (see Scherer; Pingree [1] and [2]; Billard). Babylonian origin has sometimes been suggested (cf. Hommel), but could never be established from the documents. The 'stars in the moon's path', in the old APIN text (cf. van der Waerdens [11], 77; recently re-dated to 2300 B.C. cf. van der Waerdens [2]) are 17 or 18 in number and rather represent an early stage in the development of the zodiac. The system of the lunar mansions was adopted by the Arabs, through channels as yet unknown, some time in the pre-Islamic period, since the term manâzîl is already mentioned in the Qur’an (X, 5; XXXVI,39). To the single mansions, the Arabs applied names already found with them previously, and originally used to designate their anâzîl (see anawâ). A complete list of the 28 mansions is reported by 'Abd al-Malik b. Ḥabîb (d. 238/852) on the authority of Mâlik b. Anas (d. 179/793); nearly contemporary to this is the list drawn up by the astronomer al-Farghânî. Items of information concerning the lunar mansions were collected by the Arabic philologists in their kutub al-anawâ (see the printed works of Ibn Kuthayr al-Mazrâkhî, Ibn Sîdâ, Muhammad al-Muṣripî, al-Kazwînî, Ibn al-Adjamâbî, Ibn Manzûr/ al-Tîfâshî, and Aḥmad b. Mâdjîd), and by astronomers, who took pains in identifying these mansions astronomically (see al-Farghânî, al-Battânî, al-Sûfî, al-Bîrûnî, and [1], [2], and [3]). Whereas the scientific astronomers of the Arabic-Islamic period did not apparently use the lunar mansions, these apparently were of some importance for the distribution of the ecliptic (besides of the zodiac) in earlier times. Later, they were often used by astrologers and others for different systems of divination (see e.g. Picaei, and 'Ali b. Abî l-Rîjâl; cf. also Savage-Smith, for the lunar mansions in relation to geomancy). Hence they were engraved, found with other calendric and astronomical items, on the back of many Islamic and some western astrological works (cf. Hartner, 2549 f.; Michel, 42; Mayer, pls. XV, XVII, XX, XXII-XXV).

Through Latin translations of Arabic works, the list of the 28 lunar mansions and their Arabic names known to mediaeval Europe from the late 10th century onwards (see Millâs, 251 ff.), and, later, were much used for divinatory purposes (see e.g. Strinckwet, Vian, Svenberg, Weidemann, Lutz and Müller). Lists of the 28 lunar mansions, with their Arab names, have also been penetrated Byzantine astrological texts (see CCAG).

The names of the 28 mansions, and their astronomical identifications, are as follows (for the names, see the individual entries in Kunstich [1], where sources and further details are given):

1. al-hâratîn (also: al-nathîr, byr, or bys Arietis.
2. al-kutayn, bô Arietis.
3. al-sheriyya, the Pleiades.
4. al-tabdân, a Tauri.
5. al-hakîa, aPôries (according to the Almagest, one nebulous object, the first star of Orion; but registered as three individual stars by al-Bîrûnî [3]. Alternatively also, al-masânîn, which properly would be one of the two stars of no. 6.
7. al-hurîn, aPô Geminiorum. There is confusion in the sources as to whether this hurîn is al-hurîn al-mâkihâ or al-hurîn al-masânîn.
8. al-nathîr, a Cancri, or γb Cancri (Ibn Kuthayr, and al-Bîrûnî [3]).
9. al-safîr, b Cancri + Κ Leonis.
10. al-sheriyya, ζ Geminorum (included with this station is the star a Leonis, "Regulus", which had no individual name in the classical Arabic star lore).
11. al-zubrî (also: al-hanîn), bô Leonis.
12. al-sarfâ, b Leonis.
13. al-âsâfsâ, a Virginis, sometimes b Virginis is also added to these.
14. al-sîmâk (i.e. al-simâk al-asâl), a Virginis.
16. al-zubâna, a Libræa.
17. al-shir, bô Scorpii.
18. al-kalb, a Scorpii.
19. al-sahrâla, bô Scorpii. Sometimes, al-siba, or bôr al-shrub, is given as an alternative designation, but some authors refer this name to a different ob-
AL-MANAZIL
ject, viz. the nebulous cluster following behind alshawla, i.e. M 7 Scorpii.
20. al-na^im, the two groups of four stars each,
y&eri + <J9T£ Sagittarii; alternatively, al-wasl, the
space between these two groups.
21. al-balda, a region void of stars, between stations
nos. 20 and 22.
22. sacd al-dhdbih, a M v[3 Capricorni.
23. sa^d bulac, \it Aquarii, to which some authors add
Fl. 7, or v Aquarii, as a third star.
24. sacd al-sucud, f>% Aquarii + c1 Capricorni.
26. al-fargh al-mukaddam (also al-fargh al-awwat), oc[3
Pegasi.
27. al-fargh al-mu^akhkhar (also al-fargh al-thdni},^
Pegasi + a Andromedae.
28. batn al-hut (also al-rishd^). (3 Andromedae.
Some authors additionally register the names of
some stars, or spots in the sky, near which the moon
is seen when failing to reach her proper mansion,
whereas the interstices between two mansions,
generally, are called furdja (see Ibn Kutayba, 86; alMarzuki, 196 f.; Ibn Slda, 12; Ibn ManzGr, 1800 =
al-TTfashi, 205; al-Blrunl [1], 351 f., tr. 353 f.).
The knowledge of the 28 lunar mansions has lived
on into modern times, and agricultural calendars
formed according to them are still today found in
various regions of the Arabic-speaking world and its
neighbourhood (cf. Landberg, Cerulli, Monteil, Serjeant, Hiskett, Galaal, and the literature cited there;
less so consistent are the observations reported by C.
Bailey, q.v.). Such calendars are already known from
mediaeval times (see Liber anoe [ = Kitdb al-anwd^,
Spain, 961 A.D.; translated into Latin by Gerard of
Cremona], and Ibn al-Banna?); they appear to continue older astro-agricultural traditions as paralleled
in Ptolemy's Phaseis and the Babylonian mul APIN
texts.

MANAZIR, or 'ILM AL-MANAZIR, the science of optics. The term al-manazir (pl. of a. manzar or manzara, from nazar, "to look at") was used by the Arabic translators of Greek scientific writings as equivalent to ῥαξυξα, optics or the theory of vision. The feminine manzara in the sense of "aspect" or "appearance" (the way a thing or a group of things looks) is attested in al-Šāmilī fī wuz al-dīn al-tairi, where the plural manzārīn is also used in the same sense (ed. A.S. al-Nashšārī et alii, Alexandria 1969, esp. 476-7, 479, 483-4).

The kalām literature, to which al-Djuwayni’s al-Šāmilī belongs, adopted ḥuyūl both for the light rays emanating, for example, from the sun, and for the visual rays (i.e. rays emanating from the eye) which, according to Mu’tazili and Ash’āri kalām, were the vehicles of vision (see the relevant sections in al-Kādi ‘Abd al-Dżabbār’s al-Mughni, iv (Ru’ya al-Bārī’), ed. M.M. Hilmi and Abu 1-Wafa al-Tażāzāni, Cairo 1963, esp. 59-79). However, in the medical literature deriving from Galen, we find the word manazir used in the sense of visual rays (Galen’s ὀξύς), and it is in this sense that Hunayn b. Ishākh speaks of "the reflection (maksiār) of al-manazir" (cf. M. Meyerhof, The book of the ten treaties of the eye ascribed to Hunain ibn Iṣḥāq (809-977 A.D.), Cairo 1928, Ar. text 109; Meyerhof translated manazir here as “images” — see p. 36 of his English translation in the same volume — but cf. the Arabic version of Galen’s De usu partium, Excerpta ms. 850, fol. 29b). It may be noted that the Greek writers on optics, Hero, Euclid, Heron and Theon, used ὀξύς and ἀκραύλιον interchangeable to designate visual rays (cf. A. Leujeune, Euclide et Ptoleme, Louvain 1948, 18-21).

In the scheme of the sciences inherited by mediaeval Islamic scholars from the Greeks, optics was considered a mathematical science. But Aristotle had already characterised optics as one of "the more physical of the mathematical disciplines," a group of enquiries which also included astronomy and harmonics (Physica, i.2). And although Euclid’s book on Optics (ca. 300 B.C.) was formulated almost exclusively in geometrical terms, physical, physiological and even psychological elements tended increasingly to mingle with geometrical considerations in the writings of later Hellenistic mathematicians. Thus for example, Hero of Alexandria (1st century A.D.) compared the reflection of visual rays to the behaviour of projectiles when they strike a hard surface (cf. his Catoptrica, iii, in Heronis von Alexandria Mechanik und Katoptrik, ed. and German tr. L. Nix and W. Schmidt (Heronis Alexandrini opera quae supersunt omnia, i, Leipzig 1900), 322-5). The (lost) first book of Ptolemy’s Optics (2nd century A.D.) expounded a theory of luminous radiation as distinguished from the emission of visual rays; the same work dealt with binocular as well as monocular vision; and it mentioned a certain discorritio (or retigita), a psychological faculty to which was assigned a certain vague role in visual perception (cf. L’ Optique de Claude Ptolémée dans la version latine d’après l’œuvre d’Emile Eugène de Sicile, édition critique et exégétique, Albert Lejeune, Louvain 1965, index and 22, n. 22; and 62, n. 81).

In the Islamic period, this tendency shows itself early in a work by Abū Yāṣūf Ya’qūb b. Iṣḥāk al-Kindī (3rd/9th century [q.v.]), which survives in a 12th century Latin translation entitled De aspectibus (Al-Kindī, Tidus and Pseudo-Euclid: drei optische Werke, ed. A.A. Björnbo and S. Vogl, Leipzig and Berlin 1912 [A. Aboul foqawent Lejeune, Vor der Geschichte der Mathematischen Wissenschaften mit Einschluss ihrer Anwendungen, Heft, XXVI, 3]). Here al-Kindī considers optics to be a mathematical science (ars doctrinaris: ʾilmin tarbiyya), but on one which must satisfy physical as well as geometrical principles (ibid., 3); and he opens his book with a treatment of rectilinear light radiation and the formation of shadows, thus departing from Euclid’s presentation but in agreement with Ptolemy and, it appears, Theron of Alexandria (see the Introduction to Theron’s Recension of Euclid’s Optics in Euclides Optica, Opticorum recension Thomei, Catoptrica, cum scholiis antiquis, ed. I. L. Heiberg, Leipzig 1895, 144 ff.; French. tr. P. Ver Eecke, in Euclide: l’Optique et la Catoptrique, Paris 1959, 53 ff.).

With Ibn al-Haytham [q.v.] in the 5th/11th century, we reach an entirely new stage in the conception of the nature of optics. His great Kitāb al-Manazir ("Book of Optics", of which several manuscripts are extant) begins with the assertion that optics is a synthetic branch of inquiry that combines mathematical and physical considerations. But this was not merely to continue the trend that had already started in late antiquity. Ibn al-Haytham’s position implied a complete break with the visual-ray hypothesis which had been consistently maintained by the entire mathematical tradition from Euclid to al-Kindī and by the medical tradition of Galen and his Islamic followers. Ibn al-Haytham opted instead for the view of "physicists" (tabībṣayn) or natural philosophers, according to which vision consisted in the eye’s reception of a form (ṣūra) emanating from the object seen. But again, this was not a mere imitation, and his theory was the first attempt to treat this view mathematically. The result was, therefore, not only a new doctrine of vision, but also a new methodology. In other words, Ibn al-Haytham was led to formulate problems which either would not have made sense from the standpoint of the visual-ray theory or had been ignored by philosophers aiming primarily to give an account of what vision is rather than an explanation of how it takes place.

Ibn al-Haytham was also convinced that an intramission explanation of visual perception was essentially incomplete without a theory of the psychology of perception, and he accordingly devotes a considerable part of his K. al-Manazir to such a theory. His argument is that since the eye can only receive impressions of the light and colour in the visible object, all other properties of the object, including the fact that it is situated in outer space, must somehow be "inferred" from the received visual material. His theory then consists in describing the models of inference (kāyā) which the "faculty of judgement" (al-kawāna al-nanaghyya) employs in achieving the perception of such visual properties (ma’ānī maḥṣara) as distance, size, shape, opacity, transparency, beauty—in fact, all properties other than light and colour as such. Ibn al-Haytham wrote substantial treatises on the burning sphere and burning mirrors of various
shapes, on the formation of shadows, on camera obscura phenomena and on the halo and the rainbow. Yet none of these phenomena is treated in the Kitab al-Manazir. The book thus illustrates a restricted conception of the phenomenon of light and color. The influence of Ibn al-Haytham's book upon later writers on optics both in the Muslim world and (through a mediaeval Latin translation) in the West can hardly be exaggerated.

It is remarkable that two centuries-and-a-half had to elapse before the Optics of Ibn al-Haytham began to exert any appreciable influence in the Islamic world, by which time the book had already made a deep impression in Europe (especially on Roger Bacon, John Pecham and Witelo). Towards the end of the 13th century, the Persian Kamal al-Din al-Farisi [q.v.] rescued the Optics from near oblivion by writing a large and critical commentary on it, entitled Tanbih al-Manazir bi-dhawi 'l-absdr wa 'l-basd^ir. In this work, Kamal al-Din went beyond discussion of the matters treated in the K. al-Manazir, adding, among other things, recensions (sing. tahrib) of Ibn al-Haytham's treatises "On the halo and the rainbow", "On the burning sphere", "On the formation of shadows" and "On the shape of the eclipse". We have here, then, a book on optics that is not entirely restricted to questions related directly or indirectly to vision. And yet the book does not include a discussion of burning mirrors, a subject which Ibn al-Haytham had thought fit to include in a (non-extant) treatise "On optics, according to the method of Ptolemy". (As for gnomon shadows, these were generally considered a separate subject to be treated in a separate category of writings sometimes referred to as Kutub al-AzAlI, "books on shadows.") But the narrow conception of optics proved tenacious; when in the 10th/16th century Taki al-Din Ibn Ma'ruf (d. 993/1585) wrote his Nur hadakat al-'ibar wa-nur hadakat al-abjar (Bodleian ms. Marsh 119) for the Ottoman sultan Murad III, he based himself directly on Kamal al-Din's Tanbih. But rather than include the topics appended by the Persian mathematician to his commentary on Ibn al-Haytham's K. al-Manazir, he limited himself to the subjects treated in the earlier work.

**Bibliography:** In addition to works, cited in the article, see the bibliography to the Arabic-Latin translation. An English translation of Ibn al-Haytham's K. al-Manazir is forthcoming. (A. I. SABRA)
Manbidj

Nahr Sadjur and on the Syrian Higher Euphrates, published in Holocene settlement in North Syria by Paul Sanlaville and others in the BAR International Series, Oxford 1985, no. S 238. Under the Umayyads, a section of the Banū Taghilī [q. v.] settled on the east bank of the Euphrates and led a nomadic existence near Manbidj, although the bulk of the tribe was established between the Khābūr [q. v.], the Euphrates and the Tigris. They were to distinguish themselves at the end of the 7th/13th century in the struggle against the Tatars. Palgrave (Narrative, London 1865, i, 118) mentions in the region the presence of a modern tribe, the Shammar, who are said to be related to the Banū Taghilī. According to A. Musil (Middle Euphrates, 281), the tribe of the Tarleb (sic) was still leading a nomadic existence at the beginning of the 20th century in the arid plain between Manbidj, Rusafa and the heights of the Qabar Bishrī.

After having been "the mustering point of the Roman expeditions directed against the Sasanid Empire which followed the route of the Euphrates", the latter being a military communication route parallel to the river on the western bank, Manbidj was an important centre of the lines of Chalcis, linked to Aleppo by a Roman causeway, before becoming the capital of the Araiṣīm in the ʿAbbasid Golden Age. In the Middle Ages, it continued to play an important strategic and military role as a bulwark against invasions from the east. The town being not only a staging-post, but also a major road-connection to the west of the Euphrates, on the route which maintained connections between the Mediterranean world and the Asiatic world, between the valley of the Orontes and that of the Euphrates.

A further crossing-point was further south at Ayn Taby (Edessa), opening into the Euphrates. From this point a single stage to the east, as far as the region of Balisāk and, in particular, three junctions leading to routes from northern Syria towards the Djazīrah. At the confluence of the Balīth and the Euphrates, Manbidj was reached from Halab in two days’ journey, passing through Bāb and crossing the Wādī Būtnān [q. v.], a distance of ten farasākhs [q. v.] (approximately 80 km.). From this point a single stage (marhala) remained to be covered. Yākūt gives a figure of three farasākhs to arrive at Qāṣir Manbidj, where the Euphrates could be crossed by means of a bridge of boats, a crossing made today by ferry-boat. From Manbidj, "Ayānī, Kirmīsh (Cyrrhus) could be reached in two days and Malaya in four.

It seems that the darb sulṭānīyya, which passed through Manbidj on the way to ʿIrāk, changed direction at the end of the 8th/14th century, crossing the Euphrates at the latitude of Sīflīn and Rākkā [q. v.], and the route was shifted further to the south. At the beginning of the 20th century, as Franz Cumont testifies, "caravans or ʿarabās [q. v.] setting out towards Ourfā (Edessa) and Mossoul still pass through Manbidj towards the same crossing, where ferry-boats transport them to the left bank of the Euphrates."

Manbidj was again in the Assyrian Empire on its way from Hamā towards the north-east. Protected against the Franks by Bārīn, Fāmīya and Kafar Tāb, it permitted access to Djiāzīra by way of Manbidj, avoiding Halab.

Today, the road from Halab to Manbidj, via Bāb (78 km.) is well-asphalted, as is that leading from Manbidj to Djarablus (37 km.), where the Euphrates is crossed by a metal bridge.

Shortly before the reign of Alexander the Great, in the 4th century B.C., the town was in the hands of a dynasty surnamed ʿAbd Ḥadād (= worshipper of Ḥadād, the god of thunder), who had coinage struck there. For a long period of Antiquity, Manbidj was a religious centre dedicated to the cults of Atargatis and her consort Hadrāt. In the Byzantine period, Manbidj played an important military role in countering invasions from the east. The Greeks endowed it with a double rampart and a temple owning an important treasure, which Crassus sacked before setting out with his legions to fight the Parthians and dying, the victim of an assassin, in 53 B.C.

From the 3rd century onwards, through the good offices of Septimus Severus, the town became, in its role as a bulwark against the Sasanid Persians, one of the principal bases of the "lines of Chalcis". From there, in 363, Julian the Apostate led an expedition against Ctesiphon, in the course of which he was mortally wounded.

Manbidj was part of the Cyrrhestian province, before being promoted by Constantine II, in the middle of the 4th century, to the status of capital of Euphrates Syria. In A.D. 451, the campaign against Manbidj was Stephen of Hierapolis. At the end of the 5th century there lived there an innovative theologian, the Monophysite bishop Philoxenus of Mabbuh, who had a Syriac translation made of the New Testament and published a commentary to it; he died in exile in Thrace in 523. In April 531, Kawāḏ, Emperor of Persia, occupied Hierapolis; Belisarius arrived to resist the invasion and in the same year inflicted a defeat on the Sasanid army at Callinicos, near the confluence of the Balkh and the Euphrates. In 532, Kīrā Asnūrīān, the new Persian sovereign, offered Justinian a treaty of "permanent peace" which was to be commemorated by a monument at Manbidj, but in 540 he attacked the town, which was obliged to pay a ransom for its liberation. It was in this period that a temple of fire was built in the town by the Sasanid Emperors. Kīrā gave the town the name of Manbik, which was arabised into Manbidj.

During the 5th and early 6th centuries, the Byzantine emperors, including Justinian, maintained Hierapolis/Manbidj as a front-line stronghold against the East. In 612, the Persians invaded Syria, took Jerusalem on 3 May 614 and occupied Alexandria (617-19). Heraclius reacted and succeeded in restoring the situation and, in March 650, he came to Manbidj to receive the True Cross which the Persians had carried off from Jerusalem in 614. The chronicler
Pseudo-Dionysius mentions in Manbij a church of Saint Mary and a church of Saint Thomas. According to Ibn Khurradadhbih, in the 3rd/9th century there was there a very fine church built of wood.

In the time of the caliphs 'Umar and of 'Uthmān, after the conquest of Syria, Manbij was one of the sa'awāsim, fortified posts which marked the frontier between the Dār al-İslām and the Byzantine province of Antioch.

In 16/637, the inhabitants of Manbij were attacked by 'Iyād b. Qālimīn, who had been sent as vanguard by Abū Ubayda b. al-Djarrah [q. v.]. They capitulated, and the treaty was ratified by Abū 'Ubayda when he appeared before the town. The surrounding areas of the town were at this time occupied by Yemeni tribes and, in particular, the Banū Taghlib.

Under the Umayyads, according to the testimony of the Monophysite Christian poet al-Abhāl (20-92/640-710), the Banū Taghlib, his own tribe, were settled between the Tigris, the Euphrates and the Khālīs. They had founded Manbij and spread as a nomadic existence towards the west as far as the fertile region of Manbij. Situated in the frontier zone of northern Syria, Manbij seems to have enjoyed a degree of independence, in view of the fact that its inhabitants had requested permission from 'Umar to practice commerce in the interior of the caliphate. The Banū Taghlib, b. Muhammad, emir of Antakiya and of Manbij. Two years after the death of the governor of Antakiya and of Manbij al-Hamadhani, Manbij was shared between the Banū Taghlib as a cousin of the prince of Halab, and the Ikhshīdīd whom he put to death, and occupied Manbij in his turn.

In the early years of the 6th/12th century, Manbij or Kalb, a fortified town stretching from the limits of the territory of Halab to the Sadjur and the Euphrates. Not far from Balis is situated Manbij, a fertile and fortified town where there are numerous very ancient markets, rich in Greek relics. One of the local products is a kind of nougat made of dried grapes, made with nuts, pistachios and sesame. The products is a kind of nougat.

Not far from Balis is situated Manbij, a fertile and fortified town where there are numerous very ancient markets, rich in Greek relics. One of the local products is a kind of nougat made of dried grapes, made with nuts, pistachios and sesame. The products is a kind of nougat.
was to be coveted by the Atabeg of al-Mawsil, Djawâl, by Ridwan b. Tutush of Halab and by the Franks. In Safar 502/September 1108, after Djawâl seized Manbij, they joined it to the archbishopric of Tell Bashîr, subject to the Latin Patriarchate of Antioch. Shortly afterwards, the Franks lost the town, to which they were never to return, but there was to be for a long time a Latin prelate consecrated bishop of Manbij in partibus.

In 514/1120, the territory of Manbij was attacked from Tell Bashîr by Joscelin who, barely released from captivity by Djawâl, had crossed the Euphrates on his way to Antioch and, arriving at Manbij, was unable to resist pillaging the lands belonging to Ridwan of Halab. In spring 517/1122, after the amir Hassân b. Gûmûshügin, a Turkish lieutenant of Balak at Manbij, had taken prisoners in the territory of Edessa, Joscelin returned to pillage the region by way of reprisal. In 518/1124, the Arûkûd Nûr al-Dîn Awâlî, the son of Awâlî, b. Amrûk [p. 489], the nephew of U Ghâzî, having become master of Halab, took refuge at Tell Bashîr. Balâk occupied Manbij after the death of the latter in Ramadân 516/November 1122, resolved to attack Tell Bashîr. He entrusted an army to his cousin Husûl al-Dîn Timûr-Tâsh and asked him to invite Hassân to accompany him. Suspicious of Hassân’s lukewarm response, Timûr-Tâsh arrested him and occupied Manbij; while Iîsâ, the brother of Hassân, took refuge in the citadel of Manbij and appealed for help to Joscelin of Edessa, offering him the town in return for driving away the troops of Balak. Joscelin marched towards Manbij with Geoffrey the Monk, lord of Marash, and in Safar 518/March-April 1124, was confronted by Balak as the latter was preparing to attack Manbij. The Franks suffered a grave defeat; Geoffrey was killed, Joscelin fled and took refuge at Tell Bashîr. Balâk occupied Manbij and attached to the princes of Halab, to which he wished to hand over to his cousin Timûr-Tâsh, but on 19 Rabî’û 518/6 May 1124 an arrow shot from the citadel wounded him fatally. His troops disbanded, Timûr-Tâsh brought the body back to Halab and took power there, while Hassân, released from detention, returned to Manbij.

In 520/1126, the Atabeg Barsûkî of al-Mawsil, on a journey through Syria, passed beneath the walls of Manbij. The following year, in Rabî’I 521/April 1127, ‘Imâd al-Dîn Zangî, having become Atabeg of al-Mawsil and master of Halab, did not hesitate to seize the important road junction of Manbij. In 525/1131 Joscelin de Courtenay besieged Tell ʿAran, a site between Halab and Manbij. Injured by a collapsing undermine, he was carried to Tell Bashîr, where he died. The governor of Manbij, accompanied by the amir Sawâr of Halab, took advantage of the situation by attacking the knights of Edessa.

When the Byzantine John Comnenus attacked the region of Manbij in 536/1142, he did not take the town. Two years later, Manbij contributed a contingent of Turkomans to the army of Zangi. On the death of the latter, in 541/1146, his son Nûr al-Dîn, on his way from Halab to lay siege to al-Ruḥâ, passed through Manbij with his siege machinery. It was the amir of Manbij, ‘Îsâ, cousin of Nûr al-Dîn, loyal ally of Nûr al-Dîn, who by taking Tell Bashîr in 546/1151, put an end to the County of Edessa.

In 553/1158 Mağd al-Dîn Abû Bakr, foster-brother of Nûr al-Dîn, governor of the province of Halab, warned by the amir in command of Manbij of a conspiracy against Nûr al-Dîn, failed the plot which had been hatched during the illness of the latter and was to have been put into effect in Muharram 554/February 1150. When Hassân al-Mansûr died (562/1167), Nûr al-Dîn gave Manbij in iktîsâd to Ghâzî b. Hassân, but the latter rebelled and the sovereign then came in person with Mağd al-Dîn Abû Bakr b. al-Dâyâ and Asad al-Dîn Shûrkhîn, in spring 563/1168, to take the town after a full-scale siege. He deposed Ghâzî and gave the place in iktîsâd to Kûb al-Dîn Inâl b. Hassân, the rebel’s brother. Nûr al-Dîn consolidated the defences of Manbij, constructing there, as at Halab, a protective outer wall. After 563/1167 he also built there a Shâfi‘î madrasa for Ibn Abî ‘Uqrîn, while Kûb al-Dîn built one for the Hanafs.

On 14 Shawwâl 571/April 1176, Salâh al-Dîn (Saladin) launched an offensive in northern Syria against Sayf al-Dîn of Halab. He headed towards the north-east, in the knowledge that Manbij was held by Kûb al-Dîn Inâl b. Hassân, a resolute enemy of the Ayyûb sovereign; the siege-engineers had already begun their work when Inâl offered to surrender, giving up his citadel and his treasury, in exchange for safe-conduct. The prospect of taking Manbij had occasioned the appearance of the Franks, and they persuaded Salâh al-Dîn, who permitted Inâl to make his way to al-Mawsil. Manbij was taken on 29 Shawwâl 571/11 May 1176, and the victor found significant spoils there. Salâh al-Dîn recalled his nephew Taḵî al-Dîn ‘Umar b. Turân Shâh, who was seeking to impose his authority in Egypt, and gave him fiêldoms in Syria, including Manbij. In 577/1181, Taḵî al-Dîn al-Muzaffar ‘Umar, prince of Hamât, while in Manbij, attempted to bar the road from Halab to ʿIzz al-Dîn Ibrahim Ibn al-Mukad-dam, but he failed and was forced to retreat to Hamât. In Ramadân 579/June 1179, Salâh al-Dîn appointed his brother al-Malik al-ʿAdîl governor of Manbij and, two years later, he added a minaret to the Great Mosque.

It was during this period (Rabî’I 580/June 1184) that Ibn Dhuqayr, coming from Harrân, mentioned the purity of the air, the beauty of the landscape, the abundance and quality of the water of Manbij. He described its broad streets and markets, noted the piety of the Shâfi‘î inhabitants, mentioned the ancient defensive wall as well as the remains of Roman buildings, and referred to the separate and isolated citadel.

In 586/1190, Manbij, then ruled by Nâṣîr al-Dîn, son of al-Muẓaffar Taḵî al-Dîn ʿUmar, was an important rallying-point for troops setting out to fight Frederick Barbarossa.

In 588/1192, al-Malik al-Zâhir, third son of Salâh al-Dîn, sought to assert control of Manbij, appealing to al-Malik al-Mansûr of Hamât to lend him his support against al-Malik al-Adîl. But al-Mansûr refused to give up the town which controlled the communication routes towards the north-east, the valley of the Upper Euphrates and Diyar Muṣrûj. In Radjab 589/April-May 1193, al-Malik al-Zâhir and al-Malik al-Adîl attacked Manbij; al-Zâhir destroyed the citadel to prevent it being used by an enemy and the town, deprived of defences, was given in iktîsât.

In 591/1195, Manbij was dependent on al-Mansûr of Hamât; al-Malik al-Zâhir came from Kınınsîn to attack it, but he was obliged to return to Hama to Damascus and he abandoned the operation. In Dhul ‘I-Ḥaḍחa 595/September 1199, al-Malik al-Mansûr...

Ca. 600/1204, Manbîdî was a much-frequented place of pilgrimage. At the end of the 6th/12th century the Harâwî refers to the town, no longer to be seen, of al-Hâkâm b. al-Mu'talîb b. 'Abd Allâh b. al-Mu'talîbî, an eminent Kuraşî who lived at the end of the Umayyad period and is said to have died in Syria. This author mentions the mashâd al-Dîn al-Khâdir and the 'mashâd al-dîn al-nûr', where it is claimed that there lies the tomb of some prophet. Ibn Shaddâd (1'îdîl, 57) confirms the existence of this monument, the 'mashâd al-nûr', a personage of the faîrâ [q. v.]; this tomb was situated to the east of Manbîdî. There was also a masjid al-mustâdîf, an oratory where vows were fulfilled. Also mentioned is a 'Temple of the Moon which was a place of pilgrimage for the Sabians'.

In 598/1202, al-Malîk al-Zâhir Gâhîzî who, like al-Malîk al-Afdâl, did not recognise the authority of al-Malîk al-Adîl, sent al-Mubârizâdîk, one of his senior amîrs of Halâb, with troops to take possession of Manbîdî and of Ka'fât Nadîm. Shâms al-Dîn was taken prisoner and incarcerated in the citadel of Halâb. Henceforward, Manbîdî was incorporated among the territories of Halâb, and the domination of the Bânû l-Mukâddâm came to an end. The amir al-Malîk al-Adîl as overlord, and the latter, in 598/-1202, granted Manbîdî to a man named al-Malîk al-Adîl as overlord, and the latter, in 598/-1202, granted Manbîdî to a man named al-Malîk al-Adîl, who struck coinage at Halâb, took it back from al-Malîk al-Adîl, and later returned it to the small town. In 604/1208, the amir of Halâb, who restored defensive walls. At the approach of al-Malîk al-Asfârâz, who had succeeded al-Malîk al-Adîl as head of the Ayyûbîs, Sârîn al-Dîn advanced against the Ayyûbî army, suffered a decisive defeat and lost the town. In 625/1228, the army of Di'llâb al-Dîn Khârażmî-Shâh [q. v.] advanced to Manbîdî, but withdrew at the approach of winter. In 631/1234, al-Malîk al-Asfâr Muhammad received orders from the Ayyûbîd supreme ruler al-Malîk al-Kâmil to muster troops at Manbîdî in preparation for an assault on Tell Bâshîr; as a result, the chieftains assembled on the plain of Manbîdî including al-Malîk al-Asfârî Muhammad, al-Kâmil, al-Malîk al-Mughîth b. Hîmîs, al-Malîk al-Mu'azzafâlî of Hamât and al-Malîk al-Nâsîr of Karak; the commander of the operation was al-Malîk al-Mu'azzam Tûrân Shâh, cousin of the prince of Halâb, who was reponsible for bringing these leaders together.

In 634/1236-7, at the end of the reign of al-Malîk al-Asfârî Ughûfârîn, further construction work was done to the Great Mosque of Manbîdî. In 636/1238, al-Mu'azzâm Tûrân Shâh brought his army to occupy the town, which gave shelter to refugees from Ra'ka and Bâlîs fleeing before the Khârażmîs. In 637/1239-40, the latter, crossing the Euphrates once more, routed the troops of Halâb and marched against Manbîdî on Thursday 20 Rabî' II/8 November 1240, the population took refuge within the fortifications, but the town was taken by assault three days later and burnt. The Khârażmîs massacred a great many of the inhabitants before re-crossing the Euphrates. Al-Malîk al-Manûsir retrieved the town. In Djumâdî I 640/November 1242, on their way from Ka'fât Dî'llâb, al-Malîk al-Manûsir and al-Malîk al-Mu'azzaf stopped at Manbîdî before reaching Halâb.

When the Mongols of Hûlûgî [q. v.] crossed the Euphrates in their turn, in the course of their headlong invasion of the West, having taken Bâlîs in Dhu 'l-Hijjâdî 657/November-December 1259, they turned towards the north and sacked Manbîdî; and then attacked Tell Bâshîr before returning to their base at al-Rûhâ.

With the arrival of the Mamlûk sultans, the post of Dju'âr of Manbîdî, which had been occupied by Awadh al-Dîn b. Shâms al-Dîn Abu 'l-Abd al-Âlah Muhammad b. Ma'hâmîd al-Isâhâbî (616-88/1219-89).

In the treaty which the sultan Kalâwûn concluded with Leo of Armenia on 1 Rabî' II 684/6 June 1281, Manbîdî is mentioned among the "Egyptian" towns. According to Ibn al-Shâhâna, it contributed to the sultan's divan a sum of approximately 500,000 dirhams per year, based on various levies of the region of the Syrian Upper Euphrates. It is known from al-Kalkashandî (1418), that the region was dependent then upon the nâbîb of Halâb and that its governor was a djûndî, mu'azzâm of the halâb [q. v.], appointed by tawqî karîm and enjoying an ikât[-]. In Dhu 'l-Hijjâdî 721/November 1231, the place became the objective of the Turkomân amîr Mintâshî, who came to attack it; the siege lasted several days, and finally Manbîdî was taken and burnt, and a large section of the population massacred. A few weeks later, the amîr of al-Rûhâ joined battle with Mintâshî, who was defeated, taken prisoner and sent to Qâlîbân, vicerey of Halâb (early 722/late 1321).

In 748/1347, a major plague of locusts infested the region, which, the following year was to be smitten by a serious outbreak of the Black Death. In this period, the town had as its wâli the poet and historian 'Umar b. Mu'azzîfâl al-Ma'ârîfî Zayn al-Dîn al-Wardî, author of a sequel to the chronicle of Abu 'l-İfîdî. In the 8th/14th century, following changes to the road network, Manbîdî played no further part in the postal system (barîdî). Ibn Batûtâ did not pass this way, and the mail between Halâb and the Euphrates, routed further to the south, crossed the river opposite Ka'fât Dî'llâb.

At the beginning of the 9th/15th century, Manbîdî, like many other places, suffered great damage as a result of the invasion of the Timûrî Lang. However, in
the middle of this century, according to Ibn al-Shihna of Halab (in his al-Durr al-muntakhab), it was contributing 40,000 dinars in annual taxation to the sultan’s treasury, a fact which testifies to a degree of economic activity. For his part, the Egyptian Khallîl al-Zâhîrî, in his survey of the province of Halab in the Zubdat kalâb al-mamâlik (mid-9th/15th century), makes no mention of Manbîjī.

In 922/1516, Syria passed under the authority of the Ottoman sultans; the re-organisation of the eastern provinces of the empire and changes in the road network placed Manbîjī on the periphery of the major commercial processes.

In 1784 Volney visited the pashâlîkh of Halab, and wrote: ‘‘Two days’ travel to the north-east of Aleppo is the small town of Manbîjī, formerly renowned under the name of Bambîce and Hierapolis. There remains no trace of the temple of that great goddess, whose cult is described by Lucian.

For the 19th century, two important sources of evidence are worthy of mention, those of Chesney and of Yanovski. In his account of an exploration of the valley of the Euphrates, Chesney provides valuable information concerning the state of Manbîjī at the beginning of the century. He refers to the town and the castle, which were then called Kara Mambuche or Bûyûk Manbîjī, and mentions remains of surrounding walls, square Arab towers and a trench which marked the contours of Muslim city. He describes four large cisterns, a fine sarcophagus and the sparse ruins of the acropolis, the remains of two temples, in the smaller of which were an enclosure and the traces of seven columns. In the larger, which could be that of Atarges, there are, he mentions specifically, traces of massive architecture: eleven arches alongside a paved court, in which there lie the shafts of columns and lotus-shaped capitals. Slightly to the west of the defensive walls there is a necropolis containing many Turkish tombs as well as some which are pagan, Salûdîk and Syriac, the last-named bearing inscriptions with illegible characters. Two roads leave this site, leading to two bridges of boats (qerpâz). Towards Sâdûr, there are the remnants of a kanâbî, partially abandoned, which has supplied Manbîjī with water perhaps since the Assyro-Chaldean period.

To the east of the town there is an aqueduct carrying water from the hills of the Djabal Dana Tağh situated 7 miles to the south-south-east. Two miles to the south is the encampment of the Banû Sâdîb Bedouins, whose herds roam the pasture-lands stretching from Bâlîs to the Sâdûr.

Some years later, J. Yanovski and J. David note that ‘‘as throughout the pashâlîkh of Aleppo, subterranean water-courses abound in the territory of Manbîjī, relayed by communication channels and thousands of reservoirs’’. In this region, Yanovski stresses the contrast between ‘‘the natural magnificence and the human squalor’’. From Manbîjī to the southern limits of the land of Halab, the author describes ‘‘massive plains, which although laid out in the form of fertile steppes, already resemble desert and which are variegated only by a series of low hills with derelict citadels on their summits’’. Yanovski also speaks of ‘‘once luxuriant prairies ruined by the disorderly encampments of nomadic tribes’’.

As for the remaining vestiges of the ancient Manbîjī at the beginning of the 20th century, according to Baedeker (French edition, 1912, 411), ‘‘the extensive ruins of the ancient town are barely visible above the surface of the ground; however, it is possible to recognise the contours of a theatre and of a stadium’’. The Guide Bleu (1932 edition, 165) states for its part: ‘‘besides the perimeter wall, nothing is visible of the remains of the ancient town, the ruins of which have been used as a stone quarry of centuries’’. In the first half of the century, there still existed there a large pool, still stocked with carp similar of those which had been dedicated in Antiquity to the cult of Atargatis. This was, in fact, an ancient sacred lake which, like its equivalent at Marathus (Amrît) on the Syrian coast, was originally flanked by a rectangular stone wall, and in the centre of which there rose an altar of marble, (muâlîbû). In the middle of the 20th century, all that remained of it was a deep unwalled depression without water, the dried-up sacred pool being used as a playground, while its spring supplied a bathing pool from which water was also drawn off to irrigate gardens. Of the successive ramparts surrounded by a broad trench which, since Antiquity had protected the town, there remained nothing but a circular earth embankment and a few vestiges on the north-west side.

Since the 16th century, Manbîjī had been incorporated into Ottoman Turkey. At the beginning of the 20th century it was a regional centre of a kâdî of the vilayet of Halab, joined to the latter since 1913 by a telegraph cable. The region was then inhabited by groups of Kurdish and arabised Turkish families, among whom there were settled, after the Treaty of San Stefano put an end to the Russo-Turkish war of 1877-8, a number of Circassians, Hanafî Muslims [see Çandarlı]. In 1915, at the time of the Ottoman offensive against eastern Turkey, the Circassians were obliged, as a precautionary measure, to join their kînsmen established at Khânazîr, 50 km to the south-east of Halab at the northern limit of the Syrian desert.

In 1921, after the imposition of French authority in the Levant, Manbîjī was incorporated into the third region of the provincial government of Halab.

In 1924, the agricultural zone of Manbîjī was part of the sandjak of Halab; later, it was to contribute one of the seven mintakas of the mubâfaâs of Halab. In this region, in the first half of the 20th century, there existed a tripartite association between the owner of the land, the owner of the irrigation equipment and the farmer, the supplier of water being linked to the exploitation of the land. In this period, irrigation was still operated by the system of kanâbî. Since before 1914, Manbîjī had been an important staging-post for the convoys of humped cattle which, coming from al-Mawâṣîl, made a halt there, which explains the presence in the town, from this period onwards, of a veterinary surgeon who inspected the beasts before they set out for Halab by way of Bâb. In the region of Manbîjī itself, there was livestock, comprising in 1924, according to Ch. Parvie, 386 oxen, 414 calves and 4,182 cows, which made the town an important centre of dairy production. There were also herds of sheep and goats.

In 1930, Manbîjī, where there existed a police station and a magistrat’s court, was incorporated into the kâdî of the Djabal Sama‘ân, which was dependent on Halab. Two years later, the population of the town numbered 2,000, including 800 Circassians and 100 Armenians. In 1945, a census counted 4,653 inhabitants, including the population of the regional centre of the kâdî. According to the official statistics of the Syrian Arab Republic (1982), the population of the town was estimated in 1960 at 8,577, in 1970 at 14,635 (the mintaka or district then numbered 102,730), and in 1981 at 30,844. The significant demographic growth of the region in the course of the last decade is due to electrification made possible by the barrage of Tabkâ on the Euphrates, to the im-

3. Western works: Volney, Narrative, 213; 4. Thakan, Thakan, Fdrs-ndma, (before 510/1116), but only in the com- position Mandistan (cf. below).

The name. As a rule in Persia, sections of a river are called after the districts through which they flow. Mānd is the name of the last stretch near its mouth. The name seems to appear for the first time in the Fārs-nama (before 510/1116), but only in the com- position Māndistān (cf. below).

The old name of the river is usually transcribed in Arabic characters Sakkān (al-Istakhri, 120; Ibn Hawkal, 191; al-Idrīsī, tr. Jaubert, i, 401), but the orthography varies: Thakan, Fārs-nama, GMS, 152; Nuzhat al-kalīb, 134; Zakkān or Zakkān, Nuzhat al- kalīb, 217, Siyārān, Dījān-namā, 247; cf. also Saybān in Hasan Fāsāt.

The identification of the Sakkān with the Şuţān was mentioned in the Periplus of Nearchus (Arrian, Indica, xxviii, 8); this generally refers to the identity of the Sittakos with the Sittagagus (Sitāgagus) mentioned by Pliny, Nat. Hist., vi, 26, as also usually admitted (Weissbach, 1927), but Herfeld (1907) relying on the existence of another river, the Shādkhān (= Sittagagus?), has suggested doubts about the identifi- cation of the Sittakos with the Sittagagus. Now ac- cording to al-Iṣṭakhri, 119, the Shādkhān flows into the Persian Gulf at Dasht al-Dastakēn (north of Būghir)? This Shādkhān must be identified with the river Shāpur. The Fārs-nama, ed. Le Strange, 163, mentions Rūbdīlī-Sittagān ("the banks of the S."), as a station on the road from Shīrāz to Tawwādī. From this fact and especially from the name, Sittagān seems to have applied to the left bank tributary of the Shāpur. Pliny, who follows Onoresciti, adds that by the Sittagagus one reaches Pasargad in 7 days. Whatever be the identity of the Sittagagus, the ex- signation in this statement is evident (especially in the direction of the sea to Pasargad) and the waters of Pasargad (Māḥṣād-i Murgāb) do not flow into the Persian Gulf. But there is nothing to prove the ab- solute impossibility of using the Sakkān as a sub- sidiary means of transport in the season of floods (the winter). According to Arrian, Nearchus found at the mouth of the Sakkān large quantities of corn which Alexander had brought there for his army. Al- Iṣṭakhri, 99, places the Sakkān among the rivers of

Mānndīšt, a district of Fārs which are navigable at need (al-anhār al-khār al-lā'i tamāl al-sufla va'dīi ughrīyat fi-hā).
Another question is the phonetic identity of the names Sītakos (Sitoganus?) and Sakkān. According to the course of the village of Sakk (Nuzhat al-kulub: Zakkān) destroyed from a supposed genitive "Sītakos (Sitakān): Sīto-
gan-us is a mistake for Sītagan-us; lastly, the peculiarity of the Arabic script could explain the change of Sītakān to Sakkān. Here we may add that Hasan Fasaṭ ʿāli gives one of the stretches of the river the strangely written form Saykān ("Sītakān"). Al-
Iṣṭakhrī, however, derives the name of the river from the village of Shīkaft, which separates it from the valley of the
river Shapur. It follows this direction (ca. 100 miles)
to the end of the Asmangird mountains around which it makes a bend and turns south (70 miles). It then meets the parallel ranges which run along the Persian Gulf and continues its winding course to the sea in a westerly direction (140 miles).
The Sakkān (Mānndī) and its tributaries drain and irrigate a considerable area (the Kūh-i Mānndī and the Kūh-i Darang). Al-Iṣṭakhrī says that its waters contribute the largest share to the fertility of Fārs (akhan ʿimārāt).
The sources of the river (Kān-i Zand, Čihišāmga and Surkh-rag) rise in the mountains of Kūh-i Nār and Kūh-i Marra-yi Shīkaft to the northwest, and west of Shīrāz. These streams unite before Kūh-i Zāyān in the district of Māsārm on the great Shīrāz-Karrūn-Būghrī road. Al-Iṣṭakhrī, 120, places the sources of the Sakkān near the village of Shāḥshāfri (?), in the district of Ruwaydīyān (?). In the same author, 130, Kūn al-Asad on the Sakkān corresponds to the modern Kūn-i Zāyān. The Fārs-nāma (and the Nuzhat al-kulub) places the sources of the Sakkān near the village of Catriya (?). Under the Turkish name of Kara ağha, i.e. "[the river of the elm]", the combined streams flow through the districts of Māsārm ( = Kūh-i Marra-yi Shīkaft), Sīyāḵ (al-Iṣṭakhrī, 120: Siyāḵ and Kāwār. In this last district, Rivadāneyra, iii, 81, going from Shīrāz to Fūrahūzābād, crossed the river by a "substantial bridge". It is in the district of Kāwār that Hasan Fasaṭ ʿāli gives the name of the river Saykān. In Kāwār (Hasan Fasaṭ ʿāli) there used to be the barrage of Band-i Bahman, where a subterranean channel (kānāt) part of the water was led into reservoirs (ūnāt) and then to the fields. In the bulāk of Kīhāf (al-Iṣṭakhrī, 105: Kābr̄, which must be distinguished from the district of the same name in the kāra of Iṣṭakhr, the river turns south. Aucher-Eloy, who crossed the river on the road from Fūrahūzābād to Dārāmūn (Dāhrūm) calls it "Tengui Tachka" (= Tāng-i Khākh-i?) and speaks of its "beautiful valley". Rivadāneyra continues his journey from Fūrahūzābād to Dārāmūn crossed the river by a ford between the villages of Tādwan and "Assun-Dscherd" (Asmangird?). He also admires the pleasant and flourishing aspect of Kīhāf. Below the latter, the river enters the bulāk of Simkhān where, near the village of Sarkal, it receives on its left bank, the brackish (šīr) river of Dāhrough, and then flows through the ravine of Kāzān, and waters the bulāk of Kīr-wa-Kāzān. Al-
Battūja, ii, 241: Kūndjibāl = Kūndj + Bāl). In the district of Dīz-gūh (Dīz-gūh-i Shīkaft) the river has two tributaries: near the village of Gābri, the Dār al-
Mīzān, and two farsākh lower, that of Dihram. The Dār al-Mīzān comes from the left (east) side of the bulāk of Asīr. The Dihram, much more important, comes from the right side after watering the historic district of Fīrūzābād (the ancient Ġur, capital of Ardashīr-Khurra; cf. the details in Le Strange, 236, and al-
Fūrahūzābād). Al-Iṣṭakhrī, 121, makes two tributary come from Dārdjān (of Siyāḵ) and water first Shīnayghān and then Ġur (in place of the name of the river Tīrza, al-Iṣṭakhrī, 99, 121, one should probably read Barūzā; cf. the Fārs-nāma, 117-118: Hakīm Barūzā was the sage who dried up the Lake of Ġur).
After Dīz-gūh, the river enters the district of Sanā- wa-Shumbā of the bulāk of Dāhūth, and near the village of Bāghān receives on the right bank the river Ġaniz which comes from the district of Tāsūj-i Daftāt. Finally, near the village of Dūmānlū the river enters the coast district of Mānndīstān and receives the name of Mānndī. It flows into the sea near the village of Ziyārāt, halfway between the old harbours of Naḵgārām (to the north and Sirāḵ (to the south). Mānndīstān. The district forms part of the bulāk of Daftāt (which is to be distinguished from Daftāstān to the north of Daftāt up to Būghrī). Daftāt (36 × 18 farsākh) is composed of 4 districts: 1. Bardstān, the part of the coast in which is the port of Dayyar. 2. Mānndīstān in the coast to the north of Bardstān and the two banks of the river Mānndī. 3. Sanā and Shumbara on the river above Mānndīstān. 4. Tāsūj-i Daftāt, a very narrow valley (12 × ½ farsākh), watered by the Ġaniz and surrounding Sanā and Shumbara from the bulāk Arba-a (on the lower course of the river of Fīrūzābād).
The whole of the bulāk belongs to the torrid zone (garmiy) of Fārs. Mānndīstān (12 × 5 farsākh) includes lands so flat that the current of the river is imperceptible and the water cannot be used for irrigation. Agriculture (wheat, barley, palm-trees) is dependent on the winter floods. The district has 40 villages. The capital of the district and of the bulāk is Kātī. There used to be two rival families in Mānndīstān: the Shāykhīyān and the Hāḏēḏjān. During the disturbances under Ġurī rule (1722-9) the Hāḏēḏj Raʾīs Djamāl exterminated the Shāykhīyān and founded a little dynasty of hereditary governors, who were able to annex the district of Bardstān through matrimonial alliances. One of his descendents, Muḥammad Kān (d. at Būghīr in 1298/1881), was noted as a poet under the pen-name of Daftāt.
Hasan Fasaṭ ʿāli explains the name Mānndīstān by a popular etymology: "the place where the water flows slowly (vaʿamānda)". Names in -stan are common in Fārs (Lārīstān, Bardstān), but even if such a formation was possible in a river-name, the element Mānd would still be a puzzle. It is curious that Hasan Fasaṭ ʿāli sometimes writes it Mānd (read Mānndī) and sometimes Mūnd (read Mūnndī). It might be suggested as a
pure hypothesis that there is a connection with the people Mnd (cf. Med) of which there might have been a colony in Mandinsit.

MANDA, an island off the coast of Kenya. It lies in approximately 2° 12' s, 41° E, on the east side of Lamu Island [q.v.] in the Lamu Archipelago. There is a small modern settlement at Takwa Milinga, near the ruined walled town of Manda, which gives the island its name. It was finally destroyed by Fumo Luti, Sultan of Pate, in 1086. Its sole mention in Arabic literature is as a Mandan, in the 11th century. It has been widely mentioned as an island of the east coast of Kenya by various authors, including [see kilwa], as one of the settlements at which a son of the founder was set up; the Arabic form presumably represents the Swahili Manda Kuu, or Great Manda, recorded by A. Voelktzow. Al-Idrīsi’s reference M.l.n.d. more probably refers to Malindi [q.v.]. According to the traditional Ḥabari za Pate (“History of Pate”), it was founded earlier than Pate, by which it was conquered later. However, it was of sufficient importance to pay tribute to the Portuguese separately from Pate, and it was its failure to do so that led to reprisals by the Portuguese in 1569, when many houses and some 2,000 palm trees were destroyed. In 1637 it was required to demolish its defensive walls.

H.N. Chittick carried out excavations at the site between 1967 and 1982. (These have been entirely filled in, and there is scarcely anything to be seen, other than the remains of two mosques.) There are massive stone walls on the western and northern sides abutting on the shore, and the remains of later walls on the south-west and south-east of the site. These walls are distinguished by Chittick as mega-walls and maxi-walls: the mega-walls are of blocks of stone weighing up to 4 tons each. The stone used, in both cases, is coral, quarried from a nearby reef which can still be identified. The walls provided stability for the sand dunes, so that houses could be built on the resulting terraces. These constructions are similar to ones observed by the writer at Šijhr in South Yemen. The houses were built of coral, but also used brick. Very similar bricks have been found at Šijhr, Ṣūma, and were probably brought from there as ships’ ballast unloaded here in order to take on cargoes of mangrove timber. Certain houses have brick cisterns, and one, with a sunken courtyard, is similar to one known in Sirāf. Po contra, the lay-out of the houses, however, is compared by M.C. Horton to types known from the Red Sea. Glazed and unglazed imported Islamic pottery, in which the earliest period of the site can be paralleled closely in the Whitehouse’s excavations at Sirāf [q.v.], and some was certainly made in the Sirāf vicinities. It need not be concluded, however, that Manda was a colony of Sirāf. Rather, its connections with the Red Sea, and also with Šihr, suggest that it served both the Red Sea and the Persian Gulf as a trading port, already in existence in the mid-8th century, busied chiefly in the ivory and mangrove trades, in a region in which they abound naturally. A curiosity is an arcade building with open sides, probably of the 13th-14th centuries, and most likely to have been a covered market, albeit it has been fancifully described as a “kiosk”. There is a Friday mosque and another mosque, of 14th-15th century date. Only six coins have been found, two of them Ḥāfīzīd, and apparently from Sicilian mints, an indication of the red-sea prosperity in this region. For the architecture of the mosque, see Chittick, ed. of Archiv d. Orientforschung. (The plate published by Chittick is illegible.) There is no trace of there having been a local currency. At Takwa there is a well-preserved Friday Mosque and quite a number of houses in what was a walled town of some 12½ acres. The mosque appears to be of the late 15th or early 16th century, and was cleared by J.S. Kirkman. Per contra, the pillar that rises above the roof of the mihāla is not of religious significance. Examination of the side walls discloses stumps of what were a series of pillars that originally provided an open clerestory below the roof, a feature still perpetuated in domestic architecture on Pate Island. A curiosity in the mosque ablutions is the decoration of the cistern with three plates: the latter author, the pillar that rises above the roof of the mihāla is not of religious significance. Examination of the side walls discloses stumps of what were a series of pillars that originally provided an open clerestory below the roof, a feature still perpetuated in domestic architecture on Pate Island. A curiosity in the mosque ablutions is the decoration of the cistern with three plates: that in the place of honour in the centre is of Portuguese manufacture, and bears the Cross that is the emblem of the Portuguese Order of Christ. Outside the walls an inscription on a pillar tomb is read by Kirkman (1846) that the tomb of Shaykh Ahmad Mansūr b. Ahmad or “Shaykh Fakīhī Mansūr”, honouring it with an annual pilgrimage from Shola on Lamu Island. The Friday Mosque also enjoys the reputation of being a place of sanctuary. The inability to read the inscription can be taken as an indication of the local level of literacy in Arabic.

Mandates. The mandate (Arabic Manda, Turkish mandatı, from the French) was essentially a system of trusteeship, instituted by the League of Nations after the end of the First World War, for the
administration of certain territories detached from the vanquished states, chiefly the Ottoman and German Empires. The concept of the mandate has been variously understood as either a new world order or, contrariwise, merely as a façade for neo-colonialism, with other interpretations ranging between these two extremes. Essentially, the option of establishing mandates in conquered territories was largely intended to defer (if not quite resolve) three foci or conflict: (1) Among the Powers themselves, particularly the victorious Allies, regarding domination of areas formerly administered by the vanquished — according to their respective global and regional interests and in consideration of secret agreements drawn up during the war years. (2) Between each Mandatory Power and the populations of the to-be-mandated territories — whose elites had become at least partially suffused with assertive patriotism — in an attempt to find methods of fulfilling promises expressed during the war. (3) Among rival sectors within each of these populations, some of which rejected mutual accommodation.

The mandate was not only a response to the real or potential threat of the above conflicts, but also a compromise between the desire of the victors — chiefly France and Great Britain — to maintain their hold on certain areas and the determination of People's Commissaries in Paris, such as the latter mooted separately by Khalide Edlb [q. v.].

The mandate was not only a response to the real or potential threat of the above conflicts, but also a compromise between the desire of the victors — chiefly France and Great Britain — to maintain their hold on certain areas and the determination of People's Commissaries in Paris, such as the latter mooted separately by Khalide Edlb [q. v.].

From a legal point of view, the appointment of a Mandatory took the form of an agreement between the League of Nations and the respective Power, in which the latter was enjoined to promote the interests of the population in the mandated territory and prepare it for self-rule, under the control of the international body — a new conception in political science. The Mandatory had to report annually to the League of Nations’ Permanent Mandates Commission, whose Constitution was approved by the League’s Council in December 1920. The Commission was first appointed in February 1921 and formally supervised the application of the mandates. This Commission, numbering at first nine members (the number subsequently varied), comprised a majority of representatives from countries other than the Mandatory. It usually met in Geneva twice a year, diligently examining reports from the Mandates and petitions by the local population, generally insisting upon the presence of representative officials of the Mandatory for cross-examination. Consequently, the commission’s functions were simultaneous control of and collaboration with each of the Mandatories. It was hampered, however, by the lack of direct contact with people in the Mandated territories and by an absence of any power other than that of relaying observations to the Council of the League of Nations, whose duties included overall observance of the system and its modification where required. In addition, the International Court of Justice at the Hague served as a court of appeals, in certain cases, for the people of the mandated territories.

On a practical basis, the Mandatory thus had considerable latitude in its day-to-day governing and even in much of its decision-making. Nevertheless, there remained certain basic juridical differences between mandates and colonies. The Mandatory lacked exclusive rights and possessed merely a delegated — and consequently limited — authority; hence it was not the sovereign power of the mandated territory.
nor even its protector, in an international sense. Rather, it constituted merely a trustee for... (commander of the Free French forces which entered Syria, together with the British, in June 1941), in September 1941.

The mandates offered differing degrees of autonomy to the local populations — to ʻIrak the most, to Palestine the least, and to Syria an intermediate degree — appropriate to the level of homogeneity of the population (assuming that too much autonomy might be unsuitable for a heterogeneous population). The case of ʻIrak is rather special, however, on other grounds as well. In 1921, even before final approval of the mandate, the British, who had already assumed effective control, invited Faysal b. Husayn (who had been ejected from Syria by the French) to reign over ʻIrak under their aegis, assisting him in setting up the institutions of government [see FAYSAL I]. True to their conception of the mandate, the British created directors' posts at the top level of every Ministerial office and appointed advisers in various administrative departments, as well as local judges. In 1921, an ʻIrakí army was set up, in 1923, a Constituent Assembly was elected, which met in March of the following year and approved ʻIrak's constitution of July 1924. The assembly also approved the October 1922 British-ʻIrakí Treaty which, without explicitly supplanting the Mandate, constituted official legal recognition by Great Britain of ʻIrak's sovereignty, provided the former offered binding advice in international and financial matters. Great Britain indeed successfully represented and defended ʻIrak's interests in the delicate negotiations held with Turkey since 1925 concerning the area of Mawsil [g.o.] which the League of Nations eventually allotted to ʻIrak. Although the 1922 Treaty did not mention the mandate at all, it was nonetheless approved by the Council of the League of Nations on 27 September 1924, as the instrument of mandate.

These moves only satisfied the ʻIrakí nationalists for a brief while, however. Largely due to their pressures, a new British-ʻIrakí treaty was signed in 1930, one which practically terminated the mandate; Great Britain reserved for itself certain rights, largely in the military domain, for another twenty-five years. The League of Nations, however, was the only institution which could terminate a mandate officially — and this was the first time the issue had arisen. Thus the Permanent Mandates Commission set up five pre-requisites for ending a mandate: a settled government and administration capable of running all public services; ability to maintain territorial integrity and political independence; capability of keeping internal peace and order; adequate financial resources for governmental requirements; and a legal and judicial system affording regular and equal justice to all. The Commission had some doubts about the suitability of conditions in ʻIrak for ending the mandate, primarily those relating to the judicial system and minority rights. After lengthy debates, however, in autumn 1932 the Permanent Mandates Commission voted to recommend termination of the mandate for ʻIrak to the Council of the League of Nations. The Council approved and in October 1932 admitted ʻIrak to the League of Nations (the first Arab state to join); thus the 1930 Treaty came into force and the mandate ended definitively. All formal restrictions on ʻIrak as a sovereign state were abrogated, although Great Britain did exercise its rights to intervene in crucial state and security matters until the end of the Second World War.

Syria and Lebanon. The French mandate in Syria and Lebanon, also imposed in 1922, continued to exist for a much shorter period than that of ʻIrak, ending only in 1945. The Mandatory was charged with framing an organic law for Syria and Lebanon within three years and then to lead them into developing as independent states. It was further enjoined to levy taxes, develop natural resources, and establish judicial and educational systems, as well as military forces, these last to be eventually handed over to the local people. All this was conditional on the Mandatory's promoting the well-being of the population and refraining from granting monopolies and concessions to its own nationals to the detriment of the local people or those of those states. The French in Syria accordingly allowed Arab Syrians and Lebanese to staff the administration — although it was headed (in ʻIrak) at its highest echelons by advisers delegated by the Mandatory. The French had a parallel organisation of their own, led by the High Commissioner; furthermore, they not only managed foreign and military affairs themselves, but often intervened in internal matters as well, through their officials. As with the British in ʻIrak, the French in Syria and Lebanon found Francophile Arabs willing to cooperate with them, simultaneously incurring the hostility of the nationalists.

On the whole, the Mandatory had greater success in Lebanon than in Syria. In the former, a representative council was prompted to prepare an Organic Law, in 1925, which was adopted by the Mandatory in the same year; in the following year, Lebanon became a republic with its own constitution, president and government — supervised by the Mandatory (as in ʻIrak). In Syria, however, a serious uprising (called a "revolt" by the nationalists and an "insurrection" by the French) occurred in the Druze region 1926-7, probably brought about by a combination of local grievances and patriotic aspirations; this uprising spread and the Mandatory forces put it down strongly. An attempt to set up a Constituent Assembly, 1926, to prepare a constitution, foundered largely because of tensions between the above groups. In 1930, the assembly was dissolved and the French authorities unilaterally proclaimed a constitution, with the proviso that it could not contradict the responsibilities entailed in the Mandate. In principle, it resembled the Organic Law in ʻIrak, although it was republican rather than monarchical in intent and comprised variations for Syria's different units. An assembly was elected two years later and, in 1936, a French-Syrian treaty was agreed upon. This would have recognised Syria's sovereign independence (in three years' time), while allowing France to maintain its military forces there. However, the Government and Parliament in France did not ratify the treaty and Syria reverted to Mandatory rule, with the French High Commissioner increasing his authority.

All this exasperated the nationalists who, although divided among themselves, were antagonised by the French division of the mandated territory into separate units and by the changes repeatedly introduced. The nationalists were particularly irritated by what they interpreted as the Mandatory Power's actions to increase autonomy in Druze and 'Alawi districts, carve out a "Great Lebanon" and hand over the sultan of Alexandretta (Tartus) to Turkey. Even the declaration of General Gouraud (commander of the Free French forces which entered Syria, together with the British, in June 1941), in September 1941,
that the French mandate had ended hardly convinced the Syrian nationalists, as France insisted on a "predominant position" there. Only at the end of the war, in 1918, did France recognize Syria's independence, thus ending the mandate (the League of Nations had been inactive during the war and was considered defunct, for practical purposes; hence it had no part in this decision).

The mandate in Lebanon developed along parallel although not identical lines. As early as August 1930, the French carved out a "Great Lebanon" which did away with the area's former Christian hegemony and turned Lebanon into an even more complicated mosaic of religious communities. The division of the main official positions, as well as the composition of the elected representative assemblies since 1926, have reflected and institutionalised this complexity. The 1926 Constitution accorded a high degree of home rule to the Lebanese, while granting France important decision-making privileges. A Franco-Lebanese treaty, similar to the Franco-Syrian one of 1936, was drawn up during the same year, but likewise failed to obtain ratification in France. Nevertheless, the difference between Lebanon and Mandatory France led to less violence in Lebanon than in Syria; Lebanon's independence (and termination of the mandate), attained in 1943, demanded fewer struggles that did Syria's.

Palestine and Transjordan. The mandate for Palestine was sui generis in several respects. Unlike the drafts of the mandates for 'Irak and for Syria and Lebanon, the text of the mandate for Palestine did not charge the Mandatory with drafting an organic law, but rather with promoting political, administrative and economic conditions to ensure the establishment of a national home for the Jewish people, while protecting the civil and religious rights of the rest of the population. The Balfour Declaration of 2 November 1917 was inserted into the preamble of this text and certain privileges were granted to the Jews, sc. the formation of an official Jewish Agency to represent them as well as provisions concerning land settlement, Palestinian nationality, the establishment and operation of public works, services and utilities, the development of national resources and the recognition of Hebrew as an official language (along with English and Arabic).

Considering the terms of the mandate and, even more so, the increasing rivalries between Arabs and Jews in Palestine, the British authorities found it difficult to accommodate communities; many official measures antagonised one community, or the other, or both. One of the first such British decisions was to separate Transjordan from Palestine, in 1922, and endow it with a separate administration (to be headed, however, by the same High Commissioner). Relations between the Mandatory and Transjordan were then formalised, in 1928, by a treaty and a Constitutional Law, both patterned on British-'Irak ones and confirmed by the Permanent Mandates Commission.

In both Palestine and Transjordan, the British instituted an administration essentially differing from the colonial ones they had established elsewhere. Its legal authority was based on The Palestine Order in Council, 1922, providing the British administration in Palestine with executive, legislative and judicial powers. The administration was led by the High Commissioner, assisted by a Chief Secretary and other British heads of various departments. Some of the middle-rank positions and most of the lower ones were staffed by local Arabs and Jews — one of their few and highly competitive meeting grounds. All British efforts to establish joint Arab-Jewish bodies, such as a Legislative Council, were doomed to failure. Even when reluctance was overcome, mutually acceptable terms could not be agreed upon: the Arabs wanted such bodies to reflect their statistical majority, while the Jews wished guarantees that they would not be voted down on every single issue. In consequence, both Arabs and Jews in Palestine developed their own separate systems for self-rule, the latter enjoying greater success in virtually developing "a state within a state" in such domains as education, self-defence, elections, trade unions, religious, social and cultural affairs. Many of these were taken care of within an "Assembly of Israel" (Knéset 'Ivriyya al-'alūd), led by the Mufti al-Hādjdj Amin al-Husaynī (q.v. in Suppl.), which succeeded in co-opting a number of Christian Arabs as well.

The 1920-1 and 1929 flare-ups, directed mostly against the Jews, culminated in a large-scale Arab uprising which continued sporadically during 1936-9, against both the Jews and the British. Each was followed by British Commissions of Inquiry, which resulted in official White Papers duly laid before both the British Parliament and the Permanent Mandates Commission. The Royal Commission headed by Lord Peel proposed the partition of Palestine, but this was rejected by both Arabs and Jews. The 1939 White Paper limited Jewish immigration and restricted land sales to Jews, thus appeasing the Palestinian Arabs during the Second World War. After the war, however, it was the Palestinian Jews who acted against the 1939 White Paper policy: in steps initiated by the Jewish Agency and the National Council, they smuggled in Jewish immigrants from amongst the survivors of the Nazi Holocaust, while small groups, disobeying the above bodies, physically attacked British officials and soldiers in Palestine. When neither strong military reprisals nor additional commissions proved to be of any avail, the British, undergoing a process of decolonisation in any case, bowed to Jewish wishes and world opinion. American pressure played a particularly prominent role in this respect, as did the United Nations, before which the issue had been brought in 1947 (and which had decided on partition). Thus the British terminated the mandate for Palestine on 15 May 1948. They had already granted Transjordan formal independence by a treaty concluded in March 1946 and amended in March 1948 in Transjordan's favour (equalising relations, although, in practice, Great Britain remained the new state's preferred ally).

Conclusion: The mandate system was far from a signal success; nor was it a total failure, however. First of all, it succeeded in providing a formula, acceptable to both idealistic statesmen and Realpolitik partisans, for dividing the spoils of the First World War; and, secondly, it represented a modus operandi for the victorious Allies, chiefly Great Britain and France, to maintain their interests in the Middle East without blantly contradicting their mutual agreements during the war and their promises to Arabs, Jews and others. On the other hand, it failed to provide either a solution to tensions between local nationalists and the respective Mandatories, or a permanently satisfactory modus vivendi among the various local population groups within each of the mandates. It was nationalist pressure, escalating into violence, which hastened termination of the physical presence of the
Mandatories in 'Irak, Syria and Lebanon, Palestine and Transjordan. The process itself was part of the new world order following the Second World War, one which witnessed decolonization and the founding of numerous new states, not unrelated to the political, military and economic relinquishing of Great Power status by the British and French. The tensions between Arabs and Kurds, Sunnis and Shi'is in 'Irak, various ethnic and religious communities in Syria and Lebanon, Arabs and Jews in Palestine, or Bedouins and other groups in Transjordan, erupted into violence or even war, were among the more unfortunate aspects of the unresolved legacies of the mandates. It may be that the Mandatories had neither the time nor the opportunity required to tackle these tensions and to set up a lasting accommodation. They were too busy with forging unitary countries and nations in the mandated territories, which had been disparate units in the sprawling Ottoman Empire. Although the Mandatories' fostering of local culture was tempered by a desire to export their own civilisation, they did succeed in encouraging education, setting up a more impartial judiciary, instilling law and order, promoting a national economy, establishing a more adequate taxation system, improving agriculture and irrigation and assisting with public health, roads and communications — all of which led to significant advances towards modernisation.

[1922], and an Italian one as II mandato inglese per la...

MANDATES — MANDE

MANDE, a term which simultaneously possesses geographical, political and ethnic connotations. Mandel is a region situated between the upper Niger to the East, Beledougou to the North and the upper Bak hoy to the West. Mandel is also applied, however, to the whole of an enormous ethnic family comprising according to some West A and tradeable forms (Dogon, Bambara, Malinke in particular), more than forty population groups currently inhabiting the Republics of Guinea, the Ivory Coast, Ghana, Mali, Upper Volta, Niger and even Nigeria (see D. Zahan, Aperçu sur la pensée théologique des Dogon, in Cahiers Internationaux de Sociologie, xi [1949], 113-33; S. de Ganay, Notes sur la théodicée bambara, in RHR, cxxv [1949], 212-13; G. Dieterlen, Essai sur la religion bambara, Paris 1951, 13; the same, Mythe et organisation sociale au Soudan français, in Journal de la Société des Africanistes, xxv/1-2 [1955], 40-2).

More precisely, Mandel designates the “motherland” of one of the ethnic groups which originated there, the Mandingo. According to dialectal variants, the latter pronounce the term Mandé or Manding, while the Bambara of the West African traditions (Dogon, Bambara, Malinke in particular), more than forty population groups currently inhabiting the Republics of Guinea, the Ivory Coast, Ghana, Mali, Upper Volta, Niger and even Nigeria (see D. Zahan, Aperçu sur la pensée théologique des Dogon, in Cahiers Internationaux de Sociologie, xi [1949], 113-33; S. de Ganay, Notes sur la théodicée bambara, in RHR, cxxv [1949], 212-13; G. Dieterlen, Essai sur la religion bambara, Paris 1951, 13; the same, Mythe et organisation sociale au Soudan français, in Journal de la Société des Africanistes, xxv/1-2 [1955], 40-2).

This phonetic rendering illustrates the uncertain etymology of the morpheme, Mâdè could signify either "child" (d) of the mother (m), i.e. uterine issue or "child (d) of the master of the soil (mâ)". There are in addition (cf. S. M. Delafosse, La Langue mandingue et ses dialects (Malinké, Bambara, Dioula), Blabl. de l'ENLOV,
Paris 1929, i, 11). There is no basis for deciding in favour of either of these hypotheses.

In the current state of knowledge, little is known of the early history of the Mande. The first written information on this subject derives from Arab and Berber sources, it being understood that the first scholars to transmit in writing their knowledge of sub-Saharan Africa lived in North Africa and were directly or indirectly in contact with the negroes of the Sudan of their period. Among the latter, the Mandingos were, doubtless from an early period, the suppliers of gold (the *tibr* of the Arab authors) and of men ("immigrants") to the Italian, Portuguese and Spanish merchants who acquired it in North Africa through the intermediary of local traders. But it is logical to suppose that the tracks crossing the Sahara and bearing this precious metal towards the Mediterranean did not become "trade routes" until after the conquest of North Africa by the Arabs. Furthermore, it was subsequent to this invasion that there appeared the first written testimonies relating to the Mande.

The earliest in date, known today, is given by al-Ya'kūbi (d. 284/897) in his *Ta'rikh*, 26: "There is also another kingdom called Mallal, which is at war with the sovereign of Kānim (Kanem). Their king is called Mayusi (Mai Wasi?)" (cf. J.M. Cuqo, *Recherches sur les sources arabes concernant l'Afrique Occidentale du VIIIe au XVe siècle*, Naples-Rome 1970, 22). If to these, there is added an item from al-Bakrī (K. al-Masdlik wa l-ilmamālik, tr. de Siane, 1965, 333, quoted by Cuqo, *op. cit.*, 102-3), mentioning the conversion to Islam of a kingdom of Mallal (ca. 442/1050) with the aim of putting an end to the drought which was devastating his country, then in a passage from al-İdrīsī (548/1154) on the subject of Mallal, "a small town without walls (*Opus geographicum*, 1, Naples-Rome 1970, 22; Cuqo, *op. cit.* 132), the sensation of "historicity" may perhaps be reassuring, but our knowledge relating to Mande gains nothing in substance. It is not until the beginning of the 13th century, and again with recourse to the oral tradition relayed by the minstrels, that a "history" is discovered in which Mande becomes a kind of stage, upon which actors, half-real and half-mystical, play a role in events of interest and significance.

At this period there was in Mande a certain Nārē-Famaghan, who was only one of forty or more Manding minstrels all of whom bore the title of *manṣa* (chief). He had twelve sons, his potential successors, of whom the youngest, Soundiata (the Mari-Diata of Ibn Ǧīḥālīn) was to have a historic destiny: it was he who was soon to found the empire of Mali. Meanwhile, Mande was tributary to the neighbouring kingdom of Sosso.

This destiny was, in reality, dependent on three factors: (a) the decline of the neighbouring empire to the north, Ghānā, threatened by the king of Sosso, as well as by Arabo-Berbers descending from the north who were ultimately to destroy it (469/1076-7); (b) the lack of unity in Mande, where each minstrel was master of his own territory; and (c) the victory of Soundiata over his rival Soumangourou Kantë, king of Sosso. This last factor constitutes a remarkable example of the oral history of Mande. The narration of the events which took place in the confrontation between the two protagonists takes the form of an epic account in which the real, the miraculous, the serious and the comic are mingled in an apparently inextricable manner; but where a guiding thread is detectable throughout. The story-tellers have seized with relish on these events and, in general, accord little importance to the other two factors.

The plot of the account in question may be sum-

Bagayogo, Sinayogo, Sinaba, Kantë; the shoemakers: Kamare, Garanké; the descendants of slaves and slaves themselves (SCOA, *L'Empire du Mali*, 1970, 413).

Originally, however, the number of Manding clans was smaller. The memories of the story-tellers mention twelve of them, as having constituted the nucleus of what was later to become the Mande "world", the difference (between this number and 34) consisting of new elements coming in from the exterior, either from the empire of Ghānā, or from Sosso and Mande, in fact; attracted these "immigrants" and they would now be called, for two reasons: first, the gold of Bouré, with all that this metal offered in terms of opportunity for work and wealth, and second, the paganism of the animist religion which was seen as virgin territory for Islamic missionary effort. The first of these attractions was more of a lure to the inhabitants of Sosso, almost all of whom practised the extraction and casting of iron; the second appealed to the native of the kingdom of Ghānā, among whom Islam was already beginning to be implanted on a wide scale and who were seeking, at the same time, to migrate towards the south, as a result of increasingly frequent droughts.

It is evident that available knowledge concerning Mande before the foundation of the empire represents a collection of fragmented elements. If to these, there is added an item from al-Bakrī (K. al-Masdlik wa l-ilmamālik, tr. de Siane, 1965, 333, quoted by Cuqo, *op. cit.*, 102-3), mentioning the conversion to Islam of a kingdom of Mallal (ca. 442/1050) with the aim of putting an end to the drought which was devastating his country, then in a passage from al-İdrīsī (548/1154) on the subject of Mallal, "a small town without walls (*Opus geographicum*, 1, Naples-Rome 1970, 22; Cuqo, *op. cit.* 132), the sensation of "historicity" may perhaps be reassuring, but our knowledge relating to Mande gains nothing in substance. It is not until the beginning of the 13th century, and again with recourse to the oral tradition relayed by the minstrels, that a "history" is discovered in which Mande becomes a kind of stage, upon which actors, half-real and half-mystical, play a role in events of interest and significance.

At this period there was in Mande a certain Nārē-Famaghan, who was only one of forty or more Manding minstrels all of whom bore the title of *manṣa* (chief). He had twelve sons, his potential successors, of whom the youngest, Soundiata (the Mari-Diata of Ibn Ǧīḥālīn) was to have a historic destiny: it was he who was soon to found the empire of Mali. Meanwhile, Mande was tributary to the neighbouring kingdom of Sosso.

This destiny was, in reality, dependent on three factors: (a) the decline of the neighbouring empire to the north, Ghānā, threatened by the king of Sosso, as well as by Arabo-Berbers descending from the north who were ultimately to destroy it (469/1076-7); (b) the lack of unity in Mande, where each minstrel was master of his own territory; and (c) the victory of Soundiata over his rival Soumangourou Kantë, king of Sosso. This last factor constitutes a remarkable example of the oral history of Mande. Encyclopaedia of Islam, VI 26
marised in the following manner. Soumangourou, king of Sosso and suzerain of Mande, massacres the eleven sons of Soundiata. The latter is spared only on account of his disability, which renders him inoffensive in the eyes of his suzerain. His disability is significant and makes him the opposite of his rival, the blacksmith of Sosso, the archetypal ‘man of action’, dressed in garments of iron; he has crippled legs, as a result of which he lives for seventeen years in a hole in the ground, only his head and shoulders being visible.

But Soundiata is cured of his infirmity in an equally significant manner: with the aid of two enormous bars of iron (used by him successively), of which the first becomes his bow and the second his royal sceptre, he hoists himself out of his ‘hole’, permanently cured, takes to arms, rallies his warriors and goes to fight Soumangourou in a decisive battle, at Krina. The latter escapes from his pursuer only by being blocked by a slab of stone immediately after the entry of the unlucky hero. Traditionists and historians agree in making these events coincide with the foundation of the Manding empire, ca. 1235, and the dispersion of the blackssmiths across West Africa, subsequent to the destruction of their ‘empire’.

It has not been possible to include all the details of the account of the first half of the 13th century, written in Malinké of the Malinké historiographers. The elements of the account supplied here have the purpose only of giving an impression of the structure of the narrative and an ‘introduction’ to its eventual interpretation.

This structure and its interpretation have as their starting point the idea that the status of the hunter-cultivator is superior to that of the blacksmith; but this superiority only emerges and becomes evident from the moment that the first masters the products of the technology of iron possessed by the second. Soundiata is in subjection to Soumangourou until the day that he takes possession of arms, of which the raw material has been supplied to him by his rival, the blacksmith. This could, conceivably, be translated into more modern terms as an assertion that strategy and skill in the manipulation of arms (traits characteristic of the hunter-cultivator) represent a knowledge more profound than that which concerns metallurgy and the science of the armourer. The story summarised above also refers, undoubtedly, to the type of knowledge acquired through initiation. The blacksmith is, on account of his skill, a ‘natural’ and it could be said, initiated being. The hunter-cultivator, on the other hand, acquires this knowledge only after a long period of initiation corresponding to a ‘death’. Soundiata remains ‘buried’ for seventeen years, and emerges from his ‘hole’ to conquer. Soumangourou, on the contrary, is the archetype of life and strength, but, beaten, he descends into bowels of the earth. One comes out of the earth to defeat his adversary, the other enters the earth, vanquished by his enemy. This gives an explanation not only of the dispersal of blacksmiths across Africa, but especially of their place in society.

Soundiata, rich in exploits and in wisdom, occupies a position of eminence in the memory of Malinké story-tellers. He has no equal in the history of Mande other than in the person of one of his successors at the beginning of the 8th/14th century, Mansa Mūsā [q.v.], whose reign marked the highest point of the Manding empire. In his time, this extended from Gao to the estuary of the Gambia, and from Oualata (in the north) to the jungles of Guinea. But Mansa Mūsā owes his place of honour in the work of Arab historians, particularly in that of al-Umari (Masāḥīk al-ṣafi fi mamalik al-ṣamār, quoted by Cuoq, op. cit., 275-9), to the pilgrimage which he made to Mecca and to the fact which he observed during the journey.

This sovereign dominated the whole of the 9th/14th century in West Africa. Even Europe was aware of him and he was featured on the Catalan maps of Dulcert (1339) and of Cresques (1375). Ibn Batūṭa (iv, 367-48), who passed through Mande in 753/1352-3, was unable to make the acquaintance of the Manding emperor who died ca. 1337, but his journey coincided with the last years of prosperity of the great empire. From about the year 1380 onwards, this empire entered upon a period of decadence concerning which Ibn Khalidīn gives some interesting information (cf. Cuoq, op. cit., 339-50). The 15th century marked the beginning of the death-throes of Mande, harassed by the Touareg, the Songhai and the Mossi; the second half of the 17th century saw its disappearance. In 1670, Mande, as a political entity, was reduced, under the onslaught of the Bambara kings of Segou, to the small province from which it had originated, in the region of the Upper Niger; it had survived for approximately three and a half centuries.

Situated in a zone of commercial contacts between North Africa and Black Africa, Mande had, on account of its rich gold deposits, throughout its history, a considerable influence on the commerce and transformations of its immediate neighbours as well as of the Arabo-Berber tribes of the Mediterranean coast. In view of the facts, it is quite astonishing that this great kingdom, born out of the victory of strategy over technology, could have lasted so long. This would not, in the opinion of the present writer, have been possible had not those who presided over the affairs of the country, as well as the people themselves, been particularly conscious of the values which permit the realisation of human potential. The initiatic societies of the Malinkés, so closely linked to the monarchy, are instructive in regard to the ‘spiritual’ preoccupations of the kings of Mande. Such concerns are not rare in African history, but in this case they take on a particular dimension in view of the zone of insecurity in which the Manding empire was located from the very beginning of its existence.

MANDIL, normalised mandil, from Latin/Greek mánīthē, -um, ium, entered Arabic speech in pre-Islamic times, presumably through Aramaic, and has remained in use to this day. Its principal meanings were those of handkerchief, napkin, and towel. Mandil was, however, understood generally as ‘piece of cloth’ and used for many other purposes, such as covering or carrying something or serving, attached to the body, as an untailored part of dress. Numerous other words were available in Islamic languages as synonyms of mandil in both its specific and its generalised meanings. Arabic thus had
Mandil 403

many uses of mandils are attested, for instance: covering the face to conceal crying (al-‘Uyun, Dīgāl, Hyderabad 1374-80/1954-61, i, 364; al-Djawbarī, 23, speaking of a trained monkey); wiping off tears (Ta‘īla Baghdādī, xi, 155) or sweat (al-Šābūrī, Rusūm dīr al-buqadd, Baghdādī 1383/1964, 75, using shustadja), wrapping the body around the flame of a candle spread by the wind’s blowing (Diyā‘ al-Dīn Ibn al-‘Aṣ̄īr, as quoted by al-‘Uyun, 1, 81). Most, if not all, of the uses of mandil were metaphorically used to indicate low status, commonness, and abuse (al-Tawhīdī, al-madīn, ed. Weipert, Beirut 1980, 126 f.). All this shows that the mandil was always an object that engaged the human fancy.

Bibliography: The few selected references in the article are meant to be in addition to those in F. Rosenthal, Four essays on art and literature in Islam, Leiden 1971, 63-99. Fundamental earlier studies are R. B. Sergeant, Material for a history of Islamic textiles, in Ars Islamica, ix-xvi (1942-51), repr. as Islamic textiles, Beirut 1972, and A. Steiger and H.-E. Keller, Lat. Mantellum, in Vox Romana, xv/1 (1956), 103-54, where mandil is followed in its forms and uses through the European languages and Arabic. More recently, Geniza studies have enriched our knowledge of the use of mandils, cf. the publications by S. D. Goitein and, especially, Y. K. Stulman, for instance, The wardrobe of a Jewish bride in Medieval Egypt, in Studies in marriage customs, iv (1974), 297-304. See alsoLIBAS.
MANDIL, AWWALD or BANU, a chiefly family of the Maghrawa [q.v.], prominent in what is now western Algeria in the 7th-8th/13th-14th centuries, taking its name from Mandil, grandson of Abu Nás, son of the Banu Khzarran rulers of Tripoli (391-540/1000-1 to 1145-6) and descendants of the 10th-century Spanish Umayyad Maghrawi chief, Khzarran b. Falfil.

Abû Nás, whose forbear from Tripoli had made his way to kin in the Chelif [Shalaf] basin and finally established himself among the local Maghrawa, had received an 'ideâ' from the Almohads for his services to the Almohad ruler. He had come to Mardin with the Hafsid, and, when in the field against Tlemcen (772/1370). Taking to the mountains of the Banu Bu Sa'd, he won Maghrawa support and garnered the rewards of loyalty to the Almohads.

On his death, he was succeeded by Mandil, the elder of two sons, whose expansionism won him the Ouarsenis (Wansharis), Madina (al-Madiyya) and the fertile Mitidja (Matldja) plain, which he devastated with unsparing pro-Almohad zeal. Subsequently he lost Mitidja itself [see BALUYDA] to Yahyâ, the last of the Banu Ghaniya [q.v.], and around 623/1226 Yahyâ had him killed. Mandil was the founder of the strongholds of Marât on the Rif (Wâdi Rahyû), a tributary of the Chelif.

Mandil's eldest son, al-'Abbâs, was accepted by his brothers as the new chief. As such, he looked to his father's example, but in fact lost all Mandil's gains to his rivals, the Banû Tuglîn, and fell back with his tribe on their heartlands in the lower Chelif. There he remained for a time as ruler of a modest principality.

A change came with the intervention of the Hafsid [q.v. in the Central Maghrib following the repudiation of Almohad authority by the 'Abd al-Wâdid [q.v.] Yahgharmânûn, de facto ruler of Tlemcen. Tribal appeals to the Hafsid Abu '1-Baka, the Hafsid ruler of Tlemcen, but, finding the 'Abd al-Wâdids Yaghamrasan, a strong and internecine quarrel.

Peace between Tlemcen and Fâs came in 749/1348 he took over Miliana, Tenes, and Brechk and Cherchell and re-established his stronghold of Marât on the Rif (Wâdi Rahyû), a tributary of the Chelif. From Muhammad's murder to Thabit's death the family of the family's history is its involvement with Tlemcen, ending with its defeat at Kairouan (al-Sanhadja, on the other, collapsed a few years later with the death of Rashid in a heated personal quarrel with a new chief of his allies, the Sanhadja (between 709 and 711/1309 and 1311; date unclear). Dismayed at Rashid's death, the Maghrawa left their Chelif heartlands, and many took refuge in places as far apart as Andalusia and Ifrikiya. Rashid's young son, 'Ali, found safety with his aunt in Fas, the sultan's wife, and the Awlad Mandil migrated to Marinhid soil and married into Marinhid tribes.

'Ali b. Rashid grew up at court as a Marinhid by adoption and, in adult life, took part in the sultan Abu 'l-Hasan's ambitious campaigns that toppled Tlemcen, but on the sultan's defeat at Kairouan (al-Kayrawân) in 749/1348 he took over Miliana, Tenes, Brechek and Cherchell and re-established his ancestral principality. He requested, but was refused, Marinhid recognition in return for support against 'Abd al-Wâdids resurgence. 'Ali's subsequent reliance on the 'Abd al-Wâdids to respect his principality proved misplaced, and brought him to disaster and suicide (752/1351-2). His young son, Hamza, was taken to Fâs and, like 'Ali, was reared as a Marinhid.

As an adult, Hamza deserted the Marinhids on the grounds of an alleged injustice when in the field against Tlemcen (772/1370). Taking to the mountains of the Banû Bû Sa'd, he won Maghrawa support and
held out till a vast Marinid army terrified his allies into surrender. With few followers he next established himself among the Arab tribe of Husayan, then in revolt against the Marinids with 'Abd al-Wadid backing them. The tribal leader of Titteri' suggests that the tribe's 'ibn Tliari was his stronghold. His subsequent failure to rally the Banu Bu Sadiid drew him into a rash exploit at Timzughat (Timzughat), north-west of Miliana, which ended in disaster. Both he and his friends were captured, and the Husayan fled to the Titteri mountains from their plain below. From the fortress they made their last stand—an event actually witnessed by Ibn Khaludin. Hamza and his friends were executed, and early in 1372 their headless corpses were crucified outside Miliana. Thereafter the Awlad Mandil disappear from history.

MANDIL [see MANDJANIK]

MANDINGO [see MANDANIK]

MANDANIK (A., ultimately from Greek >p¡jatovaskon, via Aramaic, cf. Fraenkel, Die aramäische Fremdworteir, 243, passing into Spanish as almancon, cf. Bourdavid, Glossaire, 69; manajamk, a general term for any kind of stone-throwing siege-engine. The expressions mandanik and arraida [q.v.] are both used for this kind of machine, and although the arraida may have been the smaller of the two, their presence often seems to be interchangeable. Mandanik occurs more frequently than arraida, but their point of origin is vague. The question of the point of origin of the counterweight trebuchet has not yet been resolved. The trebuchet originated in China no later than the 4th century B.C. and was in common use in Chinese armies from that time onwards (J. Needham, China's trebuchets, manned and counterweighted, in Lynn White Festschrift, Humana civilitas, i [1976], 107-53). It consisted of a beam, composed of a single spar, or of several spars bound together, which was supported on a fulcrum on top of a timber tower. The tower was often provided with wheels, to assist in the placement and aiming of the weapon. The beams were from 5.60 to 8.40 m. in length, with diameters at the extremities of 12.5 and 7 cm. At the narrower end was a copper "nest", attached to the beam by iron wires, thus forming a short sling. The missile, which could weigh up to 60 kg., was placed in the sling. At the other end of the beam there was a special attachment to which a number of ropes were attached. A team of men, ranging in number from 40 to 250 or more, pulled in unison on these ropes to discharge the missile, to distances of up to 150 metres (D.R. Hill, Trebuchets, in Viator, iv [1973], 99-114). Although the range of these machines was less than that of the classical weapons, the greater weight of the missiles made them much more effective against fortifications. The traction trebuchet was diffused from China, through the Turkish areas, to the Middle East during the 1st/7th century. At the siege of Mecca in 64/683 there was a mandanik called Umm Farasa ("Mother of the hair"). This description may well have been derived from the appearance of the ropes hanging down from the end of the beam. A poet added his own description: "When the rope [signifying the missile] is looped tightly in a 'stallion' (al-Tabari, i, 426). At the siege of Daybul in Sind in 92/711-12, the Muslims had a siege-machine called al-A'ris ("The Bride"). It was operated by 500 men, and was under the control of a skilled operator who took charge of the aiming and shooting (al-Bâdhûri, Fâlîh, 437). There was a battery of machines at the siege of Baghdad in 261/875-6: men were assigned to every mandanik and arraida, and pulled on ropes to discharge the missiles (al-Tabari, i, 1551 f.). The counterweight trebuchet, which came into use at the end of the 6th/12th century, was a much heavier machine. It consisted of a heavy wooden beam resting on a fulcrum, which was supported on a massive timber tower. The beam, typically about 20 m. long, was divided by the fulcrum in the ratio of 5:1 or 6:1. At the end of the short arm, the box containing the counterweight was suspended, and filled with lead, iron or stones; the total weight was from 10 to 30 tonnes. A long sling—about as long as the beam itself—was attached to the end of the long arm, with a pouch to contain the missile. The trebuchet was spanned by a winch, whose rope was attached to the long arm at about the mid-point. When the release mechanism was pulled, the beam rotated and the sling accelerated to a greater velocity than that of the beam. The missile was released when the end of one of the ropes slipped from a hook, at an instant when the combined effect of the sling's velocity and the angle of discharge gave maximum range to the missile. Ranges were of the order of 300 m., and the missiles could be very heavy. During the 8th/14th century sieges of Tlemcen, the mandanik was capable of bombarding the town with balls made of marble, some of which have been found there, the largest with a circumference of 2 m. and weighing 230 kg. (see nijska, ii, for characteristics of both kinds of trebuchet, see Hill, op. cit., passim).
MANDJANIK — MANDU

written a few years earlier than this, Murdā b. ‘Ali devotes a section to trebuchets, all except one of the traction type. The exception is called a ‘Persian’ manajamk, and although the passage is obscure, it is possible that this was a counterweight machine (C]. Cahen, Un traité d’armurerie composé pour Saladin, in BEO, xii [1947-8], 16-18). On present data, we can only locate the origin of the counterweight trebuchet somewhere in Mediterranean Christendom or western Islam, towards the end of the 6th/12th century. Its spread thereafter was very rapid, both in Europe and in the Muslim world. The first report we have of its use in Islam refers to the siege of Hims in 646/1248, where the machine in question is referred to as a mandjanik maghibi, a western or a North African trebuchet (Abu ‘l-Fida°, Mukhtasar tažrik al-bajjar, in RHC, Historiens orientaux, i, 1872, 125). Counterweight trebuchets were used in great numbers by the Muslims at the siege of ‘Akka in 690/1291 (al-Makrizi, K. al-Suluk, ed. Quatremère, Histoire des sultans Mamelouks, Paris 1837-42, ii, 125). At least certainly, the counterweight trebuchet was introduced to China by the Muslims. Two Muslim engineers, ‘Alā’ al-Dīn and Ismā‘īl, are honoured by a biography in the official history of the Yuan dynasty. They constructed the machines for Kubilai for the siege of Fan-ch'eng towards the end of A.D. 1272. Thus the counterweight trebuchets acquired the name of ‘‘Muslim’’ machines, by which they were long afterwards known (Needham, op. cit., 114).

Bibliography: In addition to the works mentioned in the text, see K. Huuri, Zur Geschichte des Mittelalterlichen Geschützwerks aus orientalischen Quellen, Helsinki 1941; information about the construction of traction trebuchets is to be found in Abu ‘Abd Allāh al-Khārazmī, Mafatih al-‘ulum, ed. van Vloten, 247-9. (D. R. Hill)

AL-MANDIJUR, Abu ‘l-‘ABBAS AHMAD b. ‘ALI AL-MINASSI AL-FASII, a learned Moroccian scholar and teacher, from a family originally from Meknès, born in Fās 926/1520 and died there 16 Dhu ’l-Ka‘d/dal 18 October 1537. Endowed with vast learning and a great power of verbal expressiveness, he spent his life teaching, with the methods in use at the time. He was a master of Islamic topics, in particular, theology and law, and was considered one of the greatest masters of his age at the Karawiyyīn [q. v.]. Between 987 and 993/1579-85, he stayed frequently for periods in Marrakesh, where his most eminent disciple was the sultan al-Mansūr al-Dhahabī [q. v.].

He was the author of commentaries and glosses on well-known and esteemed works of theology and law (see Lévi-Provençal, Charfa, 91), of which various manuscripts are extant (see Hajji, Activité intellectuelle, 164-77, passim), but above all he has left behind a Fabras [q. v.] of great documentary interest which has not however yet been made the object of a critical edition. It was written in Radjaq 989/August 1581 at the request of al-Mansūr, who wished to get from his master a general uṣūla [q. v.] theoretically authorising him to teach all the topics studied under his direction and further containing the names of his own masters, with biographical notices and items of information of a literary nature. Several manuscripts of al-Mandijur’s Fabras exist (see Hajji, op. cit., 27, no. 72), which was written in two versions, a long and a short one, according to the author’s own practice.

Independently of the sultan, this teacher oversaw the intellectual formation of several pupils, who themselves left on less distinguished pupils, subsequently who filled the office of kāfī in various Moroccan towns, unlike their master who, despite his

great learning, piety and exalted protection and patronage, never exercised any religious office at all because of his distant Jewish ancestry [see Mayyara]; he was even barred from leading the prayer when he had been thus designated by al-Mansūr (al-Ifrānī, Nuzhat al-hādī, 155).

MANDU, fortress and town of Central India.

1. History. Once the fortress-capital of Mālwā [q. v.] and now a village 34 km. south of Dhar in Madhya Pradesh, in lat. 22° 21’ N and long. 75° 26’ E. The first rulers took full advantage of a natural outcrop of the Vindhya range, looking over the Nimar plain to the south. A deep and jagged ravine, the Kakra Khoh, isolates it on the sides. The plateau, well-supplied with lakes and springs, stretches unevenly over 5 km. and more from north to south, and 6 to 7 km. from east to west, at an average altitude of 600 m. with the remains of the inner fort. The first rulers took full advantage of a natural outcrop of the Vindhya range, looking over the Nimar plain to the south. A deep and jagged ravine, the Kakra Khoh, isolates it on the sides. The plateau, well-supplied with lakes and springs, stretches unevenly over 5 km. and more from north to south, and 6 to 7 km. from east to west, at an average altitude of 600 m. with the remains of the inner fort. Songadh as one of the more prominent landmarks to the west. Mandapaka is mentioned on an inscription found at Pratapgadh in Rajasthan and dated to the equivalent of 946 A.D. Mandapada-durar appears on a copper-plate grant of Jayavamadeva dated 1261 A.D. Thus Mandu could be a corruption of Mandapada or even of Mandava.

In the early Islamic days of the subcontinent, the Paramāra king Bhoja delected Mahmūd, the Ghaznavid sultan [q. v.], from the area. Itūmūn himself did not reach as far as Māndu in his conquests, but Dājlal al-Dīn Khaḍhīj sacked the neighbouring lands in 1293, and the fort fell to ‘‘Alā’ al-Dīn Khaḍhīj’s general A‘īn al-Mulk in 1303. Thereafter, the local governors ruled from Dāhār, where Mahmūd Shāh Tughlūk took refuge from the chaos engendered by Timūr’s onslaught; after his return to Dīlī in 804/1401, Dilawar Khān Gīrī proclaimed himself independent, and at his death in 808/1405, his eldest son Alp Khān ascended the throne of Mālwā under the name of Huḥang Shāh, and moved the capital to Māndū. On his coins and until the end of the century, Shāḥdābād, the ‘‘city of joy’’, appears as the name for the new capital. Although much involved in warfare with the rulers of Gudjarat, Dājūnpur, Dīlī, Utrīs and the Dakhān, he fully restored and strengthened the ancient fortifications protecting the access to the Middle course of the Nirmān, and to rival with his neighbours. After his death, the cruelty of his own son led the son of his trusted relative and vezār Malik Mughūt to accept the throne in 839/1436 under the name of Mahmūd I Khaḍhīj [q. v.]. During the 36 years of his reign, the fame of Māndu
spread abroad as far as Cairo as well as to Samarkand; scholars and holy men called at the capital, sometimes on their way to the Bahmani court of Shams al-Din Muhammad III at Bidar [q.v.]. The buildings of his reign reflect the ever-expanding size of his realm; besides palaces and hospitals, Mahmud ordered the start of Hujjat Shah’s tomb in 843/1439, his own madrasa and victory tower in 846/1443 after his victories over Chitor (Citawr), and the completion of the Djami Masqjid in 858/1454. In 871/1467 the lunar calendar replaced the solar one. Under the generous rule of sultan Shams al-Din, the town of Mandu was further enhanced, one may imagine, by buildings to fit his desire “to open the door of peace and rest, and pleasure and enjoyment on me and those depending on me” after the “34 years at the stirrups” of his father. His large and somewhat eccentric harem never deterred him from his religious duties and from a sober life, unlike his son Nasir al-Din (906-16/1500-10), who was a dossimaniac, although for a time a sound ruler, a lover of the arts and a great builder of palaces such as the so-called Baz Bahadur palace dated 914/1508. During the troubled reign of his son Mahmud II, Muslim and Hindu nobles were rivals for power at court, especially Mēdīnī Rāy [q.v.]. Notwithstanding its architectural highlights, its rule came to a brutal end in 937/1531, when Mandu-fell to Bahadur Shah of Gudjarat and the smith was taken prisoner, with his seven sons, and later killed. In 941/1534, the Mughal Humāyūn [q.v.] broke into the fort near the Tārāpur gate, but not before Bahadur Shah had been lowered with horses from the inner fort of Songāfrh down into the deep Kakra Koh. Two years later Malik Khān, an officer of the defunct Khāldjī retinue, seized Mandu and ruled for 6 years under the name of Kādir Shāh until he was murdered in 949/1542 to Shir Shāh Sūr, who replaced him by his relative Shujāʾ Khān as governor of Māwā. In 963/1555 his son Bāz Bahadur seized power, although unable to assert himself for long; when Akbar’s general Adham Khān overran Māndu in 968/1560, Bāz Bahadur escaped while his favourite Rupmatī, of poetical fame, chose poison rather than servitude. He managed to recapture Mandu in 979/1570, which date is rubbied on a tomb. In 987/1578 the latter first visited the fort in 991/1573; further visits were connected with expeditions to the Dakhan. Two inscriptions dated 1008/1600 and 1009/1601 recall the hospitality given by his governor Shah Būdhān Khān in his palace now called Nil Kanth. On Akbar’s order, the southern Tārāpur darvāza was re-orientated to the west in 1014/1605 and Mahmūd Khāldjī’s tomb was roughly repaired at the same time. Dājāngīr [q.v.], according to his memoirs, spent seven months in Māndu during the rainy season in 1026/1617; buildings were restored and the whole court enjoyed hunting and feasting; his birthday celebrations took place in Bāz Bahadur’s garden next to his palace with the future Shah Dājāhn and Sir Thomas Roe in attendance. Four years later, the young prince spent another rainy season there and held a conference to induce reconciliation between two Jain factions. Awrangzīb [q.v.] is represented in Māndu by only one inscription on the northern ‘Alamgīr darvāza dated 1079/1668-9. After his death 1118/1707, a rapid deterioration of the empire lead to the supremacy of Marāhā [q.v.] power. In 1734 A.D. Pēghwā Bādgī Rao was appointed governor of Mālwā. His deputy Anand Rāo Pūr and his descendants ruled thereafter from Dārā. Māndu reverted to its first vocation of a hunting ground until basic restoration was started early this century; it has continued to this day.

2. Architecture. As in Gudjarat, Dājāhnpur and Bīdar [q.v.] throughout the 9th/15th century, the newly-independent state of Mālwā competed not only on the battlefield but also in setting up an imposing new capital. It was imperative to modernise the walls and the ten complex gates and to make good use of the expanses of water and springs, as well as to plan the town along a north-south axis with the new Dājāhnī Masqjid sited at the central east-west crossing. As in Dārā, the master-builders at first drew on the Gudjarat tradition by adapting Hindu proportions and style to the Mālwā Khān Dājāhnī (808/1405-6) measuring about 37 by 45 m., and the Malik Mughul Dājāhnī (835/1432), about 42 by 46 m. In both cases, spoils from temples were used to implement an Arab mosque plan, with three domes over the prayer hall in the later building. The Dājāhnī Masqjid, built of red ochre sandstone like the rest of Māndu, was completed by the mid-9th/15th century to include the revered marble tomb of Hujjat Shah. An inscription dated 975/1563 recalls the reverential visit of four master builders of the Mughal court. An exulting plinth emphasises the 85m façade of the mosque, with its eastern domed entrance of metropolitan quality. A similar dome over the mihrāb rests on competent corner arches. A total 150 smaller domes line the subn. Opposite, the one-time madrasa (Ashrafiyya Mahall) of Mahmūd T Khāldjī, with its tower of victory once seven storeys high, was changed into a marble-lined imposing tomb, with impressive inscriptions, before his death; but it soon became derelict. A large number of lesser tombs are scattered along the approach road to Māndu and across the plateau.

Always on aplinth and at most times following a square plan, the domed chamber usually belongs to a complex including a prayer hall also on a plinth, and a tank, as with the Dārā Khān mausoleum (10th/16th century). Geometric bands of glazed tiles enhance the base of drums inside domes, as in the Dājāhnī Masqjid, as well as outside some of the tombs; they are chiefly turquoise and white, of mediocre quality when compared with those on buildings in Bīdar. Stone carving on elegant projecting windows, arched walls and qalālds are far more successful.

In some architectural traditions a wall is strung between palaces and water expanses: the Dājāhnī (“ship”) Mahall, the broad buttressing outer walls (at an angle of 77° from the horizontal) contain an imposing audience hall with five double and one single-pointed arches. By the north wall of the royal enclosure, a large palace complex once dominated the Mūdż∩ Talāo, including a special well, the Champa bādolī, with adjacent underground rooms for the summer. Further afield, the Uḍjala (bright) bādolī and the Andherī (dark) bādolī recall the elaborate wells of Gudjarat and Radjasthan. Both the Gadā (beggar) Shah’s shop and house hint at a later audience hall and palace. Beyond the large Sāgar Talāo to the south, the so-called Bāz Bahadur palace overlooks the waters of the Riwā Kund. Once a complex of barracks, the so-called Rupmatī pavilions dominate the whole scene. The last important palace to be built was the Nil Kanth (“blue throat”); it faces westward on the edge of the cliff by a spring. At present it is used as a Hindu temple.

3. Painting. As in architecture, painting in manuscripts for the court evolved along original lines, but drew on two main sources, relating to neighbouring
states. A Jain minister of the Paramara king Jayasimha founded in Mandapa-durga one of his six *jhana-bhandaras* ("storage of knowledge"), a specifically Jain library, in 1263; the books always contained an important pictorial element. The *Mandua kalpa-sutra* of 1439 illustrates the continuity in production. On the other hand, illustrated Islamic texts of the time blend this traditional draughtsmanship and vivid colours with the conventions from the 9th/10th century schools of Shîrâz and Harât, to produce a recognisable Mâlîwâ style; the few manuscripts discovered so far relate to the early part of the 10th/11th century: the *Nâmas-namâ* (a book of delicacies), (Ethê 2775, India Office Library), the *Mîrâf al-fusâli* (a Persian glossary of rare words), (BL Or. 3299), the *Buṣâtã of Sa'di* dedicated to Nâsir al-Dîn before 916/1510 (National Museum of India, New Delhi, no. 48.6/4), *"Aqfâ`ib al-sânã* (a Persian translation of al-Dżâzâri’s book on the knowledge of mechanical devices [see al-Dżâzâri and Ḥîyal in Suppl.]) (BL Or. 1371).

**MANDÜB (a.)** "meritorious and recommended action", term of Islamic law; see *gaʿirî*.

**MANDÜR, MUHAMMAD B. ABD AL-ḤAMĪD MŪṣĀ (1907-65),** the *ghâyîh of modern Egyptian and Arab literary critics*, was born in Kafr Mandûr, near Minyâ al-Kamh, in Egypt’s Sharqiyya Province, to a rather wealthy family. His semi-literate father was a devout and tolerant Muslim who belonged to the Nakshbandi dervish order. Mandûr learned many *kurânic* verses from his father, and his religious upbringing in the vanguard of opposition to the government of Sidki Pasha and the British. Mandûr was discharged after only three months, and for a short while he contented himself with publishing a few articles and teaching at the newly-founded (1944) evening Institute of Drama. In 1945 he was appointed Editor-in-Chief of the evening newspaper *al-Wâfd al-Misrî*, which, with the assistance of some rebellious avant-garde writers, he gradually transformed into a daily revolutionary manifesto against the British and their Egyptian collaborators. Despite his socialist writings and his leadership of the liberal progressive wing within the Wafd party, Mandûr was never a communist; he remained a nationalist politician and his vehement opposition to the Sidki-Bevin Treaty brought him imprisonment twenty times in 1945 and 1946, and cost him the closing of his own six-months-old newspaper, *al-Beʿâbî* ("Resurrection"), as well as eleven other newspaper and magazines. With the fall of Sidki’s cabinet, Mandûr assumed the editorship of the new Wafd newspaper, *Saʿūd al-Ummâ* ("The voice of the Nation"), where he pursued his political struggle against "colonialism and Western exploitation of Egypt’s national resources". Mandûr operated a successful law office from 1948 to 1954, and at the same time continued to write and edit the newspaper *Saʿūd al-Ummâ*. He was elected to the Egyptian parliament in 1950, and served on several parliamentary committees. In 1953 he embarked on yet another teaching and writing career at the Arab League Institute’s of Higher Arabic Studies, and continued until some time before his death in 1965.

Mandûr’s copious œuvre consists of specialised and general books treating one or several related subjects or literary genres; translations of diverse works, mostly from French into Arabic; book reviews; hundreds of political and literary articles; some elementary attempts at poetry; and one screenplay.

Despite his prominence as a journalist, political activist and translator, Mandûr’s reputation is principally that of eminent literary critic, surpassing in
intellectual vigour and critical insight his teacher Taha Husayn, but without his fame and versatility. His literary works encompass three basic fields: criticism, theoretical and practical; poetry and poets; and theatre, in both its prose and verse forms. Most notable and enduring of his critical books are Fi 'l-mizān ad-dādīlīt ("In the new balance"), in which Mandur expounded his theory of al-shīr al-mahmūs ("whispered poetry"), inspired by the title of Mikhail Nu‘ayma’s [q.v.] poetry collection Hams al-dīvān, n.d. ("The whispering of eyelids"); and al-Nakd al-manḥādījīt 'ind al-'Arāb ("Methodical criticism among the Arabs"), 1946. Some other books in this category are: Fi 'l-adāb wa 'l-nakd ("On literature and criticism"), 1949; al-Adāb wa-madhdhibuhihī ("Literature and its schools"), 1958; and al-Adāb wa-funūnihī ("Literature and its genres"), 1963. Mandur’s major works on poetry and poems comprised a theoretical work on poetry, Fann al-shīr ("The art of poetry"), 1960, and a renowned series of critical studies on Syro-American poets, Egyptian modernist poets, and the poets of the vers libre movement. His principal works on the theatre include al-Masrah ("The theatre"), 1959; al-Kāsīṣkhātīya wa 'l-ṣīṣtī al-fānsīyya li 'l-dīmām ("Classicism and the artistic roots of drama"), n.d.; and applied studies of the verse plays of Ahmad Shawki (d. 1932) and the prose theatre of Tawfik al-Hakim (b. 1908).

The most distinguished of Mandur’s translations are the two acclaimed critical treatises which greatly influenced his early critical thought and which punctuated his critical writings throughout his career: Georges Duhamel’s Dfence des lettres (1943) and Gustave Larson’s La Méthode de l’histoire littéraire (1946), which he appended to the fifth edition of al-Nakd al-manḥādījīt ‘ind al-‘Arāb. The other translated works encompass a whole range of literary disciplines, from Flaubert’s Madame Bovary to E.A. Poe’s The Raven.

His political and ideological writings comprise one major book, al-Dimṣakṣrīyya al-ṣiyāsīyya ("Political democracy"), 1952; and innumerable articles, some of which were published in two books (Dīwān al-adab al-ishtirākī, Cairo 1965; and more recent editions of Dīwān al-adab al-ishtirākī, Cairo n.d., and Beirut 1967; and Khayri ‘Azzī, Udbāh ‘alāṣi wāṣir al-nidāl al-ṣiyāṣī, Cairo 1970). Works published posthumously, such as Kitāb al-lam tanggar, Cairo n.d.; and more recent editions of Mandur’s work, feature representative lists of his publications.

Bibliography: Mandur wrote upwards of thirty books and hundreds of articles and book reviews, the majority of which remain uncollected. In 1964, he granted an elaborate and informative interview which was published in Fu‘ād Dawwār’s book ‘Ashrat udbāh yaiyathaddāthīn, Cairo 1965. Another interview was published in the Lebanese literary journal al-Adāb (January 1961), by Fārāk Shīḥbēh. Scores of articles about his life and critical writings have been written after his death in such major Arabic literary journals as al-Adāb, al-Ṭalī‘a, and al-Majālāt. The most detailed and penetrating expositions of Mandur’s criticism in English are presented by D. Semah in his book, Four Egyptian literary critics, Leiden 1974, and in his Muhammad Mandur and “New Poetry”, in JAL, ii (1971). Major Arabic studies of Mandur include Henri Riyād’s Muhammad Mandur, Rā‘īd al-adāb al-ṣīḥṣāfīkhī, Khar- toum 1965 and Beirut 1967; and Khayri ‘Azzī, Udbāh ‘alāṣi wāṣir al-nidāl al-ṣiyāṣī, Cairo 1970. Works published posthumously, such as Kitāb al-lam tanggar, Cairo n.d.; and more recent editions of Mandur’s work, feature representative lists of his publications.

(Mansour Ajami)

MANER, a former town, now no bigger than a village, 22 miles/32 km. west of Patnā [q.v.] in Bihār state, India, by the junction of the rivers Sōn and Ganges (it was reported to be at the junction in 1722, 3 miles/5 km. south of it by 1812, 7 miles/10 km. south by 1907); it had therefore some strategic and mercantile advantage, and was one of the earliest and most important sites of Muslim colonisation in this part of the world.

By Mughal times, it had become the chief town of a pargana of some 80,000 bighas [see Misāma 2, India] in the sāba of Bihār (Aṣn-i Akbari, tr. Jarrett, Calcutta 1891, ii, 151, 153). A copperplate grant from a Hindu

PLATE XI

1. Malik Mughlth Djami\textsuperscript{c}, 835/1432, east façade.

2. Malik Mughlth Djami\textsuperscript{c}, Kibla riwaks and sahn.

2. Malik Mughlth Djami\textsuperscript{c}, Kibla riwaks and sahn.
3. Hüshang Şâh’s tomb, started 843/1439.

The king of Kanawjd (ed. and tr. P. R. Sharma, in JBORS, ii/4 [1916]) of 1126 A.D. requires that the tomb chamber which also has finely carved stone screen openings. A local tradition asserts that the stone was brought from Gundjar; certainly, features of Gundjar tomb design are apparent here [see further MUGHAL. Architecture.]. West of the mausoleum is a small mosque with curvilinear roof, centrally situated between stone verandahs running along the entire western wall of the enclosure; inscription dated 1028/1619, quoting Qur'an, III, 97-8. An undergrowth of shrubbery in the south-west corner is identified as the tilla of Shâh Dâwal. A fine entrance gate, in a more conventional Mughal style, bears two chronograms of 1022/1614-15 and 1032/1622-3. Other minor buildings around the tank are in grave disrepair. The earliest inscription of Maner, 798/1395-6, records the reconstruction of an older mosque, now disappeared. The Djamii mosque of Maner, itself undistinguished, bears two records of renovations, of 1103/1691-2 and 1283/1866 (the last on a marble slab carved in Medina), both mosques thus testifying to a vigorous Muslim population over the centuries; but the grounds around the Maner tank are also the scene of a devoutly Islamic fair on the urs of Ghâzâlî Miyan [q.v.].

J. BURTON-PAGE

MANF, Memphis, the capital of the Egyptian Old Kingdom, situated on the west bank of the Nile opposite modern Hulwan [q.v.] about twelve miles south of Fustat [q.v.], plays a pivotal rôle in mediaeval Arab geographical and historical writing on Egypt. Al-Kaâgândârî (Shâh al-aâbâ, iii, 316, 6-8; German tr. P. Wüstenfeld, Die Geographie und Verwaltung in Ägypten, Göttingen 1879, 41) presents the climate (— the third) and the geographic coordinates of Manf. The Muslims knew about the great antiquity (madina ... azâliyya; K. al-Istibâr fi 'âdadār al-amâr, Alexandria 1958, 83, French tr. 68) of the formerly huge city (cf. Ibn Zûlân, quoted by al-Âzawdî, Âhâr al-bîlîd wa-âlîhâr al-âmâr, Beirut 1939/1979, 274). The great scholar and most prominent medieval authority on Manf, 'Abd al-Latif al-Râghahî (al-Fadâa te 'l-Imârî, in Kamal Hafûth Zand ed., The eastern key, London 1965, 136-7) speaks of over 4,000

MANER — MANF

which stands the square sandstone mausoleum of Makhdûm Shâh Yahya (in-
years, a surprisingly exact estimate. Manf was destroyed when 'Amr b. al-As conquered Egypt and presented itself to mediaeval visitors in ruins (Abu al-Asarya, c. 695-700). The city of Manf in pre-Islamic and in Islamic Egypt—numbered thirty (e.g. al-Nuwayri, Nikayat al-arab, xxv, 4, 8 ff.).

The seventeenth-century Turkish traveller Evliya Celebi (Sehaybatname, x, 11, 18) vacillates, in his interpretation, between a Coptic (Menf — a bride) and an Heb emergency ("place of purity").

The mediaeval authors (e.g. al-Dimashki, 232) merge the Arabicised authority of his prestigious informants, was the first of many subsequent authors to connect the Arabicised form Manf with Coptic ma'uf (authoritative reading in Ibn Dukmak, 130) as the original name, sometimes confused (Ibn Hawkal, as cited by Abu Dja'far al-Idrisi) with the forms Maf (Ibn al-Zayyat, 7, 6-7) and, more correctly, Manuf al-Kalsh, accepted by mediaeval visitors in ruins (kharb, 231-2; and the tables in J. Maspero and G. Wiet, Mémoires pour servir à l'histoire de l'Égypte, Cairo 1919, 173-84, and A. Grohmann, Studien zur historischen Geographie und Verwaltung des frühmittelalterlichen Ägypten, Vienna 1959, appendix ii). Many, though certainly not all, mediaeval authors (e.g. al-Dimashki, 232) merge the cities of Manf and of Wasi'maustm into one. A papyrus of 137/570 explicitly mentions the kāna Manf (Grohmann, 140b).

The city Manf in pre-Islamic and in Islamic Egypt—numbered thirty (e.g. al-Nuwayri, Nikayat al-arab, xxv, 4, 8 ff.).

The Nile posed a constant threat to the fields and pastures around Manf in pre-Islamic and in Islamic times; Ibn 'Abd al-Hakam (Futūḥ Muf wa-akbārahā, 6,8) speaks of the canal of Manf as one of the seven khulūd of Egypt; for al-Wakid, e.g. Ibn Dukmak, 130, offers as an alternative the city of Menuf = a bride) and an

The explicit and implicit information on Pharaonic Egypt given in the Kur‘ân and in the stories of the prophets was the indispensable repertory for mediaseval Muslim reports on the history of the country in pre-Islamic times. The ubiquitous archaological remains of Pharaonic period were eagerly identified with items familiar from the sacred text and the commentaries. In a similar fashion, Manf was given its well-defined and prominent place within salvation history. The reports of traditionists such as Ibn Lahi‘a (q.v.), recorded by early historians like Ibn ‘Abd al-Ḥakâm and ‘Umar al-Kindî, remained the main corpus of information on Manf well into the modern period. Even in the 19th century the truths of the կիսայ անհյա? were not easily superseded by the results of enlightened empirical and historical research. ‘Ali Mu‘âammad al-‘Adawi’s lengthy chapter on ‘Ibn Idrîs was introduced and, so to speak, legitimated by a long verbatim quotation from al-Mâkrisî’s Khitat, i.e. by an intrinsically Islamic text. Only then does there follow what European scholarship has found out about the factual history of the city (see his al-Khitat al-Tawfîkiyya al-dajidda, xvii, 2-8).

Three verses of the Kur‘ân are interpreted as referring to the city of Manf: iv, 115, “And he [= Mûsâ] entered the city at a time of carelessness of its folk” (cf. also ‘Umar al-Kindî, Fadâ‘îl Miṣr, ed. Ibrâhîm Ahmad al-‘Adawi and ‘Ali Mu‘âammad ‘Umar, Cairo–Beirut 1391/1971, 25); xxvii, 21, “So he [= Mûsâ] escaped from thence, fearing, vigilant”; and xliii, 51, “Isn’t mine the sovereignty (mulk) he [= Musa] escaped from thence, fearing, vigilant”; cf. Ibn ‘Abd al-Latif) and made it a place of public venera-

The dominant Islamic stereotype associated with Manf is its role as the seat of Pharaoh’s troops in the Red Sea (al-Rau’d al-mîsri, 551a, cf. the footnote of the editor). According to ‘Abd al-‘Ali, at the end of the 10th/16th century, whenrousing the city and the country. Al-Mâkrisî, in his chapter on Manf (fol. 35a), both writing in the Ayyubid era, Musa took refuge in the neighbouring hamlet of Dunûh/Dunmiyya/Dunuwayh. This place remained sacred to the Jews, who erected a synagogue there (‘Abd al-Halîm; the Jews were banished to Ayn Shams, as one source maintains (Abû Dja‘far al-‘Idrisî, fol. 57a). ‘Al-Himyari goes so far as to claim, with rule over Egypt after the demise of Pharaoh’s troops in the Red Sea together with the soldiers of the country provided the “historical” nucleus for the hen-precked predicament of the Egyptian male, to be encountered among non-Egyptian writers from the days of Herodotus to the time when Musa ‘Ali, in 1582, had the ‘Adwan and ‘Umar take an important part to play in this context. The main temple (birâ‘î barbî [q.v.] of Manf, with its four doors, built by the valiant Queen Dalûkâ, had an apotropiac func-

The women’s régime established in Egypt after the Pharaoh of Moses had perished in the Red Sea with the soldiers of the country provided the “historical” nucleus for the hen-precked predicament of the Egyptian male, to be encountered among non-Egyptian writers from the days of Herodotus to the time when Musa ‘Ali, in 1582, had the ‘Adwan and ‘Umar take an important part to play in this context. As we have seen in the case of Manf’s epithet “capital city of the Egyptian kings”, historical
veracity and pious legend are inevitably and inex-
tricably mixed. Some of the miraculous buildings of
the Manf of the magicians may well have had their
origins in contemporaneous Pharaonic building
activity. Thus we hear of sophisticated gears (al-
darad` al-
mudjawaṣṣa, al-Khitat, iii, 28) engineered to lift water to
the highest buildings on Manf in early postdiluvian
times. Manf is—truly or falsely?—mentioned as the
location of Egypt's first Nilometer [see MIKYAS], (al-
to the highest buildings on Manf in early postdiluvian
version in al-Kazwim, 265, who cites al-Kuda
i, and

dary function—in such cases as Joseph's abode or
Ayn
Queen Daluka. Of equally indeterminable historicity
built as the second and third ones much later by
Kanz,'i, his departure could immediately be signalled to the
identify them and to differentiate between their legen-
tions available to us, though it is not always easy to
the granite monuments) in the ruins of Manf (see Abu
us that Yusuf erected it, together with the Pyramids,
and to Manf seems to have been the minimum pro-
belonging to the Pyramids). A visit to the Pyramids
rendered as "temple" than "church"—in Manf. It
wielded as "church"—in Manf. It
often closely connected with the adjacent Pyramids
(sc. of Sakkara, Būṣir and Dīža), Egypt's greatest
wūqāba (Abū Sāliḥ, 200; Abu Djafar al-Idrīsī, fol.
34a, speaking of Manf as the "settlement" [kūyām]
belonging to the Pyramids). A visit to the Pyramids
and to Manf seems to have been the minimum pro-
gramme for visitors to the area who were interested in
Pharaonic archaeology (cf. Abu Djafar al-Idrīsī, 45a,
on the envoy of Frederick II to the court of al-Malik
al-Kāmil). In striking unanimity, most authors men-
tion the prevalence of the indelible green colour (sc.
of the granite monuments) in the ruins of Manf (see Abu
'l-Fidā', 117).

Certain monuments are singled out in the descrip-
tions available to us, though it is not always easy to
identify them and to differentiate between their legen-
dary function—in such cases as Joseph's abode or
Pharaoh's palace—and the archaeological reality as
seen and recorded by the authors. Therefore the de-
tailed scholarly observations of 'Abd al-Laṭfī al-
Baghdādi are of particular value. One building, not
mentioned by 'Abd al-Laṭfī, is the magnificent,
monolithic, so-called "bishop's church" (kānūn al-
šūkāf); Abu Hamīd al-Kudīs (150) lists it even as the
first among the 'adaja'ib of Egypt. It is not all clear
whether this church, the church "spread with mats"
mentioned by Abū Sāliḥ (200), and, thirdly, the
monolithic Dār Fir'awn, with its many halls, rooms
and roofs, about which an 'Allid authority reports
figures of awe (al-istibāb, 83; Yākūt, v, 214a; al-Ḥimyari,
55a; al-Nuwayri, 159; Ibn al-Ilmān, iii, 367), all
mean the same building or not.

There was certainly one other kānūn—since we
have to do with Pharaonic buildings, rather to be
rendered as "temple" than "church"—in Manf. It
was noted for its small size, for which a hieroglyphic
inscription, deciphered by 'Uṯmān b. Sāliḥ (d.
217/832), the "sage of Egypt" and one of Ibn 'Abd
al-Hakam's main authorities, gives a very convincing
explanation: building with granite on a large
scale was just too expensive ('Uṯmar al-Kindi, Fadā'il,
52, quoting 'Ibrāhīm b. Munkīd b. Khāwālīnī; modi-
fied in Yākūt, v, 214a-b, quoted by al-Kazwīnī, 274-
5, and Abū Hamīd al-Kudīs, 70). This temple was
allegedly erected on the spot where the irate young
Mūsā, at Satan's instigation, had killed an Egyptian
(al-nafaḍ al-θulūs) [1], cf. Tab. Kalkashandī, XV, 15]. Again
we have to do with the problem of identification. Is this
the famous monolithic green chapel that was
located within the precinct of the great temple of Manf
and is described in detail by 'Abd al-Laṭfī (138-9),
Kalkashandī (iii, 316, 19-317.3) and al-Makrizī (al-
Khitat, iii, 28)? Its weight was legendary (ibid.). Both
from the inside and the outside it was covered with a mass
of hieroglyphic inscriptions (al-kalam al-būhāsī, al-kalam
al-būhāsī, al-bībānī); as evidence of the
factual. It broke into pieces; its power was legendary (ibid.). The
funeral of this building had already been destroyed in his days by some, as he
complains, foolish treasure-hunter (loc. cit.). Sultan
Hasan, Abu Djafar al-Idrīsī (fol. 42a). The image

harmonious proportions of the huge human statues of limestone and red granite, one of which undoubtedly represents Isis with the child Horus (154-5). Al- Kalkashandi (iii, 316, 16-18) notes: 18 of 20 cubits length each which lie precipitated in the mud as being made of "white granite". Al-Maqrizi (al-Khatib, iii, 28) attributes them (or two other, similar, monuments) to Potiphar. One of the two statues could well be identical with the monument mentioned by Abu Sallih (199) with the surprising name of Abu '1- Hawl (see Haarmann, Die Sphinx, 373) and with the famous statue of Ramses II that was transported from Manf to the Cairo railway station at the Bâb al- Hadid in this century.

AL-MANFALÌTU, MUSTAFA LUTFI (1293-1343/1876-1924), Egyptian writer and poet.

Born in al-Manfalut (Upper Egypt), then going to live in Cairo, al-Manfalûti never attended any teaching institutions except al-Azhar. He later composed poems which appeared in the press; one was published in 1904 by Farah Antûn's magazine al-Qâmi'a. By the very traditional character of his art, he belongs among the great Egyptian poets of the age. Like them, he cultivated the still flourishing genre of occasional poetry. His composition of epic poems cannot even be regarded as original, since Khalil Murudad, Ahmad Shawkî and Hâfiz Ibrahim had distinguished themselves in this field. (He left no diwan, but only an anthology, Mukhtârdt al-Manfaluti, 1912, in which some prose texts accompany several poems.) Finally, his true originality derived from his doctrinal commitment, and from its quite unexpected literary corollary. His Islamic faith appears strong in the face of any test. For him, Islam is not an old system of values in which he will seek refuge, but a dynamic religion whose constantly renewed force should animate the faithful, allowing them to view the future with optimism. He also believes that everything capable of fostering this dynamism should be encouraged. Thus he took the side of the great reformist Muhammad 'Abd ul-Hamid (q. v.) and even went to prison for supporting him against the Khedive. His support for the companion of al-'Afgâni is often evident in his poems, but being as he is above all a moraliser, he found a more convenient form in which to express himself in the collection of essays in the shape of edifying stories which he published in the weekly al-Mu'allûd under the title of al-Nâzarât ("Sketches"). Death, misfortune and tears, represent the essential ingredients of these narratives. At times, destiny, cruel and unjust, begets pure and defenceless beings. But often it is the evolution of society which brings on catastrophes; at the end of the last century and beginning of the present one, the rash Egyptians have repudiated their sound traditions and turned their back on the wise precepts of Islam in order to imitate blindly the European example. This is the message to be drawn from al-Manfalûti's fables. We must believe that the content and form of these works may be used in the education of the public of the period, since they were reprinted in three volumes in 1910, 1912 and 1920. But in 1915 our author published another collection with the evocative title al-'Abârât ("Tears"). The dominant tone remains one of pathos, but it is to be noted that the series are of two kinds. Only six of them are the original work of al-Manfalûti, while the eight others have been translated by him from French or—in one case—from American English. For, paradoxically, despite his admonitions against the Western life style, he admired the literature which it produced. Chateaubriand and Alexandre Dumas the Younger are translated here, and later it was to be the turn of Alphonse Karr (Sous l'ombre des tulipes) ["In the shade of the palm trees"], 1919), Bernardin de Saint-Pierre (Paul et Virginie) and François Coppée (Pour la couronne) ["For the crown"], 1920). Are we not to suppose that this pitiful picture of disasters, to which vernal, unshared or impossible love leads, constitutes the most eloquent condemnation of the society which attaches such importance to this sentiment? Furthermore, one of the three original stories in al- 'Aharât, entitled al-Hâlât ("The Veil") shows how a young Egyptian, returned from Europe where he has studied, brings on his own misfortune by allowing his wife to spend time in the company of his best friend. However, this interpretation is not always justified. It is clear that the narrator is little concerned to explain the avalanche of misfortunes which befall his heroes. His main concern is to place them in a desperate situation, which he knows how to turn to the best advantage in order to move his readers. For here we have an artist who excelled in appealing to the emotions. The instrument that he used was the Arabic language, on which he played to perfection because he kept it in the register which suited him best: ample periods, sonorities balanced with majesty and the theatrical expression of powerful feelings. All his contemporaries and even some of his successors bore witness to the quality of his style, which they regarded as enchanting. But, quite obviously, the conclusions that they reached could be diametrically opposed.

The novelist Mahmûd Taymûr (q. v.), in the preface of one of his first collections (al-Sharây' Sayyîd al-Abî, 1926), believed that the subjects and characters imagined by al-Manfalûti lacked consistency, but he did not cease to admire his style. Moreover, the 1921 publication of his two-volume work, entitled Mu'assasât, contributed to winning a public for it. In fact, this well-known foreign genre became acclimatised on Arab soil. It did so in the first place thanks to the quality of its language, although some Syro-Lebanese
and Egyptian translators of the period wrote in very mediocre Arabic. It must be noted that, never having put anything above Platonic love (al-hubb al-^udhri), i.e. the pure love which made the Hassāni tribe of the Banū 'Uthmān famous from the 2nd/8th century onwards. Furthermore, the kind of story which he preferred is sensational and popular. He believed that, like himself, his compatriots might have a passion for the unhappy love stories in Europe, while they also might have a passion for the life stories of those who had died or had been driven mad by love, of whom Arab collective memory had preserved the remembrance. It is significant that the modernist al-Māzini had mentioned, in the above-mentioned work, what a danger al-Manfalūti’s literature presented for lovers of bad novels, those who put nothing above debased by foreign idioms. Also, his supposed translations. Thus it is to be understood that they were, and translated works might be closely related. The work and the land of the Khazar in the north (Djahan-nama, ed. Yu. Borshcevskiy, Moscow 1960, fol. 5b). In another place (fol. 17a) he of the word. He believed that, like himself, his compatriots might have a passion for the unhappy love stories in Europe, while they also might have a passion for the life stories of those who had died or had been driven mad by love, of whom Arab collective memory had preserved the remembrance. It is significant that the modernist al-Māzini had mentioned, in the above-mentioned work, what a danger al-Manfalūti’s literature presented for lovers of bad novels, those who put nothing above debased by foreign idioms. Also, his supposed translations. Thus it is to be understood that they were, and translated works might be closely related. The work and the land of the Khazar in the north (Djahan-nama, ed. Yu. Borshcevskiy, Moscow 1960, fol. 5b). In another place (fol. 17a) he
explains Mankishlagh as a name of a tribe (kawm) of Turks who left their former place because of an enmity between them and the Oguz and came to live in the region of Siyāh-Kuh near the Caspian Sea, where they found springs and pastures (cf. the account of al-Iṣṭākhrī-al-Balkhi above); they were called the "People of Mankishlagh" (ahl-i Mankishlagh), and their ruler was called khān. Immediately after this, speaking about the Turkic tribe (kawm) Yəzif which lived in the Balkhān mountains, Bakrān adds that two other tribes, one from Mankishlagh and the second from Khūrāsān, joined the Yəzif, after which the latter became numerous and strong, and at the time of writing (almūn) they consisted of three parts: the Yəzif proper, those of Mankishlagh (Mankishlagh) and of Fāra.

As one can conclude from all accounts cited above, Mangishlak became inhabited by some Turkic (apparently Oguz) tribe of tribes about the first half of the 4th/10th century, and the migration of these Turks to Mangishlak was connected with the internal strife in the Oguz confederation. The Mangishlak Turks were apparently hostile to the Oghuz tribes involved in the Saldjuk movement, and they were considered pagan as late as in the middle of the 6th/12th century; in the early 7th/13th century they (or at least a part of them) were included into the Yəzif group of the Kharaṣmaglaks, which later became numerous and strong, and at the time of writing (almūn) they consisted of three parts: the Yəzif proper, those of Mankishlagh (Mankishlagh) and of Fāra.

The accounts of written sources are to some extent corroborated by the Turkmen genealogical tradition as rendered by Abu ʿl-Ḡāzāʾī (Ṣadżara-yi Tarākīmī, ed. Kononov, text, 61-2), which also connects the migration of the Oguz to Mangishlak with the great disturbances in the d of the Oguz in the time of All Khān and Shāh Malik (Oguz rulers, contemporaries of the first Saldjuk). It is to this time that the Turkmen tradition relates the migration to Mangishlak of all those tribes which were also later found on the peninsula, as attested in other sources. The most numerous among these tribes was the Sālor [q. v.], which in the 10th/16th century was divided into the "inner" (iṭṭī) Sālor, who lived on the coast, and the "outer" (lujkī) Sālor, who lived farther to the east, on the road from the coast to Kharaṣmaglak (see Bartol'd, Sočinennya, viii, 148). The "outer Sālor" was, in fact, a group of tribes affiliated with the Salar proper, and it was found also in the Balkhān and Khūrāsān; among them the tribe Ersarī [q. v. in Suppl.] lived partly on Mangishlak. Other tribes mentioned in Ṣadżara-yi Tarākīmī as those who came there with the Sālor included the Ṣawdaw [q. v.] and Igdīr, which remained on the peninsula also later.

According to the Turkmen tradition, in the middle of the 8th/14th century Mangishlak belonged to the Golden Horde, together with the Balkhān and the northern part of Kharaṣmaglak (see Abu ʿl-Ḡāzāʾī, Ṣadżara-yi Tarākīmī, ed. Kononov, text, 72). Nothing is known about the region in Timūrid times. The available sources only clearly indicate that after the Mongol conquest, Mangishlak remained for several centuries one of the main regions inhabited by the Turkmen, together with the Balkhān and the western part of the Kārakūm desert (see Yu. Bregel, in C.A., xxv/1-2 [1981], 20-2). With the conquest of Kharaṣmaglak by the Uzbeks in the early 10th/16th century, the ʿArabshāhī Khāns subdued also the Turkmen tribes of Mangishlak, which were divided between the Uzbek sultans as part of their appanages (see Abu ʿl-Ḡāzāʾī, Ṣadżara-yi Turk, ed. Desmaisons, text, 201, 202, 206; tr., 216, 220). In the 11th/17th century, however, the Turkmen of Mangishlak seemed to be mostly independent, and the region sometimes served as a refuge for the Uzbek sultans, who fled from Kharaṣmaglak during internal strife there. Via Mangishlak there ran a trade route from the Volga basin to Kharaṣmaglak. Goods were unloaded in the Kabaklī landing-place on the Buzāzi peninsula and taken to Kharaṣmaglak by caravans through the plateau of ʿUst-Yurt. The route became especially important after the conquest of Aṣṭrakhan [q. v.] by the Russians (1556). Turkmen also profited from this trade, supplying camels and protection to the caravans, extorting presents from the merchants and occasionally plundering them. Mangishlak also served as the starting point of a sea-route to Shīrāz [q. v.], in the late 10th/16th and early 11th/17th centuries used by Central Asian merchants and pilgrims to Mecca wishing to avoid travel through Shiʿī Iran (see Abu ʿl-Ḡāzāʾī, Ṣadżara-yi Turk, ed. Desmaisons, text, 257, 273; tr., 275, 294). In 1558 the first English traveller to Central Asia, Anthony Jenkinson, passed through Mangishlak (see Purchase his Pilgrimes, xii, Glasgow 1696, 10-13).

Both the Turkmen tribes on Mangishlak and the trade caravans were endangered by the raids from the north of the Mangīt [q. v.], or Nogays, in the 10th/16th century and of the Kalmuk [q. v.] in the 11th/17th century. The Kalmuk raids in 1620s and 1630s caused the transfer of the landing-place from the Kabaklī Bay to the Karagan Bay, near the Sari-Taš Mountain, farther to the south (see A. Čułošnikov, in Material po istorii Uzbekskoy, Tadžikskoy i Turkmenskoj SSR, pt. 1, Leningrad 1932, 74-6, and the map attached to the book). Already the Mangīt raids forced a part of the Turkmen to leave Mangishlak. Another cause of emigration was, apparently, the growing desiccation of the steppe which began at the same time (see Yu. Bregel, in Suppl., text, 72). Later, the Kalmuk pressure had the same effect. In the middle of the 11th/17th century, the Ersarī tribe totally abandoned Mangishlak, together with a part of the Sālor; another part of the Sālor probably remained there till the early 12th/18th century. The Kalmuks under Ayuka (1670-1724), or as early as the reign of Punčak-Mončak (1667-70) deported parts of the tribes of the ʿCawdaw and Igdīr as well as a part of the tribe of the Sojinnadji to the Volga basin (from where they moved to the Caucasus). In the first half of the 12th/18th century, most of the remaining ʿCawdaw and Igdīr migrated to Kharaṣmaglak, and in the early 19th century several groups of the same tribes migrated via the Volga to their tribesmen in the Caucasus; but Mangishlak was finally abandoned by the Turkmen only in 1840s (a small section of the ʿCawdaw has continued to dwell near the Caspian shore till the present time). The Turkmen were replaced on Mangishlak by the Kazaks, who belonged to the clan Aday of the Bayull tribe (of the Little Horde). There seems to be no historical evidence of the time of this migration; Kazak legends relate this movement to the middle or the second half of the 12th/18th century. Assertion of some modern Kazak scholars trying to connect the Aday with the ancient Daha, and thus trying to prove that the Kazaks were the most ancient inhabitants of Mangishlak, are totally unfounded. For the Aday, Mangishlak was the
region of their winter pastures, their summer pastures being about 600 miles from there to the north.

As early as the 1670s, the khan of Khiwa, Anusha, asked the Russian government to build a fortress on Mangushlak to protect the trade route between Russia and Central Asia; but the first Russian attempt at establishing a permanent position on the peninsula was made only under Peter the Great, when three fortresses were built near the Caspian coast by the ill-fated expedition of Bekovit-Cerkassky (1716); the fortresses were abandoned the next year. During the 18th/19th and early 20th centuries a number of Russian expeditions studied Mangushlak, and in 1834 the Russians founded a fortress on the southern shore of the Mertviy Kultuk Bay, named Novo-Aleksandrovskoye, with a permanent garrison. The establishment of Russian power on the Mangushlak shore was one of the reasons of tensions between her and the Khanate of Khiwa which led to the unsuccessful Russian military campaign of 1839-40. Mangushlak remained a bone of contention between Russia and Khiwa for another decade, both sides trying to use against one another the Aday Kazaks, but neither actually extending its sovereignty over the peninsula until in 1846 the Russians built a fortress on Cape Tüp-Karagan, named first Novo-Petrovskoye and then in 1859 renamed Fort Aleksandrovskiy. But the final incorporation of Mangushlak into the Russian Empire occurred only after the occupation of the Krasnovodsk region in 1869 and the submission of Khiwa in 1873. According to the imperial decree of 1870, the district (pristavstvo) of Mangushlak was subordinated to the Russian viceroy of Caucasus, and after the Russian conquest of Turkmensia in 1881 this district was incorporated, as an oblast', in the newly-organised 'Transcaspian region (Zakaspiyskaya oblast')... After the revolution of 1917, Mangushlak (except for its southernmost part around the Kara-Boghaz Bay) was separated from the land of the Turkmens and included in the republic of Kazakhstan. Since 1973 it has formed a separate Mangushlak region (oblast') of Kazakhstan, including also a part of the Ust-Yurt Plateau, with an area of 100,000 square miles and its centre at Shevchenko (built only in 1965), where until 1964 Aktau; the population of the oblast' was 256,000 in 1978, of which the population of Shevchenko was almost a half (110,000 in 1979); 92% of the inhabitants of the oblast' live in cities (see Sovetskii Entsiklopedicheski slovar', Moscow 1980, 1522). The present economic and strategic importance of Mangushlak is determined by its mineral riches, especially petroleum and natural gas (discovered in 1961) and uranium; details about the uranium mines are kept secret by official Soviet sources, but this uranium is used, apparently, by the atomic power station in Shevcenko. #Bibliography: In addition to the works mentioned in the text, see S. the Mangit tribe joined the Uzbek confederacy restored by Shâyâbânî Kân [see SHAYBANIDS] and participated in his conquest of Transoxania; the Mangits in the troops of Shâyâbânî Kân are mentioned in the Shâyâbânî-nâm by Muhammad Sâdî [ed. Vâlmîry, Budapest 1885, 272, 276]. Yet the bulk of the Mangit confederacy still remained between the Volga and the Emba rivers for another century, until they were driven from this territory by the Kalmucks [q.v.] in the 1620s. After this, the greater part of the confederacy moved to Northern Caucasus, where they have been known only as the Nogays (about the Mangit as one of the tribal units of the Caucasian Nogays, cf. N. G. Volkova, op. cit., 80-3), while another part migrated to the Khânate of Khiwa, where they first established themselves in the Amû-Darya delta. Abu 'l-Ghâzâlî mentions the Mangits only outside Khârâzûm, in their old territory, and as distinct from the Uzbeks (see Shâhârâ-yi Turk, ed. Desmaisons, text, 212-13, 230, 267, 270, 290, tr., 228-9, 246-7, 286, 289, 311). If the name of the tribe Abu 'l-Ghâzâlî is said to have divided all the Uzbek tribes of Khârâzûm into four groups, one of which was formed by the tribes Mangit and Nukuz (Mu'nîs, Firdaws al-ikbâl, ms. of the Lenîngrad Branch of the Institute of Oriental Studies, C-571, fol. 65b). Probably, the migration of the Mangits and other Turkic groups of the Mangit ulû to Khârâzûm happened in the reign of Abu 'l-Ghâzû (1215-74), or it was this movement that caused the redistribution of the Uzbek tribes and their territories in the khânate.

In Khârâzûm, the Mangit tribe contended for power with the tribe of Kongrat [see KUNGRAT]; the historian of the Kongrat dynasty Mu'nîs [q.v.] traced this rivalry back to the time of Nokay Noyan (see Firdaws al-ikbâl, ms. cit., fol. 94b). At the end of the 17th and the 18th centuries, the Mangit who inhabited the central part of the Amû-Darya delta (Alâr) with the fortresses Mangit-kalâ and Şâh-Temir, together with several other Uzbek tribes of the same region, had their local rulers who did not recognise the authority of the khân of Khiwa. In their struggle with the Kongrats, the Mangits of Khârâzûm were supported by their tribesmen in Transoxania, whose chiefs formed a new dynasty in Bukhara in the middle of the 18th century [see MANGITS]. After some success in 1740s (when two chiefs of the Mangit, Artûk İnak and then his brother Kuruz Bek, were the actual rulers of the khânate), the Mangits were finally overcome by the Kongrat and lost any political importance in Khârâzûm. Since the beginning of the 19th century, they have inhabited mainly a region to the south of the Amû-Darya delta, where the town Mangit was founded in 1215/1800 (see Mu'nîs, Firdaws al-ikbâl, ms. cit., fol. 156b) on a canal of the same name (Mangit-arnâ).

In Transoxania, the Mangits were much more numerous and powerful than in Khârâzûm; their main territory was the oasis of Karhî [q.v.]. According to the Gaziska Daryâ basin, but a greater number of them lived also in the oasis of Bukhârâ, as well as near Samarkand and Katta-Kurgân. It is not clear, whether they all were descendants of the Mangits who came with Shâyâbânî Kân, or whether some of them arrived later, as in Khârâzûm (and, probably, through Khârâzûm), with the dissolution of the Mangit ulû (cf. above). According to statistical data of 1923, the total number of the Mangits in Transoxania was 99,200 (of whom 44,000 were near Bukhârâ and 31,000 in the region of Karhî); and in Khârâzûm 16,000 (ibid., 1925). There is no record of the Mangits there after 1620s. The Karakalpak s [q.v.] also include the Mangit as one of their major tribal subvisions (see T. A. Zhadanko, Ocherki istoricheskoy etnografii Karakalpakov, Moscow-Leningrad 1950, 123-4; Dokumenty arxhiiv, Khiva, po istorii i etnografii karakalpakov, ed. Yu. Bregel, Moscow 1967, 91-100). This migration back to the 15th-16th centuries, when the Karakalpak were apparently included in the ulus of the ulus. Bibliography: In addition to the works mentioned in the text, see M. G. MANGITS, a Turkish dynasty which reigned in Bukhârâ [q.v.] from 1166/1753 to 1339/1920.

It was founded by the chiefs of the Uzbek tribe Mangit [q.v.], which was dominant in the central regions of Transoxania after the Uzbek conquest of the 16th century. Khudâyâr Bîy, the grandfather of the sovereigns of the dynasty Muhammad Rahîm, became an ataul [q.v. in Suppl.] in 1162/1714 under the Djiânîd khan Abu 'l-Fayd (Tâ'khî 'Abû 'l-Fayd-Khanî, Russ. tr. A. A. Semenov, 3). His son Muhammad Hakîm Bîy was appointed to the same post in 1134/1722 (ibid., 67), and he became an all-powerful minister of Abu 'l-Fayd Khan. He was instrumental in securing the peaceful surrender of Abu 'l-Fayd Khan to Nâdir Shâh in 1135/1740 and therefore enjoyed special favour of the latter, and began to style himself amir-i kâbir. His son Muhammad Rahîm Bîy served as the head of a detachment of Bukhârian troops with the army of Nâdir Shâh. After the death of Muhammad Hakim Ataîlî in 1156/1743 and the subsequent disturbances in the country, Muhammad Rahîm was sent by Nâdir Shâh to Bukhârâ with Iranian troops to restore order. Having firmly established his authority in Bukhârâ, he ordered Abu 'l-Fayd Khan to be killed several days after the assassination of Nâdir Shâh in Mayhâd in 1160/1747. During the first years of his actual rule, he enthroned puppet khanhs (the first of whom, 'Abd al-Mu'în, the son of Abu 'l-Fayd, was killed as early as 1161/1748), officially remaining only an ataul; but after 1166/1753 he apparently reigned alone with the same title, and in 1170/1756 he was proclaimed khan. After his death in 1172/1758, his uncle and successor Dînîyîl Bîy A'tailî (1172-99/1758-85; according to some sources, the correct name was Dânîyâr; however, the coins give Dînîyîl again enthroned puppet khanhs, grandsons of Abu 'l-Fayd. Only Dînîyîl's son Shâh Murâd (nicknamed 'Amîr-i Ma'sîmîn', 1199-1215/1780-1800) finally deposed the Dînîyîls and acceded the throne himself. The latest known silver coin with the name of the last Dînîyîl khan Abu 'l-Ghâzû is dated 1203/1788-9 (see Davidović, Istorija monetnogo dela, 51-2; Burnaševa, Moneti [I], 120). However, Shâh Murâd did not adopt the title khan, and instead of this called himself amîr, as did all his successors. Shâh Murâd ascribed this title even to his father Dînîyîl on the coins which he minted in the name of the latter. The implied meaning was that of amîr al-ma'mînî (this title actually appears on the coins of amîr Haydar, 1215-42/1800-26), which had to
show that the Mangit rulers considered themselves Muslim kings par excellence and not continuators of the decline of power of the Uzbek tribal chiefs, with a parallel strengthening of the central government in Bukhara. The Mangits could achieve this because of the support which they received from the urban population as well as because of the creation of a small standing army. The tribal aristocracy was finally smashed by the seventh ruler of the dynasty, Naṣr Allāh (1242-77/1282-70), who in a relentless struggle against the nomadic state tradition. Muslim kings par excellence and not continuators of

Despite the incessant wars with their neighbors and some military successes, the most important of which were the conquest of Marw by Shāh Murād in 1204/1789-90 and the temporary capture of Khokand in 1258/1842, the Mangits were unable to impose their authority on all the territories which had been included into the Khānate of Bukhara under the previous dynasties. The regions to the south of the Amīr-Daryā in Afghan Turkestan were lost already under Shāh Murād, and Marw passed under the control of Khiwa in 1258/1842; the principality of Shahār-i Khwāzor was a bone of contention between the Khānate of Bukhara and the Keneges tribe, until 1272/1855-6; the principality of Shahr-i Sabz remained independent, under hostile chiefs of the Keneges tribe, until 1272/1855-6; the principality of Ura-Tiibe was a bone of contention between the Khānate of Bukhara and Khokand, but mostly was either independent or under Khokand rule; and the mountain principalities of the Pāmir also remained mostly independent until the Russian conquest.

Under Naṣr Allāh's son, amīr Muẓaffar al-Dīn (1277-1302/1860-83), the Khānate of Bukhārā was defeated by the Russians and in 1285/1868 lost its independence. Samarqand and its province were annexed by Russia; the Khanate was slighted by establishing, with Russian help, his firm control over the mountainous regions in the upper Zaraşfān valley (1870); in 1895 principalities of the Western Pāmir were also annexed by Bukhārā. The Mangits retained their throne as the vassals of the Russian Empire. 

1. A port on the southwestern coast of the Kāhilāwīf peninsula, in lat. 21° 28' N. and long. 70° 25' 20' N. and long. 70° 31' E. and 44 miles/70 km. to the northeast of Kotah city. Here there took place on 1 October 1821 the battle between two rival Rajput powers, that of the Maharao Kishor Singh of Kotah and that of the Maharao of Baroda. British troops, which resulted in a decisive victory for Zālim Sing and the retreat of the Maharao to Baroda.

2. A town in the former British Indian territory of Rajputana, within the native state of Kotah, in lat. 25° 20' N. and long. 70° 31' E. and 44 miles/70 km. to the northeast of Kotah city. Here there took place on 1 October 1821 the battle between two rival Rajput powers, that of the Maharao Kāhilāwīf Singh of Kotah and that of the aged regent of Kotah, the kāhilāwīf, Zālim Singh (1740-1826), the latter aided by British troops, which resulted in a decisive victory for Zālim Sing and the retreat of the Maharao to Baroda.

throughout the whole of the khan's reign. When in 670/1271-2 an embassy on the way to Egypt was captured by a Frankish ship from Marseilles, the ambassadors and all their goods had to be released on the sultan's demand. When in 680/April 1280 an Egyptian embassy left for the Golden Horde, the path of Berke remained unobstructed. Under Mangu-Timur, the name and the nickname of Mangu-Timur, see P. Pelliot, Notes sur l'histoire de la Horde d'Or, Paris 1949, 58-62. (W. BARTHOLD - [YU. BREGEL])

**Mâni** (<A. *manâ*), a form of Turkish popular poetry.

The mani, is most unusually, a piece of poetry made up of heptasyllabic verses rhymed on the pattern *a a b a c a d a e* or *b a c a*...

The term mani is used to denote this form and these poetical genres in Anatolia, amongst the Turkish-speaking Balkan peoples, amongst the Crimean Tatars, in Ahdarbaydjan and amongst the Gagauz of Bessarabia, sometimes with variant forms: in Anatolia, *mâni* at Denizli and *mânî* at Urfa; in Ahdarbaydjan, *mahnî*; and in the Crimea, *mânî*. Other terms are also used to denote poetic pieces with the same thematic and formal characteristics: *bayârî* in the two parts of Ahdarbaydjan and in the Ahdarî-influenced provinces of eastern Anatolia; *beyrut* at Urfa and Dîyarbakir; *döb* amongst the Crimean and Kazan Tatars, and *döb* amongst the Mâhîs.

On the basis of their themes and the circumstances
in which they are cited or sung, manis can be classified as follows:

1. Manis about foretelling the future and divination recited at the festival of hidrelle [see ḳumr-ṭiyās], on the occasion of other festivities and on winter evenings by womenfolk;

2. Work manis recited by women in the course of communal activities, such as the preparation of provisions for the winter, fruit-gathering, hay-making, etc. On the occasion of the latter two types of activity, manis are addressed to passers-by, who are required to reply in the same fashion in order to avoid mockery by the womenfolk;

3. Declamatory manis, sung by boys and girls at the time of certain festivals and excursions into the countryside;

4. Manis of the watchmen of town quarters sung during the nights of Ramadan;

5. Manis of certain itinerant sellers of sweetmeats and delicacies who sing out to announce their appearance in the streets;

6. Manis of cafés in the tradition of old Istanbul;

7. Manis of letters, inserted as sentimental messages in letters exchanged between relatives, friends or couples; and

8. Manis of certain sāḥiṣ [q.v.] or reciters and story-tellers, who they improvise and insert between the strophes of the poems which make up the sung part of their prose narratives (see P.N. Boratav, Halk hikayeleri ve halk hikayeçiliği, Ankara 1946, 239-42, 291).

Concerning the origin of the mani, one may suggest as a hypothesis an adaptation of the model of the rubā‘ī to the heptasyllabic and octosyllabic metres peculiar to the Turkish languages; a first stage in this process of adaptation of would be the tayyāb, another type of quatrain peculiar to Turkish classical poetry, composed in the ṣarîd metre and rhymed according to the same schema as the rubā‘ī and mani.

(P. N. Boratav)

MĀNĪ b. FĀTĪKH or FĀTIKH, the form found in mediaeval Islamic sources (e.g. al-Mas‘ūdī, Muridī, ii 164, 167-8, vii, 12-16, vii, 293, = §§ 589, 594, 2705-7, 3447) for the founder of the dualist religion of Manicheism, Mani son of Fātīk, born in southern Persia in the 1st century B.C. and martyred under the Sassanid Bahram I in 214, 276 or 277, and whose faith spread from the Persian empire in the 7th century as far as Central Asia, eastern Turkestan (where after 762 it was the chief religion of the Uyghur Turks [q.v.]) and northern China. In Islamic sources, the adherents of Manicheism appear as the Manâniyya (Mānâniyya), as in the important section on them in al-Nadirî’s Fihrist, ed. Riḍâ Taḏdâdud, Tehran 1530/1971, 391-402, tr. Dodge, ii, 773-805, and in al-Khârâzmi’s Mafātith al-sūriy, 37, where both forms are however registered.

Although Manicheism was in the early Islamic centuries largely pushed into Central Asia (thus the Hudud al-sūr, tr. Minorsky, 113, 113.25, mentions a ‘‘convent of the Manichaens’’, ḵānqâh-i Mānî, in Samarkand in 982, with a manâniyya or audiitore) and beyond, it had an important part in the general phenomenon of zandaka ‘‘heresy, unbelief’’ in early ‘Ābâbîd ‘Irâk, for a general consideration of this, see zindik, and meanwhile, Spuler, Iran, 206-9.

**MANISA** [see MAGHNISA].

**MANOHAR, MANOHARGARH, a fortress on a lofty rock, some 2,500 feet/770 m. high, in lat. 16° N. and long. 74° 1’ E., in the Western Ghats range of peninsular India. Formerly in the southernmost part of the British Indian province of Bombay, it is now just within the southwestern corner of the Maharashtra state of the Indian Union.

**MANSĀ MūSĀ, king (mansa) of Mali (712-38/1312-37).**

He was apparently the grandson of Abū Bākhr (Manding Bori), who was the brother of Mārī Jāta (Sunjata), the legendary hero credited with the establishment of Mali in the 14th century [q.v.] as a powerful empire. Mansā Mūsā reigned at the pinnacle of Mali’s prosperity, and is remembered in the Arabic sources as a pious and virtuous sovereign. Following the example of several earlier Malian rulers, and having appointed his son Maghā (Muhammad) to rule in his absence, he made a pilgrimage to Mecca in 1324 that made a profound impression on the Egyptians and was chronicled by Arab writers. According to the 17th-century Timbuktu chronicles Tārīkh al-Sūdān and Tārīkh al-Fāṭiḥāh, whose authors relied extensively on oral sources, Mansā Mūsā was accompanied by an entourage of thousands, including his favourite wife, Inārī Konte, and he travelled via Timbuktu, where he caused to be built one of several mosques constructed during his journey. In Cairo, he flooded the market with so much gold that its value fell throughout Egypt. One of al-‘Umārī’s informants, Ibn Amīr Ḥājīb, was often in the company of Mansā Mūsā when he was in Egypt, and among the things told him by Mansā Mūsā himself was that he came to power when his predecessor (Muhammad, of a different branch of the same family) appointed him deputy before leaving on a sea-going expedition, from which he never returned, to discover the limits of the Atlantic Ocean. While on pilgrimage, Mansā Mūsā also met the Andalusian poet and architect Abū Iṣḥāq Ibrāhīm al-Sāhilī, who accompanied him back to Mali where, ac-
According to Ibn Khaldun's friend Khadidja, Abu Ishak constructed for the mansa an elaborately decorated domed building that may have been the first of its kind in that country. Also accompanying Mansa Musa were four *ghuruf* from Kunnyah who settled in Mali with their families. Upon his return, Mansa Mūsā continued his policy of diplomatically furthering the interests of Mali in the greater Islamic world by corresponding with the sultan at Cairo, sending *'ulama'* to study in Fās, and exchanging embassies and gifts with the Marinid ruler of the Maghrib, Abu 'l-Hassan. Al-'Umarī claims that Mansa Mūsā had returned to Mali from his pilgrimage with the intention of handing over his sovereignty to his successor, with the stipulation of returning to Mecca to live near the sanctuary; but he died before he could carry out his plan.

Viewed from the local African perspective, Mansa Mūsā and his pilgrimage engendered a western Sudanic oral tradition, the hero of which is Makanta Jigi (Fajigi), "Father of hope who went to Mecca". As an oral record of the local Timunic expectation placed on Mansa Mūsā's pilgrimage by his subjects and their descendants, the Fajigi legend reveals attitudes that helped make it possible for an accommodation between indigenous religious practices and Islam to be achieved. The basic narrative line of the legendary oral account tells how Mansa Mūsā/Fajigi was motivated to make the pilgrimage because he was responsible for a regrettable incident involving his mother Gongo (Kankan), possibly resulting in her death. Making a pilgrimage to Mecca, he acquires the most important of the spiritually powerful altars (*boliv*) used in traditional Manding religious ritual, including those of the prestigious Komo society. As Fajigi returns through the land of the Manding, he distributes some of the altars, as well as various potions and amulets to people who help him. When he reaches the rivers of Mali, he uses a magic canoe to transport the altars. The canoe encounters rough waters and some of the cargo falls into the water, which varies according to the informant, the canoe sinks to the bottom of a lake or river where it remains to this day, itself a powerful altar that receives regular offerings. The most significant feature of this legend is the paradoxical claim that the *mansa* was most famous for his devotion to Islam was at the same time the one who provided his subjects with the essential paraphernalia of the ancestral non-Islamic Manding religion. Thus, from the traditional non-Muslim point of view, Mansa Mūsā and his pilgrimage emerge, not as examples of faithful Islamic endeavor but as a source of traditional Manding religious continuity. Cavalrymen were identified in muster rolls by name and physical appearance; horses by description and imperial brands. Special *du-asbah suwdr* rank obliged the mansabdār to employ men two, rather than merely one, to meet the muster [see further دژگری at *tasriḥa* in Suppl.].

Most *mansabdārs* obtained payment for their fixed *dhāt* and *suwdr* ranks in the form of salary assignments known as *dājīs* [q. v.]. Under this arrangement, the empire transferred to the mansabdār the right of collection of its share of the land tax from a specified area—a village or portion thereof, or a *pargana* [q. v.], or portion thereof—in an amount equivalent to his pay claim. Assignment of a *dājī* ordinarily did not convey with it any administrative rights or responsibilities in the area assigned. Many lesser-ranked *mansabdārs* were paid directly in cash from the provincial or central treasuries. The *mansabdār* system formally expressed the uniformity and cohesiveness and discipline of the Mughal administrative and military elites. Mansabdārs were the instruments of imperial unification and expansion. The honorific ranking system tied all the

### Bibliography

nobles and lesser mansabdars to the person and the preference of the emperor. All ... to 10 dinars (fine) (cf. Becker, Beiträge zur Gesch. Agyptens, 104). In the texts of such passports (cf. Becker, Papyr. Schott-Reinhardts, i, 40, 11) however, we have, so far as I can see, not the word mansabdur but only kuttab.

Manshur seems also to have a quite general meaning of “pass” and is always told in the Mughal empire, in particular for the various diplomas of appointment, including mansabdars.

Between 1119/1707 and 1136/1724 discipline and the integrity of the mansabdari system began to deteriorate. Ranks rapidly became inflated and, if not meaningless, were very much distorted. By the late Mughal period, for which we have very full sources. The increasingly complicated system of the administration brought a minute distinction between and special names for the various diplomas of appointment, edicts, etc., and the term mansabdur was henceforth used exclusively of the grants of appointment or of the edict on the equation of taxation and lunar years (taba'il al-sinn) which is quoted from the Mansabdadi of the Khadi al-Fidai for the year 586/1191-2. On the references see, not the word mansabdur but only kuttab. In the chancellery in the name of the mandshir henceforth used exclusively of the grants of appointment, including mansabdars.

Under the Ayyubids also, mansabdur had quite a general meaning. Thus among the examples of Fatimid documents given by al-Kalkashandi, x, 457-52, there are several which in their texts are described as mansabdur. Among these are for example, appointments to the supervision of inhabitants (mash'aratul-manadur al-bahiriya), of the poll-tax (mugharafatul-igdawi), to a professorship (tadrist), etc. A grant of an appanage could also be called manshar at this time, as in al-Kalkashandi, xiii, 131 [see Ibn Qalaf, in Suppl.] from the Fātimid Wasiyāl al-bayān of ‘Ali b. Khalaf, and the regulation that the manšātīr must not have an address (‘unwān) and that in place of this, the head of the Diwan must write the date with his own hand, seems to be first found in Ibn al-Ṣ añafi, Kāmil Dīwan al-Rasā‘ī, 113 - al-Kalkashandi, xii, 199.

Under the Ayyubids also, mansabdur had quite a general meaning. Thus in ibid., xi, 49 f., "a marshall of the nobles" (nakib al-‘alghir) is appointed by a manshar, and in 51 f., governors (wulāf) of different provinces. In the text of it, the name manshardur is given to the edict on the equation of taxation and lunar years (taba'il al-sinn) which is quoted from the Mansabdadi of the Khadi al-Fidai for the year 586/1191-2. Among the references see, not the word mansabdur but only kuttab. In the chancellery in the name of the mandshir henceforth used exclusively of the grants of appointment, including mansabdars.

The term manshur became limited and specialised in the Mamluk period, for which we have very full sources. The increasingly complicated system of the administration brought a minute distinction between and special names for the various diplomas of appointment, edicts, etc., and the term manshur was henceforth used exclusively of the grants of appanages. These manshurār were always written in Cairo in the chancellery (dīwan al-rūgha) in the name of the sultan; only in exceptional cases might they be in the name of the al-nāb b al-kāfi (see al-Kalkashandi, iv, 16; xii, 157). According to the very full description in al-Kalkashandi, xii, 32 f., and al-MaknzT, ii, 211, the procedure in granting a fief was as follows: if a fief became vacant (mahāl) in a provincial town, e.g. in Damascus, the governor there (nāb b) proposed a new holder and had a document (rukūn, also called mishār or manshur ‘a’ drawn up about his proposal by the inspector of the army (nāzir al-dīwan) and the Khalkahān, xiv, 190, 51). In a provincial town (al-dīwan al-dīwan) of his town. This document was then sent by courier (barid) or pigeon post (‘ulā’ adhanib al-hamām) to the government (al-abwāb al-sharifa) in Cairo. Here it was
received by the postmaster (dawaddr), later by the private secretary (kdtib al-sirr = sahib diwdn ... course of extensive travels or through embassies and presentations.

Although nothing is known of the painter’s origins, many rules were laid down for the wording to be used; the text is to be shorter and less florid than in the other appointments and there are none of the usual rules about service (wasayā); an original "virgin" (mubākārat al-inštā) is recommended as the finest form of a manshīr. Special formulae are further required for grants of appanages which were concerned with renewal (tashtid), addition (iyadāt) or substitution (al-ustād). A regular signature of the sultan, such as is usual on appointments as confirmation (mustānad), is not found on the manṣūrār; instead of this, the sultan writes formulae like "God is my hope" (Allāh amalī), "God is my protector" (Allāh waṣīyya), "God is sufficient for me" (Allāh ḥabībī). "To God belongs the rule" (al-mulk li ilāhī), or "God alone has grace" (al-ʿināma li waṣīyya). Occasionally, the manṣūrār for the highest ranks (mukaddamu l-uluf and mukaddamu l-ṭablikhd) had a tughrā [q. a.] at the top. The tughrās were prepared by a special official beforehand and gummed on to the finished diplomas. In al-Kalkashandī, xiii, 165 ff., the tughrās of al-Nāṣir Muḥammad b. ʿAlāwīn (693-741 AH = 1294-1343 AD) are reproduced and described; they differ considerably from the better-known form of the tughrā of the Ottoman sultans. After ʿAlī ʿAbd al-Salām of the Mughal studio, achieving the distinction of being the only artist who made his reputation by nature painting. His progress is interesting as he was one of few painters whose fortune was improved by changes in the atelier when the amateur naturalist and aesthete Džahāngīr (1014-17/1605-27 [q. a.]) succeeded his father Akbar [q. e.] as emperor. His evolution demonstrates the fact that the Mughal artist was demanded realistic renderings of a very high standard from his artists. The completed manṣūrār was then taken back by a courier from Cairo to the town concerned, e.g. Damascus, and handed over to the tenant of the appanage. The inspector of the army there (tāṣkīr al-din), however, first entered it in his register, for he had to keep a roll of the holders of fiefs in his province. al-Kalkashandī, xiii, 167-99, gives as examples of manṣūrār no fewer than 26 texts, beginning with one drawn up by Muḥyī l-Dīn b. ʿAbd al-Zahir in the reign of Kālāwūn for the latter’s son al-Nāṣir Muḥammad, which for its remarkable beauty he calls a regular tughrā l-manshurī. The other texts are of the appanages and military ranks, as well as for sons of amirs (waṣīd al-umrār) and for amirs of the Arabs, Turkomans and Kurds. In the Ottoman Empire, certain patents of appoint-
Mansur was working in Akbar’s studio by about 988/1580, when he co-operated as a colourist for many natural history vignettes from the now dispersed earliest Babur-nama manuscript (E. Smart, Paintings from the Baburnama, Ph.D. diss., London University 1977, 327). Since his last dated painting is a work of 1033/1624 (see A. Das, Ustad Mansur, in Lalit Kala, xvii), it can be ascertained that Mansur was probably one of those recruits who began grining pigments and colouring designs during his teenage years. The memoirs of the Mughal dynasty’s founder Babur [q. v.] that record the strange flora and fauna of his adopted country were among the few early outlets for Mansur’s talent; he definitely contributed to three of the four copies of this manuscript and probably also to the remaining volume (now in Baltimore and Moscow) which no longer has artist attributions (Smart, loc. cit.). Mansur’s greatest achievement for the 16th century Mughal manuscripts is the colouring of a scene filled with animals which shows Akbar hunting in a kamarg; this is one of the most spirited miniatures in the Akbar-nama manuscript (998-1003/1590-5), intended to be a uniquely powerful and impressive volume glorifying the dynastic position of the reigning sovereign. Although Mansur did not produce the design, much of the painting’s impact can be attributed to him and indicates that he probably attracted some attention in the studio by this time.

The animal paintings of the four Babur-namas are quite precise, but the challenge of anatomical studies on a small scale was perhaps not significant; a larger picture done about 998/1590 of two birds (rosy pastures, sturnus roseus Linnaeus) arranged in front of an imaginary landscape shows the limitations of Akbar’s studio and (E. Kuhnel and T. Goetze, Indian book painting, London 1926, pl. 10). It is clear that in this period Mansur uneasily applied flesh and feathers over a lumpish inner structure without the kind of anatomical knowledge that he had derived from observation of European paintings by about 1021/1612. Mansur was not a draughtsman; he acquired modelling skills with more difficulty than some other artists, and throughout his career there are indications in his work that he was forced to master formulae concerning structure. He does produce a few free and imaginative studies of animals poised in motion, such as that of a chameleon on a branch (S. C. Welch, Indian drawings and painted sketches, New York 1976, no. 15), but his greatest innate skill seems to be in transcribing patterns or textures. In this 10th/16th century compositions of birds, however, he does not render textures with as much illusionistic ability as he later did under the influence of Renaissance art.

Mansur did both the design and colouring of four political and courtly scenes for the first portion of an Akbar-nama begun in 1912/1603. Such commissions indicate that artists were expected to be versatile during the Akbari period in order to maintain their places in the studio; these compositions, which were the most usual types in an era devoted to historical illustration, were expected to be within the scope of all painters. Mansur is just able to manage the figural groups competently. The painter was apparently inconsistent in his ability to render figures, perhaps succeeding in revealing character only when he felt particular interest in his subjects. Of two portraits done in ca. 1000/1595, one of a turkeycock (E. Smart) reveals an easy, jocular individual, while the other of a prince on a throne demonstrates the artist’s decorative talent (vina player in Welch, Art of Mughal India, New York 1963, no. 18; prince on throne, private collection, Hyderabad). Since an ornate portrait of Djahangir seated on a low throne is inscribed to both Mansur and his fellow artist Manohar, who was primarily a portraitist, it is probable that Mansur contributed the details of costume and throne which are as intricately as his later bird pictures (A. Ivanova et alii, Albom indyskikh i persidskikh miniatuir, Moscow 1962, pl. 17).

Djahangir began his commissions of hunting and probably animal subjects while still a prince; it is possible that the pictures of rosy pastures mounted in an extensive manuskpr for album prepared for Djahangir had also been commissioned by him before 1008/1600. No specific evidence, however, remains to show how Mansur’s special association with the emperor developed. By the time of Djahangir’s accession, Mansur had commenced signing pictures Ustad Mansur or Mansur Nakkiaj (N. Titiev, Miniatures from Persian manuscripts, London 1977, 3), but despite this assertion of mastery there were many other painters, some younger than Mansur, who were more prominent and who had undoubtedly attracted the emperor’s attention (e.g. Manohar, Abu ‘l-Hasan and Bughndas). There are only a few pictures which stylistically appear to have been done early in Djahangir’s reign because of the combination of delicate drawing and tentative modelling. These compositions may indicate that Mansur’s green chameleon, creeping along a leafy branch and his portrait of a Himalayan blue-throated barbet (S. C. Clarke, Indian drawings, London 1922, pl. 15). The latter composition has very sensitive details, but the bird is awkwardly posed, indicating an early date. By 1021/1612, Mansur had acquired a much more scientific knowledge. In that year, Djahangir records that he received several exotic creatures, including a turkeycock, which he ordered to be painted together in a special durburr scene by an unspecified artist (Djahangir, The Tuzuk-i-Jahangiri, or Memoirs of Jahangir, tr. A. Rogers, ed. H. Beveridge, repr. New Delhi 1968, i, 215-17). A single portrait of the rare turkey which has crisp, very sophisticated, decorative details was probably painted by Mansur in this same year and demonstrates the evolution of his mature abilities (Clarke, pl. 15).

Both this composition and that of the barbet deserve attention because they are inscribed with Mansur’s title Nadir al-A‘yr (“Wonder of the age”) which was given to him by the emperor at some indeterminate date. Though such an inscription may have been placed on these miniatures—which are here presumed to be early—at any time, it is worth noting the doubtful possibility that such a tribute had been awarded by ca. 1021/1612. The most reasonable assessment, however, seems to be that the encomium was given after this date because the painter has left a large body of consistent work which is slightly more advanced and complex than the turkeycock; it therefore seems logical to assume that it is this corpus which would have won such singular praise from Djahangir. When in 1027/1618 Djahangir himself mentions the title in his diary, it is clear from the context that he had bestowed it some time previously, perhaps in ca. 1024/1615 (Tuzuk, ii, 20). In the diary, the emperor begins with a discussion of Abu ‘l-Hasan, whom he had also selected for the reception of a similar title and whom he ascerts to be his best painter. An implicit comparison of the two artists is made by the emperor as the foremost in two artistic categories; it is apparent from the passage that Djahangir’s appreciation of natural history drawing was profound and that he had elevated the subject by his interest in it.
Of the five artists mentioned by name in Djahangir's memoirs (Abu '1-Hasan, Aka Rida, Bishndas, ... completely abandoned by al-Mansur and he even embellished it with a number of palaces. The Hammadid kingdom had there-

Kashmiri flowers were originally placed together in a pears on the reverse is not positioned as those of the India and Pakistan, London 1947, pi. 139). A picture of the fur of the animal done in small slurred brush florican may imply. Tulips and Butterfly (Aligarh University) published survivor from the Kashmiri flower group that Mansur attributed painting of a nilgai is a much softer study with tributary, majestic and coldly intense qualities of study done for Shah Djahan is known by inscription. Most of the painter's work were mounted in the great book of their own very similar to the other albums that were mainly portraits. In the composition of tulips, Mansur has blended the colour of the blooms very subtly to express their delicate, waxy quality which he then contrasts with the powdery wings of a butterfly. Clearly, by the end of his career he was interested in the nature of substances and in how the imagination reacts to sensation.

Other paintings by Mansur not previously mentioned include early work in the Dhâmsâl-tawârikh, Tehran; the Khamsa of Dihlawi (fol. iv), Baltimore, and Djahangir's Muraqqâ' gulshan (fol. 53a), Tehran. Additional flowers and birds include an iris and narcissus (Y. Godard, Un album de portraits des princes timourides de l'Inde, in Ahtâr-î-Îrân, ii (1937), nos. 80 and 81 (fig. 113), godfinch (M.A. Alvi and A. Rahman, Jahanger the naturalist, New Delhi 1968, pl. XVIIA), falcon (R. Krishnadass, Mughal miniatures, New Delhi 1955, pl. IV) and pheasant (G. Marteau and H. Vever, Miniatures persanes, Paris 1932, no. 259, pl. CLXXVII). Unfortunately, because of Mansur's reputation, most unsigned flower and bird paintings done in the first half of the 11th/17th century have been ascribed to him without stylistic consideration. Mansur's work is quite bold, his compositions are generally simple with few objects, and the atmosphere is often somewhat static, so that it is to great extent possible to distinguish his mannerisms from those of other painters. Not only have inferior unrelated miniatures been attributed to him, but deliberate copies of Mansur's work were done by admiring artists of the 12th/18th and 13th/19th centuries. In a few instances, since it was customary for Djahangir to ask several artists to paint the same subject or to request an artist to produce more than one version of a miniature, there are two or more excellent pictures from Djahangir's reign that should be equally appreciated; these include another version of the turkeycock, probably by Mansur, and two others of the cheer pheasant—one perhaps by Mansur's fellow artist Payag. Since Djahangir's memoirs show that Mansur produced a vast number of paintings that have disappeared, what is known of his output should be evaluated as an accurate but limited indication of his abilities. It is clearly unfortunate that such a large percentage of his work should have been lost.

Al-Mansūr had in the first place to quell the revolt of one of his uncles, Balbūr, the governor of Constantine. He sent against him another Emīlī, Abū Yaknī. The latter after his victory was given the governorship of Constantine, but shortly after, he in his turn, together with his brother, who had been given the governorship of Bōne, rebelled. These risings over which Al-Mansūr, thanks to his energy, was triumphant, brought to the side of the rebels of the Hammādīd family the Zīrīds of al-Mahdīyya, who wished to get back some power in Barbyrī, the Almoravids of the Maghrib, who wished to extend towards the east, and the Bedouins, who were, always ready to join in the feuds of their powerful neighbours.

Al-Mansūr was, on the other hand, led to oppose the advance of the Almoravids who were, somewhat curiously, allied with the traditional opposition of the Zanātā [q.v.]. With the probable object of disarming the opposition, al-Nāṣr and al-Mansūr had married two sisters of Mūḥākūk, the chief of the Banū Wāmānū, at that time the most powerful of the Zanātā group. This alliance did not hinder the time-honoured feud from breaking out again. It became more acute when Al-Mansūr murdered his wife, the sister of Mūḥākūk. The latter then asked for support from the Almoravids.

From Tlemcen, where they had been installed for more than twenty years, the Almoravids had, after many attempts, endeavoured to expand towards the east at the expense of their brethren of the same race, the Sanhadja Banū Hammad. Al-Mansūr had twice reduced them to impotence. It was at this time that the Almoravids, driven by the Wāmānū chief into an alliance with the Almoravids of Tlemcen. The alliance formed in this way was a great blow to the Hammādīd kingdom. Algiers was besieged for two days; Ashīr was taken.

The fall of the latter fortress, the oldest stronghold of the family, was bitterly resented by al-Mansūr. He got together an army of 20,000 men, composed of Sanhadjas of the skin of Mūḥākūk I, Al-Mansūr marched against Tlemcen, met the governor Tāḥīn b. Tin-‘aμer to the north-east of the town and put him to flight. Tlemcen was spared at the supplication of Tāḥīn’s wife, who invoked the ties of relationship uniting them with the Sanhadja [496/1102].

After the defeat of the Almoravids, al-Mansūr severely punished the Zanātā and the rebel tribes of the Bougie district, whom he forced to flee into the mountains of Kabylia.

Thus al-Mansūr seems on the eve of his death (498/1105) to have thoroughly re-established the power of the Hammādīd. According to a tradition, which is not above suspicion, recorded by Ibn Khaldūn, the two capitals owed very important buildings to him: Bougie, the Palace of the Star and the Palace of Salvation; the Ka‘a, the government palace and the Kasr al-Mannār, the beautiful donjon of which is still in part extant.

Mercier, Hist. de l’Afrique septentrionale, ii, 53-5; L. de Beylie, La Kalaa des Beni Hammad, 38 ff., 99 ff. (doubtful traditions relating to the mosque of Bougie which was enlarged by al-Mansūr); G. Marçais, Manuel d’art musulman, i, 105, 121-3, 129-30. (G. Marçais)

Al-Mansūr, Abū Dī‘afar Abū ʿAbd Allāh b. Muḥammad b. ʿAlī, the second of ʿAbbasid caliphs, reigned 136-58/754-75. He was born in ca. 90-4/709-13 at al-Ḥumayma [q.v.] to the east of the Jordan, where the ʿAbbasid family were living. His mother, Sallāma, was a Berber slave girl. In 127-9/744-6 he joined the unsuccessful revolt of the Tālibīd ʿAbd Allāh b. Muḥāwīya [q.v.] against the Umayyads in western Iran. He then returned to al-Ḥumayma and took no part in the early stages of the ʿAbbasid revolution, coming to al-Ḳūṭh with his brother Abū ʾI-ʿAbbās (soon to be the caliph al-Saffah) as the ʿAbbasid armies were approaching from the east. After the establishment of his brother as caliph, he was sent to conduct the siege of Wāsīṭ where the last Umayyad governor of ʿIrāk, Yazīd b. ʿUmar b. Hubayra [see Ibn HUBAYRA], was holding out. There he made contact with Khurāsānī generals, including al-Ḥasan b. Kaḫṭāba, who was to be one of his most loyal supporters. He also tried to reach an agreement with Ibn Hubayra but was thwarted by Abū Muslim, who demanded that the Umayyad leader be executed.

After the fall of Wāsīṭ, he was appointed governor of al-Ḥijjāz and Armenia, where he succeeded in winning the loyalty of some of the most important Umayyad generals, including Ishākh b. Muslim al-ʿUkayfī. When al-Saffah died in Dhu ’l-Ḥijjah 136/June 754, he had already considerable political experience and had attracted a powerful body of supporters.

His brother designated Abū Dī‘afar as his heir, to be succeeded in turn by his nephew ʿIsa b. Mūṣā, the governor of al-Ḳūṭh; Abū Dī‘afar, who was on the haddījī with Abū Muslim at the time, quickly returned to take control. However, until the defeat of the ʿAlīd rebellions of 145/762-3, he faced a series of challenges to his caliphate.

The first threat came from his uncle ʿAbd Allāh b. ʿAllī, who at the time of al-Saffah’s death was preparing to attack the Byzantine Empire with a large army of Syrians and Khurāsānīs, and he decided to use this force to make a bid for the caliphate. Al-Mansūr was obliged to seek the support of Abū Muslim, who, against his better judgment, was persuaded to lead a large Khurāsānī army against the rebel, and Abū Allāh’s army, by this time composed almost exclusively of Syrians, was defeated near Niṣībīn in Qumādā II 137/November 754. Abū Allāh spent the rest of his life in disgrace in ʿIrāk, but the caliph typically, was careful to be reconciled to the Syrian leaders who had supported him.

The defeat of the rebels left al-Mansūr free to deal with Abū Muslim [q.v.]. Tension between the two men had been growing since the death of Ibn Hubayra, and a visit by al-Mansūr to Abū Muslim’s court at Marw before he became caliph had convinced him that Abū Muslim was too powerful to be allowed to survive. The conflict was not simply about personalities, but concerned the whole direction of the caliphate: Abū Muslim wished that eastern Iran should be effectively independent, under his rule, and that its revenues should be assigned to his Khurāsānī supporters, while al-Mansūr insisted that the caliph should appoint governors and collect taxes from the area. The presence of Abū Muslim in ʿIrāk made him vulnerable, and he was murdered at al-Ḥadāʾ in the caliph’s presence (Shaḥbān 137/February 755). His murder was followed by disturbances in Iran, notably the strongly anti-Muslim revolt of Sunbāḥīh, but in the end, al-Mansūr asserted his control over Khurāsān.

The last major challenge which al-Mansūr faced was the threat of an ʿAlīd uprising which eventually broke out in Radjab 145/September 762 in Medina, led by Muḥammad b. ʿAbd Allāh [q.v.]. Attempts to
spread the revolt to Syria and Egypt failed, whilst al-Kūfah, the traditional centre of Alid support, was easily defeated and killed by an 'Abbasid force led by 'Īsā b. Mūsā (Ramaḍān 145/November 762).

Shortly before Muhammad's death, his brother Ibrāhīm led a rising in al-Ṭabarānī which attracted widespread support in the city. Having taken over the town, he began to march on al-Kūfah, but was met by 'Abd al-Malik and Hishām, and he was defeated and killed at Bābkhamrā after a fierce battle (Dhū 'Iqāda 145/February 763).

The failure of the revolt left al-Mansūr free to consolidate his rule in comparative peace. He was a political planner of great skill and had a clear vision of the development of the caliphate. His policy was to establish a centralised, largely secular state, based on a reliable, salaried army and an efficient revenue-gathering system. His models were the great Umayyad rulers 'Abd al-Malik and Hishām, and he rejected the demands of those groups like the Rāwandiyya [q.v.] who launched a short-lived but dangerous revolt in 141/758-9 and who wanted to assume a more messianic role.

His main support came from the Khurāsānīyah, who forced the army which overthrew the Umayyads and who now became a privileged military group; governors of Khurāsān were always chosen from among their number, and they were appointed to important posts in other parts of the Caliphate. In ʿIrāq, garrison cities were established for them at Baghdad and al-Rakkā. Al-Mansūr also relied heavily on members of his own family. They were frequently given key governorships in ʿIrāq and he used a large part of his resources to build a new capital at Baghdad. Part of the reason for this was the need for security, and the outbreak of the Rāwandiyya had shown how vulnerable the caliphate was to even small-scale rebellions. Baghdad was also developed as a centre for the Khurāsānī soldiers who had come westwards and could not be settled in existing cities like al-Kūfah without arousing the hostility of the local population. On the Euphrates in al-Diṣrār, al-Rakkā was also developed from 155/772 onwards, as a Khurāsānī base to supervise the affairs of Syria and the Byzantine frontier.

In 147/764, al-Mansūr forced the resignation of 'Īsā b. Mūsā from his position as heri apparent and designated his own son Muḥammad al-Mahdī, who enjoyed a profound support of the bulk of the Rāwandiyya, who now obliged 'Īsā to content himself with being heir to al-Mahdī.

Al-Mansūr died on the road to Mecca in Dhū 'Al-Ḥijjah 150/October 775 in his mid-sixties. The twenty-one years of his reign had seen the establishment of the 'Abbasid caliphate as a centralised state under the caliph's control. He was a politician of genius who pursued his aims with a single-minded but prudent determination. He cannot be considered a popular ruler; he was noted for his hard work and his almost proverbial meanness (cf. his nickname ʿAbū 'l-Dāwānīk "Father of farthings"), and many felt that his autocratic style of government had betrayed the hopes of the 'Abbasid Revolution. Yet without his firm hand, the Muslim world might well have become prematurely fragmented in the mid-2nd/8th century.

AL-MANSUR (Madinat-) [see Baghdad]

AL-MANSUR, AL-MALIK MUHAMMAD B. UMAR B. S.fahanshah, local ruler of Hamat [q.v.], historian and patron of letters, b. 567/1171-2 (al-Makrizi, Suluk, i, 205), son of Salāḥ al-Dīn’s nephew al-Malik al-Muẓaffar Ṭakī al-Dīn Umār [q.v.], and paternal grandfather of Abu l-Fidāʾ [q.v.] (but not Tūrānghāʾ’s grandchild, as in vol. i, 805, above).

According to autobiographical remarks in his Midmār (see below), al-Mansur was still a child when taking part in campaigns and sieges of Salāḥ al-Dīn and Ṭakī al-Dīn. When in 579/1183 the latter was appointed governor of Egypt by Salāḥ al-Dīn, al-Mansur accompanied him (Midmār, 158, 227), and in Alexandria he studied ḥadīṯ with Abū Tāhir al-Silāfī [q.v.] (al-Ṣafādi, Wāfi, iv, 295, no. 1790), and with Abū Tāhir b. Āwāf [q.v.] (al-Dhahābi, Ḥabar, v, 71). Already in 580/1184, when his father had to leave Cairo temporarily (Mufarridi, 200), he became his official representative in Egypt. After his father’s death in Ramaḍān 587/September-October 1191, he became ruler of the city state of Hamāt and its dependencies, Maʿarrat al-Nūmān, Manbij, Kalʿat al-Najm and Salamiyya [q.v.]. The fiefs on the eastern side of the Euphrates, however, which Salāḥ al-Dīn had granted to his father in 586/1190, he had to restore to his brother al-Malik al-ʿAdil [q.v.] (Ibn al-ʿAṣir, vii, 82-3; Ibn al-ʿAdīm, Zubda, iii, 121-3; Abu l-Fidāʾ, Maḏḥasār, iii, 85). Eight years later in 595/1199, al-Mansur conquered the fortress of Bārīn (mons ferrandus) (Ibn Wāṣiūl, Mufarridi, iii, 101), but was forced by al-ʿAdīl to surrender it for his brother (Ibn al-ʿAṣir, xii, 195; Ibn al-Makrīzī, al-Ṣafādi, vii, 208). This thus his territory was at least a compact unit.

Hamāt and its surroundings held a key position against the Crusaders on the one hand, and on the other they were, after Salāḥ al-Dīn’s death, a buffer state between the main opposing rulers of the Ayyūbids, especially between al-Malik al-Zāhir Ghāzī in Aleppo and al-Malik al-ʿAdīl in Damascus (see Ayyūbids).

Al-Malik al-Mansur succeeded in maintaining his sovereignty and keeping his territory together through all the dangers of the internal struggles of the Ayyūbids. Moreover, for thirty years to come, i.e. until his death in 617/1220, he made it into a centre of adab and the sciences. In and around Hamāt he engaged in a busy building activity (Abu l-Fidāʾ, Maḏḥasār, iii, 132; Yakūt, Muḥqiq, ii, 300), and made the town into an almost impregnable fortress. The results of these activities proved useful during his victorious battles against the Crusaders (599-601/1203-4), as well as during the difficulties with his father’s cousin and his temporary overlord al-ʿAdīl. For the battles against the Crusaders and the relations with them, see F. J. Dhamman, al-Malik al-ʿAdīl, 118 f.; Ibn Wāṣiūl, Mufarridi, iii, 141-50; Abu l-Fidāʾ, Maḏḥasār, iii, 111-2; al-Makrīzī, al-Suluk, i, 164; Ibn al-Furāt, Taʾrīḫ, v, 22-4. The sources do not agree in the details: Ibn Wāṣiūl, Mufarridi, iii, 163 f.; Ibn al-ʿAṣir, xii, 195; Ibn Naẓīf, al-Taʾrīḫ al-Mansūri, 15 (= Grynjevič, Moskow 1960, fol. 122b); Sibṭ b. al-Djiwāzī, Mirʾāt, vii, 2, 523. For his difficulties with al-ʿAdīl, see Ibn Wāṣiūl, Mufarridi, iii, 121-3; Abu l-Fidāʾ, Maḏḥasār, iii, 99; Ibn al-ʿAdīm, Zubda, iii, 149. 对于他的病后生活, see Ibn Wāṣiūl, Mufarridi, iii, 152; Ibn Naẓīf, al-Taʾrīḫ al-Mansūri, 8 (= Grynjevič, fol. 111b); Ibn Wāṣiūl, Mufarridi, iii, 132, and after him Sibṭ b. al-Djiwāzī, Mirʾāt, ms. Topkapı Sarayi Ahmed III 2907/xxii, fol. 292b, l. 11 (this line lacking in ed. Haydarabadī, vii/2, 510).

During the unrest after Salāḥ al-Dīn’s death, al-Mansur officially took the part of al-ʿAdīl. In 595/1199-1200, he even declared himself ready to enter into a loose alliance with the latter against al-ʿAdīl (Ibn al-ʿAdīm, Zubda, iii, 144; Ibn Wāṣiūl, Mufarridi, iii, 101). However, at an early stage he had also recognised the political advantage of an alliance with Salāḥ al-Dīn’s brother, already in 590/1194 he openly showed his sympathy for the part of al-ʿAdīl (al-Makrīzī, al-Suluk, i, 124). But this again did not prevent his from playing the Ayyūbīd rivals off against each other to his own advantage.

Both al-ʿAdīl and al-ʿAdīl wanted control over northern Syria, while al-Mansur was able alternately to promote or to foil their plans. In 596/1200, after al-ʿAdīl had become sultan of Egypt, al-Mansur swore allegiance to him (Ibn Wāṣiūl, Mufarridi, iii, 114) and the sultan confirmed him as ruler of Hamat. In 598/1201-2 he married one of al-ʿAdīl’s daughters, and in 603/1206 and 606/1209 he supported the sultan in his attacks on the Crusaders’ territory and in al-Djazīra (Ibn Wāṣiūl, Mufarridi, iii, 172 f., 192; Ibn al-Furāt, Taʾrīḫ, v, 86-90).

In politics, al-Mansur did not have much room for direct manoeuvring. However, his decision not to engage in politics of his own, who was amiable and conciliating, but tried to keep a balance between the competing forces of the Ayyūbīds, benefited not only his own city state but in the end also the state as a whole.

He was the first ruler of Hamat to have copper coins struck with his own name (Balog, The coinage, 249-52). They also bear the name of the ʿABBāsīd caliph al-Nāṣir li-Dīn Allāh [q.v.] whose futuwwa [q.v.] he had joined with great pomp (Ibn al-Furāt, Taʾrīḫ al-duwal, in JÁ, 5th ser., vi [1855], 283 f.). His escort (maṣwāb) was so large that it was compared with the ones of al-ʿAdīl and al-Zāhir (Ibn Wāṣiūl, Mufarridi, iv, 81).

The ruler of Hamat was not only an important Maecenas and an ʿālim in his own right (Abu l-Fidāʾ, Maḏḥasār, iii, 132) but also imām and mufti in several fields (al-Makrīzī, al-Suluk, i, 205). His illness and death in 617/1220 threw the whole state considerably out of balance (see Gottschalk, al-Malik al-Kāmil, 103-4, 167-70). The pretender to the succession, al-Mansur’s middle son Khlījī Arslān, as well as the crown prince, his elder son al-Muẓaffar, who in the end secured his rights, were no more than dependents on al-ʿAdīl’s son al-Malik al-Muʿazzam of Damascus and al-Malik al-Kāmil of Egypt [q.v.].

Works 1. Mufarridi al-hakāʾīkh wa-sirr al-khaldīnīk, a chronicle originally in ten volumes, preserved in parts (see Bibli.). The full title is given by Shihāb al-Dīn al-Kūṣī (d. 653/1255), one of the author’s pupils who studied part of the work with him (al-Ṣafādi, Wāfi, iv, 259-60, no. 1790), as well as by Ibn Wāṣiūl who knew a part of the Midmār which is lost today (Mufarridi, iv, 78, 84), and by Hādżji Khalīfā, who apparently saw only a mukhtasar of the Mūfaqar (Khalīfā al-zunān, ii, 1713). Hādżji Khalīfā’s remark that some historians were sceptical about the authorship of this chronicle is refuted by al-Kūṣī’s direct information.

The exact size of the Midmār cannot be determined, the preserved part apparently being only a final section of the whole work (see Mufarridi). The text starts with the year 575/1180 and ends abruptly in 582/1186, and there are moreover lacunae (see 41, 115, 208). The text shows (39, 72) that the work was to be continued at least until 631/1137 (Mufarridi 122, 144). The Mufarridi was composed after the siege of Jerusalem (Rajjab 583/Oct. 1187), or even after the death of Salāḥ al-
Din (Safar 589/Feb. 1193), with the purpose of glorifying the deeds and character of the Ayyubid sultan. It thus stands in the tradition which began with 1Imad al-Din Isfahani, was continued by Ibn Shaddâd and came to its completion in the work of Abû Shâhâma [q. v.], in whose eyes Salâh al-Din played the role of a saviour in Islamic history.

The Mişârû is one of the principal primary sources of its time. It contains numerous autobiographical data as well as reports of eye-witnesses, which are also of importance for the biography of the author's father al-Malik al-Muzaffar [q. v.], to whom the son devoted two quarters. He explains why his father was unable to take part in the battle of Mârdû al-Uyun (Mişârû, 18 ff.) and deals with his nomination as governor of Egypt (ibid., 154-8). Here (ibid., 155-8) the certificate of investiture (iktâla) as granted by Salâh al-Din is for the first time edited in its full context. The work contains numerous official documents, several of which can only be found here. Amongst them are letters of Salâh al-Din's famous secretaries al-Kâdî al-Fâdîl and 1Imad al-Din al-Isfahâni [q. v.]. (Mişârû, 114, 149 f, 224 f). The main figures are al-Nâşir li-Dîn Allâh, Salâh al-Din and Karâkhsh [q. v.], to each of whom the author assigns a section for every year. Salâh al-Din's politics are described as exemplary, with the caliph as his direct antagonist. In this context, the Mişârû's attitude supports the claim to legitimacy which was so important for the usurper Salâh al-Din.

Two different groups of sources, an 'Abbasid one and an Ayyubid one, may underly the Mişârû, although there are only scanty indications of informants (see A. Hartmann, an-Nâşir, 14-17, and Index, s. v. Mişârû; L. Richter-Bernburg, in JAOS, ci/ii [1982], 278 f.; A. Hartmann, al-Malik al-Mansûr, in ZDMG cxxxi (1986), 570-606). For the events in Bagdadh, in which al-Mârstîniyyâ is mentioned once (Mişârû, 122), while the informants for Salâh al-Din and Karâkhsh remain anonymous (139, 226), although al-Mânstûr received some information on the last-mentioned from himself or from participants in his campaigns (e.g. 54). A direct source for much of the information on Salâh al-Din in the Mişârû is found in 'Imad al-Din al-Isfahâni's Barûk al-Shâhâ. Since the Barûk exists only in ms., with its greater part lost anyway, the Mişârû is of interest for the reconstruction of several passages of the Barûk, together with the text of al-Bundârî and Abû Shâhâma (see Hartmann, al-Malik al-Mansûr). The author must have been in very close contact with the state chancellery, but his sources have still to be investigated, as does also the influence of the Mişârû on later chronicles.

The work was denied a large circulation, as remarked by Hâdjdî Khâlîfa (Kâshf al-zunun, ii, 1713) who calls it something precious which could only have been composed by someone who belonged to the learned men of his time.

2. Akhâb al-malik wa-nuzhat al-mâlik wa 'l-mlâmik fi tâbakat al-ghurâ'awâ, 2 a lexicon in 10 volumes on poets from the Dâhilîyya period down to the author's time (GAL I, 324; S. 1, 558; Hâdjdî Khâlîfa, Kashf al-zunun, ii, 1102, ll. 27-9). Only the ninth volume, composed in 602/1205-6, has been preserved (ms. Leiden, Or. 639). It contains selections from poems and very short biographies of poets from İrâk, Syria, Egypt, Transoxania and al-andalus of the 4-th-6th/10th-12th centuries. The poets are arranged according to their functions: kings, amirs, viziers, judges and secretaries (see M. Awis, Kitâb Tabakat al-ghurâ'awa li- 'l-Mansûr b. Shâhânshâh Sâhid Hamât, al-Minâr, Dâr al-Kutb, 1983). The work was denied a large circulation, as remarked by Hâdjdî Khâlîfa (Kâshf al-zunun, ii, 1713) who calls it something precious which could only have been composed by someone who belonged to the learned men of his time.

In fragments (ms. Leipzig 606; Brockelmann, I, 324; S. 1, 558; not mentioned in Hâdjdî Khâlîfa).

AL-MANŞÛR Bül'âh (Almanzor in the mediaeval Spanish chronicles) is the name by which is known the man who was, de facto, the real master of al-Andalus from 368/978 to 392/1002. Since no new source is available, except as regards the military campaigns, to expand upon the major features of the biography of Abû 'Amir Muhammad b. 'Abd Allah b. Muhammad b. Abî 'Amir al-Ma'Sîrî, as revealed through the works of R. Dozy (Histoire des musulmans d'Espagne) and E. Lévi-Provençal (Histoire de l'Espagne musulmane), this article will be confined to a summary of this material.

Born in 326/938 into a minor aristocratic family which had settled after the conquest at Torrox, in the district of Algeciras, and which had fulfilled various posts in the judicial administration, Ibn Abî 'Amir studied in Cordova, hâdîth and fiqh as a pupil of Abû Bakr b. Mu'âwiya al-Kuraqhi, and Arabic language and literature as a pupil of Abû 'Ali al-Kâlî and of Ibn al-Kûsî [q. v.]. He began his career in the service of the kâfî of Cordova, Muhammad b. 'Ali al-Saltm, and subsequently, in 356/967, became steward of the eldest son of al-Sayyida al-Kubrâ, the sultana Subh [q. v.]. He skillfully acquired the friendship and support of the latter, according to some accounts, through
the giving of presents and according to others, through the exercise of his personal charm. This relationship was by no means unconnected with the rapid advance of his distinguished administrative career: director of the akka [q.v.], treasurer, curator of intestate property, kādi of Seville and Niebla, etc. After a brief interlude (he had embezzled from the coffers of the mint, but his friend Ibn Hudayr made good the loss before the enquiry), he continued his advance and was appointed to the functions of chief of al-gunjra al-wustūd [see Chalmeta, Rhumes de la Chalmeta, 238, 369]. The construction of his palace at al-Ruṣāfa dates from this period, and it was also at this time that he set out to court popularity among the Cordovans. The fact that he had been sent, as inspector of finances, to verify the sums by Ghalib [q.v.], during his campaign against Hasan b. Gannūn enabled him to forge solid links with the army.

The death of al-Hakam II [q.v.], in 366/976, opened a new phase. The caliph had named as his successor his son Highām [q.v.], who was only eleven years old, under the tutelage of the vizier al-Muṣḥafī. The party of palace slaves (sakaliba [q.v.] wished to appoint his uncle, al-Mūṣhir. Al-Muṣḥafī, foreseeing that this would be the end of his political career, sent Ibn Abī ’Amīr to strangle the latter. The ’Amīr was already closely linked to the vizier, through his personal ambitions and through his relationship with Ibn Abī ’Amīr. It was thus that there fell to him the task of drafting the act of allegiance (bay’u [q.v.] to al-Muṣāyяд b. ’Ilāh and of accepting the oaths of various Cordovan social groups. The new caliph appointed al-Muṣḥafī as ḫāṭib [q.v.] and Ibn Abī ’Amīr as vizier. These two succeeded totally in destroying the political influence of the slaves’ party and declared a remission of debts as a means of ensuring popular support.

In 366/977, Ibn Abī ’Amīr left to repel an attack by the Christians and captured the suburb of al-Hamma (Baños de Ledesma, in the province of Salamanca). The campaign was of little importance but, skilfully exploited, it served to increase the prestige of the new vizier, attracting to him the sympathy of military men and especially that of the commander in chief of the Middle March (al-daghr al-wustūd [q.v.]) Ghalib, who, soon afterwards received the title of ḫāṭib al-ṣawā‘ir. As the popularity of al-Muṣḥafī declined on account of his lack of political vision and his nepotism, Ibn Abī ’Amīr succeeded in taking to wife the daughter of the old general, appointed himself sāhib al-madīna [q.v.], accused the ḫāṭib of malpractice, imprisoned him in 978 and caused his disappearance.

Having become ḫāṭib, Ibn Abī ’Amīr foiled a conspiracy against him but was forced to make concessions to the opinion of the ulama who criticised his conduct, private and public, under the pretext of lack of orthodoxy. He therefore decided to “censor” the splendid library of al-Hakam II, and works of philosophy, astronomy, etc., were destroyed. It was in the same spirit of ostentatious piety that he made his own manuscript copy of the Qur’an and ordered the final expansion of the Great Mosque of Córdoba in 377/987. In order to strengthen his control of the administration of the state, he transferred the offices of Madīnat al-Zahrā [q.v.] to his new residence at Madīnat al-Zāhirah and obtained from the young caliph a “delegation of all his powers, so as to permit him to devote himself to pious observances”. He then took the title of al-Mānsūr bi ’Ilāh. The ḫāṭib then took the title of as-Samūl b. al-Ahmām.

The activity of al-Mānsūr, which was brilliant, and passed to him in 984; Sancho Garcés Abarca of Navarra had been his client since 982; Vermudo II of Léon asked and obtained from the ’Amīr an army which helped him to re-establish his authority; and the Castilian Count García Fernandez surrendered in 990. Sancho Garcés and Vermudo II gave their daughters in marriage to al-Mānsūr, who became the true arbiter of the Spanish situation. It is equally certain that these campaigns ruined a major part of the work of “reconquest” and almost the entire effort of repopulating Léon in the 9th century; the whole of Estramadura was devastated. The effects seem to have been still more in those eastern states which had no “frontier” (cf. P. Bonnassie, La Cathédrale du militant du XVe à la fin du XIe siècle, Toulouse 1978).

The Masāfīlīl al-Brar [q.v.], which reproduces the chapter of Ibn Hāṣīn [q.v.] on Hispano-Maghribi relations, is the principal source for the study of his North African activity. Al-Mānsūr inherited the policy of Abd al-Rahman III [q.v.] and of al-Hakam II; rather than seeking conquests, he preferred to obtain submissions and vassalages. This had the double advantage of not immobilising too many troops while allowing the recruitment of large numbers of colonial troops for the purposes of his Spanish campaigns.

There were numerous dangerous moments: when the pro-Fāṭimid Bulwūnī b. Zīrī [q.v.] advanced as far as the gates of Čeuta in 980; the insurrection of Hasan b. Gannūn in 985 (he was executed in defiance of the guarantee of security given by Ibn Abī ’Aṣkalāṇa, which aroused a considerable degree of resentment); and the rebellion of Zīrī b. Ṭiyāya [q.v.] in 998, suppressed by ’Abd al-Malik al-Muṣṭafī [q.v.], who went on to install a sort of “viceroyalty” of Fās.

Almost all the authors stress the politico-military activity of al-Mānsūr, which was brilliant, and pass too quickly over his internal policy. The famous military reforms have not been correctly assessed and are generally considered an innovation, whereas they were in fact simply a systematic application of the policy inaugurated by the caliph al-Nāṣir, when the latter drew conclusions from the disaffection and subsequent rout of his troops during the campaign of 327/939, that of al-Khandak (on this expedition and its setbacks, see Chalmeta, Simancas y Alhambra, in Hispania [1976], 397-464). Al-Mānsūr confined himself—in regard to the ethnic basis of recruitment—to intensifying the policy already applied by al-Nāṣir in 328/939-40 (see Chalmeta, Simancas y Alhambra: el año siguiente, in Actas Jornadas Cultura Árabe [1978]) and to enlisting only non-Andalusians. This was therefore an army without attachment to the country, or to its people; a “neutral” army.
force, a “Foreign Legion”. These professional war-
riors, mercenaries, required payment and were ex-
pensive to maintain. The Amirid novelty consisted in
taxing heavily all the Andalusians, even the Arab
agnád. The desired effects were achieved. Powerful
ponents were estranged from the army (thus
deprived of prestige, of command, of access to infor-
mation and to weapons), the considerable sums raised
compensated the troops, who could be mobilised at 24
hours notice and who were entirely in his pay. The ef-
cet of his action was, primarily (Tobén, 17) to forge
for himself an instrument of internal repression and,
subsequently, an army which by its very nature con-
stituted an offensive machine of quality, but whose
numbers and composition made it unsuitable for use
as an occupying force (hence for the consolidation of
captured positions). This policy also had unforeseen
and undesirable effects in the long term: the im-
poverishment of the local population; its indifference
towards the government; and its lack of military train-
ing. The otherwise incomprehensible phenomenon of
the collapse of the caliphate, when confronted by the
Christians of the north at the time of the fitna [q. v.],
thus becomes understandable and almost inevitable.
The impact of the orthodox “purge” of the library
of al-Hakam II on the intellectual life of Arab Spain is
inexplicable. The troops took away not only the
heavy toll. Many volumes must have been unique in
Andalus, and their destruction must have prevented,
or at the very least delayed, their dissemination.
In an indirect fashion, the library of al-
Hakam also performed, in part, the function of a
library of a public library, and it was dispersed during the siege
of Cordova; furthermore, the economic crisis which ac-
companied the fitna put a severely reduced profit on the
constitution or enrichment of private libraries.
The campaigns of al-Mansur, which assumed a
change in relations between al-Andalus and the Chris-
tian kingdoms, were to bring about, in the long term,
the birth of a new attitude, a new sense of unity in the
popular Christian consciousness. Hitherto the
Muslim campaigns had only been responses to Chris-
tian initiatives. In order to avoid conflict, it was suffi-
cient to abstain from provocation. These campaigns
had also been relatively benign, without too drastic ef-
effects in terms of destructions and death. After all, the
deepers had relatives on the other side; they
could be caught unawares in their turn; etc. The
Christian states had hardly ever struck in any depth,
and the danger had never affected the majority of the
population. However, the Amirid raids were not
responses, but attacks, and thus difficult to foresee.
They were conducted with a ferocity unprecedented
in the Spanish context, and left behind a long trail of
destruction, of death and of rancour. The Muslims
were no longer Hispano-Arabs, but foreigners, dif-
ferent people. These campaigns affected the hinter-
land, it was no longer simply a matter of
frontier-dwellers, of people who had chosen, in ex-
change for certain fiscal and social advantages, to
“live dangerously”. All sectors of the population, in-
cluding those people who preferred a peaceful ex-
istence, far from the exposed territories, were
affected, capital cities were plundered, etc. Since sur-
vival was at stake, any likelihood of coexistence must
have seemed absurd. These destructive raids pro-
vided a defensive reflex and a much greater sense of
solidarity between the various Spanish Christian
kingdoms. The economic damage is the proof of this—faced with
what was coming to be regarded as a common enemy.

The Amirid campaigns, which employed a
number of Christians, either as mercenaries or as
vassal troops, for example in the famous raid against
St. James of Compostella, enabled the latter to ac-
cquire, from the inside, a useful knowledge of the
deaths, the resources and the structure of the Cordovan
state. This was to prove advantageous, some years later,
when the Christians put into effect, in the reverse direction, the
Amirid policy. By this time the damage had been done. The bitterness accumulated
as a result of al-Mansur’s 52 expeditions had engendered the notion that it was essential at the
earliest possible opportunity to settle accounts with the adversary whose lack of reaction aroused contempt. The new identification between the concepts of Christendom and Spain required the
expulsion of the “other Spain” (Chalmeta,
Historiografía hispana y arabísmo: biografía de una disrior,
in Rev. Infor. Esp. UNESCO [1982]).

The systematic policy of infiltration, destabilisation and then reorganisation of the Cordovan state which
had enabled al-Mansur to seize power and above all to
sustain it, led to the annihilation of all the struc-
tures constituting a system: political, economic,
social, ethnic, cultural, etc. After him, there was to be
no more caliphate, great families, surplus budgets,
social or ethnic coexistence. The Andalusians were
hereafter aware of only one enemy: the Berbers.
They forgot the Christians, or saw them as their allies.
In view of the fact that al-Andalus was a feudal society, its chances of resisting the advance of a
society which had the necessary mechanics for wag-
ing war were limited. According to the Chronicle of
Silos, “In the year 1002, Almanzor died; he was en-
tombed in Hell”. Such was the Christian verdict. It
could be extended to the whole of Muslim Spain, for
the political-military muscle engendered the mental at-
titude which spelled the doom of Hispano-Muslim

to describe the internal conditions of the Samanid kingdom under Mansur as an eye-witness; cf. especially BGA, ii, 241: *fi waktind hddhd;* 344 on the fightind hddhd; 344 on the character of Mansur "the justest king among our contemporaries, in spite of his physical weakness and the slightness of his frame". On the vizier Abü 'Ali Muhammad Bah'ami, see bat'ami, where also information is given about the Persian version of al-Tabari's history composed in 352/963 by or orders of this vizier. On the rebellion of the commander of the Samanid bodyguard, Alp-Tegin, and the independent kingdom founded by him in Ghazna and on the establishment of Samanid rule there in the reign of Mansur and the son and successor of Alp-Tegin, Ishâk (or Abü Ishâk İbrâhîm) see Alp-Tegin and Ghazna; in Barthold, Turkestân, 251, n. 4, Abü Ishâk İbrâhîm should be read for Ishâk b. İbrâhîm (this passage is misunderstood in the Russian original). In other directions also in this reign, the Samanid kingdom prospered in its foreign affairs; the fighting with the Buyids [see BUVAYHIDS] and Zîyârîds [q.v.] was a rule successful.

2. MANSUR B. NUH II, Abü 'l-Hârith, ruler in Transoxania only (387–99/997–9). His father Nuh II b. Ahmad, was as a rule successful. His father Nuh II b. Ahmad, was as a rule successful.

3. MANSUR B. NUH II, Abü 'l-Hârith, ruler in Transoxania only (387–99/997–9). His father Nuh II b. Ahmad, was as a rule successful.

During his brief and impotent reign he was hardly feared by every one for his extraordinary severity. The last months of his reign were devoted to fruitless efforts to settle peacefully the question of succession, Mansur was dethroned on the 5th of Dhu al-Hijja 614/April 1217. He had to fly to Amul [qa'da, 615/May 1217] but was called back to Bukhara.

The Ghaznavid historian Bayhaqi, ed. Morley, 803, ed. Ghäni and Fasyâd, 640, Russian tr. Arends', 776, talks highly of his courage and eloquence; on the other hand, he is said to have been feared by every one for his extraordinary severity. During his brief and impotent reign he was hardly able to instil terror into any one. The last Samanids were quite helpless against the rulers and generals Fa'îk, succeeded even to the neighbourhood of Kawkaban, where he built a substantial house for himself and quarters for his followers, and even set up a mint. After frequent engagements, a truce was agreed upon in 613/1216-17. Having removed to Kawkâban and then to Zafar, the last Samanid b'illah died in Muharram 614/April 1217 in Kawkâban (Redhouse, Al-Mansur, ii, 1217). For a more detailed survey of the intricate situation in the Yemen during the life of al-Mansur b'illah, see al-Mansur b'illah (q.v.), ed. Serjeant, 61-3.

Al-Habâhi, Mu'alla'fât, 37, mentions four si'as of al-Mansur b'illah: one anonymous, one by Muhyi al-Din Muhammad b. Ahmad al-Walîd, a third one by 'Ali b. Nahwân b. Sa'id al-Hînâyâr, and a fourth one by Abu Firas Daghâlam (+ Dû'aym) al-Sâñî, the Imam's secretary (see Smith, Ayyâbids, ii, 8, 78 n. 4, 98). Al-Mansur b'illah is also the last Imam treated by his companion Hamîd b. Ahmad al-Muhammî in his Kitâb al-Hadîth al-wâridiya fi dibhir (manâshi' a'immat al-Zaydiyya (Brockelmann, I, 525; S I, 560; Strothmann, Die literatur, in Isl., i, 361). Like many other Zaydi Imams before and after him,
al-Mansur bi'llah developed a great literary activity. Besides the 21 titles mentioned in Brockelmann (GAL, I, 403, S I, 701; cf. also Ahlwardt, Verzeichnis, iv, 4950, XI), al-Habashi, Ma’alafat, 48, lists 62 other titles, some of which may be the same as those summarised in B.L. Suppl. nos. 210, 211, 1230 IV-VII.

In his Kitāb al-Shafi‘ (Brockelmann, I, 403, S I, 701; al-Habashi, Ma’alafat, 44, no. 53), the Imām often quotes from the Kitāb al-‘Unda by al-Hilli al-Wāṣṭi‘ (Brockelmann, S I, 710; Van Arendonk, Dēbāt, 15/17 n. 1) and makes use of the kutub al-‘umma, i.e. collections of traditions favourable to the descendants of Fātimah and the ‘Alī (v. Strothmann, Die Literatur, 141, i, 358, ii, 64). Of historical interest might be the following mentions, numbered by al-Habashi, Ma’alafat. No. 23 is a da’wā to Sunukr of the year 599/1202-3. This Sunukr is probably the atabeg Sayf al-Dīn Sunukr, a manūl of Tughtakin (cf. Smith, Ayyūbids, 97, 98; Ghāva, i, 356 ff.). No. 24 is a da’wā to the ’Irākī amīr al-hadjāj Tughtakin (= Tashkīn?) cf. A. Hartmann, an-’Nāṣir, 146), while no. 64 is a kitāb to (the same?) amīr Kānim al-’Irākī. No. 25 is a da’wā of the Imām to (al-Mu‘īzz) Ismā‘īl b. Tughtakin when the latter came down (baṭa) to Kabkabān, of the year 599/1202-3. (According to San‘a‘, ed. Serjeant, 62, al-Mu‘ūzī was murdered in 598/1201-2, but see Ghāva, i, 300). No. 56 is a sūra kitāb to the ’Amil of the Banū ’Abdāb in the Yemen, and no. 60 is a da’wā sent to the ’Abdābīd amīr ‘alā al-Aṣūr (al-Mu‘īzz b. Tughtān when Imam Tashkīn = Tashtikīn? cf. A. Hartmann, an-’Nāṣir, 146) while no. 62 is a da’wā to the Shaykh, Imam Tashkīn (i.e. Imam Ayyūb, Imam al-Malik al-Nāṣir li-dīn Allāh (see Ghāva, i, 400 n. 1)). According to al-Habashi, part of this kidaša is mentioned in Muhammad Yahyā Zubārā, A’immat al-Yaman, Ta’īṣ 1375/1955-6, (but see San‘a‘, ed. Serjeant, 572), 139-41, and there is a commentary on it by Hamīd b. Ahmad al-Muḥallī, d. 652/1254, entitled Maḥāsin al-âzār (Brockelmann, I, 325, S I, 560). No. 63 is a da’wā to al-Malik al-Abī Bakr b. Ayyūb [q.v.] of the year 598/1201-2, while no. 79 contains correspondence between the Imām and the Banū Rasā’il.

The battle for al-Kayrawān began at the end of Shawwāl 334/beginning of June 946, and ended after two months of fierce fighting in the crushing defeat of the Khārījī leader, now driven to retreat into the region of the Zāb, the original seat of his revolt. But even though this battle allowed the Fatimid ruler to save his kingdom, it did not mean the end of the revolt, but only the beginning of the decline of Khārījīsm. It remained for the Fatimid ruler, in order to extirpate the roots, to continue and subjugate its adherents the Kamlān, Birzāl, Huwwārā and other Zanāta elements in their fastnesses of the Aurės and
the Záb. Also, he still had to kill Abū Yazid. But to put an end to his formidable enemy, Isma'īl had to dislodge him from there and force him to fall back to the north of the Záb mountains, into the massif of 'Ukbār, the 'Djajal Mā'sā'idī. Thus harassed, Abū Yazid retired into the strongholds of Shākir and Kiyānā. It was in this last, which was taken by storm, that he was at last taken prisoner, before dying of his wounds a few days later, in the night of Wednesday-Thursday 28th Muharram 336/ August 947. Having suppressed the rebellion and killed the "accursed" Khārījī, Isma'īl could now make public his father's death and his own accession to the throne with the title of al-Mansūr bi 'l-Shāhī. Then having pacified the Záb from Manṣūrī [q.v.] onwards, where the Banū Kamlān, previously uncompromising participants in the revolt but now submissive, had come to give him their submission, he proceeded to Tāḥārt in order to re-establish his authority there and to punish the rebellious tribes, notably the Lawātā [q.v.]. Did he then dream of leading his troops still further towards the central Maghrib with the intention of making an impression of his rival in al-Andalus, 'Abd al-Rahmān III and his Zānātá allies? Some Isma'īlī sources suggest this. In any case, a serious illness reduced him to inactivity, and when he at last recovered, he took the road towards Ḫirīkiyā, on Saturday, 18 Rabi' II 336/November 947. He only arrived there two months later after a long stay at Sēfī which, amongst his faithful adherents the Kūtāmā, from whom al-Mansūr had recruited his army, in order to settle in the new capital al-Mansūriyā.

It was on Thursday, 27 Dādūmād II 336/13 January 948 that Isma'īl entered there. His return was celebrated with great pomp, and in his presence was held a parade in the course of which the crowd was amused by the comic spectacle of the "man on the donkey", his skin stuffed with straw and hoisted on to the back of a camel and handed over to the tricks of an ape and monkey.

Thus only 15 months had been necessary for al-Mansūr to finish off the leader of the Khārījī insurrection. But hardly had he got back when he had to go personally to pacify the provinces of the Kastillāyā region and the southern part of the Aurēs and to reduce to obedience the Manāwā, Maghrāwā, Kālālā and other Yafrān tribal elements stirred up by Fadjl, a son of Abū Yazid. The death of Fadjl put an end to all Ibadī threats to the Fātimid kingdom. For the remainder of his all-too-short reign, less than seven years, al-Mansūr devoted himself to dealing with internal and external affairs of his realm, which had suffered considerably from the revolt of the "man on the donkey". He resumed the wars of prestige undertaken by his predecessors in the central Maghrib against the Muslim Spanish ruler, who had not failed to support Abū Yazid; and also in Sicily against Byzantium, which had, during the opening stages of the revolt, caused a deterioration of the authority of the Fātimids there. Order was soon re-established in Sicily, and rule there was entrusted to the faithful family of the Kīmādī [q.v.], who had just submitted to the influence of the Spanish Umayyads which occurred probably in 387/997 or 388/998, he occupied Sa'da, the stronghold of the descendants of al-Abāsā. It was on his orders that the chief of these last, Ahmad al-Diynābī, was made in 340/951 to restore to Mecca the Black Stone which his father had carried off after seizing Mecca.

Before dying in his capital, hardly having reached the age of 40, on 28 Shawwāl 341/18 March 953, Isma'īl al-Mansūr could justly pride himself on having restored in a short period of time, the tottering edifice of the Fātimid caliphate in Ḫirīkiyā.
Hādi, and brought Nadjran and the territories of Khawlan, Wāda'ā and Bakil under his control. After his death, a rebellion erupted, however, his administration quickly crumbled. In Muḥarram 389/January 999 he returned permanently to Yaman. During the next two years, he extended his sway over much of the highlands of Yaman. In the heyday of his reign, his rule extended from the Bilād Ḥaḍath ʿam to Ṣanʿāʾ and Ḍhamār, and included the territory of Khawlan ʿal-ʾAliya, ʿAnṣ, Alḥān, Ḥimyar with Shībām Akiyān, Kuḥlān, ʿAṣṣa, Ḍjabal Maswasr and Ḍjabal Tays. His extensive kingdom, however, had no outlet to the sea, and his hopes to gain control of the Red Sea port of Ṣaṭhār, settled by two, possibly Ziyādī, slave amīrs, by diplomacy or military means, came to nought. For his residence in Yaman he came to prefer the town of Ṣayyān, a two days' trip south-east of Ṣaʿdā, in the territory of the Banū Ṣalāman, who were among his most loyal supporters. He also acquired an estate which he brought newly under irrigation in Wādī Maḍḥāb, between Ṣayyān and Ṣaʿdā, and built a castle there. In Ṣaʿdā he restored the ruined castle of the Imām Ṣaḥḥām al-Naṣir, son of al-Ḥādi, which lay outside the town, for his own use. His position in the old capital of the Zaydī state was, however, precarious, as the population and the tribes of the neighbourhood were predominantly loyal to al-Ḥādi's descendants, while the Turks had relinquished their claim only under duress. Al-Ḥādi's rule over the descendants of al-Hadf, whose allegiance to his tribes of the neighbourhood were predominantly loyal
by diplomacy or military means, came to nought. For his residence in Yaman he came to prefer the town of Ṣayyān, a two days' trip south-east of Ṣaʿdā, in the territory of the Banū Ṣalāman, who were among his most loyal supporters. But this should not obscure the fact that he conducted frequent military operations during the military off-season in his wars with the Turks. Among the more frequently mentioned are accounts regarding the various stages of life, it is useful, indeed essential, to examine his relations with the poets and leading political figures of his time. In view of his numerous impressive military gains against four Ottoman governors over more than two decades, it is hardly surprising that most accounts of Imām al-Kāsim dwell on his role as a warrior imām, so much so that one of his biographers (al-Djurmuzi) arranged the history of his imāmate according to his ‘risings (nahādat)’ against the occupying power. But this should not obscure the fact that he commanded wide respect among fellow-Zaydi for his scholarly attainments and extensive knowledge of Islamic law and religious practice. Al-Habshi’s study of the literary output of the various Imām attributes to al-Kāsim’s authorship some 41 works, a productivity surpassed apparently by only four of his peers. His performances, both in poetry and in prose, range in length from one or two folios to several hundred and deal mainly with jurisprudence and Zaydi dogma. Although some were produced prior to the proclamation of his da‘wah, others must have been composed during the military off-season in his wars with the Turks. Among the more frequently mentioned are al-Ḥiṣām, a substantial work on ḥadīth uncompleted at his death; al-Asās li-‘alād al-aṣbāḥ, concerning the fundamental principles of the faith and widely commented upon; al-Iṣbaḥ li-sabīl al-rashid, a collection of articles; and several compilations of his answers to questions regarding law and dogma.

**Bibliography:** The principal source for the life of al-Kāsim is a biography by Ahmad b. Muḥammad al-Saffah (d. 1055/1645-6); an early supporter of the Imām and one of his officials. A ms. of the second part of this isra (title unknown) at Edinburgh forms the basis for A. S. Tritton’s *The rise of the Imams of San'a*. London 1925; it is possible that this isra and another title attributed to the same author, al-Labīr al-aṣīl, is also an abridged edition of Durra al-mudīya fi l-tīra al-Kāsimyya (and its abridgement, al-Nubdha al-mudīya) by al-Djurmuzi (d. 1077/1667), who freely acknowledges his debt to al-Sharafi. Yet a third biography is the anonymous Sirat al-Manṣūr bi ‘l-ḥāl al-Kāsim described by Ayman Sayyid (Muḥammad ta’līf al-Yaman, Cairo 1974, 332) as a history of Yemen 858/1057-1674. Abu Ṭīf in details are the Rauṣ al-ṭārīf bi ʿĪsā b. Ṣuf Ṭīl Alliance b. al-Mutahhar (d. 1048/1638), Ghāyāt al-āmānī by Yāḥyā b. al-Husayn (d. ca. 1100/1688), al-Kāsim’s grandson (ed. Sa‘īd ʿAbd al-Fattāḥ ʿAǧṣūr, Cairo 1968, ii, 770-814), and al-Iṣbaḥ by al-Mawzū‘i (d. ca. 1031/1621), unique among these treatises for its anti-Zaydi bias. For other ms. source materials, especially those of the 12th/18th century, consult al-Habshi, Ma‘alullat hukkam al-Yaman, Wiesbaden 1979, 127 f., which work also identifies, describes and locates the mss. of all works attributed to al-Kāsim’s authorship (pp. 128-36). Ottoman archival materials for al-Kāsim’s era are extensive. An important monograph on this figure is by al-Muṣṭafā, al-Kāsim al-Manṣūr bi ‘l-ḥāl al-Kāsim, Qudeda 1982. Other published secondary materials include Muhbibi, Khulṣayt al-ṭārīf, Cairo 1284/1867-8, i, 485-7, ii, 73-6, 217 f., iii, 293-7, iv, 296-9; Ahmad Rājīd, Ta’līfī Yemen wa San‘ā‘, Istanbul 1291/1874-5, i, 170-223; Wustenfeld, Ṣan‘ā‘ al-sīrah al-sīrah, xvi (xvi), Dresden, 1884, 38-48; ʿArif Pasha, Yemen ta’līfī, Istanbul 1236/1908-9, 86-96; Zāḥib, Ḥufuf al-muḥadhdun, San‘ā‘ 1343/1924-5, 78 f.; Šawkwānī, al-Badr al-tārīf, Cairo 1348/1929-30, ii, 47-51; Djiḏri, al-Muṣṭahaf min ta’līf al-Yaman, Cairo 1951, 141-4; ʿArghī, Bulāq al-maram, ed. al-Karmali, Cairo 1939, 65 f.; Muṣṭāfā Sālim, al-Fahh al-Uṯmānī, Cairo 1969, 338-69; Bayḥānī, Abshīr al-anwar, Cairo 1319/1971-2, ii, 244, n.l. (J. R. BLACKBURN)
tion in literary subjects*. Moreover, these contacts were not limited to the poetic sphere. It was al-Asbahānī who introduced al-Namārī to al-Fadl b. Yāḥyā, who persuaded him to come from al-Ḍajjār to Raḥḥālī and introduced him to Raḥḥālī. Subsequently, rivalry broke out between the two poets, and it was through the good offices of the celebrated Tāhir b. al-Husayn (d. 207/822) that they were reconciled. Besides these poets, Mansūr al-Namārī was acquainted with numerous political figures. In addition to the Barmakids and especially al-Fadl b. Yāḥyā and his brother Dīnār (d. 187/803) and the aforementioned Tāhir b. al-Husayn, he knew al-Fadl b. al-Raḥīm b. Yūnus (d. 208/824) (q. e.), an enemy of the Barmakids and himself the vizier of Raḥḥālī. Al-Fadl b. alRaḥīm intervened with the caliph to secure the release of the poet, who had been imprisoned for his proclaimed Shī‘ī tendencies. A similar intervention was assured him, we are told, by Yázid b. Māzyad al-Shaybānī (d. 185/801), the governor of ʿAḥṣār bāydaḏjān. Al-Namārī knew al-Maʿmūn (d. 218/833) then heir to the throne, at whose court he met numerous poets. But according to all the evidence, it was the caliph Raḥḥālī who influenced the life and who signed the death warrant of the poet. In fact, Raḥḥālī invited al-Namārī to his court, where the latter addressed eulogies to him and received gifts from him. The poet himself shows the pro-ʿAḥṣār tendencies, he cast him into disgrace, imprisoned him and ordered Abū ʿĪṣa, a pro-ʿAḥṣāsīd Zaydī, to torture and execute him. But the latter was only able, on arriving in Mecca, to attend the obsequies of the poet, probably in 190/805.

2. Works. Of the hundred-page Dīwān attributed to Ibn al-Nadim (d. 305/919) to the poet and of the anthology of Ḥāфиз al-ʿUṯmānī al-Namārī attributed by Yāsīk (d. 622/1225) to Ahmad b. Tāhir, it is possible to assemble only 57 fragments totalling 386 verses gleaned from various historical or literary sources, of which the most important are the Ḧāḏīqān (14 pieces), the Ṣamāʿī of al-ʿAlāʾ (d. 356/9699) and the Tihābīn or ʿAqādī Dīwān al-Mutanabbi by ab-Ḥūbārī (d. 616/12219) (10 pieces), the Tābaqāt of Ibn al-Muʿtazz, the Zahr al-adab of al-Ḥusayn b. ʿAbd al-Ḥādī al-Muhanna of the Muwāṣṣata al-ʿAmīḍī (d. 571/1174) and the K. al-Ṣināʿī ʿatayn of al-ʿAskarī (d. 395/1005) (7 pieces). On the other hand, two modern authors, al-Rifāʿī in Aṣr al-Maʿmūn (10 pieces) and especially al-ʿAmīḍī in the Aṣrān al-Ṣanʿa (15 pieces) have taken an interest, among many others, in Mansūr al-Namārī.

These 57 fragments, of which 14 may be disregarded since they are also attributed to other poets, are of unequal length; only 15 contain 7 verses or more and may thus be considered kasidas, 16 others contain one verse, 11 others three verses, and 8 two verses.

The poet uses 10 different metres and, in particular, ṯawīl, basīt, kāmil and wafīr (respectively 20, 8, 6 and 8 fragments) which are the “noble” classical metres; ṭamāl, munsārīn, ḥaṣāq and mukāṯāfīn, the “light” metres, are used only once. For rhyme, al-Namārī uses 14 of the 28 letters of the alphabet: most prominently used are lām, hāʾ, rāʾ, mīn, dāl and nān (respectively 14, 9, 8, 5 and 4 times), a common phenomenon in Arabic poetry. Ḥamza, hāʾ, fāʾ, kāf and ʾayn are used only once. Moreover, in his poetry (or in that portion of it which is available to us) al-Namārī makes use of the principal poetic genres. While he reserves for satire (ḥīf, ḥakīf, ḥikāf) boastfulness (faḏḥ) and lament (ṭuḥfi) only respectively 1, 2, 3 and 4 pieces, on the other hand he devotes to erotic poetry (aḥzād) 17 fragments which are in fact nothing more than amorous preludes, where the poet evokes youth and looks forward with foreboding the old age. But, according to all the evidences, it was laudatory poetry (madh) which al-Namārī practised most prominently. In fact, 20 pieces or 200 verses are devoted to madh, of them for the above-mentioned viziers and governors and 14 for al-Raḥḥālī; noble lineage, munificence, courage, dedication, competence in handling the affairs of the state, in other words the socio-politico-religious qualities commonly recognised, are the principal themes of the laudatory poems and especially of those which are dedicated to the caliph. However, some authors make the remark that al-Namārī is not at all pro-ʿAbbasid and that he only praises alRaḥḥālī with prudent dissimulation (ṭayyiq) as do many poets. Moreover, he displays his Shīʿīsm in 9 pieces totalling 69 verses, emanating exclusively, admitted, from Shīʿī sources. The poet expresses his deep affection for the ʿAlīids, mourns al-Ḥusayn (d. 61/681), displays his hatred of the Umayyads and the ʿAbbasids to whom he denies all merit, and calls for armed revolt with the purpose of averting the sons of Fāṭima.

In conclusion, in poems of classical structure and in a pure language and a sometimes quite virulent style, al-Namārī practises the principal genres, distinguishing himself in his so-called "opposition" poetry in spite of the contradictions which the majority of classical Arab poets display.

**Bibliography:** In addition to the works mentioned in the article, see T. al-ʿAshṭarāḥī, ʿIrāq Mansūr al-Namārī, Publications of the Arab Academy of Damascus, 1401/1981, and the reviews by ʿAbd al-Ḥādī al-Fāḥšām in MJMA, Ivi (Oct. 1981), and M. ʿAlaʾī, in Hawliyyet al-Dīmār al-Tūnisiyya, xii (1982).

**MANSÜR AL-YAMAN**

**Shaybānī, Sabīl Abū l-Kāsim al-Ḥasan b. Faraḍī b. Hawsbāb al-Zādhibn al-Nadji ʿAbd al-Nasr Al-Kūfī, often known as Ibn Hawsbāb, was the founder of the Ismāʿīlī dawwa in Yaman. Other forms of his name and genealogy are less well attested; later Ismāʿīlī tradition considered him a descendant of Muhammad b. Ṣād b. Abī Tāhī.**

He was a Kūfī Imāmī Shīʿī, probably from Nars, a canal near Kūfah, learned in the religious sciences, and was won for the Ismāʿīlī cause by a dāʿī, who is identified in a Fāṭimid source as the chief dāʿī ʿAbd al-Raṣūl and by the ʿAlawīs as Ibn Abī ʿĪsā, an assistant of ʿAbd al-Raḥmān in Iraq. According to his own account, as related by ʿAbd al-Raḥmān, he was introduced by the dāʿī to the imām who, after a training period, sent him together with the Yamanī ʿAli b. al-Fadl al-Dījāshīnī to Yaman. They arrived there early in 268/late summer 881 and separated. Ibn Hawsbāb passed through Ṣanṭāna and Ćanad and stayed some time in ʿAdan before establishing himself, allegedly in accordance with the instructions of the imām, in the village of ʿAdan Lāʿa in territory under the rule of the ʿHādīs (Yāʿfurīdhs). In 270/885 he began his mission, publicly proclaiming the imminent appearance of the Mahdī, and quickly attracted a large following. After an attack on his followers by a local ʿHūdī garrison he occupied the stronghold of ʿAbī Muḥarrar on a mountain below Ḏabāl Maswar (ca. 272/885-6). Later, he captured Ṣayf b. ʿAdalī on Ḏabāl Tūlqah and fortified Bayzd b. Ḏabāl Maswar as his residence. He sent the dāʿī Abū l-Malāhīm as governor to Ḏabāl Tays and conquered Bīlād Shāwīr, ʿAyān and Hamdūn. His first campaign against Ṣḥībām, the residence of the ʿHādīs, failed. Later, he took the town aided by the
treason of a Hiwalid client, but was soon forced to leave again. These events took place before 290/903, though their exact dates are unknown. It is evident, however, that he was firmly established before 278-9/982-3 when the dā'ir Abū 'Alā Allāh al-Sḥīfī [s.v.] was sent to him from ʿIrāk to be trained for his mission in the Maghrib. He sent dāʿīs also to other countries: al-Hayṭām, cousin of his wife who was the daughter of a local Shīʿī, to Sind: ʿAbd Allāh b. ʿAbd Allāh al-Sḥīfī al-Mansūrī [s.v.] and others to al-Yamāmā and Hind (presumably Gudjarāt). His lakāb al-Mansūr or Mansūr al-Yamān, which he was given after his early successes, implied ideas both of a restorer of Yamānī glory and a precursor of the Mahdī (see B. Lewis, ʿAlī b. al-Fadl as a Consul, in ʿAlī b. al-Fadl al-Yamānī: Al-Fadl b. Abī Yaḥyā al-Hasanī, ed. S.ʿAlī, al-Shayyal, i, Cairo 1971, 166-173). In 282/995 ʿAlī b. al-Fadl, who had initially established himself further south in the Bilad Yafi, decided to move to Delhi 1968, Kitdb al-Rushd wa ʿl-hīdyya, of which fragments are ex-

AL-MANSŪRA, the principal city of the province of Sind under the Arabs. It was founded by ʿAmr b. al-Ḥuṣayn b. ʿAbd al-Muṭṭalib. The son of the celebrated conqueror of Sind, in 120/738 or shortly afterwards (al-Baladhurī, Futūḥ, 444; Yaʿlā b. Abī ʿAlī, ca. 889, Caetani, Chronographia Islamica, 1507), 47 miles to the north-east of modern Haydarābād [see HIND]. Geography, at iii, 407, Al-Birūnī’s statement, according to which Mansūra is merely a Muslim name given by Muhammad b. al-Kāsim to the ancient city of Brahmanābād at the time of its conquest (al-Djamāhirī maʿrifat al-dāʿībārī, Haydarābād, Deccan 1355, 48; al-Kānin al-Masʿūdī, Haydarābād, Deccan 1954, 552), is at variance with the earlier traditions, though the sites of the two cities were certainly close to each other. The attribution of the founding of Mansūra to the Umayyad governor and adventurer Mansūr b. Ḫumār (Hidayat Hosain, in ʿAlī b. al-Ḥusayn, Kāba ṭaḥla, 74; H. Halm, Die Sirat Ibn ʿAlāʾ: Die ismaʿiliische"
The exact location of Mansura, the question whether it was built on the site of Brahmanabad or at some distance from it, as well as the precise date and circumstances of its destruction and abandonment, are inconclusively discussed by several authors. (See Bibliography.)

**AL-MANSURA, a town in Lower Egypt near Damietta (Dimyāt [q.v.]),** and chief place of the maḏrīsyya al-Dakahlīyya. The town was founded in 616/1219 by the Ayyūbid sultan al-Malik al-Kāmil [q.v.], as a fortified camp against the Crusaders, who had conquered Dimyāt in Saḥban 616/116 November 1219. Situated at the fork of the branches of the Nile near Dimyāt and Ugmūm Tannah, the town dominated the two most important waterways of the eastern delta and served as an advanced outpost of Cairo. In July/August 1221, the advance of the Crusaders under King John of Jerusalem and the Catalan-Legate Pelagius was checked before al-Mansura in exactly the same way. In December 1249 the Franks, approaching from Dimyāt, appeared before the town and pitched camp again in the angle between the branches of the Nile. On 5 Dhu 'l-Ḥaḍra 647/10 February, 1250, they forced the crossing of the Bahr Ugmūm and penetrated into al-Mansura, but were driven back after heavy street fighting, during the ensuing battle before the gates of the town, King Leo Tzachares himself facing Baybars I al-Bundukdārī [q.v.]. After hesitating for several weeks, the Franks beat a retreat, but did not reach Dimyāt. On 3 Muharram 648/7 April 1250, the King and the remainder of his army were taken prisoner, and on 5 Safar 7 May of the same year were ransomed for exchange for Dimyāt.

During the reign of the Mamlūk sultans, the town belonged to the province of al-Dakahlīyya, whose chief place was Ugmūm Tannah, the present Ushi, renamed maraj in 1871) with 60 villages. As a staple of cotton, harvested in the Delta, al-Mansura witnessed an important increase in population: 27,000 inhabitants in 1900; 49,000 in 1917; and 210,000 in 1970.

**AL-MANSURA, a town in Lower Egypt near Damietta (Dimyāt [q.v.]),** and chief place of the maḏrīsyya al-Dakahlīyya. The town was founded in 616/1219 by the Ayyūbid sultan al-Malik al-Kāmil [q.v.], as a fortified camp against the Crusaders, who had conquered Dimyāt in Saḥban 616/116 November 1219. Situated at the fork of the branches of the Nile near Dimyāt and Ugmūm Tannah, the town dominated the two most important waterways of the eastern delta and served as an advanced outpost of Cairo. In July/August 1221, the advance of the Crusaders under King John of Jerusalem and the Catalan-Legate Pelagius was checked before al-Mansura. When al-Malik al-Kāmil ordered the dikes to be pierced and the land flooded, the Franks, who had pitched their camp in the angle between the two branches of the Nile, were forced to surrender and to purchase an unhampered retreat by giving up their Egyptian conquests (7 Rashād 618/22 July, 1221).

During the reign of the last Ayyūbid Turāngāh, the Crusade of Louis IX of France came to its end before al-Mansura in exactly the same way. In December 1249 the Franks, approaching from Dimyāt, appeared before the town and pitched camp again in the angle between the branches of the Nile. On 5 Dhu 'l-Ḥaḍra 647/10 February, 1250, they forced the crossing of the Bahr Ugmūm and penetrated into al-Mansura, but were driven back after heavy street fighting, during the ensuing battle before the gates of the town, King Leo Tzachares himself facing Baybars I al-Bundukdārī [q.v.]. After hesitating for several weeks, the Franks beat a retreat, but did not reach Dimyāt. On 3 Muharram 648/7 April 1250, the King and the remainder of his army were taken prisoner, and on 5 Safar 7 May of the same year were ransomed for exchange for Dimyāt.
himself and the leaders of his army and laid the foundation of a mosque. In the year 702/1302 the "Victorious Camp" (al-Mahallat al-Mansura), was given the form of a regular town by the construction of a ram part. In addition to the mosque, the dwelling of the chiefs, the storehouses for munitions and the shelters for the army, there were baths and caravanserais. As Tlemcen was inaccessible to caravans, al-Mansûra, or New Tlemcen, as it was called naturally attracted the business of the besieged town. Documents in the archives of the Crown of Aragon attest to the fact that it was visited by Christian merchants, and that a Marini d lived there. After a siege of eight years and three months, the Marînids in 706/1307 withdrew from Tlemcen following the death of Sultan Ya'qûb and, al-Mansûra was methodically evacuated under the direction of Ibrahim b. 'Abd al-Djalîl, the vizier of the sultan Abu Thabit. The people of Tlemcen were compelled, by the terms of the treaty made by the Marînids, to respect the town for some time later; then, when the entente between the two empires had collapsed, they demolished its building and rendered uninhabitable the entitlements left at their gate by their hereditary enemy.

The second phase of al-Mansûra's existence began 30 years afterwards, in 735/1335, with the Marînids drive eastwards under the great ruler Abu 'l-Hasan (al-Mansûriyya, or Mansûriyya 441). The town, a prosperous centre of rice cultivation, was built (747/1348-51) under the leadership of the vizier, who had accompanied him to the town, and provided with a kasba and mosque, a medina, a house of justice, palaces, baths and caravanserais. It was probably at this time that the great mosque was completed and that the "Victory Palace," was built. The Marînids court installed itself there and conducted the affairs of state thence until the defeat of al-Karawân and the re-installation of the Banû 'Abd al-Wad at Tlemcen (Djumâdâ II 749/September 1348).

After the retreat of the Marînids, al-Mansûra, once more abandoned, fell gradually into ruins. Today the rampart of terrace pisé flanked by square towers is still comparatively intact, but the inner is lost under vegetation. Still exists, however, the ruins of a palace, no longer distinct, a section of a paved street, and probably the surrounding wall in terrace pisé of the mosque with half of the great stone minaret which rose above the principal entrance. Although the inlaid ceramic work has almost entirely disappeared, the façade of the square tower, which is 120 feet high, is one of the finest pieces of Maghribi art of the 8th/14th century that survives. The columns and the capitals in marble of the mosque are preserved in the Museums of Tlemcen and Algiers.

(G. Marçais - M. Shatzmiller)
and to have used the method of strangling or stoning, because they held that iron weapons must not be employed before the coming of the Mahdī. They considered all belongings of their victims as booty and turned over a fifth (khums) to their leader. Al-Džahīz describes them as living and travelling together in groups and acting together, beating their drums and tambourines and making their dogs bark in order to cover up the cries of their victims. Abū Mansūr’s “foster mother” (hādima), Maylā, is named as a head of the strangers in a poem of Hammad al-Rawīya.自行车, the description (or is it the expression) of truth and to that which is derived from concepts and to that which is derived from judgments (tawassiriyāt and tadžkīyyāt). This definition presupposes the valid distinction between the rules that hold that the rules of logic “supply knowledge of the methods permitting a passage from the necessary truths of intuition to speculative truths, because this expression at first sight gives the impression of a passage which is effected [directly] by itself (intikāl ġlīth), while the more general sense is that this is a passage which is either made directly by itself or through an intermediary (la tādār bi ‘l-tawāṣil). This being so, al-Tahanāwī points out the difference between logic and grammar (handasa) on the other. Grammar “only explains the general rules which apply to the quality of elocution in Arabic terms, and that in general manner; when one wishes to propound a discourse appropriate to a particular subject (mukāhī) in a congruous and proper manner, that is to find for particular modalities (aḥkām ḥiqqiyā) which are drawn from these rules as are normally the derivations (fara‘) of principles (ulūl). But this does not apply in the passage of thought from a known to an unknown. Grammar is of absolutely no assistance in making passages of this kind. The name is true of geometry; it is in posing principles (nafṣīdh) in the practice of them”. This science, al-Tahanāwī continues, “was called mantık because the root naṭ (action of speaking, elocution) applies in a general fashion to statement (lafe), to the perception of universals (idrāk al-kulliyāt) and to the reasonable soul (al-nafs al-naṭāk), since this act reinforces the first of these concepts, through the second it follows the path of rectitude (sadd), and by its means the perfection of the soul is realised, a word has been derived from this root to designate it, sc. the word mantık. It is the science of rules (kaʿānīn) which explains the methods for passing from that which is known to that which is unknown, and the conditions that they pose (gharā‘īt) so that error (ghalat) will not survive in thought (ṣkr). The known extends to the necessary truths of intuition (darārisiyāt) and to speculative truths”. It may be noted that this distinction corresponds to that made by Aristotle (Anal. Pr. i, 10, 76 b 10) between “common axioms” and “entirely demonstrated conclusions”. As for the unknown, “it extends to that which is derived from concepts and to that which is derived from judgments (tawassiriyāt and tadžkīyyāt)”. This definition presupposes the valid distinction between the rules that hold that the rules of logic “supply knowledge of the methods permitting a passage from the necessary truths of intuition to speculative truths, because this expression at first sight gives the impression of a passage which is effected [directly] by itself (intikāl ġlīth), while the more general sense is that this is a passage which is either made directly by itself or through an intermediary (la tādār bi ‘l-tawāṣil). This being so, al-Tahanāwī points out the difference between logic and grammar (handasa) on the other. Grammar “only explains the general rules which apply to the quality of elocution in Arabic terms, and that in general manner; when one wishes to propound a discourse appropriate to a particular subject (mukāhī) in a congruous and proper manner, that is to find for particular modalities (aḥkām ḥiqqiyā) which are drawn from these rules as are normally the derivations (fara‘) of principles (ulūl). But this does not apply in the passage of thought from a known to an unknown. Grammar is of absolutely no assistance in making passages of this kind. The name is true of geometry; it is in posing normative problems (masb‘āl kānīnīya) that it tackles objects of research on configurations, in the sense that it makes these problems the principles of the demonstrations whereby it reasons on these objects. As for the particular notions which intervene in these demonstrations, geometry does not in any way contribute to their understanding.” Al-Tahanāwī is no doubt thinking here of the Euclidian method which proceeds from problems to arrive at theorems: the given data of the problems serving as a base for the demonstrations. As for the particular notions, they relate to the terms of the syllogism, in particular the middle term which is the cause of the conclusion in the minor. Thus Aristotle writes (Anal. Post., i, 11, 94 a 27-34): “Why is the angle drawn in the semi-circle a right-angle? Or, from what given information does it follow that is is a right angle?” J. Tricot explains Aristotle’s argument in these terms: “We have here the following Barbara syllogism, in which B, the middle term, is the cause of the conclusion: Every angle which is the half of two right-angles (B) is a right-angle (A). Every angle drawn in the semi-circle (r) is

**1. Etymology.**

The LA gives mantīk as a synonym of kalām in the sense of “language”; a book is described as being mantīb (that which has a voice). But it is certain that the Kurgan uses this root with a normative sense which has a broader sense to the word mantīk. The man who has received wisdom (hikma) is named as a head (maṭla‘ “foster mother”, hawdy). The man who has received wisdom (hikma) he does not talk through passion but he does so according to reason. It is understandable that reason distinguishes him on the spiritual level. As for the particular notions which intervene in these demonstrations, geometry does not in any way contribute to their understanding.” Al-Tahanāwī is no doubt thinking here of the Euclidian method which proceeds from problems to arrive at theorems: the given data of the problems serving as a base for the demonstrations. As for the particular notions, they relate to the terms of the syllogism, in particular the middle term which is the cause of the conclusion in the minor. Thus Aristotle writes (Anal. Post., i, 11, 94 a 27-34): “Why is the angle drawn in the semi-circle a right-angle? Or, from what given information does it follow that is is a right angle?” J. Tricot explains Aristotle’s argument in these terms: “We have here the following Barbara syllogism, in which B, the middle term, is the cause of the conclusion: Every angle which is the half of two right-angles (B) is a right-angle (A). Every angle drawn in the semi-circle (r) is...
the half of two right-angles (B); Every angle drawn in the semicircle (r) is a right-angle (A)." But it is evident that the role of geometry is precisely to show that every angle drawn in the semi-circle is the half of two right-angles. Although it implicitly uses the preceding syllogism, it is not by means of the syllogism that it achieves the end which it seeks. Consequently, the science of logic is different from the demonstrative science of geometry. Logic is definitely defined as one of the instrumental sciences (min al-ilm al-diliyya). But if it plays a role in the treatment by each particular science of its own object, what is the object of logic itself?

"It is said," al-Tahanawi states, "that it has its object (mawjud) concepts (tasawwurat) and judgments (tadsikat)." It is a process of passing from known concepts or judgments to unknown concepts or judgments, by short or long steps: short when a concept is defined through haul or through sam, or when judgment is by analogy (kisay), induction (istikr), or comparison (tamb bif); long, when there is the added consideration that a concept is universal or particular, essential or accidental, or when a judgment is proved by a contrary or contradictory judgment (kadiyya wa-takfiyya wa-nakhdh). The logician also enquires into concepts in as much as they give access to judgment when they are considered as subjects (ma'add) and judgments. Those who are concerned with the precise meaning of words (al-tabaks) reckon that the object of logic is constituted by secondary intelligibles (al-ma'kali'at al-thaniyya) not as such and taken in themselves, nor as existing in thought, for it then becomes an issue to be dealt with by philosophy; but in as much as they give access to the unknown. "In fact, when the universal intelligible notion (al-ma'add al-akhl) exists in thought, and is compared with particular things which are beneath it, it becomes either essentiality (al-dhatiya) because it becomes a part of their quiddity, or accidentalness (al-raftadyya) because it is exterior to them, or specificity (al-ma'addyya) because it is their quiddity itself. That which becomes essentiality is the genre (dim) relative to its different individuals, and the specific difference (al-ma'add al-akhl) existing in thought, and which becomes accidentalness is either an attribute (khiss), or a common accident ('arad 'amm), according to two differing points of view." These "intentions" (ma'dani), i.e. the fact that the universal notion is essential, accidental or specific, do not belong to exterior entities; they are what becomes of the universal natures (al-tahd Y al-katllya) when they are found in thought. The same applies to the fact that a judicative proposition is attributive or declarative, that an argument is an analogy, an induction or a comparison, for this is what becomes of the nature of particular relation (al-nisab al-dgulyya) in thought. Consequently, these secondary intelligibles are indeed the object of logic. Finally, al-Tahanawi comments that logic is also concerned with "intelligibles of the third degree" (al-ma'kali'at al-thaniyya) which are essentially what becomes of secondary intelligibles. Thus the judicative proposition (kadiyya) is a secondary intelligible. But inquiry can be made as to its divisibility (niksism), on the fact that it contradicts another (tanakud), or that it is convertible (insik), or that a conclusion may be drawn from it (imud); these are intelligibles which fall to the third rank (al-daragha al-idiltha). These questions are tackled by Aristotle in De Intermed, and in the Prior Analytics, whence this separation of intelligibles into three degrees seems to be derived. As for the purpose (gharan) of logic, it is the discernment of truth and falsehood (tamyiz al-sik wa'l-khld) in speech, of true and false (al-hakk wa'l-bht) in beliefs (fi 'l-bhtkd), of good and bad in actions (al-khayr wa'l-thghr fi 'l-a'mal). Its utility (manafa) is thus to give access to the theoretical sciences (al-ilm al-nazariyya) and to the practical sciences (al-analyiya).

Such is the survey of logic made by al-Tahanawi at a late date (12th/18th century). It shows the ideas which were current in the Muslim world, following a long history in the course of which it was both attacked and defended, and cultivated in a more or less fruitful fashion. It is necessary now to go further back in time.

3. Discussions of logic among Arab-Muslim thinkers.

A. Grammar and logic. It is undeniable, and the work of Aristotle proves this, that there is a connection between logic and language in general, and with the spoken language and its grammar in particular. But can logic, which aspires to be universal to all men, be reduced to the grammar of a language spoken by a particular people? This question was posed in the course of a famous debate described by Abi Hayyan al-Tawhifi, between the Christian logician Abi Bshar Matta b. Yunnus and the grammarian and commentator of Sibawayh, Abi Sa'id al-Sifar. Matta defines the purpose and utility of logic in the same terms as those employed by al-Tahanawi. Logic is an instrument comparable to a balance, giving awareness of what weighs the most, but not the nature of that which is weighed. Furthermore, in bodies, not everything is evaluated by weights; there are measures other than weight. The same applies to intelligibles. This reply is evidently an argument al hominem which does not explain how, alongside the grammar which regulates discourse, reason would pronounce, in intellectual problems, on the truth and falsehood of ideas.

Whatever the case, Abi Sa'id returns to his thesis: it was a Greek who instituted logic according to the language of his people, on the basis of the technical terminology (istilh) applied to it by the grammarians and of knowledge of the traits which characterise it. How could this logic be imposed upon Turks, Indians, Persians and Arabs? Matta replies that logic is concerned with intelligibles and ideas; on this level all men are equal. For all men, two and two make four; the same applies to the rules of logic, which is denied by Abi Sa'id, who declares that these intelligibles are only reached by the language with its nouns, verbs and particles. To preach the study of logic is to preach the study of the Greek language, seeing that the people who spoke it have disappeared and it is known only through translations into Syrian, then into Arabic. But, Matta replies, the translations preserve intentions and ideas. Abi Sa'id does not insist and does not pose the problem of the difficulties of translation, unlike al-Dhahabi (K. al-Hayawdn, i, 75-9). Even admitting, he says, that these translations may be accurate, there is no reason to think "that there is no proof other than the intelligence of the Greeks". To claim that the sciences (al-ilm) of their contribution to the sciences, he replies that "knowledge of the world is dispersed throughout the world among all the inhabitants of the world", without perceiving that by this reasoning there could be a logic common to all.
If the Greeks do not occupy a privileged position, it is also true that Aristotle is not the whole of Greece; he has not taken on the gravity of his words, for they pose the question of knowing if there are divergent mentalities in reconcileable in their diversity, and if there are among men one or several truths. Should the existence be admitted of as many logics as there are languages and grammars and people? Whatever the implications, he concludes: “The world has remained the same after the logic of Aristotle as it was before.” This being so, he attempts to explain that it is by grammar and not by logic that one can understand, for example, all the uses of the particle  

(And), which is undeniable, but proves nothing. Matth replies that the logician has no need of grammar, although the grammarians need logic: it is by accident that the logician is concerned with words, as it is by accident that the grammarians hit upon an idea (  

); but the idea is more noble than the word. On the contrary, for Abä Sa’id, “Zayd is the most virtuous of the brothers”. It is certain that logic is a grammar, but it is included in the language”. The difference between the word and the meaning (  

), is that the word is a “natural reality” which is effaced with time, while the meaning is a “reality of intelligence” which remains fixed across time. He then shows that, in order to express his logic, Matth needs the Arabic language and its grammatical terms of genre, type, specific difference, at-tic can invalidate any kind of reasoning.

This being so, Abä Sa’id leaves the consideration of words in order to turn towards the intellectual content of their meanings. What is to be made of the statement “Zayd is the most virtuous of his brothers”? Matth believes that this is correct. Abä Sa’id retorts that he is mistaken and that the statement should be: “Zayd is the most virtuous of the brothers”. Zayd is one of the brothers, but he is not one of his brothers. In fact, “the brothers of Zayd are other than Zayd, and Zayd is exterior to their group.” Abä Sa’id claims that Matth does not know why one of the propositions is correct and the other false. But he himself does not explain how grammar demonstrates this, and his own explanation, based on the logical notions of inclusion and exclusion, has nothing grammatical about it. It is true that Aristotle does not deal directly with this type of proposition. Nevertheless, Matth should have been able to reply, for the notion of a brother is relative and according to Aristotle (Categories, 7, 6 a 36) relatives “refer to another thing.” Zayd, as a brother, is thus the brother of his brothers who are other than him: he is not one of them.

Finally, Abä Sa’id criticizes the logicians for having done nothing more than “frighten people” with the technical terms of genre, type, specific difference, attribute, accident, individual, and especially with the neologisms in  

, such as  

,  

,  

,  

,  

,  

, etc. Ibn Kutayba had already made a similar critique in the  

. Abä Sa’id mocks the “magical” formulae of the syllogism and concludes, “All of this is nonsense, trifles, incomprehensible and confused propositions. Anyone possessing fine intelligence, good discernment and refined insight, can do without it altogether.”

This critique poses more problems than it resolves, in particular that of a grammatical logic. Abä Sa’id’s performance is that of a debater seeking only to have the last word, unperturbed by his self-contradictions and avoidance of questions. But his critique is interesting, in that it shows the existence of a certain Aristobism opposed to all things Hellenic, based no doubt on the religious belief that God has revealed the  

in clear Arabic language (XVI, 103).

Unfortunately, translations render them in obscure terms and arcane usage: "Nor every expression is right for every notion." Consequently, "No one can say of the meanings of the words, nor of their complex terms, equally comprehensible to the common man and educated, to the scholar and the ignorant, in the same measure as we have understood them:"

This being so, Ibn Hazm surveys the eight books of logic. As regards the *Isagoge*, it is sufficient to mention what he says of names which can designate several individuals, or a single one, as the case is presented in Arabic. For example, God says (III, 2): "In truth, man is in distress." Here, the name indicates the species (nau₃). A phrase such as "The man whom you know has come to see me," refers to an individual. But the ambiguity can be removed by the use of the collective: *al-nāṣ* instead of *al-insān* (the man), *al-khayl* instead of *al-faran* (the horse). This reference to the Kurʾān and to Arabic is worthy of note. Ibn Hazm then tackles the works of Aristotle: first the book "of isolated names" (*al-asma restarted*/al-mustafa), i.e. the Categories (*Kātibṭ harm) ; these are the ten mubālat. He begins by defining synonyms (*al-asma restarted*/al-mustafa restarted) and homonyms (*al-asma restarted*/al-mustafa stalka), for example, *nār* which denotes the vulture, a star, a stallion's head, and the shoe of a horse. He gives a different definition to paronyms which he calls "derivations" (*al-asma restarted*/al-mustahkka), the word *παρά* which was used by Aristotle having the sense of a word formed from an example of another; but it is never "born", for the substance (*gawhar*) bears and is not born.

Here there is established the ambiguity which results from the substitution of names for beings. Aristotle has stated clearly, "Among beings, some are affirmed by a subject, while not being in any subject" (Cat., 2 1 a 20). Ibn Hazm should have specified that Man, in the sense of a secondary substance (cf. Cat., 5, 2 a 10 ff.) is not in a subject, but as a universal, he can be the predicate of an individual subject: Zayd is a man of the tribe of the horse. Then the names of the third group are like the knowledge of a man: it is born in his soul and is qualified by knowledge. The names of the fourth group are like the knowledge which is a kind of quality relative to the soul and which includes such studies as medicine, jurisprudence, etc., par-ticular types of knowledge which it qualifies. What is of interest to Ibn Hazm is names, their meanings and their relationship within the language and their usage. The thing denominated is only considered in terms of the name which renominates it.

Turning to the ten categories, Ibn Hazm follows Aristotle, while simplifying him. With regard to the substance which is that which exists in itself, he does not say that the primary substance is neither in a subject (Indo *νοοτριγια*), not attributable to a subject (Indo *νοοτριγιαν*), while the secondary substance, once it has been seen, is not in a subject, but is attributable to a subject. He insists above all on the fact that the substance has no contrary (dīd). When two substances are taken to be contraries, the contrariety derives from their qualities (kaygīya). Consequently, God, having no qualities, is in no sense contrary to His creation. It is no longer possible to talk of more and of less: an ass is not more than another ass in "the-nature-of-the-ass" (fi ʿihamiriyā), nor a goat more than another goat in "the-nature-of-the-goat" (fi ʿi-tayyiyā): it is interesting to note this use of abstract terms in -iya which in principle Ibn Hazm rejects since they evoke ideas of the Platonic type existing in reality. But here there is little risk of "realism", since the context shows quite clearly that hmiriya and tayyiy are nothing more than conventional terms which designate the ass and the goat in the sense of secondary substances. Without pursuing further this analysis of the categories, it is evident that logic has so far been presented as a means of classifying words, of specifying their usage and thus developing a method of explaining the *Kuranic* text which is often quoted to illustrate, or to support, such-and-such a significa-tion. Nevertheless, in his chapter on the *De Interpretatione*, he calls "Book of Enunciations" (*K. al-Akhbār*), where there is a discussion of "names joined
to express a new signification (al-madīṃa ʾīlā ḍayyirāb), in other words "composites" (al-marabbāb), he denotes pure "nominalism". All qualifications and enunciations bear on the things denominated, not on the names, for the things denominated are the significations (al-maḍārî), and the names are the expressions of them (al-ʾibār ṣanḥâ). It is thus well established that the name is other than the thing denominated." Those of a contrary opinion seek support from the verse (LXXXVII, 1), "Praise the Name of your Master...". But they are mistaken, since a thing denominated can only be reached through the name which expresses it; these are the two inseparable relations.

It is worth paying attention to what Ibn Hazm says concerning speech, in order to show how he understands Aristotle in relating him to the notions of Arabic grammar. He renders the word ʾapha by kalima and says that it is what the grammarians call qualifications (nāʾî) and the theologists attribute (ṣīfa). The Greek word in fact primarily signifies speech and discourse (and in second place "verb" in the grammatical sense). J. Tricot writes (De l’Interprétation, 81, n. 1), "In the language of Aristotle and also that of Plato (cf. Sophist, 262 c; Cratylus, 399 b), the word ʾapha expresses the act of qualifying a subject or the qualification which is given to it, in a more general sense that which is stated on a subject."

The Arab grammarians describe it as "a name derived from a verb (fiʿl)". For example: ʿabbā, yāṣhhu, fa-ḥuwa ṣabīh (sense of being in good health). Kalima indicates a determined time. Thus ṣabīh is a statement (ṣibḥār) on the present fact of health of a person; ʿabbā indicates an action in the past (fi l-ʾmadāʾi); yāṣhhu, a future action (mustākbāl). The word ʾibaḥ (act of being in good health) is a name (ism), not a kalima. It is what the grammarians call masdar (verbal noun). These are of two types: (1) the masdar can express the action of an agent (fāʿil) or the movement of a mobile, for example the blow (darb) of one who strikes (dārīb); or (2) that which is a qualitative for what is qualified, for example the fact of being in good health (ṣibhā, masdar or ʿabbā) for someone who is in good health and is one of his qualifications*. There are thus two enunciative propositions: (1) Zayd strikes (darabeh), and (2) Zayd is in good health (ṣabīh), which means that Zayd is the agent-subject of the act of striking which is the effectiveness (taʿbīr), and that he is the qualified-subject of the fact of being in good health which is "borne" (maḥmûl) on him. With this incursion into Arabic grammar, Ibn Hazm deviates considerably from what Aristotle says.

In his study of the first part of the Prior Analytics, Ibn Hazm follows Aristotle fairly closely. He speaks of defined propositions (kadāsī maḥsûrā), "those which are explained by a word (laḥf, cf. below: ʿàr) which explains that they are intended to signify a global extension (al-ʾummān); these are universal propositions; or else a limited extension (al-khsusā); these are particular propositions. Next come undefined propositions (maḥmûlā), "in which the one who enunciates them does not state explicitly that he means a part (baʿād) of what is offered by the sense of the noun which they contain, or in which nothing prevents them from receiving a signification of global extension". It is evident that it is always the verbal expression (laḥf, ṣim) which interests Ibn Hazm, where Aristotle speaks of attribution to such or such a subject (wannuṭalāb). Furthermore, when he employs the words masdar (subject) and maḥmûl (predicate), he always explains them by terms borrowed from Arabic grammar: maḥmûl ʾaṭrā (that on which an enunciation bears) and ṭabar (enunciative). He stresses the means of concluding in an always true and necessary fashion (ṣittidā ʾahlan ʾahlan). Logical necessity has posed a problem for theologians (cf. below). But here it is reduced to evidence supplied by the sense of words themselves. If the noun "man" denotes living beings, and if the noun "existence" is applied to living and to inanimate beings, it is evident that the noun "existence" applies to man. If this is formalised, the result is a first-figure syllogism of the Barbara type: Every living being is substance; man is a living being; thus every man is substance. (N.B. This syllogism is given in the order major, minor, conclusion, whereas Arab logicians enunciate first the minor, then the major.)

Ibn Hazm devotes several paragraphs to judgments and to conditional syllogisms (girairriya). Aristotle does not deal with these in the Prior Analytics. As in the case of al-Fārābī and Ibn Sinā, a Stoic influence is evident here. The conditional proposition is either conjunctive (maṣūm), or disjunctive (muḥkām). Conjunctives are divided into connected propositions (muttasia): if A, therefore B; and into propositions with exception (ṣittidā): A or (not A) unless if B. The disjunctive enumerates cases, two or several, exclusive of one another, in a manner which is exhaustive (therefore perfect) or non-exhaustive (therefore imperfect): either A, then B; or C, then D...; now A, thus B. Ibn Hazm gives examples, which are known as instruments of the Stoics: if the sun has risen, it is day. The rising sun is the cause (ṣabāb) of the day. But he also gives judicial examples, which is to be expected since in the K. al-Muhallā, among other texts, he stresses the obligation to take account of the conditions which are in the Book of God (al-ṣarīf fi Kīsāʾ Allāh), without exception or addition. Thus a fornicator who is married, adult and healthy of mind, is punished by flogging; that which intoxicates is forbidden; now the wine of figs, when (iḏhā) it is fermented, intoxicates; thus the wine of figs if fermented is forbidden. The conditional particles are if (in), as soon as (maṭā mē), when (iḏhā mē), whenever (maḥmû, kullāmā). This being so, Ibn Hazm examines the different conditional syllogisms, according to whether their premises are universal or particular, affirmative or negative.

This brief appraisal shows that, without rejecting logic in general, and that of Aristotle in particular, Ibn Hazm reduces it to an instrument for the evaluation of names and of their meanings, whether they are isolated or connected in speech. By this means, genres, types, differences, particulars and accidents serve first to classify names, then, through them, the things denominated, to define the relations between names, and thereby between things denominated. While laying the foundations of a Zāhiri grammar, he has transformed the logic of Aristotle into a Zāhiri logic. It makes no attempt to advance a theory of quiddities and essences, being designed above all to serve in commentaries on Kūrānic and prophetic texts, and the truth that it propounds is that of legal maxims and of akhbām. It is for this reason that it is illustrated essentially by examples drawn from "Islamic law", and the nature of the work in question is clearly indicated by the full title, al-Takrib li-hadd al-maṭpar ilayhi bi-l-alfar al-ʾāmmiya wa-l-amīna wa-l-fikriyya.

C. The theologians and logic. (a) The ʾHanbalis. Very attached to the notion that all knowledge comes from God, they admit however that reason (ʿaṭā), being a gift of God, is something of which use should be made. This is stated, for example, by al-Barbahārī.
MANTIK 447

[q.v.], although he denounces personal and arbitrary use of reasoning. He attacks innovations (bida*) as also does Ibn al-Ba'ta [q.v.], who denounces those "who take ignorant and debased beings as their masters, although the Lord has given them knowledge," and thus adopt "ideas which have no proof in the Book of God" (Profession de foi, introd., ed. and tr. H. Laoust, Damascus 1958). There is no doubt that logic is envisaged in this attack on bida*.

But the most important text written by a Hanbali on this subject is the "Refutation of Logicians" (K. al-Radd 'ala 'l-mantiqiyin) by Ibn Taymiyya [q.v.]. The author is at pains to show the uselessness of the logic of Aristotle. For example, a definition teaches nothing about the defined object to those who do not already have knowledge of it: "There is nothing more clear than 'man', but his definition as a reasonable animal encounters objections*. There is no need for a definition in forming a concept (taṣawwur) of the defined object and of its reality. "All men of good sense in all nations know the realities of things without being taught them by the school of Aristotle." However, Ibn Taymiyya admits nominal definitions which "distinguish between the defined object and that which is other than it*. But he reproaches al-Ghazālī for having introduced Greek logic (nabidh) and fikr al-dīn and renounces his works al-Mussafa', Mihkāl al-nazar, Miṣyār al-sīm and al-Kīsāfī al-mustakīm. On the other hand, when the logicians declare that knowledge of judgments can only be formed by the syllogism (kiyās), this is a negative proposition (kādiyya saliva) which is not known through evident intuition (badhā), and they have no proof (dalil) of this negation. How can they claim that none can acquire knowledge of a non-intuitive judgment except through the intermediary of a logical syllogism based on the universal (br-ussātī al-kiyās al-mantikī al-shumūlī)? The difference between the intuitive and the speculative is relative. A judgment is intuitive when it is sufficient to observe the two terms (subject and attribute) in order to recognise that it is true. But in this men are very different from one another. Some are capable of understanding a concept or weakness of the faculty of thought of different individuals. In this sense, the logic of Aristotle, indeed all logic, will be nothing other than methods of exposition of known truths, not rules for transference from a known to an unknown.

In matters of religious tradition, there may be a need for universal propositions. If, for example, the prohibition of nabih is to be explained, the statement will be that nabih is an intoxicating drink and every intoxicating drink is prohibited (or, nabih is a form of khamr (fermented drink), and all khamr is prohibited). Each of these propositions is known through a text (Kur'ānic or prophetic) or through consensus (imāra*). It is objection to the minor premise, the reply will be that it is established in the Sahih of Muslim that the Prophet said, "All intoxicating drink is fermented drink, and all intoxicating drink is forbidden*. Those who believe that there is a demonstration by means of two premisses display enormous ignorance, "for the Prophet is of too eminent rank to have recourse to such a method in the dissemination of knowledge*. But it appears that this method may be applied to the purpose of those whose intelligence is of a less eminent rank.

Furthermore, universal propositions are known, in a general manner, not by demonstrative proof (burhān), but by an analogy of comparison (kiyās tamghīl). If the demonstration of the logicians requires a universal proposition, the knowledge that is had of them must have a cause. If one advances the consideration of the fact that which is absent by that which is present (al-khās bi-l-a'ādād), or that the principle that the judgment borne on a thing is identical to that which is borne on a similar thing, then one has recourse to the analogy in question. If it is said that at the time of particular perceptions, there is produced in the soul a universal knowledge by the grace of the Giver of Intellect (Wāḥib al-dīl = Wāḥib al-dīl), who is the Agent Intellect (al-khalīf al-fāsād), or, further, that in perceiving particular things, the soul is "disposed* to receive from the Agent Intellect the influx of the universal, the reply will be that it is discourse (kalām) on particular things which shows that the universal judgment is knowledge and not opinion or ignorance. Finally, if demonstrative proof supplies only a knowledge of the universal, as the universal is only in thought and there is nothing at the exterior but the determined existing (mawjud mu'āyan), it follows that, through burhān, no existent can be absolutely known. The above are a few of the many criticisms levelled by Ibn Taymiyya against the logicians.

(b) The Aṣḥāris. In his K. al-Tamhīd, al-Bākīllānī brings together various kinds of demonstrations (istidālī), (1) those which divide a thing in the intelligence (fi 'l-dīl) into two or more parts which cannot all be true or all false; proof (dalil) shows that these divisions are false, except one; the intelligence judges as necessarily true that which remains; (2) that which states in that which is presently given (fi 'l-dīhīd), that it is necessary to judge and to qualify a thing by reason of a cause: it must therefore be judged that which has the same qualification in that which is absent (cf. Gardet and Anawati, Introduction à la théologie musulmane, 365 and n. 3). "In fact it is impossible (mustaflī) to establish a proof which shows that which
justifies the qualification by an attribute in the absence of that which renders this attribute necessary. This is known as the body is qualified as a body only by reason of the fact that it is composite; it must therefore necessarily be judged that everything qualified as a body has a composition; (3) that which demonstrates the truth or the falsehood of a thing according to (salāt) the truth or the falsehood of another thing which is similar to it and included in the same notion. For example, it is shown that God can give back life to the dead by the fact that this is the same thing as giving it to the living. Other types of demonstration depend on the exigencies of lexicography, or on the Qur'ān, the Sunna, tafsīr and the analogical reasoning of jurists (al-kiyād al-ghārî) which, likewise, is linked to a "cause" (ṣīla, cf. below). "All these traditional proofs (adilla sam'yya) have the same role in the unveling of truth through kiyās as have judgments based on reason."

In his Ithārāl, al-Dhuwaynī defines just reasoning (al-nazar al-sahlī) as "everything which leads to an understanding of the manner in which the proof proves (al-saltārā al-ruqūd al-llāhī minku yuḍūl al-dalālī)." As for proofs, "they are that which, through just reasoning with regard to them, lead to the knowledge of that which is not known in a necessary manner by deep-rooted practice. "Muslim theologians are confronted with the problem of the demonstration of the propositions, which, al-Dhuwaynī explains clearly. "Reasoning (nazar) does not engender knowledge as a derived effect (lā yuwa'llūd al-ṭīm); it does not necessitate it (lā yuḍūbahu) in the way that the efficient cause (ṣīla) necessitates its effect. "He thus expresses, on the one hand, the opposition of the Ash'arīs to the Mu'tazilī doctrine of tawallul, and on the other hand, their opposition to the doctrine of al-falāṣīfīa which, for according to Aristotle, considers that the minor clause of a syllogism is the cause of its conclusion by the route of essential necessitation. According to the Ash'arīs, it is God who immediately creates knowledge of the conclusion as soon as the premises have been posed. This is an application to logic of the doctrine of occasional causes. Logical laws, like the laws of nature, are for God a custom (ṣāla), a rule of conduct (sunnah) which He freely decides to observe, and the correlation between premises and conclusion is purely ʿādī. Nevertheless, for al-Dhuwaynī this correlation is rational (ʿādī) in the sense that God has created reason and its necessary principles; they cannot be incumbent on Him, since He creates them freely, and it is by the same free act that, having created them, He decides to observe them habitually."

(On this question, cf. Luciani, El-Irshad, ed. and tr. Paris 1938, 14-15, n. 2.) This problem of logical necessity (al-ṭarîfir) is of prime importance to theologians. According to al-Bākiliānī, in his Tadhkîl, a knowledge is necessary in two senses. First, it is a knowledge which is attached to the creature itself "by a connection (laṣūm) of which it cannot rid itself". Doubt is not possible; there is an act of violence done to the one who knows, for, in the language, the word ʿītārār signifies ʾiksh (violence), i.e. ʿāqib (constraint). It is in this sense that there is talk of a necessary knowledge. Subsequently, a knowledge can be said to be necessary when there is a need for it, for, in the language, ʿarāra signifies ṣāla (need). In the first sense, sensible knowledges are necessary, since they are imposed on the five senses. But there is a sixth necessity "which has been originally created in the soul, arrives through one of the senses, such as the knowledge that the soul has of itself, and the knowledge of the principles of necessary intuition, such as that a statement is true or false; two statements positing two contrary objects cannot be simultaneously true or simultaneously false; and this applies in all cases where the intelligence makes a division by which is applied the principle of the excluded third. It is this necessity which renders the conclusion necessary. Here, too, there is recourse to the notion of the ʿādī connection. (On the tripartite division of knowledge, cf. Iṣraḥāl, 25, and n. 1.)"

In his Mukāfīr min al-dalālī, al-Ghazālī writes that questions of logic have no reference to religion, either to refute or to prove it. "They are a rational examination (nazar) of methods of proof and of criticism, of conditions relating to the premises of the demonstrative syllogism (birākān) and the manner of disposing them, of the conditions of correct definition and the manner of organising it." However, misuse of this science leads to the belief that the conditions of demonstrative proof necessarily engender certitude (al-yakin). On the level of religious problems, it is not possible to unite these conditions in an exhaustive manner. If al-Ghazālī thus warns the theologian against the dangers of logic, he does not fail to recognise in the Ḥiyāt al-ʿulūm al-dīn that logic, as "enquiry into the manner and conditions of proof and of definition", enters into the science of kalām. A branch of philosophy, it is placed in the second rank, after mathematics and before metaphysics (al-šāhīdīyyāt) and the philosophy of nature (al-kiyād al-ṣawāīqīyyāt). But al-Khatīb al-Mustakīm, al-Ghazālī has shown that there are syllogistic demonstrations in the Qur'ān, which he is set to form in.

4. The logic of the faṣāṣifa.

(a) Preliminary comment. The logic of Aristotle depends on judgments of attribution which express the inherent predicate in the subject (some statements regarding the term of a proposition). A simple principle of logical attributes, or its simple presence in the subject, when the predicate is accidental. The link between the predicate and the subject is marked by the copula "is" (ʾaṣma). But the Arabic language disregards the copula. The verb kāna indicates a state at which the subject has arrived, a manner of being; this is why it is followed by the direct case (wasṣ) such as a biṭ. Grammarians recognise only the relation of the mubṭadaʾ (inchoative) and of the ʾıkhabar (enunciative). In his commentary on the Muṭāṣsāl al-Zamakhshārī, Ibn Yaʿṣīḥ [cf. 25, n. 25] explains that the mubṭadaʾ is definite in order to show that it is known to the two interlocutors who are in accord in discussing it, while the ʾıkhabar is indefinite in order to show that one of the two is ignorant of that which the other intends to tell him regarding the mubṭadaʾ. It is thus not a case of a discussion expressing the relation of a predicate to a subject, but of an informative discourse (ʾıkhabar) of one who addresses a second person regarding something which is the object of the information (al-mukāfīr). This concept is close to that of the Stoics in regard to the λέξεις, that which can be said of a thing. Their dialectic concerns true or false statements relating to things; these statements or judgments (ʾikhāṣiyyat) comprise a subject (substantive or pronoun) and an attribute expressed by a verb. They never express the relation of two concepts. Although the ʾıkhabar can be something other than a verb (even an entire proposition, e.g. Zayd, his father has come) there is evident kinship between the notions of the Stoics and those of the Arab grammarians. There is even a relic of this where Muslim thinkers, especially Ibn Yaʿṣīḥ (see below) adopt formulae of the Aristotelian type. It may further be noted that for Ibn Yaʿṣīḥ, the true agent of a proposition is not the grammatical subject, but the one who enunciates
it: before every statement, there is an understood "I say that". Now the verb kdla (say) is constructed with kdla, although its copulative huwa is normally introducing the consecutive of kdla, testify to the reality of this understood preface.

This being so, the falsa, the under the influence of Aristotle, were obliged to find an equivalent of the copula. The particle adopted for this purpose was huwa (he; Zayd, he [is] wise), although its copulative usage is incorrect. As is shown by N. Taha (Langage et philosophie, Rabat 1979, 25), "in its ordinary usage, the pronoun huwa serves to establish a relating of idenity between the subject and the noun (or rather the nominal description) attributed to it, for example, Ibn Khaldun huwa mu'allif al-Mukaddima (Ibn Khaldun is the author of the Prolegomena)". But it is also admitted, for example by al-Farabi in his commentary on De Interpretatione (Shakir K. al-'Ibadi, Beirut, 103) that the copula is "potentially" contained in the statement, since the verb to be is "either expressed in a word, or contained in the idea" (ibid., 46).

(b) The commentaries. The work of the falsa, rest on translations and commentaries on a major, medium and minor scale, of the books of the Organon. In the article Maniik in EF, Van den Bergh wrote, "The Arab philosophers did not develop this logic, but they have summarised, reproduced and commented on it, often with felicity". But this judgment assumes a positive contribution on their part. It should first be stated, with N. Rescher, that the first generations of Arab writers on logic, including al-Kindi, Abū Zakariyya, al-Rāzī and al-Farabi, were in a true sense "the products of Syriac schools". "The Arab logicians, in this tradition of the Greeks of the Hellenistic period, and the Muslim Aristotelians, like al-Farabi and Averroes, are the last link in a chain of which the first members are the masters of the Greek language, such as Alexander of Aphrodisias, Porphyry, Themistius, Ammonius and Joannes Philoponus" (Al-Farabi's Short Commentary on Aristotle's Prior Analytics, Pittsburgh 1963, Introd., 23). Nor should the influence of Galen, and through him of Stoic ideas, be forgotten. Thus in his Short Commentary on the Prior Analytics, al-Farabi introduces the conditional syllogism which Aristotle does not discuss, although he has promised to do so (Pr. Anal. 50a 40 - B 1). On the other hand, the theory of propositions-and modal syllogisms to which Aristotle devotes more than a half of his treatise, is entirely ignored (cf. Rescher, ibid., 38). It is true that al-Farabi has dealt with this in his Major Commentary. In his disdain for modal syllogisms, Rescher sees the influence of the Syriac theologian-logicians. It may be noted that Galen, in his Institutiones Logicae, does not speak of them either. One original step taken by al-Farabi in this short commentary is the use of ecthesis (Ex tôn w: iōtir, apax, which D. M. Dunlop suggests should be amended to iōtir, or iōtir) in the reduction to the first figure of syllogisms of the second of the Baroco system and the third of the Bocardo. The following is an example of the Baroco system (with the major moved to the head):

Every mobile (M) is corporeal (C) Major A
Some existent (X) is not corporeal (C) Minor O
Some existent (X) is not mobile (M) Conclusion O.
If some C is not O, it may be said that a part of the Xs is not C. Let this part be called P. We then have:

No P is C Minor E
No P is M Conclusion E.
But "no P is C" is converted into "no C is P", and by inverting the premises the result is a definitive reduction from Camestres to Celarent of the first figure, with the second concluding:

No C is P Major E.
All M is C Minor A.
No P is M Conclusion E.
It is thus proved by this reduction to the first figure that no P is M. It is converted that P is some X. Therefore, it is true that some X is not M. Rescher also draws attention to the originality of the chapter on analogy or transfer, in relation to what Aristotle says (Pr. Anal. ii, 25, 69 a 20 f.) on this reasoning which he calls ἀπόκρυψις. Of the latter, the following is typical: there is an evident major and a minor which is uncertain, but more probable or at least no less probable than the conclusion which is to be demonstrated. For example: Every science can be taught; justice is a science, therefore justice can be taught (syllogism of the first figure in the Barbara system). But al-Farabi's analysis is different. He revives the distinction between ἁπλός and ἄριθμος (cf. above). Rescher analyses this reasoning as follows: when A and B are two similars relative to S, and when A and B are both known, it may be concluded that T is present in B. Thus experience seems to teach us that bodies, such as animals and plants, are created. This character of being created is transferred from these bodies to the celestial bodies. But al-Farabi adds, the resemblance must be "relative to that which characterises animals as created," in other words, "a similarity between animals and the heavens on a point which gives, true to the judgment that the character of being created belongs to all these beings", for example the fact that they are all contingent. This requirement recalls a passage in the Topics concerning resemblance (i, 17, 108a 14-17): "it is in the measure that they possess an identical attribute that things are similar." Therefore the bodies of animals and plants are created because they have this character of being contingent. The result is a first figure syllogism of the Barbara type:

All contingent bodies are created.
The celestial bodies are contingent bodies.
Therefore the celestial bodies are created.
Al-Farabi is not the only one to achieve originality in his commentaries. Ch. E. Butterworth has also drawn attention to the originality of Ibn Rushd, although the latter is reputed to have followed Aristotle to the letter. He had "the onerous task of introducing the thought of a pagan philosopher to a somewhat closed Muslim community..." And, since he conceives that "teaching by means of demonstration is the apogee of what Aristotle has said on the art of logic, he sees no objection to presenting everything which precedes the exposition of this teaching as preliminaries based on general opinion, provided that this tactic induces his readers to revise their attitude towards the philosophy...of Aristotle" (La valeur philosophique des commentaires d'Averroès sur Aristote, in Multiple Averroès. Paris 1978, 117-26). Also worth consulting is the same author's very interesting introduction to the edition of the Middle Commentary on the Topics (Averroès' Middle Commentary on Aristotle's Topics, Cairo 1979).

(c) The original treatises. It is with Ibn Sinā that logic is genuinely detached from commentary to become an integral part of the great treatises. The Shīfā, the K. al-Nadibāt and the Ighārāt all begin with a section devoted to logic. In the Shīfā, moreover, Ibn Sinā
follows the order of the treatises of the Organon while making them precede the Isagoge (al-Madhkhāl), then moving on from the Categories as far as the Poetics. Ibrahim Madkour has well demonstrated that this treatise is not a commentary in the manner of those of Ibn Rūghī; it presents an original development with ‘personal hypotheses and analyses of great breadth’ (Le Shīrāzī, ed. Cairo, General Introd. 16-17). The connections between the Shīrāzī and the Naqāṣī are close. Both respond to the same principal idea: ‘to combine together logic, physics and metaphysics’ (bid., 19). The Isābāt, which are subsequent to them, further display ‘the originality and the personality of Avicenna. This is why the work is associated with the ‘Oriental Philosophy’’ (bid., 22). There has been much discussion of this philosophy, which Ibn Sīnā himself evokes at the beginning of the Madkhol. That which remains of the Manṭik al-Madhkhiliyyīn (the Logic of the Orientals) offers no new ideas in relation to the other works. Ibn Sīnā shows himself here closely attached to Aristotle. But he himself indicates the sense in which this philosophy is different. ‘We have revealed in this book the philosophy conforming to that which is in the nature of the spirit (fi ‘l-‘abṣīb) and to that which expresses the correct point of view (al-‘arṣ bi al-‘ashbī) without concessions to those who are associated in this discipline. There is no hesitation in diverging from their positions, as the formation is not the same in other books’ (Madkhol, 10). In fact, he specifies that the Shīrāzī is more in agreement with the Peripatetics (al-Madhkhīliyyīn). It could thus be considered, as a result of the works of S. Pīnēs on the K. al-Insāfī, that the Orientals are the thinkers of Khūrāsān who are represented by Ibn Sīnā and that the Occidentals are the Peripatetics of Baghdādī; it is the latter that Ibn Sīnā opposes and it is their interpretation of Aristotle that he criticises, on account of the fact that it is marked by the influence of ‘those Christian simpletons of Baghdādī’. It is certainly a fact that these Christians, Nestorians in the main, has pursued their studies of logic ‘in close association with their theological studies, since Greek philosophy provided a rational conceptual analysis, in which the theology of these churches forms an articulation’ (The development of Arabic logic, Pittsburgh 1986, 14). Nevertheless, in the Shīrāzī, there is already a debate conducted with various logicians. Nābil Shehāb (The propositional logic of Avicenna, Dordrecht 1973) has sought to discover whether these are Ancient Greeks, contemporary Muslims or Christian Arabs. The author refers to Aristotle, to the Stoics (Chrysippus), to Galien, and he uses information supplied by Diogenes Laertius, Sextus Empiricus, etc. In the postercity of Avicenna, Fakhr al-Dīn al-Rāzī [q.v.] and Naṣīr al-Dīn al-Ṭūsī, who both commented on the Isābāt, differ on their interpretation. Al-Rāzī wrote numerous critiques of Avicenna, while acknowledging the scale of his debt to him. Rescher writes with reference to him: ‘In principle, Fakhr al-Dīn was not only a critic, but also an interpreter and a continuer of the work of Avicenna. He may, nevertheless, be considered the founder of an important western school of Persian logicians ... since it constitutes a focus of opposition to the tradition of Avicenna’ (Development, 184). On the other hand, al-Ṭūsī (597-672/1201-74) criticised the writings of the ‘westerners’, specifically those of al-Rāzī (bid., 197). In Spain, the influence of al-Fārābī was dominant, and there are seen perpetuated there the concepts of al-Rāzī’s Baghdadī, which was introduced by Muhammad b. ʿAbdūn (4th/10th century). Worthy of mention among the logicians of this country are Abu ʿI-Salṭ [q.v.] and Ibn ʿU ṭūlūs [q.v.]. Many of these logicians had maintained an ancient tradition dating back to the Syrians, that of associating the study of logic with that of medicine.

Among the successors of Ibn Sīnā, mention should also be made of Abu ʿI-Barakāt al-Baghḍādī [q.v.] who constructed his K. al-Muṭabar on the tripartite division of logic, physics, metaphysics. He sometimes follows Ibn Sīnā and sometimes attacks him. His method is based on immediate, evident a priori forms of knowledge, which, as S. Pīnēs writes, ‘disparage the a posteriori theses’ accepted by the Peripatetics. This arrangement of treatises poses the problem of deciding whether logic forms an integral part of philosophy (the Stoics), or is only a methodological introduction to it (the Peripatetics). Many Arab logicians support the latter point of view. Ibn Sīnā and the Muslim Neoplatonists reconcile these two concepts: logic is a part of philosophy to which it constitutes an introduction.

There is room here only to draw attention to the interest in the study of logic on the part of scholars of the Arabo-Muslim world in the Middle Ages. Thus it is known that the great mathematician, astronomer, [optical] physicist and physician, Ibn al-Haytham (d. 430/1039 [q.v.]) wrote on the ‘seven books’. Al-Bīrūnī, a contemporary of Avicenna, considered that this is the foundation of the perception of man, the language characterised by the bi-univocity of signifiers and signified. Nevertheless, he mentions in the introduction to his Pharmacoepia, the interesting quality of the Isagoge and the four treatises, from the Categories to the Secondary Analytics. It may be wondered what use would have been made of it in cases where the mathematical language does not apply. In these matters, much research remains to be done. (4) The logic of the Ikhwan al-Safā. It is from the 10th to the 14th Epistle that questions of logic are dealt with, after mathematics (arithmetic and geometry), astronomy, geography and music. The Ikhwān speak of the Isagoge and the first four books of the Organon. Men, being tied to a body, require for its comprehension an elocution formed of articulated words (nūk lafāz); thus, in order to answer questions, they also possess an elocution formed of thought (nūk fiṣḥī). There are thus two logical sciences to be distinguished: (1) ʿilm al-manṭiq al-lubāwī and (2) ʿilm al-manṭiq al-faṣāḥī. It is necessary to start with the first in order to make the second comprehensible; this is the object of the Isagoge, the Madkhol. Then the logic of thought (al-manṭiq al-fiṣḥī) is approached. ‘Termus (al-fatāz) are only the signs which designate ideas, which are in the thought of souls: they have been instituted between men, so that each may express to other men what he has in his soul’. These ideas are forms which are given to the individual soul by the Creator, through a series of intermediary emanations: from God to the Agent Intellect, then to the universal Soul, then to the primary Matter, then to the human soul. ‘They are that by which men expresses themselves in their thought relative to knowable things, having seen material testimony to them by means of the senses.’ Logical philosophy is thus fundamentally linked to a cosmology in which man is a microcosm (sīlam sāḥīr) and the world a makros anthropos (insān kahir). But he requires verbal logic (manṭiq lafāz) in order to convey knowledge to others and to question them. This logic is thus not an art of discovery, but an art of revealing and of answering questions. Its object is to inform and to ‘popularise’ (Rescher).

Lexicographers recognise several senses for the word ‘genre’. For the philosophers, there is only
one: that which is applied to the ten terms studied in the categories (al-^ashrat al-alfdz ... case is presented on which there is no particular text, if it resembles a case dealt with by a text, it falls under the

which they call (mukawwina), the other kinds, the one constitutive to nine genres corresponding to the nine unities. Thus perfective

constitute what do not yet exist, but have only the potential of being or not being” (De Int., 7, 17, a 36-17 b 3); they speak of enunciations of which the truth or falsehood is determined by a root (hdsa), hence the existence of inconclusive modes. The Ikhwan add ironically, “unless one wishes to call existence inadequate. In word, logic is in relation with the thought of men enclosed in a multiple world, with their awarenesses which bear on the multiplicity of finite and defined beings. But it is useful, as are the sciences which follow its rules, to show the inadequacy of this type of knowledge and the need to pass beyond it to acquire the awareness of the Absolute One which is sought by the mustarshid under the guidance of his master.

5. Logic in the judicial sciences.

One developed very early in Islam a science of the principles of law ("ilm usul al-fihkh) of which it could be said that its function in the law was the same as that of logic in philosophy and the sciences. There is thus already a doctrine of reasoning among the usuliyyun. From the Kur'anic verse IV, 83, there has been drawn the notion of istihsan, elucidation of the divine word, closely related to islah with the sense of deduction. The commandment in LIX, 2, fa-"abru ya a/* li l-ahdah” (“Draw the lesson from this, you who are of clear vision”) is also interpreted in the sense of an obligation to reflect by means of analogy. There has thus been from the start the practice of informal modes of reasoning which constitute what is called in a general fashion iddhah (personal effort). The great problem was to apply the revealed Law, often “approximately” ("ala l-ta^mil), to detailed questions and to particular cases. First to be used were the hadiths of the Prophet which gave clear guidance in detail ("ala l-tafsirl). But when this was insufficient, there was recourse to analogy.

It is with the İmâm al-Shâfi'î that analogy (kiyâs) was properly constituted as a form of reasoning more rigorous than the simple comparison of similar cases (tandhîf). Al-Shâfi'î proceeds from the notion that every single event or process has a cause ("illa), which is more general than the order itself. When a case is presented on which there is no particular text, if it resembles a case dealt with by a text, it falls under the
name judgment on account of this same cause. In his Risala, al-Shafi‘i employs the word ma‘nd in the sense of cause or reason; the kiyya which is not based on a simple resemblance is that which rests on the fact that ‘God or his Messenger have in a text (manaseq) or forbidden or permitted something li-ma‘nd (for a reason). Consequently, when we find some thing similar to this ma‘nd in a case in which it is itself the object of no text of the Book or of the Sunna, we permit it or forbid it, because it is in the ma‘nd of the permitted or forbidden’ (Risala, ed. A. M. Shāhir, Cairo 1357/1938, 40). In order to extend the application of the Law, there are distinctions drawn between reasonings in a minor ad majus (kiyya al-aqdlān), a majori ad minus (kiyya al-aqālīl), a pari or a simili (kiyya al-musawāt or al-mithl) and a contrario (dāllal al-khiṣāb). But these first elaborations of a judicial logic are contemporaneous with the translation of Greek philosophy. Also no doubt perceptible, in this distinction of arguments, is the influence of the Topica, ii, 10 and iii, 6, for example, ‘An argument may be drawn from more or from less or from the same degree (119 b 16)’. The influence of the methodology of Roman law is indisputable, and comparisons could also be drawn with the methods of Rabbinic law.

It is with al-Ghazālī, in his introduction to the Mustaṣfī, that Greek logic is genuinely introduced into judicial speculations. For him there is no logic that Greek logic is genuinely introduced into mustasfī, or consensus which is opposed to it, or on analogical reasoning has more force than another. But this point is controversial.

Thus the modality of necessity corresponds to that of the impossible to that of the forbidden. Consequently, when we find some thing similar to this this is a case in which it is itself the object of no text of the Book or of the Sunna, we permit it or forbid it, because it is in the ma‘nd of the permitted or forbidden, it is prescribed, forbidden, advisable, inadmissible. The conclusion must demonstrate under which circumstances the methods of Rabbinic law. It is with al-Ghazālī, in his introduction to the Mustaṣfī, that Greek logic is genuinely introduced into judicial speculations. For him there is no logic.

MĀNU (and also Kasr Mānu or Tin Mānu), ancient locality situated on the Mediterranean coast, in the western part of the plain of Ḫiṣān, between Kābis (Gabès) and Aṭrābulus (Tripoli), and on the old route leading from Itīkīya to Egypt. In our opinion it should be identified with Ḫaṣā Ḫaṣā (Ad) Ammūn of the Ancients, a place situated about 30 km. west of the town of Sabratha, Sabra of the old Arabic sources. It was here that there took place, in 283/896-97, a great battle between the army of the Aghlabid amirs and of the great Iḥāds Berber tribe of Nūfās (q.v.). The latter people who lived in the Dājal Nūfās to the south-west of Tripoli (it was already called Naussi or Corippus towards the middle of the 6th century A.D.), were already dominating the western part of the Ḫiṣān before the Arab conquest, having their main centre in the town of Sabratha. The Nūfās, being Christians in this period, made their influence felt as far as Tripoli, whose inhabitants appealed for their help, in the year 22/642-3, against the Arab general ‘Amr b. al-‘Ās. Later on, after the Arab conquest of Tripolitania, the Nūfās, who became orthodox Iḥāds Muslims and transferred their political centre to the Dājal Nūfās, continued to extend their domination over the plain of the Western Ḫiṣān, thus assuring themselves of control of the communication routes running along the coast between Itīkīya and Egypt. In 267/879-80 Abū Mansūr Ilyās, chief of the Nūfās and at the same time governor of this tribe nominated by the Rustamid imāms of Tāhāt, was called upon for help, as the true master of the hinterland of Tripoli, by the inhabitants of this town, which was besieged by the Tūlānīd ʻAbbās b. Ahmad b. Tulān in (q.v. in Suppl.). Sixteen years later, in 283/896-97, the Nūfās barred near Manū the

(R. Arnaldes)
passage of the Aghlabid amir Ibrahim b. Ahmad who was leading an expedition against Egypt. In the bloody battle between the two armies, the troops of Nafusa were annihilated, and the power of his people broken. From this time onwards, they were to withdraw into the mountains of the Djabla Nafusa. 

**MANÜCHIRI, ABU ’L-NADJM AHMAD B. KAWS B. AHMAD, Dângâghânî, was the third and last (after ʻUnsûrî and Farrâkhi) of the major panegyrist of the early Ghaznavid court.**

Very little is known of his life, and that little is derived exclusively from his poetry. Later tâdhkîrs writers have expanded and distorted this modicum of information with a few, readily refuted speculations. What can be ascertained with reasonable certainty is that he spent his youth, presumably in Dângâghân, acquiring an encyclopaedic knowledge of Persian and Arabic poetry and otherwise honing his poetic skills in preparation for a career as a court panegyrist. Nineteenth-century scholars speculated that Manûchîr’s first patron was the Ziyârid prince Falak al-Mâ (Ibn Khurradadhbih, 82; Ibn al-Fakhîr, 74; al-Ýâ’îbî, 337), but seems to have disappeared already in the Fâtimid period (cf. al-Kâlkhânî, _Subh_, iii, 384). It was replaced by Maḥâllat Manûf which, since the administrative reformation of the caliph al-Mustanjîr and the latter’s vizier Bâdral-Dâmalî, has belonged to al-Ghârîbiyya province (Ibn Mâmâmî, _Kawdnî_, ed. ‘Atîyya, 183). In Mâquilî times, the tax-farm lands of the town were given as ʻîdâqîs to Mâlkûs al-sultan and to officers of the guard (Ibn Dukmâk, _Intisâr_, ed. Voellers, v, 97), but later revoked in favour of the diwan al-μâfsâd (Ibn al-Dîfân, Tâlùh, ed. H. Elmorita, 91; Hâlm, _Agâhiyyat al-mumkinân_: Lehensregister, Wiesbaden 1982, ii, 523 and map 34).

2. Manûf al-Ulûyâ, the modern Manûf/Mûnûf, in Byzantine times a bishopric in Copmt Panuf Khiît, in Greek Ὀμώφως ἡ κάστον. After the Arab conquest, the town became the centre of a _kûra_ (q.v.) (Ibn Khurradadhbih, 82; Ibn al-Fakhîr, 74; al-Ýâ’îbî, 337), but to seem has disappeared already in the Fâtimid period (cf. al-Kâlkhânî, _Subh_, iii, 384). It was replaced by Maḥâllat Manûf which, since the administrative reform of the caliph al-Mustanjîr and the latter’s vizier Bâdral-Dâmalî, has belonged to al-Ghârîbiyya province (Ibn Mâmâmî, _Kawdnî_, ed. ‘Atîyya, 183). In Mâquilî times, the tax-farm lands of the town were given as ʻîdâqîs to Mâlkûs al-sultan and to officers of the guard (Ibn Dukmâk, _Intisâr_, ed. Voellers, v, 97), but later revoked in favour of the diwan al-μâfsâd (Ibn al-Dîfân, Tâlùh, ed. H. Elmorita, 91; Hâlm, _Agâhiyyat al-mumkinân_: Lehensregister, Wiesbaden 1982, ii, 523 and map 34).

**MANÜF, name of two towns in the Nile delta.**

1. Mañûf al-Sûlî, near the present Maḥâllat Manûf in the markaz of Qâdîn, in Byzantine times a bishopric in Copmt Panuf Khiît, in Greek Ὀμώφως ἡ κάστον. After the Arab conquest, the town became the centre of a _kûra_ (q.v.) (Ibn Khurradadhbih, 82; Ibn al-Fakhîr, 74; al-Ýâ’îbî, 337), but to seem has disappeared already in the Fâtimid period (cf. al-Kâlkhânî, _Subh_, iii, 384). It was replaced by Maḥâllat Manûf which, since the administrative reform of the caliph al-Mustanjîr and the latter’s vizier Bâdral-Dâmalî, has belonged to al-Ghârîbiyya province (Ibn Mâmâmî, _Kawdnî_, ed. ‘Atîyya, 183). In Mâquilî times, the tax-farm lands of the town were given as ʻîdâqîs to Mâlkûs al-sultan and to officers of the guard (Ibn Dukmâk, _Intisâr_, ed. Voellers, v, 97), but later revoked in favour of the diwan al-μâfsâd (Ibn al-Dîfân, Tâlùh, ed. H. Elmorita, 91; Hâlm, _Agâhiyyat al-mumkinân_: Lehensregister, Wiesbaden 1982, ii, 523 and map 34).

2. Mañûf al-Ulûyâ, the modern Manûf/Mûnûf, in Byzantine times a bishopric, in Copmt Panuf Rîs, in Greek Ὀμώφως ἡ κάστον. After the Arab conquest, the town became the centre of a _kûra_ (Ibn Khurradadhbih, 82; Ibn al-Fakhîr, 74). According to Ibn Hawkal (Bâqî, ii, 128) there was a tax official (ʻâmîl) and a _kâdi_ in the town in early Fâtimid times. At the administrative reform of the caliph al-Mustanjîr and Bâdral-Dâmalî, the _kûras_ were united into greater provinces (aʾmâlî, sing. ʻâmâl). The southern point of the Delta then became the aʾmâl al-Manûfiyya, with the town of Manûf as the residence of the _wâlî_ (Ibn Mâmâmî, 188; Yâkût, _Mâqâmât_, i, d). During the Mârilî period, the municipal lands of the town were divided into several _kâdîs_ (Ibn al-Dîfân, 100; Hâlm, _Lebensregister_, ii, 372 and map 23). Al-Kâlkhânî gives the name “Munûf”, and mentions the ruins of the older town to the west of the new settlement (_Subh_, iii, 405; cf. iv, 66). Under the jurisdiction of the _wâlî_ of al-Manûfiyya, there came also the small province of Ibîyâr (Dâjqâzîr Bânî Nasr), neighbouring on the north-west. In 1826, under Muḥammad ʻAli Pasha, the town was replaced by the larger ʻÎshîb al-Kûm as chief place of the mîhârîyyat al-Manûfiyya. At present, Manûf is the centre of the markaz of the same name.

where the tent [see KHAYMA] are erected, and in general, this term is a synonym for the encampment of nomadic Arabs and then for the halting place of caravans.

In the geographical works and travel accounts of Arabic authors from the mediaeval period, this term is used for the site or encampment of caravans on the fringes of some settlement or equally, at the side of a khan [q. v.] along the highway which might be fortified to a greater or lesser degree according to the needs for security. At the opening of the 7th/13th century, the Ayyûbid al-Malik al-Mu‘azzam established a lodging-place (makâm) at each manzil on the Pilgrimage Road (darb al-hadjj [q. v.], according to Ahmad b. Tülin in his Ka‘la‘id. Ibn Batutta mentions a funduk [q.v.] at each stop (manzil) along the Cairo-Damascus road; these must be the foundations of Nâṣîr al-Dîn, Tankiz’s daawâr. According to Sauvaget, there was, during the Mamlûk period, a lodging-place (manzila) at each posting-stage (manzil) of the barid [q. v.] network. It could also happen that a manzil could be the origin of a village, as at Khân Shâykhûn in central Syria.

Manzil is thus the equivalent of a dâr al-manzila: a house where one halts, whence a place where one offers hospitality, a ‘hospice’, for travellers. Along the routes through Arabia used by the pilgrims, the manzil was often a pious foundation, with a wakf’, this is probably why Niebuhr mentions the “free hostelries” in his Travels in Syria, and why Burckhardt says, in his Travels in Syria and the Holy Land, in the second, similar hospitality was definitely used by travellers; the owners who offered this hospitality did great credit to the Turks’ sense of hospitality.

At the present time, manzil denotes a lodging, a house and even an appartment. It is sometimes accompanied by a term which pinpoints its function more exactly, e.g. manzil al-tâlîbih “home for female students”, the title of a work by Fawziyya Mâhrân which appeared in Cairo in 1961.

The term manzil forms part of certain place names. We find mention of the main halting-places considered to be manzârî in such authors as Ibn Khûrrâd-dîbîb (272/885), al-Yâ‘kûbî (287/900), Ibn Hawkal (366/971) and al-Mukaddasî (390/1000), or later, the Andalusian ones al-Bakîrî (487/1094) and al-Idrîsî (ca. 1154), who give us the itineraries of the main commercial routes of the Dâr al-‘Islâm and the Pilgrimage ones. Thus along the darb al-hadjjî of Egypt, between Fustâṭ and Mecca, one finds the Manzil Ibn Bundûkû (BGA, vii, 111, 149, 190, vii, 183), which al-Mukaddasî (215, 249) and al-Idrîsî (Opus geographicum, 345) call Manzil Ibn âd-dâsh, between Buwayh and A‘dîrûd; at the next stage, there was a manzil at Râbî‘l-Hûdâ, but with merely a well and no provision for travellers. Going westwards from Egypt, Ibn Khûrrâd-dîbîb (223) mentions in Cyrenaica, on the track connecting Barka with Sulûk, in the Wâdî ‘l-‘Arab, the Manzil Shâshik al-Fahmi, which de Goeje translated as “territoire”. Amongst the best-known manzâlî of mediaeval Êfrikiya should be mentioned Manzil Bashâhî [q. v.]; the Manzil of Kâbîs [q. v.] (Brunswick, Hafzûdû, i, 313), which in the 7th/13th century was outside the walls and which Victor Guérin visited in the mid-19th century in the course of his travels through the Regency of Tunis; and on the coast, at the end of the 7th/13th century, to the north of Sousse, Manzil Alî Naṣr and Manzil Tâmûn, a fishing port with a fertile hinterland [see ya‘rib ‘al-dâkhil]. The dependencies of al-Mahdiyya [q. v.] included Manzil Khâyâr, Tâbi‘ûn and Manzil Ma‘rûf (Brunswick, Hafzûdû, i, 309). In Sicily, there existed a Manzil Amîr which al-Harawi (55/125) calls Kârṣ al-Amîr (the present Mislîmi), a famed pilgrimage place, where, according to some, was the tomb of Gâlen (Ka‘b Dâlînî) and according to others, that of Aristotile. Numerous place names in al-Andalus recorded by al-Idrîsî as being in the 4th clime are followed by a preposition a, e.g. Manzil Abû-‘l-Hûdâ but, with merely a well and no provision for travellers.

At the end of the Mamlûk period, at certain stages there were fortified caravanserais, with kitchens and fortiﬁers attached, which could accommodate military detachments. In the Ottoman period, Mustafâ Pagha, governor of Damascus, built in 971/1564-3 to the north of the citadel, in the Taht al-Kal‘a quarter, a khan and also independent lodging-places in its vicinity; the manzil in this way became an inn meant for travellers without either mounts or merchandise. Al-Khîyârî (d. 1083/1672), who in 1080/1669 travelled from Medina to Istanbul, states that there were, in Êfrikiya, on the road from Ta’izz to Mecca, two manzil, at al-Dârîyûn and in the Dâlwân, a manzil where one could stay in tents in summer but live in a khan during the winter. In 1081/1671, the stage of Mâdînîn Sâhîl [see al-Hûstî], one of the centres where the pilgrims assembled on the Pilgrimage Road to the south of Tabûk [q. v.], suffered a serious attack by the Bedouns. The frequency of such attacks against this manzil led Asad Pagha to construct, in the middle of the 12th/18th century, a fort in order to protect the religious caravans. At the end of the Ottoman period, there were, according to Tibawi, two types of hostelry: the madîfa, which was communal, and the manzil, which was private. In the first, lodging and food were offered free to travellers; in the second, similar hospitality was given in private houses situated along the roads constantly used by travellers; the owners who offered this hospitality had to pay reduced taxes.

At the present time, manzil denotes a lodging, a house and even an appartment. It is sometimes accompanied by a term which pinpoints its function more exactly, e.g. manzil al-tâlîbih “home for female students”, the title of a work by Fawziyya Mâhrân which appeared in Cairo in 1961.

2. In the eastern Islamic lands.

In Iran and, especially, in Hindustan, it came to designate a camp, characteristically the royal camp, with corresponding verbs like nāzil kārdan and manzil giriftan meaning "to encamp." This usage is distinct from the sense of udār [q.v.], properly "the royal precinct in camp" from Mongolian ordo, and of yūr [q. v.] meaning "camp site, territory" as in Turkish, from the time of Djiwaynī onwards. The camp centre had already been organized as a drudūntūm through the arrangement of the emperor's screened precinct differentiated into an outer and an inner area, as a mobile extension of the palace. The concept appears to have been inherited by the Mongols, but with the orientation shifted from east to south. The sides were defined by lines of carts and tents, the royal guard was quartered to the rear, forming the battle guard, yeke kol, and in front stood the wing comprising the royal enclosure with the three rings of the khan's camp that they were known as the "travelling royal camp, with corresponding verbs like nāzil kārdan and manzil giriftan meaning "to encamp." This usage is distinct from the sense of udār [q.v.], properly "the royal precinct in camp" from Mongolian ordo, and of yūr [q.v.] meaning "camp site, territory" as in Turkish, from the time of Djiwaynī onwards. The camp centre had already been organized as a drudūntūm through the arrangement of the emperor's screened precinct differentiated into an outer and an inner area, as a mobile extension of the palace. The concept appears to have been inherited by the Mongols, but with the orientation shifted from east to south. The sides were defined by lines of carts and tents, the royal guard was quartered to the rear, forming the battle guard, yeke kol, and in front stood the wing comprising the royal enclosure with the three rings of the khan's camp that they were known as the "travelling royal camp, with corresponding verbs like nāzil kārdan and manzil giriftan meaning "to encamp."
change was from the cart tents which had been characteristic of the Golden Horde and were still used everywhere, they have been supplanted by trellis tents. The protective circular camping formation is already defined by Rashid al-Din (Mongol geographum, 293, 302) calls moreover Djazlrat Shank which al-Idrīsi Hawkal (tr. Kramers-Wiet, 69-70) further says: "...

MANZIL BASHSHU, a place in Ifrīqiya whose site has been identified as the place called Djiadida.

Under the Aghlabids [q.v.] it was the chief town of the administrative district of the peninsula of Cape Bon or Djazlrat Shank which was probably composed by Abu Hamfa's pupil Ibn Hanbal. It is possible that this third stand-

The idea of a manzila bayn al-manzilatayn is prepared in a saying attributed to the Basran ascetic Yazd al-Rakashi (d.

Nader, 118, 11. 2 ff.; Pseudo-Kasim b. Ibrahim, K. al-Ádī wa l-taḥqīḥ, in Rusā’il al-Ádī wa l-taḥqīḥ, ed. Muhammad á’Mara, i, Cairo 1971, 125, 11. 4 ff.): the unbeliever must be fought and cannot be inherited from, the believer is loved by God, the munafik should be summoned to do penance or otherwise be executed; all this cannot be said about the fāṣik. Therefore, since these juridical regulations (ahkām) cannot be applied to him, the corresponding designations (asma’) are not valid in his case either. In this presentation of the problem which became common in the future, the term munafik was replaced by tom thus it slowly lost its significance for the theological vocabulary. Dirār b. ÁAmr (2nd century [q.v.]) and Bishr. b. al-Mu’tamir (d. 210/825 [q.v.]) still wrote treatises about the munzila bayn al-manzilatayn (cf. Fihris, 215, i. 13 and 205, 11. 23 f.). Abu 1-Hudhayl included it among the usul al-khamsa; Ibn al-Rawandi [q.v.] refuted the Mu’tazila in this point (cf. Fihris, 217, i. 10). The terms ism and hukm are already found, though perhaps not yet systematically linked with each other, in Abu Hanifa’s Risāla i’il-Álmān al-Batt (ed. Kawglari, 35, 1. 16 and 36, 11. 12 f.). The disputation between Wāṣil and ÁAmr b. Ubayy preserved by al-Shāfī’i al-Murtada (Amāli, ed. Muhammad Abu 1-Fadl Ibrahim, Cairo 1373/1954, i, 165, 11. 8 ff.) where Wāṣil uses ism but not hukm, is apparently no precedent finding for the K. áMigārā baynahat [sc. bayna Wāṣil] us-bayna ‘ÁAmr b. Ubayd (cf. Fihris, 203, n. 1) which may have been composed in the second half of the 2nd century; nevertheless, it remains our oldest testimony for the Mu’tazila position and shows archaic features in part of its argumentation.

Similarities with Christian speculations about penitence have been pointed out by E. Gräf (in OLZ, iv [1960], 397; cf. also R. Strothmann, in Ed., xiv [1915], 211). There is, however, to date no proof for any influence.

Watt, The formative period of Islamic thought, Edinburgh 1959; P. van Ess, in REI, xvii (1979), 51 ff.; M. Cook, Early Muslim dogmas, Cambridge 1981, 94. See also FASIK and MU’TIZILA.

(J. Van Ess)

MAPPILA, standard Western form of Malayalam Mappila, the name of the dominant Muslim community of southwest India, located mainly in the state of Kerala, primarily in its northern area popularly known as Malabar. Significant numbers of Mappilas are to be found also in southern Karnataka and western Tamil Nad, as well as in diaspora groups scattered throughout India, including the Laccadive Islands, Pakistan, the Gulf States and Malaysia. In 1971 there were 4,162,718 Muslims in Kerala, almost all Mappilas, and of these 2,756,747 (est.) were concentrated in Malabar. Mappila growth in the past century has considerably outpaced that of the general population. If the rate of increase in the decade 1961-71 (37.5 %) was maintained, the size of the community in 1981 would exceed 5,700,000. Mappila share the language (Malayalam) and the culture of the inhabitants of Kerala (Malayalis), as well as the unique religious blend of its 25 million people (39.5% Hindu, 21.0% Christian, 19.5% Muslim). Not only because of its size but also because of its particular historical experience, the Mappila community represents a significant segment of Indian Islam.

1. The Name

The name Mappila ( - Māppila, Mopolah) is a direct transliteration of the current Malayalam term. Its origin is not settled, but it appears to have been a title of respect formed by a combination of malāh “great” and pilla “child”; it was restricted to visitors and immigrants from abroad, both Christians and Muslims, either in the broad sense of “honoured ones” (Logan, i, 191; Innes, 186; Hameed Ali, 265; Kareem, 61) or in the more specific meaning of “bridgegroom” and “son-in-law” (Miller, 33; Thurston, iv, 458; Gough, 442; Gundert, A Malayalam and English dictionary). The latter meaning may have been interpreted as points of intermarriage and is supported by contemporary usage in colloquial Malayalam and Tamil. Other derivations, including Arabic, have been suggested, but none so persuasive as the above.

In time, the term became the distinctive appellation of the indigenous Muslim community of Malabar, although it is still occasionally applied also to Syrian Christians in South Kerala.

2. The origin of the Mappilas

Mappila culture is the Malayalam culture of Kerala with an Arabian blend, a fact that points to the ancient intercourse between Kerala and southern Arabia, founded on the great spice trade. The Mappila community traces its origin to that well-documented relationship. Arab trade with Malabar [q.v.] was going on for centuries prior to the advent of Islam. As settlements in particular became energetic from the 4th century A.D. and continuing until the European era. Islamised Arab traders brought their faith with them to Kerala, where some settled and intermarried with the native Malayalis. The earliest generally accepted epigraphic evidence of Muslim presence in Kerala is represented by the Tarisapally copper plates dated 235/849 (Kunjanpillai, 370), which contain Muslim names in Arabic script; however, a Muslim tombstone at Irrikuril dated 50/670 was observed by Mappila scholar C.N. Ahmed Moulaevi before it was washed away, and another tombstone inscription at Pantalayini-Kollam dated 166/782 was legible in the 19th century (Logan, i, 197; but note the criticism of Burgess in Logan, i, p. ix). Because of the Kerala climate and the impermanence of palm leaf writing materials, there are no however Muslim inscriptions in Malayalam predating the 14th century. Nevertheless, despite the paucity of material proof, I.H. Qureshi’s (p. 11) balanced opinion that Islam entered Kerala “within a few years of the proclamation by the Prophet of his mission” is very probably correct and Mappilas, in that light, may be regarded as the first settled Muslim community of South Asia.

Another view favouring a later 3rd/9th century dating for Mappila beginnings is dependent on an unreliable passage of the Akhbār al-Sin wa l-Hind [q.v. in Suppl.] Arab geographers, who provide the available materials for the 3rd-6th/9th-12th centuries of Mappila history, were compelled to rely on such reports (only al-Mas‘ūdī travelled to India, and he to the north; cf. Nainar, 3 ff.). The point of view, however, is also related to the persistent and much-debated tradition of the conversion of an important Hindu ruler, Chērāman Perumal. The form of the tradition that is generally accepted by Mappilas is that reported by Shāvkh Ahmad Zayn al-Dīn (904-89/1498-1531) (referred to as Zainuddin), who was the earliest known Kerala Muslim to deal with the subject of Mappila origins and whose Tuhfāt al-mughālibin became the basis for later Indian Muslim writings on the subject (Fīrigha, iv, 531). Zainuddin dates the conversion event to 207/822, but most Mappilas prefer an earlier dating, that of 5/624. According to the story, Chērāman Perumal’s missionary followers

Given in the article. Cf. also W. Madelung, Der Imam al-Qasim ibn Ibrahim und die Glaubenslehre der Zaiditen, Berlin 1965, 10 ff.; W. M. Watt, The formative period of Islamic thought, Edinburgh 1959; P. van Ess, in REI, xvii (1979), 51 ff.; M. Cook, Early Muslim dogmas, Cambridge 1981, 94. See also FASIK and MU’TIZILA.
led by Malik b. Dinār established a series of mosques, thus facilitating the expansion of Islam. While there is no historical evidence for the strongly-held tradition, there can be little doubt of the hospitality and toleration of native Hindus toward the Arab visitors and their faith.

The direct relation of Mappilas with Arabian Islam is as significant as their relative isolation from Indo-Persian Islam. That original relationship continued over the years, furthered in recent times by the extensive employment of Mappilas in the Gulf region, and it has affected the Mappilas more profoundly than any other Indian Muslims.

3. Mappila development to 1921

(i) Beginnings to 1498

Through eight centuries from their origin to 1498, the Mappilas and Islam in Kerala experienced an apparently calm and peaceful development. Mutual economic interest and religious tolerance, expressed in the direct support of Arab traders by the Zamorin of Calicut, the leading figure in Malabar commerce, paved the way. Immigration, intermarriage and missionary activity were inter-woven strands in the Mappila growth. While occasional stress must be assumed, there is no record of overt abrasiveness or militant encounter between the religious communities; the long period of harmonious relationships, including as it did the delicate areas of religion and marriage, stands as a model development in the history of the subcontinent. Mappilas flourished under these conditions, especially in coastal areas, as noted by Ibn Batūta (704-79/1304-77) during his three stops in Malabar; Zainuddin estimates that 10% of the population of Malabar was Muslim by the midpoint of the 10th/16th century (p. 59).

(ii) The European period

Vasco da Gama's arrival in Calicut in 1498 ushered in the European era and signalled a sharp change in Mappila fortunes. A participant in the events, Duarte Barbosa (p. 78), summed up the history when he said: "Thus they continued to thrive until the Portuguese came to India". The imperialist aims of the newcomers, embracing both economic and religious interests and exercised through military means, introduced a new note into Kerala life. They succeeded in cutting off the Arab trade, and Mappilas who had been prevented from becoming landowners by the hereditary system of land tenure and who depended on commerce, were cast into reduced economic straits which eventually became a pattern of poverty. As new alliances developed the warm relationships between Hindus and Mappilas were also disturbed, and in the end cordiality was replaced by antipathy. Extreme cruelty, chiefly on the part of the Portuguese, produced an inevitable reaction. The Portuguese attitude reflected the mediaeval European tradition and was well represented by the governor of Goa, Afonso Albuquerque (d. 1515), who dreamt of destroying Mecca and who bitterly persecuted his Mappila opponents.

The volatile combination of commercial rivalry and religious animus produced long-lasting negative effects on the Mappila community: economic regression, estrangement from Hindus, bitterness against Christians and a new spirit of militancy. These trends continued in the ensuing period of "pepper politics" as the Portuguese were replaced by the Dutch (1656), the British (1662) and the French (1725). Power remained in the hands of a coalition of Christian foreigners and their Hindu allies, while the Mappilas gradually became a society of small traders, landless labourers and poor fishermen. The Mappila community experienced psychological gloom and distress, and defensive attitudes developed.

During the period 1755-99 the Muslim leaders of neighbouring Mysore [see MĀHISĀR], Ḥāyār ʿAli (d. 1782) and Tīpū Sultān (d. 1799) [q. v.] briefly interrupted the European hegemony over Malabar. Their suzerainty provided fresh hope for the Mappilas, who for the first time in their history were under Muslim rule. Mappilas were now able to obtain some land rights and administrative positions. There was a sharp increase in the community's growth, especially through accessions from the outcaste society. The fanatical religious policy of the Mysore rulers, however, served to intensify the spirit of militancy in the whole region, and the Muslim-Hindu alienation that had been born in the Portuguese period now became an established pattern.

The British assumed full power in 1792 (continuing till 1947), and the newly-raised Mappila hopes were dashed. The British restored the old order, adopting a policy of deference to Hindu leadership and maintaining a wary eye toward the Mappilas. The latter, disappointed and embittered, displayed their resentment in a series of 51 militant outbreaks during the century 1821-1921. The formal causes of the outbreaks included agrarian discontent, poverty, religious zeal and resentment toward the rulers, but underlying these was the emotion of an oppressed people, who responded to a seemingly hopeless situation with often unreasoned and self-destructive violence. Not all Mappilas shared in the depression-agression syndrome, and only a small portion of the populace actively participated in the outbreaks. Those who did participate, however, did so in the tradition of militant ghātā, resulting in violent activities against those whom they perceived as their oppressors, whether British administrators or Hindu landlords (jennis), and they very willingly accepted martyrdom.

This course of events reached its final dénouement in the Malabar Rebellion of 1921, frequently called the Mappilla Rebellion. This was a spontaneous uprising (not one of "systematic preparation", as stated by T.W. Arnold, ET, MAPPILAS) that included the establishment of a temporary "Moplastan" in Eranad, South Malabar, under V.K. Kunhamsad Haji. The new factor that helped to provoke this major upheaval was Mappilla involvement in the Khilafat movement [q. v.], an organised effort within Indian Islam and the Non-cooperation Movement, to help restore the caliphate in Turkey [see KHALIFA]. This ill-fated cause had helped to generate temporary Hindu-Muslim unity in the Indian freedom struggle. The message that came to the Mappila community through the visits of leaders such as M.K. Gandhi and Shawkat ʿAli was clear: only a free India could effectively plead the cause of Muslims, and they very willingly accepted martyrdom.

Those whom they perceived as their oppressors, whether British administrators or Hindu landlords (jennis), and they very willingly accepted martyrdom.

The immediate results for the Mappilla community...
were disastrous. The Rebellion was put down after six months of bitter fighting in which thousands lost their lives. Severe reprisals followed: 292 Mappilas were executed, 502 were sentenced to life imprisonment, thousands were jailed or transported to the Andaman Islands, and large fines were levied. A special force named “The Malabar Special Police” was organised to provide a permanent solution to the “Mappila problem”. The community was recumbent in defeat, its relations with Hindu neighbours at an all-time low, its reputation for uninformed zealotry unparalleled on the sub-continent. The fundamental implication was that Mappilas were at the end of the kind of road that had been followed; a fresh philosophy needed to be developed, and a new life forged. Contemporary evaluation within India tends to the view that the Malabar Rebellion was a war of liberation, and in 1971 the Kerala Government granted the remaining active participants in the revolt the accolade of Aayagi, “freedom fighter”.

4. From 1921 to the present

Subsequent events have dramatically altered the shape of the Mappila community from a defeated and closed society to a community marked by recovery, change and positive involvement in the modern world. Factors producing the change include: the new political spirit; the new shaping of the Mappila community has involved it in severe inner conflicts and introduced a series of unresolved dilemmas. In the process, however, Mappilas have been transformed from a negative symbol to a positive force in contemporary Indian Islam.

(i) The political factor

In the post-Rebellion period, 1921-47, Mappilas began to draw away from the Congress Party, although Mappila leaders such as the highly-esteemd Muhammad Abdurrahiman Sahib and E. Moidu Moulavi continued to struggle for the nationalist cause. Most Mappilas were convinced that a Muslim party must speak for them, and they aligned with the Muslim League. They were led by the inspirational K. M. Seethi Sahib (1898-1960), the chief architect of the Mappila revival. In the Partition controversy, these Mappilas upheld the two-nation theory and put forward an abortive proposal for a separate Muslim-majority province in the Malabar region, to be called “Moplastan”. Although the Muslim League suffered a demise in the rest of India, it continued to remain a serious political factor in Malabar, and Mappilas eventually provided the leadership for its resurgence on a national level.

It was after the linguistic state of Kerala was formed in 1956 (including Malabar District, formerly part of Madras State) that Mappilas became a strong political force, giving the community a new sense of confidence and importance. Mappila political views covered a broad spectrum, and Mappilas were associated with every major party. Under its able leaders Syed Abdurrahiman Bafaki Tangal (d. 1973), P. M. S. A. Pukkoya Tangal (d. 1975) and C. H. Muhammad Kcrad (1928), the state Muslim League, however, held the allegiance of the majority of Mappilas, and it played a king-making role in the state. Although never gaining more than 14 seats in the legislature, through clever alignments it participated in several governments. This success not only created a taste for power politics, but also encouraged the conviction that the welfare of the Mappila community depended on political prowess. Their participation in Kerala politics further gave rise to a psychology of accommodation that took Mappilas into co-operative relationships with all segments of society, including coalitions with Marxist parties. The strong Mappila support for a Muslim party, however, gave rise to the charge of “communism”, a criticism that rose from both within and outside the Mappila community.

It was noted that Pukkoya Tangal, much revered for his saintly qualities, was at the same time the President of the Samastha Kerala Jamiat-ul-Ulema and President of the Kerala Muslim League. The criticisms increased when the Marxist-led state government granted the wish of the League for the formation of a Muslim-majority district in 1969 (Malappuram District, 64% Muslim, the fifth largest Muslim-populated district in India), over vigorous protests of the Jan Sangh and other right-wing Hindu organisations. In 1975 the contention of the Muslim League that it represented the sole legitimate Muslim voice was seriously weakened when the party, largely as a result of personality conflicts, split into a continuing group led by M. K. Kresh living in the US in 1983, and a rival group. The League, however, held the allegiance of the majority of Muslims in the state, receiving 12.8% of the seats in the state assembly (Indian Union Muslim League, 14; All India Muslim League, 4).

(ii) The economic factor

Mappila material strength recovered very slowly during the period 1921-47 and there was only slight improvement thereafter. Economic disabilities were keenly felt (e.g. by 1947, only 3% of taluk officers in Malabar were Muslim, though one-third of the population was Muslim; in 1971 Muslims held only 30% as many state government posts as did Hindu Nayars, whose numbers they exceeded). The problems of poverty and unemployment, endemic in densely-populated Kerala, were felt in a special way by the educationally-backward Mappilas. The situation produced within the community an emphasis on material concerns, self-critical attitudes, a thirst for education, and an open door to the influences of Communism.

Traditional Mappila leaders appeared baffled by the magnitude of their community’s problems, and many disadvantaged Mappilas were gradually attracted to the arguments of Comunists that promised a better life. Communist parties, strong in Kerala, had down-played religious issues and had become accepted as ordinary political alternatives. As did many Hindus and Christians, Mappilas began to mark their ballots “Communist” without any sense of contradiction. It has been suggested (by Mappilas; precise data unavailable) that more than a fifth of Mappila voters may have made this choice at one time or another. For most, it was a statement of protest rather than an affirmation of ideology; some, however, were influenced by the ideas of the Communist movement, others became doctrinaire proponents of Marxism, and a few became prominent Party leaders and officials. Typifying the latter is Ayesha Bai, the first Muslim woman to rise to public fame in modern Kerala, who illustrates the startling impact of Communism on this conservative Islamic society. Joining the Communist Party in 1953, she became Deputy Speaker of the Kerala Assembly (1957), an organiser of the State Women’s Society (Mahila Samajum), and an aggressive advocate for the forward progress of Mappila women.
Within the past five years, a dramatic turn-around has taken place in Mappila prospects as a result of the great influx of funds from the earnings of Mappilas employed in the oil production centres of the Middle East. The sudden and unevenly distributed wealth is creating a new set of circumstances, within which the interplay of economics and religion will take new forms.

(iii) The educational factor

Pre-independence governments had made special efforts to advance Mappila education, but Mappilas had maintained a generally suspicious attitude toward those efforts (the community’s literacy rate was only 5% in 1931). By the 1950s, however, the Mappila community had accepted the state programme of universal education, especially at the elementary level, and by 1960 nearly half the eligible Mappila children in Kerala were attending schools: by 1972 almost all were enrolled. Higher education experienced slower growth. In 1922, the Aikya Sankhum society was founded in Cochin State to promote higher education, and it provided strong impetus for the establishment of Mappila-managed schools. In 1936 a special Mappila high school was founded at Malappuram under the pioneering C.O.T. Kuniyapikki Sahib. Another significant event was the founding of Farook College in 1948, through the efforts of Moulavi Abussabah Ahmedali (d. 1971) who had spent some years in Egypt in association with Taha Husayn. The Islamic context was deliberately maintained in the College, but modern disciplines were placed in the foreground. Under the leadership of K.A. Jaleel (b. 1922), later Vice-Chancellor of Calicut University, the institution had great impact on the Mappila community. By 1974 there were over 700 elementary schools, 36 high schools, nine first-grade colleges, and several technical institutions conducted under Muslim management. The spirit of modern education was still the subject of controversy in the Mappila community, but not the value of schools.

The explosion of education fostered an increasing sense of individual independence and intellectual freedom. The Muslim Educational Society (MES), founded in 1964 by a group of M卓ila professionally trained men, headed by P. K. Abdul Ghafoor, a professor of medicine, typified the new Mappila spirit and brought into sharper focus the increasing conflict between the old and the new. The MES was characterized by intense dissatisfaction with the slowness of the community’s forward progress, by the call for ‘revolutionary change’, by its attack on what it regarded as superstition, and by a burst of philanthropic activity. In addition to promoting new colleges and providing support for students, it began social service activities, including the founding of 14 hospitals. Its influential periodical, MES Journal, led the cry for change. The response of the Mappila community was broadly supportive, and the success of the MES gave it a wiser prominence in Indian Islam. The movement, however, came into conflict with traditional approaches, and major controversies within the Mappila community followed in its wake. After initially supporting the new dynamism, the Muslim League and Jamiat-ul-Ulema each issued calls to Mappilas to dissociate themselves from the popular cause, charging it with advocating changes in the Shari'a. As a result, Mappilas began to be polarised between progressive and conservative views, and did not break into sharp and formal division. The MES itself, however, experienced a schism in 1982; dissatisfied with its leadership some members formed a new, parallel organisation called the Muslim Service Society.

5. Mappila theology

(ii) Major features

Mappila theological development followed a path independent of trends in other areas of Indian Islam, a phenomenon accounted for by the origins of the community and by its linguistic and geographical situation. It was the conservative pattern of Arabian Sunni orthodoxy that provided the major external influence. Mappila development has not been merely imitative, however, but it has been affected by its living experience in the Malayalam cultural context, especially after 1947.

Mappila isolation from Urdu-speaking Islam is notable, although never total. Contacts in the post-Independence period have increased significantly as Mappilas assumed leadership roles in the Indian Union Muslim League, as well as in other all-India Muslim organisations; but these have been primarily of a political and social rather than theological nature. The only Malayalam translation (1967) of a major Indian Muslim work on theological themes is that of Sayyid Amīr ʿAlī’s Spirit of Islam. The views of Sir Sayyid Ahmad Khān, of Sir Muhammad Ibkāl, and even of Mawlānā Abū ʿl Kallām Āzād, remain relatively unknown. Mawlānā Abū ʿl ʿAlī’s Mawdūdī’s work is better known as a result of the translation efforts of the Dīnūrī-ʿIsmāʾīlī. A few Mappilas have studied at Aligarh or Osmania universities, and Urdu is offered as a language option in Kerala schools. These factors, combined with societal mobility, indicate a probable deepening of relationships in the future.

The basic Mappila theological orientation is summed up in the two statements: All Mappilas are Sunnis. The majority of Mappilas are Sunnis. Both statements may be understood correctly. The former refers to the absence of Shi'a in the Mappila community. The latter refers to ordinary Mappila usage of the term Sunnī: in common parlance it signifies the traditionally orthodox in contrast to adherents of other movements. Chief among the latter are the Muddāḥirds; the Dīnūrī-ʿIsmāʾīlī party has some influence, and there are a few Ahmadiyya. In this secondary connotation, about two-thirds of the community are Sunnis, who represent popular Mappila religious belief marked by conventional doctrine and practice, and alligiance to Shāhī’ī law.

(ii) Mappila religious leaders

The major categories of authoritative religious figures are maulavis, mullas, tangals and kādīs. Maulavis (= musalar, the earlier term) are the true leaders, combining in effect the functions of inām and khatīb, and to some extent those of fāsāk and mufīṭ, the latter being dependent on the community’s esteem. A maulavi must have graduated from an acceptable training program. Mullas are religious workers of lesser standing and slight education, whose functions are primarily Kur‘ān reading and home visitation. Tangals (Mal. pers. pron.; honorific) are individuals descended from saintly families; not necessarily engaged in religious vocations, they are generally respected and occasionally revered. Kādīs are fewer in number, and though their sphere of influence is limited, they are well regarded; they may be hereditary tangals or appointed.

Mappila theological progress is closely related to the pattern of maulavi training. The older form was set by the Shaykh Makkhīmīn institution at Ponnani. Said to have been founded in the 6th/12th century, it reached its peak under Shaykh Zayn al-Din b. Shaykh ʿAlī
(872-928/1467-1521), known as the “senior Makh-dum”, who wrote religious treatises, and his famed grandson, Shaykh Ahmad Zayn al-Din b. Shaykh Muhammad al-Ghazali, the historian and scholar. The office of the Makh-dum was hereditary, the style of education personal and the curriculum narrowly traditional. Although the institution has lost its earlier importance, its spirit lives on. It houses the Maanath-ul-Islam Sabha, whose key purpose is “instructing new converts to Islamism” (Maanath-ul-Islam Sabha—Articles of Association, Ponnani 1949, 1).

Contemporary maulavi training follows two paths. The Ponnani tradition is carried forward by the Qamara Nuriyya College at Pattikad (founded 1965) led by T.K. Abu Bekr Musaliar, which has rapidly become the premier Sunni training college for Mappilas. Some Mappilas still attend al-Baiykat-us-Salihat College at Vellore, Tamil Nad, and a few have gone to Deoband. The curriculum at Qamara Nuriyya follows the Deoband model, substituting Shafi'i law for Hanafi; theological authorities studied include al-Baydawi, al-Mahalli, al-Nawawi and al-Ghazali. The basic intent of this educational stream is that the student becomes a true proponent of taklid and obtain basic vocational skills, and the educational style combines the lecture method with memorisation. The narrow and concentrated learning experience instils the dedication for which the Mappila maulavi is noted, and assures that he will remain the symbol of continuity. Its lack of foundation in modern knowledge, however, has also made the system the focus of vehement criticism from within the Mappila community, and many Mappilas regard the reform of religious education as the key to Mappila forward progress. Reflecting this view a second track of maulavi training has developed that emphasises a basis in modern education. A high school degree, and desirably a college degree in Arabic is a prerequisite, led by T.K. Abu Bekr Musaliar, which has rapidly gone to Deoband. The curriculum at Djamia Salihat College at Vellore, Tamil Nad, and a few have served the Mudjahid movement, while the Qamara tradition is carried forward by the Rouzathul-Uloom at Feroke.

(i) Mappila theological reform

Mappila theology remained in a fairly constant mould until the present century when Wakkom Muhammad Abdul Khader Maulavi (1873-1932) of Quilon sparked the beginning of the modern reform movements. He was influenced by the Egyptian reform of Muhammad ‘Abdul and Rashid Ridā through al-Manâr [q.v.] and was to some degree aware of the ideas of Ishaq al-Din al-Aghâni [q.v.] and Muhammad b. ‘Abd al-Wahhab [see ibn ‘Abd al-Wahhab]. Wakkom Maulavi exhorted Kerala Muslims to abandon un-Islamic practices, to respect reason, to adopt English education, and to develop progressive movements. He spread his views through the short-lived but influential Arabic-Malayalam periodical, al-Ilâm (1919) and by his Malayalam books A literary view, Progress and literature and The rights of man. He inspired a group of students at Trivandrum who carried forward his ideals, including K.M. Seethi Sahib in the socio-political realm and Khatib Muhammad Maulavi (1886-1964) in the religious field. A Malabar scholar respected for his skill in taflîr and fikr, for his important fatwas, and for his efforts to establish the all-Kerali Jamia-ul-Ulema, Khatib Muhammad’s integrity and personality enabled him to transmit the southern reform to the more traditional north. To help express the spirit of the reform, “K.M.” also joined with his colleagues, E. K. Maulavi and M. K. Haji, in establishing the major Mappila orphanage at Trirangadi.

The tide initiated by Wakkom Maulavi and carried forward by his followers was basically a conservative reform, marked by an insistent call to return to the fundamentals of Islam and a positive reaching out to the new world. It is this fact, taken together with the quality of its leaders and their effective teaching and writing, that accounts for its wide impact. In the end, the movement affected a broad spectrum of Mappila leaders: orthodox maulavis, teachers and other professionals, and business men. It took on an organisational form in 1952 when some Mappilas formed the Nadvat-ul-Mujahideen as “a progressive” organisation to enlighten the Muslim masses “on scientific lines,” to further “the true injunctions of Islam” and to promote harmonious relationships” with other religiousists” (cf. imprints on Mudjâhid inscriptions). Sunni leaders felt compelled to resist many of the new trends; they called the Mudjahïds “Wahhâbiyyah” as a term of reproach and criticised the Mudjâhid practice of establishing separate mosques. Mappila Mudjâhid place strong emphasis on tawhîd, accompanied by severe criticism of saint veneration and other “superstitious” practices. They lay stress on the Kurân in contrast to Hadîth, and they argue for the validity of translations and the use of the vernacular in mosque and madrassa. They support the use of reason in the interpretation of the Kurân (“how it promotes thinking and discourages imitation”), C.N. Ahmed Maulavi, Religion of Islam, Calicut 1979, 53) and its appropriate application to modern conditions. In that connection, the principles of sigmât and taklîd are attacked, and tawhîd is affirmed. Modern education is to be promoted and should include women. C.N. Ahmed Maulavi (b. 1906), the premier Mudjâhid scholar and the most prolific Mappila theologian writing today, represents this approach. His six-volume translation of the Kurân (1951-61) was the first in Malayalam. His translations and other interpretative works (cf. Bibi.) comprise an important body of reformist literature and have made “C. N.” the subject of controversy in the Mappila community.

The final stream in the contemporary Mappila theological development was added by the social reformers represented by such organisations as the MES (see above). Communist Mappilas had criticised what they viewed as “other-wordly” religion, but the orthodox tendency was to resist the critique in view of the source. The lay leaders of the Mappila social reform from a stronger base declared in effect that theology must be judged by its ability to respond to human problems. Their treatment of zakât, which produced a major controversy, is illustrative. Traditional charitable giving practices should be altered, and a portion of zakât should be diverted to revolving funds that will help establish productive enterprises and so deal with the roots of economic hardship. Science is to be respected, for there is no conflict with religion, and co-operation with people of other faiths for mutual uplift is enjoined. The fundamental emphasis of the Mudjahîds and MES is the same: it is not Islam but Muslims that need change and reform.

As a result of these influence, Mappila theology displays an increasingly divided face. Sunni theology, which has both resisted and absorbed, is no longer a solid block. There is considerable inner movement and diversity of approach. The possibility of a new theological synthesis exists, but may be difficult to realise.
6. Mappila religious and social custom
(i) Religious practice
Formal religious life centres on the mosque, of which there are 3,300 in Kerala, an estimated one for every seventy Muslim homes (Kerala Muslim Directory, 668). The architecture is unique, following the general pattern of Kerala Hindu temples, with peaked roofs and no minarets. Mappilas believe that the oldest mosques were originally Hindu temples, setting the pattern for later construction. Newer mosques tend to an amalgam of style; the explosion of mosque construction in the early 1980s reflected both Arab cultural and financial influence. A defined geographical area will include a djanmadatu mosque, other mosques and a number of small prayer halls (niskaranapalli). Each mosque has a maulavi assisted by a muktri (= ma'nuthgini), and other staff, depending on its size and affluence. Arabic continues to be the primary language of the Khulta, with Malayalam making some inroads. Women do not ordinarily attend mosque services. The popular Ramadhi night services, however, are open to all and are well attended. Since only a minority of Mappilas attend the Friday mosque service, religious leaders look to a combination of Ramadhan programmes and nadrass instruction to nurture the community.

Advanced Arabic studies are conducted at the more than five Arabic Colleges in the state. The majority follow the older method of rote instruction, but seven are chartered to grant the Afi-id-ul-Ulama degree which is based on modern language study and which qualifies the bearer to teach the subject in secondary schools. The art of chanting has been drawn into public rhetoric and has created a special Mappila art form. The qawwals of the Kur'An are taken with great seriousness, and it has led to the protective use of Kur'Anic phrases in amulet form, usually blessed by a person possessing the grace of karâmat, and used especially to ward off sickness.

Mappilas commonly observe the basic practices of dîn, and a disproportionately high percentage of the annual pilgrims from India to Mecca are Mappilas. Mawlid readings are common in Mappila homes. Even more important are the Arabic-Malayalam mîlas, religious song-stories, which celebrate the lives of Muslim saints or heroic events in the history of the community. The most popular is the Muden Mâla representing the life of al-Djilânî (470-561/1078-1167), closely followed by Rifa'in Mâla commemorating al-Rifâ'î (500-78/1106-83). Sunni Muslims also revere local saints, who are regarded as having miraculous powers, although the practice of shrine visitation is falling into some disrepute as the result of community criticism and the relentless pressure of modern views. The best-known is Syed Alavi of Mambram (1749-1843), whose shrine is still frequently visited; “by the foot of the Mambram Tangal” is a sacred verbal seal to a Mappila agreement. Other important shrines are those of Shaykh ZainuddIn at Ponnani and the Kondotti shrine of Muhammad Shâh Tangal. The latter was an 18th century saint, possibly an itinerant Sûfi, whose followers have always denied the Sunni allegation that he was a Shî'ti. In addition to Bakr Îd and 'Id al-Fitr, special festivals called ne'râs are connected with particular localities. The most famous of these, the Malappuram ne'râ, recalls the deaths of 44 Mappila martyrs (1141/1728). These celebrations were traditionally accompanied by much fanfare and with very high emotional expression, but are increasingly regarded by the educated populace as outdated expressions of religious fervour. A number of Sunni leaders are waging a determined battle to validate the concept of awalih, which is the most hotly debated issue in contemporary Mappila religion.

(ii) Social custom
Mappila social custom is governed by the Shari'a, subject to the restraints of national law and the conditioning influences of Malayalam culture. Mappilas have generally stood for the inviolability of the Shari'a in the area of personal law. Birth, marriage and burial ceremonies are strongly traditional, but in other areas, Mappila customs have been relatively open to change, including the area of family planning. Mappila women are experiencing a quiet revolution; some are joining professional vocations and assuming leadership roles. Polygamy was never common, but the divorce rate is high. Social classes in the Mappila community are not sharply defined, but there is a continuing distinction of Mappilas of Arab descent, which is maintained through marriage practice and special regard for descent from the Prophet’s line.

Mappila adaptation from the Hindu environment is not pronounced. The most striking example is the matrilineal system called marumakkathayam, indigenous to the Nayar caste, which played an influential role in Mappila history. Although in South Malabar accessions to Islam were primarily from outcaste groups, in North Malabar many Nayar joined Islam through conversion or intermarriage. Through this process, marumakkathayam took its place alongside the patrilineal system in Mappila Islam. The practice traces descent through the female side, assigns authority to the eldest sister, and controls property through the joint family system. This pattern, unusual in Islam (but cf. the Minangkabau Muslims of Sumatra) is progressively yielding to the development of nuclear families and to the pressure to conform to the more traditional Islamic order.

Other elements of Kerala culture, ranging from dress habits to architecture, have become part of the Mappila tradition. It is not possible, however, to speak of a fundamental cultural inter-penetration between Mappilas, Hindus and Christians. Mappila religious practice and theology, in particular, remain relatively isolated. The notable example of syncretistic practice—that associated with the Muslim saint, Vâvâr, at the Hindu Sabarimala shrine in South Kerala—is an isolated exception to the general rule.

7. Mappila character
The key element in Mappila character is devotion to Islam. Although there is controversy within the community over the answer to the question “What is Islamic?”, the importance of the issue is not doubted. The intensity of this commitment has given rise to the Mappila reputation for excessive religious fervour. The assessment that Mappilas are “religious fanatics” has followed as a more or less accepted assumption in many scholarly writings, particularly Western, contributing to the development of a caricature that bears little resemblance to reality.

As a result of the stress and reverses of the European period, Mappila reactions were extreme from time to time. The emotional and untutored response of some Mappilas to conditions that seemed hostile to Islam, however, did not represent an innate disposition characterising the entire community, which for centuries had co-existed with Hindu and Christian neighbours in practical harmony. Even those who maintained the “fanatic” assessment were forced to recognise the ties between Mappilas of north and south Malabar, and in the south between coastal and inland Mappilas; these generalisations were too
broadly sweeping, however, to be accurate or helpful. Since 1947, Mappilas have turned their backs on the kind of reactions that produced the caricature; nothing clearly illustrates that fact as the Mappila restraint in the anti-Muslim riots that took place in Cannanore District in 1971.

Mappilas share the emotional traits of Malayali personality, but Mappila character is especially marked by simplicity of faith; loyalty to friends, Muslim and non-Muslims; fortitude and patient endurance; honest and frugal, industriousness, marked ability in commerce; a sense of community pride and oneness; and the readiness to follow recognised leaders. Various influences are modifying the traditional character. Community loyalty is no longer blindly granted, and there is a new sense of individual freedom, as well as more impatience with unsolved problems. Although displaying remarkable vitality, religious faith is neither so simple nor so stable as it once was, and as the public attention is more and more directed to social progress, there is a growing tendency to view it as a purely private matter.

8. Mappila literature

For much of Mappila history, the number of Mappila writers and their influence upon the community was severely limited by the lack of education. As Mappila literati developed, religious publications dominated the field. These continue to increase rather than decrease in quantity, and the Kurâan itself remains as the best-seller. More recently, however, Mappila writers have expanded their interests to general themes, and secular literature is being written and published in abundance.

The special, and still largely hidden, Mappila literary achievement is the Arabic-Malayalam body of religious materials, narrative poetry and songs. It is estimated (P. Seyd Muhammad, Varan College Annual, 1974, 56) that less than 10% of these materials are translated into Malayalam. This literary form emerged about five centuries ago as a complex blend of Malayalam language, Arabic script with special orthographic features, and some Arabic, Tamil, Urdu and Persian vocabulary. Particularly loved are the khwaab ballads, comprising a series of romantic ballads and battle songs. These heroic epics represent the private Mappila folk annals, which are memorised and sung on special occasions, particularly by women. The poet laureate of the Arabic-Malayalam song literature is Moyinkutty Vaidyar (1857-91). With the rise of general education, the Arabic-Malayalam literary genre is on the decline, although religious literature is still being produced in considerable quantities at the publishing centre of Parappanangadi for use in madrasas.

Mappila periodical literature is extensive and wisely read, and is especially influential in the religious sphere. Almost one hundred periodicals have appeared during the past half-century, the majority in Malayalam, but many have died an early death. There are currently about a dozen significant publications, representing different points of view. A Mappila newspaper which played a significant role in the community's development is the Chandrika (founded 1934). For a more natural picture of Muslim life and emotion, the works of contemporary Muslim novelists must be considered. They represent Mappila culture, views and feelings with realism, freshness, honesty and a sense of humour. Generally uninterested in political strife, novelists also tend to be both in spirit and deal lightly with religion, showing little hesitation to smile at its pretensions or to mock its idiosyn-

cracies. Drawing on universal human issues, they project a paradoxical mood of hope and pessimism. Leading authors include U.A. Khader, K.T. Muhammad, N.P. Muhammad and Moide Padiyath, but the outstanding Mappila novelist is the widely honoured Vaikom Muhammad Basheer (b. 1910). His most noted work, Nâdappokkottanmrconnu ("My grandfather had an elephant", 1951), follows the interaction between a conservative and progressive Mappila family, the elephant symbolising unrealistic traditionalism; the story illustrates a dilemma that faces Mappilas both in the present and in the future.

In general, western studies of the Mappilas from the British period must be used with great care because of frequent bias and inadequate sources, but see P. Holland-Pryor, The Mappilas or Moplahs, Calcutta 1904, a caste handbook of the Indian Army; W. Crooke, The Moplahs of Malabar, in Edinburgh Review (1922), 181-93; G. MacMunn, The martial races of India, London 1933. Much more useful are the Madras and Kerala government-published District gazettes, and of these the best is William Logan's oft-quoted Malabar manual, 3 vols., Madras 1887, a mine of information, meticulously gathered by a relatively objective civil servant, and generally reliable; C. A. Innes, Malabar, ed. F. B. Evans 1933, is an up-dating of this classic. E. Thurston, Castes and tribes of Southern India, Madras 1909, iv, 455-501, provides ethnographic information, much of which is now outdated.

MAPPILA

The complex Malabar land tenure system that has played a major role in Mappila history is introduced in Sreedhara Menon, The evolution of the Jenmi system in Kerala, op. cit., 325-69 and F. N. Pillai, Jemmi systems in Kerala, Kottayam 1966. For observation of the Mysorean impact, cf. F. Buchanan, A journey from Madras through the countries of Mysore, Canara and Malabar, 3 vols., London 1807. The development through the British period may be traced in the Guide to the records of the Malabar District, 1714-1935, 9 vols., Madras 1936. For a British opinion favourable toward Mappilas, see Logan, i, 621-70, while Innes, 304-72, summarises the different types of land rights. L. Moore, Malabar law and custom, Madras 1905, and A. Mayer, Land and society in Malabar, Oxford 1952, provide systematic overviews. M. A. Oomen, Land reforms and socio-economic change in Kerala, Madras 1971, outlines the recent dramatic changes.

Orthodox Sunni beliefs are found in short Malayalam or Arabic-Malayalam writings such as Muslim praramba matangal ("Basic Muslim tenets") Ponnai, 1950; Madrassa textbook, Classes 1 to V. Parappanangadi 1972; K. Umar Maulavi, Tarjum-un-ul-Khan, Tirurangadi 1971; and al-Mumt Annals of the Madras college, Madras 1950. The classic Shai're manual is Shaikh Ahmed Zainuddin, Fathul Mun'ir, Trichur 1968. Uncritical hagiologies of Muslim saints include M.A.

---

466 MAPPILA — AL-MAR'A

Woman

1. The Arab world.

For a long time, the problem of woman has been avoided or dealt with only partially or in a biased way, but now a general twinge of conscience has brought it to the focus of our attention. Not just one but many different problems confront the Arab woman and affect how she is seen by society. There is the legal aspect, defining the precise relationship between the two sexes in law; there is the collection of "distorted pictures" (the expression used by Etiem-
later practice allowed the husband or the brother to put the suspected woman to death more expeditiously. Divorce (II, 226/52 and LXV in totu) is an absolute right conferred on the husband (LXV in totu), who must nevertheless refer to "the evidence of honest men among you" at all times. But in practice, this control has been neglected over the centuries. In the end, a new legal right evolved, allowing a man to use the police authorities to bring back a wife who has left the conjugal home (bayt al-ta'ā). Nevertheless, there had been constant reference to the Kur'ān even when irrelevant (bayt al-ta'ā, stoning the adulterous woman) and this was used as an argument for "sacralising" the status imposed on a woman.

This sacralising of her inferiority is perhaps the main reason for the problems of the Arab woman. She is regarded from an ontological point of view as a second-rate human being, coming after man in the order of God's creatures. She submits to her duties, is limited in her powers and is mistress neither of her own development nor of her own body. Everything about her is considered taboo, so that "marriage is dealt with in the same way as a man thinks about correct behaviour".

However, in the early stages of Islam "correct behaviour" was still flexible. Verses were revealed at the request of the Prophet to allow the Prophet to marry the divorced wife of his adopted son (XXXIII, 37) or, according to the exegetes, to expose the depraved character to public abuse for having accused A'ishah of adultery (XXIV, 11-19; see note in Blachère's translation). Later, after the death of the Prophet, the conquests increased the number of marriages between Muslims and Jews and Christians. Although there was clear authorisation for this in the Kur'ān, the caliph 'Umar temporarily prohibited this type of marriage for the sake of the welfare of the state. The revealed text was distorted or even contradicted to justify the need of the moment (cf. Muhammad Mustafa Shalabi, Ta'ilt al-ahkâm, 244).

In fact, the law was to become the battleground for two opposing factions. There were the literalists with their rigorous interpretation, who claimed to take their stand on the Kur'ān and the Sunna (al-tafsir bi 'l-manākul) as well as on "consensus" (ijmā'ū) and "precedent" (taklīf), methods essentially formalist or literalist. On the other hand, there was a body of rationalist or liberal opinion from the Mu'tazilis to Avicenna and to Khalīd Muhammad Khalīd in the 20th century who have tried to take into account the original historical setting of the statutes and the development of individual interpretation, especially concerning women. However, over the period of the Arab-Muslim evolution, it has been the literalist tendency which has carried weight, even where in one region or another of the Muslim world some traditional customs favoured women's rights (cf. G.-H. Bousquet, 161 ff.).

In modern times, Muslims jurists, influenced by reformist ideas, have tried to make a distinction between "human law" and "divine law": the "'ibādat, religious acts which bring the creature into contact with his creator", and the "mu'amālatā, relations between individuals" (Chehata, 11). Since 1897, the institution of marriage (which is included in the mu'amālatā) has been a written contract in Egypt and, therefore, has implied some means of protection for women, even though traditionally "it is not advisable to write it down" (Linant de Bellefonds, ii, 40). It has become more and more the general rule to draw up a legal document (in Ottoman law, 1911; in the Tunisian statute book, 1956; in Morocco, 1958; etc.). By borrowing from articles drawn up by the most liberal judicial schools, the modernists have followed a parallel course and tried legally to restrain the practice of polygamy (which includes the monogamy clause) taken from the Hanbal school. This is why the Ottoman law of 1917 allows a wife to obtain the annulment of her marriage contract if her husband marries someone else. The Jordanian legal code of 1951 is similar. The Syrian (art. 14.3) and the Irākī (art. 3.4) codes do not include the monogamy clause, but insist that the second marriage is given preliminary authorisation by a judge. The Tunisian code of 1959 (art. 18) was the first in an Arabic-speaking country, and until now (1982) the only one, to prohibit polygamy completely. As with marriage, there has been a gradual tendency to embody the procedure in a written document. It happened in Egypt in 1931 and in Syria in 1953 where, as also in Morocco, the judge may sentence the husband to pay costs and alimony. Several Islamic countries have forbidden "triple repudiation" in any circumstances. There has been a complete break with tradition in Tunisia, where (arts. 31 ff.) the act of repudiation is not reserved just for the husband, but it is possible to have "legal divorce", granted by the court "at the request of either husband or wife", each having equal statutory rights.

In Syria the law of 31 December 1975 (art. 60) stipulates that "the dowry must be paid to the woman herself" and almost everywhere, legal limits are imposed on the minimum age of marriage for young women and young men.

Although in most Arab-Muslim countries, it remains true that the witness of two women is worth that of one man; a marriage between a Muslim and a non-Muslim woman is null and void; and rights of inheritance are always regulated in an unjust way, improvements cannot be systematically denied. The wishes of a woman herself about her own future are now being taken into account. For example, the woman who marries a man with a different nationality is no longer obliged to lose her own nationality if she acquires that of her husband. In Irākī (f'O no. 2217, 1973), she may choose the nationality she wishes. In Lebanon (document dated 11 January 1968), she may have dual nationality and will lose her own only if she makes an official request to have her name removed from the registers of her native country. In Libya (Law no. 7, 1963), she keeps her nationality unless she is able and wishes to assume that of her husband; it is the same for Egyptian women (Nationality law, 1958) and for Syrian women (1969, art. 12). In Tunisia and the Sudan, the husband's nationality has no effect on that of the wife, who always keeps her own. It is also of note that in two decrees by the Supreme Court of Appeal in Egypt, in 1972 and 1975, equal weight was given to the testimony of women and men, and thereby the principle of the charter of 1962, "Woman must be equal with man", was introduced into the judicial system. Such examples indicate the tendency in recent times to concede a much greater autonomy in legal matters to a woman.

Distorted images of women in literature. From earliest times to the Nahda, poetic and literary compositions present their heroines with two sides to their character. Poetry of the archaic type always praises the hard life of the Bedouin with their historical reckonings of events, their virtue and their sweethearts, who were not only ravishingly beautiful but were sometimes perfidious, were small-waisted and heavy-hipped, mendacious and inconstant (cf. Ka'b b. Zuhayr's
They were always moving about, wandering with their tribes, seeking watering places as well as those of the inaccessible free-woman. Poetry and prose alike express the sexual frustrations experienced by writers who have accepted the social prohibitions and who respect the traditional hierarchies. In love with his goddess, whose social standing has been questioned by biographers), Al-Abbas b. al-Ahnaf claims only to "adore" a free woman. He says, "Only slaves can love servants" (Ditän, ed. Khazardji, 86, poem 161, verses 3, 4, 5). The same contempt was expressed later by al-Djahiz concerning slave prostitutes (cf. Ch. Pellat, Le milieu barrien, 253-4).

Theologians were appalled at the sacralisation of woman before she became this symbol of mystery. Al-Abbas b. al-Ahnaf is said to have "added apostasy to debauchery in his poetry" (Tstud al-kaf ze 'l-fudurj fi shh'rhi), according to Abu 'l-Hudhayl al-Allâf, the Mu'tazili (Aghârî, viii, 15; concerning Ibn al-Ahnaf, the poet at the court of Harun al-Rashid, and his love poetry, see N. Tomiche, Réflexions sur la poétique de 'Abbas b. al-Ahnaf, in Arabica, xxviii/3 [1961], 273-99). In fact, poetry writing had become an expression of submissiveness to social prohibitions and a form of unattainable romantic desire. A poet like Ibn al-Ahnaf really tortured himself in order to tell of his desire in a way that none of his predecessors had. Probably it was at this stage of literary development that the myth of Madânîn, "the fool of love", became established (see Blachère, HLA, i, 122) and was anachronistically projected back to the beginnings of Islam. The poet makes an idyllic scene of his love for the free mother of the former slave, and then allowed much more boldness in their behaviour than their successors under the 'Abbâsid régime were able to tolerate (Lammens, Mow'awwa lî, 259, 440). Both groups display strong intellectual qualities, for countless passages from the Kitâb al-Aghârî represent free-women and slaves as being wise and good, firm advisers as well as well as mocking, insolent and cunning (i, 75, 76, 89, 126; ii, 86; viii, 133-4, 135, etc.). Again, this shows the dual image of woman described.

With the development of cities, these two female types finished on opposite sides of the social hierarchy. The urban Arabs adopted the values and ways of life of the peoples with whom they mixed, but they wanted to "preserve" their wives from them. This policy resulted in the practice of shutting up the so-called free townswomen of the wealthy and generally better-off social groups, especially after the transfer of the capital to Ta'rik. Consequently, the influence of the slave singer became greater since she alone could mix with the men of the élite classes. She was shrewd, witty, cultured and often a poetess. She frequented all the places of social entertainment and constituted herself as a civilising influence on the sensitivity, the mind and the tastes of an expanding society throughout the Muslim empire, from al-Andalus to Persia.

Perhaps it was under the influence of the Manichaean beliefs of Persia or of Satism and Tantrism in Hindu and Buddhist India, that these same women of such great cultural importance gradually became a source of spiritual joy and a way of life. For centuries there has been a fixed dual image of woman as an idol beyond man's reach, but also as an erotic yet passive object, flattering the fantasies of the poet and of the story teller. This is why she was also a passive object of physical pleasure for poets like Abu Nuwas or Ibn al-Hajjdâdî, who spoke of her in less mystical and less guarded terms. There was, therefore, an adoration and total submission of one group woman, and a libertine attitude, an ethical debauchery and a revolt against social prohibitions of another; all these characteristics feature in the "man of high birth", the zarîf, the ideal man of the most illustrious centuries of the empire.

For centuries there has been a fixed dual image of woman as angel and demon. In Arab literature of the modern era, since the beginning of the Nahda and in later audio-visual media, feminine characters retain some of their traditional aspects. In current art forms, like modern novels and the theatre, the mediaeval contrast between angel and demon appears in familiar guise with the mother and wife on the one hand, and on the other, the "femme fatale", with eroticism aroused by the female form. Sexuality may, of course, be used to stimulate a wider circulation (magazine stories and films taken from the works of Iskân 'Abd al-Kuddîn or Yâsîf al-Sîhâlî). In the avant-garde novels, however, or in the new poetry, it may also convey a message of revolt against Society and the Establishment. Eroticism has a structural function
just like that of violence in works like those of Ghitani or MadjTd Tubiya in Egypt or Haydar Haydar and Zakariyya Tm in Syria.

Old feminine images still persist. Sometimes they are compensated to guarantee the old established order (proud, strong mothers and wives who keep the man on the right path in social behaviour); but they may also have an evil effect, threatening the dominant position of man, his virility, the family and the social structure (mistresses of restaurants, and brothels, treacherous women, real Delilahs capable of stripping any Samson of his vigour). Details are borrowed from real life and known events in order to bring these images up-to-date and to allow the stereotypes to be used again and again. New images show the changing life experience of women and enrich the discussion of novels, poetry, theatre and the cinema. There is the woman who has regained part of her independence by working and becoming entirely responsible for her own affairs. Her autonomy is accompanied by portraying a sexual emancipation in the artistic image of her, which is on the whole badly tolerated by the writer and the media. There is also the female student who is potentially emancipated and who often preaches looser morals than she practises. In contrast, there is the peasant woman, the worker and the servant, who have left their familiar countryside, are exploited for their work and their sex, and have to fight to survive. And there is the freedom fighter, who struggles beside men for the liberation of the homeland in Palestinian literature. No judgment is made on her sexual behaviour, usually.

When issues of daily political and social life are involved, these images of woman are moulded to suit the artistic work in which they are used. Real events are mostly in a fictional world and then become symbolic elements within it. It is often difficult to discern what is true experience and what has been imagined, so they should not be taken seriously as historical documents. They do remain as important disclosures of their authors' aspirations and ultimately of the attitudes of their social groups, but not as a real description of the situation of woman in the Arab-Muslim society.

Woman in real life. It is hard for official laws and idealising images in literature to reveal the true life style of Arab women. We can obtain a much better description by observing how historians and biographers from the past portray her, and then how the press and audio-visual media of to-day continue to do so. In ancient texts, she only appeared when some noteworthy event occurred, like her being expelled from the harem. But in early Islam she could win a measure of respect and even evoke fear. There were frequent political alliances made between the powerful to ensure the loyalty of influential tribes; and when wives were selected from a tribe, it gave the woman a distinctive prestige and respect (see Lammens, Mo'dais, i, 324, 318). There seems to have been no need for her to be confined or veiled for several decades. One Amazon, who exposed the calves of her legs, took part in the horse racing at Medina, and when the press reported it, it was highly praised. There were remarkable qualities in order to dominate her husband (see Creasy, Histoire of the Ottoman Turks, repr. 1961, 225-6, 230-1; M. Gaudefroy-Demomblynes, Le monde musulmane, 387; Clot, i, 331). There was a mystery surrounding woman, her underhand activities and her ambitions, which produced in man a deep distrust of her and an imperious insistence on her local submission.

Lower-class women were not considered worthy of interest until the 19th century and afterwards. Then, many European travellers, especially in Egypt, gave precise information about their situation (see Mengin, Histoire de I'Egypte, ii, 305; Michaud and Poujoulat, Correspondance d'Orient, v, 13; vii. 83; 85-6; P.-S. Girard, in the monumental Description de I'Egypte, xvii, 56; Schoelcher, L'Egypte en 1845, 160-1, 305; Clot, etc.). Such a woman seemed lively and active, working in the factories of Muhammad ʿAli or as an alum, "dancing girl". She endured "a type of circumcision" performed in Egypt (Clot, i, 321-3) [see Khafif], and in the Sudan, infibulation, probably through the influence of pagan practices from black Africa. Following the occupation of Egypt by the French (1798-1801), the growing influence of the West, the development of the Arab bourgeoisie, the modernisation of towns and reformist ideas all had a disturbing effect on the family and social structures as well as on general attitudes. Any attempt to defend the earlier status quo brought about a deterioration in female segregation and increased restrictions. However, crises are sometimes salutary in the way they precipitate a liberation movement.

The year 1839 saw the beginning of the Panjimāt law, a period of social reform when many schools were opened for girls in Turkey, but not in the other Arab regions of the empire. There had been a school for girls in Beirut opened by the American missionaries in Beirut in 1835, but it was the only one of
its kind for a long time. The first primary school for girls in Egypt was opened in 1876, and in Irak in 1899; tuition was given in Turkish.

The First World War brought about a growing need for labour, especially female labour, in these countries: they worked in the spinning and weaving industries, in companies manufacturing cigarettes and in factories making preserves, matches, etc. Women used to work side-by-side with men for the same pittance. In 1921 the first proto-trade union organisations demanded equality for men and women before the law. These rights, though often only existing in theory, like the nine-hour day and maternity leave on half pay, were granted from 1933 onwards. They led in turn to the setting up of a legal labour code in Iraq (1936), Syria and Lebanon (1946). These laws and guarantees, rarely respected at first, gradually and slowly are becoming customary.

It was not only in industry that women were employed. They worked in greater numbers (as they always have done) in craft and family enterprises. The patriarchal structure of the family favours an almost closed economy, and there the woman's fight for independence has almost no room to develop. The development of female education and the formation of a female consciousness has undoubtedly been made possible because of the wealth generated by oil and commerce.

The Arab woman's evolution was inevitably accompanied by a development of conscience, in the absence of which, in spite of lengthy periods of common conflict, she finds herself excluded from trade union activities through what is in effect discrimination. Furthermore, because of ignorance she did not avail herself of the rights which the law allowed her. Perhaps the quickest stirring of female consciousness was brought about by the fruitful activities of the feminist organisations. They were formed after the First World War and were mostly philanthropic, although some were definitely political; they were constantly active despite the sarcasm of the media.

Of all the Islamic countries, Turkey had the largest population of literate women, and it led the way in major changes. Developments in female education led to the propagation of more liberal thought. With the revolution of Atatürk in 1923, the country was laïcised, and the wildest dreams of female liberation were realised—a model for other Arab states. At the end of the 19th century in Egypt, the first theorist of eastern feminism, Kāsim Āmin [q.v.], published a book entitled Taḥrīr al-mār'a, "The emancipation of the [Egyptian] woman" which, in the name of the law of the Kurān itself, protested against the breaking of the law, the obligatory wearing of the veil, unjustified polygamy, and repudiation without the arbitration of a judge. He claimed equality of teaching for both sexes. Egyptian feminists supported him. From 1911 Bāḥīyat al-Bādiya demanded that women should have free access to the mosques and that there should be compulsory primary education for everyone. After the First World War, Hūdā Schāfrāwī, a member of the Turkish aristocracy, opened her salon in Cairo and in 1923 appeared in public with an uncovered face.

At the end of the last century, feminist claims were expressed only by some women of the aristocracy, but now they have become increasingly urgent. They have been taken up by the upper and middle classes, by professional and journalistic both sexes and they have been organised into various unions or associations. The right to vote is now denied only to women in the Arabian peninsula, and since this right has become general, women's groups have assumed an electoral significance and have been recognised by the political authorities. In Egypt, the "Organisation of Arab Women" was formed by the female Minister of Social Affairs in 1962. In Syria, in 1968, the "General Union of Women" was directed by the Baʿth. The "Women's Union" was created by law in Libya in 1975 and in Irak the "General Federation of Iraki Women" is one of the organisations (munazzamāt) of the Baʿth party.

Trade unions and feminist activity have a value, but a general spread of education provides a much more favourable climate for female consciousness. Laws established after the achieving of independence have democratised education. The Declaration of Human Rights signed by the United Nations (art. 26) decreed that primary education should be free. Despite this, compulsory education is far from being generally accepted. Little schooling is available in the rural areas (in Morocco, Jordan, Irak and even Egypt, for example), but elsewhere only half the population of female school age reaches a primary school. In Saudi Arabia, the proportion is a third, with absolute segregation of the sexes (cf. Maqtubat-Madhkeb, Paris, Doc. française, no. 78 (Oct.-Dec. 1977); L'Islam, Doc. fr. photo. 27). The situation is the same in Iraq. The difficulty of creating and maintaining an insufficient number of schools and qualified teaching staff. There are added problems because families use their children to work in the fields, in small industries, or in the home to eke out their resources.

Even when they are given the chance of a place at school and they pursue their studies, girls are sub-consciously moulded by the cultural outlook fostered by the school and their view of the world is not necessarily different from that of their society, at least not until the final stages of secondary school. Official Syrian statistics for 1975 can act as a guide for the rest of the Arab world. In 1970, out of a population of 65,925 women who held certificates of primary education, 8,758 were pursuing an occupation other than that of housewife (13.4%); for vocational (secondary and technical levels combined) diploma holders, the figures were 7,176 out of 8,059 (89.03%); for higher education diploma holders it was 3,365 out of 4,482 (75.07%); and for doctorate holders it was 108 out of 151 (71.5%) most of whom came from the middle classes or were the wives of diplomats living abroad. Very often (in 38% of the cases), the women were working for relatives or private individuals without receiving any payment. In 1970, this was the situation for 64,088 of them. It is also interesting to compare figures for married and unmarried women in the same year; there were 1,067,073 married women and 515,751 single, divorced or widowed, but although there were nearly twice as many married women, the number of active unmarried women (71,996) was well over the number of active married ones (38,886).

Often women agree to sacrifice their career in order to respond to the wishes of a husband or family. Such behaviour cannot simply be explained as due to the state of her mind, but must be influenced by the almost complete lack of necessary social infrastructures like creches, canteens, etc. Pedagogic activity, therefore, cannot exist without educational activity, and they must complement each other. At the present time, there is insufficient integration of the different claims for equality of the sexes and for the liberation of women. Deep disturbances can be felt...
even in the socialist universities of Damascus and Mawsil concerning the actual segregation of women and concerning the wearing of the veil on the head or over the face. It has been an era of growing both legal and cultural, and also economic and political development, and any progress that has been achieved by the work of cultured women, heroines in the fight for freedom, and trade unionists have been followed by some unscrupulous steps backwards, even in the so-called progressive countries.

The struggle goes on in the Arab-Muslim world between the two groups, still called "integralist" or "fundamentalist" by some, "integrationist" and the liberals; old arguments have been rekindled. The rise of Muslim "integrationism" has been made possible by the new-found power of the ayatulislāh in Iran through the success of their revolution against the Shah's régime, and above all by their resistance against the unfortunate Irāk aggression. Even if the Arab-Muslim world accepts modern techniques in the hope of bettering its way of life, it still remains attached to the values and religious beliefs by which it hopes to preserve its identity. The threats and fulminations of the 'adāma' conservatives of Syria, Irāk, Egypt and Algeria exploit this religious attachment and encourage the observance of passivity and submissive attitudes in the societies concerned. This has led to a spectacular return to the very low status of women. In the "espirit courtois" of the syriac sources, as well as in the "integrationist" opposition. In Egypt, the law up to 8 January 1982) was still preserving the "family code" in Algeria maintains the legal inferiority of the woman: she is always considered a minor and must pass from the guardianship of her father to that of her husband, brother or uncle, or even to that of her eldest son. Polygamy and repudiation are allowed and any professional activity a woman undertakes must be sanctioned by her husband, as in Algeria (Le Monde, 14 February 1982). The project for a "family code" in Algeria maintains the legal inferiority of the woman: she is always considered a minor and must pass from the guardianship of her father to that of her husband, brother or uncle, or even to that of her eldest son. Polygamy and repudiation are allowed and any professional activity a woman undertakes must be sanctioned by her husband. In Kuwait, members of the assembly have refused to allow women the right to vote in February 1982, even though the Dean of the Faculty of Law at Kuwait University was a woman (Le Monde, 14 February 1982). The project for a "family code" in Algeria maintains the legal inferiority of the woman: she is always considered a minor and must pass from the guardianship of her father to that of her husband, brother or uncle, or even to that of her eldest son. Polygamy and repudiation are allowed and any professional activity a woman undertakes must be sanctioned by her husband.

Little is known about the customary status of woman in South Arabia before Islam. From the rich and varied material available, one could artificially bring into a unity an essentially disparate group of customs, which will then be treated with special care. It is even more important to remember that there is a serious gap in the material. Whereas the different sources all provide, by a sort of complicity between informants, information about the women of the North (the Bedouin), there is hardly any mention of the women of the South (sc. the Yemeni) ones, who have grown up in an environment appreciably different from that of Mecca or the desert, in religious texts, literature or ethnographic research work. Here and there references to customs which were fundamentally Bedouin. To identify the relics of the old matrilinear linguistic unity long before Islam. Furthermore, having identified the relics of the old matrilinear customs in particular tribes, he concluded that these customs which had survived until just before the Hijdra. The linguistic unity long before Islam. Furthermore, having identified the relics of the old matrilinear customs in particular tribes, he concluded that these customs which had survived until just before the Hijdra. The cultural and linguistic unity, which came much later than Robertson Smith suggested, would have followed the decline of the kingdoms of the South and the progress of desertification. The language of the North, close to but different from the South Arabian which it ended up by supplanting, finally imposed itself on the whole peninsula, spreading with itself the customs and manners of the desert.

Robertson Smith's serious error has finally led to a regrettable confusion. At the time of the Hijdra, Classical Arabic (that of the Qur'an) although not prevalent, was understood in almost all areas of Arabia. From this fact, he assumed that there was a linguistic unity long before Islam. Furthermore, having identified the relics of the old matrilinear customs in particular tribes, he concluded that these customs were prevalent in the whole of Arabia, without taking into account the question of migration.

What was the status of Arab women prior to Islam? It is quite clear from what has been said that the inhabitants of Southern Arabia (the "Southern Arabs") must be distinguished from those of the North. Even so, it is not necessary to agree with the genealogists who suggest a double lineage, Kahitani for the one and Madhun for the other, for they have merely translated into the language of their own particular discipline the ever-present rivalry between cultivators and pastoralists. Nonetheless, there were the well-established agricultural traditions of the southern Arab farmers. The Northern Arabs were traditionally dependent on a pastoral economy for their sustenance; they developed for themselves a distinctive nomadic civilization marked by the stamp of the desert. Research into the South Arabian area has proceeded, but there is still only fragmentary and inadequate information on many aspects of social life.

b. The status of the South Arabian woman

Little is known about the customary status of woman (♀ n t m r) in South Arabia before Islam.
In a recently discovered inscription, anyone of the Dhu Matara is forbidden to kill their daughter (Chr. Robin, *Mission archéologique et épigraphique française au Yémen du Nord et au Tihamah*, 1957, p. 110). The so-called harlots of Hadramawt, in their capacity of wād, always denote an inferior position of woman in pre-Islamic South Arabia, and it is similarly forbidden to hand over girls by way of reparation, which leads one to suppose that the man had control of the woman. As in other Semitic societies, so here it is probable that the husband regards his wife as a chattel. Some inscriptions group wives and possessions together (A. F. L. Beeston, *The position of woman in pre-Islamic South Arabia*, in *Proceedings of the 22nd Congress of Orientalists, Istanbul, 1951*, ii, Leiden 1957, 104). However, it would not be correct to infer from this that the wife was in a state of slavery.

In other inscriptions, it is stated that she had a rôle in questions of inheritance. Rhodokanakis even dared to suggest that in South Arabia, the women were financially independent. Beeston does not share this point of view, but he does admit that the widow could acquire economic independence in certain conditions, as, for example, when the male heir was too young to exercise his rights (Beeston, *op. cit.*, 105). He also draws attention to the fact that the woman could assume high office, especially that of priestess, a role in which she would have practised sacred prostitution (idem, *The so-called harlots of Hadramaut*, in *Oriens*, [1952]; cf. J. Ryckmans, *Les "heraldulinsisten" de Ma'āin et la colonisation mésardine*, [1952]). She also had access to high administrative offices. In one inscription, we find a woman with the title of maktawa, a senior official who came under the direct orders of the king. Could it be that a woman may even have held the office of the highest magistrature, as suggested by the legend of the Queen of Sheba? However, the inscriptions do not mention the name of any sovereign or kayla. Nevertheless, after the reëda, the Banū Mūsawiyā in the Hadramawt, who were called the royal Kinda, were ruled by four brothers as joint kings in association with their sister, the famous al-ʾAmarrada, who was a famous and despot as they (Ibn Hazm, *Djamlharr ansāḥ al-ʾArab*, Cairo 1962, 428).

Information provided by the inscriptions about the system of family relationships might well lead to confusion. In most cases, the line of descent is through the father. However, in every age there are isolated instances of descent through women. In one text there is even a case of both types of descent side-by-side (see the inscription on the statue in Chr. Robin, *L’Arabie du sud antique, in Bible et Terre Sainte*, 177 [Jan. 1976], 19). Two other inscriptions record a concession granted by a king to men and women of the same class. Now it seems that the transmission of the concession was made by the women to their descendants (Ahmed Fakhrī, *An archæological journey to Yemen*, ii, *Epigraphical texts*, Cairo 1952, inscrs. 3 and 76). In other inscriptions, women are mentioned only in terms of their lineage; even their ascendants are considered from the point of view of the female line. From there to the conclusion of the existence of a system of matriliny in South Arabia before Islam is one step; to prove it, it is another. One can even go so far as to affirm that polyandry may also have been known to the South Arabsians. The observations of Strabo already mentioned are relevant here, and certain scholars like Glaser, Winckler and more recently Müller, consider that the views of the Greek geographer have been confirmed by the inscriptions (for further discussion and bibliography, see J. Chelhod, *Du nouveau à propos du matrimonial arabe*, in *Arabica*, xxvii [1981], 99 ff.; Chr. Robin has drawn our attention to a Haseaean inscription where the line of descent is traced exclusively through women; it reads: “Burial place and tomb of Ḳḥbayy, daughter of Ḳḥayat, daughter of Shībaim, daughter of Ḳhāḏir, of the lineage of Yankhāl”). However, documents where this type of union is mentioned are rare so that it is wise to treat them with caution. On the other hand, it is clear that polygamy was practised in ancient Yemen and, according to Beeston, they even practised temporary marriage (*Temporary marriage in pre-Islamic South Arabia*, in *Arabian Studies*, iv [1978], 21-3).

The inscriptions so far discovered do not contain any reference to the existence of a system of maternal rights in ancient Yemen before Islam, but the discussion must necessarily remain open, for ethnographers have produced several examples of matrilineal succession in contemporary Yemen society. Some sexual freedom before and after marriage has also been noted as prevalent in some tribes in Yemen. This is no recent innovation but, as will be shown, has its roots in the past.

c. *The status of women in customary law in modern South Arabia.*

As a rule, the šarʿa governs the status of both men and women in the whole of South Arabia, with slight modifications in the case of South Yemen. Its successful application relies on the central government maintaining effective control. Outside the large urban societies of Sanʿāʾ, Taʾizz, Ḳadān, Sayʿūn, Shībaim, Ḳadma, etc., it is generally true that the semi-sedentary and village Yemenis observe customs which do not always conform to Islamic law. Girls are often disinherited and marriages are contracted by exchange. This customary practice is known as tāḥūl, or also ahām al-salaf. It is inspired by strongly-held desert values, and in accordance with Bedouin customs promotes an idea of honour among the Yemenis, related to the “whiteness of the face”.

The law decrees that woman should be completely submissive to the will of the man; father, brother, husband, uncle, paternal cousins, and even her own adult children. She is considered to be a feeble being, whose defence depends entirely on the man. In his eyes, she symbolises his own virility: every thoughtless action is interpreted by her strong protector as a challenge to his power, an outrage to his dignity. A whole mystique has grown up around the concept of honour which decrees that the modesty of the women whom he guards should be a sacred object. Any assault or attempted assault on their chastity is classed as murder and may be punished extremely severely. This is the conventional attitude to the love life of Yemeni women. Among the Humūn of the Hadramawt, however, despite her unfavourable position, the woman enjoys a certain amount of sexual liberty. Indeed, tradition even permits a girl to conceive a child outside marriage. If the child is not recognised by its natural father it will take the name of its mother or that of its maternal uncle. Even a married woman can take a lover without fear of her life and without the risk of being molested. A girl who wishes to take a lover would have to take him from among the people of her tribe. As a rule, the lucky man should exhibit all the physical and moral qualities which a woman would like to find in the father of her child. The aim of such a liaison is,
presumably, to produce an ideal child, but the custom is disappearing; it is called kasb or ikhtisāb. A similar type of union was known to the Arabs before Islam by exactly the same name. The Arabs were supposed to do this to raise children of pure Arab stock, so that the man who was to father the child should be especially good. There is some similarity between the two customs, but here it was the husband who asked the wife to have relations with another man, whereas among the Humūm it is the girl who takes the initiative. Within this tribe, as among the ancient Arabs, no one is at all embarrassed to announce the birth of a child conceived outside marriage. The child born this way is called al-farkh, “the chicken”, a harmless nickname which indicates the “illegitimate” nature of his birth, even if his father recognises him as his own. If he does not, he will take the name of his mother and be raised by her. She may subsequently be sought in marriage, and the intentions of her suitor will be judged by asking him if he will take her bi-hamili-hā wa-shamālikihā, “with her burden and her coat”. If he takes both mother and child, then the dowry would be more significant; but if he will take only the girl, the child will be brought up by her maternal uncles.

Custom likewise allows to Humūm married women the right to have affairs during the prolonged absence of their husbands; when a husband returns, he cannot inflict reprisals on the unfaithful spouse. He has the choice of accepting the situation or repudiating his wife. If he nevertheless ill-treats his wife, he risks legal proceedings by his parents-in-law, and this appears to be an old custom. According to Ibn al-Mudjawir, a woman among the Saru could take a lover called a makhfīf, “a replacement”, when her husband was on a journey. Ibn al-Mudjawir, Taʾrikh al-mustabsir, Leiden 1951-4, 26).

Whatever the cause of the trouble, the Humūm never punish an adulteress; but a woman who takes a lover while her husband is at home is severely condemned. Despite this, she is generally in a favourable position, for she can ask her husband to repudiate her so that she can start a new life, and he cannot deny her this privilege. As is necessary for the dowry and any wedding expenses to be returned. If she is repudiated at her own request, the unfaithful wife has no rights regarding her children; they will remain with their father and keep his name. Despite this freedom enjoyed by women in Humūm society, the family is patrilocal and patrilinear, as elsewhere in Yemen. How can these obviously matrilinear customs be reconciled with the prevailing patriarchal way of life? They seem to be the relics of a system of matrilinear rule which once was to some extent normal in South Arabia. It seems that neither virginity nor chastity was considered as important as modern Arabs unusually consider them. Ibn al-Mudjawir states that among the Bahmiyya, the “fiancée” was tried out by her suitor. If he was satisfied, he left his sandals behind at her father’s house and the marriage could then be settled; if he were to put them on when leaving the house, it meant that he did not want the girl (Ibn al-Mudjawir, op. cit., 54). The custom of giving a traveller a girl for the night goes back to the 3rd/9th century. The founder of the Zaydi state opposed certain sexual liberties practised in the village of al-Asām. It was situated in the high plateaus, and there a host would honour his guest by offering him his daughter or his sister after he had dressed her up in her most beautiful clothes. She would then be subjected to the most intimate caressing but not extreme sexual behaviour (C. van Arendonck, Les débuts de l’imamat zaydite au Yémen, 165). Similar observations were made by Ibn Mudjawir, but in his account the wife was offered to the traveller (Ibn al-Mudjawir, op. cit., 53). After fourteen centuries of Islam, it is only recently that a similar custom was observed in Yemen in the region of Mārib, though it is true that the guest there had made to respect his partner under the threat of reprisals (private investigation. Cf. K. al-Irājānī, L’organisation sociale de la tribu des Hashid, in COG, lxx [1968], 8).

This sexual liberty has ensured that sufficient scholarly attention has been paid to women in Yemen, and it seems that in some areas she has been able to impose her will on her husband. It is public knowledge among the Yemenis that in the Djabal Sabīr, the pleasant mountain overlooking Ta’izz, the village women rule the roost in financial matters. They have even gone so far as to send back lazy husbands. It is still only the man who has the right to repudiate, but he must nevertheless obey his wife’s commands. Among the Dhim in the region of the Djafl, a woman will put a piece of red cloth on the entrance to her tent when she is displeased with her husband. He knows from this that he is in disgrace, and does not dare to cross the threshold of his home until his wife has removed the sign of the quarrel with her own hand (A. Faqlī, al-Yaman maṣīḥa wa-bīh ruddhūrū, Cairo 1970, 110). A similar custom existed among the Tayy in pre-Islamic Arabia. To show Hātim that he should leave, Māwiyah simply moved the entrance to the tent (Aghānī, Beirut 1956, xvi, 207). She was thus mistress of her own fate, since she could separate at will from her husband when the latter displeased her. Among the ancient Arabs, a number of high-society ladies seem to have enjoyed the same privilege. There is, for example, the case of Sanūmah bint Amr from Medina, who belonged to the Nadījār, originally from Yemen. The chroniclers say that she agreed to marry her husband only on condition that she could leave him if she wished.

Other accounts confirm how common these matrilocal customs were. Ezēz, Botta’s guide, entered into a marriage contract, the principal clause of which stated that the woman could not follow the husband to his village (Botta, Relation d’un voyage dans le Yémen, Paris 1880, 125). According to Ibn Battūta, at ZabTd marriage to a stranger was freely accepted, but if the husband decided to leave the town the wife would not follow him under any circumstances (Ibn Battūta, Rihla, ii, 168). The child of such a marriage would be brought up by his mother or some other relative. Ibn al-Dayba of Zabīd, the Yemeni historian, was abandoned by his father in his infancy and entrusted to his maternal grandfather. When this relative died, the boy was looked after by his maternal uncle (Ibn al-Dayba, al-Fadl al-mazīd al-Aghānī, ed. J. Chelhod, San'a' 1983, 217).

When this discussion is analysed, the following facts emerge:
(a) A Yemeni woman is not required to follow a strict sexual morality, as is generally the case in the Arab East.
(b) The sexual freedom enjoyed by the women of the Humūm dates back to ancient times.
(c) In some tribes, the woman controls her own destiny, having the right to take a lover and to dismiss her husband.
(d) Children conceived apart from the husband belong to the maternal side of the family.
(e) Such matrilocal customs are still to be observed in some parts of Southern Arabia.

Although it cannot be assumed at all that South
Arabia exerted an influence on North Africa (Helfritz, *L'Arabe heureuse*, Paris 1961, 116), there are certain similarities between the customs described above and those observed in Kabylia. The Berber woman is generally known to enjoy more sexual freedom than the Arab woman, and many monographs have been devoted to describing her love life. Its luxuriance and diversity of customs make any attempt at synthesis problematical. Prenuptial chastity is certainly not expected of any girl, but once married they must be faithful to their husbands. But if they are freed from their marriage ties by widowhood, repudiation or the prolonged absence of the husband, they are allowed to take lovers. Their sexual freedom is even more marked than that of the Humûm. Many of them still work as prostitutes, and this is not thought in any way dishonourable. Many coutreurs belong to high-class families and subsequently end their lives with good marriage arrangements (E. Dermenghem, *Le pays d'Abel*, Paris 1960, 69). Children born of these temporary unions belong to the mother’s line.

When the life of the Yemeni woman is compared to that of her sister in the North, it seems very similar, except for the sexual freedom, limited in any case to certain districts, she enjoys. The Northern girl is also married by her father (before coming of age, even after her paternal cousin holds the right of preemption). She will not usually be consulted initially about her choice of husband; only after she has been widowed or divorced will she be free to reject a suitor. Analogies between her situation and that of the Bedouin women will be discussed later.

d. *The Arab woman in traditional law just before the Hijra* (during the first century of Islam).

The status of women in Western Arabia before the Hijra again raises the question of different customs in different areas. Clear differences in male attitudes can be detected, when comparing evidence from nomadic tribes, from the sedentary population, from a trading city or from a village community, even though at this particular time almost the whole peninsula was Bedouin in character. The word Bedouin clearly refers not only to the Arab of the steppe, al-ardâhi, but also to anyone who follows the desert customs and conforms to its code of honour. Poets like al-Akhtal and Djârir called themselves Bedouin (Aghdm, vii, 134), and from this point of view, just before the Hijra, the Meccans practised Bedouin customs.

Most of those Arab tribes which, by their nomadic and war-like life style set great store by their virility, consider that women are feeble and almost irresponsible beings and in need of constant help. At the same time, she embodies man’s ideals and is sometimes almost venerated as sacred. This ambivalence naturally leads to the paradoxical description of her as *awrâ* (LA, s.v. *awrâ*). The birth of a daughter was not welcomed at all, for women and obligations on men, and failure to observe them casts a slur on their honour. Female chastity together with conjugal fidelity, *inter alia*, constitute *qâri* (s.v. *qâri*). Licentiousness is severely condemned in Islam (Muslim, *Sâhih*, Cairo 1334, iv, 136), but nonetheless practised even to the present day.

The birth of a daughter was not welcomed at all, for families believed it could bring dishonour (Aghdn, iv, 248) or even poverty (Kur’dân, VI, 151; XVII, 31). Fathers sometimes buried their daughter alive, even though this custom was condemned in the Kur’dân (XVI, 58; LXXXI, 8). Among the Kuraysh, this custom was common, and they buried their daughters at a place called Abu Dulâma, a hill above Mecca (Aghdn, xi, 246). But for the most part, fathers seemed to accept the inevitable and to find consolation in counting up how much the infant girl would bring him in the future marriage of her brother (Aghdn, xvi, 245; *Kâhil* [s.v. *awrâ*] “excision” was practised everywhere. It is not certain whether this happened soon after birth or just before marriage, but if the latter, it can be seen as a rite of passage. The girl would be married when she was scarcely nubile, and often she was promised from birth; sometimes her father or brother would exchange her for a wife without spending any money. This type of union was known as *bikr* (LA, s.v. *shighdr*), this type of union was known as *bikr* (LA, s.v. *shighdr*), and even applied to married women. A man would repudiate his wife and exchange her for another man’s (Aghdn, xviii, 356). Marriage by exchange was forbidden in Islam (Muslim, *Sâhih*, Cairo 1334, iv, 136), but nonetheless practised even to the present day. This emphasises the lack of real concern shown for the girl’s own wishes, regarding her future partner. Her father, brother or guardian would draw up an agreement without even consulting her (Aghdn, x, 104; xix, 131-2, 275) which is not surprising considering how young she was when first married. *A‘ishâ was married to the Prophet at the age of six, and the marriage was consummated when she was nine* (Muslim, *Sâhih*, iv, 142). A widow or a divorced woman (*djaybîl*), not so much in demand as a virgin (*bikr*), would generally make her own arrangements. This was probably what happened when a woman offered herself to Muhammad (Kur’dân, XXX, 50); he declined the offer. The Kur’dânic reforms tried to protect the young girl when her parents refuse the right to be consulted (but see *Tâhir* in Suppl.).

Arab dictionaries use the same word *nikâh* to denote stable and temporary unions, which often do not last long and border on prostitution. According to *kâhil*, attributed to *A‘ishâ and recorded by al-Bukhârî, pre-Islamic society recognised four forms of marriage. (1) A man may marry the daughter or sister of another man on payment of a dowry. (2) A man asks his wife, after her menstruation, to have intercourse with someone he names so that she can have a child of good pedigree. He himself avoids all contact with her until her pregnancy is evident. (3) A group of less than ten men assemble at a woman’s house and all have intercourse with her. For the child which is subsequently born, the mother chooses one of the ten she prefers to be the official father. (4) A woman gives herself to any man as a prostitute. If she becomes pregnant, she

In fact, it would be unwise to make generalisations. Epinal’s picture of a humble Arab woman submissive to the wishes of her *ba‘l*, her lord and master, might well be the masculine ideal for a wife, but this is not the picture painted by our evidence. Many tales of the pre-Islamic and even the Islamic period show woman as a refined but mischievous creature, resisting supervision and enjoying sufficient freedom to enable her to embark on a few amorous adventures. The husband in the child sleeping peacefully in his mother’s bosom is the uncontested proof of this. We shall see later that, in sexual matters, traditional customs are not adhered to so rigidly as is often believed.

The birth of a daughter was not welcomed at all, for families believed it could bring dishonour (Aghdn, iv, 248) or even poverty (Kur’dân, VI, 151; XVII, 31). Fathers sometimes buried their daughter alive, even though this custom was condemned in the Kur’dân (XVI, 58; LXXXI, 8). Among the Kuraysh, this custom was common, and they buried their daughters at a place called Abu Dulâma, a hill above Mecca (Aghdn, xi, 246). But for the most part, fathers seemed to accept the inevitable and to find consolation in counting up how much the infant girl would bring him in the future marriage of her brother (Aghdn, xvi, 245; *Kâhil* [s.v. *awrâ*] “excision” was practised everywhere. It is not certain whether this happened soon after birth or just before marriage, but if the latter, it can be seen as a rite of passage. The girl would be married when she was scarcely nubile, and often she was promised from birth; sometimes her father or brother would exchange her for a wife without spending any money. This type of union was known as *bikr* (LA, s.v. *shighdr*), and even applied to married women. A man would repudiate his wife and exchange her for another man’s (Aghdn, xviii, 356). Marriage by exchange was forbidden in Islam (Muslim, *Sâhih*, Cairo 1334, iv, 136), but nonetheless practised even to the present day. This emphasises the lack of real concern shown for the girl’s own wishes, regarding her future partner. Her father, brother or guardian would draw up an agreement without even consulting her (Aghdn, x, 104; xix, 131-2, 275) which is not surprising considering how young she was when first married. *A‘ishâ was married to the Prophet at the age of six, and the marriage was consummated when she was nine* (Muslim, *Sâhih*, iv, 142). This was probably what happened when a woman offered herself to Muhammad (Kur’dân, XXX, 50); he declined the offer. The Kur’dânic reforms tried to protect the young girl when her parents refuse the right to be consulted (but see *Tâhir* in Suppl.).

Arab dictionaries use the same word *nikâh* to denote stable and temporary unions, which often do not last long and border on prostitution. According to *kâhil*, attributed to *A‘ishâ and recorded by al-Bukhârî, pre-Islamic society recognised four forms of marriage. (1) A man may marry the daughter or sister of another man on payment of a dowry. (2) A man asks his wife, after her menstruation, to have intercourse with someone he names so that she can have a child of good pedigree. He himself avoids all contact with her until her pregnancy is evident. (3) A group of less than ten men assemble at a woman’s house and all have intercourse with her. For the child which is subsequently born, the mother chooses one of the ten she prefers to be the official father. (4) A woman gives herself to any man as a prostitute. If she becomes pregnant, she confirms the pre-Islamic arrangements in everything touching her love life.
waits until the child is born and then consults a physiognomist to decide which of her clients is to be the father of the child. Once he has been selected, that man is his father by paternity. To those four types, others can now be added. (5) ṭabīḥu, a marriage by exchange described above. (6) nikaḥ al-mātik, a marriage to the father’s widow, which was prohibited by the Kurān (IV, 22). (7) nikaḥ al-mutʿa, temporary marriage, which was authorised at the beginning of Islam but forbidden by the sunna, apparently on the initiative of the caliph ‘Umar; tolerated however by the Shi’as. (8) nikaḥ al-dhun’ah, cousin marriage, which is also prohibited by the Kurān (IV, 25, 26).

On examination, the various types of ‘marriage’ listed show two different attitudes to the relationship. Types 1, 2, 5 and 6 clearly betray the influence of the patriarchal system. The woman is completely subjugated to the man and has apparently little freedom. He may use her as he wishes, even to the point of making her share another man’s bed; this is done either to honour the man or to raise a child of good stock. Moreover, he can ‘reserve for himself’ a close relation (a sister or a daughter for example), not to marry himself but to exchange for a wife. The domination of women by men in this family system is absolute, and it is nowhere illustrated better than in the Arab preferential marriage. Now as before, it occurs between a man and the daughter of his paternal uncle. The latter is entitled to a share of his freedom, and, not content to have his goods, wants to have his wife. He is therefore required only to pay a mahr [q.v.], for the dowry is paid by the deceased; or he can marry her off on condition that a new dowry is paid, which has now become synonymous with ‘wife’. Similarly ibn ‘amm means both paternal cousin and ‘husband’ (Aghānī, xv, 263, 275). The son of a father’s brother has by tradition a preeminent right over the daughter of his uncle. He is therefore required only to pay a symbolic dowry imposed by Islam. The madh [q.v.] recouped by the father-in-law is in inverse proportion to the degree of the relationship. Strangers to the tribe pay more than fellow tribesmen who are in an unfavourable position in regard to the khamila; the ibn ‘amm would be absolved from payment and could even compel his uncle to give him his daughter. More distant cousins were equally favoured, but could not press their demands. Nevertheless, this unwritten right is not absolute; the more sedentary the community, the more uncertain is the situation; there are many examples of an uncle refusing his nephew through greed. The fear of weak progeny is an equally common reason for advising against marriage to the ibn ‘amm. But the woman who is called to live in a strange tribe naturally evokes sympathy. She will be far away from her agnates, her natural protectors. Once relieved of the constraints imposed on her, the girl need no longer submit to the will of her cousin. When the poet al-Farazādak became the guardian of his ibn ‘amm Nawār, he had to devise a plan to get her to marry him after she had refused many times (Aghānī, xix, 12ff.).

Though the nomadic life, which condemns its followers to an indrawn existence, may favour endogamy, it does not explain a man’s domination of his ibn ‘amm. Robertson Smith likens this type of marriage to the right of inheritance. It is as though the woman forms part of the patrimony and many other customs confirm this point of view.

Marriage to the step-mother was quite widespread among the ancient Arabs. Al-Shahrastānī tells the story of three brothers who succeeded to their father’s widow. It was recorded in both Medina and Mecca, and can be connected with the levirate, which was known to the Arabs then and is known now. Greed was the main reason for marrying a father’s widow. The Kurān considered it an abominable practice (IV, 22), and contemporaries of Muhammad maligned anyone who resorted to it; they called him a dayyān, which means one who is callous to his father and, not content to have his goods, wants to have his wife as well. On this point the Kurān expressly says: “O you who have believed! You are forbidden to inherit wives against their wishes, or to prevent them marrying in order that you may appropriate from them a part of what you gave them” (IV, 19). Commentators have observed that when a man dies, leaving a widow, his heir covers her with his cloak to show the right he has over her. Having done this, he may either keep her for himself without spending any money, for the dowry was paid by the deceased; or he can marry her off on condition that a new dowry is paid, which will come to him. He can also prevent her from marrying until she has bought back her freedom with what she received from her husband; if she does not, she will remain in his possession until she dies, and he will become her heir. Such a greedy attitude is found not only in the son but in the other male agnate relations, especially when the deceased left behind very young daughters. Here again the Kurān (IV, 127) plainly refers to orphaned girls whose guardians refuse to give them what has been bequeathed to them; they would rather keep them in order to marry them or force them to buy their freedom. In the same way, the paternal cousin, who is the first claimant able to marry the girl without committing incest, tries to seize what will ultimately come to him by inheritance, even during the lifetime of his uncle. Al-Wāhīdī, in his commentary on verse six of the Sūra on Women, refers to this. A woman called Kubayyāh complained to Muhammad about the behaviour of her stepson who had inherited her; he did not support her financially, he did not cohabit with her nor would he grant her her freedom. Once they knew of her complaint, all the women of Medina searched for the Messenger of Allāh and told him, “All of us are in the same situation as Kubayyāh, except that the right to marry us is not inherited by our sons but by the children of our paternal uncles” (al-Wāhīdī, Aṣḥāb al-nuṣrāf, Cairo 1315, 108). Thus in the minds of the women of Medina, marriage to a parallel cousin was similar to that of a son to his father’s widow, sc. a right of succession. In neither case did the woman have any free will; at one time, she could belong to her husband’s heir, and at another to her father’s future heir.

All this raises the question of the status of the Arab woman regarding inheritance before Islam, a much-debated issue. It is generally thought that at Medina she was disinheritied for the same reason as children: “Only those who fight and defend property can inherit.” At Mecca. a trading town, the system of succession may have been more favourable, although the sources contradict each other. The words of the caliph ‘Umar are often quoted: “We Kurayışites dominate our wives; at Medina we find the men are dominated by their wives” (al-Bukhārī, Sāhīh, Cairo 1376, vii, 25). Obviously, the writer here is not concerned so much with the system of inheritance as with e.g. the behaviour of the women. It is difficult to imagine that a woman who behaves like a virago to her husband will display docility when her property is under attack. In any case, whether the woman was from Mecca or Medina, she would receive presents from her kāhid “friend”, her husband, and her relatives. She could even have a personal fortune and administer it as she pleased, as did Khadīja, who ran her own business. She might even receive part of the inheritance by will.
Many orientalists feel that the reforms introduced by the Qur'ān to help women were inspired by the system of inheritance used in Mecca; but that thesis has been challenged. We shall therefore assume that in several verses of the Qur'ān it clearly states that the woman, be she mother or wife, had wealth which on her death reverted to her husband or children (IV, 12, 37, 175). In the circumstances, the Qur'ān must only have recorded what was a known fact. It would be difficult to explain in any other way the compulsion brought to bear on a widow to make her buy back her freedom by giving up part or all of what she had received from her husband. Besides what money she could earn from her own work (weaving, husbandry, beauty care, singing and dancing), she had other opportunities to be materially independent, thanks to matrimonial customs approaching free unions.

The four other types of marriage mentioned above (types 3, 4, 7 and 8) could assure the woman of a more or less comfortable existence. They are rooted in a matrilineal conception of relationship, and assume that the woman enjoys a fairly large amount of sexual freedom. In a society founded on the code of honour of the desert, even prostitution would be interpreted as a sign of tolerance in sexual matters, since the woman could also engage in this activity for her life. Furthermore, she is able to take a khaban who pays for the services thus rendered by a sadak. Group marriage and mut'a also confirm the existence of matrilineal customs. In a temporary union, while still living within the group of relations, she grants her favour to a man and receives a payment in kind (a dress, a measure of dates or flour), and it lasts for a fixed time, usually three days (Muslim, Ṣāḥib, iv, 130 ff.). The texts say nothing about any child born of this union; probably he would belong to his mother's clan and take her name, as was the case with the child born to a prostitute. The famous Ziyād b. Abīhi [q.v.] was better known by the name Ibn Sumayya in Arab literature, and many men used their mother's name. One cannot for certain whether they were all born from cohabitation; it simply implies that the system of matriliney was well-known to the ancient Arabs. There are several examples: the king 'Amr b. Hind, the poets Sulayk b. Sufaka, Ibn al-Dumayna (Aghdni, xv, 350), Ibn al-Tahṣiryya (ibid. xv, 385), Ibn al-Haddāsiyya (ibid. xiii, 3), Ibn Dabba (ibid. vi, 307), etc.

Very many tribes have a woman as eponymous ancestor, such as the Āmila, Badjila, Khindif and Kayla. There are also numerous examples of matrilocality. The poet Ma'in b. Awṣ [q.v.] took advantage of a visit to Bṣra to marry a woman whose guest he was. He spent a year with her and then asked her permission to go back to his first wife (Aghdni, x, 352).

Whatever interpretation is put on these customs, they certainly show that the pre-Islamic Arab woman enjoyed much more freedom, even in sexual matters, than is generally supposed. Whenever the outcome of a battle seemed uncertain, the chief would place his daughter in a litter among the warriors in the hope that it would stimulate their excitement, and the prospect of such a marvellous reward would lead to victory. On the day of tālāk, the two daughters of Fīlād al-Zimmānī, like she-devils, undressed among the warriors and sang love songs to give them more courage (Aghdni, xx, 345). On the day of Uḥd, the same song was taken up by Hind bint 'Uṯba among the ranks of Kūra'ysh (Aghdni, x, 238).

It was the custom, especially for the tribes from the South, like the Kinda, the Ḍharm and the Banū ʿUḏhrā, to let a man speak to the girl he loved of his sentiments (e.g. Aghdni, vii, 218, 219, 234, 263). However, when the suitor pressed his claim, the girl's father, feeling a scandal, might ban him from the house and decline his offer of marriage. The most famous example is that of Tawba b. al-Ḥumayyir and Laylā al-Ākhyāyiyya [q.v.]. Imruʿ al-Ḳays celebrated his love affairs in his Mu'allaḳa. Al-_FARAZDĀK once surprised some girls bathing in a pool and exclaimed, 'By God! It's like the day of death!' (Aghdni, xix, 52). Men and women might meet on many occasions, in the pasture lands, at wells and even in the tents. A woman would converse with men and have guests when the master of the house was away. The big annual fairs, which served well for arranging marriages, were frequented by women, poesettes, trades-women, inquisitive women and those eager for a sexual relationship, whether regular, temporary or licentious. In the first century after the Hijra, while pursuing beauty, ʿUmar b. Abī Rabīʿa took advantage of the pilgrimage season to embark on some amorous adventures. On the question of the veil, see muḥājib. Not only could the pre-Islamic woman converse with men (cf. Aghdni, xix, 306) but by tradition she had the right to protect them. Fugitives from the ranks of the Banū Anṣār found sanctuary in the tent of Subayya b. Ḥassān al-Shams (ibid., 161). When harried and pressed and in danger of his life, the well-known yaʿtik Sulayk b. Sulaka sought refuge with a woman who belonged to his enemy's clan. Without hesitation, she defended him from his pursuers, covered him with her mantle and took up a sword to drive off those pursuing him; but, being outnumbered, she uncovered her hair and managed to get herself and others to the rescue. The fugitive thus escaped death (Aghdni, xviii, 320; cf. xx, 380 ff.).

However a man might behave himself towards his wives and female relatives, he expected strangers to show them the greatest respect. To cast a slur on a woman's honour was to throw down the gauntlet. Chroniclers say that the cause of the war of the Fitḏjar (Aghdni, x, 152) can be attributed to a joke in very bad taste. The victim of the joke was a woman of the Banū ʿĀmir who let herself be courted by the young men at the sīk of ʿUkaz.

There is considerable evidence of a considerate attitude to women, but nevertheless they did not escape the hazards of war with the risk of captivity. Her conqueror would rarely spare her the ultimate humiliation of making her grace his bed (Aghdni, xix, 340 ff.). Islam permits sexual relations with prisoners of war (Muslim, Ṣāḥib, iv, 158; 170; cf. Aghdni, xii, 370); married women are not excluded (Aghdni, xix, 25, supported by a verse of al-_FARAZDĀK); but pregnant women must not be approached (Muslim, iv, 161).

Even before Islam repudiation (tālāk) was known to the Arabs. A man could send away his wife simply by unilateral decision. All he had to do was to recruit the formula anti ṣāliḥa. Another formula, with incestuous overtones, lent more gravity to the situation, but it belonged to the zīhr and was forbidden by Islam (Kūrān, LVIII, 2). The man would say to his wife, anti ʿalayya ke-zahrī ummi, "To me you are like my mother's back". When the woman desired to separate, the man had recourse to ḥūl; he would agree to restore her freedom on condition that she gave him back all or most of the property he had given her (cf. Kūrān, II, 229); the arrangement by the rescuer (if provided the financial agreement is mutually acceptable). There were two other ways, rather more exiguous, by which a man could force a woman to
return to him what she had been given by him. The 
ild3 was a temporary interruption of the marriage and
could last for up to two years. The Kur‘an reduced the period to four months (II, 226). There was also the
‘adl, which was prohibited by the Kur‘an (IV. 9).
In the face of all this oppression the woman seemed helpless, yet there are records of women wanting to
safeguard their independence, who only agreed to marry if they were granted the right to leave their
husbands. Such women appear to have belonged to the higher social levels, and appear at Medina as well as at Mecca, among the sedentary communities as well as among the nomads. One cannot speak in this
connection of polyandry, but they certainly changed their husbands very frequently. Al-Maydání has
recorded the names of some of them, the most famous one being Umm Khāridja, who is said to have
married about forty times and whose hardiness in marriage became proverbial (Amthdl, proverb no. 1871, Cairo 1959, 1, 348; according to Ibn Habih, Mubahhar, 436, she married only about eight times).
Islam, it is true, allowed only men the right of
repetition, but the women of the Kuraysh aristocracy sometimes behaved like their independent sisters of the old régime. Because of their nobility, they were much in demand, and so they married many times; in this way, they were able to amass large fortunes and establish themselves as one of the better families of Mecca. This made it hard for their husbands (Aghani, xviii, 468). One of these women, the famous ʿAilha bint Talha [p. v.], even repudiated her husband by using the ancient formula of the zihār; she would not go back on her
oath until she was convinced that it was invalid (Aghani, x, 106).
In the pre-Islamic period, a widow would observe a delay before remarrying. When her husband died she
would be shut away, wear her oldest clothes and use no perfume. After a year, she would come out from
her place of withdrawal and throw a clod of mud. From that time onwards, she could lead a normal
life (al-Bukhari, Sabil, vii, 52). This period was shortened by Islam to four months and ten days (Kur‘an, II, 254), during which she might not use perfume or go out. When she received condolences, if she wished to remarry she remained seated; otherwise she
would stand (Aghani, x, 114).
These details have been given so that the status of
women during the period of the Hidjra can be understood in the light of tradition, but these customs
do not necessarily have any legal force. There are many problems still to be solved about the position of
women in traditional law, and the pre-Islamic material is too scanty to help in solving them. The
Kur‘an and the early fiqh accord a considerable part to traditional customs, but Islam also provided a new
outlook here by giving women a legal position, even though it is a diminished one, for she only counts as
half the value of a man. It is not clear whether this is
new legislation, or merely an adoption of old customs. Rather than waste time in conjecture, it seems worthwhile to study the behaviour of pre-Islamic Arab nomads.
Being Muslims, they have probably been influ-
enced by that faith, notably in regard to what concerns their personal status, even though its influence
may not be very deep. More than one modern custom is in direct contravention of the gharr. Woman is systematically disinherited and her evidence is often disregarded; marriage by exchange is frequently prac-
tised, and in blood revenge, equality is demanded. Clearly, the permanence of pre-Islamic customs here proves the lasting influence of the fighī. Traditional
rights are still decided this way in the Yemen. Not all
the pre-Islamic customs still thrive in Bedouin society, but the prevailing legal framework observed by them has been inspired by that tradition. They bear the mark of the desert, the same influence that has shaped all the Semitic nomads.
c. The legal status of Bedouin women.
The birth of a daughter is no cause for rejoicing. She is of so little account that if a Bedouin is asked how many children he has, he deliberately misses out the females. For the same reason, the strength of a tribe is measured purely by the number of warriors it
can muster.
A girl’s education is left entirely in the hands of her
mother. From the time she is able to be of the smallest service, she is made to help with the domestic chores. From infancy onwards, excision is practised; some-
times it occurs just before marriage, which can take place when the girl is very young, often before she is ten. This occasion is of great importance for the father, for it falls to him to fix the amount of the dowry which he generally keeps for himself. It usually happens that the girl, whose opinion is rarely sought, has been promised from birth to an agnate relative, notably to her first paternal cousin, who has a pre-
emptory right over her. He often uses this right and
abuses it, for he can carry off his bent “am” on the day she is married, and so take life for life from the culprit. If they catch him, he does not usually escape away. It is severely condemned in Bedouin society, even when it is done with a view to marriage. When it becomes known that a woman has been taken off, all the agnate relatives set off in pursuit of the culprit. If they catch him, he does not usually escape death, and the ravished woman may suffer the same fate. In fact, the treatment they each receive depends on the intentions of the abductor and the civil status of the woman he has taken.
A man who wishes to marry may encounter opposi-
tion from the girl’s parents, and so he may, with her consent, resort to abduction. Provided it is carried out in good taste, his actions are looked on somewhat indulgently, but it must take place in the presence of
a trustworthy witness who has been enlisted to help in the operation. He must guard the girl, bring her to a safe place until vouch for the fact that everything was conducted honourably. With such assurance on the father, the latter will usually give his consent but ask for a high dowry. If the abduction is followed by illicit sexual relations, the man and the girl will be punished with the same severity as lovers who are caught in the act. If the abduction has been carried out against the wishes of the girl, the action is treated as rape. The man must offer to make amends by marrying the girl, and considers himself lucky if it is accepted. A dowry will then be required of him equal to the price of her blood. In addition, he is required to offer in marriage a girl who is a close agnate relative to the father, brother or paternal cousin of his future wife without a dowry.

To abduct a married woman, even with her consent, brings severe disapproval from Bedouin society. It can lead to reprisals, often violent from the husband in the first place, but also, and above all, from the agnate relatives of the unhappy wife. Death awaits the lovers. They will escape their fate only if they can find refuge with some powerful person or influential leader. In order to save his guests, this person must bring the husband to recite the repudiation of his wife, and to allow the girl to remain in his possession. He will also have to offer his parents the consent to the marriage. The abductor in turn must give one or more girls in exchange for the wife.

If any woman is suspected of having an illicit sexual relationship, whether she is a girl or a married woman, widowed or divorced, she finds herself in great danger. If gossip about her continues, she runs the risk of being killed by a close agnatic relative. Absence of proof of the alleged misconduct is not regarded as proof of innocence. It is customary to exonerate her or to condemn her by adopting one of the following procedures. Her father or guardian may request that a court of justice summon her lover, about whom the rumours are circulating, and that they make him swear that the accusations being made against him are untrue. It is remarkable that the woman stays away from this judicial action, even though her life depends on it. Her presumed partner must stand before the judge, and it is he who must take the oath. Women are considered to be legally incapable, and so are seldom authorised to appear before a Bedouin court even as simple witnesses. Certainly, if it should happen that there are no male witnesses in a particular case, a judge might agree to hear a woman's evidence, but solely for his own information. A woman's evidence is only acceptable in law when it concerns another woman. A quicker way to judge a woman's guilt is by subjecting her to the ordeal of bugh'a. If the evidence according to this procedure is against her, it is not uncommon for her to be put to death by a close agnatic relative.

The reputation of a woman for whom he is responsible evokes an uncompromising attitude among the Bedouin. Abduction, adultery and rape all taint her honour, and their guilt can be washed away only by a blood-bath. But it always appears to be the woman who pays the price, and there is a quick, private system of justice to punish any girl who has compromised her reputation. Traditional Bedouin law relating to illicit love affairs is so complex that it is impossible to survey the main features briefly and accurately. Consideration must be given to the civil status of the woman or girl, whether she is married, widowed or divorced, her religious status, her connivance with or opposition to her ravisher, the resistance she displayed, the circumstances under which the crime occurred, and the time and place of the rape or attempted rape. It would obviously be tedious to dwell on these points. However, the culprits caught in the act are generally put to death. Their blood has been spilled, which means that the one exacting justice will not be pursued for that action and the dya will not have to be paid. The agnate relations may be less severe with a young girl who is seduced, and may let her off with her life, but the abductor must then marry her and must give a girl from his close family without asking for a dowry. He will also be forbidden to repudiate his wife because of these special circumstances.

It is probably unnecessary here to struggle through the labyrinthine procedure of the 'urf on matters of illicit love affairs, but two of the previously-mentioned points are worthy of note: the place and the time of the crime. It may have been committed near the camp at dusk after the flock had returned; or in grazing land when the shepherdess was naturally far away from her family. In the first case, the woman is described as 'akhirat al-sarh,' 'the one who returns behind the livestock' and she is entirely responsible for what has occurred. At that time of day, it is possible that the girl was being pursued by a sexual instinct. He who was so far from her house proves that she was conniving with her seducer. But if she was away at her place of work, then her guilt is somewhat lessened, but she must cry for help (hence the expression mutayyibat al-dahh 'the girl who cries in the morning'). She is therefore spared by her family.

In several places previously, we have mentioned that an illegitimate marriage must be exchanged for a near family, without a dowry, to a member of the injured family. This custom is sometimes observed in a case of murder, when the blood relative forgoes his right of vengeance and accepts a compromise. The wergeld that the family of a murderer must give as compensation may include a young girl, called a ghara in these circumstances. She must be a virgin, white and free. She is given in marriage without mahr to a near relative of the victim, and is reduced in effect to a state of semi-slavery. Although she is legally united to the man whose life she shares, she is not completely granted the status of a wife. She is liable to all the oppressions that a husband metes out to his womenfolk and endures his ill-treatment without being able to have recourse to the protection of her family. The most she can do is to seek refuge with an influential person and ask for his help. Her role is to correct the wrong inflicted on the injured family, by giving birth to a male child to replace the deceased. When the boy is old enough to bear arms, her mission is completed. At that time she ceases to be a ghara, a servant, and becomes barra, free. She can leave her husband, who has no further right over her; if he tries to keep her he must pay the dowry. She is not thought of as belonging permanently to the man who takes her, but is handed over by her family against a guarantee that she will be returned to them when she has finished her task. Even when the conditions of a woman's marriage are perfectly normal, she is still legally dependent on her own family. It is their responsibility to defend her, and it also falls on them in the end to avenge her blood.

One point of interest here is often passed over in silence, but deserves to be mentioned. Although by marriage a woman must be entirely submissive to her new master's will and must follow him and live together with him, for all that, she is not his property.
She is like a precious investment placed in his hands and which is entirely at his disposal. He may rebuke her, he may even hit her, but he is not allowed to injure her or attempt to take her life, for he is answerable to his parent-in-law for his conduct. He is perfectly within his rights to kill her if he actually catches her in the act of adultery, but then he may not ask for the return of the dowry he has paid. He would be entitled to a return of the dowry if he simply repudiated her, and he would then leave her relatives to wash away their shame in the culprit’s blood.

The married woman depends, legally speaking, on her own family in most situations. It falls to her father, brother, uncle or paternal cousin to chastise her if she is at fault, and to avenge her blood if she is a victim of murder. Unless the husband is also the paternal cousin, he must restrain himself from any violent action and be content to have the dowry paid back to him.

The Bedouin woman is not handed over defenseless to the despotic rule of her husband. It is even probable that she often exerts a good influence on him. In his absence, she may offer hospitality and shelter to a fugitive. Even if her natural defenders, her agnatic close relatives, disappear or are at a distance, she is not left entirely without defence. If she is ill-treated by her husband she can put herself in the protection of a distinguished person as a dakhila, a refugee. It is then up to her husband to ask her if she will resume married life. To do this, he arranges a delegation of at least three witnesses to inform her of his wishes. This procedure can be repeated three times. If, despite his insistence, his wife remains obstinate in her refusal the husband then has the right not to support her financially any more, if he does not want to dissolve the marriage. If he does not make any of these customary approaches, a Bedouin court can condemn him to pay his wife substantial financial compensation.

The dissolution of a marriage contract may occur in two different ways: repudiation or widowhood. Only the man has the right to divorce his spouse. If he does this without an adequate motive, he cannot reclaim the dowry, as custom enables him to if the fault is the wife’s. This financial aspect to marriage plays an important role when the woman seeks to regain her independence and her husband refuses to recite the liberating formula on his own. There is, however, one circumstance where he is obliged to grant her her freedom, sc. in the case of his impotency. Since a woman’s legal incapacity forbids her to appear before a law court, a relative representing her brings the action against her husband. The latter then has the right to only one-half of the dowry he paid. The divorced woman, like the widow, must observe a period of restraint before remarrying. The 'idda for the Jordanian Bedouin is normally one hundred nights, but often the woman is put back into circulation before the expiry of the minimal legal delay, for she is considered a source of wealth.

Like repudiation, widowhood grants a woman some freedom in her choice of further husband. She may return to her own family, leaving behind all the property left by her husband, or she may stay with her husband’s family and her children. If she is of remarriageable age, the dead man’s brother may marry her. But if the widow has the role of guardian according to the wishes of the de cujus, in which case she cannot also receive his paternal home nor remarry. It is her responsibility to remain at home looking after the children and ensuring the prosperity which she inherited and which will pass to them when they attain the age of majority. Since remarriage is unavailable, she may ensure that she enjoys a normal sexual life by taking a zawjd musarrib “visiting husband”. This type of union is very rare and runs counter to the principle of patriarchy on which Bedouin society is built. Instead of following her new partner, the widow receives him at her house almost as a guest. Whether the man is married or single, he must have his own home to which he returns after visiting her. In this way, the woman retains her freedom since she can dismiss her visiting husband if she no longer wants him. However, it is still he who has the right of repudiation. This is one of the very rare times that a Bedouin woman enjoys much economic independence.

The ‘urf is very strict with women in financial matters. It especially disregards the teaching of the Kur'an which decrees that a daughter shall inherit exactly half the portion inherited by a son. It says that the only people who are allowed to inherit are the agnate males. On the father’s death, the sons possess the property. The heirs must first attend to the needs of the mother and the widows of the deceased.

Daughters are in their brother’s care until their marriage. They must also help their sister both financially and morally if she is divorced, widowed or ill-treated. In return for these services, not only do these brothers exclude them from the inheritance but they also keep their dowries and exchange their sisters when they barter for wives. Custom is no more favourable to daughters in the case of a subsequent inheritance from the mother’s side. No matter how important the total, they receive only the jewelry and the clothes. Even if the price of their mother’s blood is involved, they do not receive anything more.

The problem of the diya for the murder of a woman brings many related complexities. From a purely formal point of view, the ‘urf decrees that a woman’s blood is worth half of a man’s. It is exactly the diya of an unemancipated slave. In reality, this applies when the murder was committed by a person of the same sex or when it happened purely by accident and not as the result of war or raid. A complete diya is required when a woman is unfortunately hit by a stray bullet or in a brawl between two women. Contrarily, in the case of a man, the blood money can in effect quadruple in nominal value, i.e. double that for a man, when the death follows a struggle with a man, even if that man was only defending himself. If a woman dies at or after an attempted rape, the diya becomes from eight to twelve times its original value. In addition, the ‘urf makes a subtle distinction between a single and a married woman. In the latter case, it seeks to establish whether she is pregnant or not. If her pregnancy is confirmed, the sex of the foetus must be determined. Whatever the cause of death, a pregnant woman counts as two people. The culprit will have to pay either the diya for two women or for a man and a woman; of course, the case can be made worse depending on the circumstances and prevailing conditions at the time of the crime.

In conclusion, two comments should be made on the legal status of the Bedouin woman. First, it would be erroneous to pretend that the situation is the same for all the desert Arabs. Customs more or less local may vary, and important variations may be seen from one region to another. But there is good reason to suppose that these variations reflect differences in the letter of the traditional law rather than in its spirit, the perpetuity of the law being firmly guaranteed by its environment. The ‘urf represents one kind of mentality, that of the nomadic Semite, and there are
many similar customs to those described above attested among the ancient Hebrew nomads. Secondly, it would be equally wrong to suggest that this law, even though not enshrined in any written form, is as alive today to the extent it was at the opening of this century. The evolutionary process, less or more active according to the different regions, seems to develop in two directions. There is a marked return to the 'urf, and many persons have tried to prove, in a contradictory fashion, that there is no break in the continuity of tradition between 'urf and sharī'a. On the other hand, central governments have, in a rather more discreet manner, endeavoured to move towards a more modern conception of justice to accord with the general trends in the country. Despite all this pressure, there appears to be a part of sharī'a which seems secure against all modern reforms: that of whiteness of the face, honour and which in its essence is symbolized by woman.

3. In Persia. a. Before 1900. The following will not be concerned with the legal position of women—this has been discussed above in sections 1 and 2—but will focus on their position and role in society. The sources are meagre. Women did not normally leave written accounts of their lives. We know their roles and motives and characters from their own accounts, and it is not to be expected that others should write of them except in very general terms. So far as women are mentioned, they belong for the most part either to the ruling classes or to those who are believed to have made some contribution to the religious life of the community. Among the latter are women of the family of the Prophet and saints. Their lives are recorded in biographical dictionaries and hagiographical works. Their characters are seldom delineated in any but the broadest terms, and the virtues ascribed to them are usually characteristic Islamic virtues. This is to some extent true of the women of the ruling class also. They are mentioned in histories and chronicles because they either played a prominent part in events as regents or in some other capacity and because marriage alliances were an important element in state policy. Women of the middle and lower classes were seldom associated in history, and peasant women are virtually ignored. Much incidental information on women is, however, to be found in the historical literature of the 5th-8th/11th-14th centuries. The anonymous Tarikh-i Shah-i Kirdan written in the 7th/13th century (ed. Muhammad Ibrahim Bastani Pariisi, Tehran Shahin- shahi, 1335/1976-7), and the Sekil-i ult of Nasir al- Din Mungi, written between 715/1315-16 and 720/1320-1 (ed. Abd al-Ikhb, Tehran AHS 1327/1949-50) contain lively accounts of the women of the Kirdan (Kutlugh-Khânîd) dynasty of Kirman, and the Darâmî al-tawârîsh of Rashid al-Dîn Fadl Allah gives much information on the women of the Ilkhanîd family. The sources for the later centuries are less rich, until the 19th century, when there are several important works which give a picture of the activities of women of the ruling class, notably the Tarikh-i 'Adudi of Sulân Ahmad Mirzâ 'Adud al-Dawla b. Fath 'Ali Shah (ed. Abd al-Husayn Navâ'î, Tehran Shahinshahi, 2335/1976-7) Yaddâgîh-ye az zindagi-i manzûs-i Nâsir al-Dîn Shah by Dast 'Ali Mu'ayyir al-Mâmâlik, which grew up as a page in the Kirdan court (Tehran n.d.); and vol. i of Sutâni az zindagi-i man by 'Abd Allah Mustawfi (3 vols., Tehran AHS 1324/1945-6), which gives an intimate picture of life in an upper class family in Tehran; while Taj al-Saltana, the daughter of Nâsir al-Dîn Shah, who was born in 1301/1883-4, wrote an autobiography entitled Khâtirât-i Taj al-Saltana in 1343/1924-5) (ed. Mansûra Ithîhâdiyya and Sirîs Sa'dîwandîyân, Tehran AHS 1361/1982). From the 16th/16th century onwards, Persian sources are supplemented by the accounts of European travellers. These, by the nature of things, are the accounts of outsiders, but as inter-course increased in the 19th century and European women began to come to Persia, the information on the position of women and their daily life becomes fuller. At all periods, there was a difference between townswomen, peasant women and tribal women. The general consensus of the settled population was against the participation of women in public affairs. Townspeople were secluded and played no part in public life; and little is revealed of their influence in family affairs. All houses, other than those of the very poor, were divided into the women's apartments, the andarun, public apartments, the hiran, where business was transacted and male guests entertained. In the richer households, it was customary for eunuchs and female slaves to be employed in the andarun. Peasant women worked in the fields. They did not, however, usually appear unveiled in public before the opposite sex.

In tribal society, great weight was given to the bond of blood relationship, and the woman's role in establishing this was of great, perhaps paramount, importance. Marriage alliances consolidated tribal federations and marked the entry of new tribes into existing federations. The exchange of women was also a method of terminating blood feuds. The nature of tribal society was such that women enjoyed a status and function which was, on the whole, denied to them in settled society. Tribeswomen did not normally veil. They played an active part in the daily life of the tribe and often in the management of tribal affairs (cf. Sir John Malcolm, Sketches of Persia, London 1845, 154-5).

In all classes and sectors of society, child marriage and the marriage of cousins were normal practice.

Encyclopaedia of Islam, VI
Among the richer classes, polygamy was common. Rivalry between the inmates of the haram to secure favour for their own sons was of frequent occurrence. Remarriage of widows and divorced women was also common [see mut'a and nikah].

With the rise of the Saljukids [q.v.] in the 5th/11th century, women of the ruling class began to play a more active role in political life. The reason for this is probably to be sought in their Turcic tribal background, even though the Saljukids were to some extent separated from this once they had become the rulers of an empire. From the time of Toghril Beg onwards, marriage alliances with local ruling families became common and with the caliphate was an important aspect of Saljuk policy. This was also true of the succession states. The sons of Saljuk mothers do not appear to have had precedence over the sons of other wives, nor, in general do the sons of free women appear to have had precedence over the sons of slave women or concubines. Some of the wives of the sultans had their own amirs and establishments; some held abdo's [q.v.] and landed property; and some disposed of considerable wealth. The office of wasir to the wife of the sultan was sometimes a stepping-stone to an important office under the sultan. Several "royal" women played a prominent part in public life. Toghril Beg is reported to have consulted his chief wife Atun Qdah in affairs. Sibt b. al-Djawzi states that she was a regress of the Ilkhan and given to charitable works, of good judgement and firm determination (Mir'ai al-zamàn, ed. Ali Sevim, Ankara 1968, 75; cf. also Ibn al-Djawzi, -Muntazam, Haydarabadd, Deccan 1938-40, viii, 218). Terken Khät'un, the chief wife of Malikgäh, was a masterful and ambitious woman. She and Zubayda Khät'un, another of Malikshâh's wives, vied with each other in order to secure the succession of their respective sons after the death of Malikgäh. The former appears to have had a sizeable force of military slaves at her disposal.

Some of the wives of the amirs and atabegs were also prominent women of the ruling class. The Ilkhanids, for the most part, appear to have taken their wives from the Mongols, tribes and through them to have retained their links with the Mongols in Central Asia and China. They also concluded marriage alliances with local ruling families, whose daughters they took into their harams. Such alliances had benefits for both parties: the local rulers assured their own positions, even if only temporarily, while the Ilkhanids were able through such unions to bring outlying provinces more closely under their control. But while local women were taken into the establishments of the Ilkhanids, women of the Ilkhanid family and of Mongol nobility are seldom recorded as having been given to local rulers. The women of defeated enemies, so far as they escaped massacre, were regarded as part of the booty and were taken into the establishment of the Mongol princes and army commanders.

The wives and daughters of the Ilkhanids and Mongol princes enjoyed a privileged position vis-à-vis the rest of society. They received a share of the booty and took part in the kurultays [q.v.] held to acclaim or appoint a new Ilkhan. Many of them accumulated great wealth. Ögedei's chief wife Torgene and Guïyk's chief wife both acted as regent on the death of their husbands. Sultana Kamkâh Toghril, who was married to the Ilkhan Hulegu, was put on the throne with the help of Shaykh Hasan, the grandson of the Amir Öçan, in 799/1338-9, on the grounds that the right of the throne was hers since no male member of the house of Hulegu remained. In fact, however, the kingdom passed to the Öçanids and the Öçali tribes. In spite of the prestige and authority enjoyed by the women of the Ilkhanid house, their freedom was limited by custom and their position was, in many respects, one of subjection. On the death of an Ilkhan, his wife passed to his successor or to one of his uncles, brothers or sons. If accused of plotting against the Ilkhan or of some other misdeemour, Ilkhanid women were not immune from trial by yargh [q.v.], the bastinado and even execution, whether guilty of the crime of which they were accused or not.

The senior wives of the Ilkhanids had their own ords. Junior wives were often placed in the ordu of a senior wife. Imperial concubines were distributed among the ordu of the Ilkhanid's wife. Some were in due course promoted to the status of a "full" wife. On the death (or disgrace) of their wives, the Ilkhan would remarry with a daughter of his emirs or of his ordu, and it proved difficult to determine exactly the composition and size
of the ordus of the Mongol princesses. By the time of Ghazan, many of them were large and powerful establishments. The Mongol princesses also sought to bring the ordus of the princesses under their control and to use their revenues for military and other expenditure (see further Lambton, Continuity and change in medieval Persia: aspects of administrative, economic and social history 5th/11th to 8th/14th century, forthcoming; Spuler, Die Mongolen in Iran, Berlin 1968; see index under Frans; Shirin Bayangi, Zan dar Iran-i 'Ushdi-i Maghul, Tehran AHS 1352/1974).

The position of women under the Timurids resembled in many ways their position in the Ilkhanate. Timur himself seems to have chosen wives mainly of Mongol origin for himself and his family (H. Hookham, Tamburlaine the conqueror, London 1962, 72). They had their own quarters in the royal camp (Clavijo: embassy to Tamerlane, tr. G. Le Strange, London 1928, 242-3, 268, 271). They appeared in public at royal feasts and on occasion gave banquets themselves, at which they appeared only lightly veiled before their male and female guests (ibid., 237, 244 ff., 275; cf. also Mu'in al-Din Natanz's account of a great feast given by Timur in 806/1403-4 at which women were present, Mantaddab al-tawarikh ed. J. Aubin, Tehran AHS 1334/1956, 398 ff.).

Under the Kara Koyunlu and Ak Koyunlu, women of the ruling class continued to play an influential role, especially through the establishment of kinship links (see J. E. Woods, The Aygunylu: clan, confederation, empire, Minneapolis and Chicago 1976). Marriage alliances in the early Safavid period also were an important means of consolidating the ruler's influence. Tahmasp was allied in this way with powerful amirs and local rulers (see Iskander Munshi, A'tlamara-yi 'Abbas'i, Tehran AHS 1334/1956, 2 vols., i, 125 ff., for mention of his wives); his sister was married to the religious leader, Islam Shâh Ni'mat Allâh Yazdi, and a daughter of this union was married to Tahmasp's son, Ismâlî Mirzâ (ibid., 132). Zaynab Begum, one of Tahmasp's daughters, whose mother was a Georgian woman, was, according to Iskander Munshi, highly intelligent and acquired great influence with 'Abbas I, into whose harem she passed. She was known for many charitable works and benefactions (ibid., 135). Pari Khân Khânâm, another of Tahmasp's daughters, played an influential part on her father's death in promoting the accession of Ismâlî Mirzâ. After his accession, she fell from favour, but after his death, on the accession of Muhammad Mirzâ, she exercised great influence in the government of the country. Great rivalry existed between her and Muhammad Shâh's wife, Mahdî Awiâyâ? Khâyir al-Nisâ? Begum. Pari Khân Khânâm's high handed behaviour aroused the enmity of the Kizilbash amirs and she was eventually murdered by them. Khâyir al-Nisâ? Begum then took upon herself the government of affairs because of her husband's defective eyesight. She too was murdered by the Kizilbash amirs, who resented her interference (see ibid., index under Pari Khân Khânâm and Mahdî Awiâyâ? Khâyir al-Nisâ? Begum, and Mahmûd b. Hidayat Allah Afuhaqâ; Nânakâvit al-âshrâ', ed. Isbân Ihsânî, Tehran AHS 1350/1971-2, 21, 72, 250). Khadija, another of Tahmasp's daughters, was married to Dâmghân b. Sultan Ahmad, the rival of Biya'i Pas in Gilân (see 'Abd al-Fattâh Fumini, Tarikh-i Gilân ed. M. Sotoodeh, Tehran AHS 1349/1970, 51-6).

As the Safavids moved away from their tribal background, the influence of their women was increasingly confined to harem intrigues. Already under Tahmâsp, large numbers of concubines and slaves, especially Georgians and Circassians, were introduced into the royal harem. This trend continued, and with it the power of the eunuchs of the palace greatly increased. The general deterioration in the position and status of the royal women in all probability spread among other ranks of society also (cf. Jean-Baptiste Tavernier, Voyages en Perse, Geneva 1970, 282-4; Du Mans, Estat de la Perse, Paris 1890, repr., 1969, 27-5; Chardin, Sir John Chandos travels in Persia, with an introduction by Brig. General Sir Percy Sykes, London 1927, 222). The status of the mother appears to have had little influence on the choice of the wa'idh. The mother of the shah was the most important lady in the harem; after her came the shah's wives and then his favourite concubines (E. Kaempfer, Am Hofe des persischen Groischen 1684-1685, tr. W. Hinz, Tübingen and Basel 1977, 232). When the ladies of the royal harem went out, the district through which they were to pass was declared tmruk (a reserve), and those who inadvertently strayed into the road were beaten and sometimes done to death by guards and eunuchs (cf. Tavernier, op. cit., 284; Du Mans, op. cit., 95-6; Chardin, The coronation of Soylamy the III, published with The travels of Sir John Chandos into Persia under the reign of Tahmasp, and the travels of Monsieur de Thevenot into the Levant, London 1687, repr. 1971, pt. 2, 99). The practice of tmruk continued in a modified form under the Kâdgârs. Males were expected to turn their faces to the wall when the royal women passed by (see Curzon, Persia, 2 vols., London 1892, i, 404).

The accession of Shâh Sultan Husayn (1105/1694-1722), the last of the Safawids, was largely secured by his great aunt Maryam Begum, a masterful lady who exercised great influence. The shah took an inordinate pride in his harem, the scale and magnificence of which became a drain on the treasury. It was not uncommon for beautiful women to be seized by his officers and sent to his harem, as they had been in the reign of his predecessor, Shâh Sulayman (1101-17), who ordered the fall of the Safavid dynasty and the Afghan occupation of Persia, Cambridge 1938, 36, 41, 47-8). Muhammad Hâghim A'ash Rustam al-Hukamâ alleges that there were nearly 1,000 beautiful girls of varying provenance in Shâh Sultan Husayn's harem (Rustam al-tawarikh, ed. Muhammad Muşhirî, Tehran AHS 1348/1969-70, 70-1).

Akâ Muhammad Khân (1193-1211/1779-97), the first of the Kâdgârs, took the daughters and women of defeated enemies and rebels into the royal harem as hostages to lessen the likelihood of rebellion and to consolidate his rule. He also sought to heal the breach which had occurred between the Koyunlu branch of the Kâdgâr tribe, to which he himself belonged, and the Develu branch, by the marriage of his nephew and successor Fath 'Ali to the daughter of Fath 'Ali Khân Develu [see KADJAR]. On one occasion, when Akâ Muhammad Khân, was absent from Tehran, it was arranged that his sister should receive an envoy from one of the khans of Turkistan, sitting behind a curtain to do so. This, however, gave great offence to the head of the Afsâr tribe, either because of its supposed impropriety or because he had not been consulted (Mustawfi, op. cit., i, 23-4).

From the reign of Fath 'Ali Shâh onwards, there was a great increase in the size and expenses of the royal harem, the numbers in the various sections of the eunuchs employed in the palace ('Adud al-Dawla, op. cit., 54 ff. See also Malcolm, Sketches of Persia, 220; J. AL-MAR}
Morier, A journey through Persia, Armenia, and Asia Minor to Constantinople, in the years 1808 and 1809, London 1812, 225, 259; Mustawfi, op. cit., i, 40-1. Mu'ayyir al-Mamalik mentions the imprisonment of Nāşir al-Dīn Shāh (1848-96) at over 3,000; when the shah moved to summer quarters in the hills near Tehran, he was accompanied by a vast cavalcade (Yādaḵāt-hār-e ʿaz zindagānī-i khashyāt-i Nāṣir al-Dīn Shāh, 106, 127. See also Docteur Feuvrier, Trois ans à la cour de Perse, Paris 1906, 142). Fath ʿAli apparently abandoned the practice of reigning the princes in his audience according to the hierarchy of the royal harem and the rivalries of the royal ladies (Tūrīḵ-e ʿAdudī, 12 ff. Cf. also Malcolm, History of Persia, 2 vols., London 1829, ii, 394, 396; Morier, op. cit., 369. See also the introduction by ʿAbbās ʿĪblāṭ to Shāh-i hāl-i ʿAbbās Mīrzā Mulk-Ārā, ed. ʿAbd al-Husayn Nawāṭ, Tehran AHS 1243-4 (1827-8), and the jealousy and rivalry between the mother of Nāṣir al-Dīn Shāh and the mother of his half-brother Mulk-Ārā.

The female establishment of Fath ʿAli Shāh is in some ways reminiscent of that of the ʿIlkhāns. One of his wives, the daughter of Imām Kūli Kān ʿAfšār Urūmi, gave Fath ʿAli several of her serving maids with appropriate outfits and in due course they bore him children (ʿAdud al-Dawla, op. cit., 15). Lady Shīlī relates how one of the wives of Muhammad Shāh, when he was still ʿāmil ʿashr, bought a Circassian slave-girl as a present for her husband (Glimpses of life and manners in Persia, London 1856, 203-4). Several of Fath ʿAli Shāh’s wives were very rich and had their separate establishments outside and independent of the royal harem, notably Šādī al-Dawla Tāwūs ʿAbduʾl-Karim ʿIṣlāḥī (484), Nātyr al-Dawla (op. cit., 18-19) and Diyāʾ al-Saltāna. The latter’s mother, Maryām Kānānum, was a Jewess. She had been in the harem of ʿĀqā Muḥammad Kān, and after his death was married to Fath ʿAli. Diyāʾ al-Saltāna was a good calligrapher and copied many books of prayers and ziyārat-nāmas. She enjoyed Fath ʿAli’s confidence, and during his lifetime remained unmarried. She often acted as his scribe and wrote his secret letters (ibid., 25). Another of Fath ʿAli’s wives, Sunbul Kānānum, was among the prisoners taken by ʿĀqā Muḥammad Kān during his Kirmān campaign. She enjoyed great favour with Fath ʿAli, and repeatedly interceded with him for the subjects (ibid., 20). Her daughter, Husn Dāhān Kānānum, was a poetess and a ʿūṣīfī. She was married to Amān ʿAlāʾ Kān, the governor of Kūrdistān, and for several years exercised great authority in that province (ibid., 67). Another of Fath ʿAli Shāh’s daughters, Zubayda, who was married to ʿĀli Kān ʿNuṣrat al-Mulk Kārā Gūzūlā, was also a ʿūṣīfī. She lived for many years in Hamadān, where she enjoyed great authority. She went on the pilgrimage and made several visits to shrines in ʿIrāq and Māshhād. She gave many gifts to the poor, ʿayyāb, and mullaṣ, and was noted for her charitable benefactions. Every year, she set aside a sum for her personal expenditure, and for the poor and orphans (ibid., 30-2). Badr-i Dāhān Kānānum, the mother of Fath ʿAli Shāh’s sons Hasan ʿĀli and Huṣayn ʿĀli, the former of whom became governor of Fārs and the latter governor of Tehrān, lived principally in Šīrāz, where she exercised great influence. She interfered in the administration of affairs and enriched her family greatly by commerce and monopolies. She was believed to have made a corner in corn with an accomplice in ca. 1810. Nevertheless, she was reputed to be charitable to the poor and ready to do justice for the oppressed. From time to time, she negotiated a visit to the capital, for which she was generally obliged to make an advance in a considerable present to the king, who then permitted her to return and reside with him as a wife (Morier, A second journey through Persia, Armenia, and Asia Minor to Constantinople, 1810-16, London 1818, 61; idem, A journey through Persia ... in the years 1808 and 1809, 154-5).

Mustawfi describes in detail the harem-khana of Nāṣir al-Dīn Shāh and the discipline exercised in it (op. cit., i, 510 ff.). Nāṣir al-Dīn Shāh’s mother, who presided over it, was a capable woman. She was a granddaughter of Fath ʿAli Shāh; her father was Muḥammad Kāsim Khān b. Sulaymān Kāḏar (see Mu’ayyir al-Mamālik, 172-6; Sheil, op. cit., 9). Munir al-Dawla, one of Nāṣir al-Dīn Shāh’s wives, used to hold a feast for women in Tehran on the birth-day of Fāṭima, after her son Kāmān Mīrzā ʿAlī b. Pir ʿAbbās al-Saltāna became governor of the city in 1277/1860-1, (Abu Ḥasan Buzurg ʿUmd, Az màst khār marṣ, Tehran ASH 1335/1957, 79). On the occasion of Nāṣir al-Dīn’s first journey to Europe, which took place in 1873, it was finally agreed that only one of his wives should accompany him. In the event, the lady returned to Persia from Moscow. The other of his wives to go to Europe was Amān ʿAlāʾ Khān, one of his favourite wives, who went blind towards the end of her life. She was sent to Vienna for treatment, which, however, proved fruitless. She was accompanied by the eunuch Bahram Khān Khāṇādžâ and several women nurses and attendants (Mu’ayyir al-Mamālik, op. cit., 159; Feuvrier, op. cit., 185).

Although women might exercise great authority within the harem, their liberty outside was gravely restricted by the practice of veiling. This enabled them to move freely in the streets, the princess being indistinguishable from the peasant (Glimpses, 212; cf. also Feuvrier, op. cit., 144). She also notes that the mission doctor’s door and house was crowded with women of all ages and ranks (Glimpses, 212-13). Women, other than tribal women, when they went on journeys normally travelled in panniers carried by mules or in litters suspended between two mules. The panners carrying women of the higher classes were canopied by semi-circular tops covered with cloth hanging down like a curtain (Sir Robert Ker Porter, Travels in Georgia, Persia, Armenia, ancient Babylon ... during the years 1817, 1818, 1819, and 1820, 2 vols., London 1821-2, i, 398-9). Tribal women and some of the royal women rode and were often accomplished horsewomen (cf. ibid., 259; Mu’ayyir al-Mamālik, op. cit., 127).
home by private tutors (cf. Mustawfi, op. cit., i, 296–7, 298). Girls up to the age of seven were allowed to attend a makṣah, but the number who did so was small; when they were then too old to go unveiled, their education was sometimes finished at home by female mullās. Girls in well-to-do households were taught to sew and embroider and such other accomplishments as were necessary for the running of the haram. Spinning was the ubiquitous occupation of the poorer classes. Carpet weaving was also carried on by women and children, mainly as a house industry, in many districts, and also in tribal areas. Textiles were also woven by women in many towns and villages. Little is known of the condition of those so employed until modern times [see asār, in Suppl.].

The recreation of women was largely confined to visiting relatives. Marriages, births, deaths and other anniversaries also broke the daily round. The weekly visit to the bath was an occasion which offered the opportunity of intercourse with female friends. Visits to shrines and cemeteries, especially on Thursday evenings, were other recognised outings (see Du Mans, op. cit., 93–4; Sheil, op. cit., 145 ff.; Morier, A second journey, 137, 166). Raasda-khādījān, especially in Saffar and Mubarram, were other occasions for visiting and recreation. Female raasda khādījān usually consisted of groups of young women (Naqsh-i dawlat, 373, 711-12) and also the assemblies for women in Ramādān (Mu'ayyir al-Mamalik, op. cit., 111, 113). So far as women attended mosques, they sat curtained off from the men. They were also segregated at tā'zīyas. In the Tīkīya-yi Dawlat in Tehran, the shāh's women and women of the upper classes had their own separate boxes, while poorer women sat in a separate part of the 'yāt' (Sheil, op. cit., 127 ff; Buzurg Umīd, op. cit., 157–8, and see p. 106 for a description of the procession taking the shāh's standard ('ulāmā) from the royal haram to the Tīkīya-yi Dawlat). Women of the Prophetic family figured prominently in several of the passion plays, but their roles were normally played by men and boys (see P. J. Chelkowski, ed., Ta'ziyeh: ritual and drama in Iran, New York 1976).

Gradually in the second half of the 19th century, changes took place in the position of women, partly as a result of increased intercourse with Europe. Emancipation was slow, but women began from time to time to take part in public demonstrations (cf. the account of a bread riot in Tehran in 1861 during the famine, E. B. Eastwick, Journal of a diplomat's three years' residence in Persia, London 1864, repr. Tehran 1976, 2 vols., i, 288–91). The most notable case was their participation in the movement against the Tobacco Concessions in 1893 was a watershed for their political activities; for the first time women, a hitherto invisible sector of society, had managed to take part in Iranian street politics. In these demonstrations, women proved themselves valuable to the 'ulāmā, who subsequently encouraged them to participate in the uprisings that led to the 1906 constitution. Women mobbed Ṣōrīr al-Dīn Shāh's carriage, organised public meetings and even marched to the Maglis brandishing guns and weapons. But although their activities provided actual and moral support, women were not granted the vote by the constitution. The opposition of the 'ulāmā to female suffrage was extreme: when Ḥādīj ji Wakil al-Ra'āyā proposed their enfranchisement in 1911, the President of the Maglis moved that no record be made "of this unfortunate incident" (Mangol Bayat 1978).

The active participation of women in the constitutional revolution, however, served to heighten their political consciousness and in the years that followed, women formed a number of secret societies and organisations seeking three main objectives: access to education, freedom from the hijāb (veil) and suffrage. It was in the field of education that women had their first success.

Since women were physically and socially confined to the sphere of domesticity, few had had the opportunity of obtaining any formal schooling before 1900. There were, however, exceptional women, some related to the 'ulāmā, who had been educated at home, or, in a few cases, attended schools and were thus able to educate other women. In 1910 one of these, Mrs Ĥubā Azimādā, opened the first private girls' school in Iran, Namūs. Three years later Mrs Vazdi, the wife of a leading mujtahid, opened a second girls' school, 'Iffatīyā. Despite considerable hostility and repeated attacks by mobs, more schools were set up, and finally in 1918 the government capitulated and opened ten state schools for girls as well as a women's training college, the Dār al-Mu'āallimat. This college was subsequently expanded and its courses extended from three to five years. In 1934 it was renamed the Preliminary Teachers' Training College for Girls, Dānīšgāh-yi Makaddamati-yi Dukhāriān. Much of the material taught in the 1920s at the college was subsequently compiled in text books and used for teaching in secondary schools (Badr-ol-Moluk Bamdad, From darkness to light, ed. and tr, Thēvēnōt, op. cit., pt. 2, 293–4; Ker Porter, op. cit., i, 202, 239. 396, 499; Scott Waring, A tour to Shirdi, London 1807. 61–2; Morier, A second journey, 61; Kay Kāwūs b. Iskandar, Kābāš-nāma, ed. Gholām Husayn Yūsūfī, Tehran 1967, 129–31; Nasīr al-Dīn Tūsī, Āfghān-i Naṣīrī, ed. M. Minovī and 'A'īr Rīdā Haydāri, Tehran ASH 1356/1976, 215–22, 229–30; Fāṭhir Kawīmī, Kārnāmā-yi zanān-i makṣār-ī Īrān, Tehran AHS 1353/1974–5; Dāhīb al-Dīn Māhālīt, Rāyshūn at 'ardrār dar tārīqā-yi dawlati-yi Ḥādūs-ndma, 5 vols., Tehran 1375/1955–6; Abu ʿI-Hasan Buzurg Umīd, op. cit., 21–2, 39–40; Mustawfī, op. cit., i, 689 ff. On marriage customs see murrā and nikāh; see also Ker Porter, op. cit., i, 345; Malcolm, History of Persia, ii, 426–8, 440–3; Sheil, op. cit., 143 ff; 'A'dūd al-Dawla, op. cit., 59, 68–9; Mustawfī, op. cit., i, 287 ff, 436 ff. (A.K.S. Lambton)

B. After 1900

The end of the 19th century marked the beginning of a long struggle for emancipation by Iranian women, which culminated in a short-lived success in the 1970s. The participation of women in the public demonstration against the Tobacco Concessions in 1893 was a watershed for their political activities; for the first time women, a hitherto invisible sector of society, had managed to take part in Iranian street politics. In these demonstrations, women proved themselves valuable to the 'ulāmā, who subsequently encouraged them to participate in the uprisings that led to the 1906 constitution. Women mobbed Ṣōrīr al-Dīn Shāh's carriage, organised public meetings and even marched to the Maglis brandishing guns and weapons. But although their activities provided actual and moral support, women were not granted the vote by the constitution. The opposition of the 'ulāmā to female suffrage was extreme: when Ḥādīj ji Wakil al-Ra'āyā proposed their enfranchisement in 1911, the President of the Maglis moved that no record be made “of this unfortunate incident” (Mangol Bayat 1978).

The active participation of women in the constitutional revolution, however, served to heighten their political consciousness and in the years that followed, women formed a number of secret societies and organisations seeking three main objectives: access to education, freedom from the hijāb (veil) and suffrage. It was in the field of education that women had their first success.

Since women were physically and socially confined to the sphere of domesticity, few had had the opportunity of obtaining any formal schooling before 1900. There were, however, exceptional women, some related to the 'ulāmā, who had been educated at home, or, in a few cases, attended schools and were thus able to educate other women. In 1910 one of these, Mrs Ĥubā Azimādā, opened the first private girls' school, Namūs. Three years later Mrs Vazdi, the wife of a leading mujtahid, opened a second girls' school, 'Iffatīyā. Despite considerable hostility and repeated attacks by mobs, more schools were set up, and finally in 1918 the government capitulated and opened ten state schools for girls as well as a women's training college, the Dār al-Mu'āallimat. This college was subsequently expanded and its courses extended from three to five years. In 1934 it was renamed the Preliminary Teachers' Training College for Girls, Dānīšgāh-yi Makaddamati-yi Dukhāriān. Much of the material taught in the 1920s at the college was subsequently compiled in text books and used for teaching in secondary schools (Badr-ol-Moluk Bamdad, From darkness to light, ed. and tr,
F.R.C. Bagley, New York 1977, 60). The increasing secularisation of education and the growing power of the state in this field proved an important factor in enabling women to gain access to education. The next major campaign was directed against compulsory seclusion and the veil.

In the 30 years that followed the constitutional revolution, many dedicated women participated in the prolonged battle for emancipation. Middle-class and upper-class women, some of whom had been educated at the foreign schools in Iran and many of whom were taught by their male relatives at home, formed secret societies and women's groups such as Andijanan-i Azadi Zanân (“Women's Freedom Society”), which included a member of the royal family. In 1910, one of these groups published the first journal to be edited by a woman, Dâniâ, and other journals followed. Some, such as Shûkhâ, edited by Maryam Umîd Muzayyin al-Sulûtân, which began publishing in 1913, were devoted to literature and education. Others were more overtly committed to political emancipation. One such was Zahân-i zanân edited by Siddîka Dawlatbâdî which began publication in Isfâhan in 1919. Despite repeated threats to her life and attacks on her newspaper, Dawlatbâdî continued to oppose the religious establishment and was unable to get to such law enforcement agencies.

In 1910, there were a number of women literary figures, the best known among whom were Parwîn Pitsâmî [q.v.] (1906-41) and Simîn Dângîwhâr, as well as more than 10 women publishers and journalists. In the face of hostility, exile and imprisonment, women such as Shahnâz Azâd, editor of Nâma-yi banâvist (“Women’s letter”) and Afak Parsâ, publisher of Dâhân-i zanân (“Women’s world”), continued to oppose the religious establishment and its move to restrict the freedom of women. In the event, finally found an unexpected ally in Ridâ Shâh Pahlâwî. (For a detailed discussion of women journalists and writers, see Pari Shakhî al-Islâmî, Zanân-i râznâmâgân va andîşgân-dârî-yi Iran (“Women journalists and women intellectuals of Iran”), Tehran 1935/1972, and in Elizabeth Sansarian, The Women’s rights movement in Iran, New York 1982, 32-7).

After the overthrow of the Kâdjars in 1924, Ridâ Shâh embarked on an extensive programme which initially did not benefit women very much. For example, the Civil codes of 1930, although intended to curtail the judicial control of the Shâri’a, incorporated much of the Twelver Shi’i Shâri’a which was the stipulation of a minimum marriage age of seven. Divorced women were required to keep the custody of their sons at the age of two and daughters at seven. Divorced women were required to keep the ‘idda and remain unmarried for two months in case of zigha and three for permanent wives. The only departure from the Shâri’a was the stipulation of a minimum age for marriage: 15 for girls and 18 for boys.

The Penal Code of 1940, though almost wholly European in conception, retained the Shâri’a laws for adultery. The killing of one’s wife, daughter or sister caught in zigha was no longer a capital offence but a misdemeanour and carries either no sentence at all or a short discretionary term of imprisonment. Retribution against an adulterous husband, father or brother, however, is not sanctioned in the same way.

Nevertheless, by 1936 Ridâ Shâh felt sufficiently confident to include women’s education and the banning of zigha into an educational and craft training process. He began in 1935 by giving state recognition to women’s groups and setting up a women’s centre, Kânûn-i bâhunâwân, with a budgetary allocation from the Ministry of Culture and under the patronage of his daughters Aghraf and Shams, and headed by Hadîjar Tarbiyat. In 1937 Siddîka Dawlatbâdî was appointed as the head of the Kânûn and it was reorganised into an educational and craft training centre for women. In 1936, Tehran University began admitting women. It was, however, the outlawing of the veil in the same year and rigorous enforcement of this measure until Ridâ Shâh’s abdication in 1941 which proved a historical landmark for Iranian women. Along with access to education, the abolition of the zigha finally ended their physical and mental segregation and enabled them to participate more openly in the public sphere (see Bamdad, op. cit., 80-3; Sansarian, op. cit., 62-6; Avery, Modern Iran, London 1965, 291-2).

After the departure of Ridâ Shâh, there was something of a backlash against women. Nevertheless, organisations such as the Women’s League, Damîyat-i Zanân, and the Tudeh (Communist) party’s Tasbîkh-i zanân, in Iran, continued to agitate for legal reforms and female suffrage. One of the first things they did, with the resolute opposition of the Majlis, in which they had been enfranchised, the campaign for legal reforms and female suffrage was finally ended their physical and mental segregation and enabled them to participate more openly in the public sphere. In 1936, Tehran University began admitting women. Middle-class Iranian women, many of whom had been educated abroad, saw the religious establishment as the main opposition and sought to circumvent the legislature by taking to the streets. In this they had the tacit support of the Shah’s mother, Aghraf Pahlâwî, who headed the influential High Council of Women’s Organisation, Shûkh-i ‘Aliyî Damîyat-i Zanân.

In January 1963, women organised a widely-publicised and well-supported one-day strike, refused to celebrate the anniversary of the unveiling of women, marched to the Senate and insisted on voting in the Shah’s White Revolution referendum. Although their vote was counted separately, the high turnout, the extensive publicity given to the women’s protests and royal patronage finally enabled them to obtain the vote in February 1963. A year later, there were two women senators and four women deputies in the Majlis. In the struggle between the secular and the religious establishment, the state scored a temporary gain and acquired the wholehearted support of middle-class women.

Once enfranchised, the campaign for legal reforms was intensified. Assisted by the Women Lawyers’ Union and the newly formed Iranian Women’s Organisation (Sâzâmân-i zandân) headed by members of the royal household, Iranian women succeeded in securing radical changes. By 1978 abortion was legalised and, through the Family Protection Laws of 1967 and 1975, the husband’s right to zigha and polygamous marriages was curtailed, as was his discretionary right of divorce and custody of children.

Family Courts were set up and empowered to allow divorced women to claim an alimony over and above the customary mahra. Conditions for working women were also improved, and they gained an entitlement to twelve weeks’ maternity leave and nurseries in work places with more than ten nursing mothers.

On the political level, it was unusual to see middle-class women who benefited from these measures; rural women, though theoretically entitled to nurseries and legal protection, were generally unaffected by these laws and were unable to get to such law enforcement agen-
cies as the town-based Family Courts. There were, however, a number of programmes intended specifically for rural women. For example, the Literacy Corps, the Extension Corps and the Health Corps, were set up in 1968, and despatched women contracept to teach village women respectively to read, produce handicrafts and instruct them in family planning. Of these, by far the most successful was the Extension Corps which taught women to improve their traditional crafts of weaving and sewing and embroidery and which facilitated the marketing of these products through a network of urban shops. Ironically, the ability of rural women to gain their livelihood as craft workers reinforced the parental reluctance to allow them to go to school, since schooling merely deprived the family of their daughter's all-too-valuable labour without giving them any substantial returns (for a case study on this, see Haleh Afshar, The position of women in an Iranian village, in Feminist Review, no. 9 [Autumn 1981], 76-8). Thus despite numerous literary campaigns, nearly 95% of rural women remained illiterate. J. Rudolph Toubia, Relations between urbanisation and the changing status of women in Iran, in Iranian Studies, v/1 [Winter 1972], 29, and Borrass Sáslivári, in Amádá-í Djanábdi-í Tóxiq-í-í Yéf, in [New York, Summer 1357/1978], 191.

Even for urban women, successes of the 1970s were short-lived. Although the Shah appointed one women minister, an ambassadress and nearly 40 women judges, his modernisation policies did not benefit the mass of the poor rural and urban dwellers, male and female. Welfare legislation remained unimplemented and the bulk of Iranian women continued working in the informal sector without security and for minimal wages. It was the combination of poverty and illiteracy that kept rural women so responsive to the extensive campaigns waged by the religious establishment against the Shi'a. In the early seventies, Ayatollah Khomeyni emerged as the charismatic leader of this opposition. Khomeyni appealed directly to women to abandon their unrewarding tasks given the extensive campaigns waged by the religious groups, and to bestow the dignity of motherhood and domesticity to women as an important support base and secured them the vote (H. Afshar, Khomeyni's teachings and their implications for Iranian women, in A. Tabari and N. Yege, in The shadow of Islam, London 1974, 17-103; Nahid Yeganeh, in The shadow of Islam, in Islamic Republic in Iran, in op. cit., 30-7; Ayatollah Tálikání, Ínhaj, English tr. in op. cit., 103-7; Nahid Yege, Women's movement in the Islamic Republic in Iran, in op. cit., 26-74. 5. 4. In Turkey [see Supplement].

5. In the Indo-Pakistan sub-continent.

The evolution of Muslim social polity in India, from the earliest date of advent of Islam in the sub-continent in the 2nd/6th century, has been constantly affected and acculturated by the indigenous cultural environment. In this process, the status and role of Muslim women also underwent significant changes throughout the ages. The earliest accounts indicate that among the Turkish settlers women enjoyed a respectable position; they even took an active part in state affairs. Seclusion was not strictly enforced during the earlier centuries, but began as a rigid practice during the 4th/10th century.

During the Dihll Sultanate period (7th/13th century), despite strict seclusion of women, ambitious ladies of royal households often played decisive roles in intricate affairs of succession to the throne. Shāh Turkān (wife of Ilutmīsh and mother of Rukn al-Dīn Frūz Shāh I) and Malik-yi Dāhān (wife of Djalāl al-Dīn Frūz Shāh II) had succeeded in effectively outmanoeuvring the male-dominated courts by installing on the thrones the princes of their choice and wielding absolute power in their behalf. Ilutmīsh's daughter, Rādiyya Sulţāna, even succeeded in ascending to the throne herself and ruled for four years (634-7/1236-40). The records of the Tughlūk and Lodi dynasties are also full of accounts of royal ladies often playing leading roles in state politics.

The harem life from the Sultanate period down to the Lodi dynasty (i.e. in the pre-Mughal era) was centred around the ladies of royal households, with their dependents, maids, slaves and eunuchs. Seniority in rank among royal ladies was a major factor in commanding both respect and power. Seclusion was so strictly observed that even outside women were not permitted to enter the harem enclosures. The princesses and girls of higher classes received Kur'ānic and literary education at home from learned tutors (ladies as well as elderly men). In regard to literary and artistic talents, there are numerous instances of outstanding achievements by ladies. Rādiyya Sulţāna was a noted poetess; Dhūghtar Khāṣṣa, Nusrat Bibi and Mīhr Afruz had mastered the art of dancing; Fūţula and Nusrat Khaṭṭān were famous musicians of their times.

During the Mughal period (1362-1428), although the practice of seclusion had become more intensive and was considered as a sign of respect— even royal decrees were issued for observing strictly the rules of purdah (seclusion)—women of the royal households and upper classes played perceptible roles in state politics and achieved high merits in literary accomplishment. On occasion, Nur-i Dāhān (wife of Djalānī) broke the purdah convention and did not mind coming out in public. In fact, she was the real power behind the Djalānī throne. She also led an army expedition against Mahāhābat Khān [see].

In southern India, during the same period, Sulţāna Cānd Bībī personally defended the fort of Ahmadnagar against the mighty forces of Akbar, and Mahāhābat-yi Dāhān ruled the Deccan as a regent on behalf of Nizām Shāh of the Bahmani family.

In literary achievement, the Mughal period provides a long list of ladies of distinction. Dāhānārā (second wife of Shāhdāhān) was a noted biographer; Gulbādān Begaq was the author of the Ḥumayūn-nāma, and Dījān Begaq (daughter of Khānī- Khānān) wrote a commentary on the Kur'ān, for which she received from Akbar an award of 50,000 dinārs. Among the famous poetesses of this period, Salīma Sulţāna, Nur-i Dāhān, Sitt al-Nisā' and Zīb al-Nisā' (eldest daughter of Awarangzīb) were outstanding.

The decline of the Mughal dynasty towards the middle of 12th/18th century heralded the emergence of the modern era in Indian history. The incoming European powers (Portuguese, Dutch, British) were in the process of consolidating in the subcontinent their political and military powers, which eventually weakened the power bases of Muslim courts in northern as well as southern India. With this shift of power, the practice of seclusion had become more intensive and was considered as a sign of respect— even royal decrees were issued for observing strictly the rules of purdah (seclusion)—women of the royal households and upper classes played perceptible roles in state politics and achieved high merits in literary accomplishment. In this process, the status and role of Muslim women also underwent significant changes throughout the ages. The earliest accounts indicate that among the Turkish settlers women enjoyed a respectable position; they even took an active part in state affairs. During the Mughal period (1362-1428), although the practice of seclusion had become more intensive and was considered as a sign of respect— even royal decrees were issued for observing strictly the rules of purdah (seclusion)—women of the royal households and upper classes played perceptible roles in state politics and achieved high merits in literary accomplishment. On occasion, Nur-i Dāhān (wife of Djalānī) broke the purdah convention and did not mind coming out in public. In fact, she was the real power behind the Djalānī throne. She also led an army expedition against Mahāhābat Khān [see].
mothers, religious education, domestic economy, and light social fiction. Hidjab Imtiyaz CA1T was the...

During the Second World War, India witnessed an unprecedented political upheaval which had its bearing on Muslim women's increasing participation in political activities and literary expressions. Saleha Abid Husain, Rasheed Jahan and Ismat Chughtai emerged as leading Urdu writers of that time. Begam Mohammad Ali, maintaining her seclusion, fought and won a seat in U.P. legislature in 1946. Rasheed Jahan and Ismat Chughtai began their literary activities; both of them were among the organisers of several industrial strikes, and were imprisoned for a considerable time in 1949.

In 1947, after Partition, two separate commonwealth states came to exist: India with Hindu majority provinces, and Pakistan consisting of Muslim majority regions. The North-West Frontier Province, Sind, West Punjab (as the western wing) and East Bengal (as eastern wing). Among the remaining Muslim population in India, after independence, Muslim women came out of seclusion in greater number; they started entering the institutions of higher education in ever-increasing numbers and competed for specialised jobs. Although up to higher secondary level, the fusion of education has been maintained in college and university education, the predominant majority of Muslim girls have been enrolling in institutions of co-education. Their participation in active educational, professional and political fields has been of great significance. At Aligarh Muslim University, several Muslim women professors have chaired various academic departments. There have been a number of Muslim women holding administrative positions in various government establishments. In the political sphere, the traditions of Muslim women's participation have been continuous. Begam Anis Kidwai was the first Muslim female minister appointed in the 1970s in the Uttar Pradesh cabinet, and later on she was elected as President of Congress (I) for several months.

At present, Muslim women are found throughout India as eminent medical practitioners, educationists, administrators, and political activists. In all these fields their status for all practical purposes is equal to men without significant discrimination. Soon after the establishment of Pakistan as a Muslim state in 1947, women's emancipation became a key factor in all walks of life and especially in the provinces of West Punjab and Sind. Muslim women of the Punjab were already far advanced in education; a large number of well-educated families from the U.P. and Hyderabad had migrated after the partition to Sind province, and women of these families demand opportunities for themselves in the newly-established state. Muslim women in the North-West Frontier Province and East Bengal had not been able to advance beyond average primary education in those early years. Thus the establishment of the All-Pakistan Women's Association (APWA) during early 1930s drew upon female activists mostly from Lahore and Karachi. It remained a middle-class dominated organisation which aimed at a better deal for women: it organised meetings and demonstrations against polygamy and the maltreatment of women, and it presented a mild programme of social reforms in favour of women. But any active participation of women in politics was at least two decades away.

In literature, however, several women writers rose to prominence: Hajira Masroor, Khadija Mastoor, and Jilani Bano in short story writing; Qurat-ul-Ain Hyder as a novelist and Zohra Nigar as a poet. During the early 1960s, Begam Liaquat Ali Khan was appointed as the first woman ambassador of Pakistan; she was accredited to Belgium. Her appointment was not due to her own active participation in political or social life but was honoured as a recognition of Begam Liaquat Ali Khan's assassination first Prime Minister of Pakistan, Sahibzada Liaquat Ali Khan [see liyākāt 'alī khan]. It was mostly during the 1970s that women came to prominence in Pakistani politics. Begam Nasim Wali Khan had emerged, side-by-side with her husband, Khan Abdul Wali Khan, as a political activist against the rule of Zulfiquar Ali Bhutto. Soon after Bhutto's execution, his widow—Begam Nusrat Bhutto—and daughter—Benaiz Bhutto—took up the leadership of the Pakistan People's Party and have become the focal point of opposition to the Martial Law Authority. More and more women are becoming involved in political activity; thus Hinda Gilan, a lawyer by profession, has recently emerged in Lahore as a dynamic political activist.

Bibliography: Most of the works referring to the status and role of Muslim women in the Indo-Pakistan subcontinent from the earliest times down to the end of the Mughal period comprise the standard historical sources, see the Bblls. to hind. iv. History and vi. Islamic culture. For a summary treatment of the status of Muslim women in pre-Mughal times, see I.H. Qureshi, Administration of the Sultanate of Delhi, n.d. Calcutta, 190; Rekha Misra, Women in Mughal India, Delhi 1967, 5-15; R. P. Tripathy, Some aspects of Muslim administration, Allahabad 1936, 29; and Ishwari Parasad, History of Qaraunah Turks in India, Allahabad 1936, 132. Accounts of the status of Muslim women during the Mughal period are available, mostly written in Persian: Gulbadan Begam, Humayun-nama, tr. A. S. Beveridge, London 1902, provides an elaborate account of female life inside harems. Other important references to Muslim women's life can be found in 'Abd al-Kādīr Bādū'ī, Mastāqāb al-tawzī'ī, Calcutta 1884, 404-6; Abu 'l-Fadl, Akhbar-nāma, tr. H. Beveridge, Calcutta 1912, i, 43, 114, ii, 114, 149-51, 212, 230, 288-93, 317-19, 324-30, iii, 212-13, 215, 536, 1140; Mu'tamid Khān, Ikhāl-nāma-yi Damaqgiri, tr. Elliott and Dowson, Calcutta 1865, 345-6, 424-8, 430-1, 435-6. There are numerous studies in English on this period; see Rakha Misra, op. cit., chs. 2-8; P. N. Chopra, Society and culture during the Mughal age, Agra 1963, ch. 5, 103-31; B. Andrea, ed. L. Binyon, The life of
The Bedouin economy is based essentially on animal husbandry, sometimes linked with land cultivation of a more or less intermittent nature. These two activities could not be developed without the same time creating a certain number of rules, determined by custom and relating in particular to the ownership of land and of wells. It might be supposed that the desert, on account of its aridity and particularly severe living conditions, is free territory belonging to anyone who has the courage to dwell there. This is not at all the case. An expert on the subject, T. E. Lawrence, states correctly in this regard:

"Men have looked upon the desert as barren land, the free holding of whoever chose; but in fact each hill and valley in it had a man who was its acknowledged owner and would quickly assert the right of his family or clan to it, against aggression. Even the wells and trees had their masters, who allowed men to make firewood of the one and drink of the other freely, as much as was required for their need, but who would instantly check anyone trying to turn the property to account and to exploit it or its products among others for private benefit. The desert was held in a crazed communism by which Nature and the elements were for the free use of every known friendly person for his own purposes and no more" (The seven pillars of wisdom, London 1935, 83-4).

Each tribe, even the most itinerant, possesses a fixed centre which serves it as a place of resort and as a rallying centre where its various clans assemble during the months of greatest heat. At this time of the year, everything in the desert has been scorched by the sun. Then the Bedouin returns to his summer camp, situated close to an oasis or a major source of water. When the ferocity of the climate is alleviated, and with the slopes of the first rains, he goes back to his natural habitat in search of grazing for his flocks. But he cannot wander at will. Each tribe has its pastures which it frequents periodically. The vast extent of its nomadic range enables it, in a good or a bad year, in spite of the rigours of the severest climate, to find adequate nourishment for its livestock. In this manner, the Ruwāla spend the summer, especially in the month of August and the first days of September, in Damascus. With the alleviation of the temperature, they travel to their winter pastures situated in Saudi Arabia, crossing the Jordanian desert by way of Wādī Sīrhān. It can happen, however, that a persistent drought consumes the hardy desert vegetation, roots and all, in spite of its legendary resilience. The Bedouin is then constrained to leave his ancestral territory in search of a more fertile zone. But he is evidently obliged to take into account the attitude towards him of the lawful owner of the coveted pastures. The latter, however, can in fact refuse to accede to his request or may offer him grazing rights only in exchange for the payment of rent. If the supplicant considers himself strong enough to confront him with force, he will be inclined to reject any compromise. Otherwise, he must submit to the conditions prescribed, or search elsewhere. In Jordan, a nanny-goat, known as šīlāt al-riḥāt'a, is offered to the owner of the pastures.

The territory of a Bedouin tribe is jointly owned; it is communal property, the exploitation and tenure of which are reserved for its occupants alone, the members of the group and their protégés. It is divided into lots, of unequal size, corresponding to the number of clans belonging to the tribe. Even strangers, even foreigners properly introduced, may move about there freely and use the wells. But the grazing right is accorded only to fellow-tribesmen and their clients.
Even at this level of social organisation, pastures are a cause of dispute, the best being appropriated by the strongest clans. Consanguinity and solidarity impose upon all an obligation to accept here, with apparent enthusiasm, the least prosperous among them, especially in times of drought. But the latter would be wrong to consider an acquired right which is in fact a duty for mutual aid. The collectivism of the desert is located essentially at the level of the hamula, the members of which may pasture their livestock in any part whatsoever of the communal lot. The members of another hamula are admitted to it only with the authorization of the shaykh, and by reason of their links of kinship, geographical proximity and good relations with the titular proprietors.

Among the Kabilis of the high plateaux of the Yemen, although this people has long been sedentarised, the pastures of a tribe are reserved for its members, but also for those who are admitted on account of being refugees: rašî, matî or katîr. The stranger who ventures there without authorisation is tolerated for three days; this is the right of tenure (mat'sa) accorded to a friendly clan. Once this interval is passed, pressure is exerted on the unwelcome visitor to force him to leave. He is harassed, he is threatened, his mount may even be seized. But no attempt is made on his life, even if he insists on remaining; it will be enough to prevent him from being an enigma. The latter is obliged to compensate the proprietors and force his subordinate to leave the place. If the demand is refused, serious conflict may erupt. To avoid this, the group of outsiders which has suffered drought must come to an understanding with more fortunate neighbours to pasture its livestock on their territory, in a place and for a period of time prescribed, in exchange for the payment of an indemnity in kind or in cash. Henceforward it will not be troubled. Furthermore, it enjoys the right of protected neighbour status (gušwar [g. e.]), according to which the lessees are required to act as official protectors.

There also exist in the Yemen, as among the Arabs of the desert, treaties of friendship between tribes which allow each contracting party to use the pastures of the other in return. This is the case e.g. with the alliance known as sabha or sabhā which is based on a kind of fraternal relationship (ta'ākhā). It is an agreement, both defensive and offensive, by which two tribes undertake to take up arms on one another’s behalf. To conclude the agreement, there is no need for bloody sacrifices, except for the purpose of celebrating the event, nor for oaths; this is a pact that goes beyond sworn pledges. The agreement is set out in writing and signed by the leading shaykh. Such documents (marātkim) state explicitly that the contracting parties consider themselves henceforward “as a single member, a single arm, sharing the same fear and the same tranquillity, sharing the loss and the gains, however meagre they may be, accruing from a common action against the enemy” (al-Hamdānī, Ilkī, ed. Khāshīb, x, 70). Henceforth, the members of a tribe may go to live on the territories of the other and also take advantages for its pastures. Excluded from this treaty are the fornicator and the thief.

It will be understood that here it is the perspective of an essentially nomadic tribe that is under discussion. When the process of sedentarisation is initiated, the community of proximity tends to take the place of consanguinity. Arabs residing in the same region exploit the pastures in common, even where they belong to different tribes. But a group from a different area which seeks to install itself there cannot do so before obtaining the consent of the leading shaykh. The latter can even exact the payment of tribute.

The ownership of land, among the Arabs of the desert, is controlled by the law of the strongest. For this reason, it is often definitive. Until recent times, the Bedouin, even if sedentarised, despaired any kind of bureaucratic administration of land and seldom had recourse to it. To defend his rights, he trusted his sword. The demarcation of territories operated in the most rudimentary fashion, since each clan knew its own domain, as well as that of its neighbour. For marking boundaries, very simple means were employed: a shallow ditch, stakes, mounds, piles of stones and, more recently, barrels. Those who occupied themselves with agriculture planted strips of onions to mark boundaries. Such an administrative system, clearly precarious and imprecise, often gave rise to disputes. Litigation was submitted to the jurisdiction of an ānīja.

2. In Persia.

The terms marte (pl. marstāt), šalafkar, šalafghar, šalafgar, mardāz, and šarīf are used interchangeably in Persian literature to mean pasture. In early works, gāvāh-šarīf is also found (cf. Hudūd al-ṣīlah, tr. Minorsky, 94, 85 and Ibn al-Balkhi, Fārs-nāma, ed. G. Le Strange, London 1921, 155). Marghzar is also used to mean meadow-land, while the word čaman is restricted to this meaning. Mārta, šalafghar, and šalafgar are also used in the sense of pasture tax.

The wide variation in temperature in Persia is highly important in shaping the general plant geography, and coupled with the variations in the annual distribution of precipitation is responsible for the differences of Persia’s plant cover and pasturage. Relief is also a decisive factor and affects both climate and soils; and a striking feature of Persia, especially the central plateau, is its micro-relief. The bulk of Persia’s vegetation lies in the eastern Turkish region, receives its rains in autumn, winter and spring; summer rains are negligible in most regions. This affects the development of pastures and results in their exploitation being largely seasonal. In Islamic times the phytogeographical boundaries have probably continued broadly the same. Changes in microclimates may have been experienced, but the overall macro-climate has probably remained unaltered.

Millenia of human activity have left their impress through the cutting of trees and grazing. In many regions it is probable that the primary vegetation was a kind of Artemesietum which included perennial grasses. Centuries of overgrazing and steady grazing would appear to have reduced the original vegetation of much of the plateau to a state of barrenness. In some places, it has led to the disappearance of perennial grasses from the steppe vegetation and their replacement by anti-pastoral non-palatable components, such as Amygdolus, Anabasis, Astragalus, and Artemisia herba-alba. The movement of flocks has also resulted in the severe cropping of trees, as, for example, in the oak forests of Luristan, Pusht-i Kūh, Īlam and Kurdistan, and the disappearance of Quercus brantii from hillsides in the neighbourhood of Kirmānshāh. The natural vegetation along the travel routes of nomad and semi-nomad tribes has also been disturbed in recent centuries.

Another factor which has led to change in the make-
up of vegetation is the collection of plants for industry, fuel, drugs and food. Fuel collection, especially, has affected not only the forest regions but also the steppes and led to the occurrence of some barren, almost unvegetated areas. At the higher altitudes on the plateau, the climate is often too cold and water too scanty to produce anything more than a thin vegetational cover of short grass and low scrub. Large areas of the country are sterile or almost sterile hamadas due to very low rainfall or to an excess of salt in the soil or both. The ecology of hill-sides varies greatly with respect to latitude, altitude, exposure and soil. Many slopes of low ridges and hills are bare because of their exposure to wind, heat and drought. Perennial grasses survive only in the high mountains beyond the limits of agriculture and in places inaccessible to grazing, on slopes too steep for agriculture and in those districts which have a long snow cover (approximately at an altitude of 2,400 m. to 2,600 m.). Seasonal grasses are found in the steppe areas and a periodic or episodic growth of grasses in some semi-desert regions (see further E. Ehlers, Iran: Grundzüge einer geographischen Landeskunde, Darmstadt 1980, 63-127).

Drought, demographic movements, disease, invasion and war have all at different times affected the local distribution of arable and pastoral land and dead lands—sometimes temporarily and at other times permanently. Frontier regions, in particular, tended frequently to be laid waste, presumably with the destruction of, or damage to, local pastures. In the predominantly pastoral regions the maintenance of a balance between pastures, animal population and human population was maintained, on a short term, by the dispersal or concentration of flocks according to the productivity of the pastures and the utilisation of widely separated pastures at their different periods of productivity. If the balance between pastures, flocks and human population was upset, conflicts between different groups over pastures and encroachment upon neighbouring arable land would be likely to occur. If the settled population increased and productivity rose, more land would be brought under cultivation and grazing land would be reserved. Changes in land use, usually on a small scale and sometimes of a temporary nature, have also occurred from time to time when nomad tribes have adopted a settled life.

Since most pastures were exploited seasonally, it is difficult to arrive at any realistic estimate of the number of animals carried per acre in the different regions. Masson Smith's estimate that "a sheep required something like 10 acres of steppe pasture" (Turvan nomadism and Iranian politics, in Iranian Studies, xi [1978], 62) does not appear to take the seasonal factor into consideration. B. Spooner puts the stocking rate in the Turān district, east of Sīmān, which was declared a biosphere reserve in 1977 and in which pastoralism of various types was the dominant form of land use, at 8.6 acres per animal for the period October/November to May (The Turan programme, in Margaret R. Biswas and Asit K. Biswas (eds.), Desertiification, Oxford 1980, 192). Similarly, it is difficult to determine the relative distribution of sheep and goats.

The matter is to some extent obscured by the fact that the term gūsfand in Persian literature covers both. In modern times sheep predominate; they probably did so in the past also. Goats are numerous, especially in areas where the vegetation is less abundant. They voraciously crop all green plants and are largely responsible for the deforestation and decrease in plant and grass cover which has taken place. Oxen are widely used as draught animals, but herds of cattle are not important except in a few, mainly lowland, districts. Herds of camels are put out to pasture in the tragacanthic steppes, often in areas where the vegetation is unpalatable or too sparse for either sheep or goats. Herds of horses are (or were) bred and turned out to pasture in some tribal districts (cf. Sādār Asad, Tārīkh-e Bābīyāri, lith. 1333 AH, 20-1). Rulers needed large numbers of horses for their armies. Royal herds and army remounts were grazed in special reserves and elsewhere (see Sir John Chardin, Travels in Persia, London 1927, 169-70, on the horses of the Safavid shah). Flocks of sheep kept to provision the royal establishments were similarly pastured in royal reserves.

Seasonal pastures in cool upland regions (sārdīn, pāyālak) are exploited mainly by tribal groups. Some of them make long-range migrations from their winter quarters in lowland regions (garmisn, kīdālak); others travel short distances, sometimes only from valley bottoms to the upper mountain slopes. Most villages are surrounded by many square miles of waste land in which the villagers are able to keep a few sheep and goats and donkeys. Some, in the more fertile regions, keep flocks which they take to graze either in the neighbourhood of their villages or farther afield. Stubble grazing is an important form of land use. In many upland regions, notably in the Alburz, villagers practise a form of stubble grazing in which they send their village flocks to summer pastures in the neighbourhood of their villages. There is also some winter migration of village flocks to the coastal plains of the Caspian from higher regions (see also A.K.S. Lambton, Landlord and peasant in Persia, Oxford 1953, 354-5, and Ilfāt).

With the contraction of the frontiers of Persia in the 19th century, the Muḥādān steppe in the north-west and the Turkmān steppe in the north-east, both regions in which there were good pastures, became frontier districts and tribal groups migrated annually across the Perso-Russian frontier. The Perso-Ottoman frontier in Kurdishān also traversed pasture land and seasonal migration across it took place, and continued in the 20th century after the creation of 'Irāq.

A survey made by H. Pahlot in 1967 shows 25% of the total land as range-land (Pasture development and range improvement through botanical and ecological studies, in Report to the government of Iran, FAO 3211, Rome 1967, quoted by E. Ehlers, Agriculture in Iran, in Encyclopaedia Iranica, i, fasc. 6, 613). It would, however, be rash to assume that this percentage was constant throughout Islamic times, but because of the inadequacy of the sources for a historical survey it is not possible to discuss changes in the extent of the land under agriculture and pasture land at different periods except in the most general terms.

Pasture was an important resource for villagers, and for nomads it was vital, while for those dynasties which relied on the support of tribal and nomadic forces the ability to ensure the availability of pasture for their followers was also of critical importance. This was especially the case during and after the Mongol invasions, which resulted in a large and permanent increase in the number of nomads. Throughout the Ilkhanate (654-736/1256-1335), the demand for pastures was insatiable. The wars between the Ilkhanate and the Golden Horde were, in part, over the acquisition of the rich pastures of Aḡārbāyādīn (C.J. Halperin, Relations in the Mongol Empire under the Ilkhanate, in HAJ, xi [1963], 250-1). The war which broke out between the Ilkhanate and the Mongols of Central Asia in A.D. 1270 was in part over the pastures of Bādğīs (W. Barthold, An
The possession of pastures was also important for the succession states to the Ilkhanate, with the possible exception of the Mughal emperors, who observed, to some extent, the traditions of settled government. It was also the case under Timūr (d. 807/1405), the Turkoman dynasties of the Ak Koyunlū and the Kara Koyunlū and the Safawids when they first came to power in the early 10th/16th century; while one of the reasons which led Aḥā Muhammad Khān K̄̄djar to choose Tehran as his capital was that it was within easy reach of Gurḡān, where the pasture grounds of the K̄̄djar tribe were situated.

A comparison of the accounts of the early Islamic geographers with later accounts will reveal some changes in the distribution of pasture land. The accounts of later writers must, however, be used with reserve unless they are known to be writing from personal experience. Sometimes they merely repeat the information available in the works of their predecessors. What an author records does not necessarily refer to the time he was writing.

There is little evidence that the Arab invasion had much effect on the distribution of pastures, though there probably was some displacement of those who had previously exploited them. There are references to the extensive reserves of tribes (kumbā) and to reserves in which the cattle and flocks of the caliphs and their governors and army remounts grazed. Al-Baladhurī mentions the pastures of the flocks of the caliph al-Mahdī (158-69/775-85) in the neighbourhood of Hamadān (Fatūs al-bulūd, 310-11). The Tārikh-i Kumm also mentions that pastures (zirāgihā wa ʿalāfazārā) were reserved in every village in the neighbourhood of Nihawand and Karadāj for the beasts (dawdbb) of the caliphs and were called ḥijāzāt (Hasan b. Muhammad b. Hasan Kumī. Tārikh-i Kumm, Persian tr. by Hasan b. Abī b. Hasan b. Abī al-Malik Kumī, ed. Djalāl al-Dīn Tīhrānī, Tehran AHS 1311, 185).

It is perhaps significant that Dinawar, the centre of Māh Kūfā, was within easy reach of rich pastures. Kūfā was also part of the tribal lands of the Māh Kūmī tribe, similarly a district with plentiful pastures. Ibn Hawkal, writing in the second half of the 4th/10th century mentions that it had abundant pastures where numerous flocks grazed and much water (K. Sūrat al-ʿard, ii, 359). Similarly, the availability of pastures in Khūrāsān would have facilitated the settlement of large numbers of Arabs in that province and may perhaps have influenced the choice of the centres where they established garrisons. Even if they were not accompanied by flocks and herds, they would have required pastures for their remounts and baggage animals (on Arab settlement in Khūrāsān, see further M. A. Shaban, the Abassid revolution, Cambridge, 1970). Elsewhere, so far as the Arabs settled in Persia as tribal groups, they would have required pastures for their flocks. But on the whole, there do not appear to have been many conflicts with local groups over pastures. The Tārikh-i Kumm, 243-4, states that the Aḥārī leaders ʿAbī Allāh Yaḥyā was appointed in 102/720-1 to Yazdān-fādhar, who had allocated to them the villages of Māmāqān and Dīmar near Kumī in 99/718-17, saying that the pastures were too small for their camels, horses and sheep. Yazdān-fādhar accordingly allocated to them the village of Fārāba also.

The geographers of the 3rd/9th and 4th/10th centuries give, on the whole, a picture of a prosperous countryside practising arable and pastoral farming. There is mention of pastures and meadow lands in some districts and of the presence of large flocks in various regions, which implies the existence of pastures and grazing land (see ilāt). Transhumance was practised in Fārs, and al-ʿIṣṭāḵwī puts the number of nomads at 500,000 tents (Masdlik al-mamālik, 97-9, ilāt), which suggest that pastureage was extensive. Yākūt, writing in the early 7th/13th century, also states that they were estimated at 500,000 tents (Barbier de Meynard, Dictionnaire géographique et historique de la Perse, Paris 1868, 412). It seems likely that he was merely copying al-ʿIṣṭāḵwī, unless it is to be assumed that large flocks of pasturage, flocks of which the population were in a state of absolute equilibrium.

There were extensive pastures and grazing grounds on the borders of the dār al-islām occupied by the Ghuzz (cf. Hūdūd al-ṣālam, 100, and ghuzz). One of the factors behind their migration in the 5th/11th century into the dār al-islām may have been pressure on pastures in Central Asia and tribal movements which resulted therefrom. One of their needs on entering Persia was to secure pastureage for their flocks. However, the numbers of the Ghuzz coming into Persia, first as independent groups and then under the leadership of the Saldjūqs, were not large, and there is little evidence of major displacements by them of those exploiting existing pastures (see further Lambton, Aspects of Saljuq-Ghuzz settlement in Persia, in J. D. S. Brewer et al., Iran: Pre-Islamic and Islamic (Oxford 1975, 121 ff.), nor, with the exception of Gūrgān, does there seem to have been much change in the distribution of arable land and grazing land as a result of their advent into Persia. Whereas Gūrgān in the 3rd/9th and 4th/10th centuries appears to have been a well-cultivated countryside, in Saldjūq times much of it was pasture land. By the reign of Sandjār (511-52/1118-57), large numbers of Turkomans occupied pastures in Gūrgān, Dihistān and the neighbourhood of Marw (ibid., 110), and pasture land was probably encroaching on arable land.

Fārs continued to be rich in pastures in the Saldjūq period. Ibn al-Balkhī, who wrote in the reign of Muhammad b. Malikshāh (496-511/1104-18), mentions by name extensive pastures in Fārs, and states that it was the main centre of the horse (dawdbb) (Masdlik al-mamālik, 97-8, ilāt). The whole of it was pasture land (gūvd gūvd-dī), which was composed in 372/982-3, had mentioned the woods, trees and meadows of Rudbar (124). Afdal al-Dīn mentions that land in the neighbourhood of Marw was within easy reach of rich pastures. Whereas Gūrgān in the 3rd/9th and 4th/10th centuries appears to have been a well-cultivated countryside, in Saldjūq times much of it was pasture land. By the reign of Sandjār (511-52/1118-57), large numbers of Turkomans occupied pastures in Gūrgān, Dihistān and the neighbourhood of Marw (ibid., 110), and pasture land was probably encroaching on arable land.

Similarly, the availability of pastures in Khūrāsān, which was composed in 372/982-3, had mentioned the woods, trees and meadows of Rudbar (124). Afdal al-Dīn makes no mention of woods. When the Ghuzz invaded Kirmān after the death of Sandjār, there appears to have been a temporary contraction in arable land. Afdal al-Dīn mentions that land in the Rāwar district was not cultivated because of the encroachment of nomads (K. ilāt al-ṣālam, 29) and that crops were grazed by the flocks of the Ghuzz (al-Mudīf ilā budayfū al-azmān, ed. Aʿīsā ibn Abī Bakr, Tehran AHS 1311, 180). The Mongol invasions in the 7th/13th century resulted in widespread destruction and depopulation. Standing crops were ruthlessly grazed by the Mongol hordes; much land went out of cultivation. There was
a permanent increase in the numbers of the nomadic population and the flock population and consequently in the demand for pastures; it is likely that much arable land was converted into pasture. Hülegü, according to Dhuwayj, when preparing his expedition to Persia, declared pastures in the districts through which it was expected that the army would march to be reserves (kuruk) and forbade any grazing in them other than by the army (Tārīkh-i Dughmān, ed. Muhammad Kazwīnī, London 1912-32, iii, 93). Later rulers also sometimes declared pastures to be kuruk. After their invasion of Persia, the Mongol hordes continued to practise transhumance. Atabeg ʿUmarT, who lived in Mamlūk territory in the first half of the 8th/14th century, states that their summer residence was in the Karābāgh region, which had many pastures, and that their winter quarters were in ʿUdjan, which also had extensive pastures, and sometimes in Baghdād (Masālik al-abār wa-mamlāk al-ansār, ed. and tr. K. Lech, Wiesbaden 1968, Ar. text, 86). Many of the Mongol settlements in Persia were within easy, or fairly easy, reach of rich pastures. Marāḡa, the first Ilkhanid capital, had good pasture in the neighbourhood and further afield at ʿUshnī and other districts in Kurdistān. Tabrīz, the capital of Abaqa (663-80/1265-81) and later of Ghiyān Khan (694-703/1295-1304), had good pastures nearby in ʿUdjan and summer pastures in Mt. Sabānī and Mt. Sahand. Ghiyān also built a city, Muhmūdābād, in the Mughān steppe, where the Mongols pastured their flocks and herds in winter (see Le Strange, Lands of the eastern caliphate, 176). Arghun (673-80/1284-91) founded the city of Sulṭānīya, which was completed by Oldjeytī (703-15/1304-16) where there were very rich spring pastures. Another foundation built by Oldjeytī was Sulṭānābād-i Cihatmāl at the foot of Bisūrīn, which, because of its excellent pastures, was a regular camping ground of the Mongol establishments (Hamd Allah Mustawfī, Nashat al-sulbā, ed. Le Strange, London 1915, 107). One of the biggest changes in the distribution of pasture land brought about by the Mongols was the expansion of land under pasture in the Mughān steppe and in the country round Sulṭānīya. Some of the pastures had probably been under cultivation. Both regions continued to afford pasture to nomadic groups and army remounts down to modern times. Marco Polo on his journey south-east from Alamūt towards Yazd and Kirmān wrote, ‘When you leave this castle (sc. Alamūt), you ride across beautiful plains and valleys and charming hill-slopes, rich in fine grass and excellent pasture, and with abundance of fruits, and all other good things. Armies are glad to stop there on account of the great plenty’ (Travels, tr. A. Ricci, London 1931, 53). Pastures in Gurgān, on the other hand, do not appear to have been important in Ilkhanid times: Mustawfī states that Gurgān and Kabūd Djiʿma were in a state of ruin (Nashat al-sulbā 160). It is possible that, apart from the destruction brought about by the Mongol invasion, they had been overgrazed. The pastures in Fārs of which Mustawfī gives a list were still extensive. He follows Ibn al-Balḥī’s account but adds one or two details. He remarks that the pasture of Ḫīd and Miḥkān was extremely large (135) and that the grass of the Shīdān pasture was beneficial (ibid.). He omits any reference to the pasture of Darābfir, but mentions an extensive spring pasture near Kāzūrīn (136). Mustawfī also mentions that there were excellent pastures in Khūlkāl (82) and a large pasture near Karagāi-i Abū Dula (69). He states that the pastures of Kāzūrīn were especially rich in fodder for camels (58), and that the pasture lands of Isfāhān were good for fattening animals (49). Round Tustar and in the neighbourhood of Dīzful there were also many excellent pastures (110, 111). Curiously, he does not mention the pastures of Ḫūrān or Ujgerd. There is not much information on the pastures of Lūrāstān. In the early Islamic centuries there was presumably some exploitation by transhumant herding, but this may have been more regularly organised in Ilkhanid times with benefit to the pastures. Muʿīn al-Dīn Natanzī states that when Hülegū gave the governorate of Lūrāstān to the Atabeg Shams al-Dīn Alaʾ Arghun (d. 670/1271-2), the province was in a state of ruin and the subjects dispered. The Atabeg brought the province back to prosperity by various measures. One reason for its renewed prosperity was, according to Muʿīn al-Dīn, the fact that Shams al-Dīn adopted the custom of the Mongols of moving from summer to winter quarters, spending the winter in Shīḵū and Iṣfahān and the summer in the Zarda Kūh (Murastāb al-wāṣāl-i muʿīnī, ed. J. Aubin, Tehran 1957, 43-4). Initially, the basis of the Mongol economy was the produce of their flocks and herds, hence their primary need was for pastures; but once they had become the rulers of a settled empire some more stable basis was required. Ghiyān Khan, towards the end of his reign, sought to bring about an agricultural revival, and his efforts may well have restricted the availability of pasture. One of the measures he took to provide for the upkeep of the military forces of the state was to issue a yarlīq in 703/1303-4 to allocate ikṭās to the soldiers. One of its provisions forbade the ploughing up of permanent pasture (Rashid al-Dīn, Tārīkh-i mishrāb-i ghdzdī-i ḡizānī, ed. K. Jahn, 306). The reason for this prohibition can only be guessed at: perhaps, since land capable of cereal growing gave a higher yield in terms of foodstuffs per unit of area than land under pasture, it was due to a fear that the soldiers might plough up all the land allocated to them and as a result would not be able to keep their horses. Ghiyān’s reforms were shortlived and the agricultural revival ephemeral. With the emergence of new federations of tribes at the end of the Ilkhanid period and the apparent resurgence of nomadism in Khurasan from about 747/1346 (see Muʿīn al-Dīn Natanzī, op. cit., 197 ff.), it is likely that the need for pasture again became paramount. Timūr and his successors appear to have been in the habit of allocating pastures to their followers (cf. Abd al-Razzāk Samarkandī, Maʿlaʿ al-ʿaḏgān, ed. Muhammad Shafīʿ, Lahore 1360-8 AH, ii, 1337). From the account of Clavijio, who travelled through Persia in the time of Timūr, there does not seem to have been undue pressure on pastures, in spite of the new influx of nomads. He states that a certain Caghatai tribe, who served as Timūr’s bodyguard, was allowed by him to seek pasture and to sow its crops in all districts, and he mentions meeting between Andīkuyy and Balkh parties of Caghatai nomads in search of pasture, who encamped in all places where there was pasture and water (Embassy to Tamerlane, 1403-1406, tr. Le Strange, London 1928, 196). He also describes extensive pastures in the neighbourhood of Khūwy (148), meadow lands in Lār in the Alburz (169), rich pastures along the Tedjen River (186-7) and round Samarkand (233) and the winter pastures of the plains of Karābāgh (309). We know from the Maʿlaʿ al-ʿaḏgān that in 866/1461-2 the Dūlāyder tribe [see Boldimir, DULAYDER TRIBE] had “long since” (az dir baz) had its yurt, or tribal pastures, in Astārabād and had innumerable flocks (op. cit., ii, 212).
1253), which suggests that there had been an improvement in the pastures there since Ilkhanid times.

The period from the 8th/14th to the early 10th/16th centuries was one of tribal movement and resurgence under the Ak Koyunlu, Kara Koyunlu and the early Safavids, and it is unlikely that there was any reduction in the land under pasture, with the possible exception of the reign of Uzun Hasan (871-83/1466-76), more land may have been brought under cultivation. Already before this in the reign of Tahmasp (930-84/1524-76) one of the Sā'īn Khānī Turkoman tribes from Khāzār, which had come from there to Astaraābād, are said by Iskandar Mūnshī to have engaged in agricultural activity along the Gūrgan River (Shamār-yi Shāhī, Isfahān AHS 1334, i, 590). The pastures of ʿArabistān, ʿUrmistān, Bakhtiyārī, Kurdistan and many of the frontier regions, which were under provincial governors and befargara, were presumably exploited by their tribal followers. The shahs themselves owned large herds of horses and sheep, for which they needed pasture in the neighbourhood of the capital and elsewhere. Taver- nière, who visited Persia several times between 1652 and 1668, states that the shah kept 40,000 horses (Tavernier, 258). The movement of tribes to border districts and elsewhere by the Safavids and later by Nādir Shāh and Aḥam Ṿahān Khān, short-lived spring grass pastures. In the region round Mashhad, Turbat-i Radkan there were also good but not very extensive fine pastures at Cinarud at the head of the R. Kashaf, which continued to be exploited by various tribal federations. Kinneir mentions the rich pasture lands of Sulṭānīyā (A geographical memoir of the Persian empire, London 1813, 124), the rich soil and pastures of Mūḥāfāz (153) and the luxuriant pasture of Luristān (138). In Kirmāngāh the pasture was very good but inferior to that of Ardalān (141).

Failure of rains resulting in a partial or total lack of pasture occurred frequently in different localities. In the late 1860s and early 1870s there was widespread drought. From the winter of 1865-64, the rains were below average for some nine years, with the exception of 1865-6. In 1869-70, hardly any snow or rain fell in the valleys. In the south, particularly, there was little or no grazing, and lower prices for wool and flocks. Losses in flocks and herds (O.B. St. John, Narrative of a journey through Baluchistan and Southern Persia, in F. J. Goldsmed (ed.), Eastern Persia, an account of the journeys of the Persian Boundary Commission 1870-2, repr. London 1976, i, 95). From 1869-72, there was severe famine in almost all regions, accompanied by a country-wide outbreak of cholera; but what the effect of the resulting decline in population was on the distribution of arable and grazing land is not well documented. In the last decades of the 19th century, there appears to have been some sedentarisation of nomads, on a fairly small scale, which may have resulted in the conversion of pasture land into arable land in some districts (see G. G. Gilbar, Demographic developments in the late Qajar period, 1806-1906 in Asian and African Studies, xi [1976], 146-7). In the latter part of the 19th century, there was also an expansion of cultivation in the piedmont zone round Tehran and Kārāql; as a result of this, various tribal groups which had formerly grazed this land were forced to extend their annual migration and farther south towards the heart of the Central Lāt, in order to make use of very inferior and short-lived flushes of pasture that follow sporadic rainfall (W. B. Fisher, Physical geography, in Camb. hist. of Iran, i, 58). Similar events may have taken place elsewhere.

It will have become clear from the foregoing that much grazing land was situated either in the karim of villages, i.e. in the land surrounding the cultivated lands of a village, or in waste or dead land, and so far as the law books discuss pastures they do so chiefly under the headings of hīnā and mawāt [q. v.]. A hadith of the Prophet is recorded to the effect that all Muslims are partners in water, fire and grass. In the light of this, Abū Yūsuf lays down that although the meadows belonging to a village were similar to other private property, their owners could not prevent others from the free use of water and grass unless they had no pasture apart from such meadows and unless no common land was available to them in which they could graze their flocks (Le livre de l’impôt foncier, tr. E. Fagnan, Paris 1921, 155 ff.; see also N. P. Aghnides, Mohammedan theories of finance, repr.
Most MalikTs and HanafTs, however, apparently gave the villagers the exclusive use of the pasture lands in the haslime of their village, but they nevertheless granted the Imam the right to make concessions of such lands to individuals should the public interest required it (ibid., 514). In practice, a wide variety of usage seems to have prevailed. In modern times, the pastures round a peasant proprietor village were usually held in common by the villagers, while in landlord villages the villagers usually had a customary right to graze their animals in the village pastures (Lambton, Landlord and peasant, 355-7).

In privately-owned land (mulk, mulk), the pastures followed the ownership of the rest of the land and could be transmitted by sale, gift or inheritance in the same way. Many pastures constituted, or were situated in, crown lands (see KHALISA), and could be granted to individuals as permanent, temporary or life grants like other crown land. Ibn al-Balkhl states that the pastures of Dagh-i Rùn in the Kühglúa were partly išÁ (“and partly mulk (“Pasture lands”) in its 8th clause that farming in areas that have been used from time immemorial as pasture is forbidden for a certain town or village; (2) pasture lands could be transmitted by sale, gift or inheritance in the same way. In some cases they were transmitted by inheritance, but in others they were subject to re-allotment by the chief of the tribe. Information on these matters is to be found in modern anthropological studies (see especially R. L. Tapper, Pasture and politics, London 1979, on the Shahsivan of Adhar-i bāyādān; F. Barth, Nomads of South Persia: the Bāsi tribe of the Khanschí confederacy, London 1961; W. G. Irons, The Yomud Turkmen: a study of social organisation among a Central Asian Turkic-speaking population, Anthrop. papers, Museum of Anthropology, no. 58, University of Michigan, Ann Arbor 1975; idem, The Turkmen nomads, in Natural history, lxvii [1968], 44-51; and G. R. Garthwaite, Khans and shaks: a documentary analysis of the Bakhtri in Iran, Cambridge 1980).

On the basis of the hadīth of Muhammad quoted above, al-Māwardi states that no governor could exact anything for the use of pastures in dead or reserved land (al-Abkām al-sulūt-iyya, Cairo 1966, 187, tr. Fagnan, Les statuts gouvernementaux, Algiers 1915, 401). In practice, however, there was a wide variety of usage in the matter of pasture taxes generally, and they are not always easily distinguishable from flock taxes (see Kharādž). In Persia, the owners of pastures also levied dues on those who grazed their flocks in them (for modern usage, see Landlord and peasant, 290, 355-8).

3. In Turkey.

The legal practice on the pastures appears from the ancient legal texts, to have been influenced by custom and tradition. The Aydîn Edict of 935/1528, issued during the reign of Suleymân the Magnificent, states in its 8th clause that farming in areas that have been used from time immemorial as pasture is forbidden as being against public interest. Likewise, the 13th clause of the Kütyâha Edict of the same year indicates that the ploughing and private ownership of areas where cattle are pastured is forbidden on the interests of both the urban as well as rural population.

In fact, similar provisions existed even earlier: the 16th clause of the Bursa Edict of 892/1487 suggests that the arrangements concerning pastures were much the same previously. It says that “It is forbidden to cultivate and to establish private property on pastures where both city and village dwellers graze their herds because it brings harm to the public.”

Hence we conclude from these measures of the 9th/15th and 10th/16th centuries that:

(1) acceptance of a given stretch of land as pasture is contingent upon its being used for this purpose from very old times and its having been allocated as a pasture for a certain town or village; (2) pasture lands should not be used for grain production, and frequent references to this prohibition in the laws of different periods show that this rule was implicitly admitted by society as an unchanging principle; (3) pastures cannot become private property; and (4) only the dwellers of the village or town to which the pasture is allocated may use it for this purpose.

The Land Edict of 1274/1858 is by far the most significant Ottoman legal text on this subject of the 19th century. Though it was a product of the Tanzimât [q.v.] era when western influence was being felt in an increasing degree, this Edict combined custom and tradition with the tenets of the formal Islamic land law. Articles 91 to 102 of this Edict contained provi-
sions regarding the aradi-yi matrafa “assigned lands”, though the normal term of Islamic law in which such stretches which are allocated to the use of town or village dwellers as pastures and winter grazing [see KISHLAK] is aradi-yi mahmiya “protected lands”. Now according to this new law, there were two kinds of aradi-yi matrafa. The first included areas of public utility such as roads, and recreational areas, while the second covered pasture, summer and winter grazing grounds, and scrubland where firewood might be gathered. Their salient features may be summarised as follows: (1) title deeds cannot be released for such lands; (2) they are not subject to taxation; (3) prescription is not applicable to them; (4) ex officio settlements of conflicts on these areas are not admissible; (5) such areas cannot be increased or decreased; (6) they cannot be made the subject of gifts; and (7) proof of collective use of such areas prevails over that of individual use in conflicts regarding their allocation.

Article 97 of the law defines pastures, concerning which the following points may be noted: (1) allocation is the conditio sine qua non for any area to be considered as pasture; (2) where allocation does not exist, it must have been used as a pasture from time immemorial; (3) the town or village dwellers to whom the allocation has been made alone can utilise a pasture for their herds; (4) pastures cannot be bought or sold; (5) buildings cannot be constructed on and trees cannot be planted in pastures, nor can they be converted into vineyards and fruit farms; (6) the surface areas of pastures may not be increased or decreased; (7) pastures cannot become private property through prescription; (8) the nature of the pasture cannot be altered, thus it cannot be used as arable land; (9) the offspring of animals grazing in the pasture are allowed there also; (10) summer and winter grazing grounds are accessible to dwellers of other town and cities, while the pastures are exclusive to urban or rural population to whom they are allocated; and (11) the use of summer and winter grazing grounds requires the payment of a certain fee, although the pastures are at the free disposal of the herds of towns and villages to which they are allocated.

There has been much debate among the Turkish jurists on whether the provisions regarding pastures of the 1274/1858 Land Edict were annulled by the 1926 Turkish Civil Code modelled on its Swiss counterpart. Though article 641 of this Code stated that ad hoc provisions would be introduced regarding the administration and utilisation of property for public use, such provisions have yet to be adopted, particularly concerning the pastures. Likewise, article 912 states that immovable property allocated for public use and not owned by individuals is in general not subject to the registration procedure. This does not appear to contradict the spirit of the 1274/1858 Land Edict or the practical implementation of the provisions concerning pasture lands. Article 43 of the Law on the Implementation of the Turkish Civil Code states unequivocally that the Medjelle-yi ahkâm-i ‘adilîye is rescinded, but without making any reference to the Land Edict; it merely mentions in a general fashion that the provisions of the previous laws contradictory to those of the Civil Code are deemed to have been repealed. Due to this uncertainty, the status of pastures has largely been governed by existing law and the Land Edict, even after the entry into force of the Civil Code in 1926.

Under article 639 of the Civil Code governing the acquirement of immovable property not entered on the land registry for an uninterrupted and legally unchallenged 20 years may request the registration of such property in his possession. Though this provision was used in a rather limited fashion in Switzerland, whence the Civil Code was borrowed, widespread use had been made of this article in Turkey in order to establish private ownership of land under state control and possession, including of pastures. This has been to some extent facilitated by the inadequacy of the land registry system and by the incompleteness of the cadastral survey work, not to mention the rapid population growth and the accelerating rate of agricultural mechanisation. Finally, when the matter appeared to have attained significant proportions, the legislative power felt the need to take action, and a modification of the issue appeared in article 639 of the Civil Code concerning the acquirement of immovable property whereby requests for registry were to be directed to
the treasury and the relevant public corporation. In 1972, Law 1617 limited the areas for which registra
tion as private property could be requested under
acquisitive extraordinary prescription to 20 donums.
Meanwhile, the over-use of pastures far beyond their possible
of natural regeneration has caused major
problems, such as soil erosion. Accordingly, the intro-
duction of a new legal framework for the regulation of
pasture lands in Turkey should yield considerable
benefits in developing livestock production and in
making the existing pasturage lands more productive.

Abbasid administration in decay, from the old capital of Adharbay-
djan to Tabriz, was not
characterised by a reputation for probity and avoidance of the grosser
forms of corruption like
wasdtd). Naturally, the vizier himself benefited from this, and
among the accusations against Ibn al-Furat at his fall
on the route was Kulsara (cf. below).

In the "Abbasid caliphate, this form of bribery became
institutionalised in the caliphate of al-
Mukhtadar (295-520/908-32 [q.v.]), when the vizier Ibn
al-Furât [q.v.] instituted a special office, the divîn al-
marâfîk [see diwân i] in which were placed bribes and
money from commissions collected from aspiring candidates for office, above all for the lucrative
finances, in return for a grant of such an office.
Naturally, the vizier himself benefited from this, and
among the accusations against Ibn al-Furât at his fall
was the one that he had kept back a proportion of the
monies received from confiscations (muşâdarat [see muşâdar])
and bribes for the grant of an office
(including the level at which it was recog-
nised that a vizier or secretary might by convention
keep back some part of the payment as a recognised
commission, the hâk al-xâlûnÏ). Even a vizier with a
reputation for probity and avoidance of the grosser
forms of corruption like ʻAli b. ʻIsâ [q.v.] was not
averse to accepting marâfîk as a normal perquisite of
office.

(C. E. Boeckwroth)

MARÂGAH, the old capital of Aţâr-bay-
djan.

Position. The town lies in lat. 37° 23' N. and
long 46° 15' E. at a height of 5,500 feet above
level of the sea on the western slope of Mount Sahand (11,800
feet high) which separates it from Tabriz [q.v.]. This
explains the very considerable difference in climate
between the two towns, which are only 30 miles apar
as the crow flies (by the high road 80 miles). The
climate of the river Sâfi (Sofâ) which runs there
is mild and rather moist (Hamz Allâh and Meccqueenem, 1904). The plentiful water
supply makes the vegetation rich. The fruit o
Marâga is celebrated in Persia and a good deal of i
is exported to Russia via Ardabil. The district i
watered by the stream which flows down from the
Sahand and then turns west to Lake Urmia which i
20 miles from Marâga. The town is built on the le
bank of the river Sâfi (Sofâ) which runs there
from the basin of the Caspian Sea

From the geographical point of view, Marâga i
quite independent of Tabriz. It lies a little off the great road from Tabriz to Kirmângâh which runs neare
Lake Urmia (via Binâb). The direct bridge-path Tabriz-Marâga by the passes of the Sahand is onl
practicable in summer. There is also a direct route
along the river and on the south coast of the
region crossing the Sâfi-rûd, 20 miles from Marâga. This road has always been of importance whenever Marâg
was the capital of Aţâr-baydjan. The important plac
on the route was Kûlsara (cf. below).

At the beginning of the 19th century, Marâga ha
6,000 families (Bustân al-siyahat); in 1290/1880 it ha
13,259 inhabitants, of whom 6,865 were men an
6,394 women (H. Schindler). Mecquenem (1904
190, and th
6,000 families
(Bustân al-siyahat); 3
(1870), and th
(Salâr-Khana).

2. Same formation as shown in Fig. 1 but in a still hotter and drier area near Isfahan. Dominants are antipastoral and antipyric plant species (*Artemisia* spp., *Astragalus* spp.). The white dots are plants of *Tulipa polychroma*; the flowering shrub to the right in the foreground is a thorny species of *Amygdalus*. (Photograph by M. Zohary, *ibidem*, 292.)
3. Slope grazed by sheep and goats near Kirmanshah originally covered by a low forest of Quercus brantii. (Photograph by M. Zohary, ibidem, 290.)

4. Detail from Fig. 2: Artemisia, probably herba-alba. (Photograph by M. Zohary, ibidem, 293.)

5. Another detail from Fig. 2: Astragalus sect. Tragacantha. (Photograph by M. Zohary, ibidem, 293.)
Ptolemy, vi, ch. ii, Ἐἰροδνωνίος, Dio Cass., xlix, 25, are variants of the same name, which was probably that of the ancient capital of Atropatene; cf. Ritter, Erdkunde, ix, 770. If the identification of Φράκτα (summer capital, Strabo) with Talšīrī Sulaymāni suggested by Rawlinson has been accepted (cf. Hoffmann, Auszüge aus syrischen Akten, 253; Marquart, Erinnerungen, 108; A. V. Williams Jackson, Persia, past and present, 136), the identification of Φράκτα is still uncertain. On general principles, it is improbable that a town like Marāgha so advantageously situated by nature was in existence in Roman times as the ancient name of Marāgha increases the probability of the identification Φράκτα = Marāgha (of course with a reservation as to the exact site of the ancient town).

A place-name Marāgha is mentioned in Arabic (Yākūt) and a little town of the same name is in Egypt near Ta'attār. The etymology "place where an animal rolls" *(from m-r-jh)* proposed itself to the Arabs here, but in Adharbājān (cf. also the village of Marāgha near Bakhrūsh, Nishāt al-sulāb, 122) the name is rather a popular Arabic etymology of some local name. It is to be observed that Ptolemy, vi, ch. 2, calls Lake Urmīya Margiāne (μάργιαν τῆς Μαργιανοῦ λίμνης) and gives the same name to the country along the coast of Assyria. Lastly, Marquart in Erinnerungen, 143, 221, 313, retains the variant Μαργιάνι, but Μαργιανῖον seems also to be based on a good tradition (cf. Ptolemy, ed. Wilberg, 1838, 391).

The Arabs. Marāgha must have been among the towns of Adharbājān conquered by al-Mughirā b. Shu'ba al-Thakāfi in the year 22 (al-Baladhun, 325; al-Yaʾkūbī, Balūdān, 271). Marwān b. Muhammad returning from his expedition to Mūkān and Gīlān in 123/740 (cf. al-Yaʾkūbī, Historiar, ii, 363) stopped here and erected a stone with the inscription (in Pers. script) the old village (karyā) was given the name of Marāgha (cf. above). Marwān did some building there. The town later passed to the daughters of Hārūn al-Rashīd. On the rebellion of Wādīnā b. Rawwād, lord of Tabrīz [q.v.], Khūzaym b. Khāzin, who was appointed governor of Adharbājān and Armenia (probably in 107/783, cf. R. Varthema, Καθημερινά της Α’ ἐποχῆς, in Zentralstelle Kolleg Vetokosovedov [1925], 1, 397), built walls round Marāgha and put a garrison in it. When Bābāk rebelled in 201/816-17, the people sought refuge in Marāgha. Al-Maʾmūn sent men to restore the walls and the suburb (rubād) became inhabited again (al-Baladhun, loc. cit.). In 221/836 Marāgha is mentioned as the winter quarters of Afshār in his campaign against Bābak (al-Tahārī, iii, 1186).

In 280/93 the Sādīq Muhammad Afshīn b. Dīwādād seized Marāgha from a certain 'Abd Allāh b. Huysayn, who was killed (al-Tahārī, iii, 2137; al-Mabsūdī, Marāği, viii, 143 = § 3281). In 296/908 the Sadjīd Muhammad b. 'Abd al-Razzāk is a record of the diseases which decimated them because they ate too much fruit in Marāgha. This reference to Marāgha is quite unexpected in the text, and Margoulouth has rightly proposed to read اَلْقَرْم in place of دَقَرْم. A coin struck at Marāgha in 337/949-9 by Muhammad b. ʿAbd al-Razzāk is a record of the brief conquest of Adharbājān by the general of the Būyid Rukn al-Dawla (Vasmer, Zur Chronologie d. Gegenwärtigen in Islam, ii/2 [1927], 170). Of 347/958 we also have drainages of Marāgha in the names of the two sons of the Daylamī Marzūbān, Ibrāhīm and Djasīrūn (ibid., 172).

The Rawwāds and the Saldūqs. After the disappearance of the Daylamī, we find in Tabrīz the family of Rawwādī Kurds who seem to have been related to the Musafāris by marriage only. On the other hand, it is very likely that the Rawwāds are the descendants of the Arab al-Rawwād al-Azdī, lord of Adharbājān (al-Baladhun, 331) who became assimilated by their neighbours in Adharbājān. The best-known of these Rawwāds is Wāhsūdān b. Mamlān (μωχίαν; the change of d to l in Kurdish is common) who is mentioned between 420/1029 and 446/1054 (Ibn al-Aṭhīr, ix, 279, 351, 410), and who in addition to Tabrīz possessed other strongholds in the mountains (Sahān). When in 420/1029 the Ghuzz reached Marāgha and executed there a governor, the latter was called al-Husayn b. Ḥadiyya, but in 42?/10? the latter was united under Wāhsūdān and drove out the Ghuzz (Ibn al-Aṭhīr, ix, 270-2). This incident shows that the district of Marāgha was within the sphere of influence of Wāhsūdān. In 446/1054 Wāhsūdān became a vassal of the Saldūqs, but Ibn al-Aṭhīr, ix, 410, says nothing about the extent of his possessions around Sahān. In 497/1104 the peace between the sons of Malīk-Shāh, Bākriṭuš and Wāhsūdān, was signed near Marāgha, and in 498/1105 Muhammad visited Marāgha.

The Aḥmadīs. In 505/1111-12 we have for the first time mention of the Aḥmadī b. Ibrāhīm b. Wāhsūdān al-Rawwādī al-Kurdi, lord of Marāgha and Kūtbāt (Kūlsāraʾ) (Ibn al-Aṭhīr, x, 361). He was the founder of a little local dynasty, which lasted till about 624/1227. We know very little of the history of the Aḥmadīs [q.v.], which has never been closely studied.

Aḥmadī was certainly the grandson of Wāhsūdān b. Mamlān of Tabrīz [q.v.], and this explains the insistance with which the Arā بهگ of Marāgha tried to retake Tabrīz. Only inscriptible hereditary rights can explain the strange fact of the presence of a Kurd among the amirs of the Saldūqs. The name Aḥmadī is a peculiar formation; the name of Mahadmī, a village to the south of Marāgha, belongs to the same category of diminutives. The Aḥmadīs, however, very soon adopted Turkish names.

Aḥmadī with a large army took part in the Counter-Crusade of 305/1111-12. During the siege of Tell Bābār, Joscelin came to terms with him ( tamburah) and he withdrew from the town (Kamāl al-Dīn, Tarāʾīk halāb, in Rec. des hist. des croisades, iii, 599). Aḥmadī soon abandoned Syria entirely, for he coveted the lands of the Shāhīr Arman Suḵmān who had just died. We know that Suḵmān had extended his sway over Tabrīz, and the reference is probably to this town. According to Sītī b. al-Djaṣwī, in ibid., 536, Aḥmadī had 5,000 horsemen and the revenues from his fiefs amounted to 400,000 dinars a year. In 510/1116-17 (or 508/1114-15) Aḥmadī was stabbed in Baghdād by the Ismāʾīlīs, to whom he had done much injury (ibid., 556; Ibn al-Aṭhīr, x, 361).
Ak-Sunkur I. In 514/1120 Malik Mas'ud, governor of Mawsil and A'dharbaydjan, rebelled against his son Malik Tughril and gave Maragha to his Atabeg Kasim al-Dawla al-Buruki, but the rebellion collapsed and in 516/1122 Ak-Sunkur al-Adhami (client of Ahmadil), lord of Maragha, who was in Baghdad, was authorised by Sultan Mahmud to return to his fief. As the amir KUN-toghil, Atabeg of Malik Tughril (lord of Arran; Ibn al-Athir, x, 399), had died in 515/1121, Ak-Sunkur expected to get his place with Tughril. The latter ordered Ak-Sunkur to raise 10,000 men in Maragha and set out with him to conquer Ardabil, in which enterprise, however, they failed. In the meanwhile, Maragha was occupied by Djuvoyeg Beg, sent by Sultan Mahmud. The Georgian Chronicle (Brosset, i, 368) mentions under 516/1123 the defeat of Ak-Sunkur (whom he calls "Aghsuntuul, Atabeg of Ran" = Arran) during a demonstration against the Georgians carried out by Tughril from his late master's treasure.

In 524/1129, and Ak-Sunkur took a part, but not a very active one, in the suppression of the intrigues of the Mazaydli Dubsays [see MAZAYDIS]. In 524/1130 he was one of the promoters of the election of Sultan Dawud, whose Atabeg he was. In 526/1132 Tughril, uncle of Dawud, defeated the latter and occupied Maragha and Tabriz (al-Bundari, ed. Houtsmans, 161). Dawud, along with his uncle Mas'ud and two other brothers, fled to Persia in flight in the interests of his ward Sultan Arslan, and Maragha was reoccupied by A'dharbaydjan. After the capture of Hamadan, Ak-Sunkur was killed there by the Isma'ili (527/1133), instigated by Tughril's vizier (al-Bundari, 169).

Ak-Sunkur II. The name of Ak-Sunkur's son is transmitted in different forms. Ibn al-Athir, xi, 166, 177, calls him, Ak-Sunkur (II); cf. also Ta'rikh-i guzida, 472. At-Bundari, 231, calls him al-Amir al-Kabir Nasrat al-Din Khasebek and, 243, Nasrut al-Din Arslan Abu (cf. al-Kashghari, Dizan Ullugh al-Turk, i, 80). The Rahat al-sudur, 241, 244, 246, gives him the name of Atabeg Arslan Abu. Al-Bundari treats him as an enemy of the great amir Ildeniz [q.v.], whose family finally triumphed over the lords of Maragha. Ak-Sunkur II, who was called Ildeniz [q.v.], is possibly the Palangeri (?), who was the favourite of Sultan Mas'ud and sought to establish himself in Arran and A'dharbaydjan. This Khasebek had besieged Maragha in 541/1146-7 (al-Bundari, 217). In 545/1150-1 Sultan Mas'ud took Maragha and destroyed its walls (bura), but a reconciliation later took place between Khasebek and Ak-Sunkur II under the walls of Ruytin-diz (cf. below). The execution of Khasebek in 547/1153 by Sultan Muhammad alienated Ildeniz and Ak-Sunkur II and they installed Sulayman on the throne of Hamadan. Muhammad on his return to power sent an embassy to restore good relations with the two lords of A'dharbaydjan (sab'ayb A'). Peace was concluded in 549/1154, and the two great amirs shared A'dharbaydjan between them (al-Bundari, 243). On his deathbed (554/1159), Muhammad entrusted his young son Malik Dawud, (cf. the genealogical tree in the Ruhat al-sudur) to Ak-Sunkur. As Ildeniz was furthering the interests of his ward Sultan Arslan, Pahlawan b. Ildeniz advanced against Ak-Sunkur II, but the latter with the help of Shahn-ir Arman defeated him on the Safid-rud. In 556/1161 Ak-Sunkur sent 5,000 men to the help of the governor of Ray, Ildeniz, who was fighting A'dharbaydjan. The latter gained the upper hand, and in 571/1162 Ak-Sunkur II took part in the expedition of Ildeniz against the Georgians (Ibn al-Athir, x, 189). In 563/1168, however, Ak-Sunkur II obtained recognition for his ward from Baghda'd. Pahlawan b. Ildeniz at once besieged Ak-Sunkur in Maragha (ibid., 218), but a peaceful end to hostilities was postponed.

In 564/1168-9, the amir of Ray, Inandj, was killed (Ibn al-Athir, xii, 230). The Tawqih-i guzida, 72, seems to suggest that the rebellion in Maragha of Kutlugh (?), brother of Ak-Sunkur (II), was due to Inandj's influence. He was punished by the Atabeg Pahlawan b. Ildeniz, and Maragha was given to his brothers 'Ala-al-Din and Rukn al-Din.

Under 570/1174-5, Ibn al-Athir (xi, 280) mentions that at Maragha Fadak al-Din, son of Ibn Ak-Sunkur (i.e. son of Ak-Sunkur II), to whom his father had bequeathed his estates. Pahlawan besieged the fortress of Ruytin-diz and Maragha. On this occasion, peace was concluded on the cession of Tabriz to the family of Ildeniz. This important detail shows that down to 570 the fief of the Ahmadilis comprised all the country round Mount Sahand, including Tabriz.

In 602/1205-6 the lord of Maragha, 'Ala-al-Din came to an agreement with the Atabeg of Arbil, Muzaflar al-Din Gokburi, to deprive the Ildenizid AbU Bakr of A'dharbaydjan of power, on the pretext that he was incapable of ruling. From Maragha they marched on Tabriz, but Abu Bakr called to his aid the former slave of his family Ay-doghmish (cf. Defremery, Recherches sur quatre princes d'Hamadan, in JA, 1895, 154). In 603/1206-7 Pahlawan returned to his own lands and Abu Bakr with Ay-doghmish came to Maragha. 'Ala-al-Din had to surrender the fortress which was the bone of contention, but was given in compensation the towns of Urmia and Ughun. In 604/1207-8 'Ala-al-Din, whom Ibn al-Athir, xii, 157, 182, here calls Kara-Sunkur, died and left one son, a minor. A brave servant of 'Ala-al-Din assumed the guardianship of the child, but the latter died in 605/1208-9, and Abu Bakr then took possession of all the lands of the Ahmadilis except Ruytin-diz, where the servant already mentioned had entrenched himself with his late master's treasures.

It is not clear if 'Ala-al-Din Kar-Sunkur is identical with the brother of Ak-Sunkur II mentioned in 564/1168-9. For the date of his accession and his importance in the history of Maragha and A'dharbaydjan, the preface of the Haft-piyar of Nizamih [q.v.], this poem (finished in 593/1197) was composed at the request of 'Ala-al-Din K. R.b. (?; Arslan (the Rûm and the Rus paid him tribute [kharaj]; the Georgians suffered reverses at his hands). This mamddl was definitely identified by Rieu, Catalogue, i, 567 and Supplement, 1893, 145, with 'Ala-al-Din of Maragha. Nizamih mentions two sons of 'Ala-al-Din, Nusrut al-Din Muhammad and Ahmad; but to reconcile this with Ibn al-Athir we should have to suppose that both died before their father.

The family of the Ahmadilis was continued for some time in the female line. In 618/1221 the Mongols arrived before Maragha, and the town was stormed on 4 Safar/30 March. The Mongols sacked and burned the town and massacred the inhabitants (ibid., xii, 246, 263), but the lady of Maragha (daughter of 'Ala-al-Din?), who lived in Ruytin-diz escaped the catastrophe. Djalal al-Din. In 622/1225, the Khwarazmshah Djalal al-Din came to Maragha via Dakhka. He entered it without difficulty, for the inhabitants were complaining of all kinds of oppressions and raids by the Georgians (Nasawi, Sina Djalal al-Din, ed. Houdas). Djalal al-Din tried to restore the prosperity of Maragha; cf. Ibn al-Athir, xii, 200, 202.

In 624/1227, while Djalal al-Din was in Persian I'tis, his vizier Sharaf al-Mulk was forced to recon-

qu...
to the treasury at 70,000 dinars (Ardabil paid 85,000) and those of its wildyat at 185,000 dinars. The tuman of Maragha comprised all the southern part of Adharbāyjān; in the north it was bounded by the tuman of Tabrīz, in the west by that of Khoy (Urmia), in the south by the lands of Kūrdistān (Dinawar) and in the east by 'Irāk-i 'Adām (Zangān, Sudjās). All the lands now under the modern Sāvand-Bulāk or Mahābad were then ruled from Maragha. As dependencies of Maragha, Hamd Allāh gives the towns of Dih-i Kūh-arakan (in popular Turkish, Tashqorghan) to the south of Tabrīz. Lavānī on the right bank tributary of the Ḍajhaṭu (cf. Rawlison, 1841: 39; the ruins of Kal‘a-yi Bāhhta) and Paswē in Lāhīdān, in the valley of the Tigris [cf. sāwand-bulāk]. The tuman comprised six cantons (the names are much mutilated): Sarājūn (?); Niyażdūn (?); Dūzakhūrūd (?; cf. the mountain Dūzakh on the middle course of the Ḍajhaṭu); Gawdāwīk (at the confluence of the river of Laylān with the Ḍajhaṭu; the name is also read Gawdūl, Gawdawān. It is remarkable that Firdawṣī (ed. Moḥi, vii, 141, 151) mentions in these regions a Daḵič Dūk and Kūh-i Dūk where Bahram Čūbīn was defeated by Khvārsaw; Bihistān (probably the district of Bāhī on the Tatawu) and Hāghartūrūd (to the east of Sahand on the Karanghu). The district of Angūrūn on the Kīzīl-uẓūn was also a dependency of Maragha.

Christianity at Marāgha. In the Mongol period, Marāgha had become an important centre of Christianity. The celebrated Mar Bar Hebraeus [see Abū al-ʿAzīz Pāsta; cf. šuwal-kermān] of the same name which stretches as far west as Lake Urmia and contains four component sub-districts (bakhşis), Huma, ʿAbd al-ʿAdīs, Bāzūn and Malik Kard, the total population of the Šahristān being 232,067. As well as Sunnis and Shīʿīs, in the main Turkish-speaking district, the total population of the Šahristān of the same name which stretches as far west as Lake Urmia and contains four component sub-districts (bakhşis), Huma, ʿAbd al-ʿAdīs, Bāzūn and Malik Kard, the total population of the Šahristān of the same name which stretches as far west as Lake Urmia and contains four component sub-districts (bakhşis), Huma, ʿAbd al-ʿAdīs, Bāzūn and Malik Kard, the total population of the Šahristān

Francis, South Arcot, Madras 1906; and H. R. Pate, J^innevelly, Madras 1917. S. Playne and W. ... same author, 382, mentions a direct road from Marand to Maragha (via Nurin [?], somewhere west of Tabriz?). Later, Djulfa). The road from Tabriz to Khoy also branches takes its name from the village of Waldiyan. To the east of Marand lies the wild and mountainous region historians is called Yam (Mongol = "post-station").

The altarmenischen Ortsnamen, wife (Hubschmann, the lands as far as Lake Urmiya. A legend of Arme- Karadja-dagh which is crossed by the defile of the pass to the south of Marand often mentioned by historians is called Yam (Mongol = "post-station"). The pass between the plain of Marand and Marand is surrounded by many gardens, occupies the eastern corner of a rather beautiful plain, about 10 miles broad and sloping slightly to the west. To the south, the Mishow range, a continuation of the central heights of the plain of Marand is separated from the Araxes by a slightly to the west. To the south, the Mishow range, a continuation of the central heights of the plain of Marand is separated from the Araxes by a

The town lies about 40 miles north of Tabriz, halfway between it and the Araxes or Aras in lat. 38° 25' 30" N. and 45° 46" E. at an altitude of ca. 4,000 feet/1,360m. (it is 42 miles from Marand to ca. 360 miles/579 km. It lies 40 miles north of Tabriz.) Djulfa). The road from Tabriz to Khoy also branches takes its name from the village of Waldiyan. To the north-east of Khoi. The length of the Zunuz is about 40 miles (Hamd Allah MustawfT: 8

Later history. The Arab geographers of the 4th/10th century (al-Istakhri, 182; Ibn Hawkal, 239; cf. Le Strange, 4th/10th century (al-Istakhri, 182; Ibn Hawkal, 239; cf. Le Strange, 166-7) mention Marand among the little towns of Adharbaydjan where the trouser-arrived with 180 prisoners at the caliph's court. Al- Mutawakkil ordered Ibn Ba'th to be beheaded, but the latter recited verses in Arabic and the caliph was astonished by his poetic gifts (inna ma'ruhu la-adabbin) and gave him his life. Ibn Ba'th died in prison and his sons entered the corps of mercenaries (al-ghadirjia). According to one of al-Tabar'i's authorities (iii, 1388), the shaykhs of Maragha who praised the bravery and literary ability (adab) of Ibn Ba'th also quoted his Persian verses (bi 'l-farziyya). This important passage, already quoted by Barthold, BSOs, ii (1923), 836-8, is evidence of the existence of the cultivation of poetry in Persian in northwestern Persia at the beginning of the 9th century. Ibn Ba'th must have been incarcerated to a considerable extent, and, as has been mentioned, he relied for support on the non-Arab element in his nástaks (tulad taille). During the 8 months that the siege lasted, 100 individuals of note (auwâd) were killed and 400 wounded. When Bughâ al-Şarâbî (al-Baladhuri, 330: Bughâ al-Şaghîr) arrived, he succeeded in detaching the men of the Rabî' tribe from Ibn Ba'th. Ibn Ba'th and his relatives were seized and his house and those of his partisans plundered. In Shawkâl of 235/April-May 850, Bughâ arrived with 180 prisoners at the caliph's court. Al-Mutawakkil ordered Ibn Ba'th to be beheaded, but the latter recited verses in Arabic and the caliph was astonished by his poetic gifts (inna ma'ruhu la-adabbin) and gave him his life. Ibn Ba'th died in prison and his sons entered the corps of mercenaries (al-ghadirjia). Ibn Ba'th must have been incarcerated to a considerable extent, and, as has been mentioned, he relied for support on the non-Arab element in his nástaks (tulad taille).
Marand must have shared the fate of Tabriz [q. v.]. According to Yakút, iv, 503, the town had begun to decline after it was plundered by the Georgians (Kurds), who carried off its inhabitants. This is valuable confirmation of the Georgian expedition to Persia, a detailed account of which is given in the Georgian Chronicle for 1208-10 [see Tábriz and Al-Kuréj].

Among the theologians born in Marand, Yákút mentions one who died in 216/831 and another who had studied in Damascus in 433/1041-2. In 624/1226, Marand, which had not sufficient defences, was occupied by the hādījī Abú al-Asráfí of Kakhâl. Sharâf al-Mulk, governor for the Khârazmshâh, retook the town and wrought great slaughter in it (Nasawi, ed. Houdas, 166).

The only historical monument in Marand is the old mosque, Salâdîg in origin, now in ruins, with a mihrâb in stucco bearing the dates of rebuilding 730/1330 (reign of the Il-Khânîd Abû Sa'id) and 740/1339 by Khâyda Husayn b. Mahmûd (cf. Sarre, Denkmäler persischer Baukunst, Berlin 1910, 24-5 and pl. xvii; the observations by E. Herzfeld, Die Gumbadh-i ʿAlawiyân, in the Volume ... presented to E. G. Browne, Cambridge 1922, 194-5; and D. Willber, The architecture of Islamic Iran. The Il-Khânîd period, Princeton 1955, 150). Marand was mentioned in the Byzantine sources as early as 270/882-3 (cf. E. Herzfeld, Byzan. Zeitschrift, iii, 1910, 794-6; St. Martin, Mémo. sur l'Arm., 200). The statement in a description of the district of Halab (B.N. ms. Arab., no. 1683, fol. 72a) that the Armenian name of the town was Nakinuk (Blochet, iii, 525-6, 6) is wrong; this is a mistake for Goynuk, a name later given to the town itself occupied only half this area (Nahat al-kullâh, 88, tr. 89). In the Timurid period, Marand appears as a mint-town (in 832/1428-9), see E. von Zambaur, Die Munzprägungen des Islam, zeitlich und örtlich geordnet, i, Wiesbaden 1968, 238.

Marand is several times mentioned in connection with the Turco-Persian wars. According to Ewliya Çelebi (in 1647), Sinâbîn-i nâma, ii, 242, Marand was a hunting-resort of the Timurid Shâhrokh. In spite of the damage done by the invasion of Sulṭân Murâd, the town looked prosperous and had 3,000 houses. Ewliyâ enumerates a number of celebrated theologians buried north of Marand.

In the autumn of 1724 Abûl Ālam Pâsha Kâprûlu sent the Kurdish Khân of Bîlis Muhammad Abid to occupy Marand, the inhabitants of which had fled. Resistance centred round the town of Zümûz (10 miles north of Marand) which had 7,000 (?) houses and a castle called Dîza by the Persians. To dispose of the threat to their flank, the Janissaries, before advancing on Tabriz, fought a battle here in May 1725 with the Persians, of whom a large number were slain. Dîza was taken and dismantled (cf. von Hamer, Götz, iv, 226, following Çelebi-žâde).

Marand has often been mentioned by European travellers since the time of Hans Chr. von Teuffel (1589), cf. the notices by Chardin (ed. 1811, i, 318) and by Ker Porter, Jaubert, Morier, Ouseley and Monteith, of which a résumé is given in Ritter, Erdkund, ix, 907. Marand has recently gained in importance since it lies on the modern high road from Tabriz to Dîflâ built by the Russians in 1906 and replaced by a railway in 1915-16.

In contemporary Iran, Marand comes within the third wîthin of Adharbayjân, and is the centre of a region of southern Anatolia, falling within modern Turkey and now the chef-lieu, as Marâş, of the i (formerly silâyet) of Marâş.

It lies about 2,000 feet/610 m. above sea-level on the northern edge of the hollow (ʿAmk of Marâş; now Çakal Owa and south of it Şeker Owa or Marâş Owa) which lies east of the Dîyarbâkîr and is watered by its tributary, the Nahr Harîl (Ak-Sû). As a result of its situation at the intersection of the roads which run to Antakîya, to ʿAyn Zarda and al-Mâšsîa, to Albitân (Abdustân) and Yarpûz, via Gökâtûn (Kokusos) to Kaysariyya, via Behesni (Bahamas) to Sumâysîât and via al-Hadâš and Zîbra to Malatya, Marâş was from the earliest times one of the most important centres of traffic in the Syrian frontier provinces. This importance was mentioned as early as the Assyrian texts as Markasi, capital of the kingdom of Gurgum [see ғârismâna], and several Hittite monuments have been found there (cf. Unger, Marâşi, in Ebert's Reallexikon d. Vorgesch., viii, 1927, 48).

1. History up to the Ottoman period. In the Roman imperial period it was called Germanikeia in honour of Caligula on the coins, Ceasarea Germaniæ, in the district of Halab (B.N. ms. Arab., no. 1683, fol. 72a) that the Armenian name of the town was Nakinuk (Blochet, ROL, iii, 525-6, 6) is wrong; this is a mistake for Goynûk, a name later given to the neighbouring al-Hadâš [q. v.]. The Emperor Heraclius passed through the town in 626 (Theophanes, Chron., ed., de Boor, 313; Ramsay, in Glasser's Review, x, 140; Gerland, in Byz. Zeitschrift, iii [1894], 362). The Emperor Leo III came from Marâş (Germanikeia); later authors (like Theophanes, op. cit., 391) wrongly called him the "Isaurian" (a confusion with Germanikopolis; cf. K. Schenck, in Byz. Zeitschr., v [1896], 296-8).

In the year 16/637 Abu ʿUbayda sent Khânî b. al-Walid from Manbij against Marâş, and the Greek garrison surrendered the fortress on being granted permission to withdraw unmolested; Khânî then destroyed it (Caetani, Annali dell' Isîm, iii, Milan 1910, 794, 806). Sufyân b. ʿAwf al-Ğamîdi in 30/650-1 set out from Marâş against the Byzantines. Muʿâwiya rebuilt Marâş and settled soldiers in this "Arab Cayenne" (as Lammens, in Annali dell' Isîm, iii, 525-6, 6) is wrong; this is a mistake for Goynûk, a name later given to the town itself occupied only half this area (Nahat al-kullâh, 88, tr. 89). In the Timurid period, Marand appears as a mint-town (in 832/1428-9), see E. von Zambaur, Die Munzprâgungen des Islams, zeitlich und örtlich geordnet, i, Wiesbaden 1968, 238.

The Emperor Heraclius passed through the town in 626 (Theophanes, Chron., ed., de Boor, 313; Ramsay, in Glasser's Review, x, 140; Gerland, in Byz. Zeitschrift, iii [1894], 362). The Emperor Leo III came from Marâş (Germanikeia); later authors (like Theophanes, op. cit., 391) wrongly called him the "Isaurian" (a confusion with Germanikopolis; cf. K. Schenck, in Byz. Zeitschr., v [1896], 296-8).

In the year 16/637 Abu ʿUbayda sent Khânî b. al-Walid from Manbij against Marâş, and the Greek garrison surrendered the fortress on being granted permission to withdraw unmolested; Khânî then destroyed it (Caetani, Annali dell' Isîm, iii, Milan 1910, 794, 806). Sufyân b. ʿAwf al-Ğamîdi in 30/650-1 set out from Marâş against the Byzantines. Muʿâwiya rebuilt Marâş and settled soldiers in this "Arab Cayenne" (as Lammens, in MFB, vi [1913], 437 calls it). After Yazid I's death, the attacks of the Greeks on the town became so severe that the inhabitants abandoned it.

After Muhammad b. Marâşi in 74/693-4 had broken the truce concluded by Abû al-Malîk with the Greeks, in Dîflâdî, 1 of the following year the Greeks set out from Marâş against al-ʿAmâk (= 'Amk of
Antakya; cf. Le Strange, Palestine under the Moslems, 391) but were again driven back in the 4th century. Marash was restored by al-Abbās, son of al-Walīd I, and fortified and repopulated; a large mosque was also built there.

The people of Kinnasrin [q.v.] (i.e. probably of the dūr of Kinnasrin) had to send troops every year to Marash. During Marwān II's fighting against Hims, the Emperor Constantine again besieged Marash, which — had finally to capitulate (1297/746) and was destroyed (al-Baladhūrī, 189; Theophanes, Chron., ed. Boor, 422; Georgios Kedros, ed. Bonn, ii, 7). The inhabitants emigrated to Mesopotamia and the dūr of Kinnasrin. After the capture of Hims, Marwān sent troops to Marash, who rebuilt the town in 1307/47; the castle in the centre of the town was henceforth called al-Marwān after him (Yākūt, iv, 498-9). But by 1377/74 the Greeks again sacked the town. Al-Manṣūr then had it rebuilt by Sālīh b. al-Walīd I, and fortified and repopulated; a large mosque was also built there.

The Arabs in the village of Gafina of Marash (Rohricht, 56), to whom it was allotted in the 16th century, as a leader of a robber band and ally of the Byzantine emperor, conquered a little kingdom for himself on the Syrian frontier, belonged to the village of Shirbáz in the district of Marash (Michael the Syrian, iii, 173, 173 n.).

After the Franks under Godfrey de Bouillon had taken Marash in 1109/1097, they installed a bishop there (Michael the Syrrius, iii, 191). Bohemund of Antioch seems to have been in possession of Marash on a fief consisting of Marash (Goisfridus Monachus) who took the town, fortified the surrounding small towns and villages and gave them garrisons and left Monasteria there as ṣūfū (Anna Comnena, Alexiad, ed. Reifferscheid, ii, 132, 11 ff; F. Chalandon, Les Comnene, i, Paris 1900, 234). The town of Marash was placed under the Armenian prince Thath, who had distinguished himself in its defence against Bohemund (Matthaeos Urahyets, ed. Dulaurier, ch. clxxvi, 229-30; Chalandon, op. cit., i, 104-5). But by 1104 he had to abandon it and surrender it to Joscelin de Châteauvert (Courtenay, lord of Tell Bāghrīr (Matthaeos, op. cit., 257; ch. cxxvi; Raoul of Caens, ch. 148; Röhrich, op. cit., 49, n. 8, 52, n. 4). This Thathūr is perhaps the same Armenian as had given his daughter in marriage to Godfrey's brother Baldwin (in William of Tyre, x, 1, he is called Tafroc; in Albert of Aix, iii, 31, v, 18, 1009; ed. Dulaurier, ch. cxxvi; F. Chalandon, Les Comnene, i, 104-5). By 1105 Baldwin of Antioch seems to have been in possession of Marash (Röhrich, 56), to whom it was allotted in the treaty of September 1108 (I Germánakon και το ὑπό τούτον πολέμιον; Anna Comnena, Alexiad, ed. Reifferscheid, ii, 217; Röhrich, 66). In 1114 the widow of the recently-deceased Armenian prince Kogh Vasīl (~ "Basil the thief") of Marash submitted to Aš Sunkur of Mawsīl (Weil, op. cit., iii, 199); on 28 Dūmādād II 508/27 November 1114, Marash was devastated by a disastrous earthquake in which 40,000 lost their lives (Michael the Syrian, tr. Chabot, iii, 200; Recueil hist. or. crois., iii, 607; Mattheos Urahyets, 289, ch. cxxvii). King Baldwin granted a monk named Godfrey (Goisfridus Monachus) a fief consisting of Marash, Kaysmūn and Raśbān (Michael the Syrian, iii, 211; Röhrich, op. cit., 161); in 1124 Godfrey was killed at the siege of Maṣṣūn in the battle of Joscelin of Edessa. The Dāhmarakhd Mūsā, and al-Abbās, son of al-Walīd I, in 531/1136-7 laid waste the villages and monasteries near Marash and Kaysmūn (Matthaeos, 320, ch. ciili). The Saldjūk sultan Maṣūd in 532/1138
advanced as far as Marash, plundering the country as he went (Michael the Syrian, iii, 246) as did Malik Muhammad of Malaya in 535/1141 (ibid., iii, 249) and Kilidj Arslan II in 541/1147 (ibid., iii, 275). The town then belonged to Raynal, son-in-law of Joscelin II of Edessa, who fell in 1149 at Innib (Rohricht, op. cit., 260). On 5 Dumâdâ I 544/11 September 1149, Kilidj Arslan and his father Mas'ud set out from Albistan against Marash, plundered the country around and besieged the town. The Frankish garrison capitulated on being promised a safe retreat to Antioch, but the Sultan sent a body of Turks after them, who fell upon them on the road and slew them. On this occasion, all the treasures of the churches of Marash was lost, which the priests who had rebelled against the bishop had appropriated (Michael the Syrian, iii, 290; Matthieos Urhayeci, 330, ch. clix; Chalandon, op. cit., 421; Rohricht, op. cit., 263). After the capture of Joscelin, Nûr al-Dîn of Halab in 546/1151-2 took a large part of the country of Edessa including the towns of Marash, Tell Bâghir, ʿAtinâb, Dûlûk, Kûrus, etc. (Recueil hist. or. crois., i, 29, 481, ii, 54; Weil, op. cit., iii, 296; Rohricht, op. cit., 265, n. 5). The district was then divided: the suzerain received Marash, Barzaman, Raʿbān, Kaysûm and Bahasnâ, the Arçukêd Kûra Arslan of Dhu zuyâ with the Gargar, Kîlûqâ and Marash, Nûr al-Dîn kept the district of Marash, Syria, iii, 297; William of Tyre, xvii, 16). When Masʿûd's son Kîlidj Arslan, lord of Marash (Michael the Syrian, iii, 318), attacked an Armenian village, the Armenians under Stephen, brother of the prince Thoros, in 1156 revived themselves by setting Marash on fire and carried off the whole population into captivity. He then became master of the Turks (ibid., ii, 314 [expanded from Barhebraeus, Chron. syr.]; differently in Abu Ṣâhîma, Rec. hist. or. crois., iv, 92, F. Chalandon, Les Comnene, ii, Paris 1912, 434). Among those carried off was the bishop Dionysios bar Sabîbi, who escaped to the monastery of Kilisûr (according to Chabot, loc. cit., the ʿAskorân Kauzâqan of Anna Commena, ed. Reiferscheid, ii, 219) and wrote three memoirs about the devastation of his former diocese of Marash (Michael the Syrian, loc. cit.; Baumstark, Gesch. d. syr. Lit., 298). Thores of Little Armenia in 1165 plundered Marash (Barhebraeus, Chron. syr., ed. Bedjan, 331; Rohricht, op. cit., 319, n. 8; Chalandon, op. cit., ii, 531, n. 1). Nûr al-Dîn again took Marash from Kîlidj Arslan II when he was on a campaign against the Dimînânan-dîd Dhu l-Nûn (Michael the Syrian, iii, 330) in the beginning of Dhu l-Kaʿâda 568/14 June 1173) and Bahasnâ in Dhu l-Hijdja (Rec. hist. or. crois., i, 43, 592, iv, 158, Matthias Urhayeci, ed. Dulavrier, 360; Abu l-Fidaʾ, Annal. musl., ed. Reiske, iv, 423; Rohricht, op. cit., 303, who is followed by Chalandon, Les Comnene, ii, 463, wrongly puts these events as early as 1155). Nûr al-Dîn perhaps handed Marash over to his ally Mîch of Little Armenia. When the dynast of Marash raised the district of Raʿbān, al-Malik al-Zâhîr in 592/1195-6 took the field against him, whereupon the lord of Marash sought forgiveness and recognised his suzerainty (Kâmâl al-Dîn, tr. Blochet, in ROI, iv, 212). The Armenian ruler Rupen III took Bohemund III of Antakya prisoner in 1185 and forced him to cede the territory from the Dûshân up to Kasûn (Michael the Syrian, iii, 396-7; Rohricht, op. cit., 403, n. 7, 661). Ghiyâth al-Dîn Kay-Khusraw, son of Kîlidj Arslan II, in 605/1208, when on a campaign against Little Armenia, took Marash (Abu l-Fidaʾ, Annal. musl., ed. Reiske, iv, 232), and made Husâm al-Dîn Hasan governor of the town. He was succeeded in this office by his son Tubshân, who in turn was succeeded by his son Nusrat al-Dîn, who ruled Marash for 50 years. The long reign of his son Muzaffar al-Dîn was followed by that of his brother ʿImad al-Dîn who however in 656/1258 abandoned the town, which was much harassed by the Armenians and Georgians, after failing to find support either from ʿizz al-Dîn Kay-Kâwîs of Kur or al-Malik al-Sâlih of Egypt. The town then surrendered to the Armenians ( Ibn al-Shihâb, Beirut 1909, 192).

Marash did not escape during the great Mongol invasion of Asia Minor. Baybars I of Egypt in his campaign against them in 670/1271 sent from Halab a division under Ṭâybars al-Wazîr and Ṭâs b. Muhîn to Marash, who drove all the Tatars from there and slew them (Rec. hist. or. crois., ii, 246; al-Makrizî, ed. Quatremerde, Hist. de Sultan Mâmulouks, i, 101). In the wars with the rulers of Little Armenia, troops from Halab went as far as Marash in 673/1274 and destroyed the gates of the outer town (Weil, Gesch. d. Chal., iv, 7). In the next few years, Baybars negotiated with envoys from Sis, from whom he demanded the surrender of Marash and Bahasnâ; but he was satisfied instead with a considerable sum of money (al-Makrizî, Recueil hist. or crois., iv, 673; hist., 104 [688/1299]). It was not till 692/1292 that Sultan Khâlîf by a treaty received Bahasnâ, Marash and Tell Hamdûn (Mufaddal b. Abî ʿl-Faqîlî, Hist. des Sultans Mâmulouks, ed. Blochet, in Patrol. Orient., xiv, 557; Weil, op. cit., iv, 186; S. Lane-Poole, History of Egypt in the Middle Ages, London 1901, 287). But the Armenians must have retained the two last-named towns for some time, for in 697/1297 Marash was again taken by the amîr Bilqan Tabâkhi, nâb of Halab, for Lâqîn. A treaty was then concluded with the ruler of Little Armenia, by which the Dâshân was to be the frontier between the two countries; Hamûs, Tell Hamdûn, Kûrâr, al-Nukây, (for its position, cf. L. Alîshân, Sixouan, 493-6), Hâqar Shûghân, Sirfandâkâr and Marash thus passed to Egyptians (al-Makriv, op. cit., ii, 63; Abu l-Fidaʾ, Annal. musl., ed. Chabot, v, 140).

In the second half of the 8th/14th century, Sayn al-Dîn Kârâdja and his son Khâlîf, the founders of the house of the Dhu l-Kadr-oghlu, conquered the lands along the Egyptian Asia Minor frontier with Malaya, Albistan, Marash, Bahasnâ and Kârâpet [see shi l-kadr]. In the mosque of Marash, one of his successors, Malik Arslân, was murdered in 870/1465-6; his portrait with the inscription "Sultan Arslân" and that of his sister Sittâ Khatun with the legend ʿAlif al-Dîn Kay-Kawîs are painted in the Codex Venetus 516 of the Geography of Ptolemy, which he apparently intended to dedicate to this father-in-law Mehmed II (Oehausen, in Hermes, xxv [1880], 417-42)

2. In Ottoman and modern times.

In Ottoman times, Marâş lay on one of the major routes to Syria: in the early 11th/17th century, Polonyâlî Simeon passed through the city when returning from Aleppo to Istanbul by way of Kayseri. The pre-Ottoman or else 10th/16th century bridge, which still crosses the Ceyhan somewhat to the west of Marâş, must have served this traffic. If the surviving bridge is identical with the bridge mentioned in an Ottoman tax register of the second half of the 10th/16th century, this structure should have been the site of a toll gate. According to the kânî, applied in the region, nomads travelling with their flocks were exempted from toll payment, which was only demanded from traders.

Marâş was considered as lying on a bandaj or pilgrimage route, even though the "diagonal road" crossing Anatolia by way of Konya and Adana seems to have been much more popular. Ewliya Celebi passed through Marâş on his way to Hâratîz, and the suppression of robbery in the district of Marâş was always treated with particular urgency because of the danger it presented to pilgrims (cf. Başbakanîk Arşîvi, Istanbul, Muhimme defterleri, 40, p. 42, no. 98, 97/1579-80). Probably for the same reason, a number of guarded mountain passes (derbendî) was instituted in the area in the course of the 11th/17th and 12th/18th centuries.

In the second half of the 19th century, the old thoroughfare passing through Marâş had apparently lost much of its importance, for in 1891 Cuinet reported that no road suitable for wheeled vehicles existed in the entire sanâqizak. As a result, not much of an outlet existed for local industries. Only in 1948 was Marâş linked up with the Malatya-Fevzipasa railway, which in certain sections follows the area's historical routes. In addition, asphalted roads were built, so that by 1960, Marâş was easily accessible from Adana, Iskenderun, Gaziantep and Malatya.

Administrative structure and population. After the Ottomans had conquered the Dhu 'l-Kadr principality in 921/1515, the area was first governed by Dhu 'l-Kadrî Sîfî Beg b. Şâhuwûr under Ottoman suzerainty. However, after the latter had been killed in 928/1522, surviving members of the Dhu 'l-Kadrî family were appointed to governorships in the European provinces of the Ottoman Empire, and the Ottoman wilâyât-sanâqizak structure was established in the lands which this dynasty had formerly ruled. A tax register (tahârî) dating from the early years of Sultan Kânî Sulayman's reign (after 931/1525-6) refers to a wilâyât of Dhu 'l-Kadrîyya, governed by two sanâqizak beşîgî and divided into five kadâhîs (Marâş, Elbîstân; Kars or modern Kadrî, also referred to as a liwâh-sanâqizak; Şamanto; and Bozok). This wilâyât consisted of 523 villages, 665 nomadic tribes, and 3,412 mezârâs (sown, but not necessarily inhabited, agricultural land). The total adult male population of the wilâyât amounted to 76,101 men. Among the latter, 9,644 were exempt from tax payment, probably either because of their former position under the Dhu 'l-Kadrî dynasty or because of services rendered to the Ottoman administration. Total population registered in the wilâyât can thus be estimated at 230,000 to 300,400 persons.

During those years, the town of Marâş appears as an administrative centre with an unusually high proportion of tax-exempt inhabitants. Of the 1,557 adult males recorded in the town (this should have corresponded to a population of about 7,500, since only 85 persons were recorded as unmarried), 836 men were sipâhis and sipâhîzâdes, in addition to the usual contingent of tax-exempt religious functionaries. This would have left the town with a tax-paying population of only about 550 adult males, an anomalous situation which can be explained only by the fact that the count must have been prepared a short time after the conquest. At this time, Marâş was inhabited only by Muslims.

During Krânûni Sulayman's reign, the number of adult males registered in the tahârî as resident in Marâş almost doubled, and before 972/1564-5 had reached the level of 3,054 men. Of these, 370 were recorded as unmarried. Thus a total population of 13,000-14,000 is probable, apart from certain tax-exempt families which may have gone unregistered. This figure placed Marâş among the large towns of contemporary Anatolia. According to Ewliya Celebi, who passed through Marâş in 1058/1648 and again in 1082/1672-3, the town consisted of 11,000 houses, which would seem to point to a much larger settlement than that described in the 10th/16th century tax registers. However, the town seems subsequently to have lost population. Texier, who refers to Marâş as it was in the early 19th century, estimates its population at 5,000-6,000 inhabitants. Struggles between the family factions of the Dhu 'l-Kadrî and the Bâyezîdî were brought to an end only during the reign of Sultan Ahmed I (102/1613-17), and Marâş seems to have contributed to a decline in urban population. However, according to a British Foreign Office source, between 1830 and 1840 Marâş had again reached the level of 23,000 inhabitants.

Administrative structure between the late 10th/16th and the early 19th century showed relatively slight variations. According to a register containing appointments to provincial governorships between 975-82/1568-74, the wilâyât of Dhu 'l-Kadrîyya consisted of the sanâqizaks of Marâş, Malatya, 'Aynûtáb, Sîs and Kaşr (modern Kadrî). In 1041-6/1632-41, this wilâyât had been much reduced, and now consisted only of the sanâqizaks of Marâş, 'Aynûtáb and Kaşr. 'Ali, who wrote during the reign of Sultan Ahmed I (1012/1603-17) mentions the sanâqizaks of Marâş, Malatya, 'Aynûtáb, Kaşr and Šamisây as forming part of the wilâyât of Dhu 'l-Kadrîyya. This list has also been reproduced in the *Qâbûn-numâ* of Kâtîb Celebi (p. 598). Thus the wilâyât was apparently soon restored to its former size. Writing at the end of the 11th/17th century, Ewliya Celebi enumerates the following: Marâş, Malatya, 'Aynûtáb, Kaşr, Şmansâd and Niğûdê.

During the Ottoman-Egyptian conflict of the 1830s, the troops of IÎhrîmî Paşa, Muhammad 'Ali's son, temporarily held Marâş, which was returned to the Ottoman realm in 1840. Administrative structure as it existed during the second half of the 19th century has been described by Cuinet: the sanâqizak of Marâş then formed part of the eyâlet of Aleppo and consisted of the kadâhîs of Marâş, Elbistan, Andîrin, Paşardîk and Zevîtân (modern name: Süleymanh). According to the same author, the total sanâqizak population amounted to 179,853, of whom 52,000 lived in the town of Marâş (proper) (32,000 Muslims, 20,000 non-Muslims). These figures indicate that a substan-
tial number of non-Muslims must have immigrated into the town, probably mainly during the 19th century. For the early days of World War I, Besim Atalay reports 32,700 inhabitants for the town of Mar'ash proper including 8,500 non-Muslims. In 1927, when the first census of the Turkish Republic was undertaken, the impact of the World War, the occupation of 1919 (first British, then French), and the War of Independence had reduced population to 25,672. From this low point, the city expanded continuously (1940: 27,744; 1945: 33,104; 1950: 34,641; 1960: 54, 447, 1970: 110,761; 1980: 178,557), without experiencing the temporary contraction that many Anatolian towns went through during and immediately after World War II. Between 1960 and 1980, the vilâyet (later il) consisted of the following kazas (later ilâ:): Maras-merkez, Afşin, Andırın, Elbistan, Göksun, Pazarok and Türklogo. In 1980, the il of Kahramanmaras contained a total population of 738,032, of which 281, 382 (38%) lived in towns and cities. Economic activities. From the dues recorded in the tax register compiled before 972/1564-5, the importance of textile manufacture becomes apparent. Apart from a sizeable dyehouse, we hear of a tax payable by bakers. The provincial governor claimed the right to tax the weavers’ pits, (qullâh takarâ); at the end of the 11th/17th century, complaints on this score were addressed to the Ottoman central administration. In the late 12th/18th century, red cottons were particularly esteemed among locally manufactured textiles. Even in the last years of the 19th century, Mar'ash still possessed a reputation as a textile centre. Although by that time many looms lay idle, 281 workshops were still active in this sector. Apart from fabrics intended for everyday use, Cuinet mentions the manufacture of textiles embroidered in gold and silver thread. A certain revival has taken place in the second half of the 20th century; in 1960 a state factory for the manufacture of poplin and other cottons (Siimerbank) began to operate in Mar'ash. This iron must have been mined in the kada? of Suleymanli, for Cuinet records that, in the second half of the 19th century, soft iron from this district was being employed by local farriers and blacksmiths. From the tax register of Kâ纳米î Sulaymân’s early years, we learn that silver was being mined in Göksun; this latter mine, whose existence was also known to Cuinet, was apparently not exploited during the 1890s. In addition, salpetre mines were worked and powder was manufactured; during the Cyprus campaign of the 10th/16th century, the Ottoman armies were using powder from Mar'ash. In the second half of the 20th century, the most important mines of the province of Kahramanmaras are in Elbistan, where abundant lignite has been discovered, and power plants for the conversion of this raw material into electric energy are in the course of being completed. Mar'ash possesses an ample source of wood in the forests which are still fairly abundant in the district; in the 10th/16th century, this wood was used by the Ottoman central administration for the construction of a Euphrates flotilla in Birecik. According to Cuinet, in the second half of the 19th century wood was employed particularly in the manufacture of European-style furniture, whose quality and cheapness the author praised highly.
to the early years of Kānumi Sulayman, Marāši at the time also possessed three zdwiya. However, in actual fact the number must have greater, for a later register (before 972/1564-5) refers to six dervish foundations as having benefited from the Dhū ’l-Kadrī rulers’ generosity. Among the latter, the zāviya of Comaḵ Baba continued to function at least until the late 12th/18th century, and during this latter period of its existence was inhabited by Bektaşī dervishes.

The Ottoman tax registers of the 10th/16th century also refer to the existence of a covered market or bedestān, which seems to have been current in the Safavid period (see Table A). This latter ruler had also established a khrbānasrāy and an ānīsta. It is possible that the last-named building survived in one of the three covered streets, lined with shops, which still exist, or until recently existed, in the centre of Marāši. In the early Ottoman period, further business structures were added, for it is very probable that Ferbād Pāsha, who caused his rival ʿAlī Beg b. Shāhshāvar to be killed upon Sultan Kānumī Sulayman’s order in 928/1522, is identical with the Ferbād Pāsha who (at sometime before 972/1564-5) had a hamām and khrbānasrāy constructed in Marāši. The cited, which is said to go back to Hittite times, was evidenced to Eyvliya Ḍevlet, Seydīyāh, in his inscription dated 915/1509-10 (inc) and bore the name of Sultan Kānumī Sulayman (926-7/1520-66), who had ordered a complete reconstruction of the fortress.

**Suraiya Faroqhi**

AL-MARÂŠI [see NUR ALLAH AL-SHUSHTARI), AL-MARÂŠI, a line of sayyids originally from Marāši [q. v.], whose nisba became well-known on account of their dynasty which dominated Māzandarān [q. v.] for most of the period between 760/1358-9 and the second half of the 10th/16th century. The Safawids [q. v.] were related to them by matrimonial alliances (see Table B and below, 2). Their descendants, offspring of the various branches of the Marāši, have continued to bear this nisba by which they are generally known (see below, 3). It was also attributed over the course of the centuries to various sayyids and non-sayyids individuals. Concerning the lakab Marāši, another explanation of the origin of the Marāši sayyids, see Table A.

1. The dynasty of the Marâšî sayyids of Mâzandârân. [a] The first phase. Founded by Sayyid Kawām al-Dīn al-Marâšî, known by the name of Mir-i Buzurg, this dynasty is sometimes called Sīlsila-yi mulkâ’-i Kawāmî-yi al-Marâšîyya (Rayhānat, iii, 323). Its historical context is the vacuum of political power which—in post-Illâhî Iran—enabled sayyids and dervishes to impose their influence. Kawām al-Dīn traced his lineage to the Imām ʿAlî al-Mabīdīn. However, the connection between his Marâšî ancestors and Zayn al-Abîdîn remains unclear (see M. Sütüda, ed., TDG, Mubâk ādima). His genealogy, as featured in the work of Zâhîr al-Dīn (TTTRM) has been disputed by A. Şayâyân, who established an “exact” genealogy with which the biographers of the Marâšî family concur. A genealogy, different from the two afore-mentioned, seems to have been current in the Safawid period (see Table A). The family of Mir-i Buzurg resided at Dâbû, a village near Amûl [q. v.] where he studied religious sciences. He made a pilgrimage to the tomb of the Imâm ʿAlî b. Mûsâ al-RLadî at Mâshhad [q. v.] and...

frequented the kínánkah of the sayyid 'Izz al-Dín Súgháñdí, one of the three influential Súfi shabés of Khurásh, disciple of Sháykh Hasan Dúrí, founder of the Sháykhíyya-Dúrúyya tárkhá, promotor of the Sarbádár movement in Khuráshán (see J. Aubin, in Studia Iranica, v [1976], 217-24). Having obtained the idazút of 'Izz al-Dín, Káwan al-Dín founded his own kínánkah at Dábú where he attracted numerous disciples. The control of Tabaristán-Mazandaran was then the object of keen competition between local powers. After the reconciliation concluded between the Kiyá-i Cúláb and the Kiyá-i Djalál, in 750/1349, Fákhír al-Dawla Cúláb, last representative of the third branch of the Bawándids [q.v.], was assassinated by a son (or by two sons?) of Kiyá Afrásiáb, former sipáh salár and brother-in-law of Fákhír al-Dawla, eponym of the Kiyá-i Cúláb who were also known as Afrásiábíddís [q.v.]. Having thus obtained a precarious control over Amul and Mazandaran, Kiyá Afrásiáb attempted to strengthen his popularity by becoming a disciple of Mir-i Buzurg, who conferred on him the lakáb of sháykhí. But the other disciples of Mir-i Buzurg harassed Afrásiábí and his followers. Afrásiábí imprisoned Mir-i Buzurg, but the latter was freed by his furious disciples. Having appealed in vain for the aid of the Kiyá-i Djalál, Afrásiábí was defeated at Dgalálakmár-parćn, near Dábú, by three hundred dervishes under the command of Kamál al-Dín b. Kawm al-Dín (763/1361-2), who shared responsibilities with his brothers. In 763/1361-2, he entrusted the government of Amul to Ríḍa al-Dín (TTRM, 255 ff.). With control of Amul, Bárfrúsh-dísh and Sári thus assured, the Mar‘áshís extended their power over Sawádkúh and Fírzkúh, which were held by the representatives of the last Bawándids. In the conquest of the fortress of Fírzkúh, and seizure of the treasury of Fákhír al-Dawla, they were assisted by their allies, the Máláíí sayyids of Gílán (TTRM, 261 ff.). The conquest of Rustamdár as far as Násí-risták was the operation of Sayyíd Fákhír al-Dín (782/1380-1). His conquest of Kúdíjúr having given to the Mar‘áshís control over the whole of Mazandaran, Kímál al-Dín entrusted Rustamdár to him. Henceforward, he undertook to subdue the fortresses of Kúdíjúr, of Kálá-risták and of Núr; he conquered Táhlkán and Lawássán, as well as part of Lárríján fortresses of Kuhdír or Kuhdír in Daylá-risták, from Lawándar to Rayná (TTRM, 271 ff.). Fákhír al-Dín took possession of Kázwín—then being contested between Ághá-báyjání and 'Irákí-í Adájam—a brief control interrupted by the death of Mir-i Buzurg (see below). Subsequently, he reoccupied the town, levied taxes following Afrásiábí, Víghtásp, and 'Abd Allah b. Kawm al-Dín. Fákhír al-Dín took three sons killed at Djalálakmar-parc, near Dábú, by three hundred dervishes under the command of Kamál al-Dín b. Kawm al-Dín (763/1361-2). Kamál al-Dín was assassinated by a son (or by two sons?) of Kiyá Afrásiáb, former sipáh salár and brother-in-law of Fákhír al-Dawla, eponym of the Kiyá-i Cúláb who were also known as Afrásiábíddís [q.v.]. Having thus obtained a precarious control over Amul and Mazandaran, Kiyá Afrásiáb attempted to strengthen his popularity by becoming a disciple of Mir-i Buzurg, who conferred on him the lakáb of sháykhí. But the other disciples of Mir-i Buzurg harassed Afrásiábí and his followers. Afrásiábí imprisoned Mir-i Buzurg, but the latter was freed by his furious disciples. Having appealed in vain for the aid of the Kiyá-i Djalál, Afrásiábí was defeated at Dgalálakmár-parćn, near Dábú, by three hundred dervishes under the command of Kamál al-Dín b. Kawm al-Dín (763/1361-2). Kamál al-Dín entrusted Rustamdár to him. Henceforward, he undertook to subdue the fortresses of Kúdíjúr, of Kálá-risták and of Núr; he conquered Táhlkán and Lawássán, as well as part of Lárríján fortresses of Kuhdír or Kuhdír in Daylá-risták, from Lawándar to Rayná (TTRM, 271 ff.). Fákhír al-Dín took possession of Kázwín—then being contested between Ághá-báyjání and 'Irákí-í Adájam—a brief control interrupted by the death of Mir-i Buzurg (see below). Subsequently, he reoccupied the town, levied taxes on its natural powers of MTr-i Buzurg; the only survivor was an infant, Iskandar-i Sháykhí (according to Rayná, in JÁ [1943-5], 236, three sons were killed at Dgalálakmár-parc, and 'Ali in the same battle as Muhammad: TTRM, 250 ff.; Mahdíjí, 15 ff.). The Mar‘áshís then turned on the Kiyá-i Djalál, Fákhír al-Dín and Víghtásp, who held respectively Sári and Túdíjúr (a fortress near Bárfrúsh-dísh = Bábúl). After the first battle, Kawm al-Dín and Kamál al-Dín entered Bárfrúsh-dísh as victors. With some former
there, went to Talikan, and then pillaged Alamut (TTRM, 290 ff.). At the end of a long retreat to Barfurush-dih, Mir-i Buzurg died of illness (781/1379). For a period of twenty years, by his charismatic leadership, he controlled Māzandarān through his sons, among whom there was then a fair degree of unity (four of his fourteen sons died in infancy). Kamāl-al-Dīn held Sārī and had entrusted Amūl to Rūdāl-al-Dīn, Rustamārdār to Fāqīr-al-Dīn and Karatūqgān to Shāraf al-Dīn. The power of the Marāʾghīn extended to the west as far as the frontiers of Kaźwīn; with their support, the Malātī sayyids controlled a large part of Gīlān. But their position was threatened in the east by Mir ʿImād al-Dīn, founder of the small dynasty of the Murūtadāʾi sayyids of Hazāradsar and in Astārābd by Amīr Wālī, who attempted to have Kamāl al-Dīn assassinated. The latter conquered Astārābd, where he left a garrison (781/1379). Fearing lest Amīr Wālī would join forces with Tīmūr Lang, he restored Astārābd to him; similarly, he handed over Rūstamār to Malik Tūs (794/1391-2; TTRM, 293 ff.; Mahdūrī, 23 ff.). But soon after Tīmūr’s conquest of Khūraṣān and Hārāt, Iskandar-ʿī Shaykhī, youngest son of Afraṣīāb, who had campaigned in Khūraṣān, joined forces with him. Twice, Tīmūr took possession of Astārābd. The second time, he appointed as governor there Fīrāq, with whom Kamāl al-Dīn maintained amicable relations. Kamāl al-Dīn also sent his son Ghiyāth al-Dīn to Tīmūr on three occasions with suitable presents, in the hope of persuading him to protect the Marāʾghīn from persecution by Iskandar. But animosity towards the Marāʾghīn (Imāmī and Rāfīḍī Shīʿīs) was rife among the predominantly Sunnī military chieftains of Tīmūr. It was fostered in the west, in Rūstamārdār, by Malik Tūs and in the east, in Astārābd, by Pīrāk, who, inwardly, supported Iskandar-ʿī Shaykhī (Mahdūrī, 27 ff.). Tīmūr had given orders to open up the route through the forests of Māzandarān, and he sent Ghiyāth al-Dīn, held as a hostage, with his vanguard force. Kamāl-al-Dīn had a fortified camp built on a place on 6 Dhu ’l-Kaʿaḍ 794/294 September 1392. Although inflicting losses, the Marāʾghīs were defeated by numerical superiority and withdrew to Māhānāsar, after two months and six days of siege. Kamāl al-Dīn sent ʿulamaʾ to Tīmūr to request amān or quarter for himself and his associates. They left the fortress of Māhānāsar on 22 Ramaḍān 795/2 August 1393 and escaped persecution at the hands of Iskandar-ʿī Shaykhī due to the efforts of Malik Tūs, who interceded with Tīmūr on their behalf. All the non-Sunnī occupants of Māzandarān also escaped (TTRM, 300 ff.).

Tīmūr is said to have obtained the most important spoils ever conceded to him by a king. Massacres and pillage continued in all the urban centres from Māhānāsar to Amūl as well as at Sārī, to where the sayyids were brought. He then despatched them to Khvārazm and to Transoxiana by sea and river routes, and compelled them to reside in naturally isolated places. Before embarkation, three of the sayyids were able to take refuge in Gīlān: ʿAbd al-Muṭṭalib b. Rūdāl-al-Dīn, ʿAbd al-ʿAẓīm b. Zayn al-ʿAbidīn and ʿĪz al-Dīn ʿHasān Rīkābī. Two sons of Kamāl al-Dīn (ʿAli and Ghiyāth al-Dīn) were in the service of Tīmūr, who entrusted Sārī to Djamāḥīd Karīn Ghawrī and Amūl to Iskandar-ʿī Shaykhī. In spite of their efforts towards repopulation and economic restoration, these towns did not regain their former prosperity. Iskandar destroyed the mausoleum of Mir-i Buzurg at Amūl, which numerous inhabitants left for Sārī. ʿĪz al-Dīn Rīkābī, returning from Gīlān, was pursued and killed with his five sons. Iskandar accompanied Tīmūr in his campaigns, before leaving him in Aḥdarbāyjān and setting out for Amūl (802/1399-1400). Subsequently, he rebelled and fortified the fortress of Frūzkūh, which he entrusted to his son Husayn Kiya. Ṭīlī and Ghiyāth al-Dīn al-Mawʾashi took part in Tīmūr’s operations against Iskandar (805/1402-3), whose son ʿAli Kiya, coming to his rescue, was captured. Overtaken in the forest, Iskandar fought valiantly against the troops of Ḥazārafsūr Mūḥammad and was killed at Shīr-rūd-duhāzār. His severed head was displayed to his sons, the prisoners ʿAli Kiya and Husayn Kiya, who surrendered the fortress of Frūzkūh. Both sons were pardoned by Tīmūr, who then assigned the governorship of Amūl to ʿAli b. Kamāl-al-Dīn, with his brother Ghiyāth al-Dīn as his deputy, and promised him the liberation of the sayyids upon his return to Transoxiana. At Astārābd, Djamāḥīd Karīn Ghawrī had died and was replaced by his son Shams al-Dīn, who did his utmost to discredit Sayyid ʿAli (TTRM, 313 ff.; Mahdūrī, 29 ff.).

(b) The second phase: return to power and decline. On the death of Tīmūr (Shaʾbān 807/February 1405), four sons of Mir-i Buzurg were living in Transoxiana (Zayn al-ʿAbidīn, ʿAlī, Yahyā and Shārūf al-Dīn). Kamāl al-Dīn and Fāḥūr al-Dīn had died at Kaḡeqhar and three others (Rūdāl al-Dīn, Zahir al-Dīn and Naṣīr al-Dīn) in Transoxiana. The four surviving sons travelled with other sayyids to Hārāt for an audience with Shāhrukh, who permitted them to return to Māzandarān. At Astārābd, Pīrāk did not believe in the validity of their eḏda and detained them in order to protect Shams al-Dīn Karīn Ghawrī. The latter was then attacked and killed by dervishes, who informed ʿAlī b. Kamāl al-Dīn of their intention of marching on Astārābd. But Pīrāk freed the sayyids who, joined by numerous partisans, entered Sārī in triumph. Having controlled Amūl for three years, ʿAlī b. Kamāl-al-Dīn (ʿAlī Sārī) took over the government of Sārī and of Māzandarān (809/1406-7 to 812/1409-10). He retained Yahyā and Shāraf al-Dīn at Sārī and entrusted Bāburūgh-dīh to Ghiyāth al-Dīn. The descendants of Rūdāl al-Dīn wanted to install ʿAbd al-Muṭṭalib as ruler of Amūl, but ʿAlī Sārī preferred Kawām al-Dīn b. Rūdāl-al-Dīn (Kawām al-Dīn II), replaced in 810/1407-8 by ʿAlī b. Kawām al-Dīn (ʿAlī Amuli) who governed equitably (TTRM, 317 ff.; HS, iii, 347; Mahdūrī, 33 ff.). Ghiyāth al-Dīn sowed discord between ʿAlī Amuli and ʿAlī Sārī who, defeated by a coalition of forces from Rūstamārdār and from Hazāradsar (ʿĪz al-Dīn al-Dīn and his son-in-law Sayyid Murḍāṭ) was forced to flee to Astārābd. His only ally in this business was his brother Naṣīr al-Dīn, whom he sent to Hārāt to anticipate Shāhrukh.

After their victory, the people of Ṭūrādāʾ b. Kamāl al-Dīn in control at Sārī where, in spite of the threats of Shāhrukh, he continued to hold sway for almost a year (812/1314-15) before being deposed by the populace on account of his drinking habits. ʿAlī Sārī regained control of Sārī and of Māzandarān.

</table>

**Note to Table B**
1. The death dates are uncertain, the dates of the end of the reigns are shown between parentheses.
2. Kamāl al-Dīn had 4 children, of whom four died at an early age.
3. Grandson of Rūyah al-Dawla Bāwānd by his mother’s side, born of the daughter of Fakhr al-Dawla Bāwānd.
Although a drinker, the latter was a decent and peace-loving man, regularly paying the annual revenue to Shahrukh. On the death of Kawām al-Dīn II, the government was given to his son Muḥammad, who conscientiously paid tribute to Sārī. But Muḥammad had five sons, including two favourites, ʿAbd al-Karim and Kamāl al-Dīn, to whom he wanted to award governorships. His sipahsālār Bahrām Rūzāf- zūn suggested that Kamāl al-Dīn and the other descendants of Rūzāf- zūn should be deprived of control of Amul. Muḥammad expelled Kamāl al-Dīn and established ʿAbd al-Karim al-Dīn at Amul, which was soon retaken by Kamāl al-Dīn with the aid of the people of Tunūkabūn. Muḥammad then sought to install Muṭṭādā b. Rūzafzūn (uncle of Kamāl al-Dīn) at Amul. When Muṭṭādā was put to flight by Kamāl al-Dīn in alliance with Zāhir b. Naṣr al-Dīn, Muḥammad allied himself with ʿAmīr Hindūkī of Astarābād. This coalition expelled Kamāl al-Dīn and Zāhir al-Dīn, who sought refuge with Malik Gāyūmārī at Rustāmdār and then at Gīlān under the protection of Sayyid Rūzāf- zūn, who conscientiously paid tribute to Sārī. Asad Allah b. Ṣafī al-Dīn took refuge at Amūl under the protection of ʿAbd al-Karīm (d. 814/1411). Ghiyāth al-Dīn took refuge at Astarābad, Abd al-Karīm and the leading citizens of Astarābad, Abd al-Karīm and the leading citizens of Khurāsān (863/1459), then, on two occasions, of Māzandarān, which was then retaken by Kamāl al-Dīn with the aid of the people of Tunūkabūn. Muḥammad then sought to install Muṭṭādā b. Rūzafzūn (uncle of Kamāl al-Dīn) at Amul. When Muṭṭādā was put to flight, Kamāl al-Dīn in alliance with Zāhir b. Naṣr al-Dīn, Muḥammad allied himself with ʿAmīr Hindūkī of Astarābād. This coalition expelled Kamāl al-Dīn and Zāhir al-Dīn, who sought refuge with Malik Gāyūmārī at Rustāmdār and then at Gīlān. Kamāl al-Dīn proceeded to regain from his uncle control of Amul, which he retained until his death (849/1445-6). Muṭṭādā (a pious and just man) then returned from exile in Rustāmdār and was established in power at Amul by the inhabitants and by dervishes (TTRM, 353 ff.).

On the death of Muḥammad (865/1452), his son ʿAbd al-Karīm was held hostage at Harāt (in the army of Dājān Shāh Kara-Koyunlū, according to HS, iii, 352). A month after the temporary enthronement of his son ʿAbd Allāh, ʿAbd al-Karīm I arrived to take over the government of Sārī and of Māzandarān (856/1453-4). A year later, Murtādā, a former officer of Ghiyāth al-Dīn, now a sipahsālār, returned from exile in Rustāmdār and was established in power at Amul by his son Shams al-Dīn, an incompetent drunkard. To obtain payment of the revenue, Bābur was obliged to send an expedition against ʿAbd al-Karīm, who experienced difficulties with rival families claiming to be his sipahsālārs. The Bābulkānī upset the ʿAzīz and later Shams al-Dīn to the east of Sārī, and Bahārm B. ʿIskandar Rūzāfzūn to the west of Sārī. Killed at the instigation of Shams al-Dīn Bābulkānī, Bahārm was replaced by his brother ʿAbd Rūzāfzūn. ʿAbd al-Karīm entrusted Amūl to Asad Allāh b. Ṣafī al-Dīn (TTRM, 367 ff.).

After the death of Bābur (861/1457), Sulṭān ʿIbrāhīm and Māhūmūd competed for control of Māzandarān. Out of patience with the tyranny of ʿAmīr Bābā Ḥāsan, the Timūrid governor of Khurāsān, Astarābād, ʿAbd al-Karīm and the leading citizens of Māzandarān appealed to Dājān Shāh Kara-Koyunlū (d. 872/1467) to come and intimidate them (Mahdijūrī, 465-6, according to MS and RS). But the Timūrid took control of Khurāsān (863/1459), then, on two occasions, of Māzandarān which he gave in ʿuyyārgāl to his son ʿAlī Muhammad. ʿAbd Allāh b. ʿAbd al-Karīm (ʿAbd Allāh I) succeeded his father ʿAbd al-Karīm to Amūl (865/1452) and his two sons, whom he held as hostages, using for this purpose a former officer of Ghiyāth al-Dīn, the sayyid Rūzafzūn, whom he had made his sipahsālār. Disapproving of this conduct, ʿAbd al-Karīm left to come and intimidate them (Mahdijūrī, 465-6, according to MS and RS). Before dying, ʿAbd Allāh named his son Muṭṭādā as successor (820/1417). His brother Naṣr al-Dīn promised to support the legitimacy of Muṭṭādā, which Ghiyāth al-Dīn did not accept. Thus Naṣr al-Dīn installed his nephew at Sārī (820-37/1417-33). He obtained from ʿAbd al-Mūlī a guarantee not to rebel and strengthened ties with Malik Gāyūmārī. But when Muṭṭādā took power into his own hands, he made strenuous efforts to eliminate his uncle Ghiyāth al-Dīn and his two sons (whom he held as hostages), using for this purpose a former officer of Ghiyāth al-Dīn, ʿIskandār Rūzafzūn, whom he had made his sipahsālār. Disapproving of this conduct, Naṣr al-Dīn left to come and intimidate them (Mahdijūrī, 465-6, according to MS and RS). After a temporary refuge at Tunūkabūn, ʿAbd al-Mūlī regained Amūl from Kawām al-Dīn II (TTRM, 331 ff.).

Before dying, ʿAbd Allāh named his son Muṭṭādā as successor (820/1417). His brother Naṣr al-Dīn promised to support the legitimacy of Muṭṭādā, which Ghiyāth al-Dīn did not accept. Thus Naṣr al-Dīn installed his nephew at Sārī (820-37/1417-33). He obtained from ʿAbd al-Mūlī a guarantee not to rebel and strengthened ties with Malik Gāyūmārī. But when Muṭṭādā took power into his own hands, he made strenuous efforts to eliminate his uncle Ghiyāth al-Dīn and his two sons (whom he held as hostages), using for this purpose a former officer of Ghiyāth al-Dīn, ʿIskandār Rūzafzūn, whom he had made his sipahsālār. Disapproving of this conduct, Naṣr al-Dīn left to come and intimidate them (Mahdijūrī, 465-6, according to MS and RS). After a temporary refuge at Tunūkabūn, ʿAbd al-Mūlī regained Amūl from Kawām al-Dīn II (TTRM, 331 ff.).

Before dying, ʿAbd Allāh named his son Muṭṭādā as successor (820/1417). His brother Naṣr al-Dīn promised to support the legitimacy of Muṭṭādā, which Ghiyāth al-Dīn did not accept. Thus Naṣr al-Dīn installed his nephew at Sārī (820-37/1417-33). He obtained from ʿAbd al-Mūlī a guarantee not to rebel and strengthened ties with Malik Gāyūmārī. But when Muṭṭādā took power into his own hands, he made strenuous efforts to eliminate his uncle Ghiyāth al-Dīn and his two sons (whom he held as hostages), using for this purpose a former officer of Ghiyāth al-Dīn, ʿIskandār Rūzafzūn, whom he had made his sipahsālār. Disapproving of this conduct, Naṣr al-Dīn left to come and intimidate them (Mahdijūrī, 465-6, according to MS and RS). After a temporary refuge at Tunūkabūn, ʿAbd al-Mūlī regained Amūl from Kawām al-Dīn II (TTRM, 331 ff.).
Allāh I with his uncle Kamāl al-Dīn even more of a drunkard and more ineffectual than this nephew, who went to live in Āmul, then governed by Asad Allāh. As he gained influence, Allāh Rūzafzūn made him return to Sārī. But disorder erupted in Māzandarān following the elimination of Allāh Rūzafzūn by the Bābūlkānī sāyyids. Allāh I eliminated his rivals. He had his cousin Murtuḍā castrated and put his uncle Kamāl al-Dīn in the position where he did not. Zayn al-Abīdin avenged his father by killing Allāh I, whose son and heir, Allāh I, was only four years old and lived in the ādār of Abū Sa‘īd. The majority of leading citizens pledged alliance to Zayn al-Abīdin, but the Pāzāvārī sāyyids took pains to overthrow them. The supporters of Allāh I attempted to enthrone his son Allāh I, whom they brought back from Adharbāyjān, but when Asad Allāh refused them entry to Āmul, Allāh I, was taken by his mother to the court of Hasan Beg Ab Koyunlu (Uzun Hasan [q.e.v.] with some pishkashs. Hasan Beg appointed one of his officers, Shibīl, who, with levies from Gīlān, Rustamdār and Māzandarān, established Allāh I al-Karīm at Sārī. But Zayn al-Abīdin retained allies, including Sayyid Ḥaybat Allāh, and the citizens of Māzandarān who had been destroyed by Zayn al-Abīdin joined him. Hiding in the forest, he defied Shībīl’s confederation and recaptured Sārī, then helped Ibrāhīm to drive his uncle Asad Allāh from Āmul. But on the orders of Malik Dājāngīr b. Kāwūs and Pādūspānī, he reinstated Asad Allāh at Āmul. In the interval before acceding to power, Allāh I al-Karīm lived at Gīlān under the protection of Kār Kiya Muhammad (end of 878/1474) and spent seven months at Kum as the guest of Hasan Beg. Sayyid Ḥasan, one of the sons of Asad Allāh, left Āmul and went to Sārī to serve Zayn al-Abīdin, who ordered the detention of Asad Allāh and his younger son Husayn and installed Hasan at Āmul. Asad Allāh was imprisoned at Bārūfūrūs-dīh, but was freed by the inhabitants and, when reinstated at Āmul, urged Allāh I al-Karīm to join him in opposing Zayn al-Abīdin. On the advice of his sister’s husband, Allāh I, who had him executed and regained temporary control of Sārī (880/1476). Allāh I, went to Āmul and then, with numerous supporters, took Sārī and control of Māzandarān, but was expelled once more by Zayn al-Abīdin and was forced to take refuge for the third time at Lāhīqūn under the protection of Sayyid Muhammad and then of his son Allāh I, who sent him back to Māzandarān with a force commanded by Sayyid Zahrī al-Dīn Marāštī. Zayn al-Abīdin fled to Sāwādūkh and sent his brother Shams al-Dīn to appeal to Ya‘qūb Beg Ab Koyunlu, who sent an army to confront the partisans of Mahmūd. Out of patience, the leading citizens turned towards Muhammad Rūzafzūn (who maintained amicable relations with the leading Safavid dignitary Cuha Sultan Tekkelu), Allāh I al-Karīm regained his throne by force and consequently reigned with benevolence and equity. A learned man, despite his sternness, was eloquent and conversed with the ‘ulamā’. He was protected by Shāh Ḥusayn al-Maḥdī, whose commensal was he. But under Tāhmāsp (1524-76), Cuha Sultan obtained the release of Muhammad Rūzafzūn (imprisoned under Shāh Ḥusayn al-Maḥdī) and established him at Sārī. Allāh I, al-Karīm returned to Bārūfūrūs-dīh, where he died at about 24 years old after an unsuccessful attack on Muḥammad. The sāyyids and leading citizens were divided into two groups regarding the succession, some favouring the son and heir designate Amīr Shāhī (932/1525-6 to 938/1531), others his brother Suḥlān Muḥammad. Placed in power by one faction, Muḥammad was quickly deposed and sought refuge with Muḥammad Rūzafzūn who eliminated him (Ilī, 86). Amīr Shāhī led a licentious life, and delegated official business to Amīr Allāh I Husayn who was soon eliminated by the partisans of Muḥammad. Out of patience, the leading citizens turned towards Muḥammad Rūzafzūn. Others allied themselves with Allāh I, al-Karīm; Suḥlān Muḥammad. Amīr Shāhī joined Tāhmāsp’s retinue in Khurāsān, and Muḥammad Rūzafzūn had him assassinated on his return to Māzandarān, at Āhūsār (near Firūzkuh) by Muẓaffar Beg Turkmān. Muḥammad al-Maḥdī eliminated some of the ‘ulamā’ princes (Suḥlān Muḥammad b. Muḥammad Shāhī, then in Āmul, escaped the massacre), then dominated Māzandarān and maintained its security (939/1533-4 to 952/1545-
6; Isfahani 86 ff.). He entrusted military affairs to Hasan-mat, a leading citizen of Sawadkuh, who appointed his elder brother Gustam to the governorate of Sawadkuh. In gradual stages, all districts of Mazandaran came under the control of his relations, but jealous parties impelled Muhammad to depose Hasan-mat and his associates and disorder ensued. Shâh Tahmâsp sent an expedition (in 952/1545-6) to avenge the blood of Amir Shâhî. But Muhammad maintained a long-standing friendship with the uskâtâl Kâdi Djalân, who was able to pacify the Shâh. Mir ʿAbd Allâh b. Sulṭân Mahmûd came to Rustamdâr to avenge his father, and defeated the army commanded by ʿAbd Rastam near Barfurûsh-îâ. Almost a year after this defeat, ʿAbd Rastam died (Isfahani 89 ff.).

After killing Farâmarz b. Muhammad—who was in the Saʿfâvî ardâ—at the time of his father-in-law's death, and expelling Suhrâb, nephew of Muhammad (enthroned at Sâri for a brief period)—ʿAbd Allâh b. Mâhmûd ruled over the whole of Mazandaran. Ignoring the demands of Shâh Tahmâsp to pay tax and to restore the funds of Muhammad Rûzâfsân, he was deposed in favour of Sulṭân Murâd b. Amir Shâhî who, under Muhammad Rûzâfsân, was part of the retinue of Shâh Tahmâsp at Kazvîn. Summoned to repay the funds of Muhammad, ʿAbd Allâh was told to accept consuming opinions. Tahmâsp married the daughter of ʿAbd Allâh, Khayr al-Nisâ Begum (Mahdî-i Ulyâ), to his eldest son, Sulṭân Muhammad Khudâbânda (see below). Mirzâ Khan was obliged to share the government of Mazandaran with the elder son of Muhammad Khudâbânda, Hasan Mirzâ, accompanied by a uskâtâl Mirrâk Dîv, whom he was caused to be assassinated at the instigation of Mir ʿAzîz Khân. He succeeded in ʿAbd Allâh b. Mâhmûd, 210, 240, tr. 312, 313, 358-9. After the death of Shâh Tahmâsp (984/1576), control of Mazandaran reverted in entirety to Mirzâ Khan, through the good offices of Shams al-Dîn Dîv, but in order to avenge the death of her father ʿAbd Allâh, Mahdî-i Ulyâ had Mirzâ Khan assassinated and replaced him with her uncle Mir ʿAlî Khân b. Mâhmûd, who died soon afterwards (A.A.A., 210-11, 240-1, tr. 312-13, 358-9; on the campaigns of Mir ʿAlî Khân against Mirzâ Khân and his ʿregn, see Mir Taymûr, 201-2; on the successes of ʿAbd Allâh Khân, see also Djalân-ârâ, 91-2; Shahân, Mâzândarân, 230-1).

In the chaos which ensued, Mahdî-i Ulyâ was assassinated in her turn. While Khâbâbî factionalism enfeebled Saʿfâvî power, Mazandaran was the object of competition between various local potentates. After the death of Mir ʿAlî Khân, his control was shared between Sayyid Muzaffar Murtâdqi (of Hazâr-jâbîr, d. 1005/1596-7) and Alvand Dîv, but the descendants of the various branches of the Marâshî family continued to struggle for power. Notable among the latter were Mir Husayn Khân, cousin of Mir ʿAlî Khân (Mir Taymûr, 282-3; and especially Mir Sulṭân Murâd II b. Mirzâ Khân (ibid., 316-17). This unstable situation persisted until annexation to the Saʿfâvî crown (see below). At Isfahân, distant descendants of Mir-i Buzûrg were influential at the centre of Saʿfâvî power (below, 2).

Political, religious and cultural activity. In pre-Saʿfâvî Iran, the Marâshî movement represents an interesting case of political aspirations from which “Mahdîism” is apparently absent. Unlike the millenarianism professed by the “Shîʿî republic of” the Sarbadârs of Sabzavâr (1338-81), it remains, although Shîʿî, within the framework of Šûfism (Arjmand, 68-9, 83; on the Marâshî in the context of “popular” movements, see Petrushevsky, ʿIsmâʿîl dar Īrân, tr. K. Kîhâvâr a, Tehran 1354, 379-80). Few indications are available, however, as to the doctrine of the Marâshîs between the 8th/14th and 10th/16th centuries, preoccupied as they were with the extension or defence of their power (very few theological or literary works have survived, see below). Their immunity as sayyâds saved them from the extermination inflicted by Timûr on the Sarbadârs and other local potentates, but the charisma enjoyed by the founders—Mir-i Buzûrg and his sons—suffered from the erosion of power.

During the “second phase”, after the death of Timûr, their descendants divided into rival groups competing for control of Sâri, Āmul, Bûrûrfûsh-îâ and the frontier zones (in the east, Karâtûghân; in the west, Rustamdâr; in the south, the foothills of the mountains) which, with Gîlân, often provided refuges for claimants temporarily deprived of power. Control of Sâri, entailing that of Mazandaran, was the most hotly-contested. Essentially, it belonged to the descendants of Kamâl al-Dîn, while Āmul was controlled in the 8th/14th-9th/15th centuries by Riḍâ al-Dîn and his descendants. But claimants from both branches remained in a state of constant rivalry.

Limited to the east by Timûrî control of Astarâbâd, the influence of the Marâshîs was more easily extended on the side of their allies in Gîlân, especially at Lahâdjan [q. z.], where they asserted Sayyid ʿAli Khâyî to establish himself as master of Bîvâ-privation. Shamlûn. The rivalries between claimants were complicated by the fact that some were supported by contemporary powers (Timûrîs, Kara Koyunlu, Ak Koyunlu and Saʿfâvids), while others asserted to varying degrees a refusal of allegiance or independence. Increasingly they were thrown by the Western powers (Parthian), with the influence of the Marâshîs was more easily extended on the side of their allies in Gîlân, especially at Lahâdjan [q. z.], where they asserted Sayyid ʿAli Khâyî to establish himself as master of Bîvâ-privation. Shamlûn. The rivalries between claimants were complicated by the fact that some were supported by contemporary powers (Timûrîs, Kara Koyunlu, Ak Koyunlu and Saʿfâvids), while others asserted to varying degrees a refusal of allegiance or independence. Increasingly they were thrown by the Western powers (Parthian), with the influence of the Marchis to the extension of their power, that of Amir Husayn Khâyî Čulâwî, which was obliged to tackle Shâh Ismâʿîl I (1501-24) in order to establish a precarious control over Mazandaran in 909/1504 (Savory, Consolidation, 75-4). It was to assert his hereditary rights as grandson of Mir ʿAbd Allâh Khân Marâshî (through his mother) that Shâh ʿAbbâs took control of Mazandaran in 1005/1596; local non-Marâshî chieftains (Sayyid Muzaffar Murtâdqi; Alvand Dîv and especially Malik Bahman Lârîdjanî) were obliged to defeat or subdue his general Farhâd Khân Karamanlu (A.A.A., 518 ff.; tr. 693 ff.).

Some important vestiges of the Marâshî domination have survived in Mazandaran, a region subject to frequent earthquakes. The mausoleum (sometimes called mosque) of Kamâl al-Dîn Mir-i Buzûrg at Āmul, constructed in 781/1381-90, destroyed under Iskandar-i Shâibî, rebuilt after the death of Timûr, was decorated with kâdis [q. v.] and embellished with gold under Shâh ʿAbbâs I, was in a quite dilapidated state in the mid-19th century (Stuart, quoted by Rabino, MARÅSHÎS 515
Mázandarán, 37; drawings from photographs in the Morgan (1307/1890) reproduced in Mahdjurl, 24; Rabino, ... with a wealthy library, bears his name (brief biography in Rayhdnat, iv, 11-12; Fischer, index; Momen, 317). Although Kadi nakib dant, the Mir Nur Allah, who disseminated ll took the town where there is reproduction of an article by Kasravl c ImamI ShiSsm there. While the Mar s.v. Mir Allah. His only known work (see works of the second historian, Mir Taymur, identified Shushtar where he was at the beginning of the dynasty, Shah Mir b. Mir Kawam al-Din, grand-

These migrations sometimes took the form of deportations. Among the descendants of representatives of the Mar family is the Mar Mar ashl of Mazandaran, at Kazwin, Isfahan, Shushtar. while his father Mirza Rafi' al-Din held the post of sird. Under Shah Sa'. (1033/1624), while his father others were blinded (as were some Safawid princes). He returned to the uzaira under Shah 'Abbas II (1642-66) and died at Aghtaf in 1643-54 (AAA, 1013, tr. 1234 sq.; Mahdjuri, 15; Shayan, Mázandaran, 233).

Other Mar'ashis enjoyed the favour of Safawid sovereigns. Under Shah Tahmasp, Mir 'Ala' al-Mulk Mar'ash, kddi-i 'asat, was appointed sadr of Gilan (AAA, 155, tr. 254). The 'alim Sayyid Asad Allah Husayni Mar'ashi 'Shah Mir' (d. 984/1576-7)—who also exercised the sidiria—was appointed mutawalli of the sanctuary of Imam Ridâ at Mashhad (Rayhanat, iv, 10-11). Other Mar'ashis continued to exercise this important function at the shrine-town of Mashhad [q.v.]. Their descendants were even able to claim double Safawid and Mar'ash lineage on account of the influential family of the Khulafa of San, the Zayn al-Abidin shelters the tombs of Zayn al-Abidin and Shams al-Din, son of Kamal al-Din b. Muhammad Rabino, (Le Guilan, Illustrations, 89). On the monuments of Mázandarán and the tombs of the Mar'ashis, see Sutudâ, Astariâ, iv, v (photographs and numerous indices).

2. Some descendânts of the Mar'ash Sayyids of Mázandarán. Although all related to Ali al-Mar'ash/ali-Mar'ash or to Hasan al-Mar'ash, the Mar'ash sayyids are divided into various branches (in Mázandarán, at Kazvin, Isfahan, Shushtar, Naghsh, Nadjaf, etc.) in which the lines of kinship are sometimes hard to trace. The only ones to be mentioned here are the best-known, in the period subsequent to the foundation of the dynasty (on other Mar'ashis, see below, 3).

In spite of their charisma and their acknowledged status as sayyids, very few of the Mar'ashis of the dynasty gained renown as ‘ulama' or udabâ. Besides Kâdzil, the Sayyid Dâ'mad-ud-Din Girât-i Kâdzil the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the second historian, Mir Taymur, identified the death of the secon...

Notes to Table A
(1) TTRM, ed. Tasbîhî, 166.
(2) Muhammad absent from TTRM, ed. Şâyâyî, 236.
(3) Dihkhuda, 166; Yazdi, fol. 2a; Şahîh-i Nâjîfî, ii, 380.
(4) The lakab al-Mar‘aşî (a kind of pigeon) is said to have been given in the first place to ʻAli Mar‘aşî, the eponym of the Mar‘aşîs sayyids (Rayhânî, iv, 10). In Yazdi, ʻAli al-Mar‘aşî and his son Hasan are made into a single “ʻAlî Mar‘aşî”.
(5) TTRM, Mukaddima (approved by the Ayâtallâh Mar‘aşî-Nâjîfî, TTRM, ed. Tasbîhî, Mukaddima, 39-40, with typographical errors).

more and more involved in the world of politics and public affairs, the Mar‘aşîs of Iran regard themselves predominantly as religious “specialists” (râhâ‘în), with the religious line contracting matrimonial alliances among the elite of the “ulama”. Alongside the major branch constituted by the family of the ayâtallâh Mar‘aşî-Nâjîfî—one of the seven leading marâţî-i taklîdî in 1975 (a position still held in 1985: Momen, 249)—there exists a junior branch of Mar‘aşî marâţî-i taklîdî at Shiráz (see Fischer, tables, 90, 92, 94).

Like other Imâmî ʻulama, the Mar‘aşî sayyids have established themselves in various parts of the Muslim world (Iran, ‘Irâq, Syria, Turkey and Egypt) and in countries of the Indian Ocean fringes (East Africa (Zanzibar) and Java (Rayhânî, iv, 12)). Sayyîd ʻAbd al-Husayn Mar‘aşî Shushtari was sent to Zanzibar in 1885 as mullâ to guide the newly-established Imâmî community there (Momen, 317).

3. Other Mar‘aşîs. In the genealogies of descendants of ʻAli Mar‘aşî/Mar‘aşî (or Hasan Mar‘aşî), mention is found of titles or functions such as mubâhiddî, fâhîh, nakîb al-asâfîr, wâzîr, etc., which indicate that previous to Mir-i Buzurg, some of them must have held office or wielded a certain influence in ‘Irâq and later in Iran, in the capacity of ulama or nakîs of the sayyids, or in administration. Among the other sayyîd or non-sayyîd Mar‘aşîs, whose lines of kinship with the various branches of the Mar‘aşîs are uncertain, the following are worthy of mention: Sayyîd Hasan b. Hama b. Alî Mar‘aşî, Abû Muhammad ʻ Abd al-Malik Mar‘aşî, ʻâlim of Tabaristan who went to Baghdad in 356/966-7 and died there two years later (Rayhânî, iv, 11); Husayn b. Muhammad Mar‘aşî, Abû Mansûr (d. 421/1030), historian and close associate of Sulîmân Muhammîd of Ghaznî (ibid.); Sayyîd Ahmad b. Alwâr Mar‘aşî (d. 539/1144-5) extremist Shi‘i (ghuluwwi) who travelled widely before settling at Sârî where he died (ibid., 10); and ʻAbd al-Malik Mar‘aşî, Abû al-ʻAbbâs, Hanafi fâhîh (d. 872/1467-8) (see Dihkhuda, Lughat-nâmâ, s.v. Mar‘aşî).

MARASIM (a), official court ceremonies, both processional and non-processional. The whole range of ceremonial, including protocol and etiquette, is called also ruza; other terms found frequently are mawtum [g.e.] and mawkih. Mawkih [g.e.] refer specifically to solemn processions, but seem also to have had the more general meaning of audiences (for discussion, see Sourdel, Le vizirat abbasid de 749 a 946, Damascus 1960, ii, 684, n. 3; for the Fatimid, see e.g. al-Kalkashandl, Subh, iii, 494: mawkihil [al-khalihil]; mawkihil [al-mawkihil].

1. Under the caliphate and the Fatimids.

The caliph presided over court ceremonies seated on a throne (kursi, sarir), a custom dating back to the Umayyads, surrounded by the insignia of sovereignty (khadi* al-khilal), and veiled by a curtain (sir). The insignia, according to al-Kalkashandl, Subh, iii, 269-72, are: the seals (khadem [g.e.]), the mantle of the Prophet (burda [g.e.], the staff (kadfl [g.e.]), the caliphal garments (khutba [see khutba and timar]), and the (dynastic) colour displayed in banners and robes of honour [see 'alam and khilfa]. Most of these insignia can be traced back to the Prophet himself. To these, the prerogatives of the khaliha and skaka [g.e.] can be added. For further discussion of insignia of sovereignty, see Ibn Khaldun, Muzaddima, tr. Rosenthal, New York 1957, ii, 48 ff.

Clear distinctions were made between ceremonial costume and ordinary wear. When summoned to the palace by al-Muqtadir shortly before his arrest in 306/918, the vizier Ibn al-Furat enquired, bi-kadfl al-mawkihil am bi-durrala? ("in ceremonial dress or the durrala? [everyday costume of the scribal class?")?, al-Sabi, Kitab al-Wuzur?, 264).

The 'Abbâsîd caliph wore a black kabêl and black rasîfla (a kalansuwa-type turban), and red boots. He gardened of the ceremonial occasions. To his left, another sword was kept, and in front of him, the Kur'an of 'Uthman. He wore the burda and held the kadihil (al-Sabi, Rusûm dar al-khålila, ed. Mighâl? A'wsâd, Baghdad 1383/1964, 90-8, tr. Elie A. Salem, Les rules et régulations de l'Abbassid court, Beirut 1977). Dignitaries, arâba al-mawkihil, wore black kabêl's and black robes of honour (khilfêta) were conferred on army commanders and honoured notables (al-Sabi, op. cit., 90-4).

For the Fatimids, the sources on caliphal costume are more plentiful. The dar al-kiswa (see al-Makrizi, Khilfâ, i, 409-13) provided magnificent costumes to the caliph and his entourage for each ceremony, as well as for accession) which took place in the palace. The Fatimid colour was white, and the caliph's garments were often made of white dabsî, a fine silk stuff (see dabsî). The most common term for Fatimid court apparel is badla, an outfit consisting of eleven pieces (al-Makrizi, op. cit., i, 413: badla mawkihil). The caliphs adopted the white jaylasin of lawyers and judges during Ramadan and the two festivals (ibid., i, 413, ii, 227-280).

The prerogative of wearing the dynastic colours was reserved to the caliphs, their families, their retinue and the highest officials of the bureaucracy and court. Red was also a royal colour. We read of a Fatimid vizier upon whom the caliph bestowed his own red garment (Ibn Taghribirdi, al-Nudjim al-zahira, iv, 99), as well as a warning against wearing red in the caliph's presence "because it is the colour of the caliphs' dress as well as those who rebel against him" (al-Sabi, Rusûm, 75).

The most frequent of all ceremonies were caliphal audiences (madajiil; dulsâ, used in the general sense as well as for accession) which took place in the palace (for discussion, see Sourdel, Questions de cérémonial abbasid, in RET [1960], 121-48, and M. Canard, Le cérémonial fatimite et le cérémonial byzantin: essai de comparaison, in Byzantion [1951], 408 ff.). Al-Kalkashandl lists three categories of audiences for the Fatimids: al-madajiims al-îâm ayyâm al-mawkihil (general audiences), the dulsâ held expressly for the kaid and shibid on the four layâl al-uwkuk ("nights of lights"), and the dulsâ on the mawlids (see mawlid) and several other audiences. Even these audiences had some processional elements, manifested primarily in the formal arrival of the vizier at the palace riding his mount. After the audience hall had been prepared by covering the walls and the sarir in fine fabrics (dibâdi in the winter, dabsî in the summer), the sibbi al-risâla summoned the vizier and rode with him, in customary haste, to the palace (al-maâm al-mawdiil ft sura al-buraka). The vizier wore ceremonial costume and rode with his entourage in the same order as that of the procession of the New Year (fa-yarkah bu ubbahatii wa-djmâta`ithi al-sâl 'l-tariib al-mukaddam dhikruhu ft dhsri al-rabî` al-aouw al-îâm), cf. al-Makrizi, Khilfâ, i, 448-9 ff., for details of the vizier's arrival at the palace on the New Year.

The prerogative of mounts, even in a non-procedural setting, was an important symbol of authority. Caliphs maintained large stables (see tabaristan wa-rayyan dar al-khilal), and horses were often distributed as gifts to particularly honoured officials. Even within the palace walls, caliphs were expected to ride from one point to another. Similarly, gates and doors were symbols of sovereignty and authority and were the sites of important ceremonial activity. The caliph and vizier usually mounted and dismounted at a gate or door (see e.g. al-Makrizi, Khilfâ, i, 389-90), and officials sometimes dismounted at a gate of the palace and kissed it even when the caliph was not present (idem, Ittât al-hunafa`, Cairo 1967, ii, 71-2).

Under both the 'Abbâsîds and the Fatimids, the
vizier enjoyed the privilege of entering the palace walls while riding his mount, a prerogative normally reserved to the caliph himself (idem, Khitat, i, 387). Even the high-ranking kadi al-kuddt, reserved to the caliph himself (idem, i, 386, 389). Upon his investiture with the takbil al-ard, kissing the ground, was acknowledged to be a late introduction. Previously, high-ranking officials (viziers and amirs) used the verbal salute only. As an honour to a favoured official, the caliph might offer his hand, covered by his sleeve, to be kissed. The custom of kissing the ground seems to have been thoroughly engrained and observed, regardless of rank, by the Abbasid period. Variations included kissing the caliph's hand and foot, kissing his stirrup, and kissing the mantabs in front of his sarh.

Those attending a caliphal audience were exhorted to stand straight and still, not to fidget, to maintain absolute silence unless spoken to by the caliph, and then to answer in a low and clear voice. They were to fix their attention upon the caliph to refrain from laughing even if there was cause for it, and to avoid slander, calumny, and criticism at all costs. The caliph's mistakes were not to be corrected, nor was his name or that of his wives to be used. One approached the caliph only if summoned and in that case, advanced a few steps at a time, stopped with bowed head, and waited for the caliph's command to proceed. Even the vizier, who was permitted to approach the caliph to speak about matters of state, had to hold himself in reserve. In the instance of five cubits upon completion of his business.

The djulus for the four layâli al-sukiad (at the beginning and middle of Ragib and Shabibân) took place in the belvedere (manzara) overlooking the Bâb al-Zumurrud. The high point of the ceremony occurred when the caliph opened one of the windows of the manzara and revealed his head and face. On of his mawânnak eunuchs put his head and right hand, covered by his sleeve, out of another window and proclaimed: "The Commander of the Faithful returns your greeting." The kadi al-kuddt and the sâhib al-bâb were then greeted personally.

The Fâtîmids celebrated six (according to some sources four different) mawâlîds: those of the Prophet, al-Hasan and al-Husayn, 'Ali, Fátima, and the present (mawâlîd al-khalîfa [or mawâlîd al-bâb]). The mawâlîds took place under the manzara surmounting the Bâb al-dhohab, and included much of the same ceremony as the layâli al-sukiad, with the addition of distribution of sadakât and an impressive quantity of food prepared in the Dar al-fistra. The powerful vizier al-Afâd b. Amir al-Djuyûushi annulled the observance of these mawâlîds at the height of his power, but the caliph al-Amir, encouraged by his mawânnak eunuchs, restored them when he regained power.

Both the Fâtîmids and the 'Abbasîds prepared elaborate receptions of ambassadors, in particular of the Byzantine embassies. Ambassadors rode to the palace and distanced at its gate, then entered the audience hall through a column of soldiers. The sâhib al-bâb and his nâbî flanked the caliph, who was seated on his sarh, surrounded by his vizier and high-ranking members of his retinue. Al-Makrizi describes two such embassies in Khiat, i, 403, 461, and al-Sâbî, Risâm Dar al-khalîfa, describes in detail the reception of the Byzantine ambassador Ward, 14-17. See also S.M. Stern, An embassy of the Byzantine emperor to the Fâtîmid caliph al-Mu'izz, in Byzantion, xx (1950), 425 ff.

The caliphs (at least theoretically) held an audience every evening for redress of grievances (al-djulûsi li 'l-nasaâli). The Fâtîmids conducted these djulus in the kâfîfa of the palace.

Investitures of high officials with robes of honour.
(khîlas) and titles (alkab [see LAKAB]) abound in the historical literature. These investitures generally occurred in the context of an audience, and the same protocol was observed.

Banquets (simâ' [pl. asmâ') were some of the most elaborate and impressive ceremonial occasions. They occurred during Ramadân and on the two 'îds ('îd al-šîr and 'îd al-adhâ or al-nahr), at the New Year, and at the mauûl al-na'bî. The simâ' of the Fâtîmids extended across the entire length of the audience hall, and was filled with all manner of delicacies, including sugar figurines and castles made entirely of confectionery. During Ramadân, the amîrs would rotate in attending the banquet every night, although their presence was not required. They were, as usual, seated according to their ranks. A significant feature of all banquets was the permissibility of taking food out of the palace and distributing (and even selling) it among one's family and friends. Descriptions of these banquets are found in Ibn Taghîbirdî, al-Nûdîm al-sâhîra, iv, 97-8; al-Mâkûrî, Khtâb, i, 387-8. For further information about ceremonies on Ramadân and the two 'îds, see MAWAKûB.

2. In Muslim Spain.

In al-Andalus, as elsewhere, raûmû is used, in the same manner as mansûmî, to denote court etiquette and procedure. On this subject, no treatise is available comparable to the De Ceremoniis composed by the Byzantine Emperor Constantine Porphyrogenitus, or to the Rusûm dâr al-khiyâli of Hîlîl al-Sâbî; there is no alternative therefore other than to attempt to reconstruct Hispanic-Arab court etiquette by means of the meagre information preserved by the chronicles and to have recourse to descriptions of official acts (bay'a, [q.v.]), signings of agreements, receptions, processions (maqsûkî [q.v.]).

When, in 1387/756, 'Abd al-Rahmân al-Djâkhîl [q.v.] transformed al-Andalus into an independent amirate, he was the initiator of the (embryonic) Cordovan etiquette. It is in this sense that the dispositions of his entourage are best understood. According to al-Maǒkârî (Naľf, ii, 25), "he was obliged to maintain a certain distance and not to mingle to an excessive degree with the people, nor to show himself in public". But it was 'Abd al-Rahmân II [q.v.] who (influenced by Ziriyâb [q.v.]) instituted Andalusian etiquette. According to al-Maǒkârî (Naľf, i, 223), "he was the first to isolate himself, behind a tapestry, from the people". Ibn Hayyân (Muktâbâs, ii, 91) is still more explicit: "It was he who organised the hierarchy of the court (rattâba rusîm al-dâulâl-i khîdâmâ)". This information is confirmed by Ibn Ijâhari (Bayân, ii, 91) and Ibn Sa'îd (Muqâhîrî, i, 45); the Djîrîh bâdîl al-Andalus (117) makes him "the first to clothe himself in the pomp of the caliph". The separation of the functions of the sharîa [q.v.] and of the isk [q.v.] which all authors attribute to him are to be seen in the same sense.

At the time of the king's bay'a, in 206/822, his brothers, his uncles, his kinsmen, his "men" (the senior functionaries of the court), the judges and the fâkhrâh, military officers of every rank, the dignitaries and the people, pledged allegiance to him (Djîrîh, 117). This order reflects a hierarchy, since the text clearly distinguishes six "categories" or "categories". The same regulation recurs (with minor variations) throughout the whole of the caliphate. It is observed in the allegiance pledged, in 300/912, to 'Abd al-Rahmân III al-Nâšîr [q.v.] (Chron. anôn., 29-30) and in the list of witnesses who applied their signatures to the act of surrender of Saragossa in 326/937 (Ibn Hayyân, Muktâbâs, v, 277-9). The same hierarchy appears in the description of the feasts of the Breaking of the Fast in the years 360-4 and in that of the Sacrifices in the years 360-4, preserved by the Muktâbâs of Ibn Hayyân. Lévi-Provençal (Hist. Esp. Mus., ii, 117) speaks of pomp and ostentation, of a rigid etiquette: "The reverential fear (hayya) which is inspired by the august person of the caliph and the magnificence (fâkhrî) which presides over all the manifestations of his official life encompass him in the manner of a halo".

It does not seem that al-Maǒnûr b. Âbî Šâmîr [q.v.] introduced any changes into the organisation of the caliphate. He was obliged to co-exist with the mulâk al-fawâdî [q.v.], judging by the comments of the amîr 'Abd Allâh [q.v.] when he examines, in his Memoirs, the various groups capable of supporting him.

Nothing is known of the norms of Almoravid etiquette. In the Almohad period, there is no documentary proof of the effective application of the complex and discordant order described by Ibn al-Kâtânî, al-Hulal al-mâlûkîyya and the K. al-Ansî fî ma'rîfât al-aslâb (13 categories according to the former, 18 according to the K. al-Ansî; cf. the observations of J. F. P. Hopkins, Medieval Muslim government in Barbary, London 1958). The actual gradation was that reflected by Ibn Sâbib al-Sâlît (al-Maans bi l-imâma, 232, 420, 437, 445, 457, 511), similar to the Hispano-Umayyad pattern.
In 558/1163, at the time of his proclamation, Abū Ya'qūb b. ʿAbd al-Muʾmin was recognised by the shaykh Abū Hafs, the Almohads and the ashaykh of the tribes. In the course of the formal audience at Marrākush in 1170, the hierarchical order was: Almohad ashaykh, talaba [q.v.] ashaykh and viziers. In 1171, at the time of his entry into Rabat-Salā, he was followed by the Almohad ashaykh, the vizier, the kuttab, the talaba and the Bedouin. During the Feast of Sacrifices, at Cordova, the “great Almohad ashaykh, the ukhla al-qāma [q.v.], and their followers, the talaba of the capital, the ashaykh, the judges, the kuttab, the governors, delegations and notables of the town, were introduced according to their rank.” At the time of the Feast of Sacrifices of 568/1172, at Murcia, a development is observed: “First to present themselves were his brothers, followed by the Almohad ashaykh and the great men of the state”. A further development is attested by ʿAbd al-Wāḥid al-Marrākushī (al-ʿAṣimī, 239); in 610/1213, the proclamation of Abū Yaʿqūb Yūsūf “took place first—on the Thursday—in private, attended by his close relatives; on the Friday, he was recognised by the Almohad ashaykh; and on the Saturday, by the people”.

The hierarchy of the Nasrids [q.v.] was probably close to the Hispano-UMayyad tradition. This is merely a hypothesis, for although Ibn al-Khitīb (Lugat, 38) makes the second sultan, Muhammad b. Muhammad (672-701/1273-1302), “the initiator of the State, the organiser of its administration and its hierarchy... the creator of the royal protocol (mumahhid al-dawla wada al-khdna... wa-akdma rusum al-mulky... wa-akīma rusūm al-mulūk)” this tells us nothing of its components.

3. In Iran.

Persian society in most, if not all, periods was intensely formal: the demeanour, manners, dress and mode of speech of each class was minutely regulated by custom. The court set the pattern. Respect for age and position was ubiquitous. An extensive adāḥ [q.v.] literature, which sought to regulate all aspects of social life and behaviour, grew up (cf. al-Qazwī, al-Adab fi 'l-dīn; Kāwūs b. Iskandar, Kāhās-nāma; and see J. S. Badeau, They lived once thus in Baghdad, in Sami A. Hanna (ed.), Medieval and Middle Eastern Studies in honor of Aziz Suryal Aṭṭiya, Leiden 1972, 38-49).

Persian ceremonial was designed to emphasise both the awe in which the ruler was held and his separation from the rest of the population. Its influence was felt already in UMayyad times and became marked under the ʿAbbāsids. Much of the ceremonial of later times can be traced back to the early centuries. There was a long continuity of tradition in respect of the insignia of sovereignty. The parasol or lāt [see MIZALLA] held over the ruler’s head was an ancient custom going back at least to Achaemenid times, while the ṣafā [q.v.] standard was an old symbol of royalty going back to Parthian and Sassānī times (see Spuler, Iran, 348), though neither were confined absolutely to the rules, but might also be attached to high offices. The beating of kettle-drums [see Nawba] in honour of the ruler and by his subjects, was also customarily accompanied by the distribution of bags of gold and silver coins by the monarch on the occasion of his accession to those who were present at his court (H. L. Rabino, Coins, medals, and seals of the Shahs of Iran, 1500-1941, London 1945, 87). The distribution of scattering (nājar) of coins, jewels and precious objects, both by the ruler and his subjects, was also customarily connected with festive occasions such as the Naw Rūz (the Persian New Year). The canonical festivals of the ʿid al-adhā and the ʿid al-fitr [q.v.] were the occasion for public celebration. It was customary for the ruler to go out to the musalla outside the town where the ʿid prayers were performed and to take part in them (see further Nawba, 2. In Iran).

The ruler was expected, especially if his followers were largely drawn from tribal groups, to keep open table. Feasting was especially common under the Ghaznawids, the Ḵāḥāns and the Timurids. Masʿud b. Maḥmūd, the Ghaznawid, used to have a large leather table-cloth (bātān) laid out on the dais on which he sat to hold audiences, on in some neighbouring garden or pavilion, and to invite the great men of the state to sit with him at the bānān (cf. Abu ʿl-Fadl Bayhaḵi, Tārīḵ Maʿṣūdi, ed. Allā Akbar Fayyād Maḥhad H. A. H. 1350/1971, 439, 734-5). Wine flowed freely at these feasts (see ibid., passim). Niẓūm al-Mulk considered it indispensable for the ruler to keep an open table and he claims that ʿOṯoǧrīl Beg entertained his followers thus in the early morning (Siyyār-nāma, ed. Scherf, Paris 1891, 115). The court astronomer, though not essential to court ceremonial, nevertheless played an important role, especially under the Safawids and Kāḏjarīs, in deciding the most auspicious moment for the coronation of the ruler or for some movement such as when the entry into a town should take place, or even for the proper hour “to sit, to rise, to depart, to eat, to go to bed” (Du Mans, État de la Perse en 1660, ed. Scherf, Paris 1890, repr. 1969, 30).

The Ziyārid Mardawīdī [q.v.] (d. 323/935), when he sat on a golden throne and wore a crown (tāḏī), was imitating Sāsānīd (or what he believed to be Sāsānīd) custom (Miskawayh, Taḏārīḵ al-amarn, v. 489, and see A. Mez, Die Renaissance des Islams, Heidelberg 1922, 17). In subsequent centuries, the throne and the tāḏī continued to be important elements in royal ceremonial. The Būyid ʿAdud al-Dawla [q.v.] was surrounded by great magnificence when holding audiences. Like the caliph, he sat on a throne on a dais. High-standing visitors sat on stools or chairs (kursī) in front of his throne. As in the caliph’s court, his musical instruments accompanied him. The nakaraḵāna survived in Tehran until 1937. Considerable importance attached also to the throne. In the early centuries this was placed on a qūfa, or dais, which was often a considerable structure, consisting sometimes of a portico or pavilion open in the front in which the dais was situated. Sometimes on the throne itself there was another chair or seat on which the ruler sat. Apart from these ancient insignia, there were also insignia of Islamic provenance, such as the right of the ruler to have his name mentioned in the khāba [q.v.] and on coins (see DUKA).

The grant of robes of honour [see KUṬTA] though not specifically one of the insignia of royalty, was a practice followed by all rulers and one attended in Safawid and Kāḏjarī times, if not earlier, by special ceremonies. The purpose of the grant was partly to honour the recipient, but partly also to fill the ruler’s coffer, since the recipient was often expected to make gifts to the ruler in return, and if the recipient was in the provinces, to whoever brought the kāḇā. Another practice was the distribution of bags of gold and silver coins by the monarch on the occasion of his accession to those who were present at his court (H. L. Rabino, Coins, medals, and seals of the Shahs of Iran, 1500-1941, London 1945, 87). The distribution of scattering (nājar) of coins, jewels and precious objects, both by the ruler and his subjects, was also customarily connected with festive occasions such as the Naw Rūz (the Persian New Year). The canonical festivals of the ʿid al-adhā and the ʿid al-fitr [q.v.] were the occasion for public celebration. It was customary for the ruler to go out to the musalla outside the town where the ʿid prayers were performed and to take part in them (see further Nawba, 2. In Iran).
the right hand side was the place of honour (see further H. Busse, Chalif and Grosskonig, Beirut 1969, 222 ff., and ʿAli Asghar Fakhl, ʿAbd al-Dawla, Κουμ μ.Δ., 215 and passim). Hillāl al-Sabīḥ described the caliph al-Tāʾsīʿs reception of ʿAbd al-Dawla in Baghdad in 367/977-8 and the royal insignia which he gave to him in 368/978-9 (Fakhl, op. cit., 473 ff. See also al-Suyutī, History of the caliphs, tr. H.S. Jarrett, Calcutta 1881, 427).

The Sāmānids and Ghaznavids both evolved an elaborate ceremonial, which was influenced by what was assumed to be the Sāsānīd practice and by practice at the caliph’s court. In the Ghaznavid court, every effort was made to enhance the glory of the ruler. On formal occasions, the greatest deference was exacted from all, even the caliph’s envoys. It was Masʿūd b. Mahmūd’s custom to hold court, sitting on a dais (ṣafāh), in one or other of his palaces or gardens (cf. Bayhaḵi, ʿAjba, 438). It seems that his throne was originally made of wood. This was replaced in 429/1038 by a golden throne of great magnificence, which had taken three years to make. When it was finished, it was placed on a dais in the new palace which Masʿūd had built and surmounted by a parasol. Bayhaḵi describes the splendour of the scene when Masʿūd, wearing a red satin cloak shot with gold, mounted the throne for the first time on 21 Šaʿbān 429/8 July 1038. Ten richly dressed ʿglāms stood on the dais on the right side and ten on the left. With rows of ʿglāms, also richly dressed, and bearing arms and the ṣmāt ad darān standing in a body the hall. The meaning of ṣmāt ad darān is uncertain. The term may have been applied to a ṣfardān who held a switch or some such implement, whose duty was to keep back the crowds. On the other hand, one of the meanings of ṣmāt ad darān was a cushion on a dais, see Ibn Baiṣṭāṭa, Travels, tr. H.A.R. Gibb, Cambridge, 1956-71, iii, 660. 18n, and ṣmāt ad darān may, thus, have been the bearer of the royal cushion.) The notables from the provinces and the great men sat on the dais. The “pillars of the state” and the great men of Masʿūd’s entourage scattered innumerable gifts before him. The ceremony apparently began early in the morning, for Bayhaḵi states that Masʿūd sat until breakfast time (ṣaʿīdāt). At the close of the audience, Masʿūd’s boon companions (nādīmān) came forward and scattered their gifts, after which Masʿūd mounted and rode off to a garden. Having changed his clothes, he went again on horseback to another palace or pavilion (the Spring House) where a feast was held for the great men and the “pillars of the state”. After this Masʿūd went to another garden where he drank wine with his boon companions until the time of the afternoon prayer (Bayhaḵi, 714-15).

Masʿūd’s reception in Mubarram 423/December 1031-January 1032 in Balkh of an envoy sent by the caliph was marked, according to Bayhaḵi’s description, by much splendour. Four thousand palace ʿglāms, splendidly dressed and equipped, were drawn up in ranks on either side of the palace. Two hundred royal ʿglāms, in full regalia, stood in rows near Masʿūd, while the great men of the court, the provincial governors and chamberlains, in their court dresses, gathered in the assembly. Masʿūd sat on a dais. The only other person to be seated was the chief minister, Ahmad b. Hasan al-Maymandī [q.v.]. When the caliph’s envoy was brought in, he greeted Masʿūd and was led to a seat by the chamberlain, Bū Naṣr. Masʿūd then asked after the health of the caliph, and the envoy told him of the death of al-Kādīr. After Ahmad b. Hasan had said a few words to the envoy in Arabic, he gave him a signal to give the caliph’s letter to Masʿūd. The envoy got up, took the letter, which was in a black brocade bag, gave it to Masʿūd and went back to his seat. Masʿūd then called to Bū Naṣr to come up to the throne. He took the bag, opened it, read the letter and then at Masʿūd’s command translated it into Persian. The following day, a mourning assembly for the caliph al-Kādīr was held. Masʿūd and all his court were dressed in white. The bazaars were closed and the diyān shut for three days. When they were reopened, drums were played and on the following Friday theḵwāb was read in the name of the new caliph. Masʿūd sat close to the minbar, which was covered with cloth of gold (ḏabbā niʿz ar-bāfi). The chief minister and the notables of the court sat nearby, with ʿAli Mikālī and the caliph’s envoy rather further off. After theḵwāb had been read, the royal treasures placed 10,000 dinārs and five silk en purses at the foot of the minbar as a present for the caliph. The gifts of Masʿūd’s sons, the chief minister, the great chamberlain, and others were then brought, after which Masʿūd departed, while the treasurers’ scribes and mastaʿufīs took the gifts to the royal treasury. Some days later, the envoy was given a khalīf, a mule and two horses, and sent back with the presents to the caliph. The chief minister also sent him a mule, with a rug (ḏabīl) and hood (burkā), 500 dinārs, and ten garments (ibid., 383 ff.). Similarly, in later times, the exchange of presents was also not confined to the two principal gifts, but on the occasion of the envoys from the ambassad: ministers also expected to receive presents from envoys and sometimes made gifts themselves to envoys.

In the following year, 424/1033, another envoy accompanied by a eunuch (ḵādīm) brought a diploma and khalīf from the caliph for Masʿūd, who was then in Ray. When the envoy was taken to Masʿūd, he kissed the latter’s hand, while the khalīm kissed the ground. On this occasion, after Masʿūd had enquired for the health of the caliph, Bū Naṣr took the envoy under the arms and seated him near the throne on the dais, on which the army commander ʿAli Dāyā and the ṣārīb, the head of the military department [see ṣārīb] were also sitting—the chief minister was absent (ibid., 471-2). This custom of taking envoys under the arms when bringing them near to the presence of the ruler also prevailed in the Timūrid, Safawid and Afsharīd courts (see below). Bū Naṣr then came forward and told the envoy to rise and take the diploma, which was rolled up in black brocade, and put it on the throne. The envoy, standing up, told Masʿūd to come down from the throne in order to put on the caliph’s khalīf. Masʿūd ordered a prayer rug (muṣallah) to be brought. As he turned to the fiṭāla, drums were beaten and trumpets blown in the garden and at the gate of the palace. Bilge Tegān and other military leaders ran forward to help Masʿūd down from the throne to sit on the prayer rug. The caliph’s envoy then called for the box with the khalīf and brought out seven robes and other garments. Masʿūd kissed them and performed two rakʿās of prayer and remounted the throne. A jewelled crown, necklace and bracelet were then brought forward, kissed and placed on the throne at Masʿūd’s right hand, while the khalīm advanced with a turban, which Masʿūd kissed and placed on his head. A standard (liwā) had also been brought by the envoy, and this Masʿūd held in his right hand. He also put on the sword and sword-belt which the envoy had brought and then, having kissed them, put them aside. Finally, Bū Naṣr read and translated into Persian the caliph’s letter and the diploma. After which the present began to scatter coins, jewels and rarities (ibid., 473-4).
Mihragan and Naw Ruz appear to have been regularly celebrated by Masud. In 426/1035 Mihragan fell on the 16 Dhul Qa'da. Bayhaki states that on this occasion coins and jewels were scattered before Masud and presents made to him. After prayers, wine was passed round and the "the customs of Mihragan were performed" (ibid., 643, cf. also 655, 697, 743). When recording the celebration of Mihragan in 430/1039, Bayhaki states that poets and singers were not given presents on that occasion because there had been a shortage of rain (ibid., 789-90). Under later rulers, the festival of Mihragan fell into desuetude. Bayhaki mentions that in 429/1038 Masud observed the customs of the Naw Ruz and gave presents and that wine flowed (ibid., 705, cf. also 815). After the Ghaznavids, Naw Ruz was celebrated as a popular rather than a public festival; under the Safawids and Kadjars it was again celebrated as a public festival (see below). Bayhaki also mentions the celebration of Sada, the festival of fire, in 426/1035, but this was probably not a public celebration. He states that Masud sat in a tent pitched beside a stream with his boon companions. Musicians were also present and a fire of wood was lit (ibid., 572). (On Sada, see Cambridge History of Iran, iii/2, The Seleucids, Parthians and Sasanians, period, ed. E. Yarshater, Cambridge 1983, 800-1.) The Ziyarid Mardawijd had before this made an abortive attempt to revive the feast of Sada. He prepared a great bonfire in Isfahan in 323/935, but was murdered before the ceremony could take place (Fakhi, op. cit., 20). The recovery of the ruler from illness was another occasion for the offering of presents to him. On 1 Rabi\'i 428/22 December 1036 Masud, who had just recovered from illness, held a court in Bust. His entourage and the great men of the city came and scattered coins and presents, while the people offered prayers for him and sacrificed animals, giving the meat with bread to the poor (Bayhaki, 278).

It would appear from the Tarih-i Masud\'i that Masud b. Mahmud frequently granted khil\'a\'s to his subjects. These appear to have differed according to the rank of the recipient. A large stock was presumably held in the royal wardrobe (qum\'-shahma). Thus Ali Dawa on 1 Djumadi I 429/6 January 1041 was "clothed with a sipahsalar\'i khil\'a", such as was customary for army commanders" (op. cit., 436), while the khil\'a given to the caliph\'s envoy in 423/1031-2 was "such as is given to the fukahd\" (ibid., 390). When the hajib Suhbashi was made chief minister (khil\'-as-i buzurj) on 10 Safar 427/13 December 1036, he was given a "complete" khil\'a with a banner, standard, drum and kettle drum, suits of clothes (suhb-h\'-yi qum\'-ma), bags of silver and other things which went with this office (ibid., 648). A special horse was also the mark of certain offices. Tash Farrash, the army commander, when setting out for Ir\'ak\' in 422/1030-1 was presented with "the horse of the army commander (sipahsalar\') of Ir\'ak\" (ibid., 373). Bayhaki also mentions "the horse of the leader (qal\') of Hindustan" (ibid., 395). Horses played a special part in royal processions [see MAWAK\'IB].

The Saldjuks, when they came into Khurasan, took over some of the ceremonial forms they found in existence. When Toghril Beg came to Nishapur in 429/1073-8 he sat on Masud\' b. Mahmud\'s throne, which was in the front part of a dais, to receive the welcome of the population. His personal apparel was modest compared to that affected by Masud. Bayhaki states that on his entry into Nishapur he wore a woven lappet over his cloak (kha\'-yi mulham), a tarejazi turban and felt boots, and was fully armed, and carried on his arm a strong bow with three wooden arrows (ibid., 732). It is not without interest that a bow and arrows were part of the insignia of the Kadjars (see below). Even after the rule of the Saldjuks had become firmly established, their court remained less minutely regulated and less luxurious than that of the Ghaznavids. This may have been due in part to a survival of tribal tradition (so far as this survived), and in part to the fact that the Saldjuks sultans were frequently engaged in military expeditions and spent much time travelling about their empire. Rawandi states that Malikshah was not cut off from the people by a curtain (hia\'-db) and that if someone came to him to redress a wrong, he would speak to him face to face (Rab\'ah al-sud\', ed. Muhamm\'mad ib\'ali, London 1921, 131). Nizam al-Mulk believed that fixed procedures in ceremonial matters enabled the subjects to regulate their conduct. Accordingly, he lays down rules in the Si\'yasat-nama for the holding of audiences by the sultan (110, 84, 86). These may well have represented his ideal rather than actual practice. He obviously felt that the Saldjuks sultans had failed to maintain the pomp necessary to preserve the awe in which he believed the monarch ought to be held. However, on occasion the Saldjuks sultans did observe an elaborate ceremonial (cf. the marriage of the daughter of Malikshah to Al-Mu\'tadadi [see MAWAK\'IB]). Nizam al-Mulk also lays down rules for the reception of foreign envoys. They were to be accompanied by an officer of the sultan as soon as they crossed the frontier. The reason for this was not only to honour the envoy but also to find out the aims and power of his patron (ibid., 86). The practice of appointing an official, known in later times as the mihmand\'ar [q.v.], to conduct important personages through the country is also found under the Safawids and Kadjars.

Bundard\'i and Ibn al-Athir both give the impression that Toghril Beg held the caliph in great veneration, though this did not prevent him from demanding the same honours as had been accorded to the Ghaznavids and in insisting on his own marriage to the caliph\'s daughter (see G. Maksidi, Ibn \'Aqil et la résurgence de l\'Islam traditionaliste au XIe siècle, Damascus 1965, 78 ff. and passim; idem, The marriage of Toghril Beg, in LMEJ, i [1970], 270). In 449/1057-8 when he was granted an audience by the caliph, he dismounted at the gate of the caliph\'s palace and went in on foot. On seeing the caliph sitting on his throne, he kissed the ground several times. He was then seated on a chair (kurst) in front of the caliph\'s throne. The caliph, addressing him through the na\'i al-r\'-\'uda\', gave him a khil\'a, standard and diploma and girded him with a sword (Sibh b. Djawari, Mar\'ud al-zam\', ed. Ali Sevim Ankara 1968, 24-6; Ibn al-Athir, Al-Kamil, ix, 436; see also MAWAK\'IN). The caliph\'s envoy when he came in Sha\'a\'b\'an 453/August-September 1061 to Tabriz for the conclusion of the \'ad\' between the caliph\'s daughter and Toghril Beg, appears to have been treated with great respect. When he entered the sultan\'s presence the latter was sitting on his throne, around which were standing the amirs and meliks according to their ranks. After the envoy had saluted the sultan, \'Amid al-Mulk al-Kunduri [q.v.], Toghril Beg\'s wazir, approached him and greeted him; under both the Ghaznavids and the Saldjuks it appears to have been the function of the chief minister to speak on such occasions on behalf of the sultan. The caliph\'s envoy then stood up and took out his deed of proxy (khâ\'ah al-wu\'al\'). The whole company rose and he went on to the passage stating the exalted ceremonies which were to be performed," he bowed, and those present, including the sultan and \'Amid al-
Mulk, also bowed. When details of the marriage portion (mahr) were mentioned, voices were raised in prayer for the caliph. The kha'ba was read by a certain Mansur al-Khurarsin, after which al-Mu'azzam al-Ma'add distributed khiyas in great profusion, the Saljuq sultans seem to have been more sparing in their grants. When Alp Arslan took oaths of allegiance from his amirs for his son Malikshah as his heir apparent, he gave them khishas (Ibn al-Ashir, x, 34). Similarly, when Sandjar came to Rayy in 543/1148-9 and renewed Mas'ud's power, Muhammad's diploma, he gave Mas'ud and all the amirs of 'Irak valuable khiyas (Rwandi, 175). Whereas Mas'ud b. Muhamud appears to have expected his subjects to present him with gifts on all occasions, under the Saljuqs the practice was less common. The Saljuqs adopted the various insignia of royalty which had prevailed under earlier rulers. They added to them the ghishina (q.v., and see also Mawakih). They apparently had special tents when on expeditions. When Muhammad b. Muhammad spent one month with his uncle Sandjar in 521/1127 after he had rebelled against him, he was not allowed a red dahram tent. When he was restored to the government of 'Irak at the end of the month, Sandjar again according to him, gave him a special garment (kivas-i khiss), as well as a bejewelled cloak, a special horse (asb-i naubat) with harness set with jewels and an elephant with a howdah also set with jewels (Rawandi, 170). Pir Muhammad, Timur's grandson, also had a red tent (Clavijo, Embassy to Tamerlane 1403-06), tr. from the Spanish by G. Le Strange, London 1928, 254), and so too did Faith Ali Shah (Feuvrier, Histoire des Tartares, viii, Paris 1965, 90-2; see also Spuler, Documents relatifs a l'histoire des Croisades, 1931, 17, 113). The birthday of the ruler, at least during the reign of Ghazan Khan, was celebrated with great splendour and presents were given to him (see Spuler, op. cit., 264). There were apparently special ceremonies concerned with the presentation of drink to the Ilkhan. These, too, were modelled on the practice of the court of the Great Khan (cf. Travels, 132 and also Tahrir-i shah-i Karâ-Khânâ), ed. Muhammad Ibrahîm Bâstânî Pârîzî, Tehran Shâhîngilhâ 2535/1976-7, 139). One of the features which differentiated the ceremonies of the Ilkhanid and Timurid courts from earlier and later courts was the participation, on occasion, of women of the royal house in public ceremonies. The Ilkhan's chief wife sometimes sat on the throne with him. The Ilkhanîs were lavish in their grant of khiyas. They and their wives held large stocks of precious garments. Some were made in royal workshops (cf. Rashid al-Din, Tahrir-i mulk-i Khânâ, q.v., Kâshânî, Tahrir-i Opolyâ, ed. Mahîn Hambîly, Tehran A.H.S. 1348/1969, 121-2). Rashid al-Din states that Ghazan gave away on one occasion 20,000 garments (Tahrir-i mulbarak-i gha'zânî, 185).

Much of the ceremony of earlier times continued to be found under the Timurids. Clavijo, in his account of Timur's reception of foreign ambassadors in Samarkand, describes how they were taken under the armpits by a series of waiting officials as they advanced through the palace and its grounds. First they came to Timur's nephew, a very old man, seated on a dais, to whom they made obeisance; then they came to several of Timur's grandsons, who were also seated on a dais and to whom they paid their respects. Three of the young princes got up, asked for the letter which the envoys had brought from the king of Castile and took it to Timur. The envoys followed and found Timur sitting on a dais in the portal at the entrance of the palace. He was dressed in a cloak of plain silk, wearing a tall white hat, ornamented with pearls and jewels, with a balas ruby on the crown, and sat on a mattress covered by an embroidered silk cloth with cushions behind him. On sight of Timur, the envoys bowed and put their right knees to the ground, crossing their arms over breasts. Advancing another step, they again bowed, and on the third occasion remained kneeling. Timur then commanded them to rise and approach him. Three chamberlains came forward, took them under the armpits, led them up to Timur until they stood immediately before him, and again made them kneel. At the end of the audience a feast was held (Embassy to Tamerlane, 220 ff.). Clavijo describes another feast given by Timur which was attended by numerous men and women (ibid., 227 ff.). At the end of it ‘‘one of the lords in waiting came forward with a silver bowl full of small pieces of silver money … and of this money he proceeded to throw handfuls over us ambassadors as also over the other guests present, and gathered up all the rest of the coins that remained in the bowl and threw them into the skirt of the cloaks we ambassadors were wearing, this being a gift to us’’ (ibid., 227). Timur then presented each of them with a robe of honour. They
bowed in acknowledgement three times and then knelt before him (ibid., cf. also the reception of the Spanish envoys by Pir Muḥammad, Timūr’s grandson, 254). At various other times the ambassadors were given robes of honour—on one occasion they each received not only a robe of kincob, but also a skirt to match, a hat and a horse for riding (ibid., 236), and on another they were each given a robe of honour of kincob and for wearing underneath it a close fitting jacket of silk cloth lined with skins, with a high collar made of the fur of two marten skins, a hat and a wallet containing 1,500 silver pieces (ibid., 276-7).

Once when Timūr received the envoys in the Great Pavilion in Samarkand, he was accompanied by a great crowd of his imperial kinsmen and many foreign ambassadors, all of whom took their seats in due order of precedence. Elephants then were brought in and performed tricks, and minstrels played their instruments. Round about there stood some 300 wine jars for the guests and two tripods made of wooden staves painted red, with a great leather sack hanging on each filled with cream and mares’ milk. These the attendants kept stirring and threw in many loaves of sugar. Timūr’s chief wife appeared at the feast, taking her place beside Timūr but slightly behind him on a low dais, three of her ladies sitting beside her. Seven others of his wives, and the wife of one of his grandsons, sat beside them. (ibid., 257 ff.). Describing the ceremonies connected with drinking that took place at the feast (which appear to have resembled customs at the court of the ʿIkhāns), Clavijo states, “Those who are given to drink at the hands of Timur have to do so ceremoniously and after this fashion. They come forward and bend the right knee knee, once at some distance before approaching; then they rise and step forward nearer to him (Timur) and kneel with both knees on the ground, receiving the offered cup from his hand. Then they stand up and go backwards a little distance, taking care always to face his highness, and they kneel again and then drink at a draught all that is in the cup, for to leave any wine undrunk would be against good manners. Then having swallowed the draught they rise again and then they rise and step forward nearer to him: after this the ambassador is conducted to the place of the ʿIkhāns.”

and return to the city accompanied by a concourse of the local officials and inhabitants (The travels of Monsieur de Thevenot, London 1687, reprint 1971, ii, 72, 104; Jean-Baptiste Tavernier, Voyages en Perse, Geneva 1970, 273). This was also the case under the Afghars and Kadjars (cf. Jonas Hanway, An historical account of the British trade over the Caspian Sea, London 1762, i, 101; Malcolm, History of Persia, London 1829, ii, 407, 408; 'Abd Allah Mustawfi, Shahr-i zindagani-i man, Tehran A.H.S. 1324/1945-6, i, 546-7). Prior to taking leave of the shah, envoys were given khil'as, which they wore at the farewell audience. The quality of the person regulated the value of the khil'a. Some consisted of a whole suit of clothing, even to the shirt and shoes. Some were taken out of the king's own wardrobe from amongst the garments he had worn. The common ones consisted of a vest, an upper vest, a scarf and a turban. The value of khil'as varied enormously. One given to an ambassador from the Mughal emperor was valued at 100,000 crowns and consisted of a garment of gold brocade with several upper vests, lined with marten furs and enriched by a clasp of precious stones, 15,000 crowns in money, upper vests, lined with marten furs and enriched by a khil'a. Monsieur de Thevenot,

London 1687, repr. 1971, ii, 72, as din, ed. Sykes, 8-9). Minor rulers also gave as, which they wore at the farewell audience. The quality of the person regulated the value of the khil'a. Monsieur de Thevenot,
of polo and archery contents in the maydan of the city (ibid., i, 598). Sometimes owing to the exigencies of war, the Naw Rúz was not celebrated officially, as was the case in 1025/1616-17 when the shah was en route for Georgia (ibid., ii, 897-8).

Sir John Chardin gives an eye-witness account of the coronation of Sháh Sai II (1077-1105/1667-94). His father Sháh 'Abdálláh II having died in Tabaristán without designating his successor, his chief ministers decided to put Sulaymán (who later took the name Sai) on the throne. They sent the kurtá-báshí and Isfahán to bring Sulaymán out of the kāram where he had been confined on the orders of his father, and to give him a letter announcing their decision. Every effort was meanwhile made to conceal the late shah's death, to which purpose the chief ministers, other than the kurtá-báshí remained in Tabaristán, sending only their deputies to Isfahán. Sulaymán was informed of the decision to place him on the throne and preparations for the coronation were immediately made. The kurtá-báshí, attended by the chief eunuch and a train of other persons, conducted the prince to the audience hall, where the deputies of the ministers of state made their three usual prostrations in the name of the ministers of state as also did the munájjám-báshí, who had come with them from Tabaristán (for a description of the hall, see The works of Sir John Chardin into Persia and the East Indies to London 1691, Coronation, 37 ff.). The prince then went to the bath to purify himself and put on new clothes. Meanwhile, the munájjám-báshí and another astrologer who had come with him from Tabaristán set themselves to observe the most favourable moment for the coronation to take place. The sháh al-sáli'm, who was to perform the ceremony, was sent for and the hall prepared for the coronation. Four articles needed for the coronation were placed in the middle of the hall. The first was the throne or kurtá, "a little square cushion stool, three geometrical feet in height, the feet of the pillars that supported the corners being fashioned like so many great apples". These and the pillars were plated with gold and set with rubies and emeralds. When not in use, the throne was placed in the middle of the hall. The second was the tāqí, or crown (for a description of this see ibid., 40-1). The third was a sword and the fourth a dagger, both of which were set with precious stones (ibid., 41). The three last mentioned articles were placed near the throne. When all was ready, Sulaymán came in and sat down (not on the throne) and the assembled company ranged themselves in their appointed places (ibid., 42-3). When the munájjám-báshí gave notice that the propitious moment had arrived, the prince and those present rose to their feet. The kurtá-báshí, after throwing himself at the shah's feet, rose to his knees, opened the bag in which the letter was kept, placed his right hand on it, and then rose to his feet. The prince, having received it, returned it to him and commanded him to open it and read it. When he had finished reading, the prince ordered him to send for the sháh al-sáli'm. The latter, approaching the prince, threw himself at his feet, rose after the usual prostrations, and took the letter from the kurtá-báshí. Having laid it out on his head, he read it and examined the seals, and then fell upon his knees before the prince, and bowed thrice to the ground, thus declaring the authenticity of the letter and the elevation of the prince to the throne. The kurtá-báshí on the left and the sháh al-sáli'm on the right then conducted the prince to the golden chair or throne in the centre of the hall. The sháh al-sáli'm, kneeling, said a prayer, blessed the tāqí, the sword and the dagger, girded the sword on the shah's left side and hung the dagger on his right side. Then having made a sign to the kurtá-báshí to take off the shah's bonnet, he put on the tāqí, raising it as he did so verses from the Kūrān, which he also did when he girded him with the sword and the dagger. He then gave way to the kurtá-báshí, who read the sûrat udhí'a. As the latter ended with the khāthíb by praying for the long life of the shah and the increase of his conquests, those present loudly repeated five or six times the words in shā'di'alláh. The sháh al-sáli'm then bowed his forehead to the ground three times, pronounced a second benediction and bowed again three times, after which those present, according to their rank, came forward and made the three customary prostrations. This concluded the ceremony (ibid., 42 ff.). Subsequently, as a result of an illness which attacked the shah, a shortage of foodstuffs, an outbreak of pest and various other infelicitous events, it was believed that the coronation had taken place under an unfavourable constellation. Accordingly, a second coronation was decided upon at what was hoped would be a more favourable hour. This took place in the Čihl Sútun palace, and the shah tendered the throne of Súľtan (ibid., 132-3).

Under Nádir Sháh, court ceremonial was inevitably much reduced, since he spent much of his life in camp and on military expeditions. Hanway describes his camp and the pavilion tent in which he gave audience and transacted business. Sometimes he used to sit cross-legged on a large chair or dais and sometimes on the floor. There was nothing sumptuous in the pavilion; the front was always open even in the worst weather; in very cold weather charcoal braziers were placed in the middle. Behind the pavilion were his private apartments, to which he retired at meal-times. His officers of state and those having business with him stood in the open air forming a semi-circle in front of the tent. If anyone was brought to answer for his conduct, he was held under the arms by officers to prevent his escape or committing an act of violence. The kurtá-báshí, who was the chief eunuch, was so heavy and weighty that it needed two men to carry it (Chardin, Coronation, 39-40). The second article was the tāqí or crown (for a description of this see ibid., 40-1). The third was a sword and the fourth a dagger, both of which were set with precious stones (ibid., 41). The three last mentioned articles were placed near the throne. When all was ready, Sulaymán came in and sat down (not on the throne) and the assembled company ranged themselves in their appointed places (ibid., 42-3). When the munájjám-báshí gave notice that the propitious moment had arrived, the prince and those present rose to their feet. The kurtá-báshí, after throwing himself at the shah's feet, rose to his knees, opened the bag in which the letter was kept, and kissed it, raised it to his forehead, and presented it to the prince and then rose to his feet. The prince, having received it, returned it to him and commanded him to open it and read it. When he had finished reading, the prince ordered him to send for the sháh al-sáli'm. The latter, approaching the prince, threw himself at his feet, rose after the usual prostrations, and took the letter from the kurtá-báshí. Having laid it out on his head, he read it and examined the seals, and then fell upon his knees before the prince, and bowed thrice to the ground, thus declaring the authenticity of the letter and the elevation of the prince to the throne. The kurtá-báshí on the left and the sháh al-sáli'm on the right then conducted the prince to the golden chair or throne in the centre of the hall. The sháh al-sáli'm, kneeling, said a prayer, blessed the tāqí, the sword and the dagger, girded the sword on the shah's left side and hung the dagger on his right side. Then having made a sign to the kurtá-báshí to take off the shah's bonnet, he put on the tāqí, raising it as he did so verses from the Kūrān, which he also did when he girded him with the sword and the dagger. He then gave way to the kurtá-báshí, who read the sûrat udhí'a. As the latter ended with the khāthíb by praying for the long life of the shah and the increase of his conquests, those present loudly repeated five or six times the words in shā'di'alláh. The sháh al-sáli'm then bowed his forehead to the ground three times, pronounced a second benediction and bowed again three times, after which those present, according to their rank, came forward and made the three customary prostrations. This concluded the ceremony (ibid., 42 ff.). Subsequently, as a result of an illness which attacked the shah, a shortage of foodstuffs, an outbreak of pest and various other infelicitous events, it was believed that the coronation had taken place under an unfavourable constellation. Accordingly, a second coronation was decided upon at what was hoped would be a more favourable hour. This took place in the Čihl Sútun palace, and the shah tendered the throne of Súľtan (ibid., 132-3).

Nádir's coronation was also a break with tradition. When he had decided to assume the crown, he summoned governors, káds, ulamá' and provincial notables to a kurtálay in the Mughán steppe ostensibly to choose their ruler, but in fact to acclaim him as their ruler. Those who assembled were too numerous to be received simultaneously and so were divided into groups, each being given a separate audience. Finally, on 24 Shawwáli 1148/8 March 1736, after several days of charade, Nádir having signified his readiness to accept the crown subject to certain conditions, the umará' and other persons of consequence clad in robes of honour assembled, and Mirzá Zákí placed a golden crown, adorned with magnificent jewels, on Nádir's head. All those present knelt down and prayed, except the deputy chief mullá, who intoned the prayer. While this was being uttered, all kept their arms above their heads; afterwards, while the Fāthi was being read,
they bowed their faces to the ground. When the Fatiha was finished, everyone rose and seated himself in his appointed place according to his rank (see further, L. Lockhart, *Mohammadian Affairs*, London 1833, ii, 320 ff.). Among the spoils that Nādir brought back to Persia from his Indian expedition in 1739 was the Peacock Throne. This was lost in the troubles after Nādir’s death. The modern Peacock Throne is of Kāǧār manufacture (see Amir Gllanshah, *Yak sad u pandash sad-i saltanat dar Iran*, n.d. Tehran, 28-9; Ali Asghar Hikmat, *Takhti-i Sādri*, in *FIZ*, viii, 139-52). Nādir himself (1193-1211/1779-97), like Nādir Šāh, spent much of his life in military expeditions and had little use for court ceremonial. Under his successor Fath ʿAli Šāh (1211-50/1797-1834), traditional ceremonies were revived. No court, according to Sir John Malcolm, paid more rigid attention to forms and ceremonies, the maintenance of which were deemed essential to the power and glory of the monarch. Looks, words, and the motions of the body were all regulated by the strictest forms. When the king was seated in public, his sons, ministers and courtiers stood erect, with their hands crossed over their chests, and in the exact place belonging to their rank (*History of Persia*, ii, 400). James Morier also remarks that the king was never approached by his subjects without frequent inclinations of the body; and another person introduced to his presence had reached a certain distance, he would wait until the king ordered him to proceed; upon which he would leave his shoes and walk forward to a second spot and wait there until the king directed him to advance further. No one sat before the king except relations of kings, poets, learned and holy men and ambassadors; his ministers and officers of state were never permitted this privilege (*A journey through Persia, Armenia, and Asia Minor*, London 1812, 286).

The insignia of royalty consisted of the following articles, all of which were set with jewels and pearls: the crown (of which there appear to have been several), the sword of state, a dagger, the royal bow and its arrows, a shield and staff or mace. These were held on ceremonial occasions by pages (ghulams) or other officials, or by the princes (cf. W. Ouseley, *Travels in various countries of the east...*, London 1819, iii, 130-1; Morier, *op. cit.*, 192, 214-15; Muʿayyir al-Mamālik, *Yādādēgār-hā-ī az zandāgān-i Nāṣir al-Dīn Šāh*, Tehran n.d., 25). On the front of the crown was placed an agniate (*dīgha*). A similar ornament was also worn on the headdress of the shah and princes. On state occasions, special bracelets were worn by the shah and his sons (Morier, *A second journey through Persia, Armenia, and Anatolia*, London 1818, 173). A variety of standards were in existence, some of which were brocaded with a shawl, and sometimes he would add to this a horse with its trappings and caparisons (see further, L. Ouseley, *op. cit.*, 320 ff., also quoted by R.G. Watson, *History of Persia*, London 1866, 138 n.). Under Nāṣir al-Dīn Šāh also, the Naw Rūz was celebrated with great magnificence. Three audiences were held; the first (the *salām-i tahavīl*) took place when the sun passed into Aries and was held in the hall in which Fath ʿAli’s throne was kept. A large white cloth for the Hāft Sin stretched from near the door of the hall to the edge of the dais on which the throne was placed. The Kāḡār princes, military officers, civil officials, and religious dignitaries proceeded to their places an hour before the sun entered Aries. Three
quarters of an hour later, a curtain was raised and the shah in a blaze of jewels, preceded by the ihsân-kâsâr-bâshi and the Fatimid al-Haram, advanced slowly towards the throne, but out of respect for the 'ulâmâ', he did not sit on the throne; instead he sat on a chair (masnad) covered with gold brocade, placed beside the throne, holding the sword of Nâdir Shâh on his knees.

The first minister (the yâd-i a'zâm), with his cloak and sword of office, and his subordinates stood near the throne. The 'imâm djam'ûn and the great 'ulâmâ' sat beside the masnad of the shah, while the less distinguished 'ulâmâ' stood at the foot of the throne. The khatât al-mamâlik and the munadjîm-bâshi stood facing the throne. The former, approaching the throne, read a khutba and at the mention of the names of the prophet, 'Ali and the shah all heads bowed. The munadjîm-bâshi then came forward and after a moment or two announced that the sun had entered Aries. Immediately the trumpeters, who were drawn up outside, sounded their trumpets and guns were let off in the Maydân-i Masâkh. The shah offered his congratulations to the 'ulâmâ' and then to the rest of the company. Taking the Kurân in his hands he reverently read a passage, after which Hâddûd Nizâm al-Islâm knelt before the shah and put a little dust from a packet into water and gave it to him to drink. Having drunk it, the shah began to give New Year presents, using purring, pouring out of gold coins, to the 'ulâmâ'. When this was finished and the 'ulâmâ' had left, the bands which were drawn up outside, hitherto silent out of respect to the 'ulâmâ', would begin to play. The shah then got up from his masnad and sat on a chair and gave purses full of gold coins first to the princes, then to the army leaders and mustawfis and finally to the rest of those present, saying a few words to each one in turn. The recipients, on receiving their presents, kissed them and raised them to their heads. The assembly lasted some two or three hours, after which the shah withdrew into the garden, and thence into the andarûn, where the ladies of the haram vied with each other in kissing his feet (Mu'ayyir al-mamâlik, op. cit., 70 ff.).

On the second day of the Naw Ruz, a public audience was given by the shah at the portico of the Shams al-Amara palace and give them gold coins. A lunch would then be held for the shah would watch the proceedings with members of his haram from a window looking on the audience hall (ibid., 91).

The other major festivals celebrated by Nasir al-Din Shâh were the religious festivals of the 'id al-adhâ, the birthday of the prophet Muhammad, the 'Imâm 'Ali and the Hidden Imam, the 'id al-adhdâ, and the 'id al-fitr. Muzaffar al-Din added to these the birthday of ʿUsâyyn (ibid., 73). The Kâdîjâs, influenced by European precedent, made various innovations in ceremonial matters. In addition to the playing of national anthems on state occasions, various orders were instituted. One of the first was the Order of the Sun which Fath 'Ali gave to the French envoy General Gardane; shortly afterwards he instituted the Order of the Lion and the Sun for Malcolm (see Kaye, Life and correspondence of Major-General Sir John Malcolm, London 1856, ii, 31 ff.).

Nâsir al-Din Shâh introduced the custom of giving his picture (tîmtâl-i humâyûn) adorned by one, two or three rows of diamonds to favoured recipients. The first class with three rows of diamonds was given only to foreign rulers (Mu'ayyir al-mamâlik, op. cit., 83-4).

4. In the Ottoman Empire.

In the Ottoman Empire, ceremonial, protocol and etiquette are generally referred to as Tağrîfât. Aşas [q.v.], "procession", "parade", forms an integral part of most ceremonies held by the court, in the residence of the sultans as well as those organised by provincial governors who, in a lesser way, were expected to display the splendour of their monarch's régime.

The same purpose was served by military ceremonial and display. Splendid occasions were the mustering of the army setting out on campaign when the "horsetails" were planted in the field of Dauud-paşa or outside Uskûdar. Likewise, the fleet of the kaptûn-paşa lay at anchor in front of the tomb of Khâyr al-Din Barbarossa at Beşîka before putting to sea on its yearly tour in the Mediterranean (see Bahriyâ, iii, and Tugh).

Popular entertainment (modern şenlik) often had a processional character as well. Ceremonial festivities of the sultan's court, such as weddings, circumcisions of princes and anniversaries, were coupled as a rule with extensive popular entertainments like illuminations (donamna) and theatricals.

The great Islamic festivals [see 51], especially those
during Ramadān, were occasions of general enjoyment. Special dress and the distribution of presents by the sultan, as well as to his person, by his subjects and by foreign princes belong to the ceremonial sphere [see HIBA; KHAJA; LURAS, IV; ERICHSHA]. Ottoman ceremonial derives on one hand from the ancient traditions of world rule cultivated by the Mongol and Turkish empires in Central Asia and the Middle East. On the other hand, the traditions of leadership in Islamic history has shown that such a hypothesis is no longer tenable. The pioneering studies here of M.F. Koprulü have been confirmed by the work of modern scholars such as A.K.S. Lambton and H. İnalcık.

The rules of ceremonies and protocol set by the Ottoman government were applied within the frame of Islamic legal usage and custom (["arif"] [see "urif"] and laid down in so-called "law codes" [Kânân-nâmes [q.v.]]. Hardly any sources can be dated with certainty before the reign of Bâyazid II (886-918/1481-1512). Dilger's (1967) and Heyd's (1973) researches have shown that the mss. of [Kânân-nâmes used and published by von Hammer and Mehemed "Arif were composites or pious frauds of later date than the years of Sultan Mehemmed II (second reign 855-86/1451-81). Hence the so-called "Ottoman Kânân-nâme" is unreliable as an unqualified source, and the use made of these texts by von Hammer and, a fortiori by I. H. Uzunçarşı, is therefore flawed.

Court ceremonial, appropriately enhanced by Islamic ritual, was designed to emphasise the awe in which the ruler was held by means of a show of splendour to be seen as evidence of his power. As a consequence, his separation from the rest of the population followed. A protective seclusion was a characteristic of the Ottoman sultans, with their forerunners in the Islamic Middle East. A reliable source, Bertrandon de la Broquère (1433) describes already the isolation of the reigning sultans, e.g. Murâd II still dining with the companions, but his successor sitting at table alone. The increased elevation of the sultan's person and his gradual disappearance from the public eye led to heightened ceremonial on the rare event of the ruler showing himself at appointed occasions.

The audience maintained the link between the separate spheres of authority of the sultan and of his ministers united in the Diwan-i hümâyûn [q.v.] presided over by the Grand Vizier [see ŞAHR-I ÂZAM]. In the early days of the Ottoman monarchy, the meetings of the diwan were still public audiences. Probably during the reign of Selim I (918-26/1512-20), the public audience was instituted in front of the Bâb-i Şevâdet in the Palace of Istanbul, where a throne was placed there under an awning. The appearance of the ruler was formally applauded under the guidance of the Chief Applauder or Aşıkğâl Boğhî Alıkhâ (applause), accompanied by exclamations like, "pâdishâhîniz ok yahda" intoned by the Selâm Çavuş or Dâşıği, is a ceremonial known already in Sâlûq times. The audience proper (["arif"] implied kissing hands (desbâş) or kissing the hem of the ceremonial kaftan of the sultan seated on his throne placed on a dais (soda) on such occasions. Ca. 1525 the throne was replaced in a room specially built for audiences just inside the gate, the "ard odasî still to be seen in the Topkâpî Sarayî today. The protocol is well described in numerous reports of foreign ambassadors thus received. The guests were led to the sultan while held by their arms. The traditional explanation that it was a measure of security originating in the assassination of Murâd I [q.v.] in 1389 is rendered doubtful by the earliest sources mentioning this protocol dating from 1518. In this, rigid guidance is known from Sâlûq times and the Mâmlûk court (Dilger, 1967, 58-9 and n.; Lambton).

As tokens of favour, precious kaftans were presented to those persons received as âhidî or robes of honour. In times of decline, according to diplomatic sources of the 17th and 18th centuries, these robes were actually bought back by the Ottoman Porte to be given out another time. Since the days of Selim I, the ruler would remain immobile and practically silent during audiences. An exceptional favour was a compliment on a speech of an ambassador in the guise of a word or two, e.g. "güzeldir" or a mere gesture of the hand. Bâyazid II and Mehemmed II still seem to have entered upon some civil conversation on such occasions. The throne (Tâhâ-i hümâyûn, seri" did not have an important ceremonial significance in itself apart from being of luxury manufacture. The newly-succeeding sultan would receive the homage or oath of allegiance of his subjects (baya [q.v.], bâsîn in Ottoman usage).

The actual accession to rule was the subject of the great ceremony of the ådása. The ruler proceeded in state on horseback (or boat) to the shrine of Eyyûb on the Golden Horn, where took place the Girding of the Sword (tâkid-i sayf, kilic kilsâması in Turkish) in heu of a coronation in Western style. According to tradition, this took place for the first time in 824/1421 at Bursa, where the venerable Şeyhûk Emin Bîlghârî girded Murâd II. Since Mehemmed II, the ceremony was held at the Eyyûb åtâr the accession of the last Ottoman Mehemmed VI, on 3 July 1918, when the Şeyhûk Sayyid Ahmed Şanûş [q.v.] performed it. It is a persistent but erroneous notion that the sword was fastened by the Grand Şeyhûk of the Mâlawîyya [q.v.] devrish order.

An imperial astronomer had to appoint the exact date, which was to fall between the third and seventh day after the actual accession. On the return journey, the sultan passed the Janissary Barracks of Eski Odâlar. There, this corps offered şerbet, and the traditional intention for the next campaign of holy war was formulated by the ruler's words "We shall meet at the Red Apple." (Küçü Ekme, in Turkish the symbol of distant Christian capitals such as Rome and Vienna). A distribution of money to the Janissary Corps became usual (Dâwâsî bâkhiyâh) as was also customary at the reception of foreign ambassadors by the sultan and separately by the diwan in full session, a so-called Ulufè Divânî ("Council Hall"). The swords used formed part of the collection of the Holy Relics of the Prophet Muhammad, emanât-ı mubârâke, still kept in the room in the Palace appointed for that purpose, the birkâk-i seri" odasâl. These relics acquired by Selim I comprised inter alia the Holy Mantle itself (burda), the Holy Banner (sandjâks-i seri"), a fragment of a tooth of the Prophet (dentân-i sevâdet), hairs of the Prophet's beard (ibbâ-ya sevâdet), a print of his footprint (kadâm-i sevâdet) and swords which belonged to the Prophet, to the caliphs Abû Bakr, 'Umar and 'Uthmân and to six of his Companions.
These eşya-i müteberkike were in a way the insignia of government for the Ottoman sultans in their role as leaders of Islam, and during the 19th century, especially from the time of Abd al-Hamid II (1823/1237-1876/1279), became symbolic of Ottoman pretensions to the caliphate. The true regalia and symbols of recognition as Muslim ruler were for the Ottomans as for all others, the right of coinage (sikka [q.v.]); the mention of the sultan’s name in the Friday Prayers (şuhut [q.v.]); the seal stamp (muhur); the monogram, i.e. the prestigious tugha [q.v.], the hallmark of Ottoman ruler, whose excellence, the dressing of the Imperial Tent (steb-i hümâyûn, also şadîr) and accompanying most ceremonies, the military music of the Janissaries (mehterhânâ [q.v. and also nakeâra-khanâ and nawbâ]).

The other sovereign ceremony with religious significance was the execution of the annual “holy” caravan to Mecca and Medina carrying the concrete embodiment of Ottoman devotion toward the Holy Places. The şâre-yi hümâyûn was organised around the date of 12 Rasâdja by the Đâr al-sâdet aghâšî [q.v.] in the Harem apartment of the Palace. The first sending of the sadakat-i râmiyye was ordered by Mehemmed I. 5 Abûd-ş-Âmîd II sent a sum of 3,503,610 ghurush to palaces outside town along the Bosphorus near Beşiktaş and even across the water, notably to the palaces of Çıragan, Dolmabâché and the various quarters of Yıldız, the last one built upon the initiative of Âbd-ş-Âmîd II.

On the whole, tradition was maintained in a more sober form. To the ever-increasing number of foreign visitors to the Ottoman capital, ceremonies nevertheless still made a deep impression, as is evident from the mass of travel accounts, private memoirs and observations of diplomats. Âbd al-ş-Âmîd regularly took a great interest in keeping alive the great traditions, and promoted the study and restoration of institutions from the Ottoman and Islamic past, for ceremonial was still considered a useful means to enhance the pretensions of the Ottoman Sultan-caliph to great power status and to paramount leadership of the Islamic world.

During the second half of the 19th century, we see in ceremonial a blend of ancient oriental and modern European styles. The Teşrîfâtî remained an official attached to the Grand Vizirate, i.e. the Diwan-i Hümâyûn. The newly-created Ottoman Foreign Office employed its own Chef-de-Protocole (Khârijîyye Teşrîfâtî). Official titles and ranks are systematically arranged into a hierarchy. The sâlimâne (second in 1323/1905-6) mentions a teşrîfâtci-şârî, ranking as a vizier of second class attached to the Grand Vizier’s office. Next to him functioned a Teşrîfâtî-yi Diwan-i Hümâyûn carrying the alât rank of civil servants (ibid., 164). In the Yıldız Palace, a Merâsim Dâr-i reisi functioned. The ancient office of Akbîçhî Bâşî, leading a group of official “applauders” still survived. The classical mehterhân, however, was replaced by a western-style military band playing martial music at all occasions.

A remarkable innovation alla frança was the introduction at public ceremonies, such as the muâşîye, selâmîlik or the visit to the Khârina-yi Şerîf, on 15 Ramadân, of the prominent female members of the Sultan’s household and family. The Wâlîde Sultan [q.v.] princesses, high-ranking consorts and female officials of the Harem had to take part in a great number of ceremonies and to watch the military parades in front of the Tâvînkhânâ Kâşiha inside Yıldız Park, which was the successor, in a way, of the Alay Kâşiha on the wall of the Topkapi Sarayî facing the Sublime Porte. The Bâb-i Ârî [q.v.]. As of old, the births, circumcisions and weddings of princes and princesses were occasions for court ceremonies and public entertainments. The collective circumcision of princes took place three times during 5Abûd-ş-Âmîd II’s reign. The first days of the great Islamic holidays were celebrated with splendid ceremonial audiences in the Dolmabâché palace. Foreign ambassadors could watch proceedings from balconies opened for that purpose. The destbây was performed by a long row of dignitaries. The Şârîyê al-Ilâmî performed the ritual prayer first but (a sign of the reforms!) was followed by the Orthodox Patriarch and the Chief Rabbi:

The last time Ottoman ceremonial was watched by multitudes in the streets of Istanbul was the accession to the throne by the last Ottoman sultan, Mehemmed VI, in 1918. The Grand Vizier Ahmed Tewfîk Pasha [q.v.] was the last one to leave the sultan’s palace in stately procession (alay) to proceed to the Sublime Porte, this time in a carriage instead of on horseback, on 4 November 1922 (see A. F. Turkgeldi (a former Mehemmed, Chief Secretary to the last sultan) Gûnp şifat-tiklâmên = Memoirs, Ankara 1951, 165).
Ceremonial at the Muslim courts in India, while deriving much from Islam elsewhere, especially Iran, has also continued and adapted indigenous traditions. The pomp and ceremonial of Hindu courts is of considerable antiquity, and the grandeur of kings is a consideration which has also continued and adapted indigenous traditions. The psychological value of state ostentation is of course considerable, as tending to emphasise the power of the sovereign, his distance from his subjects, and the awe in which he is held. This ceremonial is most in evident in the state audiences, and in the royal processions; for the latter, see MAWAKIR.

Ceremonial in the earliest days of the Dhiil sultanate must be presumed, from the fact that the earliest records of the administration of the sultanate show such a close connection with that of the Ghaznavids whose power in the PanjGlb it inherited, to have been modelled on that of the Ghaznavids, for whom see section 3 above; through them came 'Abbasid connections also, which were undoubtedly strengthened in the time of Ilutmish when Fakhr al-Din IsFam, who had served as a wazir at Baghdad, was appointed the Dihli wazir. However, the prestige of the sultanate declined after the death of Ilutmish, when real power was in the hands of a confederacy of wazirs. However, the prestige of the sultanate declined after the death of Ilutmish, when real power was in the hands of a confederacy of wazirs—wazir SulaI—wazir Nizamuddin, who had served as a wazir at Baghdad, was appointed the Dihli wazir. However, the prestige of the sultanate declined after the death of Ilutmish, when real power was in the hands of a confederacy of wazirs—wazir SulaI—whose headdress was surmounted with peacock feathers (a borrowing from Hindu practice), whose headdress was surmounted with peacock feathers (a borrowing from Hindu practice).
ranged in order down the darbâr-hall were the kadîs, the khaâkh, the principal jurists and other ‘ulama’, the shaykhs of the Sîfî brotherhoods in the capital, the sultan’s relations by blood and marriage, and then the principal amîrs and other commanders. When all these were in place, some sixty caparisoned horses of the royal stable, and fifty adorned war-elephants, were brought in. If anyone waiting at the third gate had brought a gift for the sultan, this was reported to him by the bâghîs; if the sultan approved, the donor and his gift were brought in, and welcomed by the sultan who might be welcomed by the donor by a khâla [q. v.] and a purse of money ‘for washing the head’ (sar-ghusht); Ibn Baţûtâ describes a more elaborate ceremonial in the case of gifts and revenues presented by one of the provincial officers (ibid., iii, 226-7, tr. Gibb, iii, 663).

When an audience was held on a feast day, the palace was spread with carpets and the hall was enclosed beneath vast awnings; on the first day of a feast the sultan sat on a cushioned seat on the large golden throne, with heavily jewelled legs, and a jewelled parasol was held over him; on later days of feasts smaller golden thrones were in use. All attending the court would salute the sultan individually, in descending order of precedence; then revenue-holders would bring present, and all would be entertained to a grand banquet, again being served in order of precedence, while a large golden brazier would fill the hall with the smoke of different kinds of incense and fragrant woods, and those present would be sprinkled with rose-water. The dishes were escorted from the kitchens by nakhîs, and a eulogy of the sultan would be pronounced by the nakhî al-mukhâbâ before those present were assigned to their places. Ibn Baţútâ describes some of the dishes presented; last comes pân (betel-leaves containing chopped areca-nut with lime and a bitter gum). (This is an indigenous custom, and the presentation of pân is still used at Indian meals as a gracious sign of dismissal.) Ibn Baţútâ further describes the special ceremonies at the reception at the court of the ABBâsid caliph; since these involved a processional entry, they are described s.v. MARDâSIM.

Ibn Baţûtâ (iii, passim) refers often to the insignia of rulers and amîrs; for these see MARATIB. Shâhîm Sirâj ‘Affî, whose Ta‘rikh-i Frûzî Shâhî is richer in administrative details than most chronicles, lists twenty-one royal prerogatives (sikka-hâ-yi tâdâ-lârân) maintained by Frûzî Shâhî, including the khathâ [q. v.], the throne (iâdâl), the royal seal cut in agate, use of a takhrâ [q. v.], the right to the fly-flap (magas-rân), the royal sable-cover [see QARSHîVA], a white quiver, encampments outside the gate, the black umbrella, the royal headdress (kulâh; malik; a crown is not specified), and others. The right to strike coin [see SIKRA] is, curiously enough, not included here, and also frîsa [q. v.] finds no mention, although the practice is not unknown in India. For the umbrellas (nakeh chata, though commonly also cale in Indian Persian text) see MIZALKA; for the special spear used in the royal escort see DURBASH. Another common royal prerogative is the scattering of small coin (and also magas-rân) in use in the halls of special audience (diwan-i kâdshân). Ibn Battuta describes the special ceremonies at the reception at the court of the ABBâsid caliph; since these involved a processional entry, they are described s.v. MARDâSIM.

Another common royal prerogative is the scattering of small coin (and also magas-rân) in use in the halls of special audience (diwan-i kâdshân). Ibn Battuta describes the special ceremonies at the reception at the court of the ABBâsid caliph; since these involved a processional entry, they are described s.v. MARDâSIM.

The ruler in audience, in the palace, and at the court, usually sat on a cushioned seat on a throne, which were of several kinds and of different shapes; some, in the Mughal forts, were permanent structures of marble, with or without a canopy. That in the diwan-i ‘âmmin of the Red Fort at Dîhilî is a marble baldachino (nîshârmân; zîlî; shâhî) under a marble ‘Bengali’ roof, all inlaid with precious stones; Bernier describes a raised space round it, reserved for the umârî, the Hindî râdghâ at court, and foreign ambassadors; further space within the diwan was reserved for the officials and the general public awaiting audience. When the sovereign left the outer courtyard; he gives a full account of darbâr ceremonial in Travels, 261-5. The elaborate golden thrones were in use in special audience (diwan-i khâss), including the magnificent Peacock Throne (taqht-i tâdâsh) which was later lofted by Nâdir Shâh in 1152/1739 (description in Bâdshâh-nâmâ, i, 78-81; Bernier, Travels, 269 ff.; Tavernier, Travels, i, 384 ff.; for its fate, see G. N. Curzon, Persia and the Persian question, i, 321-2). Besides the appearance of the ruler in audience, there had been introduced under Aftâr his appearance on a balcony on the wall of his palace so that he might be seen by the populace at large; for this adoption of a Hindî practice, see DÂRSHAN. The emperor here and in darbâr was usually accompanied only by the magas rân and a single veiled sword; outside the palace he was invariably accompanied by the royal umbrella and the kut, a variety of arms wrapped in bags of scarlet cloth (other colours also appear in Mughal painting), the hilts of the swords often showing, together with umams and the chartîk, and tumânîk, standards resembling the common umâm but with its shafts adorned with Tibetan yak-tails. The magas rân was commonly a switch of yak-tails (sumari; tammari; see Hobson-Johnson, s.v. CHUNY), although the folded towel is not unknown in Mughal painting; in contemporary Deccan painting, however, the folded towel is invariably depicted. Darbâr paintings of Shâhâdâhân often show the fly-whisk in the hands of a Hindî râdghâ at court. Together with these trappings was carried a flat oval shield-like screen on a long pole, the aîfus (also called sâphânân), to shade the royal person from the rays of the sun. Other insignia also might be carried; see further MARATIB.

The dignities of the chartîk and tumânîk, the makhî-mînât, the right to an umbrella and to the use of elephants, might be conferred on royal princes and favoured nobles. The emperors took the title bahâdîr [q. v.] to themselves, only very rarely conferring it on distinguished generals; they used also the title bâdshah; it would seem that mitzâ might also be awarded as a title, as to Tumush, dedicated to the verses of those not of noble birth, and even to Hindûs [see MIRZÂ]; royal princes were generally called sultân.

To the privilege of striking coin was added the...
mintage of pieces bearing the royal portrait, perhaps starting with the "symbols of faith"—the likeness of the emperor and the motto Allâhuka Akbar—presented by Akbar to his marâdis in the Din-i Ilahi (A'în-i Akbari, 1, 160). Gigantic model pieces of Mughal emperors are also known, some intended as presents, but more generally retained as treasury pieces. Small coin was also struck specially for the sîthâr (q.v.), together with gold and silver fruits and flowers following Chaghatay practice, and was continued at least as late as the reign of Farrukh-siyar. Royal seals (see MUHR) were cut in steel as well as in cornelian and agate, for use on fabric and for decorative additions to the royal libraries (A'în-i Akbari, a'în 20).

As well as royal attendance at the public mosques and at the 'izâ ceremonies (described s.v. MAWÂKÎ), new ceremonies were introduced within the Mughal courts: Djahângir writes of his own regular weighing against gold, silver and other commodities, on the lunar and solar anniversaries of his accession, and the scenes are represented in Mughal painting. He also writes of the golden chain outside his palace, attached to a bell, which any suppliant for justice could ring (but zandîq pîhî dâkhâl already occurs in A'îfî's list of prerogatives of Firûz Shâh). The naurûz and dâ-pâhshàn ceremonies were also observed with great pomp in the palaces, again with painting confirmation available. Plate 7 of the Leningrad Album shows the scene of Djahângir's investiture (sometimes called "corona- tion"); but there was no Mughal crown, merely a jewelled headband worn on the cap; foreign emissaries and Jesuit priests are distinguished by their attire (including perhaps Roe!), wrestlers and dancing-girls perform, ushers carry trays of money-bags, a courtier scatters coin, kettle-drums are played from the back of an elephant which blocks a gateway, while karâns are blown from the palace walls. Plate 32 shows a darâbîr scene of Djahângir, painted by Abu 'l-Hasan: Djahângir wears a jewelled band round his turban, behind him are the afâhâgâr and a small chatr with the kur in a pink cloth; many of the courtiers are named, and indeed Râdja Bîr Singh Dâv acts as his chowry-bearer (Leningrad Album publ. as Af'îbon indiâskhî persîskhî miniâtar xvi-xvii vo., Moscow n.d.):

MARÂTHÂS, the name of the "caste-cluster of agriculturists-turned-warriors" inhabiting the north-west Dakhan, Maharâsthâra "the great country", a term which is extended to all Marâthi speakers. The Marâthâ homeland stretched between 15° N. and 23° N., nearly equidimensional with the main mass of the Dakhan lavas north of the Malaprabha river and south of the Sârpuâs. It lies within the rain-shadow of the Western Ghâts, a plateau compartmented by mesas and buttes between which valleys of black soil, watered by a 20" to 30" annual rainfall, yielded cereals, oilseeds and cotton. The significance of the Marâthâs in Islamic Indian history is that they stopped the Mughal empire in its prime.

Marâthâ fighters and revenue agents became indispensable to the sultanates of Aâmâd nâdâr (see Sâd-ar-Shâhî) and Bîjpur (see Bâd-ar-Shâhî). Hereditary local notables, deîmûkhs, despânûds and desjîts, and village headmen, pâtîls, dominated rural society with their armed followings and family connexions as outlandârs with rights to land revenue. Deîmûkhs, often enfeoffed in hill forts, became sardârs, cavalry captains, for Muslim rulers, receiving mûkâsà or (additional) revenue assignments. One such, Shâhîdî Bahânsâle (1002-74/1594-1664) father of Sîvâdî (1036 or 1040/1627 or 1630 to 1680), the creator of Marâthâ râgî, helped, along with other Marâthâ deîmûkhs families, Malik 'Anbâr (q.v.) to preserve Aâmâd nâdâr against the Mughuls in the 1620s. Following the final Mughal absorption of Aâmâd nâdâr in 1635-1636, Shâhîdî served Bîjpur in South India. In Shâhîdî's absence, Sîvâdî from 1056/1646 onwards used the resources of his father's dâjîr of Pûnâ to extend his own control over the strongholds of neighbouring, often hostile, deîmûkhs families. By 1066/1656, Sîvâdî was sufficiently important and free from Bîjpurî control for Awrangzîb, then governor of the Mughul Dakhan and attacking Bîjpur, to make overtures. In 1070/1659, Sîvâdî's slaying of the Bîjpurî commander Afdâl Khân drew more Marâthâs to himself. Hitherto, Sîvâdî had been a Marâthâ chief among many, taking advantage of the agriculturally-destructive wars between the Mughuls and the Dakhan sultanates, and the dearths that accompanied them, to recruit larger Marâthâ war bands for service under Muslim paymasters. Afdâl Khân, however, had deserted the shrine of Tûlji Tudjapur and Pandhar-pur, the latter a major centre of Marâthâ pilgrimage as "the focus of a specifically Maharashtrian bhaktî movement". By 1073-4/1663-4, during which time Sîvâdî humiliated the Mughuls by successfully raiding their chief commander's camp at Pûnâ (Sha'dân 1073/April 1663) and the port of Surât (Sha'dân 1074/January 1664), Sîvâdî had created a distinctively non-Muslim political authority in the Dakhan.

The massive Mughal campaign under Râdja Dîyâ Singh in 1075/1665, together with the bait of a future joint Sîvâdî-Dîyâ Singh campaign against Bîjpur, led to the treaty of Purandar by which Sîvâdî was to surrender 23 of his 35 forts. Sîvâdî's attendance upon Awrangzîb at Agra in 1076-7/1666 and his escape in a fruit basket illumine the obstacles to his becoming loyal to the Mughuls at the price which they could pay. Râdiput refusal to accord Sîvâdî kâtîrîya status, Mughal anger over the sack of Sûrat, and reluctance to reward defiance, limited Awrangzîb's freedom of action, while the decay of Bîjpur offered Sîvâdî more opportunities than Mughal service could have done.

Sîvâdî's coronation in 1085/1674 according to "Hindu" rites as chatrapatî symbolised the repudiation of an Indo-Muslim ethos, but not of the administrative structure of the Dakhan Muslim sultanates. He tried to curb the larger deîmûkhs and assignees in his own territory (swârdâpa) and his successful military and political activity furthered upward social movement among Marâthâ and Kunbî dâjîs and the tribal Kohs.

Prince Akbar's rebellion in 1091-2/1681 against
Awrangzib, and his joining Sivadji’s successor Sambhadji (1067-1100/1657-89) following on the capture and brutal execution of Sambhadji, Sambhadji (1067-1100/1657-89) following on a decisive victory over the Mughals at Bhopal in 1150/1737. Between 1154/1741 and 1164/1751, the forces of Raghudiji Bhonsle plundered Bihār, Bengal and Orissa, forcing the granting of āwaḥ from Bengal and the loss of Orissa. In the 1740s, the Marathās were ready to intervene in the Gangetic region, over which Mughal authority had been fatally weakened by Nādir Shāh’s [q.v.] sack of Dīlī in 1151/1739.

Although in wars against the nizâm of Ḍaydarābād in 1164-5/1751-2, 1171/1757 and 1173/1760, the Marathās acquired the cities of Ahmādānagar, Bīdāpjūr, Dawlatābād and Būrhnāpūr, their gains further south proved insurmountable. After 1145-6/1732, the Maratha possessions centred upon Ṭāndūr only became tributary to the nawāsīr of Ārkāt (Arok), and in 1156/1743 the then nizâm of Ḍaydarābād (Cīn Kīlī Khān) captured Tiruchirāppali (Trichinopoly). In 1174/1760-1, Ḥayḍar ‘Alī [q.v.] seized power in Māhīsūr (Mysore) [q.v.] and closed off the south to Maratha exploitation. Even in the Marathā homeland, the treaty of Varana (Warana) in 1143/1731 between Shāhū and Sambhadji II of Kōḷhāpūr, giving Shāhū control of the latter’s diplomatic relations but recognising his svarāgadh, indicated the segmentary character of Maratha politics. 

Under the peshwā Bādjī Rāo II (1153-74/1740-61) the Marathās led by Malhar Rāo Holkar, Dījāyappa ŚインドHYā and Raghunāth Bādjī Rāo, supported now Salār Dījāng of Awadh [q.v.], now Ghāzī Āl-Dīn Imād al-Mulk (grandson of Cīn Kīlī Khān), and now the puppet peshwā Ahmad Shāh (1161-7/1748-54) and ‘Ālīmghīr (1167-73/1754-69) in return for promises of āwaḥ from the Pandjāb or from the Gangā-Dījamna dī-āb, and of Mughal offices and subventions. In 1171/1758 Raghunāth Rāo moved to Lāhawr against the invading Afghān ruler Ahmad Shāh Durrānī [q.v.]. In Dājumād I-II 1173/January 1760 Ahmad Shāh’s forces expelled the Marathās from Dīlī, provoking a grand military riposte under Sadasāv Rāo, the peshwā’s uncle. In Dājumād I-II July 1761 the Afghāns savagely defeated the Marathās at Pānīpāt, decimating their military leadership.

The death of many of the peshwā’s principal aides and a succession of feeble peshwās after the early death of Madhav Rāo in 1186/1772, dispersed authority among the Marathās to the regional military chiefs, the Gāikwārs of Baroda, the Holkars of Indore, the Śhindhīyās of Gwāhyār and the Bhosāls of Nāgpūr. The military power of the Marathās as an uneasy confederacy was sufficient for Mahādādji Rāo ŚインドHYā (1139-40 to 1208/1772-94) to instal in 1185/1772 the Mughal peshwā Shāh ‘Ālīm in Dīlī as a dependent: it was sufficient for the Marathās to defeat the East India Company’s army at Tālegāon in 1192/1779 and to repulse it from Pūnā in 1195/1781, during the indecisive Anglo-Marathā wars of 1192-96/1778-82; it was sufficient for Tukodi Rāo Holkar and Dawlat Rāo ŚインドHYā to defeat in 1196/1783 the nizâm of Ḍaydarābād’s forces at Khārdā. But Dālāt Rāo ŚインドHYā and Djaswant Rāo Holkar fell to striving for control of the peshwā Bādjī Rāo II (1211-33/1796-1818) and, in desperation, the latter turned to the East India Company. Wellesley’s subsidiary treaty of Bassein (1217/1802) took away the peshwā’s independence. Raghudji Bhōṇāl and Dālāt Rāo ŚインドHYā resorted to arms and in 1218/1803 the latter lost Dīlī, the dī-āb and
The Marathas had hollowed out the Mughal empire, diverting its resources to themselves and distressing its peoples. But by accepting Mughal privileges, grants of revenue and titles, conferred in due form, they had preserved Mughal "sovereignty". Śhāhānā accepted the title of rājā and Mughal farānmān granting cōthū and sārdeimukhī; in 1154/1741 the pēşāvō accepted the nābī·yāhādārī of Māłowā; in 1198/1784 Mahādādjī Rāo Šīndhīlā received the title of wauki·i mīlāk from Śhāh Šimām. Mughal political and military defeats were accompanied by Mughal ideological successes. The Marathas behaved like "standards, kettledrums, trumpets, bugles and reedpipes" as carried by two sardesmukh, in the Mughal provinces of the Deccan (1707-1803 A.D.), in The Indian Economic and Social History Review (April-June 1977), 153-91; The Cambridge economic history of India, i. c. 1200-c.1750, ed. Tapan Raychaudhuri and Irfan Habib, Cambridge 1982, 193-205, 249-60, 471-7; A. Wink, Land and sovereignty in India: agricultural politics and power under the eighteenth-century Mughal Satraps, Cambridge 1986. (P. HARDY)

MARATĪ, the main Ind·ō-Ārjan language [see hind. iii. Languages] spoken by some 40 million in Bombay and the surrounding state of Mahārāšttrā. It differs from the "central" Hindi-Urdu language especially by its retention of the three genders of Old Indo-Aryan languages, and by its pronunciation and vocabulary. The national language of the Marathas, it is also a major medium of thought and communication in the Maratha homelands, and is the language of the Maratha court, the Maratha administrative system, the Maratha military, and the Maratha agricultural and economic system.

ships among the fifteen of the governor of Lahan Bandar. The practice of Firuz Shah's troops marching with 90,000 cavalry under 180 marābit and niżāma-yī hastād ("Afī, Tabīqāt-i Firuz Šahī, Bibl. Ind. text 1443, i.e. two such insignia among the many") was practised with pictures, although Firuz Šah ordered their removal. The practice of using the marābit as battle ensigns continued in Mughal times, as is demonstrated profusely in Mughal painting; but there is no lack of painted (or embroidered) pictures here, including conspicuously the Persian Lion-and-Sun device (Sol in Leo?); see gīr wa kāturistik. This device is known elsewhere in Indian Muslim art, e.g. among the Bahmani buildings at Bidar [q.v.], with no evidence however, to connect it with the marābit.

A special dignity, especially but not exclusively of Mughal times, is the mākhi-marābit, "fish banner", the institution of which has been attributed to Khusrav Parvīz, Sāsānīd emperor of Persia 591-628, from whom it passed to the house of Timūr, especially to the Mughal emperors, as a symbol of sovereignty of the realm. With the names of the "leash" which holds the falcon down and the veiled swords of state do not appear among the Bahmani buildings at Bidar, [q.v.], with no evidence however, to connect it with the marābit.

In regard to the Kur'ānic expression (VIII, 62/60) "... min ribāt al-khayāl ... (horses held in readiness)", the philologist al-Baydawī [q.v.], in his commentary (Anwār al-tanzil, ed. H. L. Fleischer, Leipzig, 1896, i, 372), is hesitant about the exact nature of this term ribāt, proposing to interpret it either as a singular, or as a masdar, or as a plural of ribāt; this last seems most logical, even though the lexicographers do not give a plural for this singular.

1. DJAMIL, born in Damascus in 1894, received his primary and secondary education in various schools in his native city, in particular that of the Lazarist Fathers, and pursued higher studies in law and political sciences in Paris and Switzerland. For this reason, he was residing in Paris when the First World War broke out. His political activities began in 1913 with his involvement in the Arab Congress which was convened in Paris to defend the interests of the Arabs and of which he was elected Secretary-General. In 1919, after making a tour of South America, he returned to Damascus where he was appointed adviser to the Amir Fayyaz. In 1920, he became adviser to the Ministry of the Interior in the Cabinet of Hāshîm al-Atâsî.

Having participated in the Syrian Revolution (1925-6), he escaped to Jaffa in Palestine, but was arrested and handed over to the French Mandatory authorities. He spent two months imprisoned at Arwâd/Ruwâd, a small island situated close to the Syrian coastal city of Tartûs. In 1928, he was sent to Paris to negotiate on behalf of the Constituent Assembly which had recently been instituted in Syria. Elected deputy for the city of Damascus to the Syrian Parliament in 1932, Djamil Mardam was subsequently appointed Minister of Finance. In April 1933 he resigned and became involved again in the politics of resistance.

From January to March 1936, he was placed under house-arrest by the French authorities at Kirk-Kînân, a little town belonging to the sandjak of Alexandretta. On his return to Damascus, he was received with enthusiasm. Subsequently he was a member of the Syrian delegation which travelled to Paris to discuss the term of the Franco-Syrian Treaty. In December 1936 he formed the first Nationalist cabinet and served as Prime Minister until February 1938. During this period, he travelled to Paris and to Geneva to defend the Syrian position in the question of the sandjak of Alexandretta and to continue discussions relating to the Franco-Syrian Treaty. In the early part of the Second World War, he lived in ʿIrāk and in Saudi Arabia, not returning to Damascus until 1941. In 1943, he was again elected deputy for his native city and became respected literary figures. In 1944-5 he was appointed Minister of Foreign Affairs (1943-4) and Minister of National Defence and of the National Economy (1944-5).

After the proclamation of Syrian independence in 1945, Djamil assumed the functions of Minister Plenipotentiary to the Kingdom of Egypt and to the Kingdom of Saudi Arabia. In November 1946, he returned to Damascus and formed a Syrian Cabinet for the second time (from January 1946 to October 1947). In July 1947, he was re-elected deputy for Damascus and was charged for the third time with the task of forming a Syrian Cabinet which lasted from October 1947 to summer 1948. Having resigned, he was recalled to form yet another Cabinet, and he remained at its head until the coup d'état of Colonel Husni al-Za'im (30 March 1949). Djamil Mardam then left Syria and made his way to Egypt, where he stayed until the end of his life. He died in Cairo in 1961, and his remains were conveyed to Damascus and interred in the cemetery of Bāb al-Saghir.

A veteran activist of the Nationalist Bloc (al-Kulta al-wataniyya), a political party linking the eminent Syrian personalities who led Syria to independence, Djamil Mardam was a skilful and far-sighted statesman. Enraptured in his speeches, which were sometimes improvised, he did not lack in eloquence. His principal works are: a diwân (edited after his death by the Arab Academy of Damascus in 1960 in collaboration with his son, the poet ʿAdnān Mardam);
and studies of al-Djahiz, Ibn al-Mukaffa, Ibn al-ʿAmid, al-Šahb and al-Farazdak (published, undated, in Damascus in the ʿArmanat al-adab collection). He also established and published in 1943 the series of the Arab Academy of Damascus the texts of the diwan of Ibn ʿUnayn (1946), ʿAli b. al-Djähn (1949), Ibn Hayyāt (1951) and Ibn al-Khayyāt (1958). Some biographical works were published in Damascus and Beirut after his death; most worthy of mention are ʿAbd al-Majān al-mugannin (the singers), al-ʿArābiyya (the Bedouin women), ʿAyān al-karn al-thālith (the notables of the 13th century A.H.) and Yaʿqūbiyya al-Khalī (his diary).

The poetry of Khalī Mardam comprises the traditional genres and is distinguished by its lyrical tone. In his description of nature and in his love poems, the poet displays extreme sensibility and remarkable finesse. His patriotic poetry is sincere, and his cultivated style is always fluent and clear and reflects the lucidity of his mind.

C. Rikārī MARDANĪSH [see ibn Mardanīsh].

MARDĀWĪDĪ u. Zīvār b. Wardanšah, Abu ʾl-Ḥādīq, founder of the Ziyarīd dynasty [q.v.] in the Caspian regions of Persia. Mardawīdī’s rise as a soldier of fortune in northern Persia is bound up with the decline of direct caliphal control there, seen already in the independent role of the Ṣadīq governors [q.v.] in Adharbaydžan during the end of the 3rd/9th century and in the general upsurge of hitherto submerged indigenous Iranian elements, Daylām, Djīlī and Kurdisch, forming what has been called the “Daylam interlude” of Persian history [see DAYLAM, and also BUWAYHIDS, KAKUYIDS, MUSAFIRIDS, RAWWADIDS, SHADDADIDS, etc.].

On his father’s side, Mardawīdī (literally, “man-assailant”), see Just, Iransche Namenbuch, 1949, sprang from the royal clan of the Djīlīs, and on his mother’s side from the ʿisabāḥṣ of Rūyān. He served the Hasanid ʿAlīʾi rulers of Tabaristān and then the Djīlī condottiere Asfār b. Shīrūya or b. Shīraway (q.v.) until the latter’s tyranny impelled Mardawīdī, with the support of the ruler of Taʿrūm, Muḥammad b. Muʿṣīrī, to rebel against Asfār, killing him in 319/931 and then rapidly capturing Hamadān, Dinawar and Isfahān in western Persia from their caliphal governors. He now clashed with a rival Daylāmī commander, ʿAbdān b. Kākī (q.v.), who had held Tabaristān, Gurgān and western Khurāsān since 318/930. Mardawīdī conquered Tabaristān and attacked ʿAbdān, but since Mākān obtained the backing of the Sāmānid ʿAlī Naṣr b. Ahmad, Mardawīdī agreed to a peace treaty, retaining only Ṣayd as tributary to Naṣr. It was at this time that the three Būyid brothers ʿAlī, Hasan and Ahmad transferred to his service from that of Mākān, and Mardawīdī appointed ʿAlī (the future ʿImād al-Dawla) governor of Kāragār. Since Mardawīdī was able to overrule most of Djīlī almost to Hulwān, the ʿAbbāsid caliphs al-Muqtaḍīr and al-Khārīr were compelled to recognise him as governor there, on condition that Mardawīdī evacuate Isfahān, now governed by his brother (and eventual successor) Wuḥūmī Mardawīdī.

By the end of 322/934, Mardawīdī’s forces had even occupied the province of Ahwāz. But the ambitions attributed to him in the (generally hostile) sources of planning to conquer Bagdād, overthrow the caliphate and proclaim himself ruler of a renewed Persian empire, were frustrated by his murder at Isfahān on 7 January 322/934. He was buried in the Zoroastrian festival or Sādhak, by his Turkish ghulāms, whom he had treated with contempt and harshness. Minorsky has described Mardawīdī as “fantasque et barbaris”, and al-Masʿūdī imputes to him delusions of grandeur and the assumption of a messianic role as the awaited ʿman with yellow-eyes”, who would rule the world. His brother Wuḥūmī Mardawīdī and his descendants kept the Ziyarīds as a force in the Caspian region for a further century, but the main southwards impetus of the Daylamī Völkerwanderung was to be spearheaded by the Būyids.

MARDĪN (written in Arabic as Mardin, in Greek as Μάρδιν, Μάρτιν, in Syriac as Mardē and in modern Turkish as Mardin), a town in what was in mediaeval Islamic times Upper Mesopotamia or al-Djazīra, in the region of Diyar Rabaʾīya [q.v.] lying on a slope rising to an altitude of 3780 ft./1152 m. in lat. 37° 18′ N. and long. 40° 44′ E. The modern town, in southeastern Turkey near the Syrian border, is the chief-locus of the il (formerly vilayet) of the same name.

Position. In Upper Mesopotamia, the watershed between the Tigris and Euphrates is formed by the heights which culminate in Karadja-dagh (3,900 feet) to the south-west of Diyar Bakr. This resultant massif is continued eastwards in the direction of Djazīra Ibn ʿUmar by the limestone chain known in ancient times as Masius and later as Izala (Ἰζάλα). The eastern part of this ridge forms the district of Djābal-Ṭūr or Tūr ʿAbdīn [q.v.], the capital of which is Midyāt. From the southern slopes of the Masius descend numerous watercourses, the majority of which join one another before flowing between the mountains of ʿAbd al-ʿAzīz or Elazīg (in the west) and Tell Kawkab and Sinjiq (in the east); their combined waters form the river Khābūr [q.v.].

Mardin lies near the point where there is an easy pass through the Masius from the lands south of the Tigris (the rivers Gök-su and Shakhqan) to the lands round the sources of the Khābūr (the stream called Zawārak which rises north of Mardin), in other words, Mardin commands the Djurāh Bāniqān road (which then turns towards Djazīra Ibn ʿUmar and Maṣṣīl). On the other side towards the west, several (Ritter, xi, 356, gives three) direct roads connect Mardin via Urfa with Birejik (on the Euphrates); to the south-west, a road runs from Mardin to Raʾs al-ʿAyn and to Harrān. The direct distances are as follows: Mardin-Diyar Bakr 35 miles; Mardin-Darnawin 30 miles; Mardin-Sawur-Midyat 75 miles; Mardin-Birejik 160 miles; Mardin-Adana (by rail) 450 miles.

The advantages of this position at the intersection
of important roads are enhanced by the very strong
natural situation of the town, built on an... to
the plain (ibid., i, 676-9). The people of Mardin
obtained an amnesty on the birth of Ulugh Beg. Salih

The Marwānids and the Sa’djids. It is probable
that Mardin was within the sphere of influence
of the Marwānids, for according to their
teacher (cf. Amedroz, in JRAS [1904], their ancestor
Bağd (d. 380/990) had extended his power over Diyar
Rab’a (Nisibin, Tür ‘Abdin). The Sa’djids ruled
there next. After the defeat of Il-Khanid Salikāghā (q.v.)
the tribe of Abū ‘Alī Tudubby b. Alp Arslan seized for a time all the lands as far as
Nisibin. Under Berk-yaruk, Mardin was given to his
old bard (mughanni).

The Artuks. At this time arose the dynasty
whose fortunes are especially associated with Mardin.
The Artuk grandsons called Yākūtī took by stratagem
the fortress in which he had been imprisoned, but it
was taken from him by his brother Sukmān b. Artuḳ,
who died in 498/1104-5. In 502/1108-9, we find at
Mardin Il-Qāhīr b. Artuḳ (Ibn al-Athīr, x, 269, 321),
whose line ruled there till 811/1408. (On their coins
struck at Mardin in 599, 600, 637, 648, 655, 656,
etc., cf. Ghālib Edhem, Catalogue des monnaies
turcomanes, Constantinople 1894, and S. Lane Poole,
Catalogue of oriental coins in the British Museum,
i, x, index, 1st part.) In 579/1183 Sa‘īd al-Dīn came to Harzam (6 miles
south-west of Mardin) but was unable to take the
town. In 594/1198, al-Malik al-‘Adīl b. Ayūb
seized the outer suburb, which was pillaged, but after
the siege of the town itself was abandoned in the following
year. In 599/1202-3, al-‘Adīl sent against Mardin his
son al-‘Adīr, who appointed governors (shahna) in its
dependencies. The Ayūbids of Aleppo al-Zāhir b. Sa‘īd
al-Dīn offered his good offices, and al-‘Adīl was content
with an indemnity of 150,000 dinars and the
acknowledgement of his suzerainty by the Artuḳids
of Mardin (cf. Abu Ḥarar, Barhebraeus, Mukhtasar,

The Mongols. In 657/1259, the Mongol Hūlagū
took Mardin. In 690/1292-3, Hūlagū’s son产生了
the town itself. In 701/1302, the Bahārīs seized for a time
the town, which they held for two years. In 742/1342,
the town was besieged by the troops of Yaḥyā, son of Hūlagū.
Famine and an epidemic raged in the town. According to Rashīd al-Dīn (ed. Quatremère, 375), Muzaffar killed his father in order to put an end to the sufferings of the inhabitants (Abu Ḥarar and Wassāf give different versions, cf. d’Anslow, iii, 308, 358). Muzaffar was confirmed as lord of Mardin; his descendants also received from the Mongols the insignia of royalty (crown and parasol). In the reign of Sa‘īd b. Mānṣūr (769/1367), whose sister Dunyā Khāṭūn was the wife of the Il-Khan Muhammad Khūdābān, Ibn Battūta (ii, 142-5) visited Mardin; he mentions the fine garments made there from goats’ hair wool (mūnṭīz).

Timūr. The Artuḳids sultan Il-Kāsh (778-809/1376-
1406) was the king of Mardin at the invasion of Timūr
in 796/1394. Malik Il-Kāsh came to pay his homage to the
conqueror, but the citizens attacked those of Timūr’s men who ventured into the town. Malik Il-Kāsh was put
in chains and taken to Sulṭānīyā (Zafar-nāma, i, 663,
671-2). In Ṣawwūl 803/April 1401, Timūr returned
to the attack and the town was taken by storm. Then
the siege of the upper fortress (al-kla’al-dẖābah) was begun, but it was never taken. Timūr was content
with paying heavy taxes and with the payment of the ṣafarī (q.v.), and returned to the plain (ibid., i, 676-9).

The people of Mardin obtained an amnesty on the birth of Ulāb b. Sa‘īd

1. In pre-Ottoman times.

Ancient history. It is noteworthy that in spite of
its remarkable situation, Mardin does not seem to
be mentioned in the cuneiform sources. Ammianus
Marcellinus (xix, 9-4) is the first to mention two
fortresses “Maride and Lorne” between which the
road passed from Amīd (Diyār Bakr) to Nisibīn.
The town had a very strong natural situation, built on an isolated
island; its remarkable situation, Mardin does not seem to
be mentioned in the cuneiform sources. Ammianus

MARDIN
Kara Khan was appointed and established his headquarters at Mardin. Soon the Ottomans occupied Diyar Bakr, and then the town of Mardin, but the Persians, who never lost the fortress, restored the status quo.

(V. MINORSKY*)

2. The Ottoman and modern periods

Finally, in 922/1516, the Persian commander Kara Khan was defeated and slain in battle at Karghandere, the town of the old town of Koč-hišar, 10 miles to the southwest of Mardin. Persian domination in Upper Mesopotamia thus collapsed, but the fortress of Mardin still remained in the hands of Sulaymand Khan, brother of Kara Khan. The siege lasted a year, and not till Mehmed Bıyıklı Pasha [q. v.] arrived from Syria with reinforcements was it stormed and its valiant defenders put to the sword (Iskandar Munshi, Ta'rikh-i 'ulam-din, 24, 32, tr. Savory, i, 72; this Persian source mentions Olang-i Kuruk in place of Koč-hišar) (von Hammer, OESP II, 7367-40, quoting Abu 'l-Fadl, son of Hakim Idris and continuier of his Hājh-i-khiyād).

In the Baghdad campaign of 941/1534, Mardin was created a sanjak and included in the eyalet of Diyarbakr (for the history of the region at this time, see Nejad Goyun, VI. Türbül Mardin sana'yı, Istanbul 1969). Ewliya Celebi, iv, 39, gives Mardin 36 'atamar and 465 timariots; Mardin could put in the field 1,060 armed men (djebi). In the 18th century, Mardin became a dependency of the Pashas of Baghdad; Otter (1737) found at Mardin a voyvoda appointed by Ahmed Pasha. As late as the time of Kinneir (1810), Mardin was the frontier town of the baghdadî of Baghdad and was governed by a mawlesiîm sent from Bagdad.

The reforms of Sultan Mahmûd II were badly received in Upper Mesopotamia. In 1832 (Ainsworth), Mardin rebelled. Power in Mardin had passed to the Kurdish beys. Southgate (1836) speaks of a hereditary (?) family who ruled in Mardin. The two brothers of the "ruling bey" seized power and refused to recognise the authority of the Porte. (It may be asked if these beys were not of the Millî tribe; on their chiefs cf. Buckingham, Travels in Mesopotamia, London 1827, 156.) Rashid Pasha, the pacifier of Kurdistan, besieged the town and blew up the great mosque (Ainsworth). Order was temporarily restored. Considerable works were undertaken to improve the road giving access to the town. Rashid Pasha died in January 1837 (Poujoulat). When the Egyptians under Ibrahim b. Muhammad 4Ali Pasha invaded Syria, their partisan Timawi b. Ayyub of the Millî tribe seized Mardin (and Mardin, The Caliphs' last heritage, 320) but was killed. The defeat of the Ottomans at Nizib (June 1839) brought matters to a head. The Porte entrusted Mardin to Sa'd Allah was appointed in place of his brother, İsa (ibid., i, 676-81), but three years afterwards the latter was pardoned and restored to his fie (ibid., i, 787). When in 803/1400-1 Timur reappeared in Mesopotamia, İsa shut himself up in Mardin. As the siege would have taken some time and supplies were short, Timur did not stop before the town, but ordered Kara Uthman Ak-Koyunlu to besiege Mardin (ibid., ii, 354).

The Ak-Koyunlu. This was the beginning of Ak-Koyunlu interference in Mardin, but Kara Uthman's forces were not yet equal to this task. In 805/1402-3, İsa came of his own accord to Timur and was pardoned (ibid., ii, 51).

For a brief period, the Kara-Koyunlu tried to resist the extension of the power of the Ak-Koyunlu to Mardin. When, after the death of Timur, Kara Yusuf left Egypt to re-enter into possession of his territory he joined İsa and advanced against Kara Uthman. The battle lasted 20 days and was settled by agreement. As soon as Kara Yusuf had left for Adharbaydın, Kara Uthman returned to the attack, defeated İsa near Djasak (there is a Djasat 10 miles to the west of Mardin on the road from Derek) and besieged Mardin, but once more without success (Müneddeddin-bashî, ii, 685). It is not clear what connection these hostilities have with an expedition against Diyar Bakr conducted by Djawsak (there is a Djawsat 10 miles to the west of Mardin on the road from Derek), who appointed his general Ustadjlu Ak-Koyunlu in place of his brother, Clara (ibid., i, 676-81), but three years afterwards the latter was pardoned and restored to his fie (ibid., i, 787). When in 803/1400-1 Timur reappeared in Mesopotamia, İsa shut himself up in Mardin. Paşa of Diyarbakır, but the inhabitants preferred to submit to Ibrahim Paşa of Mawsil, who was opposed to the Tanzimât reforms. This Paşa appointed a governor to Mardin, but the rebels still held the citadel (Ainsworth 1840), and the governor soon perished in a rising.

By the “usilâyet law” of 1287/1870, Mardin became a sandjak of the usilâyet of Diyarbakır. It had 5 kâdâ’s: Mardin, Nişîbin, Dijazîrî, Midyât and Avine. The area of the sandjak was 7,750 square miles and the number of towns and villages 1,062. The sandjak was mostly agricultural. The town of Mardin produced a small quantity of silk, wool and cotton, leather, Shawls, etc., but in spite of the excellence of the work these articles were mainly used for local consumption (Cuinet). By the reforms of 1921, Mardin formed a wilâyêt kâdâ’s, the area of the wilâyêt was 7,750 square miles and the wilâyêt of the sandjak a kâdâ’s: in addition to references given in the article: P. della Valle, Viaggi, Brighton 1843, i, 515 (the traveller’s wife was a native of Mardin); J. Among the religious sects of Mardin, the Shamsiyya would merit a special study. In the time of Niebuhr (1766), there were about a hundred families in the town, and Buckingham (op. cit., 192) and Southgate (1837) also mention them. The Shamsiyya probably represent the last survivors of a local pagan cult. Towards the middle of the 18th century, they were led to declare themselves Jacobite Christians, but only formally (cf. Ritter, Erdkunde, xi, 303-5).

Christianity at Mardin. The district of Mardin has played an exceptionally important part in the development of Eastern Christianity. A brilliant period of the Nestorian church which began in 755 is closely associated with Mardin. Towards the end of the 8th century, numerous monasteries were established around the town by the bishop John of Mardin. In 1171 the Jacobite patriarchate was transferred from Diyar-Bakr (Amid) to Mardin. In 1207 it was moved to Dayr al-Za’farán, an hour’s journey from Mardin, to a place called Minâr (see also: O. Orient, ii, 110, 221, 470; W. Wright, A short history of Syriac literature, Oxford 1891, index). On the position of Christians before 1914, cf. the works of Southgate, Parry, Cuinet, etc.

Monuments. Niebuhr noted many Arabic inscriptions at Mardin. Those of the buildings of the Artukids and the waqfyyas of their principal buildings were studied by ‘Ali Emiri [q. e. in Suppl.], himself a native of the Diyar Bakr region; see his edn. of Kâtîb Ferdi (wrote 944/1537-8), Mardin mulâk-i Artabiyûs ta’irîzî, Istanbul 1331/1931. The citadel of the town was built or rebuilt in Hamdânid times. Numerous mosques were erected by the Artukids beys from the time of Nadim al-Din il-Ghâzî in the early 6th/12th century onwards, including the great mosque, and an Artukid hammâm remains. The construction of the Zindjîyya and Khâtûniyya or Sitt Ridwiyya madrasas, whilst the imposing Kâsîm Paşa madrasa was built in 849/1445 by the Ak-Koyunlu Kâsîm b. Dîhângîr. There are many interesting churches and monasteries in the town and the surrounding countryside, including the Dayr al-Za’farân, where numerous Syrian Christian patriarchs and metropolitans are buried. See A. Gabriel, Voyages archéologiques dans la Turquie orientale, Paris 1940, i, 3-44, ii, pls. a-d, i, XXV; IA, art. Mardin, addition on Eski eserler by T.H.: Metropolit Hanna Dolaponû, Tarîhte Mardin, Il-er-lîmânî fi tarîh Mardin, Istanbul 1972, 128 ff.

In 1207 it was moved to Dayr al-Za’farân, an hour’s journey from Mardin, to a place called Minâr (see also: O. Orient, ii, 110, 221, 470; W. Wright, A short history of Syriac literature, Oxford 1891, index). On the position of
(d. 809/1406-7), disciple of the great astronomer Ibn al-Shatir (d. 777/1375), perhaps at Damascus; he later became muwakkil at Cairo (list of works in Suter, 170, no. 421; Brockelmann, II, 218, S II, 218). A great number of these treatises are on the use of various kinds of astronomical quadrants (dastūr quadrant, almucantar quadrant and sinus quadrant).

W. Horrell and W. Carl Rufus have translated the introduction to the K. al-Durr al-mużaffār fi 'l-samal bi-rub' al-qabāsīyya (An analog computer for solving problems of spherical astronomy, in A.I.H.S., xcvii [1974], 219-42). This is a treatise on the use of a double quadrant, probably an evolved version of a similar instrument invented, in the second half of the 8th/14th century, by the astronomer of Aleppo Taybugha al-Biklimish or by his son 'Ali. All these instruments derived from the yafta shakāsīyya of the Spanish astronomer of the 5th/11th century al-Zarkalluh or from the universal plate of his contemporary 'Ali b. Ḫalaf. King has also edited and translated the introduction to his R. fi 'l-samal bi-rub' al-qabāsīyya, in Scripta mathematica, ser. 2, xiii [1899]). His works on the arithmetic of degrees and minutes, he brought out the periodicity of the sexagesimal fraction (cf. P. Schmazl, ‘Sonnenuhren der mittelalterlichen Araben’, Munich 1929, 34-5, 63, 68, 72, 84). He also compiled a collection of tables, computed for the latitude of Cairo, in order to trace the curves of a solar quadrant (cf. K. Schoy, Sonnenbahnen der spätarabischen Astronomie, in Isis, vi [1924], 332-60).

Medieval geographers usually referred to it rather by its most famous historical site, ‘Ayn Qudatilq, or by the administrative centres to its east (Baysān) and south (Divnīn and Nablus). The term occurs, however, occasionally in texts from late Mamluk times in various forms: ‘Wildat Qudatilq and Marjd Bani ‘Amir’ or as a separate administrative sub-unit (‘amal) of the province of Safad.

Early Ottoman tabris points to a formalisation of the term and its status: as part of the new administrative system, a nahiyya by this name was designated, consisting of 38 villages bordered on the west by the Jordan and the Wady Qelt, in the east, Nazareth in the north, Kabatiyya in the south, and extending towards the Mediterranean. The 74 uninhabited mezra‘as included in it indicate the extent of ruin caused to the population and economy during the late Mamluk period. In order to restore law and prosperity, it was granted to the local Bedouin amirs of Turabay, who continued to rule it during the 16th and 17th centuries. The decline of Ottoman rule in Palestine meant once more a loss of any central control over this area, which became increasingly infested with Bedouins and gradually deserted by its sedentary population. “The whole of this country is in a state of insecurity... at present almost entirely deserted” is a description by Burckardt which was invariably repeated by dozens of travelers who visited the place in the 18th and 19th centuries.

In the second half of the 19th century, most of its land was registered in the name of a few urban ayyān [q.v. families, of which the Christian Sursuks of Beirut had the lion’s share. Jewish philanthropic societies anxious to purchase lands in Palestine conducted elaborate negotiations with the Sursuks during the late 19th century, but actually bought only a small fraction. In the wake of First World War, the Jewish National Fund acquired from these ayyān 250,000 dunams, compensated the 700 tenants living there, and proceeded with similar purchases in later years when this became a major bone of contention between Jews and Arabs. The drainage of the infectious swamps that covered most of the plain, the establishment of Jewish collective settlements and the intensive cultivation that resulted there, turned it into one of the most fertile part of Palestine during the British Mandate. Ever since, both under the British and in the State of Israel, the term Marjd Bani ‘Amir fell into disuse and was replaced by the biblical equivalent, “the valley of Jezreel”.

MARDJ BANI 'AMIR — MARDJ RAHIT

MARDJ DABIK, a plain near Dabiq [q.v.] on the Najr al-Kuwayt in northern Syria. The town of Dabiq, was known to the Assyrians as Dabigu (Sachau, ZA, xii, 47) and is called Δαβικος by the Theophanes (Chron., ed. de Boor, 143, 451 ff.). For convenience in his campaign against the Byzantines, Sulaymān b. 'Abd al-Malik moved the headquarters of the Syrian troops from Dabiya [q.v.] to Dabiq. In 717 with an army under 'Ubayda he set out from Mardj Dabiq for Asia Minor and on his return died there in Safar 99/September-October 717 (al-Masʿūdi, Muruqī, v, 397 – 2151; Chronica minora, ed. de Boor, 143, 451 ff.). Harūn al-Rashid also encamped in 191/807 on this plain (Syr Mardq Dabiq) and composed the differences between the Syrian bishops (Michael Syrus, Chron., ed. Chabot, iii, 19; Barhebreus, Chron. eccles., ed. Abbalsos-Lamy, i, 339). The Mirdasid Mahmūd in Radjāb 457/June 1065 defeated his uncle 'Atiyah on the field of Dabiq and then took Ḥalab (Ibn al-Adlm, Zubda, ed. Dahan, i, 296).

When in 491/1098 the Franks conquered Anṭiakiya, Kurboghā of Mawsil assembled a large army on Mardj Dabiq, with which he laid siege to Anṭiakiya. (Ibn al-Atīb, x, 188; Abu 'l-Fida°, in Rec. hist. or. crois., i, 3, 194; iii, 580). In the spring of 513/1119, Il-Ghazi on his campaign against the Franks crossed the Euphrates at Badddāy (now Badda on Sachau’s map) and Sandjā and advanced via Tell Başir [q.v.] (Ibn al-Adlm, Rec. hist. or. crois. v, 155). On Sayf al-Dīn Tungrī’s campaign against the Tarars to Malatya [q.v.], in which Abu 'l-Fida° of Hamā took part, a halt was made on the way back on the plain of Dabiq from 3 Safār to 2 Rabī‘ I 715/9 May-6 July 1315 (Abu 'l-Fida°, in Rec. hist. or. crois., i, 3).

On 25 Radjāb 922/24 August 1516 was fought at Mardj Dabiq the battle which gave Sellm I a decisive victory by which Syria passed for the next four centuries under Ottoman rule (H. Jansky, Mittel., z. osman. Geschichte, ii [1923-6], 214-25) [see also dabiq and kānsawī al-Qurnārī].

Bibliography: The geographical texts are gathered together in Le Strange, Palestine under the Moslems, 503; cf. R. Dussaud, La topographie de la Syrie antike et médiérale, Paris 1927, 474, to which should be added 'Iziz al-Dīn Ibn Shaddādī, A`ṣal, ed. S. Dahan, tr. A. M. Edle-Terisse, index. The main historical references are: Masʿūdi, Muruqī, index; Yahyā al-Amālī, ed. Kratchkovsky and Vasilev, in Patr., 442; Ibn al-Adlm, ix, 160, x, 188; Ibn al-Adlm, Zubda, ed. S. Dahan, index. (E. HONIGMANN)

MARDJ RAHIT, the name of a plain near Damascus famous in Islamic history on account of the battles which took place there.

‘a mardj is a wide expanse of land with numerous estates where large and small cattle and beasts are raised’. For M. Canard (H’amdandès, 204), a mardj is “the place where agriculture and gardens cease to be found”. Beyond the mardj, the land forms parts of the muhāfaẓa of Damascus. Certain part of the mardj have special names; amongst these, certain ones have played a great rôle in the history of Syria. The Mardj ‘Adhrā‘ or Mardj Rāhit in the north-east, and the Mardj al-Suflat [q.v.] in the south.

The climate of the mardj is identical with that of Damascus; at an elevation of 700 m. above sea level on average, it receives each year between 300 to 400 mm of rain. In February, after the winter rains, the region is swollen with water, and it is more difficult to get around, since the roads and tracks are impassable. In the spring, the springs situated at the foot of the first lines of the Kalamān allow the agglomeration of ‘Adhrā‘ to be irrigated and give enough water to the grass and vegetables to grow in April. Toward mid-May, the Bedouin come to camp and to pasture their flocks on the eastern border of the mardj. In August, the grass has disappeared, and the region is dusty until the first rains of autumn.

According to certain authors, like Muhammad Kurd ‘Alī, Mardj Rāhit is identical with Mardj ‘Aţhrā‘, but for others, Mardj Rāhit is situated near ‘Aţhrā‘, which Yakūt mentions as one of the villages in the vicinity of Damascus. This settlement, which sometimes give its name to the neighbouring mardj, is situated between the modern village of Şânüninya and the Khān al-Kūšayr at the foot of the Hill of the Eagle (Şaniyyat al-‘Ukāb) on the road from Damascus to Hims. When going northwards, one passes by the Kuβbat al-‘Asţār, the Khān ‘Ayāh—identifiable with the Khān al-Dunnī of Lepri (Rec. hist. or. crois., v, 635) and the Khān al-Kušayr. It is to the south-east of this district that Musil fixes the Mardj Rāhit.

In Muharram 13/March-April 634, the general Khālid b. al-Walīd [q.v.] left ‘Irāk in order to take part, with two other Arab contingents, in the conquest of Syria. After their defeat at al-‘Adnāytn [q.v.], the Byzantines fell back on Damascus, where they shut themselves up in Muharram 14/March 635. Khālid b. al-Walīd, having arrived himself at the beginning of spring in the region of Damascus, drove out the Ghassānids who were there and installed himself at Mardj Rāhit, to the north-east of the city, which fact has led some people to think that he had come via Tadmur. Some others think that he took the southern road via Dīmat al-Djandal [q.v.]. Whilst Khālid encamped to the north-east, the general Abu ‘Ubayda b. al-Djārāb [q.v.] deployed his troops to the south-west in order to besiege Damascus, which had to surrender in Radrjāb 14/September 638.

In 64/684 Mardj Rāhit was the scene of a great battle involving an internal struggle of the Arabs. On the death of Mu‘awiyah II b. al-Yazīd [q.v.], a complex crisis ensued over the succession to the caliphate. The community became divided into two, with the Khayyāt, partisans of ‘Abd Allāh b. al-Zubayr [q.v.] on one side, and the Kaysān and supporters of the Hamāmī, ‘a mardj b. al-Hakam [q.v.] on the other. Whilst an assembly
convoked to choose a successor to Muawiya II met at al-Ḍâbiya [q.v.], al-Ḍâbiḥ b. Kays al-Fihīr [q.v.], head of the Kays and supporter of ʿAbd Allâh b. al-Zubayr, who had made him governor of Damascus, concentrated the Kaysi forces at Mardj al-Suffar. Marwân, having become caliph, had as his prime aim the dislodging and breaking-up of the forces of al-Ḍâbih, who had rallied to Ibn al-Zubayr, in turn concentrated the Kaysi forces at Mardj al-Suffar.

In Dhumâd 1529/mid-February 1135, the Atabeg ʿImâd al-Dîn Zangî arrived from Aleppo and went to encamp at Mardj Râḥît between ʿAgdrâʾ and al-Kusayr with the aim of occupying Damascus. Whilst the city organised its defence, the Atabeg left Mardj Râḥît and took up a position to the south at the foot of Akabar al-Kalâbîya on the road to Hawrân [q.v.]. On 7 Dhuʾl-Qaʿda 535/22 June 1141, Zangî appeared again on the outskirts of Damascus in order to cut off food supplies from the city. A sortie by the defenders compelled Zangî to lift the siege and beat a retreat; he then fell back to Mardj Râḥît in order to await his troops. When these last returned, loaded with plunder, he joined them on the road northwards.

A few years later, in spring 544/1148, Nur al-Dîn in turn established his camp at ʿAgdrâʾ in the western part of Mardj Râḥît whilst he was besieging Damascus. Two years later, on 13 Muharram 546/2 May 1151, Nûr al-Dîn’s vanguard set up its tents at ʿAgdrâʾ in Mardj Râḥît, but then the army, endeavouring to keep up the pressure on the city, changed camp several times before falling back at the approach of the Mongol army.

After this victory, Marwân undertook the conquest of the lands where allegiance had been given to ʿAbd Allâh b. al-Zubayr. One result of the battle was to accentuate the rivalry of the Kays and the Kalb. The victorious Kalb and the family of Bahdal [q.v.] acquired a preponderance which the Kays, with the support of Bahlâl and Ghâmî [q.v.], were to contest strongly.

The “encounter at Mardj Râḥît” was much mentioned in poetry of the Marwânid period, in particular by al-Aḍîlî [q.v.], and by Masʿûdî [q.v.] in his Tanbîh, in connection with this Umayyad victory, verses by al-Farazîdî [q.v.]. In Dhuʾl-Qaʿda 334/July 946, the Hamdânid Sayf al-Dawla [q.v.] broke the treaty which he had made with the Ikhshîdîd regent Kâfir [q.v.] and seized Damascus, but the ruler in Cairo sent troops to regain the city. The Hamdânid army was put to flight by the Ikhshîdîd forces near Nâṣira in Dhumâd 1 335/December 946, and retreated towards Damascus; it encamped at Mardj Râḥît and then reached Hîmṣ in Dhumâd 2 335/January 947, whilst Kâfir’s forces reoccupied Damascus. In spring 335/947, Sayf al-Dawla returned to Damascus, but he was beaten at Mardj Râḥît, whose terrain was suitable for warfare, and fled towards Aleppo, pursued by the Ikhshîdîd forces.

In 381/991 the Fâṭimid caliph al-ʿAzîz [q.v.] dismissed Murîn al-Khâdim, the governor of Damascus, and sent as his replacement the Turkish general Mangûtûkân, who took up his position immediately at Mardj Râḥît before making his entry into Damascus.

In Dhumâd i 529/mid-February 1135, the Atabeg ʿImâd al-Dîn Zangî arrived from Aleppo and went to encamp at Mardj Râḥît between ʿAgdrâʾ and al-Kusayr with the aim of occupying Damascus. Whilst the city organised its defence, the Atabeg left Mardj Râḥît and took up a position to the south at the foot of Akabar al-Kalâbîya on the road to Hawrân [q.v.]. On 7 Dhuʾl-Qaʿda 535/22 June 1141, Zangî appeared again on the outskirts of Damascus in order to cut off food supplies from the city. A sortie by the defenders compelled Zangî to lift the siege and beat a retreat; he then fell back to Mardj Râḥît in order to await his troops. When these last returned, loaded with plunder, he joined them on the road northwards.

A few years later, in spring 544/1148, Nur al-Dîn in turn established his camp at ʿAgdrâʾ in the western part of Mardj Râḥît whilst he was besieging Damascus. Two years later, on 13 Muharram 546/2 May 1151, Nûr al-Dîn’s vanguard set up its tents at ʿAgdrâʾ in Mardj Râḥît, but then the army, endeavouring to keep up the pressure on the city, changed camp several times before falling back at the approach of the Mongol army.

After this victory, Marwân undertook the conquest of the lands where allegiance had been given to ʿAbd Allâh b. al-Zubayr. One result of the battle was to accentuate the rivalry of the Kays and the Kalb. The victorious Kalb and the family of Bahdal [q.v.] acquired a preponderance which the Kays, with the support of Bahlâl and Ghâmî [q.v.], were to contest strongly.

The “encounter at Mardj Râḥît” was much mentioned in poetry of the Marwânid period, in particular by al-Aḍîlî [q.v.], and by Masʿûdî [q.v.] in his Tanbîh, in connection with this Umayyad victory, verses by al-Farazîdî [q.v.]. In Dhuʾl-Qaʿda 334/July 946, the Hamdânid Sayf al-Dawla [q.v.] broke the treaty which he had made with the Ikhshîdîd regent Kâfir [q.v.] and seized Damascus, but the ruler in Cairo sent troops to regain the city. The Hamdânid army was put to flight by the Ikhshîdîd forces near Nâṣira in Dhumâd 1 335/December 946, and retreated towards Damascus; it encamped at Mardj Râḥît and then reached Hîmṣ in Dhumâd 2 335/January 947, whilst Kâfir’s forces reoccupied Damascus. In spring 335/947, Sayf al-Dawla returned to Damascus, but he was beaten at Mardj Râḥît, whose terrain was suitable for warfare, and fled towards Aleppo, pursued by the Ikhshîdîd forces.

In 381/991 the Fâṭimid caliph al-ʿAzîz [q.v.] dismissed Murîn al-Khâdim, the governor of Damascus, and sent as his replacement the Turkish general Mangûtûkân, who took up his position immediately at Mardj Râḥît before making his entry into Damascus.

After his victory over the Ghassanids at Mardj Râhit [q. v.], Khiiid b. al-Walid [q. v.] headed southwards and stayed for some time at the Mardj al-Suffar before returning to Bosra [q. v.] by way of Kanawat.

In Ramdân 64/June 684, partisans of the Umayyads met at al-Dibajiba [q. v.] to nominate a successor to Mu'awiyya II [q. v.]. The governor of Damascus, al-Dahhâk b. Kays al-Fihrl [q. v.], the leader of the Zubayrid party, was also invited to the meeting and promised to be there. He left Damascus with a considerable number of troops, but when he came to the Mardj al-Suffar, half-way to al-Dibajiba, he decided to stop there to await the outcome of the meeting, whilst at the same time making his way towards a meeting of the Kays [q. v.] of Syria, who were in rebellion against the Umayyads.

On 3 Dhu 'l-Ka'da 64/June 684, after forty days of deliberation, the Kâb [q. v.] and the Umayyad partisans elected to the caliphate by acclamation Marwan b. al-Hakam [q. v.]. Immediately, he started out for Damascus and arrived at the Mardj al-Suffar in the middle of Dhu' l-Ka'da/the beginning of July. The Kays were unable to hold their position, and in an effort to avoid combat al-Dahhâk set off hastily towards Mardj Râhit, to the north of Damascus. In the battle which followed, the Kays' leader and a large number of his men lost their lives.

In 476/1083, while the Saljuk Tutush [q. v.] was away leading an expedition against the Byzantines in the Antakiya region, Muslim b. Kuraysh, the leader of the Banu 'Ukayl and ruler of Halab [q. v.] decided to besiege Damascus. The troops of Halab, joined by the Banu Numayr [q. v.] and the Banu Shayba[n [q. v.], as well as some Turkmens elements, came to lay siege to the town. The Kays and some Yemenis joined them there. Muslim hoped for aid from Egypt promised by the Fatimids, but he hoped in vain. Tutush was recalled by the townsman of Damascus, but they had defeated their attacker before he could get back. The 'Ukaiyld was betrayed by some of his troops, and leaving the walls of the city, he went to make camp on the Mardj al-Suffar. From there he took the road eastwards across the Hamad and reached the district of Salamiyya.

Al-Ridwan b. Tutush [q. v.], the ruler of Halab, came to besiege Damascus in 489/1096, supported by Sukmân b. Arurk. When he heard that Shams al-

546 MARDJ RAHIT — MARDJ AL-SUFFAR

The Syrian Darb al-Hadidj crosses the Mardj al-Suffar from north to south after going through the Shu'ûrât pass, the Dhabl al-Aswad and the Nahr al-
Mulūk Dukāk was returning to Damascus with his troops, Ridwān raised the siege and fell back to the Mardj al-Suffār, and then went on to pillage the Damascenes in pursuit of Ridwān’s army. As Dukāk began to close in on him, Ridwān broke away, took a northerly route through the Syrian desert and returned to Halab at the end of Dhu‘l-Hijjād 49/ mid-December 1096.

In 11 Muharram 507/28 June 1113, the Salṭūnī troops of the Amir Šarāf al-Dīn Mawdūd of Mawsīl and of the Atabeg Tugh-tātkīn [q. v.] of Damascus won a resounding victory over the Franks at al-Sinānahra, the former winter residence of the caliph Mu‘āwiyah, south of Lake Tiberias. The Franks retreated to some rising ground to the west of Tiberias, whilst the Muslims camped at the foot of the hill. After thirty-six days under siege, depleted by the extreme heat and the lack of provisions, they were obliged to surrender their position on Rabī‘I 5 507/16 April 1113. Heading north through Baysān, they reached the Mardj al-Suffār, where Mawdūd paid off his troops and they dispersed. He then accompanied the Atabeg Tugh-tātkīn to Damascus, arriving there on 21 Rabī‘I 1507/5 September 1113.

At the end of 519/1125, Baldwin II of Jerusalem decided to launch a surprise attack on Damascus in reprisal for a raid during the previous autumn by the Atabeg Tugh-tātkīn. Tugh-tātkīn positioned his troops on the Mardj al-Suffār and advanced as far as Tell al-Shakhab. On 27 Dhu‘l-Hijjād 519/25 January 1126, the two armies confronted each other and fought a little battle which has become of great interest to military historians, as noted by Charles Oman, relying upon the accounts of Fulcher of Chartres and William of Tyre. This was, in fact, the first time that the Turks had used infantry to support their cavalry. The Franks were split into twelve field units each composed of cavalrymen and footsoldiers. Opposed to them was the Muslim army made up of Turkmen cavalrymen supported by young recruits, who were mounted behind the riders and ready to leap down and fight on foot when the enemy was too far for cavalry to support them. The Franks were then dispersed by the Turks, who defeated them, and the Muslim army advanced as far as Diabal Aswad, near Kiswa. Finally, both sides returned home.

In the first half of Shawwāl 525/ the second half of September 1129, the Franks launched a new offensive against Damascus after the massacre of the Bātiniyya [q. v.]. Taqji al-Mulūk Būrī in vain solicited the help of the Fātimid caliph. The Franks encamped at the entrance to the Mardj al-Suffār before Djesr al-Khshah and foraged on the plain between Tell Shakhab and Kiswa. The Muslim army, now enlarged by Turkmen and Bedouins, halted in front of the Franks, who clustered round their tents while one group of them continued foraging in the Hawrān.

After launching several attacks the Franks were at last able to achieve a decisive victory, taking much booty and many prisoners.

During the reigns of Nūr al-Dīn [q. v.] and Salāh al-Dīn [q. v.], we find hardly any mention of the Mardj al-Suffār in contemporary chronicles. The Nāṣir of Ibn Taqhrībīdī makes no mention of any conflict on this plain which the armies used to cross on the way from Cairo to Damascus. In Džumād I 990/ May 1194, the Ayyūbīd sultan of Egypt and Ayyūbīd of Kiswa, on the banks of the Nahr al-A‘wādī on the northern edge of the Mardj al-Suffār, on his way to Damascus to hold discussions with his eldest brother al-Afdal.

During the battle between al-Afdal and al-Afdal in 595/1199, al-Afdal went to encamp on the Mardj al-Suffār several times before resuming the siege of Damascus in Ramadan/July. In the following year (596/1200), it was the turn of al-Malik al-Zāhir to encamp on the Mardj al-Suffār during the rainy season before reaching to Halab.

In 614/1217 al-Afdal [q. v.], the younger brother of Salāh al-Dīn, was hard pressed by the Crusaders, and fell back from Palestine to the north. He travelled through Baysān, crossed the Jordan, passed through 4 Adījn [q. v.], and then turned northwards to follow the track of Rā’s al-Mār in order to get the Mardj al-Suffār. From there he appealed for help to the Ayyūbīd princes, but only al-Mujāhid Shīrkuh of Himṣ came to his camp. While al-Afdal was in the Mardj al-Suffār, his elder son, who was governing Egypt on his behalf, had to confront the Fifth Crusade when it disembarked at Damietta (Dīmayt [q. v.]) on Rabī‘I 6 615/28 May 1218. As soon as al-Afdal had heard that the Franks had set foot on Egyptian soil, he left for Damietta. After a day’s forced march he arrived at ‘Alikīn where he fell ill, shocked by the defeat at Damietta. He died in his camp on Friday, Džumādā II/31 August 1218. He was buried in Damascus, firstly in the citadel and then in his own tomb. Whenever al-Afdal stayed at Damascus during the rose blossom season, he would have his tent pitched in the Mardj al-Suffār, being allergic to the smell of the flowers, and then go back to the city later.

When al-Kāmil died in Rājdāb 653/March 1238, there was trouble among the Ayyūbīd princes, and al-Nāṣir Dāwūd [q. v.] had to leave his post as governor of Damascus. For a time, he took refuge in Kabūb, some 4 km. north of Damascus. But he felt himself threatened there, so sought refuge in the Mardj al-Suffār near the old Umayyad castle of Umm Hākim, from where he fled to Ka‘fāt al-Rabād, the castle of 4 Adījn.

In Shawwāl 702/ end of March or beginning of April 1303, the Mongols of Persia again crossed the Euphrates and marched towards Hamāt [q. v.]. Damascus had been occupied for a short while by the Tartars in 699/1300, and they now went out to wait for the enemy in the Mardj al-Suffār, where they were to be joined by the Mamlūk sultan of Egypt al-Nāṣir Muhammad. The troops of the Ilkhanid Ghazan Maḥmūd [q. v.] took up their position near Shakhab, to the west of the Mardj al-Suffār. They launched their attack on 2 Ramadān 502/21 April 1303 and were repulsed by the Mamlūks, who sustained heavy losses. The amīr 4 Izāz al-Dīn Aydāmūr al-‘Irzī al- Nakib, together with 4 Izāz al-Dīn Ayyub al-Turki al-Zāhirī, the governor of the province of Himṣ, and also the 4 Hadīq [q. v.] Djalāl al-Dīn Akhūsh al-Shāmil, all fell as martyrs on that day.

In 791/1390, the Mardj al-Suffār was the theatre for violent fighting between Muslims. Barkūk, the sultan who had been stripped of his position, left al-Karāk [q. v.] where he had just been released from captivity, in Shawwāl 791/September-October 1390, and he arrived in Mardj al-Suffār on 22 Shawwāl with it, is said, 500 men, some Mamlūks and some Bedouins. He closed with the troops from Damascus near Shakhab on 4 Dhu‘l-Hijjād 50.
October 1389, and went on to lay siege to Damascus. The amirs of the main towns of the north of Syria banded together and came to the help of the city, but on the way, some of them decided to go over to Barkûk. When, at the beginning of Muharram 592/end of December 1389 a warning was given of the approach of Timûr-bughâ Minâtî, Barkûk left Damascus after a violent battle at Bâb-djâbiya, within the eastern area of the city. He fell back towards the Mardîj al-Suffar, passed through Kiswa, and went on to camp at Shakhab. According to Ibn Saqâr, the two armies confronted one another on 17 Muharram/5 January 1390. In this critical situation, Barkûk was looking for cover when he suddenly came face to face with the sultan al-Muṣṭûr Hâdîtî, the caliph of Cairo al-Mutawakkil I, and the great kâdis who, since they had only a feeble escort, quickly surrendered. Hence at that point, the situation was reversed. Minâtî tried three times to release Hâdîtî and his companions but without success, since a violent storm of hail and rain forced the adversaries to abandon their conflict. Though the number of dead on both sides was less than 50, it was nevertheless a battle important for history. While Minâtî sought refuge in Damascus, Barkûk went back to Cairo with the victors, who had joined his cause, and it was restored to the office of sultan in Şafar 792/Feb 1390, whilst al-Mansûr (al-Muzaffar) lzz al-Djm Khattab b. Abd Allah al-Katf al-Busri (?) in the Mardîj al-Suffar, at the north-west of the Ladja, was built between Kiswa and Ghabaghib in the Pilgrimage route, and another, the Khan al-Zayyât, attracted many travellers. The Khan Danun, a very large khan, built 5 km. south of Kiswa on the road to Adhîr-at, was completed in 778/1376 during the reign of Sultan al-Afâr Shâh. One source even mentions a khan at Ghabaghib, north of Sanamayn, on the Pilgrimage route, and another, the Khan al-Zayyât, to the south-west of Kiswa and north-east of Shakhab. In 1941, during the course of hostilities between the Free French forces (supported by the British and Commonwealth troops) and the Vichy troops, there was a battle on the Mardîj al-Suffar, which took place on the very spot where the Byzantines had been forced to yield ground to the Arabs 1300 years before, and this later battle allowed the Allies to enter the Syrian capital.

Thubron, Mirror to Damascus, London 1967, 201. (N. Eliseéff) MARDJÂ-I TAKLID (pl. marâđi-i taklîd, Pers. for Ar. marâđi/marâdhi-i taklîd), title and function of a hierarchical order in the Shi'i jurisconsult (madâjih, faqih) who is to be considered during his lifetime, by virtue of his qualities and his wisdom, a model for reference, for "imitation" or "emulation" — a term employed to an increasing extent by English-speaking authors—by every observant Imâmi Shi'i (with the exception of mughâjis), on all aspects of religious practice and law. As in the case of other institutions, the history of this function (called marâđiyyat-i taklîd or simply marâđiyyat, the term marâđi-i taklîd often being abbreviated as marâđa, pl. marâđi) is to be understood in the context of the protracted doctrinal development of Imâmism. Although the Arab element played and continues to play an important part in this development, historical circumstances prevalent in Iran since the establishment of Imâmî Shi'ism as the state religion under the Safawids (907-1153/1501-1722 [q.v.]) were ultimately responsible for giving to the Imâmî mujtahids a dominant spiritual and temporal influence. Under the Kâdârs (1794-1925 [q.v.]), the Imâmî 'ulamâ' developed or re-interpreted various concepts or points of doctrine (nijâbât, al-îmâmîyyat, marâđiyyat, iâ'ibîyyat) which contributed to the increase of their power. Having undergone an eclipse since the 1920s—a period corresponding with the renaissance of Kurds [q.v.] as a theological centre—the influence of the Imâmî mujtahids and the role of the marâđi-i taklîd were seriously reexamined in the early 1960s as a result of doubts concerning the succession to Ayattulâh al-'Uzza Burûdîjî (d. 1961 [q.v. in Suppl.]), sole marâđi-i taâlîd since 1367/1947. Discussions and debates were held by members, religious and lay, of the Islamic societies (an-nâma-yi islâmî) concerning the method of selection and the composition of the marâđi-i taklîd and the institution of marâđa-iyyat in general, the position of Imâmism with regard to ijtihâd, taklîd and the various problems posed by the
relations between religious and political authorities, the forms and the degrees of power which could be exercised by the mujtahid, etc. It was especially by the publication of these discussions (Bahā'ī, 1341/1962; cf. Lambton (1964), 120), of which the authors, Āyatullāh Ţallākārī (d. 1979) and Mīhār Bāzargān, were arrested and imprisoned following the demonstrations of spring 1963 against the “white revolution” of the Shāh (in which Āyatullāh Khūmānī played a prominent role) that abroad there ensued a wide-ranging debate concerning these questions, of which the salient points are summarised below in their historical context.

1. Discussions of ḥijāḥ and taklīḍ. The evolution of Imāmī attitudes towards ḥijāḥ and taklīḍ may be analysed in the context of what has been called, sometimes retrospectively and anachronistically, the conflict between the Ḍabāhariyya Ḍabāharīyya [q. v. in Suppi.] and the Usūliyya [q. v.]. The eminent scholars of the period of the Būyids [see Būyaynīs] who formulated the Imāmī asal al-fikr (al-Mufīd, d. 431/1042; al-Murtadā, d. 434/1044; Shāhī Ţūfī, d. 460/1067) reject both ḥijāḥ and ḥijāḥ (although al-Murtadā acknowledges a subordinate role for ḥijāḥ: Brunschvig, 210; Arjomand (1984), 53). Even while employing its techniques, the Imāmī ṣulūk (premises) reject the ḥijāḥ of ṣulūk. Shī‘ī Ţūsī describes the traditionists as literaltasts (ṣāhī al-dīn al-maṣūmī, cf. Kazemi Moussavi (1985), 36). Ḍabāharīs and Usūlis appear as opposing factions in the Kītāb al-Nakhd, a anti-Sunnī polemical work written by the fervent Usūlī ʿAbd al-Dājjāl al-Kazwīnī al-Rāzī (d. 565/1170; on this source, see Calmard (1971), Scarcia Amoretti (1981)). In the Ilkhānī period, al-Muhākhir al-Hillī (d. 726/1325) admits that—although rejecting ḥijāḥ—the Imāmīs ‘ulamā‘ have practised ḥijāḥ. His pupil Ibn al-Mutahhar al-‘Allāma al-Hillī (d. 726/1325) formulated the methods of Imāmī ḥijāḥ. According to Mutahharī (Bahā’ī, 42), he was the first Imāmī jurist to use the term ṣulūk to describe one who derives religious precepts (hukm-i ġharshī) on the basis of authentic articles of the ġharshī. According to other opinions, al-Mufīd is said to have been the first Imāmī fakih to practise ḥijāḥ, al-Ṭūsī having given him a definitive formulation (J. M. Hussain, 150, quoting M. Ramay, 88, 92). Like ḥijāḥ, taklīḍ is rejected by the first Imāmī theologues, notably al-Kulaynī (cf. Arjomand (1984), 139) and al-Mufīd (cf. McDermott, 257 ff.). For al-Murtadā, the disciple of al-Mufīd, the taklīḍ of an ālim is permitted (with reservations). He has followed three centuries later by Ibn al-Mutahhar al-Hillī who—while no longer basing the competence of the mujtahids on the entirety of the ġharshī—it is concluded with the mujtahid or both the muftī, i.e. between the jurisconsult and the simple believer (Arjomand (1984), 139 f.; Kazemi Moussavi (1985), 37).

2. Basis and extent of the influence of the Imāmī mujtahids. According to Imāmī tradition, the world cannot exist for a single moment without a ġharshī (“proof” or “guarantee” of God), this function being supplied, after the Prophet, by the Imāmā. During the Minor Occultation (ḡhaybat al-sughra, 250-329/674-941), the fakīhā were able to consult the Twelfth Imām through the intermediacy of his four sīfs or wakīls. On the bases of these premises of the Imām, the fourth wakīl did not appoint a successor (Madelung, (1982), 163 ff.). During the Major Occultation (ḡhaybat al-kubrā, after 329/941), the Imāmī community therefore lived in a state of messianic expectation which compelled it to seek out solutions for its internal and external organisation. Unlike the Sunnis, the Imāmī fakihā generally denied the legitimacy of powers established de facto during the ghayba (the basis and the logic of this attitude have been questioned by Arjomand (1979) who criticises the interpretations of N. R. Keddie, A. K. S. Lambton, H. Algar etc.; cf. Calmard (1982), 253, Calder (1982 A), 3, n. 2).

In the acknowledged absence of an infallible guide or of a just sovereign, or of transmitters of traditions (muhaddithūn), the Imāmī fakihā became scholastics theologues (mutakallimūn) before extending their prerogatives in the capacity of mujtahids (J. Hussain, 150). Their influence increased under the Būyids (who professed Shī‘ism), with whom they felt able to collaborate without sacrificing their loyalty to their Imām (Kohler (1976 A), 532 f.). Numerous Imāmīs, including some ‘ulamā‘, collaborated with Sunnī authorities and occupied senior posts in the service of the Shī‘ī Bābāsīs and the Ṣālṭīs (Calmard (1971), 55 f.). The theologian Naṣīr al-Dīn Tūsī (d. 672/1274) and the Shī‘ī vizier Ibn al-A‘lākīnī promoted, in varying degrees, the accession to power of the Mongol Ilkhāns (Calmard (1975), 145 f.). The Ilkhānī Tūsī (d. 700/1304-17), the most eminent Imāmī ‘ulamā‘ such as Ibn al-Mutahhar al-Hillī and his son Fakhr al-Muhākhirīn (d. 771/1369-70); ibid., 150 f.; Arjomand (1984), 57 f.).

Whether accepting or contesting the powers established de facto, the Imāmī ‘ulamā‘ continued to seek, within the structural limits of the ġharshī, a means of coming to terms with their existence. According to a theory elaborated under the Būyids, during the ghayba certain parts of the ġharshī (such as diqāq or hudūd, legal penalties) are inapplicable (this is the doctrine of the sukūt: cf. Calder (1982 A), 4, quoting the same (1979 A), ch. 3). Points of doctrine concerning especially diqāq and the duties incumbent (such as amr bi ‘l-maṣūf wa-nahy ‘an al-munkar, ordering the good and forbidding the bad) are thoroughly discussed (Arjomand (1984), 61 ff., see also Kohler (1976 B)). But the Imāmīs, especially by al-Murtadā (and adopted by his successors) recommends in judicial and administrative matters “a positive and ethically responsible involvement in the existing political order” (Arjomand (1984), 65; see also Madelung (1980)).

With the rise of Sūfism in the post-Illkhānic period (14th-16th centuries), Shī‘ī themes began to permeate the ťarīkī and the thought of various messianic or millenarian political-religious movements inspired by charismatic chieftains or miracle-workers who seized power (the Sarbādārs, the Muḥāsaʿīs, the Safawīs, etc.). Various Sūfī movements threatened the existence of the existing established powers or compromised with them (Kulārwiyya, Dirāshīyya, Nūrakbāhīyya, Nīmarakāshīyya, Hurūfīyya, etc.). The case of the Shī‘ī order of the Marṣīḥī Sayyids [q. v.] constitutes a separate example of politicisation of Sūfism from which Mahdīsm is absent (for a socio-historical study of these movements, see Calmard (1975), 154 ff.; Arjomand (1984), 66 ff.). Although these socio-political changes were unconnected with the efforts of the ‘ulamā‘ to formulate and practise the Imāmī doctrine, their advice was sometimes solicited (cf. Kazemī Moussavi ( ashdb al-dīn al-maṣūmī, 163 ff.)). During the period of the Būyids (13th-15th centuries), Shī‘ī themes began to permeate the ťarīkī and the thought of various messianic or millenarian political-religious movements inspired by charismatic chieftains or miracle-workers who seized power (the Sarbādārs, the Muḥāsaʿīs, the Safawīs, etc.). Various Sūfī movements threatened the existence of the existing established powers or compromised with them (Kulārwiyya, Dirāshīyya, Nūrakbāhīyya, Nīmarakāshīyya, Hurūfīyya, etc.). The case of the Shī‘ī order of the Marṣīḥī Sayyids [q. v.] constitutes a separate example of politicisation of Sūfism from which Mahdīsm is absent (for a socio-historical study of these movements, see Calmard (1975), 154 ff.; Arjomand (1984), 66 ff.). Although these socio-political changes were unconnected with the efforts of the ‘ulamā‘ to formulate and practise the Imāmī doctrine, their advice was sometimes solicited (cf. Kazemī Moussavi ( ashdb al-dīn al-maṣūmī, 163 ff.)).
It was in this context of Sufism and extremism that there came about the rise of the Safawiyya and the resurgence of Sufism in the mid-17th century, this tendency was to in part restored through which Shaykh C...  

The imposition of Imamism as the state religion by Shah Isma'il (1501-24) was based simultaneously on the ethos of Iranian nationalism and on Shi'ism, state policy led to the ruthless suppression of messianic and Sufi tendencies both outside and inside the Safavid movement and to the persecution of Sunnis. With the appeal to the dogmatic principles of Shi'ism, this situation favoured the establishment and the ascendancy of a hierarchy of Imams who, from the outset, under Shah Ismai'l, were subject to the hostility of Persian religious dignitaries (Glassen, 262; Arjomand (1984), 203 f.). The decisive initiative for the establishment of an Imam hierarchy was taken by Shah Tahmâsp (1524-76). A devout Imam, professing no messianic pretensions, he favoured the installation of Imams 'ulama', 'imported' from the Arab countries (Syria, mainly the Djabal 'Amil, Arab 'Irak and the Persian Gulf region). With their Persân origins, they were then transferred to the hostile camp of the Persian religious dignitaries, from whom they ultimately constituted a 'brotherhood' of religious specialists. The farman through which Shâykh 'Ali al-Karaki 'Âmilî (d. 940/1534), the 'Propagator of Religion' was awarded the titles of Na'ib (deputy) of the Imam and of Khatam al-mudjâhidîn ("seal of the mudjâhidîn") could be considered both as the ratification of the establishment of the Imâm hierarchy in Iran and as the definitive transition from extremism to Imamism (Arjomand (1984), 129 ff., 133 f.).

The principles on which the authority of the Imam 'ulama' rests were redefined under the Safawids. The combination of the concepts of taklid and igîthâd is expressed in various works (Zahâbat al-boyân, by Mullâ Muhammad Amîn b. Muhammad Amîn, d. 983/1576; Zahâbat al-wisâl, by Bahâî al-Dîn 'Âmilî 'Shâykh-i Bahâî", d. 1050/1641; Ma'alîm al-wisâl, by Hasan b. Zayn al-Dîn, d. 1011/1602). Although the "Muhammad al-azamîn" al-Karaki fulminates against the proof of God (i.e. of the Hidden Imam) hadiths, various including a declaration by the Twelfth Imam which describes the 'ulama' as the proof (hadîd) of the proof of God (i.e. of the Hidden Imam) for all the faithful. The 'ulama' are also said to be the heirs of the Prophet (Hairi (1977), 59).

Although formulation of the concept of deputed authority was not pursued systematically in the Safawid period, some of the attributes of the Imams were then transferred to the mudjâhidîs (Arjomand (1984), 143). But the Imam hierarchy lacked an independent "clerical" organisation, and needed political power in order to consolidate its position in relation to the religious dignitaries, especially the sayyids, who also enjoyed a certain mystique and wielded politico-economic influence. Claiming to represent the Hidden Imam, but incapable of assuming the heritage of Safawid extremism, it legitimised the Safawid dynasty only as a purely temporal power (this was the prudent attitude of Muhammad Bâkîr Ma'dîsî [q.v.], d. 1111/1699; cf. ibid., 184). But in spite of its efforts and the support of Shah Tahmâsp, the hierarchy did not succeed in taking over the important religious and administrative function of the sadî (sâdûr), which was increasingly. The mystique of the na'îb 'ulama' did not fuse with that attached to the divinity of the Imam, most likely because of the political instability of the Safawid state. These setbacks were due in part to the fact that in addition to its rivalries with the religious dignitaries, the new Imam hierarchy experienced internal dissensions due to the diversity of its geographical origins and the diverse attitudes of its 'ulama', some of whom directed their attention to worldly matters, while others sought refuge in philosopho-  

After being dormant since the Seldjuk period, the opposition of the Akhbarîs towards the Usûfî school was renewed at the beginning of the 17th century, when Mullâ Muhammad Amîn b. Muhammad Shâhîf Ashtarâbâdî (d. 1036/1626-7), encouraged by his teacher Mirzâ Muhammad b. 'All Ashtarâbâdî (d. 1028/1619), formulated the Akhbarî doctrine in his K-al-Aswâ'îd al-madâniyya, the basis of the neo-Akhbarism which flourished in Iran and in 'Irâk in the 17th and 18th centuries (on Akhbarism, notably on Akhbarism, in this period, see E. Kohlberg, AKBÄRÎYA, in Encyclopaedia Iranica, i, 716-18). Both teacher and pupil belonged to the clique of Persian religious dignitaries. Neo-Akhbarism was embraced by two eminent representatives of gnostic Shi'ism, the elder Ma'dîsî, Muhammad Takî (d. 1070/1660), and Mullâ Muhsin Fâyûl Kâshâî (d. ca. 1091/1680). The shâykh al-Isldm of Ma'dîsî, al-Hurr al-'Âmilî (d. 1120/1708-9) was a fervent propagandist on its behalf. Rejecting the igîthâd and the taklid of anyone who is not infallible (i.e. other than the Imam), Akhbarism reflects the thought of religious dignitaries who prefer philosophy, hermeneutism and mysticism. By extolling reverence for the Imams, it constituted, for the simple believers, an attractive element of Shi'ism which gained in popularity. But with the anti-clerical policies of Shah Abd-Al'azîz (1602-72) on the one hand and the Akhbarîs (1642-66) and the resurgence of Sulûm in the mid-17th century, this tendency was to in part restored
before being rejected by the Imami hierocracy (ibid., 146 ff. and below).

In fact, despite the advance of Aghbārism at the time of the decline and collapse of the Safawids and throughout periods of disorder and instability (Afghan conquest and domination, 1722-9; reign of Nādir Shāh, 1736-47; Afghān-Zand interregnum, until 1763), an Usūlī reaction emerged in the very bosom of the Ḥadhratī family, under Shāh Sulaymān Huṣayn (1694-1722). In an effort to destroy popular devotion to Aghbārī-inspired Imāms, thus regaining it for himself, and to isolate the Šūfi and mystical trend of the élite, as a prelude to attacking it, Muhammad Bākīr Ḥadhratī adopted Usūlīsm. This reversal and this strategy (adopted by other 'ulamā'ī), had decisive consequences for the consolidation of an Imami hierocracy (ibid., 151 ff.; on the Ḥadhratī family and its descendants see Cole (1985), 6 ff.).

During the years 1722-63, neo-Aghbārīsm was dominant in 'Irāk, especially among converts from Usūlīsm coming from Bahrayn or Iran. But it was not long before in Iran and even in 'Irāk, Imāmī 'ulamā'ī were observed moving discreetly from Aghbārism to Usūlīsm. After a difficult period for the 'ulamā', involving a kind of Sumni-Sī'ī ecumenism (1736-51) imposed by the religious policy of Nādir Shāh, the Šī'ī prospect underlining it was that of Karīm Khān moving his centre of government to Shīrāz (1763-79). However, Karīm Khān had little regard for the 'ulamā'ī (Perry, 220 ff.) and the decisive struggles took place at the 'ātābāt (q.v. in Suppl.), the Šī'ī holy places of 'Irāk, where the Aghbārīs exploited alliances with wealthy financiers and even with heads of criminal gangs (the 'īṣīs (q.v.)). The leading figures in this resurgence of Usūlīsm was Akā Sayyid Muhammad Bākīr Wuhād al-Bihbānī (d. 1208/1793-4 (q.v.), considered the "renovator" (muğaddid) of the 13th century of the Ĥidrā or as the founder (muṭassīs) of Imāmī jurisprudence. He was linked both spiritually and genealogically to Muḥammad Bākīr Ḥadhratī. Like other 'ulamā'ī of 'Irāk, he enjoyed the support of the merchant-artisan class (through the intermediary of family alliances). Forcibly imposing a reformulation of the Šī'ī doctrine and refuting Aghbārīsm (K. al-UGhābār wa l-UGbārī), he went so far as to proclaim taṣfīr (excommunication) against the Aghbārīs, sending armed men (his mirahdābos) to harry them, and persecuted the Ni'matulhāshī Sūfī order (Cole (1983), 39 ff.; idem., (1985), 15 ff.). Bihbānī and his followers succeeded in "converting" to Usūlīsm numerous Aghbārīs, some of whom migrated towards Iran (in part on account of political tensions between Iran and the governor 'Umar Pāša concerning Iranian pilgrims, instability and outbreaks of plague). Some 'ulamā'ī of Northern India were then trained in the Usūlī doctrine, which they proceeded to canvass in India (Cole (1985), 21 ff.). The resurgence of Usūlīsm, which developed during the 1760s in the 'ātābātī, was spread in Iran during the 1770s (ibid., 26).

In the final phase of the conflict, the last important representative of the Aghbārī school, the muhaddith Muhammad b. 'Abd al-Nabī al-Nishabhūrī al-Aghbārī, was discredited in the eyes of Fath 'Ali Shāh Kāḏīr (1759-1834), who was at that time sympathetic towards Aghbārīsm, by the Shaykh Da'ī 'far Kāshfī al-Ġhāthī (q.v.) who declared him an infidel. In spite of the protests of the Shāh, he was expelled to 'Irāk and killed by the mob at al-Kāzimīyān in 1233/1818 (Algar (1969), 65 ff.). Although the situation of the Aghbārīs subsequently declined rapidly, some groups survived and aspects or concepts of their doctrinal positions remained, especially in Shaykhism (generally considered as a special branch founded by Shaykh 'Abīd al-Askārī (q.v.), d. 1241/1826; see also Soe Mecn., art. ashirīsī in Encyclopaedia Iranica, i, 674-9). According to Shaykhism, each believer has, in principle, a vocation to tālīfīḥād, the only authority to be followed or imitated (taklīf) being that of the Hidden Imām (Corbin, iv, 252 f.).

4. The institution of mardja'īyyat-i taklīf.

Under the Kadjars, relationships of power with the Imami hierarchy were ambiguous. Since Nādir Shāh, the state had lost the "imperio-papal" character on which Safawid power had been based. Despite the continuation of the "separation-collaboration", Fath 'Ali Shāh sought and obtained confirmation of a certain degree of legitimisation on the part of eminent 'ulamā'ī such as Mīrāz Abū l-Kāsim Kūmi (d. 1233/1817-18), and Akā Sayyid Bihbānī, grandson of Wuhāḥ Bihbānī, who extolled Akā Muḥammad Shāh Kāshfī al-Ġhāthī, vizier of the crown prince 'Abdās Mīrzā, consulted them in connection with the threat of invasion on the eve of the first Irano-Russian conflict (1810-13). Their attitudes and their fatwās which they collected in his Rīsāla-yi dīhāsīya testify to their influence.

The most significant initiative came from Shaykh Da'ī 'far Kāshfī al-Ġhāthī who—in the capacity of naṣīḥat-i 'umma of the mudjāhadīs—authorized Fath 'Ali Shāh to conduct the dīhādī in the name of the Hidden Imām (on the parallels and divergencies between the Rīsāla-yi dīhāsīya and the positions adopted by Shaykh Da'ī 'far, see Lambton (1970 A), 187 ff.; cf. also Kohlberg (1976 B), 82 ff., Calder (1982 A), 6, and Arjomand (1984), 224 f.). This was also a time of re-assessment of the notion of naṣīḥat-i khāṣa. Relations of power, on the basis of the representatives of the Imāms (initially to the four sūfārān), became, with the endorsement of the fukāhā, applicable to the just sovereign. Although the system of taxation had little connection with dīhādī, the subject was discussed at this time, with the mudjāhadīs re-affirming their rights concerning kharājī and especially khāni of which a half, considered to be sām-i Imām ("the Imām's share"), should revert to them after the period of the dīhādī (Arjomand (1984), 229 f.).

The sharing of prerogatives between the 'ulamā'ī and the temporal power is well defined by Da'ī 'far Kāshfī in his Tuhfat al-mulūk. His dualist theory of legitimate authority, recalled by eminent mudjāhadīs under Nāṣir al-Dīn Shāh (1848-96), permitted the 'ulamā'ī to acquire financial autonomy and judicial rights independent of the state (ibid., 225 ff.). But it was especially the reformulation of concepts or doctrines regarding the powers and functions of the mudjāhadīs which led to a structuralisation of their leadership. Long discussions of dīhādī and taklīf culminated in establishing the competence of the mudjāhadīs in guiding the makālīdīs ("imitators") in matters of farā'ī-dīn (i.e. the "branches" derived from 'Imāmī doctrine), the taklīf of a dead mudjāhadī being definitively ruled out. The problem of the application of the ḥudūd during the ḥubūbā continues to be thoroughly debated (ibid., 231 ff.). The faithful
being unable to understand the code” must entrust himself to the instructions of a jurist ...
Sayyid Abu’l-Hasan Musawi IsfahanI (d. at Kazimayn, 1365/1946).
9. Sayyid Aka Husayn b. Muhammad Tabataba5!

considered the latter obliged to supplant the existing mudjtahids in the name of the Hidden Imam (Kazemi Moussavi (1984); idem (1985), 40 ff.). Although making of the most learned juriscon-
dult (which he calls aljanan al-shar’iyya) an independent subject of ImamI fıkh, he does not seem to have considered the latter obliged to supplant the existing power or to function in parallel with it (ibid., 43 ff.).

A new and decisive step was taken, however, with the doctrinal formulation of the concept of a’amliyyat according to which the ImamI community must follow or imitate the precepts of the most learned juriscon-
dult. Its premises may be traced back to the Ilkhanid period (it was then applied to the Imams, but one celebrated mudjihat then bore the title of “Allāmā” al-Hill). Under the Safawids, the term a’lam is clearly applied to the ImamI mudjihat (Hasan b. Zayn al- Dön Amili, Ma’ālim al-usul, quoted by Kazemi Moussavi, ibid.). When, after many cautious and hesitant attitudes, the political-religious hierarchy, having forced the ImamI hierarchy to adopt a hierarchy, the rehabilitation of the concept of a’amliyyat took on its full importance, since the title of marjā’i taklīd was given to the most learned mudjihat. In view of the obscurity surrounding the birth of the concept of marjā’iyya—the initial signs of which may be traced back to the Safavid period—the greatest mudjihat of the past have recently been reinstated, a posteriori, as proper marjā’i taklīd (on the lists, beginning with al-Kulaynī, d. 328/939, generally including sixty-three names and ending with Burūjirdi, see Bagley (1970), 31; Hairi, 62 f.; Fischer, Appx. 2, 252 ff.). This tendency to reassess, in regard to a concept or a doctrine, the great figures of the past is also found in Shi’I mardjavaiyyah in Momen, 206, Table 7).

Having been in a process of gestation since the birth of Usūlisim with Wahīd Bihbahanī, the concept of mardjā’iyya took on precise form under his successors. But neither Bihbahanī nor Ahmad Narakī bore the title of marjā’i taklīd (although Bihbahanī and his immediate successor Sayyid Muhammad Mahdi Tabātabā’ī “Bahr al-ulum”, d. 1212/1797, are currently called marjā’i taklīd in Shi’I biographical works: cf. McChesney, 168). For numerous mudjihat and ordinary worshipers in Iran and ’Irāk, the first to have secured this title and this function was Ḥādījī Shāykh Muhammad Hasan Nadjavf, d. 1266/1849-50, known by the name of Sahib al-Djawahir (i.e. the author of Jawahir al-kulam, “The jewels of scholarship”, the most remarkable post-Safavid work of fıkh (Cole (1983), 40 f.; McEoin (1983), 157). When the ImamI community was risen by the rite of Bābism, Muhammad Hasan Sahib al-Djawahir appointed Shāykh Murtaḍā Ansārī (d. 1281/1864) as his successor. Having offered it to Sa’īd al-Ulāmā Māzandarānī who refused it, Ansārī occupied this function for fourteen years and became the single marjā’i taklīd (marjā’i al-taklīd al- ‘elmī, 234). The need for recourse to authorized Uṣuli studies to a considerable extent and arranged direct payment of contributions (sahm-i ImamI to local centres of education. With him, the institution of mardjā’iyya attained its zenith. He defined its functions in the manual of ritual practice entitled Sirat al-najdī (“The Way of Salvation”). All the ImamI mardjavaiyyahs (Ismā’il, ’Irāk, India, the Caucasus and the Ottoman Empire) sent contributions to him representing considerable sums of money, yet he led a pious, simple and ascetic life. His political attitudes were moderate and he adopted a conciliatory policy towards the Bahās, who treated him with respect. Some of his works became manuals (Fara’id al-usul, al-Mokasib, and many of his pupils became mudjihat and even mudjāz-i taklīd (see Algar (1969), 162 ff.; Hairi, art. Ansārī, in Suppl.; idem (1977), 63; Cole (1983), 40 ff.; Murtaḍā al-Ansārī, list of his works, 131-4). Besides the piety and the wisdom of al-Ansārī, the emergence of a single mudjihat to occupy the supreme function of mardjā’iyya owes much to the disappearance of major ImamI potentates as well as to the decline of Isfahān and the rise of Nadjavf as an ImamI religious centre (art. Ansārī, in Suppl.; Kazemi Moussavi (1985), 45 f.)

Henceforward, it was in the ‘atabāh, especially at Nadjavf, but also at Sāmārā (site of the “catcomb” of the Hidden ImamI), places of residence and instruction of the major marjā’i taklīd, that resistance was organised to Kādjār autocracy and foreign domination. Although not political at the outset, the institution of the marjā’iyyat became, because of the historical circumstances and the respective attitudes of each of the mudjihat. Unlike his predecessor, Ansārī issued no directives concerning his succession. But his definition of the institutional and ideological role of marjā’i taklīd, “supreme model” offered opportunities for the exercise of political prerogatives of which his followers took advance, beginning with his immediate successor Mārzā Muddajdah, and his immediate successor Mārzā Shīrzād (d. 1312/1894), who assumed the responsibility of issuing the fatwā to revoke a concession on Iranian tobacco awarded to a British company (the Excise Affair, fatwā of December 1891; cf. Bibli. in Hairi (1977), 111, n. 8).

The essential characteristic of the institution of mardjā’iyya in the 19th century is that the office was occupied successively by a single marjā’i taklīd. After the death of Mīrza Shīrzād, a number of mudjihat, equally qualified and unable to choose among themselves, were recognised as single marjā’I only after the demise of their colleagues. This tendency towards selection by longevity—working to the disadvantage of numerous highly-qualified mudjihat—was continued until the death of Burūjirdi. Since the beginning of the institution, the list of marjā’i taklīd who exercised the function in a sole capacity for a greater of shorter period of time until their death is summarised as follows:

1. Ḥādījī Shāykh Muhammad Hasan Isfahānī Nadjavf, “Sahib al-Djawahir” (d. at Nadjavf 1266/ 1860).
2. Mārzā Murtaḍā Ansārī (d. at Nadjavf 1281/1864).
3. Mārzā Hasan Shīrzād, mudjihat of the 19th century of the Hidjra (d. at Sāmārā 1312/1895).
5. Ḥudjdjat al-lām Sāyīd Muhammad Kazīm Tabātabā’ī Yazdī (d. at Huwāysh, near Nadjavf, 1337/1919).
6. Mīrza Muhammad Tākī Ḥā’īrī Shīrzād (d. at Karbalā, 1358/1920).
7. Sāyīd Fadl Allāh Isfahānī “Shāykh al-Sharī‘a” (died 1369, surviving his predecessor by only four months).
8. Ḥudjdjat Sāyīd Abu’l-Hasan Mūsāwī Isfahānī (d. at Kazīmīyān, 1365/1946).
9. Sāyīd Akā Husayn b. Muhammad Tabātabā’ī
Have you looked at the text of the document?
in this context that there is taking place the muted struggle over succession to Ayatullah/Imam Kâhumî, the Assembly of Experts (mâjlis-i hâqîqî) has recently (October 1986) criticized the “heir-apparent”, Ayatullah Muntazîrî, Hujjat al-Islâm Râfsandjâni, President of Parliament, now appears to be a possible successor.

5. Qualifications, selection, functions, consultative rôle and titles of the mardja^-i taklîd. Among the conditions necessary for assuming the position of mardja^-i taklîd, six are judged indispensable: maturity (hulîgh), intelligence (sâbî), faith (îmân), justice (sadâlî), being of legitimate birth (tabârat-i mawlid) and of the male sex (îshûkhârât; some women may, under exceptional circumstances, attain the level of iqtîsâd, but they cannot be mardja^-i taklîd). Other conditions are sometimes required: literacy, possession of hearing and sight, and being free, i.e. not a slave (Algar (1969), 8 f., following Burûjirdî, Sangîlî). In addition to these preliminary conditions, the future mardja must be qualified to practice iqtîsâd, receive the i'dâja  from 'ulama of repute and demonstrate his knowledge through his teaching, his sermons, his discussions, his writings, etc. The mardja must be generally acknowledged as the most learned person of his time. However, this title cannot be awarded to him through appointment, selection or election. His authority can only be confirmed by the universal recognition of the Imâmi community (Hairî (1977), 62; it seems however that there was at Kum a kind of “college of cardinals” deciding on the choice of the supreme mardja, the Ayatullah al-'Uzma (see Binder, 134)).

The essential function of the mardja^-i taklîd—also called mukallid—is to guide the community of those who “imitate” his teaching and follow his precepts, in particular concerning the following: application of the rules of the sharî'a (furû'-i din); judicial solutions or legal qualifications (âkâm) in regard to the problems of contemporary life. Imitation or emulation of the mardja has no connection, in principle, with the wujîl-î din which are derived from faith (îmân) and from inner conviction (yakîn). The mukallid established as mardja must pronounce judicial decisions (fatwâs) and write one or more books to guide his mukallids (risâla-yi 'amâliyya, a kind of practical treatise; tawdîh al-masa'il, “explanation of problems” etc.).

For his part, the mukallid has particular duties, especially as regards consultation of the mardja^-i taklîd to whom access is sometimes difficult. The rules of conduct in this respect are explained at length by 'Ansârî who forbids taklîd of a dead mudjâhid and stresses the role of the most learned (a'sâm) mudjâhid in sanctioning worship and ritual. Every mukallid is obliged to consult him, to follow or to “imitate” him, either directly, or in a case of obvious impossibility, through the intermediary of an honest man who has himself witnessed to conduct of the mardja, or through consultation of a book of rules of behaviour written by the latter. In cases of doubt or contradiction, prudence (hiûd) is recommended (on these complicated rules for consultation of the mardja see the analysis in the Sîrat al-mâdâjî of 'Ansârî, in Cole (1983), 42 ff.). These criteria represent only general principles, no specific process having been established for the choice of a mardja (cf. Algar (1969), 10).

With the development of the concept of mardja^-iyat, the economic power enjoyed by the mudjâhid has been concentrated in the hands of one man or a small group of men. Besides the collection and distribution of zakât and kâhumî, the administration of wadrafauce (taken under state control by the Pahlavîs), the mudjâhid have economic and family ties with the merchants who formed the merchant-artisan class of the bazar. The Imâmi 'ulama have also sometimes taken advantage of threats posed to political authority by movements such as the Sûfîs, Shîyähîs, Bahîs, etc. In fact, they have taken the initiative in countering or representing the doctrines and activities of groups seeking to find alternative solutions to the prolonged absence of the Hidden Imâm (wâlî-yi sâfî, 'âsâr-yi hâmûl, ra'sân-râbî’s) (“fourth pillar” of Shîyâ, Bahî, etc.). Despite periods of tension or confrontation, mudjâhid rise to abuses claiming the niyâbî^-î sîmaa have in varying degrees given a certain amount of support to the existing temporal power and have formulated a “variable approach” towards accommodation with an illegal régime established de facto (cf. Calder (1982), 6).

However, remaining generally mistrustful of both spiritual and temporal powers, the mudjâhid claimed for themselves an important role in the political life of Kâdar Iran (see especially Algar (1969)). Although abstaining from political activity, 'Ansârî formulated the notion of mardja^-i taklîd^-î a'âlî which offers the potential for political utilisation (cf. Cole (1983), 46 and below). Some of his successors have strongly resisted foreign economic, cultural and political influences from the West. In the interest of one man or by the political choices of the Kâdârs. They nevertheless held extremely diverse opinions regarding the events of the constitutional revolution of 1905-11 (cf. Lambon (1970 B); Hairî (1976-7), (1977), 55 ff.; Arjomand (1981)). In fact, neither the supporters nor the opponents of the constitution have ever reached the establishment of a government directly controlled by the mudjâhid. It is quite clear that recent events in the Middle East (in particular the seizure of power by a religious in Iran (1979), the Iran-İrâk war (since 1980) and the situation in Lebanon) have added to the difficulties of Shî believers, increasingly preoccupied with political choices and economic problems.

Since the Kâdâr period, the number of titles and functions, civil as well as religious, has increased considerably in Iran. This has given rise to abuses, especially among the Ayatullahîs and the Imâmî 'ulama (cf. Algar (1969), 10 ff.), often used to denote a mardja^-i taklîd. Although the distinctions remain somewhat fluid, current usage seems to describe a mardja^-i taklîd by the epithet Ayatullahî al-'Uzma, the term Ayatullah alone being used to describe a mudjâhid and Hudjdat al-Islâm an aspiring mudjâhid (Momen, 205 f.). According to a recent decree of Kâhumî (September 1984), certain 'ulama who used to call themselves Ayatullahî are henceforward to bear the title of Hudjdat al-Islâm (Momen, 298 f.; the two titles having been inter-changeably used until the creation of the hawad-yi 'ilmîyya of Kûm in the 1920s: Djalâl Matînî, 383 f.).

The question may be asked whether the replacement of the title of Ayatullahî by that of Imâm to designate Kûhumî signifies a change in the religious hierarchy (i.e. the creation of a title superior to that of Ayatullahî al-'Uzma) or is simply an indication of political function (Momen, ibid.; on these problems of Shî titles and their historical precedents, see Djalâl Matînî; on the epithet Imâm for Kûhumî, 603 f.).

MARDJAN (A.), coral. As a rule, red coral (Corallium rubrum) is used as a piece of jewelry; the black and white coral are also mentioned. The Persian term bussadh, often employed as a synonym, strictly speaking is the root of the coral “which grows as a stone in the sea in the same way as a tree on land” (al-Kazwí, Cosmography, i, 212,7), as well as the subsoil to which it is stuck.

With the pearl (la’atu [q. v.] and amber (kahrubá [q. v.]), the coral belongs to the organic products which were however, in our time, mostly associated with the precious stones (dagárakht), i.e. the minerals (ma‘ádatin). The most detailed information on the coral is given by al-Tífáší (see Bibl.), according to which the coral belongs to the mineral kingdom on the one hand because of its petrification (tabádhífar), and to the vegetable one on the other because it grows on the bottom of the sea like a tree with branches and twigs. For the rest, descriptions are taken over from antiquity. According to the Pharaohs, the coral, which grows in the sea, is like a stone, red and round like a carrot (De lapidibus, 38). Pliny (History naturalis, xxxii, 11) repeats a number of older tales on the way coral is won. He describes it as a shrub which, on green stalks, sprouts green, soft berries which petrify, turn red the moment they come out of the water and look like cornelians. According to Aristotle, the coral “is a red-coloured stone which grows in the sea. If put in dung and putrescent material, it is often used chemically” (al-Kazwí, Cosmography, i, 238, 5-6). According to the so-called “Stone-book of Aristotle”, the coral grows in the way branches do, and puts forth thin or thick twigs (Kitáb al-Ahğár, see Bibl.). As opposed to these relatively sober statements, Ps.-Apollonius of Tyana [see BÁDÚZ] enlarges and speculates upon the double vegetable-mineral nature of the coral: “It resembles the waterplants; it originates from fire and earth through the intermediary of water... its body is mineral-like because hot fire and dry earth combine in it with the help of water, but its spirit is vegetable-like because water acts as a mediator... when water, warmed by the sun, absorbs the dryness of the earth, it becomes able, in its turn, to attract the warmth and dryness of the sun, and so the coral grows gradually like a plant; in cold air however it petrifies... its vegetable character is shown by the fact that it grows and branches in proportion to the warmth which the water, mixed with dryness, causes to mount in it as nourishment”; see Sur al-fílajka wa-‘an ʼa-t-fíhka. Buch über das Geheimnis der Schöpfung und der Darstellung der Natur, ed. Ursula Weisser, Leipzíg 1979, 348, 7-351.8; cf. also the shortened translation by the same author in Das “Buch über das Geheimnis der Schöpfung” von Pseudo-Apollonius von Tyana, Berlin-New York 1980, 120 f. (Ars medica, iii, 2). In al-Tífáší, who in general quotes Apollonius extensively, the same passage is found on p. 178 f.

Coral is repeatedly said to be won at Marsá ‘I-Kharáz (~ La Calle in Algeria); from a boat, a wooden cross, weighted with a stone, is sunk on a rope to the bottom of the sea; the boat sails up and down so that the corals get caught at the extremities of the cross, which then is weighed with a jerk. Then emerges a body with a brown crust, branched like a tree. On the markets, these corals are abraded until they shine and show the desired red colour, then are sold in great quantities at a low price. Spain, Sicily and the “Frankish” i.e. probably the European, coast are given as other finding places. From the western Mediterranean, still nowadays the main deposit area of coral, it is shipped to the Orient, the Yemen, India and East Asia. At the finding places, coral is put on the markets in quantities of 10.5 Egyptian raths, costing, in Egypt and ‘Irák, 1,020 dirhams if polished, 1,100 dirhams if unpolished. Otherwise, prices fluctuate greatly according to the market situation (al-Dínáángí, Kitáb al-Íbár, illa maḥásín al-Íbárí, in Wiedemann, Aufsätze, i, 858).
In medicine, coral is used above all in collyria against eye diseases (full description by al-Tamlml, kurdliyun), and mentions the *pliGxgKxvSpov* "stone-tree" as a synonym because of the above-mentioned vegetable-mineral double nature of the coral. It is astringent and mineral double nature of the coral. It is astringent and quickly reduces proliferations, is effective against dysentery. A remedy against blockage of the urinary tracts. The root is whitened with tooth-powder, pounded coral cleanses and burned overnight in an oven and then baked. Mixed with tooth-powder, pounded coral cleanses and whitens the teeth, purifies the interstices between them, strengthens the gums and removes cavities in the roots. Until today, pulverised coral serves in the Orient as an anti-epilepticum and as a remedy against dysentery.

Bartolomeus, Governor-Generalship of Turkestan, some 7 miles/12 km. south of the Sir Darya [q.v.], or Jaxartes, on a small river now called the Margelan Say. It was a place of modest importance in the first Islamic centuries as one of the main towns, with *inter alia* Andidjan [q.v.]. of the district of Farghana known as Lower Nassy, according to al-Mokaddast, 272 (see also Le Strange, *Lands, 479*; Ibn Hawkal* 513-14, 491; al-Sam2nî, Anâb, facs. ed. f. 522a), it had a Friday mosque and markets. Coins were first minted there under the Sâmanîs. Then under the Khârjiânids [see *iEek-klâns*], coins were occasionally minted by members of the eastern branch of the dynasty, e.g. at Marghinân and the neighbouring towns of Aksiskâh and Tûnhâk by the son of Yûsuf Kâdir b. Shâh, Mahmûd Toghrîl Kara Khân (451-67/1059-75) and then by the latter's son 'Umar Toghrîl Tigin (467/1074-5), see G. C. Miles, in *Camb. hist. of Iran*, v, 374, 376; E. von Zambur, Die Münzprägungen des Islams zeitlich und örtlich geordnet, 1, Wiesbaden 1968, 233. It was in the later Karâkhânîd or Kara Khitiy [q.e.] period that the famous Hanafi jurist Burhân al-Dîn al-Marghinânî [see next article] was born.

Marghinânî appears on a Chinese map of the 14th century as Ma-rh-i-nang (Bretschneider, *Levant au Moyen Age*, Suppl. 1895-196, 212, 238, tr. J. Ruska, *The modern history of Soviet Central Asia*, London 1964, 108 ff.). Old Margelan is still a place named Skoblev from 1907 till 1924. When the Bolsheviks began to impose their rule in Russian Central Asia, Margelan became a centre of Basmâfi [q.o.] resistance from January 1918 till 1922 (see G. R. Wheeler, *The modern history of Soviet Central Asia*, London 1964, 108 ff.). Old Margelan is still a place of significance, with nearly 48,000 inhabitants, but has been outrivaled in growth by New Margelan, now called Fergana, the administrative centre of the Fergana oblast of the Uzbek S.S.R., which already in 1951 had a population of ca. 50,000.

celebrated Hidāya. He acquired his knowledge on his travels, then still the usual way of studying in Islam. His principal teachers were 'Abd al-Hājī al-Luknawī, 'Abd al-Mu'min b. Abd al-Nasafī, Ahmad al-Naṣafī (d. 537/1142-3), a pupil of 'Abd al-Mashhād al-Khāṣṣī, 'Abd al-'Azīz b. 'Umar b. Māzā (d. 556/1161-2) and Abū 'Amr b. 'Uthmān b. 'Abd al-Baykānī (d. 552/1157), a pupil of al-Sarakhsi. He studied al-Nawzilī and his son 'Abd al-Karīm b. al-Takhāwī who compiled from the Maraghehī al-Fuṣūl al-Fisāla and other works (H. Kh., no. 9305); 4. two collections of fatwas: Kātib al-Fardhī al-Farīdī (K. Ji'īl-Fardhī, no. 12,943); 3. two commentaries on al-Shaybānī's al-Fuṣūl (K. Kh., no. 1,394; and also with al-Hasan b. 'Uthman b. 'Abd al-Nasafī. He far surpassed his teachers and won recognition in his native town also, where he died in 593/1197. Of his works, the following are known, some surviving in manuscript and others only known from literary references: 1. Naṣīr al-madhābih (Kur., Lakh., in Hādīgī al-Khāṣṣī, no. 13,790, probably wrongly, al-Maddābih). 2. Maṣāḥih al-biddah (Kur., Lakh., K. Kh., no. 9305); 3. K. fi 'l-Farā'id (Kur., Lakh.), also called Farā'id al-'Uthmānī (K. Kh., no. 8,989); 4. two collections of fatwas: K. al-Tadhīn wa 'l-Mazīd (K. Ji'īl-Fardhī, no. 2,467; mss. in Brockelmann) and Muḥammad b. Asād al-Faṭīmī (Lakh.; in K. Ji'īl-Fardhī, no. 11,586; called Muhārūt al-nawzilī, mss. in Brockelmann); 6. Mazīd fi farā'id al-Hanafiyya (K. Kh., no. 11,838; identical with no. 4?); 7. a commentary on al-Shaybānī's al-Dīnārī al-kabīr (K. Kh., ii, 567); 8. his principal work is the legal compendium Kātib al-mubtādī (mss. in Brockelmann), based on al-Kuti's Mukhārīs al-Shaybānī and al-Shaybānī's al-Dīnārī al-saghir. On this work, he himself wrote a large commentary in 8 volumes, the Kātib al-mubtādī. But before he had completed it, he thought it was much too diffuse and decided to write a second commentary, the celebrated Hidāya, which later writers repeatedly edited and annotated. The most important commentaries and synopses are given in the table below.

For the manuscripts and printed texts of these commentaries and synopses and of many supercommentaries and glosses, see Brockelmann, ii, 466-9, S 1, 644-9; a printed edition of the Hidāya appeared in 4 vols., Cairo 1324/1908.

Bibliography:

al-Kurāshī, al-Dīnawī al-muṣīlī, Haydarābād 1332, i, 383, no. 1058; 'Abd al-Hājī al-Luknawī, al-Fauṣī'ī al-baḥṣār, Cairo 1324, 141 ff. (synopsis of the Tabākāt of Kāfāwī); Ibn Kūltūbī, Tādī al-tanāqīm, ed. Flügel, Leipzig 1862, no. 124; Brockelmann, loc. cit., and the literature there given.

His sons and pupils were:

2. 'Imād al-Dīn al-Farghānī, cf. al-Luknawī, 116. 3. 'Umar Naṣīm al-Dīn al-Farghānī. Two works by him are recorded: 1. Faṣī'ī (K. Kh., no. 9305); 2. Naṣīr al-Farā'ī, which he compiled from the Mukhārīs of al-Tahwīl and other works (H. Kh., no. 4,291; mss. in Brockelmann, S 1, 649; cf. al-Kurāshī, i, 394; al-Luknawī, 149).

4. Muḥammad Abū 'l-Fāṭār al-Dīn al-Farghānī, cf. Kutl., 137 and al-Luknawī, 182; in al-Kurāshī, ii, 99, apparently identical with no. 2. 5. A son of no. 2 and grandson of no. 1: Abū 'l-Fāṭār Zā'ūn al-Dīn 'Abd al-Rahīm b. Abī Bakr 'Imād al-Dīn b. Abī Burān al-Dīn al-Farghānī. Two works by him are recorded: 1. Faṣī'ī (K. Kh., no. 9,094; Lakh., 93; Brockelmann, i, 475-6, S 1 656, where the mss. are given.

II. Another family of Hanāfī lawyers goes back to 'Abd al-'Azīz b. 'Abd al-Razzāk b. Naṣīr b. Dīsamīr b. Sulaymān al-Marghimāni, who died in 1477/1084-5 in Marghimān at the age of 68. Of his six sons who attained fame as muftis, we may mention Abū 'l-Hasān Zāhir al-Dīn 'Alī (d. 506/1112-13). His son and pupil was Zāhir al-Dīn al-Hāsān b. Abū al-Maḥāsin. Four works by him are recorded: al-Adīkūr, al-Fadāwī, al-Fauṣā'ī and al-Shurūt, of which only the last survives in manuscript. He was the teacher of the famous Fākhīr al-Dīn Kādīḥīn (d. 592/1196) and of Burān al-Dīn al-Marghimāni [q.v.].

MARHALA (al-), pl. marāšīb, in mediaeval Islamic usage, a stage of travel, normally the distance which a traveller can cover in one day; it was, there-
fore, obviously a variable measurement of length, dependent on the ease or difficulty of the terrain to be crossed. The classical Arabic geographers frequently use the term Al-Mukadadda [q.v.] in one place (206) gives as his norm 6 to 7 farsakhs or parasangs (the farsakh [q.v.] being roughly 6 km.), and has an ingenious orthographical notation for marhāl of less than 6 or more than 7 farsakhs (cf. A. Miquel, La géographie humaine du monde musulman jusqu’au milieu du 11e siècle, Paris-The Hague 1967-80, i, 328 n. 1). But elsewhere (64 n. c.), his sanda works out at an average of 8.6 farsakhs = 50 km. (cf. Miquel, Ahsan at-taqāṣīm ... (La meilleure répartition ...), Damascus 1965, 139 n. 6).

Bibliography: Given in the article. (Ed.)

MĀRĪB, Māʾrīb (myrāb or mārib in the ancient South Arabian inscriptions), in classical antiquity, capital of the Sabaean realm in South-West Arabia, now the chief-city of the mudāfāa of the same name in the Yemeni Arab Republic, lying some 135 km. to the east of Sanʿā. At the last census in 1975, the mudāfāa of Mārib counted 70,000 inhabitants, and the kādaʾ of Mārib—with a population density of 2.4 inhabitants per km.2—13,000 inhabitants, consisting of about 10,000 residents, 2,000 Bedouins, and 1,000 refugees. The ṭaʿaṣ of Mārib counted 15,000 residents, and the place Mārib itself only 292 inhabitants, of whom 270 were men and 22 women, in 48 houses.

The ancient town of Mārib lies in a plain which rises 1,160-1,200 m. above sea level, and which forms the dry delta of the great Adhāna wadi (now pronounced Dhana). The latter drains an extensive area of over 10,000 km.2 in the north-eastern highlands of the Yemen which has an abundant rainfall. Since the Mārib region lies at the fringe of the desert in an arid zone which has an annual rainfall of less than 100 mm., agriculture is only possible by way of irrigation through flooding. The Adhāna wadi carries water twice a year, namely for some two weeks in spring and some six weeks in late summer. Before reaching the oasis of Mārib, this wadi forces its way through a narrow passage between the Balak mountains, and even before the extensive irrigation became possible and the deposition of fertile clay easier, so that conditions for a lush vegetation were created. The Kurʾānic statement in Sūrat Sāḥīb (baldat al-bātūtah: XXXIV,15) is rightly applied to Mārib and its surroundings (al-Hamādānī, al-Hillī, viii, 57, 1). The land of Sāḥīb around Mārib is said to have been one of the most fertile and best irrigated regions of the Yemen (al-Māṣūdī, Murīdī, iii, 366, 9-367,2 = § 1252), with irrigation creating the possibility of three sowings per year (Yākūt, Muʾālīm, iv, 383,10). The actual place of the same name stands inside the ancient urban area on a great hill of ruins which is increased by the debris of ancient cultures. It lies at 15° 26′ N. and 45° 16′ E., about as far from the Red Sea as from the Gulf of Ṣadān. By its favourable position in an oasis between the highland on the one side and the desert on the other, Mārib was predisposed to be the capital of the Sabaean realm, the core of which was formed by the urban district of Sāḥīb with Mārib as its centre. Besides, Mārib was one of the most important halting-places on the ancient caravan-route which linked the regions producing incense with the Mediterranean Sea and which, along a chain of water-places, skirted the fringes of the wadis and the eastern slope of the range of hills between the mountains and the sandy plain of the desert. Arriving from Shibwā in Hadramawt or Timnā in Katabān respectively, two different routes of the incense-road led on from Mārib, one north-westward through the Ḍawf, the other first northward, to unite again before Naǧrān [q.v.], the circumference of six miles. From the shape of its ruins, still perceptible in our days, the town formed an irregular quadrangle, with a maximum extension of 1,430 m. in length and 1,070 m. in breadth. The remains of the ancient town, such as blocks of stone from the city-wall and other constructions as well as fragments of columns, have disappeared almost completely in the last decades through unauthorised diggings. Consequently, since no scientific archaeological excavations have been carried out, for the description of ancient Mārib we still depend upon the information of the European travellers who, in the 19th century, succeeded in penetrating as far as Mārib under adventurous and dangerous circumstances. These were the two Frenchmen Th. J. Arnaud (1843) and J. Halévy (1870), and the Austrian archbishop on his third journey to South Arabia (1888). It is to the latter that we owe the most detailed, accurate and valuable observations.

More recent investigations in the Mārib oasis, carried out by the German Archaeological Institute in Sanʿā, have led to the conclusion that the irrigation sediments in places reach as high as 30 m. At a rate of sedimentation of 1.1 cm. per year, this height would lead to an irrigation period of ca. 2,700 years, i.e., if irrigation ended around the end of the 6th century A.D. or the first part of the 7th century, its beginning would reach back as far as the later period of the third millennium B.C. As for inscriptions, Mārib is mentioned in one of the earliest Sabaean texts which names a ruler, namely in G1 1719 + 1718 + 1718 = MAFRAY-al-Balak-al-Djanubi 1, a rock-inscription in which one of the governors (Yān) of Mārib (myrāb), the governor (kāna) or Yādāʾ 2 (Yādāʾ 2 Yādāʾ) dedicates some stone-hewn basins to a deity. H. von Wissmann, whose investigations into the chronology of ancient Sabaean texts is largely utilised in the following, dates this text to around 755 B.C.; its ducus belongs to the oldest paleographic stage of ancient South Arabian script. But already before this period, Mārib may well have become the capital of the Sabaean realm and the centre of South Arabia. The earliest Sabaean inscription bearing directly upon the town of Mārib is probably the three-line boustrophedon inscription (Ga 46), published by G. Garbini in Oriens Antiquus, xii (1975), 143. Here Yīthʾsamar Bayyin, son of Sumḥulʾaʾli, relates that he has walled in myrāb ḫakke. The Mukarrib of Sabaʾ named here is most probably to be dated to 715 B.C., while Hawkawī, which figures after the name of the town of Mārib, is likely to indicate a part of the town or a section of its fortifications.

Rock-inscriptions dating from the same period or even earlier, and likewise originating from the Mārib region, mention the oasis area of the town. These inscriptions, containing probably the oldest Sabaean texts, inform us in ever recurring formulaic phrases that, during the priesthood of their founder, the god Yāṭaʾr became the protector of the town by means of the rain in high summer and spring. Occasionally the word "Umm al-murūb, i.e., "the maternal of Sabaʾ", or the variant "Adhāna from Yahwir to
Himarum' Gawr indicates the lowland, i.e. the lower course of the wadi Adhana, while the expression 'Adhana from Yahwir to Himarum' probably also describes the area of the Mārib oasis. The name Saba', emerging here as the name of the region in which Mārib was situated, is originally the name of a tribe which in the inscriptions is more than once named together with Mārib. So we find e.g. "the tribe of Saba', the lords of the town of Mārib and its valleys" (ṣb'h/ṣb'ḥ/ṣb'nl/wṣb'nl/wṣb'nl: RES 3910, 2), or "the Sabaens, the inhabitants of the town of Mārib' (ṣb'h/ḥmr/ḥmr/ṣb:mm: Ga 9,3-4 with a reading corrected after F. Bron, in AION, xli [1981], 163). Still in Arabic tradition, Mārib is indicated as Ma'rīb Saba', e.g. al-Hamdani, Sīfa, 26, 22) i.e. the Mārib which lies in Saba'. After Saba', as a byname of 'Abd Shams, had been personified as the alleged ancestor of the Sabaens, and had been inserted into a pedigree by Arab genealogists, Mārib could thus become the town of Saba', that is to say of Saba' b. Yāṣḥūb b. Kāḥṭān, who allegedly founded it or after whom it also occasionally may have been named (see e.g. Yākūṭ, Mašṭakī, ed. F. Wüstenfeld, 239, 17-8; Ibn Sāfīd al-Maghribī, Naḥwāt al-takrīb, 87, 1-2; Ibn al-Mudājwīr, Taḥyīkh al-mustahbiḥ, 199, 1-2).

Line 4 of the fragmentary inscription RES 3943 relates that the ruler constructed both gates of Mārib and surrounded the town with towers, that is bastions of limestone (bk). The ruler, whose name is not retained in the text, may be Yīḥāq'āmar Bāyyīn, son of Sūmu'ālī Yānūf, whose reign can be fixed around 510 B.C. When the Sabaean realm reached the zenith of its power and founded a colony in Abyssinia, there were among the colonists also emigrants from Mārib, as is shown by the indications of their origin ḍm-mḥpb, found in Sabaean inscriptions in Yeha and Melazo.

By its geographical position at the eastern side of the mountains, Mārib was protected only slightly by nature: to the south, plains stretched out as far as Timna', the capital of Katabān, to the east as far as Shabwa, the capital of Hadramawt, and to the north as far as the towns of the Minaean realm. With the rise and strengthening of these other ancient South Arabian realms, fortification of Mārib became an urgent necessity. The town was not only the capital, but had also become the eastern fortress of the land-locked Sabaean realm: its frontier with Katabān was only some 25 km. south of Mārib, and that with the Minaeans only some 40 km. to the north. The improvement of the traffic connections with the Yemeni highlands and their maintenance became all the more urgent through the danger threatening from the south. Inscription CIH 955 + 418, dating from the period of Sūmu'ālī Yānūf around 390 B.C., mentions the construction of a road from Mārib to Sirwāḥ, the second important town of the Sabaean realm, to which refuge could be taken in case of necessity. "The town which is revered" (ḥmrnl/hmrnl) in CIH 375,2, very probably also indicates Mārib. From this inscription, dealing with the construction of the Awām temple, we learn that an attack from Katabān against Saba' could be repelled and that its founder brought peace to Mārib. CIH 37, an inscription of the vassal of Sūmālī in the Yemeni highlands drawn up under king Karīb'īl Wātar at the beginning of the 3rd century B.C., speaks about the Sabaean overlords as kings of Mārib (mlk/mḥpb). The next information about the construction of a wall of Mārib cannot be fitted in accurately, since only the name of the king's father, Yīḥāq'āmar Wātar, has been preserved (RES 4452, CIH 625, G1 1110). The latter, however, cannot be identified with either of the other rulers of this name. On palaeographic grounds, the three frag-
ments belonging to this text can be dated to the middle of the 2nd century B.C. The kings of Saba    repaired the walls of their capital, above all at the time in which danger from the outside was threatening. At that time, the city may still have been the encirclement by Katabān in the south and Maṣīn in the north, which ended only when Saba    conquered the Minean realm in the last quarter of the 2nd century B.C. A monumental inscription, occurring in at least nine homonymous versions and compiled by H. von Wissmann from more than fifty fragments (RES 2669, P. Sa 91 + 92, GL 1103 and many others), reads as follows: ‘‘Yada    il Watar, king of Saba    , son of Sumhūṣ ʿ al īl Yānūf, walled Mārib (mrb) in the order and promise of ‘Aṭṭar and Ḥawbās and Aḥmaḵ’. Unfortunately, the name of this ruler is not known from other inscriptions either, although von Wissmann plausible dated him to around 30 B.C.

Shortly after the latter date, in 25-24 B.C., a Roman army under Aelius Gallus, the proconsul of Egypt, invaded South Arabia, escorted by Naba    , and reached, as Strabo relates, the gates of the Sabaean capital Mārib. Although assaulted during a period of six days, Mārib was able to resist, for the Romans were forced to withdraw because of scarcity of water and disease among their troops. Pliny is certainly not correct in counting Mārib among the towns that were destroyed by the Romans. As Pliny reports, Mārib was used as waste land, and the Romans destroyed the irrigation works of the oasis. After their retreat, the most urgent task of the inhabitants of Mārib may well have been the reconstruction of the dam, the sluices, and the water-distributors. Numerous fragments of Yada    il Watar’s inscription about the construction of the wall were found to have been used again as building material near the northern sluice and its distributor installations. From this, it may be concluded that ashlars were removed from the city-wall, probably destroyed for the greater part, in order to set up the irrigation works anew and to revitalise the oasis of Mārib. Is it not known at what time the city-wall was reconstructed, because no inscriptions about the construction of the wall are known from that period. However, in the middle of the 3rd century A.D., the Romans were forced to withdraw because of scarcity of water and disease among their troops.

The town was still preserved almost entirely. Air photographs of recent years show on the western and northern side only a few ruins of the ancient city-wall with its bastions.

During the decades after the Roman campaign against South Arabia, a period of decline set in for Mārib. The traditional dynasty of the kings of Saba    in Mārib was pressed hard by rulers of four other dynasties rising in the Yemeni highland. All of them assumed also the title of king of Saba    and controlled Mārib alternately. Saba    and Ḥimyar, which had grown strong, were hostile to each other, each claiming the realm of the other. Henceforth, the kings of both states bore the title ‘‘King of Saba    and Dhu Raydān’’, the latter being the royal castle in the Ḥimyātī capital of Zāfār. In the same period, Beduins from the desert steppes also pressed forward from the north and the east into the region of Mārib, and were admitted into the army as contingents. In an inscription, the Beduins of Mārib (Zbl/mrb: CIH 353, 10) are explicitly mentioned among the troops participating in a campaign. But even after South Arabia, toward the end of the 3rd century A.D., had been taken over by Ḥimyar and many other nomads, Mārib was still a strongholding, and may already raise doubts for that very reason. According to the inscriptions, the seat of the Aṯār temple near Marib, the place of ruins of the Aṯār temple is mentioned with special frequency in the inscriptions of the 2nd and 3rd centuries A.D. which originate from the Awām temple near Mārib, the place of ruins now called Muḥrām Bīlīs. They mostly relate that the king who had occupied the castle of Slamh, or happiness is implored for the house of Slāhm and its lords. Slāhm was also the place where indigenous coins were minted on behalf of the Sabaean realm.

Next to Slāhm, al-Hamdānī mentions Ḥaḡar and al-Qaǧīb as other castles of Mārib (Iklīl, viii, 99, 10). From epigraphic tradition, these two are not known so far. The name al-Ḥaḡar, ‘‘the town’’, is unusual for a fortress, and may already raise doubts for that very reason. According to al-Hamdānī (Iklīl, viii, 100, 2), al-Qaǧīb was built by a member of the Dhu Ḥazāf, i.e. of that ancient eponymous kin of the Khālī tribe resident in and around Mārib. According to Yākūt (Muǧam, iv, 104, 6), the castle al-Qaǧīb is said to have been built at the order of king Shurabibī bin Yaḥyīb. Such a ruler, is, however, not attested epigraphically. The name Shurabibī would fit in with Shurābī’s Yāfūr and the father’s name Yaḥyīb with Ḥaǧar Yaḥyīb, with a faulty rendering of the surname Yaḥyīb. However, the defective title of a ‘‘king of Saba    and the Tīḥāma and their Beduins’’ which is also mentioned (Yākūt, Muǧam, iv, 104, 7-8), points to a king of the later period, i.e. rather to Shurabibī’s Yāfūr who reigned in the middle of the 5th century A.D. than to Ḥaǧar Yaḥyīb who lived more than a thousand years before the supposed ‘‘new’’, both in Sabaean and Arabic— an explanation given by al-Hamdānī himself in another place (Iklīl,
The most important temple of ancient Marīb was the sanctuary of Awām of the god Almakah, now called Hāram Bīlīkīs or Mahrām Bīlīkīs. It lay at the eastern edge of Yāsrān, the southern part of the oasis, at the other side of the wadi and at a distance of 3.5 km. south-east of the town. Partly excavated in 1952 by an American expedition under Wendell Phillips, it produced hundreds of dedicatory inscriptions, often quite extensive, which were erected in the entrance hall between the middle of the 1st and the 4th centuries A.D. They are our most important source for the history of that turbulent period. The sanctuary consists of a large, oval construction with a spacious courtyard, surrounded by a high, thick circular wall. The latter is made up of two mantles, an outer one and inner one consisting of ashlars, kept together by lateral walls, the hollow spaces being filled up with debris. The longitudinal axis between the north-western gate and the mausoleum on the opposite side measures about 105 m., while the latitudinal axis, which runs from the inner gate of the rectangular entrance hall, constructed before the circular wall, to the south-west, measures about 75 m. The temple courtyard thus had a surface of ca. 6,000 m². The construction, with its strongly fortified courtyard was only partly prepared for sowing, should not be limited if one takes it for granted that the construction as is suggested by the name of the temple, ʿelem, which very probably means 'place of refuge'. The inscription CIH 957, placed in the wall of the temple, relates that Yādāʾil Dāhirī, son of Sumhūʾalī and Mukarrīb of Sabaʾ, erected the wall of the Awām, the house of Almakah. According to von Wissmann, this ruler is to be dated around 670 B.C. The concept of the entire construction presumably reaches back to this ruler, who is known as a temple builder, even if the works were transformed and changed in later times. Thus the oval enclosing wall, originally no doubt as high as 29 layers of ashlars i.e. 8.70 m. without the frieze, was, since the first quarter of the 4th century B.C., raised by 13 more layers of ashlars (cf. CIH 373). This was done in order to make up for the heap of earth which had accumulated in this precinct of the wall since the time of foundation and to raise the wall to its original height.

The last constructional renovation which is attested epigraphically was undertaken in the second half of the 1st century A.D. under king Karībʾil Watar Yūḥannāʾīn "for the prosperity of the house of Salīh and the town of Marīb" (hgm/msh: CIH 373). It was also in this sanctuary that the tribe of Sabaʾ, i.e. the inhabitants of the town and oasis of Marīb, offered thanks for the fertility granted to their land through the water of wadi Adhāna (cf. e.g. Sh 18); or they went there in a rogation procession when rain held off (cf. Ja 735). Until the period of the beginning of monotheism in the second half of the 4th century A.D., hence during a whole millennium, the Awām temple of the god Almakah was the central place of worship of the Sabaean realm, to which people came in pilgrimage from afar (cf. e.g. RES 4176, 1-2).

Another large, sacred building in the area of the southern oasis, second only to the Awām sanctuary, was the Barʾān temple (mrhm/bmr: CIH 400, 2), likewise dedicated to the god Almakah. Nowadays it is called al-Amāʿīlīd, "the columns", because five pillars with capitals and a pillar stump still rise up from the débris of the construction so far unexcavated. With relation between the mid-2nd and mid-3rd centuries A.D. CIH 623, two identical rock-inscriptions are occasionally also called 'arsh Bīlīkīs "throne of Bīlīkīs", a designation which is however also used for a colon-
of Yasran, i.e. by cutting through the contiguous limestone rock of the Djabal Balak al-Awsat he has built the southern sluice, so that the northern half of the Marib oasis, it can be concluded from the construction of the southern sluice that the great dam and the northern sluice too were built by the same Mukarrir, since the entire complex can only have been executed as a whole, since the hewing out of the storage canal Rahabum at the southern sluice presupposes the construction of the dam which held back the waters of the wadi. This dam, which lay about 8 km. west-south-west of ancient Marib, consisted of sediments heaped on the rocky, solid stratum. At the surface, it was covered with small, unhewn stones, strongly joined by mortar; it was at least 10 m. high, at the bottom at least 60 m. broad and about 620 m. long. The dam served less to create a storage reservoir than to raise the water, brought down twice a year by the sayf, to a level from which the fields could be irrigated. So it was in fact a diverting dam, blocking the total breadth of the wadi, one which made it possible to irrigate regularly a defined acreage. The northern sluice too may well have been constructed at the same period in an analogous way. From the later Sabaean period, several dam-bursts have been recorded epigraphically. From text RES 4775, until today to be found on a wall near the northern sluice, a mark slanting at an angle of 20 m. more than the principal distributor at the western edge of the northern oasis, from where the mass of water, through 15 sluice-like openings and 121 secondary distributors, was directed to the canal systems of the various arrays built on the fields which had to be irrigated. The complicated irrigation works of the northern oasis, with its constructions of water-distributors and remains of the network of canals, is partly still discernible. The next ruler who ordered the canal of the southern sluice to be hewn further through the rock of the Djabal Balak al-Awsat was Yitha°amar Bayyin, the son of Sumhu°a°ali Yanuf. From him has also been preserved a boustrophedon inscription of two lines, recorded in two versions on the smoothed contiguous rock of the walls of the southern sluice, remains of 523 and 525 = CIH 622. This inscription related that Yitha°amar Bayyin hewed out the opening in the rock for the storage reservoir Hababid of the main canal of Yasran. The incision of the southern sluice, which has been hewn out of the rock, divides after some 30 m. towards the east in a northern and a southern branch. The northern one, which lies closer to the wadi, belonged to the Rahabum basin, as is recorded in the two versions of rock inscription CIH 623, mounted there. Consequently, the southern branch could be the Hababid basin, although the two versions of inscription CIH 622 which relate its construction have been chiselled on both sides of the entrance to the sluice on the west side. Since Yitha°amar Bayyin, through this main canal which branched off to the right, enlarged the construction of the southern sluice, a still greater acreage could probably be irrigated through the distributing constructions in the Yasran oasis which were fed by this canal. Line 5 of the fragmentary, ancient Sabaean inscription RES 3943, preserved without the name of a ruler, mentions the hewing out of the storage reservoir Hababid (the text wrongly has b d instead of b b d). Hence it may be concluded that the text was set up under Yitha°amar Bayyin. Besides, the enlargement of the storage reservoir Rahabum and the building of further irrigation works in Yasran and Abyan are also recorded. The constructions of the southern sluice have been best preserved.
dam is the rock-inscription Ja 547 which is certainly to be united with Ja 545, the latter being dated in the year 668 of the Himyarite era (= 553 A.D.). The authors of the text were again engaged, under great exertion, in removing the mud deposits at the dam. Researches by U. Brunner on the discordances which occur in the sediments of the storage area have revealed that another dam-burst must have taken place some 35 years after the one described in inscriptions CHI 541. It was again repaired. The final catastrophe apparently occurred only at the beginning of the 7th century. It is the event which is mentioned in the Kūrān as the dam-flood (sayl al-ʿarim). Sūra XXXIV, (16), i.e. the flood which broke the dam (Sabaean ʿm). Afterwards, the Mārib oasis became desolate and, in the words of the Kūrān, produced only brier fruits, tamarisks and a few Zizyphus trees (loc. cit.). Only small fields which lie at the edge of the wadi bed, and to which the high water can be directed through diverting dams, are cultivated. Al-Hamdānī already relates how in Mārib the pieces of land are irrigated from the sayl, and taḥaf and ḍukhn are sown there until finally, the harvest is reaped and ploughing prepares the soil for the next sowing (ṣāfa, 199, 19-22). In more recent times, more and more extensive areas have been added, especially in the section lying to the south of the Adhāna wadi; they are irrigated by subsoil water which has, however, to be brought up by pumps from as deep as 45-50 m.

Considering that, after a dam-burst, the sediments deposited by the floods had to be cleared away each time until the original level of the wadi was reached, it follows that each rebuilding of the dam became more difficult. Since the level of the oasis meanwhile had risen further, the dam had to be built higher each time. The mud which was carried along with the floods, and which raised the fields and was precipitated on to the dam and the storage basins, must have played an essential role in the dam construction being completely abandoned in the end.

Air photographs of the neighbourhood of Mārib show so called “dotted fields” standing out prominently. These accumulations of sediment clods lying in the ancient fields of the oasis, are relics of ancient tree and shrub plantations, widely spread, especially in the southern oasis. This observation is confirmed by the inscriptions. Text CHI 375 enumerates by name 13 palm-groves in the area of the Yarsān oasis alone, which is irrigated by the water of the Adhāna wadi by means of sluices and canals conducting the waters of the dam. Al-Hamdānī, too, relates that, during a visit to the Mārib oasis, he saw a sunken ardā shrub, at whose root was a black palm trunk. One of his companions was of the opinion that this was a remnant of palms from pre-Islamic times (ikīl, viii, 96, 2-4). In his time, date-palms remained only in Ruhābā (ṣīfa, 102, 21), the region lying beyond the dam on both sides of the Adhāna wadi.

The reasons which led to the neglect of the dam constructions and to their being left continuously to decay, and which finally reached a point so that they could not be renewed any more, may also have had a political and social background. The constant disputes between the individual principalities and dynasties of ancient South Arabia resulted in the loss of a strong central power and the disintegration of a well-organised society. This led to the growing influence of foreign powers, namely of Ethiopia and later of Sāsānid Persia. Moreover, the intensified penetration of North Arabian tribes brought about an increasing backwardness, which is attested by a considerable recession to agriculture and irrigation. A decrease of the popula-

564 MARIB
tion as a whole was probably connected with this. The Arab authors of the early Islamic period hold the same view. The fact that the last dam-burst is mentioned in the Kūrān as sayl al-ʿarim, the signification of this event for the town of Mārib and its surroundings, has caused Islamic tradition to deal in detail with this catastrophe and its consequences. Occasionally, information about the dam and the oasis themselves crept in, even if distorted and exaggerated. According to the Arab authors, too, events which had happened before the dam-burst, and the bursting of the dam itself, led to the Mārib oasis being abandoned by its inhabitants. The migration of entire South Arabian tribes towards the north is to be connected with it. Thus etc. the Banāb ḍāssān and the Azaq are said to have come from there and to have spread over various regions of the Arabian peninsula. The Banāb ḍāssān are even said to have established their era after the year of the dam-burst (ʾām al-ṣayl) (al-Masʿūdī, Tanbih, ed. de Goeje, Leiden 1894, 202, 14-15). This would admittedly mean that the sayl al-ʿarim event is to be dated much earlier than it in fact took place.

Through late Sabaean inscriptions we meanwhile know, however, that dating this last catastrophe in the 3rd, 2nd or 1st centuries A.D., or even earlier, as assumed by many Muslim authors and also some European scholars of the 18th and 19th centuries, is untenable. The Arab author who comes closest to the real date is Yakūṭ, who relates that the bursting of the dam took place in the period of the sovereignty of the Abyssinians (Muṣay’īm, iv, 383, 20). Only al-Masʿūdī dares to attribute the bursting to natural causes, when he writes that the water gradually undermined the dam constructions built by man (Murūdī, iii, 370, 9-371, 2 = § 1254). To be sure, it cannot be completely excluded that traditions about a catastrophic bursting of the dam of a much earlier date have been creeping into the legends which attached themselves to the sayl al-ʿarim. The most current version of the legend of the migration from the Mārib oasis is the following: a ruler of Mārib, ʿAmr b. ʿAmir of the Azd, nicknamed al-Muzayyikāya, was married to Zarfā, who had visions and dreams which she was also able to interpret. One day she saw Amr, her husband, about to be trampled underfoot when he saw how a giant rat with iron teeth and big claws, called Khuld, was about to trundle away boulders and to undermine the dam. Thus warned and informed about the coming catastrophe of the bursting of the dam, ʿAmr decided to sell his possessions at the lower end of the dam and to leave the country. However, in order to hide the real motive, he simulated a brawl with his son during which the latter slapped his face openly. This feigned defamation of the family presented him with the pretext of giving up his possessions, which could then be sold satisfactorily. After that, ʿAmr, with numerous followers, migrated from the Mārib oasis still in good time before the bursting of the dam set in (according to other versions, he only left after the event). His descendants spread over extensive guits of Arabia. After ʿAmr al-Muzayyikāya had left, the people of Mārib agreed upon a new king, who is, however, said not to have been designated as tubbaʾ. (For examples of detailed and embellished versions of this legend, see e.g. Wahb b. Munabbih, Kitāb al-Tiqdān, Şanā’ 1979, 273-97; al-Masʿūdī, Murūdī, iii, 378, 2-392, 7 = §§ 1264-76; Yakūṭ, Muṣay’īm, iv, 383, 20-385, 10; Ibn Saʿīd al-Maghribī, Nāgawat al-tarab, 114, 13-117, 10; al-Khazradjī, al-Uḏād al-awṣ̣āya, 9, 1-15; 3 versions of this incident are based on a version recorded by Ibn al-Mudājjīd, Tāʾrikh al-Mustaʿībīr, 595, 7-197.
15, where the dam, as in al-Hamdānī, Ṣīfa 110, 26, is called sadīd al-mazā'īma “the dam of the two closely joining places”.

The name of the ancient Sabaean capital has been transmitted in two forms in the ancient South Arabian inscriptions. The early inscriptions up to the 2nd century A.D., have always the form mryb; after that time, the form mrb appears. Two texts from the 2nd century A.D. still have both forms side by side. Inscriptions Fa 71 has mrb in lines 17-18, but mrb in line 6, while inscription Jā 576 has mrb in line 3, but mrb in line 2. The place-name myyāb may originally have been a nomen loci of a root ryyb of unknown meaning, which possibly has a parallel in Hebrew Maribā, a spring in the desert (Exodus, xviii, 7, and repeatedly), in as much as one does not admit the meaning “quarrel”, given in the Old Testament. For the pronunciation of myyāb as Maryab, reference can be made to the rendering by ancient authors: Māqāzha as Mrāzāwā in Strabo, xvi, 4, 768, after Erasthenes, and ibid., xvi, 4, 778, after Arimatōr, as well as Māqāzān, ibid., xvi, 4, 782, distorted either from Māqāzā or from Māqāzāx or Sāzā, and also the regia tamen omnium Mareliabata, mostly misspelled from Marciaba, in Pliny, Naturalis historia, vi, 32, 155. The pronunciation Marib may be inferred from the renderings Maribba in Pliny, Naturalis historia, vi, 32, 157, Mariba, ibid., vi, 32, 160, and Mariba or, in the Greek version, Māqāzx in the Monumentum Ansyrum = Res gestae Asiae Augustae, August, 25, 6. In his Introduction to Geography, Book vi, ch. 6, Ptolemy has the name Māqāzx μητρόπολις, but in his Canon of the noteworthy cities he has Māqāzha. A transition from a form Marib to Mārib or Mārīb is easier to explain than a change from Maryab to Marib. When describing Marib, al-Hamdānī too (Ḳīlā, vii, 199, 1-3) still gives both names Marib and Mārib side by side, but explains them as being the names of two Arabian tribes, on the basis of a line of poetry which he transmits. In one of the fragments of the Ethiopic inscriptions from Mārib, the name of the town occurs as Marāb (DJE vi, 102, 19). For al-Hamdānī, in the first line of the inscription, having been raised too high to be reached by the floods of the saḥ, had become denuded (Ḳīlā, vii, 95, 7-96, 6). But the distributing constructions, which led the water from the reservoirs of the dam to the fields, were still standing there as if their builders had finished their work only the day before (Ḳīlā, viii, 96, 6-7). Moreover, even of the dam itself a piece had survived on the left-hand side; at the lower part it is said to have been 15 ells wide (Ḳīlā, viii, 96, 10-97, 1). This, however, was probably not the former lowest part of the dam. According to the words of al-Hamdānī, the dam was based on the foundation-wall which, between the side-walls, was joined to the reservoirs with mighty ashlars hewn from the rocks, and to the base by molten lead (Ḳīlā, viii, 99, 1-2). The building of such works as the dam constructions was therefore ascribed to the legendary Lakāmān b. Ṭūrā, according to some (Ḳīlā, viii, 99, 3), al-Masʿūdī, Marāb, iii, 366, 3-4 = § 125); al-Bakīrī, Marṣaba, 1171, 2; Yākūt, Maṣṣaba, iv, 383, 1), while others were of the opinion that they had been erected by Ḥimyār b. Saḥā and al-Azd b. al-Ghawhā, a descendant of Kāḥān (Ḳīlā, viii, 99, 3 ff.). According to other traditions, the dam was begun by Yāḥṣūb b. Yārūf and finished by Ṣābīb Ḫūlī Kārnāya al-Ḥimyārī (Wāḥb b. Munābīsh, Kitāb al-Tūghān, 58, 15; d-ʿUkud al-Hijāz, 273, 19-274, 8), or built by ʾAbd Šams Sabaʿa b. Yāḥṣūb (Yākūt, Maṣṣaba, iv, 382, 22-3), who are said to have directed there 70 rivers and floods from far away (Ibn Ṣaḥā al-Maghrībi, Nashwāt al-tarab, 86, 16-7). It is also said that the dam was begun by ʾAbd Šams, continued by Ḥimyār and finished by Šābīb (al-Khazraḏī, al-ʿUkūd al-lu-luʿbysa, 7, 6-9). The building of the Marib dam is occasionally also ascribed to Būkūs (q.v.), the legendary queen of Sabaʿa (al-Dāmirī, Ḥayāt al-baytūrān, Cairo 1309/1892, i, 270, 31), or she is said to have repaired it (see R.G. Stiegenr, Die Königin von Sabaʿ in ihrem Namen, 75).

Finally, the irrigation works are said to have been built by a king, not mentioned by name, after he had consulted wise men (Maṣʿūdī, Marāb, iii, 369, 3-370, 7 = § 1254). As al-Hamdānī rightly observed, the saḥ of the ʿAḥāna wādī collected its water from many places and numerous sites of the Yemen (Ḳīlā, viii, 97, 10; detailed information in Ṣīfa, 80, 12-23). Other authors even relate that the plantations in the Marīb oasis were so extensive that a horseman needed more than a month to cross them and that, in doing so, he found himself continuously in the shadow of the trees (al-Masʿūdī, Marāb, iii, 367, 2-5 = § 1252; Ibn Ṣaḥā al-Maghrībi, Nashwāt al-tarab, 114, 20-115, 1; it is even said that it took him six months (al-Khazraḏī, al-ʿUkūd al-lu-luʿbysa, 8,9-10). If a woman or servant

MĀRĪB 565
walked under the trees of the two gardens with a basket on the head, it used to fill of itself with ... Araber" vom Stamme Qahtdn. Aus dem Kitdb Naswat at-tarab fitarbih gdhiliyyat al-^Arab, ed. M. Kropp, Frankfurt 1982;

A poor Sharif was in power, who, apart from Marib, (Beschreibung von Arabien, ent town in the Djawf amdm, 243-4). Around 1050/1640, Marib came under the sovereignty of Sharif Husayn b. Muhammad b. Abyad b. Hammâl already mentioned, it is borne to Abyad b. Hammâl when the latter came to him with a delegation and requested it as such (Abû Dâwûd, Sunan, ch. Imâra, bâb 36; al-Tirmâghi, Sunan, ch. Akkâm, bâb 39). What is meant here is the salt-mine at the Qabâl Sâfîr, which can be reached from Marib with camels in three days' journey along a waterless road. In earlier times, the Banu 'Abîda supplied from there almost the entire Yemeni highlands with salt. Since the salt traffic passes through Marib, this commodity is called in the Yemeni Mârîb salt (milh Mâribî; Yâhîyim Hâbhâghî, Ru'^yat al-Yaman, 116, 16) until today. Among the products of the Mârib region, al-Hamdanî calls special attention to the sesame, whose oil is quite bright, pure and of good quality (Sîfa, 199, 9-10). Until today it is considered as the best in all Yemen. In later Islamic times the place Mârib which already al-Mukaddasî (Alasân al-takâmîsîn, 89, 2) quotes only as kayat Mârib, did not play a rôle of importance. Its name emerges sporadically in Yemeni chronicles, mostly in combination with warlike events, as when troops of the Imam moved from Sa'da through the Djâwf to Mârib, or opponents of the Imam settled there. In 418/1027 there appeared in Na'ârî an attempt to use Mârib as a base of operations. Once again among the wonders of the Yemen because of its extraordinary abundance of water, Marib was wanted for the purpose of obtaining the salt of Marib as a fief by means of which the new foundation could be sustained (Abû Dâwûd, Sunan, iv, 365-9 = Ibn Rusta, al-Tanbih wa 'l-ilmîr; ahmîr Allîh al-Wazîr, and the last amîr of the reigning Ahsânîm, Muhammad b. 'Abd al-Rahmân, was deposed.

In cultural and scientific life in Islamic times, Mârib was hardly of any significance either. The nisba al-Mâribi occurs only very sporadically. Apart from Abyad b. Hammâl already mentioned, it is borne only by an informant who transmitted the request to leave the Mârib salt as a fief, namely Yâhîya b. Kays al-Mâribî (al-Dhâhâbî, Mu$tâbadî, ed. de Jong, Leiden 1881, 465, 5; according to this source, al-Mâribî should be read instead of al-Mâzinî in al-Balêdhûrî, Futûh, 73, 7). Other scholars, mostly tradi- tionists, who bore the nisba al-Mâribî in the early Islamic period, are mentioned by Yâkût (Muqâm, iv, 398, 9-11). For the later time, 'Abd Allâh al-Hibîshî, Ma'sâdî al-fîk al-'Arâbî al-islami fi 'l-Yaman, San'â' 1978, 316, was able to name only one bearer of the nisba al-Mâribi.

During the Yemeni civil war of 1962-6, Mârib's fate was uncertain. Already in the beginning of October 1962, the Republicans, with Egyptian air support, conquered Marib. In March 1963 it was conquered by the Republicans who received Egyptian air support. In summer 1965, the Royalists succeeded in occupying Mârib again. During these combats, the houses of Mârib, which stand closely together on the ancient site, were largely destroyed by air attacks. Most of the inhabitants left the place and settled down in the neighbourhood, which explains the astonishingly low present number of the population. Until the present day, numerous houses of Old Mârib lie in ruins. At the foot of the hill of the old town lie in the Ma'sâdî Sulaymân (with ancient columns), the residence of the governor (muha'afîs), the police station, the military garrison, a water-pump installation, a number of huts covered with sheet-iron, shops and a restaurant. Formerly, Mârib could only be reached from San'â' by means of cross-country vehicles after an eight to twelve hours' difficult drive on tracks and through passes by three different routes, with a length between 170 and 220 km. Since 1981 the place has been linked with the capital San'â' by a road of about 150 km length. After this convenient connection had been established, the flights between San'â' and Mârib with obsolete DC-3 aeroplanes, which had existed for years with occasional interruption, could be discontinued.

Ibn al-Mudjawir, Ta'rikh al-mustabsir, ed. O. Lofgren, Leiden 1951-4, 195-200; Darmri, Haydt sur une mission archeologique dans le Yemen, Leipzig 1866; J. Halevy, Rapport...
Marida, a town in the south-west of Spain, in the modern province of Badajoz, where it is the capital of a partido, on the right bank of the Guadiana. Now somewhat overgrown, it has an area of about 35,000 acres and a population of 3,500, mostly the inhabitants. It is on the Madrid-Badajoz railway and is also connected by rail with Cáceres in the north and Seville in the south.

The ancient capital of Lusitania, Augusta Emerita, was founded in 23 B.C., and under the Roman empire attained remarkable importance and prosperity. Numerous remains of Roman buildings still testify to the position it held in the Iberian peninsula in those days: a bridge of 64 arches, a circus, a theatre, and the famous aqueduct of los Milagros, of which there are still standing ten arches of brick and granite. Merida under the Visigoths became the metropolis of Lusitania and, according to Rodrigo of Toledo, was fortified and strongly defended, which explains why the Muslim conquerors led by Musa b. Nusayr [q.v.] had some difficulty in taking it. The Arab leader on landing in Spain in Ramídán 93/June 712 first took Medina-Sidonia and Carmona, then Seville. He next laid siege to Mérida, before which he stayed for several months; but the inhabitants in the end capitulated and the town surrendered on 1 Shawwâl 94/30 June 713. From Mérida, Musa b. Nusayr continued his advance to Toledo.

Under the Arab governors, Mérida seems to have very soon become a ratified point for a large number of rebels of Berber and Spanish origin. It was there that Yusuf al-Fihri endeavoured to organise a movement against that organised for his own benefit by 'Abd al-Rahmân al-Dâlkhî in 141/758. At a later date, a Berber named Asbagh b. 'Abd Allâh b. Wansús rebelled there against al-Hakâm I in 190/805 and the amîr of Cordova had for the next seven years to undertake summer campaigns against him before bringing him to reason. Another rebellion broke out in Mérida in 213/828, and the town had to be besieged in 217/832 and again in 254/868. In the reign of the amîr 'Abd Allâh it was the headquarters of 'Abd al-Rahmân b. Marwân al-Dhîlîkî ("the Galînic"), an Arabic name which conveyed that of a Christian nationalistic leader. Mérida also very frequently returned to allegiance in the reign of 'Abd al-Rahmân III al-Nâṣir, when it submitted in 316/928 to the kâ'îd Ahmad b. lYâs.

From the 5th/11th century, Mérida began to decline in favour of Badajoz, especially when the latter town became the capital of the independent little kingdom of the Aftasîds [q.v.]. It remained in the hands of the Muslims till the beginning of the 7th/13th century. In 623/1228 it was retaken by Alfonso IX of Leon, but never recovered its former importance.

The Arab geographers who mention Mérida describe its Roman ruins in detail; they also mention the Muslim citadel, the foundation inscription of which has been preserved. It was built in 220/835 by the governor 'Abd Allâh b. Kulayb b. Thâ'labâ by order of the Umayyad 'Abd al-Rahmân II.

al-Mâridînî [see al-Mâridînî]

MA'rîfâ (A.). "Knowledge, cognition."

---

1. A term of epistemology and mysticism

I. Lexicographical study. Like 'íjâfân, the word ma'rîfâ is a noun derived from the verb 'arafa. According to the lexicographers, it is a synonym of 'ilm [q.v.]. Ibn Manzûr (LA) notes that 'arafa may be used in place of i'tarafa ("to recognise"), in the sense that ma'rîfâ is that which enables a person to recognise, to identify a thing. On the other hand, i'tarafa signifies "to ask somebody for information (khabar) regarding something". It is the reply which makes recognition of this thing possible. When an animal is lost, "a man comes who recognises it (ma'rîfâ-hâl), that is to say, he describes it by an attribute (sîfa) which makes known (ya'lîmûna) that it belongs to him". According to a tradition related by Ibn Masûd, people were asked if they knew their Lord. They replied: "If He makes Himself recognised to us, we know Him." Consequently, from a philological point of view, the ma'rîfâ which causes recognition and which thereby gives knowledge (i'tim) of its subject, always contains the indication of an attribute with which its subject is identified. The hadîth of Ibn Masûd is explained thus: "If God describes Himself by means of an attribute through which we can authenticate Him, then we know Him."

In his Dictionary of technical terms, al-Tâhâwî lists several senses of the word ma'rîfâ, which he identifies with the word "knowledge" while noting particular connotations which are sometimes given to it to distinguish it from i'tim. (1) In the first place, ma'rîfâ is knowledge, in the absolute sense of perception (i'drâk), whether in the form of a concept, or in the form of a judgment. (2) It is the perception of a concept; in the case of a judgment it is called knowledge. (3) It is the perception of what is simple (basî), whether in the form of a concept, or in the form of a judgment regarding the conditions of this quiddity; or it is the perception of something which is composite (mu'akkab), whether it be a concept or a judgment. But according to technical terminology, perception of the composite is specifically called knowledge. In addition, according to the lexicographers, the correct statement is "I have cognition of God ('arafa 'llâh)", and not "I have knowledge of God ('almu-hâ)", because God is a simple entity. Consequently, that which is in relation to ma'rîfâ is simple, whereas that which is in relation to knowledge is multiple (mutat-’addid) and thus composite. (4) It is the perception of the particular, notion (mâhâm) or verdict (hûm); or the perception of the universal, notion or sentence. But the perception of universals is more specifically called knowledge or speculation (nâzar). According to al-Tâhâwî, it is most probable that in principle, the word ma'rîfâ is used to apply to a concept, and the word knowledge to apply to a judgment. Then there are ramifications. Thus it may be considered that definitions (2) and (4) are ramifications of definition (3), since the particular and the concept resemble the simple, and the universal and the judgment resemble the composite. (5) It is the perception of a particular by means of a proof or indication (da'îf), this is called ma'rîfâ siddâlîyya, cognition by proof. This is reminiscent of what was previously said about i'tarafa. The language itself clearly marks the connexion
between dahl and cognition; it is said dalaltu hi 'l-tank in the sense of "I have made the way... the cloud which extends its shade over all things, and like the rain which drenches the one that it likes and the one taken in itself... It is the condition of a noun applied to a thing definable in itself. (6). It is the perception that comes after ignorance (qatl). Thus it cannot be said that God is cognisant (drif); it must be said that He is knowing (slm). In this sense, the word slm has a general meaning, and the word ma'rifa a particular meaning. (7) It is a technical term employed by Sufis.

II. Ma'rifa in mystical thought. Al-Tahâwî relates that it is usually (slm) considered to be the knowledge (slm) which precedes ignorance (nakâa). The use of the word nakâa in place of qatl is interesting (cf. above, nakâa). It is the knowledge (slm) of the situation which is presented to the object, the ma'rifa, is the Essence of God and his attributes. Cognition of the Essence consists in knowing (an yuâlãma) that God is existent (macawîd), one (wsâhid), sole and unique (fard); that He does not resemble any thing; and that nothing resembles Him. Cognition of the attributes consists in knowing Him as living, omniscient, hearing, seeing, speaking, etc. It is thus seen how regularly the word 'knowledge' or the verb "to know" intervene in definitions of ma'rifa among the mystics. It is necessary to distinguish ma'rifa based on proving indications which, by means of "signs" (âyât) constitute the proof of the Creator. Certain people see things, then see God through these things. In reality, ma'rifa is realised only for those to whom there is revealed something that is invisible (al-djâhî), in such a way that God is proved simultaneously by manifest and by hidden signs. Such is the ma'rifa of men "anchored in knowledge" (al-râkîhîn fi 'l-slîm; cf. Kurân, III, 7, IV, 162). Then there is the ma'rifa of direct testimony (ghâhidîyya) which asserts itself as evidence (darârîyya); it is this which gives cognition of the signs through Him who has instituted them, and this is the prerogative of the just (al-siddîkîn, cf. Kurân, LVII, 19: hâm al-siddîkîn wâ l-ghâhadu, insha' rabbîhum). These are the men of contemplation (ashâb al-mujâhâdâh).

III. Definitions given by the Sûfis, and the mystical tradition. It is related that God said to David in a revelation: "Do you understand what it is to know Me? Cognition of Me is the life of the heart in the contemplation which it has of Me." Al-Shiblî said, "When you are attached to God, not to your works, and when you look at nothing other than Him, then you have a perfect ma'rifa." Cognition has been compared to the sight of God in the Other Life: "Just as He is known here below without perception, so He will be seen in the other life without perception (âshâk)" (al-Tahâwî), for it is said in the Kurân (VI, 101), "Vision will not comprehend Him, but He will comprehend vision." The following is cited from the hadîth of the Prophet, "If you knew God by a true ma'rifa, the mountains would disappear at your command." Cognition is linked to various conditions (âhejâd) with which taawwuf deals. Thus Abû Yazid al-Bistâmî (q.v.) said, "True ma'rifa is life in the memory of God." Shams of God quotes Abû 'Ali (perhaps al-Djuzdjanî, 3rd/9th century), "The fruit of ma'rifa is that one bears with patience (sabr) proofs when they come; that a man gives thanks (shukr) when he receives a benefit; and that he gives his consent (ridâ) to God, when he is struck with a hateful evil." The father-in-law of al-Kughâvî (q.v.), Abu 'l-Dakîk, said, "One of the signs of the cognition that a man has of God, is the entry into him of reverential fear (hayba). One of the signs that it is growing, is that this fear grows. Ma'rifa necessarily entails quietude (sakîná) as knowledge entails rest." Ma'rifa assumes not only the abolition of the consciousness of self at the level of the soul, the empirical self, but an absence of self at the level of the heart and the spirit. Abû Hâsîf (Umâr b. Maslama al-Haddâd, born near Nižâpur, d. ca. 260/874) said, "Since I have cognition of God, there enters into my heart neither truth nor falsehood. Cognition necessarily entails for the man his absence (ghayba) from himself, in such a way that the memory of God reigns exclusively in him, that he sees nothing other than God and that he turns to nothing other than to Him. For, just as the man who reasons has recourse to his heart, to his reflection and to his memories, in every situation which is presented to him, to the condition which he encounters, no the drif has its recourse in God. Such is the difference between him who sees through his heart and him who sees through his Lord." In the same context, al-Bistâmî said, "The creature has its conditions, but the drif, the cognisant one, does not have them, because his traits are effaced and his ipeity (huâyja) is abolished in the ipeity of One Other than him (God). His features become now invisible beneath the features of God." Also worthy of quotation is al-Wâsîfî (pupil of Djnayd and of al- Nûrî, d. 320/932), "Ma'rifa is not authentic when there remains in the man an independence which dispenses with God and the need for God. For to dispense with God and to have need of Him are two signs that the man is awake and that his characteristics are unequal to God. Thus the man who has the cognition of God is in intimacy (uns) with Him. One Other than him (God). His features become invisible beneath the features of God." How could this—which is due to the fact that one loses his existence in God and is engrossed in contemplation of Him—be true, if one is not a man devoid of any sentiment which could be for him a qualification, when one approaches existence?" The following are other conditions which are related to ma'rifa. Ibn Abî 'l-Hâwâwî (3rd/9th century) said, "He who knows God best and he who fears Him the most." Ibn 5âjî, the friend of al-Hallâj, thought that ma'rifa depends on three things: reverential fear, modesty (hayâra) and intimacy with God (uns). In fact, he who has cognition of God is in intimacy (unsâs) with Him. The following are some definitions and qualifications of the one who knows God. It has been said, "The drif is he who acts for the pleasure of his Lord, without gaining anything for himself by this action." Seeing that some teachers taught that having once arrived at cognition, man no longer acts, al-Djnayd took issue with this opinion: "Those who have the cognition (al-drîfîn) of God, draw their actions from God and turn to God in their actions. If they needed to last for a thousand years, acts of piety would not be diminished by a jot." The same Djnayd said, "That man is not truly an drif, so long as he is not like the earth which is trodden by the pious and the licentious alike, and the cloud which extends its shade over all things, and like the rain which drenches the one that it likes and the one
that it does not like.” In some instances, the definition adopts a dialectical twist. Thus Yahya b. Mu’adhdh (a native of Rayy, who settled and died in Nishapür in 248/872), said, “The ‘arif is the man there without being there.” Al-Djumaylī added, “who is distinct without separation.”

In general, it is to be noted that all these conceptions, while placing ma‘rifā above demonstrative and speculative knowledge, do not absolutely imply an esoteric vision. All or most depend on certain features which make of ma‘rifā an illuminative cognition whose brightness has the power to stun. Thus Ruwaym, a Sūfī of Baghdad (d. 303/915), said, “For the ‘arif, ma‘rifā is a mirror; when he looks at it, his Lord shines there for him (tadqīl lahu),” and Sahih b. ‘Abd Allāh al-Tustarī notes that “the final stage of ma‘rifā consists in two things: amazement (dahāb) and confusion (hayra).” The same notion is found in the writings of Dhu ’l-Nūn al-Miṣrī.

Some interesting analyses, and important conclusions, are to be found in the work of Farid Jabr, La notion de ma‘rifā chez Ghazālī, Beiruit 1958. Comparing al-Ghazālī with Plotinus, he writes (p. 134), “The former aspires towards an abstract ideal world, the ‘well-guarded Table’, archetype of revealed knowledge, the latter seeks to lose himself ontologically in the One... It is here that ma‘rifā and gnōsis diverge fundamentally: the latter is achieved in ecstasy, which is not simply visionary but unitive vision, and the former in the loss of consciousness of the self.” Al-Ghazālī indeed belongs to the line of mystics whose conceptions have been related in this article.

IV. Ma‘rifā in the thought of Ibn ‘Arabī.

It seems that Ibn ‘Arabī makes no distinction in usage between the words “knowledge” and “cognition”. For him, there is one ma‘rifā which is attained through the light of intelligence (bi-nur al-‘alāq); this is the cognition of the divine nature (ma‘rifat al-‘ulāhiyya) and of what is necessary, impossible, possible and not impossible for it. It is evident therefore that what is in question is a rational cognition, in other words, knowledge. On the other hand, there is a ma‘rifā which is attained by the light of faith (bi-nur al-iman), by means of which intelligence (al-‘alāq) seizes on the Esoteric and the qualifications which God ascribes to Himself. This is the second ma‘rifā which has to be that of the mystics (cf. Futūḥat, ed. ‘Uṯmān Yāḥyā, i, 203, no. 289). Ibn ‘Arabī devoted ch. 177 of the Futūḥat to “cognition of the status of cognition.” Nobody has knowledge (‘ilm) except He who knows what (‘arafa) what is through its essence. Whoever knows what is through some thing which is added to its essence, is a mukallād who intimates that which is added thus by means of that which he receives from it. Every cognisant being that is not God thus has cognition through taklīd in conforming to the data of the senses and of reason. Since He is compelled to imitate, the man of good judgment (al-ṣākil) who wishes to know God, must imitate Him in that which He has made known (akhbāra) of Himself in His Books and through the mouths of His Messengers. When he wishes to know things, not relying on his own faculties but through force of obedience (bi-khathar al-ta‘fāl), he comes into a state where God is his hearing, his sight and all his faculties. Then he knows all things through God, and God through God. This was the answer given by Dhu ‘l-Nūn when he was asked by what means he knew his Lord. “I know my Lord through my Lord; without Him I would know Him. Those who rely on their own senses, know that senses and reason can be mistaken (as al-Ghazālī pointed out in the Munkādā). They seek to distinguish the cases where they are mistaken and the cases where they are justified. But since they make this distinction with faculties which can be mistaken, they can never know whether what they classify as true is not false and vice versa. Here there is a serious malady (dā’ ʿuddāl), which can be avoided only by those who in all things have knowledge only through God. As for knowing what it is that causes such men to have knowledge from God, this is something which our error-prone faculties are incapable of establishing. Since we see that we can have knowledge only through taklīd, all that remains for us is to imitate ‘him who is called the Messenger and that which is designated as the Word of God.” We conform to these models to the point at which God becomes the totality of our faculties. We will thus be able to determine the cases where we shall take possession of truth. The man who arrives at this state is then, as the Qur’ān expresses it (XII, 108; LXXV, 14), “dāl baṣīrat.” Ma‘rifā, in its highest degree, is thus this baṣīrāt, this interior view of realities which neither the senses nor reason are capable of attaining.

Ibn ‘Arabī distinguishes three ranks of categories of knowledge (marāthīt al-ʿulām). The first is that of the knowledge of intelligence, founded on necessary principles and the demonstrations based on them. This is not under discussion here. The second is that of the knowledge of states (šīm al-adāsīl), to which the only access is through taste (gharbī), such as the knowledge of the sweetness of honey but the bitterness of bile. This definition also accords with the taste-oriented cognition of the Sūfī. The third rank is that of knowledge of secret things (al-ʿulām al-asrār). It is superior to the category of intelligence (fa’ak fa’ar al-ṣākil); it is the knowledge of the infusion of the breath of the Spirit of Holiness in the human spirit (šīm al-dākār al-khaḍr fi d-rān). It is the prerogative of the prophet (al-nabi) and of the saint (al-ʿulām). It includes two types. The first is apprehended by the intelligence, as in the first rank of knowledges, but not as a result of speculation (nazar). The second type is of two kinds. One is linked to the knowledge of the second rank, to dhawk, and is superior (aṣyāf). The other is a knowledge of information (min ḥiṣn al-ḥiṣn). This is something which our error-prone faculties are confused about with information the veracity (ṣiḥā) of which is guaranteed; this is the information given by the prophets (cf. Futūḥat, ed. Yahyā, i, 138-40, nos. 64-8). Consequently, ma‘rifā in its highest degree, where baṣīrāt is exercised, seems to accord well with the different aspects of the al-ʿulām al-asrār.

A further division is found (ibid., i, 133, no. 100): “The axis of the knowledge which belongs to men of God (ahl Allāh) consists of seven questions. For whosoever knows them (ʿarafa-hā), there is nothing in the knowledge of Realities (al-ʿulām al-baṣīrāt) which presents a difficulty. These are: cognition (ma‘rifat) of the Names of God; the cognition of epiphanic emanations (tadgīlāt); cognition of the Word addressed by God to man in the form of the language of the Law; cognition of disclosure through imagination (al-khāf al-ḥayāt); and cognition of sickness and remedies. A detailed study of these ma‘arif forms the object of ch. 177 of the Futūḥat, to which the reader is referred. All that is noted here is that it seems that among all these cognitions, there is one which is distinct in the sense that it is operated in all the others; this is the cognition of disclosure through imagination. In particular, that which Ibn ʿArabī says concerning cognition of the Names of God depends on a symbolic vision which is the act of the imagination. Here we refer to the work of H. Corbin, L’imagination créatrice dans le soufisme d’Ibn ʿArabī, Paris 1977.”
V. The Yazdan-shanakht of al-Suhrawardi. This Persian title is the equivalent of ma^rifat ... their reigns.

From the start, the Marinids displayed a remarkably dynamic military strength: with a series of campaigns C

V. Conclusion. Ma^rifat has frequently been translated as gnosis. The Greek gno\(\iota\)s probably denotes purely and simply cognition. But the word “gnosis” has taken on a particular sense; it denotes, not one, but several systems which undoubtedly have common features, but which differ considerably from one another. There are thus several gnosti: Basilidian, Valentinian, Isma\(\iota\)ll, Ikh\(\iota\)b\(\iota\), S\(\iota\)h\(\iota\)i, etc. Corbin has written in this context: “There is certainly a measure of Avicennism in all this, but it is definitely less original than Corbin suggests. It calls for the arrival of Arab tribes in the region which the soul, the being of light, brings to bear on its object; it makes itself present in making itself present to itself” (Histoire de la philosophie islamique, in the series Idées, NRF, Paris 1964, 291).

2. As a term denoting secular knowledge

Hence opposed to ‘ilm and almost synonymous with ad\(\iota\)b, see ‘ilm.

V. The appearance of the Marinids in the works of Arab chroniclers dates from the 6th/12th century, first in reference to local conflicts, then as a political factor, from the time of their participation in the battle of Alarcos, in Spain, alongside the Almohads (591/1193) [see Al-Muwahhids]. After 610/1213-14, they maintained a slow but persistent penetration into the inhabited areas of the zone which they had habitually frequented, where the arrival of Arab tribes in the region was in the process of rapid disintegration. At the start, their activity consisted only in claiming dues from the towns and charging protection dues, and the Almohads conducted an ambiguous policy towards them, fighting them at times and collaborating with them at others. By the middle of the 7th/13th century, the Almohads were no longer able to resist forcibly the physical occupation and settlement of the Marinids in the large towns. United under the leadership of the house of 5\(\text{Abd al-Hakk}, which at this point became the dynastic family, they captured Mekn\(\iota\)s in 642/1244, F\(\iota\)\(\text{s}\) in 646/1248, Sidjilmasa in 653/1255 and finally Marrakesh, the capital, in 668/1269. Only recently converted to Islam, the Marinids showed no particular reformatory zeal at the time of their occupation of Morocco, unlike their Almoravid and Almohad predecessors. They did, however, as a result of their encounters with jurists and city dwellers, cultivate a sense of mission which had a religious ingredient, wishing to provide the Muslims with just and prosperous government, which the Almohads were no longer able to offer (M. Shatzmiller, Islam de campagne et Islam de ville: le facteur religieux à l’évenement des Marinides, in SI, li [1980], 7-36).

Following the seizure of Marrakesh, the history of the Marinids is divided into two periods of approximately equal length, corresponding to two phases: a first phase (668-759/1269-1358) characterised by military exploits, urban expansion and governmental stability, and a second phase (759-870/1358-1465) which sees a slow erosion of the political structures, a territorial regression and internal division. Almost all the Marinid sovereigns of the first phase (see the dynastic list) were distinguished by the region military campaigns and the length of their reigns. From the start, the Marinids displayed a remarkably dynamic military strength: with a series of campaigns judicial decisions (fat\(\u0111\)as and na\(\u0111\)wi\(\u0111\)).
conducted in Spain against Castile (674/1275, 676/1277, 682/1283), the sultan Abu Yusuf Ya'qub established the central position which the Marinid factor was to occupy in the diplomatic scene of the western Mediterranean basin during the 12th and 8th/13th and 14th centuries. For their Maghribi co-religionists, this constant Draghag of Spanish policy constituted a permanent threat which was realised from time to time, the most violent episode being the prolonged siege of Tlemcen under the sultan Abu Ya'qub Yusuf (698-706/1299-1307). The high point of Marinid history was reached under the sultan Abu 'l-Hasan 'Ali with the siege of Tlemcen (737/1337) and of Tunis (748/1347) and the temporary subjection of the entire Maghrib (R. Thoden, Abu 'l-Hasan 'Ali. Merinidenpolitik zwischen Nordafrika und Spanien in den Jahren 710-725H/1310-1351, Freiburg 1973).

The chroniclers of the period, al-'Umari and Ibn Marzuk, supply numerous details regarding the composition, the routine, the equipment and the pay of the army. Composed of regular and irregular units, its striking force seems to have been constituted by the Arabs, since under the Andalusian recruitment, while Andalusians were recruited as unmounted archers, the Marindat assisted their mounted cavalry equipped with catapults and fire-throwners. A Chris-"munilitia, commanded by an "alcaíy" and recruited in Aragon, Castile and Portugal from 1306 onwards, with other non-indigenous elements including Kurds and negroes, constituted the regular army and the personal bodyguard of the sovereign. The Christians, between 2,000 and 5,000 at the time of Abu 'l-Hasan, were paid once every three months at the rate of 5 to 50 gold dinars per month, part of their salary being paid to their respective sovereigns. In the turbulent years of the second phase, this militia took an active part in the increasingly numerous palace revolutions. The remainder of the army was also registered in the Diwan and paid in kind. Only the chiefs of tribes received land in iktcf-

The only point of weakness was constituted by the flotilla. Due to the abundant supply of Moorish timber and the existence of ship-building yards at Ceuta and Salé, was never large enough to compete with the Aragonese fleet. The archives of the court of Aragon testify, in fact, that for naval battles, such as the seizure of Ceuta in 678/1279, Catalan ships were hired at a high price by the Marinid sovereigns. On the other hand, a Marinid unit of Zanata horsemen participated in 1285 in the European campaign against France and in 1307, 7,000 Marinids were in the service of the Nasrids of Granada.

The first phase of Marinid history was also an age of major architectural activity, and the Marinid monuments of the early period reflect the energy and the material wealth of the time. These consist primarily of three new urban conurbations, New Fez, al-Binya near Algiercas and al-Mansura near Tlemcen; of zāyān; of the necropolis of Chella; of the arsenals of Ceuta and Salé; of a kasba at Mekrēs; of mosques at al-'Ubābā, al-Mansūra and Taza; of fortifications; of a hospital for the insane at Fās; of hydraulic wheels in numerous towns, of fountains and gardens; but most of all, of magnificent madrasas, four at Fās and one at Salé, which, renowned for the beauty of their decoration and their Hispano-Moorish style, remain the Marinid monuments par excellence. The material prosperity of the Marinid state, the image that it adopted at this time, as champion of Magrībi Islam, explains the large number of pious donations (wakf ḥayri) made by members of the dynasty to the benefit of public institutions in their own towns and in captured towns, as well as those of the holy cities of the East. The chronicles of the period and the inscriptions of wakfs attest to the donation of goods, property and land by the sultans Abu Sa'id, Abu 'l-Hasan and Abu 'l-Insān to the benefit of madrasas, mosques and libraries.

Like its two contemporary dynasties, the Abi al-Wadids and the Hafsids, the Marinids state maintained the demographic, social and government-al structures of the Almoravids, as well as the physical aspects of their civilization. In addition to the Arab and Berber ethnic variety—the human wealth of the Marinid state—the demographic composition of the countryside, still agrarian and tribal, was coloured by the distinction between the sedentary population of the plains and that of the mountain regions. While the countryside remained linguistically and socially, even religiously, almost entirely Berber, the nomadic shepherds, islamised to a small extent, became more and more arabised. In the towns, largely arabised and absolutely islamised, tribal loyalty gave way to familial aristocracy. Under the Marinids, the towns gathered in Andalusian elements in ever-increasing numbers. The ethnic variety was completed by the existence of Jewish and Christian communities in the urban centres. While the Christians were merchants, priests and soldiers, more numerous in the coastal towns but still a small minority, the Jews, an indigenous element reinforced by immigrants from Spain, were more numerous and more active in all aspects of the life of the country.

The Marinid court resided at Fās, which replaced Marrakesh as the seat of the administrative appara-eratus. A Marinid sultan, bearing the title of amīr al-muslimin, and later also that of amīr al-mu'minin, was the supreme sovereign of his country, his involvement in government varying largely according to his personal inclination. Thus the sultan Abu 'l-Hasan was involved in all the bureaucratic activities of his state, especially the administration of the army, taxation—he even introduced a landownership and the fiscal system of al-dār al-layla—intellectual and religious activity, and even the administration of justice to citizens who complained of abuses on the part of his agents.

The responsibilities of the vizier, who was at certain times subordinate to the chamberlain, were on a day-to-day basis in the charge of various functions; head of finances, head of chancellery, chief of police, admiral, town governor, head of kasa, senior kādī, head of the mint and head of the mubātāhs. The Berber democratic and consultative nature of the Marinid government was maintained by the existence, throughout its history, of the council of chiefs of the Marinid tribes, which was convened at the invitation of the sovereign and mainly discussed military affairs. The economic life of Morocco under the Marinids attests to a prosperity which was unconnected with the rise, in the 8th/14th century, of the kingdom of Mali [q.v.] and the development of the gold trade. This prosperity was reflected in three sectors: agriculture, urban industry and trade with Africa and Europe. Agriculture was dominated by a system of land-ownership largely similar to that of the Hafsids: land was classified into three categories, these being public land (gīza), from which territory was leased to individuals and granted as iktcf-"malik (private property), and land endowed for religious institutions and individuals (hubus).
According to al-Umari, the revenues of ikta land were reserved for senior chiefs of the army, high dignitaries of the court, palace secretaries, kādis and Suffi ajizyas. The Marinid fatwas attest to the existence of small and medium-sized plots of land, cultivated by the owner with one or more tenant-farmers. There is no indication of the existence of large agricultural holdings, except those in the possession of members of the reigning family. All co-operation in this regard was regulated by one of three agricultural contracts agreed upon by Muslim jurists, muzaara, mughdrasa and muisakāt; khamasa also existed. The sources speak of abundant yields of fruit and vegetables cultivated in the countryside but also in the proximity of towns, wheat being the major exported product.

The local industries of the towns, textiles, tanneries, building, metal-working, ceramics, food-stuffs and glassware, gave rise to an important craft milieu which achieved prominence in the 8th/14th century with its participation in royal processions, where members of each procession marched in a group displaying a flag showing the tools of its trade, as well as written texts. Commerce with Christian countries passed especially through the town of Ceuta, but other Atlantic ports were also frequented from the 7th/13th century (660/1262), Salé, Safi, Arzila and Anfa, where in 705/1305 an agent was in residence, acting on behalf of Majorcan merchants. The duties levied by Marinid customs on imported and exported goods varied from one port to another. Christians imported into Marinid Morocco wine, cotton, pepper, flour, finished silk, camphor, cinnamon, metals, cloth, linen, fine fabrics, ropes, tackle, gum, lac, cloves, gall-nuts, Brazil wood, jewellery. They exported copper, wax, cotton goods, coral, wool, salt, leather, and above all wheat, which was cheaper than in Ifrikiya and held as a monopoly by the palace administration. No less important for Marinid Morocco was trade with Black Africa across the Sahara, whence caravans brought salt, ivory, ostrich-feathers, gum and incense, musk, Guinea pepper, ambergris, and above all gold from the Sudan in ingot and powder form, which arrived through the town of Sidjilmāsa. The vigour of external commerce explains the importance of Ceuta and of Sidjilmāsa throughout the Marinid period, as well as the aggressive character of theMagribi policy of the Marinids, which had the object of gaining control of the revenues of the Oriental, Saharan and European trade which converged in the coastal cities of the Maghrib. An abundance of yellow metal characterises the Marinid economy, as is manifested by the payments in gold (dinars) made by Marinid sovereigns especially to Spanish monarchs and recorded in their archive documents. Silver was scarce. The Marinids struck gold dinars of high quality; they followed the tradition introduced by the Almohads in minting a double dinār, the dinār ashhabī of the sources, of a weight of 4.57 gr., alongside the traditional dinār with inscription in naskhī and kufi, the dinār fidā or wasīt of the Marinid sources, of 2.26 gr., thus called because it was worth ten dirhams. Coins found indicate the existence of halves, quarters and eighths for dinārs and dirhams. The Marinids also maintained the square shape of the Almohad dirham, with an inscription also in Almohad style and in naskhī script. The quality of the striking seems, however, inferior. Marinid coinage was struck at Azemmour, Ceuta, Sidjilmaša, Fās, Marrakesh, and Salā, as well as in Maghrībi towns occupied by the Marinids: Tlemcen, Algiers, Bougie, Tuns and Tarifa. The taxes levied on the subjects of the Marinid state were usually numerous, for the most part non-Kur'ānic and, except during the reform introduced under Abu 'l-Ḥasan, leased out to waqāt. In addition to maghrībī and mukasī of all kinds [see maksi], three major taxes were in evidence: the rural population paid the khirās, which corresponded to the canonical khasādī [q.v.], also imposed on citizens who cultivated fruit trees; city and country dwellers also paid the kānūn, a capital tax similar to the dīżya [q.v.] levied on the Jews; shepherds paid the kūgr, a tax on the lands used for pasture, and each user of the irrigation systems also paid a tax on the water.

The diverse manifestations of religious and intellectual life and of literary production under the Marinids were to a large extent conditioned by changes undergone by urban society and by the development of new political and social structures. Thus from the earliest days of the dynasty, the sovereigns had to deal with a numerically strong and powerful religious establishment, which claimed for itself the role of spokesman of society and was in evidence especially in Fās. The popular revolt which took place in this city obliged the Marinids to confront the opposition of an autonomous urban movement to their régime, and to neutralise it by the creation of their own religious and intellectual circles. In order to achieve this aim, there was introduced into Morocco for the first time the institution of the madrasa [q.v.], which led to the creation of a body of Zanātā fahahārid whose loyalty to the régime could not be doubted. At the same time, because of the hostility of the city dwellers, even the administrative and literary circles of the court had to be recruited from among the new immigrants from Andalusia, from Ifrikiya, from the central Maghrib and even from the countryside (Shatzmiller, Les premiers Merinides et le milieu religieux de Fès: l'introduction des madrasa, in SI, xliii [1976], 109-18).

In general, the religious life of the period was marked by the restoration of Mālikism as an official rite, a process which had been well advanced under the last Almohads, but even more by the diffusion of Sufism which, spreading to the countryside and practised in a particularly Maghrībi form, degenerated into maraboutism. In the towns, Sufism was also practised, but in a more refined form, with the participation of the sultans, the dignitaries and the men of letters.

Literary production under the Marinids was multiple and varied, with Oriental and Andalusian elements of style and structure playing a dominant role. The areas cultivated were classical: fikā, biography, hagiography, poetry, geography (Ibn Baṭṭūta and al-Abdārī) at the same time as philosophic and natural sciences (Ibn al-Banna). Only history experienced an extraordinary development in this period, both in general and in detail, a phenomenon illustrated by the composition of the great regional histories of the mediaeval Maghrib (Ibn 'Ishārī and Ibn Khaldūn) and the appearance of local history, of towns and of dynasties, the mouthpiece of the social milieu and of territorial nationalism. The Marinid sovereigns encouraged the writing of their history, driven by a desire for legitimisation which their authority lacked.

The decline which struck the Marinid dynasty, immediately after its period of greatest prosperity, continued throughout the second phase of its history. This process was characterised by a crisis of succession of which the Kitāb al-Burāq provides the details: a multitude of children of the Marinid family were successively placed in power by innumerable revolts on the part of Arab and Berber tribes and by palace
revolutions, while real power passed into the hands of viziers. The absence of a strong central authority weakened the authority of the Marmid dynasty and was accelerated by socio-religious changes, which took place in proximity to the major towns and disrupted the might of the tribal countryside. It remains true, however, that under the Marinid dynasty there were introduced into Morocco, for the first time, the idea and the political structures of national and geographical unity which were to become modern Morocco.

AL-MARIS, the term applied to the area of the ancient kingdom of Nobatia, northermost of the Nubian Christian kingdoms, and occasionally also to its people. Broadly, it encompassed the area from Aswân to the northern border of al-Mukurra [q.v.], and was under the control of the king of Dunkûla [see Dongola], the "Lord of Mukurra and Nubia". The northern frontier, according to al-Manûfî, quoting al-Djâhiz, was indicated by two rocks jutting into the Nile five miles beyond Aswân; the southern limit was at Basûn (and variants) where al-Mukurra proper began. The capital was at Faras, and there were also important forts, including Kasr Ihbrûm. The administration was vested in the "Lord of the Mountain" (Sâhib al-Djâbal, or "Lord of the Horses", Sâhib al-Khalî, in Ibn al-Furât), the Eparch of Nobatia, under the authority of the king at Dunkûla. This official's duties were to receive correspondence and visitors destined for the king, and to control passage southward into Nubia. The population of al-Maris contained an admixture of Arabs, and al-Masûdî mentions a case in 218/833 between the king of Nubia and the Muslim citizens of Aswân who owned estates in al-Maris. The king held that land could not be sold since it was his property, worked by his subjects only in their capacity as his slaves. The case was judged in favour of the purchasers. According to Yusûf the Egyptian, there was a bishop of al-Maris (perhaps the bishop of Pachoras (Faras)). The provinces of al-ʿAlli and al-Djâbal, part of al-Maris, were apparently ceded to Egypt by the treaty of 674/1276, and the Muslim Banû ʾI-Kanz [q.v.] gradually became prominent in the region, eventually taking the throne at Dunkûla. Several of the Arab writers tell of the Marisî wind, which brought a pestilence to Egypt, so that people took on the habit of wearing the Djibbs and covering their heads with mourning black scarves or veils and for their funerals the designation "Maurotania" in Abba Mina's Coptic Life of the patriarch Isaac (ca. 700 A.D.), would appear

**MÂRISTAN [see BÎMÂRISTAN].**

**MARITTA [see MURÎD].**

**MÂRIYA,** a Copt maiden, according to one statement, daughter of a man named Shâmânî, who was sent with her sister Sirîn by the Mukawkîs [q. v.] in the year 6 or 7/627-9 to Muhammad as a gift of love for her excited such jealousy among his other wives that he might divorce them in order to marry her. He was very devoted to her and gave her a house in the upper town of Medina, where he is said to have visited her by day and night; this house was called after her the mashraba of the mother of Ibrâhîm. To the great joy of the Prophet, she bore him a son whom he called Ibrâhîm, but he died in infancy. According to tradition, an eclipse of the sun took place on the day of his death, an interesting statement by which we can get some idea of the esteem in which Muhammad's followers held him. The Prophet made her his concubine, while he gave Sirîn to Hassan b. Thabit [q. v.].

There is no reason to doubt the essential correctness of the story, as there is no particular bias in it and it contains all sorts of details which do not look in the least like inventions, so that it is exaggerated scepticism when Lammens supposes that the "mother of Ibrahim", after whom the mashraba was called, was some Jewess. On the other hand, in view of the fact that all the marriages of Muhammad after the hidjra were childless, it would have been surprising if evil-minded people had not cast suspicions on the paternity of Ibrâhîm, and that this actually happened is evident from some traditions, the object of which is to defend Mâriya from this suspicion.

On the other hand, it is not so easy to justify the part which Kur'anic exegesis makes Mâriya play in the exposition of sûra LXVI. In this sûra, the Prophet speaks in a very indignant tone against one of his wives, because she has betrayed a secret to another, which he had imparted to her under a promise of the strictest secrecy. At the same time, Allah blames him, because, in order to please his wives, he had bound himself by oath to refrain from something which is not definitely stated and because he does not use the right grant given him by Allah to release himself from his oath. In addition, there is a word of warning to the two women who had disobeyed him and a threat to all his wives that he might divorce them in order to marry more pious ones (cf. XXXIII, 28-9). According to the usual explanation, the two wives are Hafsa and 'Aishah, and the revelation is said to have been provoked by the fact that Hafsa, on returning from Medina, found Mâriya and the Prophet in an intimate tête-à-tête and that on that day by which rotation belonged to her (or 'Aishah). In his embarrassment, he pledged himself by oath to have no more relations with the Copt girl. But after Hafsa's breach of faith, Allah tells him to release himself from his oath. This explanation fits very well in some respects, and that the promise of continence is connected with marital complications is illuminating. That there are hadîths, which explain his quarrel with his wives quite differently, does not mean very much, for they are no doubt invented to drive out of currency the popular, less edifying version. But, on closer examination, there is one flaw which makes the latter uncertain, for it does not answer the question how Muhammad could call the situation in which Hafsa caught him and Mâriya a secret that is said to have been entrusted to her.

**MÂRIYYA** is the Arab name for the Spanish town of Almería. According to some authors, it was originally called Mâriyât Badjja, for it had been the port or maritime suburb of Pechina (Badjja) [q. v.], the ancient Roman Urâ. Today, Almería is the chief town of the province (which has the same name) in the most easterly part of Andalusia on the Mediterranean coast. It is surrounded by bare mountains with steppe-like vegetation, and this means that its countryside is very similar to that of some parts of the North African coastline opposite. The only part not surrounded by rocky mountains is the area towards Cape Gata, and it has always been a region of low rainfall. The land is very eroded and marked by numerous râmelis, which have been hollowed out by raging torrents during the time it does rain. By contrast, the Rio de Almería valley, the Andarax (Andarash), is a green fertile zone producing an abundance of fruit. This land of violent contrast has been witness to many splendid years of the Islamic era and has been described often in great detail by Arab writers, from East and West alike.

The Islamic history of Almería is closely linked with that of Pechina which, thanks to its own location on the coast, existed before Almería, gave it birth and saw it develop. Soon after its rapid conquest from 93/713 to 95/715, it was populated mainly by Yemeni Arabs throughout a large area extending almost as far as the Guadix (Wadi Agh), but there were also several Berber settlements, especially in the region of the lower valley. During the middle ages, the area was still part of the Guadalquivir, and this part of the North African coastline opposite. The small village and port of al-Mariyya became
more important than the neighbouring Aguilas, and it was an administrative dependency of the kura (iklim, iklim) and Dallás (Dallaya) also dependent on Pechina. Dallás was the birthplace of al-Udhri, the well-known geographer of the 5th/11th century, who provided a careful description of al-Mariyya with much interesting information (see Taṣrīḥ al-ṣāḥib, ed. ʿAbd al-ʿAzīz al-Ahwānī, Madrid 1965, index). Other towns are Adra towards the fortresses of Vélez Rubio (Báñish), Belicena (Balísana), Purchena (Barahína), Sénés (Shanish), Andarax (Andarash), to name but a few mentioned by al-Idrīsī (Opus geographicum, v, 537, 536-4) and by Abu ʿl-Fida. All these towns, as well as Vera (Bayra) and some others, were taken as dependencies of Nasrid Granada during the last centuries of Islamic rule.

The region of al-Mariyya is surrounded by steeply sloping sierras which make overland communications difficult. The town was established in 344/955 by order of ʿAbd al-Raḥmān III al-Nāṣir [q.v.], its special maritime importance arises from the fact that it faces the North African ports of Tēnēs and other Algerian and Tunisian ports, as well as Alexandria and the extreme Eastern Mediterranean. Arab geographers, therefore, chose an apt name for it, "the gateway to the East", the key to commerce and trade of every kind. The name of al-Mariyya (sic, not al-Mariyia) has given rise to various explanations. The idea of "watch-tower" could have come from the time when men reported there for guard duty, for it was a look-out post during the raids by the Berbers, excluding the fortress which was called kal-ʿat Khayrdn, renowned for this and without rival in al-Andalus. The town, and that there were as many looms for production of textiles, as can be seen from the names given to some of the cloths, like lāyā, siglaton, baldachin, and all sorts of silk, which was known to be better (and more expensive) than the fabrics of Cordova and Seville. This had the effect of reducing the economic potential. It can be argued that it prospered most in the second half of the 5th/11th century and the first half of the 6th/12th century; then it suffered the first Christian conquest in 1147, by Alfonso VII of Castile, which is celebrated in the Chronica Adephonsi Imperatoris. Its economic development and its military and naval importance showed itself in the commercial and industrial ventures that were undertaken and its growth as a city and artistic centre. Beginning with al-Idrīsī, many geographers from the 6th/12th to the 8th/14th centuries, including the compiler al-Makki, agree that the cloth and brocade (dīḥāq) produced there were as fine as the products of Cordova; the town became highly renowned for this and without rival in al-Andalus. Among the materials and brocades which had built up the reputation of the town's industry were cloth of gold (waṣīl [q.v.]) (which was also made at Malaga [q.v.]), siglaton, baldachin, and all sorts of silk, which was known to be better (and more expensive) than that from other areas. There was an obvious eastern influence on the manufacture of textiles, as can be seen from the names given to some of the cloths, like ṣafāḥūn and ṣūrānihūn, which sound Persian, and ʿṭāṭib, which was probably ʿṭrākī. Al-Zuhri (Kāṭib al-Dirāfīya, ed. M. Hadij-Sadok, in BEO, xxii [1968], 101/206) mentions other white-coloured fabrics brocaded with gold, which, according to many sources, were favoured by the women of al-Mariyya for their garments. Other reliable authorities claim that there were 800 or 1,000 factories for tīrāz in the town, and that there were as many looms for producing other fabrics as well. Naturally, this would have given employment to a considerable number of weavers.

Beside textiles, other industries included the building of warships (in the dīr al-tāwaf [sic]), and the town thus came to be known as a centre of commerce, with a great number of markets, inns and baths. The population of Pechina, situated several kilometres inland, was absorbed by al-Mariyya, and it was used for their garments. Other reliable authorities claim that there were 800 or 1,000 factories for tīrāz in the town, and that there were as many looms for producing other fabrics as well. Naturally, this would have given employment to a considerable number of weavers.
manufacture of tools and weapons from copper and iron. Agricultural products of the region came especially from the valleys of the Andarax and the Almanzora (source of the Rajá). Where there were olive trees, vineyards, aloe trees, and fruit trees, the land was used for plantations and sugar-cane. The marble from the Macael quarries in the Sierra Filabres was particularly famous because it was used for covering plinths and for paving palaces, especially the one called al-summadiyya (see L. Seco de Lucena, Los palacios del taifa almorávide del Mu'tàsim, in Cuadernos de la Alhambra, iii [1967], 15-20; J. Bosch Vilà, Mostrabes en el arte de la taifa de Almería, in Cuad. Hist. Isl. 19, v [Granada, 1977], 156). Mine-working in the area was to produce silver and gold; some writers say there were precious stones. The marble was also used to make columns, capitals, tombstones (makbariyya) and fountains.

From the time when the town was taken by the Christians in 1147 and its recapture by the Almohads in 1157, the commercial and cultural prosperity there dwindled. The most eminent citizens emigrated to North Africa, and several of the more densely populated and busier areas of the town were destroyed. Muhammad b. Yâyá al-Ramími (or Rumaymi), who had recognised the authority of Ibn Húd [see HÚDIK], was to be assassinated in al-Mariyya. These factions and subsequent internal political struggles considerably weakened the influence of the capital; and, after it had been incorporated into the kingdom of Granada by Muhammad I in Jshawwál, 635/May-June 1238, it ended its Islamic life under the Nasríds. There was a major attack on the town in August 1309 when it was besieged by the Aragonese of James II (see R. Basset, Le siège d'Almería en 709, in JA, 10th ser., x [1907], 275 ff.; I.S. Allouche, La relation du siège d'Almería en 709 (1309-1310) d'apres de nouveaux manuscrits de la Durre d'al-hiyal, in Hesperis, xvi [1933], 122-38; E. Lévi-Provençal, Un "zayád" hispanique sur l'expédition aragonaise de 1309 contre Almería, in Al-And., vi [1941], 377-99). It continued to suffer from internal troubles and was involved in the dynastic rivalries and civil wars which weakened the kingdom of Granada and cast a shadow over the future of the Muslims of al-Andalus.

Al-Zaghal, the uncle and enemy of Boabdil, took refuge in al-Mariyya and was delivered into the hands of the kings of Castile on 22 December 1449.

AL-MARKAB, observatory [see MARSAD].

Al-MARKAB, a fortress situated on the Syrian coast.

The name of al-Markab, from the root rakaba "observer, watch", denotes any elevated site from which it is possible to see and observe, such as the summits of a fortified castle or of a watch-tower (LA, ed. Beirut 1955, i, 424-8; Yázúr, ed. Beirut 1957, v, 108-9). Arab authors generally call this stronghold al-Markab; also found are Ka‘afat Markab and Híin Markab. There are also Arabic transcriptions such as Már Kábus for Markappos, Már Kábus for Markab, Már Qábir for Markab, Már Qábir for Már Gábir for Marghtam or Márqáth for Margat. In western works various spellings are encountered, including El-Marcab, Margat and Margath, Markab or Marqab.

1. Geography of the site. On current maps, the castle is situated at 35°27' E. by 35°10' N., between Lá’dhikíyya [q.v.] and Tárút, standing at an altitude of 1,187 ft./362 m. at the summit of a broad and steeply-sloping promontory, separated from a plateau of lava deposits. This barely accessible summit is one of the western foothills of the Djabal Aššáriyya range which extends towards the north, evidence of very ancient volcanic activity marked by streams of basalt in the regions of al-Markab.

The castle affords a unique panorama towards the east over land consisting of calcareous hills with outcrops of quaternary and pliocene clay, the territory of the Assassins or Hashishiyya [q.v.], and towards the west over the coastal plain which is fringed by basaltic sand and intended with small coves. At the foot of the castle there is a cove which is sheltered from the wind and capable of accommodating ships of limited tonnage; Walpole (Travels, iii, 289) noticed here in the 19th century some remains of masonry, possibly possibly the medieval harbour installations. At this latitude the coast is one-and-a-half days’ sailing distance from Cyprus.

The castle overlooks the main coastal road, at the point where the coastal expanse is narrowest. It is also at the foot of al-Markab that the road from Hamât [q.v.] by way of Masyad [q.v.] reaches the sea.

The barrier constituted by the basalt mass of al-Markab is skirted to the north by the Nahr Baniyas, which is swollen by a prolific water-source upstream from Bânîyas, and to the south by the Nahr Markiya, which flows between al-Markab and Khírîb Markiya (ruins of Muracela, Murachea); this coastal stream, according to The itinerary from Bordeaux to Jerusalem, constituted the northern frontier of Phoenicia. According to William of Tyre, this place marked the frontier between the Principality of Antioch and the County of Tripoli.

2. History. Among the early Arab geographers and travellers who made mention of al-Markab, al-Idrísi (Opus geographicum, 644, tr. Jaubert, 130) says that "it is a fortress built on a mountain inaccessible from all directions"; Yázúr says in his Musád that "it is a town and a castle overlooking the shore of the Syrian Sea. It protects the city of Bulunyás and the coast of Djabal [q.v.] All those who have passed by it say that they have never seen anything of comparable might." At the beginning of the 8th/14th century, Ibn Batútá (i, 183) visited al-Markab and mentions it as one of the great castles of Syria constructed on the summit of a high mountain and recalls that Sultan Kaláwín [q.v.] captured it from the Christians (in 684/1285). His contemporary al-Dináqí (ed. Mehren, 288) says that "Híin al-Markab is an impregnable fortress on a 'tongue of land' overlooking the sea". Abu `I-Fidá’î is more laconic, saying only that "al-Markab and Buluníyas are situated on the coast of Híin; al-Markab is the name of the castle overlooking the sea". Finally, al-Kalákshádí, in the 9th/15th century, stresses that "al-Markab is mentioned neither in the Ta’ráj nor the Masálik al-ahbár"; he used material from Abu `I-Fidá’î in his Sud, i, 145-6), saying that "it is a fortress near the coast of the ‘Roman Sea’ (al-Bejr al-Rúm) in the
fourth region and according to the $\text{Zagh}$, (corrective tables of the Ptolemaic measures, one dating from 360/965, the other from 1240/35) situated at long. 60°, lat. 34°45'. It is a powerful and finely-constructed fortress overlooking the sea; at a distance of about one parasang, the town of Biliñyās (sic = Bāniyās) is located.\(^\dagger\)

According to the chronicle of Abū Qālibi Ḥumām b. al-Ḵafīḍ the Muḥādhdhib al-_MAGIC was quoted in Yakut, and according to the $\text{Təwqı̄d al-Kulz}$ wa T-ḫuṣna of Abū Mūḏirī quoted in Abu T-Fīḍah (ed. Reinaud and de Slane, 255), the fortress was built by the Muslims in 454/1062. Al-Dimashqī (ed. Mehrere, 208) states that al-Markan was constructed with stones from previous ruins, often with well-cut blocks found on the site, and attributes its foundation to al-Rahīd. It is hardly probable that the person in question is Ḥārūn al-RaḥĪd, considered by Van Berchem (Voyage, 304, n. 4) to be a proverbial expression, and even less likely is the opinion of G. Le Strange (Palestine, 506) that the reference is to Raṣīḥīd al-Dīn (Sinān) a contemporary of Șaḥāl al-Dīn. It is not impossible that the Raṣīḥīd mentioned by Usāmā b. Munkīdīn and then by al-Dimashqī could be Raṣīḥīd al-Dawla Muḥmūd b. Naṣr, who was Mūḏiṣd amīn of Ḥalab in 452/960-1 and again from 467/1075, a supposition which is not contradicted by the secondary use of ancient materials and which is confirmed by the presence of relics dating back to the 5th/11th century. The citadel was intended to block the advance of the Byzantines, who controlled the province of al-Anṭākiyya, towards the south.

In 494/1101, al-Markan and its hinterland were in the hands of the Banū Mūḥriz, who were also in command of the castle of Kaḍmūs. In the course of an expedition conducted in 497/1104 by the Byzantines against the Syrian coast, the Admiral Cantacuzenus, having been repulsed before the citadel of Ladhīkiyya, disembarked at Bulunīyās, disembaraekd at Bulunīyās (Bāniyās) and took possession, according to Anna Comnena in the Alexiad (\'Ayyūṣ, ed. B. Leib, III, liv, XI, 40), of the important strategic point known as al-Markan (tō xaλloun-μενος Mavrogénov, the Marchapin of the historians) and of other fortified sites in the region such as Sūfiḫā (tō te Ἀργυροκόστερον) and Djabala (tō Υβάλα). In 506/1116-17 the heights of al-Markan represented the frontier of the principality of Antioch. In 510/1116-17 the crops failed as a result of inclement weather and drought and the situation was aggravated by financial inflation; Ibn Mūḥriz, master of al-Markan, was placed in an increasingly difficult position, in that he did not have the means to maintain the citadel and was threatened by the Franks. He even went to the extent of offering to cede the castle to Tughṭākin. The Atābeq of Damascus sent the kāṭīb Ibn Shūlayhā, the former master of Djabala, to his aid. On the advice of Tughṭākin, Ibn Shūlayhā took possession of the fortress and allowed the family of the Banū Mūḥriz to remain there. The same year, Roger of Antioch, having concluded a treaty with the eunuch Lūnū, who governed Aleppo, marched against al-Markan. Pons de Saint-Gilles, Count of Tripoli, came to his aid, but following a quarrel, they abandoned the siege.

Soon afterwards the Atābeq of Damascus negotiated an agreement with the Franks, ceding al-Markan in exchange for Kafanea and the cessation of their attacks on Ḥanām and Ḥimṣ. Ibn Mūḥriz resisted the attacks of Renaud Mazoyer, the master of Bulunīyās/Bāniyās, eventually negotiating with him in 511/1117-18. Renaud took possession of the castle, promising Ibn Mūḥriz that he would be allowed to remain, but the new castellan expelled him twenty-five days later, allotting to him in exchange the fortress of Manīkā in the Djabal Bahrā.

Thus Renaud Mazoyer, High Constable of the principality of Antioch, belonging to an important family mentioned in the Lignages, became the first Frankish governor of al-Markan, with territory embracing the mountainous hinterland as far as Abū Kubays, which overlooked the valley of the Qābih (sic). Frankish and Armenian settlers were established at al-Markan.

After the death of Roger of Antioch at the battle of Ager Sanguinis at Sarmada on 17 Rabi'* 5/1532/28 June 1119, the situation in the principality became tense, and the Mazoyers had difficulty retaining control of the stronghold.

If the Syrian historian al-\(\text{Aṣūmī} \) [g. v.] is to be believed, it seems that the Muslims occupied al-Markan between 525/1130 and 534/1140 during the dispute between the Franks of Antioch and the Franks of Tripoli. The situation caused anxiety to the Franks, as freedom of movement in the coastal area was threatened. According to the Genoese historian Caffaro (d. 1166), the castle of al-Markan was taken from the Muslims by trickery in 534/1140 and seized by Renaud II Mazoyer, who seems to have received the Patriarch at al-Markan. In order to meet the cost of maintaining the castle and its garrison, the castellan of al-Markan was obliged to sell, piecemeal, to the Order of the Hospitallers, his huge domains, part of which lay in the Rūḏ between Anṭākiyya and Afāmiyya [g. v.]. After the death of Renaud II, his son Bertrand Mazoyer, having insufficient resources at his disposal, renounced his claims to the castle; on the advice of the Patriarch Aimery and with the consent of the Prince of Antioch, he ceded to Roger de Moulins, Grand Master of the Hospitallers, by an act of donation concluded at al-Markan on 9 Dhu 'l-Ka‘a’d 581/1 February 1186, the castle with all its territories and dependencies including Bāniyās, Kaḍmūs, Ulāyka and Abū Kubays. On 30 June 1186 Pope Urban III appointed Brother Henry as castellan.

"The fief of Markab corresponded approximately to the bishopric of Bouloúniyya (Valania); after 1188 the bishop of Valania and his hierarchal superior, the archbishop of Apamea, were constrained by the military situation to take refuge within the walls of Markab" (Cl. Cahen, Syrie, 519).

After the victory of Hīṣṭil [g. v.], Șaḥāl al-Dīn was intent on the reconquest of Syria. In Dhumād I 584/July 1188, coming from Tartus, he was obliged to pass by the foot of al-Markan on the coastal road dominated by the Burdāj al-Ṣabī, linked to the castle by a wall. In his advance along the coast he had been followed by the Norman fleet of Sicily,
commanded by the Admiral Margaritus of Brindisi. The ships moored in the cove of al-Markab, and their crews showered missiles on the Ayyubid army, which was only able to continue its northward march with the protection of a veritable palisade erected along the sea-shore, as described by Ibn al-Din al-Ishâhînî (tr. Massê, 125-6). In the principality of Antioch, only the city itself and the fortress of al-Markab remained in the hands of the Crusaders at the end of Salâb al-Din's campaign.

The Prince Isaac Commenus, who became the independent ruler of Cyprus in 1184, gave the Crusaders an unfriendly reception on his island and was taken prisoner, at the battle of Tremithousia on 5 Dhu al-Maharram 587/31 May 1191, by Richard Coeur-de-Lion, who incarcerated him at al-Markab, where he remained until his death in 591/1195.

By means of the tribute levied on the Assassins of Djabal Bahra and their own resources, the Hospitallers were able, after 588/1192, to restore the defences of al-Markab. This site, with Hisn al-Akrâd, became one of the most important items in the defensive apparatus of the Crusaders against the Muslim domain, an apparatus comprising 3'âkkâr, 5'arks, Kdâ'yât, Sâfî'hât (Chastel Blanc), Uraymâ, Kdâ'Fât Yahmûr (Chastel Rouge) and Tartûs, in addition to the towers and subsidiary points linking these various places.

In 601/1204, a general chapter of the Order of the Hospitallers was held at al-Markab under the presidency of the Grand Master. From the beginning of the 7th/13th century, the garrison of al-Markab was in a state of constant conflict with the chieftain of Aleppo. In 601/1204-5, al-Malik al-Zahir Ghâzî [q.v.], whose domains bordered on that of al-Markâb, sent an army to attack the castle; several towers were destroyed but when its leader was killed by an arrow the army withdrew.

In the account of his travels in Syria in 1212, Wilbrand von Oldenburg gives the most complete description available of al-Markab: “A huge and very strong castle, defended by a double wall and surrounded by numerous towers. It stands on a high mountain. This castle belongs to the Hospitallers and is the most powerful defence of the whole country.... The ‘Old Man of the Mountains’ and the Soudan of Aleppo pay to it every year a tribute of 2,000 marks. Each night, four Knights of the Hospital and twenty-eight soldiers mount guard. In addition to the garrison, the Hospitallers maintain 1,000 persons there. The territory surrounding the fortress yields every year crops in excess of 500 loads of sheaves. The provisions gathered there are sufficient to last five years.” (Laurent, Peregintatores, 170). The same author informs us that “for quite a long time, Margat has been an episcopal seat” and that the bishop of Valânia (Bâniyâs) had transferred his residence there.

In this period, pilgrims embarked from al-Markab en route for Sûrâydiyya in the Principality of Antioch, with the aim of avoiding the Muslim towns and territories of the coast.

On the eve of the Fifth Crusade, in 613/1216, Pope Honorius III, successor to Innocent III, sent Jacques de Vitry to preach the Holy War in Syria, where he visited all the Crusaders’ strongholds and praised especially the might of al-Markab. In the same period, Yâkût wrote that al-Markab “is a castle such that all men declare that they have never seen its equal” (v. 108).

The following year, in 614/September 1217, Andrew II, king of Hungary, disembarked at ‘Âkkâ with a Crusader army; at the beginning of

Rama’dân 614/early December 1217 he suffered a defeat before Mount Tabor (Djâbal Thawr) and subsequently returned to Europe. Before leaving Syria, he halted at al-Markâb; he was impressed by its defences and made a substantial donation towards their maintenance. At the end of 614/early 1218, the castellan of al-Markâb enlarged his territory and made himself master of Djabala, whose ruler and inhabitants were obliged to perform an act of allegiance to the Hospitallers.

Having refused Frederick II, the excommunicated German Emperor, any support for his crusade in 1229, the Hospitallers received no aid from him towards the upkeep of al-Markab and Hisn al-Akrâd.

In Rébi’â II 628/February 1231, the troops of Aleppo began once more to pillage the neighbourhood of al-Markab; a truce was concluded at the end of spring 628/1231. In 639/1242, the truce was revoked and the Grand Master of the Order, Pierre de Vieille Bride, resumed a campaign of harassment against the territory of Aleppo from al-Markab.

Towards the middle of the 7th/13th century, al-Markab became an official episcopal seat when the bishop of Valânia (Bâniyâs) transferred his residence there.

From 659/1261, Sultan Baybars [q.v.] launched offensives against the strongholds of the Hospitallers, who paid a heavy price for their defence. The frantic appeals of the Grand Master of the Order, Hugues Revel, went unanswered. But, inasmuch as the Mamlûk sultans feared a revival of the Crusades and an expedition of Christians from Cyprus or from the West, al-Markab, like Hisn al-Akrâd, retained its strategic value. An agreement was reached between the Hospitallers and the Templars regarding the possessions of the Hospitallers in the region of al-Markâb.

In 665/1267, a treaty was concluded between Baybars and Hugues Revel in regard to these two fortresses for a period of ten years, ten months and ten hours; the enforcement of his treaty, accompanied by considerable sums of money, was supervised by the qa’d of the sultan at Hims. In 666/1268, Baybars took possession of Antioch, and seized Djabala and Lâdhîhiyya. In 1270, the sultan pillaged the neighbourhood of al-Markab and of Hisn al-Akrâd. In Shâbân 669/March-April 1281, after the capture of Hisn al-Akrâd by Baybars, the Hospitallers were left with only one fortress, al-Markâb; the Grand Master of the Order was only able to obtain a truce of ten years and ten days—negotiated through the intermediary of the amîr Sayf al-Din Balâban al-Dâwâdâr (Munkhal, no. 689)—in exchange for the cession of half of the coastal region (sâhib) of Tartûs, al-Markab and Bâniyâs and on condition that no new fortresses were to be constructed.

In Dhuâl-Hijjah 670/November 1279, taking advantage of the unrest which broke out in Syria with the accession of Sultan Calâwûn, the Hospitallers launched a raid in the direction of Bukâyâ [q.v.], but withdrew when attacked by the Muslims. On reaching the coast, they turned and routed the Muslims. After the defeat of the Armeno-Mongolian troops, the sultan commanded the amîr Sayf al-Din Balâban al-Tâbbâkî (Munkhal, no. 692), governor of Hisn al-Akrâd, to lay siege to al-Markâb. In Shawwâl 679/September 1281, the Hospitallers made a sortie and repelled the Muslims, inflicting heavy losses. On 22 Muharram 680/13 May 1281, a truce of ten years and ten months was concluded between Kalâwûn and Nicholas Lorgne, the Grand Master of the Hospitallers.
In autumn 680/1281, the latter appealed in writing for help from Edward I, King of England; in September 1281 a Mongol invasion took place in Syria. Kalâwûn succeeded, in Dîjmâdâ II/October, in repelling the Mongols near Hîms, whether the Hospitallers of al-Markâb had sent a contingent to aid the Iljîkân.

In 682/1283, the pilgrim Burchard de Mont Stion mentions in his account the “castrum Margath” — whose defensive might he extolled as belonging to the Hospitallers of St. John — and as the residence of the Bishop of Valania (Laurent, Persgrinitores, 30, 70).

In 1285, the sultan sought to punish the Hospitallers of al-Markâb for the assistance that they had provided to the Mongols. Having assembled at Damascus, in great secrecy, a considerable quantity of siege materials, Kalâwûn appeared before al-Markâb on 10 Sa‘ar 684/17 April 1285. The siege lasted 38 days, and was especially remarkable for the work of the Muslim sappers and miners who dug numerous tunnels under the walls. An exploding mine caused the collapse of the angle of the salient (bashûrd) near the Ram Tower at the southern extremity and sowed panic among the attackers, who withdrew on 17 Rabî‘ 1/23 May. Discovering the number of tunnels dug around the castle, the Hospitallers abandoned their struggle; the amir Fâkhr al-Dîn Muxrî received the surrender, and Kalâwûn entered the castle on 19 Rabî‘ 1/25 May, having given ammas to the vanquished. Aware of the strategic importance of al-Markâb, the sultan, after installing a strong garrison, repaired the defences as is indicated by the large inscription on white marble (cf. RCEA, 310-15, where the French translation by Reinaud is also provided).

In the treaty concluded on 1 Rabi‘ II 684/6 June 1285 between Kalâwûn and Leo III of Armenia, al-Markâb is mentioned among the possessions of the Mamlûk sultan; the district (niydbã) of al-Markâb is the sixth dependency of the mamlûk of Tarâbulûs. The maintenance of the fortress was charged to the private resources of the sultan. Curiously, al-Markâb is mentioned neither in the Masâlik al-Mamalik nor in the district (niydbã) of the governors of the region and that it could be reached from Bâniyâs in an hour and a half by way of a steep incline, in a south-easterly direction. In his Kitâb al-Jamik, Ibn al-Bawwâs indicates that the fortress is one of the important sites of the province of Tarabûls, “the precipitous site of the precipitous sites” including “the precipitous site of al-Markâb”. He gives no description of it and in fact does not seem to have seen it.

From the time of the period of the Burdjiyya Mamlûks [q.v.], al-Markâb is primarily mentioned in the texts in its capacity as a state prison. Among the unwilling guests of this castle were: Sayf al-Dîn Aynabak al-Bâdri, atabak al-‘azîrik (Manhal, no. 622; Ibn Taghibûrî, Nûdûm, xi, 154) and his kinsman Sayf al-Dîn Karatây Ibn ‘Abd al-‘Azîz al-Aghfâri (Manhal, no. 1850), both imprisoned in 778/1376-7. Dîjrâmûr, known as Akhî Tû [Manhal, no. 831; Ibn Kâdi Şubhâ, 98] was sent there on the order of Kîmidâ in Sa‘har 784/October 1382, an experience which did not prevent him becoming governor of Damascus in 791/1389 (Laoust, Gouverneurs, 16). In 785/1383, Sayf al-Dîn Ahmad Akgûba b. ‘Abd Allâh al-Dawwâb (Manhal, no. 478; Ibn Kâdi Şubhâ, 106, 113; Nûdûm, xii, 202, 303) joined him there and was freed a few months later at the same time as the former.

In 791/1389, three amrûs were incarcerated there: Nasr al-Dîn Ibn al-Hadhâmî, nabl of Hamît (Ibn Kâdi Şubhâ, 291), Timûrûghûn known as Mintâkh (Manhal, no. 772) and Bahâdûr al-Shîhûtâ al-Tawâshî (Manhal, no. 702) who arrived there in Dîjmâdâ II/June.

In 800/1397-8, Sayf al-Dîn Shaikh Ibn ‘Abd Allâh al-Šâfawî al-Khîsâshî (Manhal, no. 1184) arrived as a prisoner at the castle and died there a year later. The amir âdhdûk al-Dawadar (Ibn Kâdi Şubhâ, 621) was imprisoned there in 805/1402-3. In the same year, Sudûn min al-Murâbîn al-Bûbûrî known as Tûz (Manhal, no. 1126; Nûdûm, xii, 177, 298) was transferred from the prison of al-Iskandariyya to al-Markâb. Sayf al-Dîn Baktîmûr Dju’llâk al-Zâhirî known as Tûz (Manhal, no. 676) was present there for a short period; imprisoned in 810/1408, he was freed the same year. Sayf al-Dîn Damdûn Ibn Dju’llâk al-Zâhirî (H. Sauvaire, Description de Damas, in JA [1895], x, 308, no. 135) was interned there for a period of time on the orders of al-Malik al-Mu‘ayyad Shaikh and then released in 818/1415. The amir Kâni-Bay b. ‘Abd Allâh al-Muhammâdî (Manhal, no. 1811; Darrag, L’Egoïste sous Barisbey, 14) governor of Damascus who, following a rebellion in 818/1415 was recalled to Cairo, was appointed governor of Tripoli in Rabi‘ II 821/May 1417; shortly after this he suffered a defeat at the hands of the Turcomans, was dismissed and imprisoned at al-Markâb, where he stayed for two years before being freed. Finally, in Rabi‘ II 905/November 1499 (Ibn Iyâs, Mamloouks, 466), the sultan-al-Malik al-Zâhirî Kânswî ordered the imprisonment at al-Markâb of the amir Khâïr-Bak, prefect of the province of al-Qutbûyîn, but then released him.

After his return from Florence, in autumn 1027/1618, the amir Fâkhr al-Dîn b. Ma‘ûn [q.v.] took steps to strengthen his power in Syria; he succeeded in gaining the support of a number of places which had belonged to Yûsûf Çafî, including al-Markâb.

Among the travellers of the 18th century, Richard Pococke, who passed through Syria ca. 1740, noted in his Description (ii, 200) that the castle of al-Markâb, of which he gives a good description, was the residence of the governors of the region and that it could be reached from Bâniyâs in an hour and a half by way of a steep incline, in a south-easterly direction. In his Voyage (ed. Gaulmier, 284), Volney mentioned, in the Syrian coast “various villages, which were formerly fortified towns” including “the precipitous site of Markab”. He gives no description of it and in fact does not seem to have seen it.

3. Description of the fortress. Numerical and alphabetical references are those of the plan drawn up by E. G. Rey (Arch. milit.), copied by Max
van Berchem and Ed. Fatio (Voyage) and by P. Deschamps (Terre Sainte Romane, 140-1).

The configuration of the terrain is responsible for the plan of the castle, which is shaped like an isosceles triangle with its base line facing north. The latter measures 350 m., while the east and west walls each measure 400 m.; the area is more than three hectares. In the southern part is the "body of the site" separated from the remainder of the surface by a wall; the space located to the north of this internal defence is the "bailey", used as a farmyard and containing some outbuildings, enabling the population and the livestock of the immediate vicinity to be gathered within the walls in the event of hostilities.

On the west from of the perimeter wall of al-Markab, some 50 m. above the southern point of the triangle, is a rectangular tower (1), in the short southern side of which a door is located, giving access to the castle; further along are two square towers (2,3) both typical of the architecture of the period between 1140 and 1186. At approximately the mid-point of this slightly concave face, is a large square barbaric (A) to which access is gained by a stepped north-south ramp, then turning at a right-angle, by a small west-east bridge with three arches above the ditch. This entrance permitted access to the "bailey" which extended towards the north and east and to the entrance giving access to the "body of site", the castle as such. It is fitted with a loggia supported by four corbels; the door is framed with two archery apertures and provided with a trap-door and a portcullis.

Continuing towards the north, are found four semi-circular towers (4,5,6,7) lacking their battlements and curtains and in a poor state of repair. In the north-west angle is a large tower (8) which was restored after the siege of 1285. The north face of the perimeter, slightly concave, measures 350 m. This face is in a badly ruined state, with the relics of two towers, one in about the centre and the other (9) further east, 75 m. from the larger tower in the angle (10).

The eastern face is convex as far as tower 16. As on the remainder of the diagram, the perimeter wall with its archery apertures is double; it overlooks quite steep inclines and juts out at this point over a ditch, both sides of which are bricked from a depth of 5 to 7 m. There are the remains of five towers (11 to 15). It is from tower 16 that there began the east-west wall which separated the "body of the site" from the huge expanse of the "bailey", and the stones of which were used in the 19th century by local peasants for the construction of their houses.

The semi-circular tower R, 11.2 m. in diameter, constructed astride the double perimeter wall, comprises several stories. On its defensive front it has a stone "jacket" 17 m. in diameter (16). With the donjon (L), it is the finest construction of al-Markab. To the north of this tower, there was a defensive emplacement (Q) and a square tower (P). In 1211 the perimeter towers of al-Markab greatly impressed Wilbrand von Oldenburg, who said of them that they were "built to support the heavens rather than to provide defence".

By the entry A, there is access to the "bailey"; proceeding further east, a second door (O) is found, also provided with solid defensive structures and its right-angled passage opening on the courtyard (G). The latter is surrounded by a "series of buildings which were places of domestic use. In one of them, are two bread-ovens" and two millstones. The castle maintained five years' reserve of food.

Built on to the south-east wall of these premises (I), there is a building (S) with two superimposed stories, cradle-vaulted and 46 m. long to correspond with the tower (R).

To the south of the "body of the site" are located a chapel (H), a donjon (L), a hall (K) and two other halls (M, N).

The Gothic chapel (H) dates from 1186. It is of rectangular shape with two doors, the one to the north opening on the courtyard (G), the other an ogival portal opening to the west and allowing descent to the parvis by way of a flight of steps. The nave, 23 x 10 m., with walls more than 5 m. thick, has two spans of arched ribs; it is larger than that of Hüs al-Akrâd. Two small sanctuaries open on the sides of the chancel, that on the north side apparently showing the remnants of a fresco. This chapel has retained foliated capitals which resemble those of the first stage of construction of the cathedral of Tartus [q. v.].

Following the Muslim occupation, a mîhrâb was constructed in the sanctuary of the chapel.

The donjon (L), built on the southern angle of the castle, is a powerful tower with circular south front facing a nearby and potentially threatening escarpment. This tower is 21 m. high with basalt walls 5 m. thick, and in the interior are the remnants of a great hall.

Lower down, before the donjon, is a projecting structure (C) the base of which is protected by a "batter". The south face, 21 m. in breadth, is rounded in its central section—hence, by allusion to the prow of a ship, its technical name of "Ram Tower". At the top, under the watch-posts of this tower, a monumental inscription (RCEA, xiii, no. 4858), on a long band of white marble, written in enormous Mamlûk nâshîr characters, commemorates its construction by Sultan Kalâwîn in 684/1285.

A huge building (K) in three stories was constructed at the same time as the donjon (L), as is proved by "the common staircase which serves their upper rooms". This structure, shaped like a parallelogram, has three archery apertures opening towards the south-east and three doors, including a small one opening to the west on a triangular space giving access to the donjon or to the parvis of the church and the courtyard.

To the west of the donjon and the building (K), there are two buildings in two stories of vaulted rooms: M, in which there is a room "decorated with finely sculpted marble capitals", and N, closely linked to the donjon with which it shares a partition and a common passage.

The birka at al-Markab, as in many other places, is located outside the perimeter wall. In this case it is a stone-built reservoir 40 m. long and 10 m. wide; currently, it is less than 4 m. deep. Laid out on a north-south bearing, it was fed with water from mountain springs situated to the north. In times of peace, it supplied the needs of the men and livestock living within the perimeter of al-Markab. During sieges, the garrison made use of a reservoir and above all a well in the interior of the castle.

Ernest Renan, in 1863, referring to the testimony of his two colleagues, Thobois and Lockroy, wrote (Mission, 106) in regard to al-Markab: "Here there is
no sculpture or fine decoration, the design is that of a French 12th century castle. It is evident that in Syria the Crusaders did not have a uniform style of construction. Each of the nations which took part in its building followed its own taste, and all were subject to the constraints of the materials which they found."

According to the testimony of W. N. Thomson, to which Ritter (Erdkunde, xvii, 883) and M. van Berchem (Voyage, 305 n., refer, "it seems that the fortress was still in a good state of repair before the middle of the 19th century".

4. The village of al-Markab. In an assessment of tithe, dating from 589/1193, it is noted that al-Markab exported must, wine, sumac, almonds, figs and pottery. The same products are mentioned in an agreement signed between the Order of the Hospital and the Templars in 630/1233. The "wine of Margat" was extolled by the traveller Burchard de Mont Sion at the end of the 13th century.

This is probably the suburb, built to the north and east at the foot of the slopes of the castle, which is mentioned by Ibn Batuta (1, 183). It was in the spring of 726/1325 that the latter, coming from Ladhikiyya, passed before the fortress of al-Markab, of which he said that it resembled Ḥṣn al-Akrād, constructed on a high eminence; he noted that it was forbidden to enter the castle and that foreigners were obliged to halt an hour before the suburb.

In the early 19th century, the castle of al-Markab does not seem to have greatly attracted the interest of travellers. When George Robinson visited Syria and Palestine in 1828, he took the coastal road and passed through Baniyās on his way to Tripoli; he marked al-Markab on his map, but made no mention of it in the text of his account (ii, 94).

The Ottoman kāmāl residing in the castle of al-Markab, administrative centre of the district of the same name which comprised some 1,500 inhabitants, for the most part Nusayris. In 1884, at the request of the Kāmālīn, the seat of government was transferred to Baniyās.

In 1893, according to V. Cucinet, the kādār of al-Markab was situated to the south of the sandāq of Ladhikiyya: it was then bounded to the north by the kādār of Djabal, to the east by the vilâyet of Syria, to the south by the sandāq of Tripoli and to the west by the Mediterranean. This kādār was divided administratively into three nāhiyās which are Marqāb, Qadmous and Ghaouabi. It contains 393 towns, villages and hamlets. The nāhiyās are administered directly by the cānīmāk (deputy governor), with the exception of that of Qadmous which has a resident mudir in a fort of the nahī of Ghaouabi" (Cucinet, 169-70).

The total population of the kādār rose to 39,671 inhabitants, 27,121 Anṣāriyya. There were almost 200 schools there for 2,060 pupils. The main agricultural products were olives and onions, tobacco and silk which was sold for the most part to merchants in Beirut. Also found in the kādār of al-Markab was the raising of livestock, especially goats.

In 1895, Max van Berchem and Ed. Fatio noted (Voyage, i, 308) that "the mosque, recognised from a distance by a cupola and a minaret-lantern whitewashed with lime, contains some Arabic inscriptions. The most important are two decrees announcing the abolition of taxes, promulgated by two governors of the province of Tripoli, one under Sultan Barquq in 795/1393, the other under Sultan Jaqmaq in 860/1463" (Wiet, Divers, nos. 8, 166).

In 1914 al-Markab was the regional centre, as it was again in 1920. Between 1920 and 1937, this kādār comprised three nāhiyās: al-Markab, Kadmūs and

Ennaya. In 1938 there were, between Baniyās and al-Markab, five Sunni villages, of which one, close to the foot of the castle housed 321 inhabitants in 1945. These villages were dependent upon the kādār of Baniyās. In the neighbourhood there were Maronite, Greek Catholic and Greek Orthodox villages.

Since 1968 this region has experienced considerable economic prosperity with the development of the I.P.C. pipeline and the petroleum port of Baniyās.

5. The isolated tower. At a distance of 1,500 m. in a direct line from the castle, in the coastal plain, on an isolated hillock, stands a tower called Burjud al-Sābi ("Tower of the Boy").

This is a massive square guard-tower, 15 m. high, constructed of blocks of black basalt, held together with white mortar. On each face are constructed five archery apertures 2 m. high in walls 2.8 m. thick. A low door opens in the south-west face, giving access to a groin-vaulted hall; in one of the walls a staircase is constructed, leading to an upper room and thence to a terrace. This guard-tower was closely linked to the castle; its role was to watch over the small bay of the port of al-Markab and to control the coastal road. It is possible that there was a tunnel linking the tower to the castle, permitting the garrison, in time of siege, an outlet to the road or to the port.

The traces of a long defensive wall, which was covered with earth and still visible; apparently in the Middle Ages it linked the coast to the castle. The road passed through a gate in the wall and, in all probability, there would have been a customs-post here.

6. The place of pilgrimage. Nearby, 150 m. from the gate to the south of the castle of al-Markab, is a cave called "el Baiyeh" where, according to popular belief, the Virgin Mary sheltered with the Infant Jesus. At the end of the 19th century this was a place of pilgrimage much visited by the Christian and Muslim inhabitants, especially on 8 September, feast of the Nativity of the Virgin.

AL-MARKAB — MARK(I)SIYYA

MÄRK(IS)IYYA: Marxism

1. Terminology. Marxism is denoted in numerous Islamic languages by a pure borrowing from Anglo-French forms, already adopted by the Russian: marxism (or marxism) in Turkish, Persian, Pugh'tu, Uzbek, Tashkent, Kazakh, etc. The abstract form has been derived from the name of Karl Marx: Arabic márkiyya (often márktisyya on account of the antipathy of the phonological system to a succession of three consonants), Urdu märk-sïdd ("tendency of Marx"). In some languages there is a distinction, as there is in Russian, between an individual Marxist, märkisi, and a Marxist concept or practice, märkisî in Persian, Pugh'tu etc., márktisî (or Uzbek (Russian márktisiki as opposed to märkisî). In Arabic, both adjective and substantive are márkti. On the same model, more recently terms have been coined for "Marxism-Leninism", "Marxist-Leninist" etc.

2. The concept. In the Muslim world as elsewhere, that which is called Marxism is most often conceived as a complete doctrine claiming to explain the world and society, upheld by a school of thought and by a social and political movement designed to bring into reality the conclusions which it draws from this doctrine. There are orthodox forms of the doctrine and of the movement, in other words forms consistent with the thought of the founders (Karl Marx, 1818-83 and Friedrich Engels, 1820-95) and with the reality of things, as opposed to deviant, heretical and erroneous forms. This orthodox concept, official doctrine in the USSR and most other countries, has been adopted, among other places, in the Muslim world, following the tradition of religious or classical religious tendencies attached to a particular founder (cf. mânâwiyya, hanâfiyya, etc.). But its supporters ultimately make of "Marxism" a particular (though very general) science, like physics.

Specialists without affiliation to a "Marxist" organisation tend towards a quite different vision. "Marxian" ideas (those of Marx and Engels) in questions of sociology, economics, philosophy, politics, etc., qualified, fluctuating and often recast by themselves, have formed the basis of multiple doctrinal syntheses, starting with Engels himself. Groupings of political and social campaigners have set themselves up, declaring that they take as their guide one of these syntheses which they claim to be the sole legitimate interpretation of "Marxism" and consistent doctrine. One of these groupings, the Communist Bolshevik Party of Russia, on coming to power in Russia in November (October in the Julian calendar) 1917, codified under the title of Marxism-Leninism the interpretation propounded by its leader Vladimir Iliç Ulyanov, known as Lenin (1870-1924). Under its direction, a large number of Communist Parties were formed, united in the Communist International (Komitern according to the abbreviated Russian form) between 1919 and 1943, and some of these gained power after 1945. Differences of interpretation have continued to appear in these parties (whether in power or not), with dissident groups and parties seceding from them.

It is not to be denied that there are common traits in all these doctrinal syntheses, in certain ideas which are the basis of them or which derive from them. It is only in this sense that it is possible to speak of a "Marxism" which would encompass the many variants. On the level of history, it is also possible to speak of a Marxist ideological movement, comprising numerous branches, derived in the final analysis from the ideas and activities of Marx. Clearly, these terms should be used with caution.

3. Knowledge of Marx and of Marxism before 1917. In the 19th century there was for the first time talk of "Marxism" or "Scientific Socialism" as a complete and coherent doctrine, there emerged, within the vast
European socialist movement, organisations calling themselves "Social Democrats" (united after 1889 in the Second International) which claimed inspiration from the doctrinal synthesis and tolerated numerous variations.

In the first decade of this century, a few isolated intellectuals from the Muslim world became aware of these ideas in Europe, through reading or through contact with organisations. Thus, in Paris, the Tatar student from Simbirsk, Yàsu'uf Ak'kùrà, who published in 1902 in the Young Turk periodical Ġhâni-yi ʿummat (Crimea-Paris) an economic analysis of the Eastern question with reference to Marx, and the Copt Salâma Mùsâ in 1908. For them, as for many others, Marx was an eminent socialist thinker alongside others.

In the Russian empire, the Russian Social Democratic Labour Party, founded in 1898, encompassed or influenced Marxist factions and study groups among Muslim intellectuals and workers, at Kazan from 1902 (among Tatars) and at Baku from 1904 onwards (with Iranians, Armenians, Georgians, etc.). At Baku, one group adopted the name of "Muslim Social Democratic Party Hammâti" (with the sense of effort, energy, co-operation, from the Arabic himmâ). In Iran itself, a social-democratic group was in existence at Tabrîz already in 1905 (with many Armenians involved), requests to join the Marxist theoreticians Georgii V. Plekhanov and Karl Kautsky. At about this date, another group adopted the name of Social Democratic Party of Iran (fîrka-yi iqitima'iyûn-i ʿummiyyân-i İrân). In the course of the Iranian Revolution, the latter seems, through the intermediary of a more substantial clandestine organisation, the mujãhidin, to have taken action aimed at a profound social revolution, invoking the Kurîn and the Shàrrâ.

In the Ottoman empire, tendencies of the same order existed within the Christian minorities. From 1911 to 1914, Yàsu'uf Ak'kùrà, who resided there after having been one of the leaders of the movement of the Muslims of Russia during the revolution of 1905, appointed the German Marxist economist of Russian Jewish origin Alexander Helphand, known as Parvus, to edit (with personal editorial responsibility) the economic column of his journal Türk Yurdu at Istanbul.

The more radical social democrats of the colonising countries sometimes supported the nationalists of the Muslim lands and guided them in the direction of social struggle. An outstanding example was the Dutch social-democrat H. J. F. M. Sneevliet who, taking up residence in 1913 in the Dutch East Indies, founded there in 1914 the Indian Social Democratic Association (Indische Sociaal Democratische Vereeni- ging) whose members included other Dutchmen, Eurasians and a few Indonesians.

4. Knowledge of Marx and Marxism after 1917. Within the Russian Social Democratic Labour Party and the Second International, V. I. Lenin defended his own stance and defined the other tendencies as "an anti-Marxist current in the bosom of Marxism". He thus made the struggle for an exclusive orthodoxy a primary pre-occupation for his own tendency, that of the majority (Russian bolsheviks) in the Party (a temporary majority in this case), which became virtually an autonomous party in 1912 and seized power in Russia in October/November 1917.

The new Soviet power, endowed with considerable means and considering itself the first territorial resort of a worldwide revolution, consequently saw as a priority the diffusion of the works of Marx and Engels, as well as those which condensed their doctrine according to the canonical interpretation, the writings of Lenin in the first instance.

The accepted leaders of all the Russian communist parties (united in the Third International from 1919 to 1943) which were founded throughout the world on the model and the inspiration of the Russian Communist (Bolshevik) Party and of the parties and groups produced by schisms within the communist movement. Each grouping added to the so-called "classic" works of the founders other texts, those of the successive supreme leaders of the Soviet Union (especially Lenin and Stalin), those of the leaders of the various national parties, those of heads of groups of tendencies (above all Leon Trotsky), those of certain theoreticians considered particularly orthodox, or text-books defining the various orthodoxies. Meanwhile the Second ("Socialist") International continued to attempt a parallel diffusion of texts, but on a much smaller scale and with much less exclusive reference to a Marxist orthodoxy.

This massive activity of editing and diffusion was naturally performed in the languages relevant to each party or group. The Soviet state also published translations of selected texts into the many languages of the Union or of the outside world. In the Muslim countries, parties, groups and sub-groups undertook the diffusion of works published in Soviet and (later) Chinese editions and (often in association with the latter) in editions emanating from the Communist publishers of the major western countries. Often, in times of isolation or difficulty, they produced and diffused, by impropers means, their own translations and the texts of local leaders.

There exists no general bibliography of this immense literature, written in so many languages. Only a bibliography of bibliographies of editions of the "classics" of Marxism, edited in the USSR and elsewhere in the Azeri, Albanian, Bashkir, Kazakh, Tatar and Uzbek languages, is to be found in L. Levin, Bibliografija bibliografii proizvedenij K. Marks, F. Engelsa, V. I. Lenina, Moscow 1961 (see index by language).

For the purposes of a typical example, it may be noted that one of the texts most widely translated and distributed in the Stalinist era was the second section of Chapter iv of the Istoriya vseusskogo kommunisticheskoy parti (bolshevik) of the "History of the Party of the Soviet Union (Bolshevik), short course", Moscow 1938. The sub-title was "course composed by a commission of the Central Committee of the C(b)P of the USSR, 1938". The section in question (it was leaked out that the author was Stalin himself) entitled "Historical materialism and dialectical materialism", set out to summarise (in 30 pages in the French edition of Moscow) "the theoretical basis of communism, the theoretical principles of the Marxist Party". Every communist group considered it a duty to distribute this text, reckoned to be fundamental. Cf. for example, in Arabic, Yàsu'uf Sàllîn, al-Mâṭdiyya al-dàyâliyya wa-l-ta'rîkhîyya, Baghdad, Mathâ'am al-Râshîd, 1944, 50 pp., in the collection Rasā'îl al-bâth "Essays of the Renaissance" (there was no connec- tion here with the still embryonic Ba'th Party).

5. The Marxist groupings. Bearing in mind that which has been stated above, it is difficult to characterise a group as Marxist unless (directly or indirectly) it expressly declares itself so. On the other hand, it is not possible here to give a complete list of the Marxist groupings present in the Muslim world. Such a list would have to include: (a) Marxist study
groups; (b) groups and parties which called themselves “social democrats” before 1919 (some of them continuing to do so today), which those declared themselves “communists” (Arabic ghiyūţ, in other languages usually transcriptions of the European or Russian word) after this date; (c) groups and parties which adopt other designations, but which declare themselves inspired by Marxism and whose ideological and political programmes are to be identified with those of social democratic and communist parties, such as the Tādi (‘Masses’) Party of Iran; (d) trade unions and so-called mass or popular organisations (of women, students, youth, peace campaigners, etc.), such as communist parties customarily create around themselves, in order to be assured permanently of a number of sympathisers, when it is established that these “popular” groups closely follow the line of a Marxist movement, mostly of a communist movement; (e) groups, parties or organisations which declare themselves “socialists”, groupings or association which are attached to them, but only when they state categorically that their main inspiration is from Marxism.

6. Attitudes to Marxism. In the Muslim world, attitudes in regard to what is known and understood from Marxist ideas have varied as much as have attitudes in regard to organisations, and then states, which, although Marxist or were supposed to be so, the whole being most often considered as constituting a coherent unity.

The attitude of men of religion has been influenced above all by the atheism which they considered to be the corner-stone of Marxist thought and even to be the major innovation of Marx, thus displaying their ignorance of the irrereligious tendencies of European thought before Marx and alongside the Marxists. The anti-religious policies and atheistic propaganda of the Soviet State have inevitably reinforced this concept, still very widespread. The connection in actual fact of this philosophical atheism with Marxist economic and social principles has evoked memories of Muslim religious history: the Ismā‘īlī heresy being especially perceived on the basis of accounts of the Carmathian [see Carmathi, “communards”] and the Nizārī terrorism [see Ismā‘īliyya], with its supposedly non-Muslim instigators, the “communists” Plato and Mazdak. Against these ideas, prominence was given to the right of private property guaranteed by the Kur‘ān and the Sunna.

A quite different attitude, developed especially in certain circles after the Second World War, has seen in Marxism a kind of encyclopaedic scientific and philosophical synthesis giving sure guidance on action in the social sphere. Its role has been compared with that played by the Aristotelian encyclopaedia in the mediaeval Muslim world (cf. A. Larroui, L’idéologie arabe contemporaine, Paris 1967, 152 f.).

Attitudes have been particularly influenced by the policies of states claiming to be Marxist. During the 1920s and again after the Second World War, a series of states and movements have seen in them allies against Euro-American imperialism. In many cases, the sympathy engendered by this alliance was extended into attraction towards the doctrine reckoned to be basic to the general attitude of Marxist states and movement. In other cases, alliance of the external level has been able to coincide with the persecution of local Marxists.

Nationalists of Muslim countries have been able to denounce the internationalism which is an essential principle of the Marxist movement, with its antipathy towards total and unhesitating adherence to purely national objectives. Similarly, they have denounced the nationalism which could be disguised by this theoretical internationalism: the Russian nationalism of the Soviet State, the nationalism of the community parties of the colonialist countries (France, Britain, etc.), Zionist Jewish nationalism, etc.

7. Influence of Marxist ideas. The Marxist movement, most often indirectly, has diffused in the Muslim world ideas and elements of Weltanschauung which, although alien in many cases, it has systematised and popularised in its own way. They have been widely adopted, even in circles hostile to theories and political initiatives emanating from the Marxist movement.

This applies in the case of appeal in a voluntarist vein for the structural transformation of the social sphere, the traditional structures being judged to constitute permanent causes of exploitation and oppression. Dissatisfaction with the established order and the demand for justice are given a great value at the expense of the traditional attitude of Islam (among other religions and philosophies), which sees in this a culpable rebellion against the order willed by God. Transformation cannot be achieved by a moral change, by conversion, but by an organised struggle on the part of the disadvantaged against the privileged, by pressures exerted by strikes, demonstrations, etc., and the like (reformism) or by a genuine civil war, a revolution. Circumstances having favoured the revolutionary options, the term “revolution” (Ar. thawra) and its synonyms (imkādāb, etc.) have acquired a quasi-mystical quality.

The Marxist movement, born in Europe, had given the primary role to the transformation, reformist or revolutionary, according to the tendencies, of industrial European society. In its communist branch, it had however also appealed for the revolt of colonised or dependent peoples, reckoned to be exploited and oppressed by the western ruling classes just like the proletarians of the industrial world. This appeal was taken up to the point of a complete inversion of priorities. Some doctrinarians, starting with the Tādi (‘Masses’) Party of Iran; the Tudes, the Tūdī Sultan Ghaliev (see below) in Soviet Russia in the 1920s, placed on the primary level the struggle of “proletarian nations” against the totality of industrial nations, reckoned to exploit and oppress them with the complicity of and for the partial benefit of their own proletarians.

This theme of the exploitation of the colonial world by the industrial capitalist world which robbed it of its riches had been developed by Lenin as an appendix to the primary doctrine of internal exploitation. It had enormous success in all circles of the Islamic world. The term of imperialism which expressed this process, often confused with that of “colonialism” (Ar. isti‘mārīyya), was taken up by the most anti-Marxist elements and became a leitmotif (with some conceptual efforts to distinguish in a more precise fashion between “colonialism” and “imperialism”) in the Islamic world.

The diffusion of these dynamic ideas has been combined with an internal evolution, complex in origin, which tended towards a veiled secularisation, a recoil from specifically religious values (the quest for salvation, etc.) in favour of the primacy of earthly activism (which has always been regarded as important in Islam). This activism is often invested in the defence and promotion of the Muslim umma or one of its parts but this objective henceforward takes precedence over piety and religious observance. Biographies of Muhammad place far greater emphasis
on his earthly works than on his rôle as a messenger of the divine will.

There are limits to the influence exerted by communism more or less Marxist in source in the world of Islam. The nationalism which is such a dominant force in this world (including the form of nationalism attached to the Muslim umma [see KAWMIYYA]) inspires distrust, to say the least, of any analysis of the classical Marxist type which identifies, within the struggling nation itself, exploiters and oppressors to be resisted. The vision of an end of history and an egalitarian classless society has not easily taken root; traditional Islam with its hierarchies of wealth and power being considered to constitute already a society without classes as such. Similarly, the internationalism which is fundamental to Marxism (although often abandoned in practice) could hardly be expected to tempt a public opinion moulded by nationalism.

A very widespread moralism also spurns the essential determinism of Marxism (even though Marxists have often been inconsistent on this subject in practice). Finally, in spite of the logical possibility of dissociating from atheism the political, sociological, social and strategic conclusions of historical Marxism, in spite of the sporadic efforts by communist parties to emphasise this dissociation, there is avoidance of any affiliation which could be interpreted as a public proclamation of atheism or (perhaps even more repugnant) a falling into question of the supra-human origin of the sacred books, the Qur'an in particular. Atheistic propaganda, often amounting to restraint of religion in the communist states (without going in general to the extreme lengths of Albania, which has radically suppressed churches and mosques), causes unease, even among the leaders of movements or states which have chosen for strategic reasons to ally themselves with the former in a given period.

8. Marxist view of Islam and the Muslim world. Marx and Engels were not greatly interested in Islam as a religion, and as such it was subject to their general criticism of religious consciousness. Only the late reading by Engels of a book by the Anglican priest and orientalist Charles Forster, *The historical geography of Arabia* (London 1844) awakened in him reflections which he communicated to his friend and briefly commented upon by the latter (Marx and Engels, *Briefwechsel*, i, Berlin 1949 (= Moscow 1935), 568-90, letters of 18 (? May, 2, 6 and 14 June 1853. At the end of his life, Engels, inspired by the revolt of the Sudanese Mahdi [see AL-MADHIYYA], compared Muslim revolts to the religious uprisings of the Christian Middle Ages, more "progressive" in his opinion (*Zur Geschichte des Urkristentums*, in *Die Neue Zeit*, xiii/1 (1894-5), 4 ff., 36 ff. = Marx-Engels, *Werke*, Berlin 1963, xxii, 446-73, at p. 450). In general, both authors tend to explain the religious phenomena of Islam in terms of historical sociology and insist on the "stagnant" character of the "Orient" in general (cf. also *Marxisme et Algérie*, texts edited by R. Gallissot and G. Badia, Paris 1976).

The two founders followed much more closely the international events affecting the Ottoman Empire, the "Eastern Question". A favourable attitude towards the Ottoman Empire, inspired by their hatred of Russia, Turkey's enemy and supposedly the bastion of international reaction, led them to take a certain interest in Ottoman institutions following the example of their ally against Russia, the passionately Turkophile (and Turcophone) British parliamentarian, David Urquhart (1805-77), a conservative member of the House of Commons, who as a parliamentarian had been at pains to dampen the enthusiasm ("sentimentalist" and "poetic") of French Marxists (the Guesists) for the revolt of 'Urabi, in his opinion a *puits* like any other (cf. his letter to E. Bernstein, 9 August 1882, in Marx-Engels, *Werke*, Berlin 1867, xxxv, 349 ff.).

The Marxist theoreticians of the Second International showed even less interest in the world of Islam, with the exception of Parvus (see above) and some examples of the destruction of the "natural economy" by capitalism in Kabylia mentioned Rosa Luxemburg, quoting the Russian sociologist M. M. Kovalevsky. Indignation at the traumas wrought by colonisation was counter-balanced, as it had been among the founders, by the conviction that socialist revolution could only be produced in the industrialised world as a result of the maximum development of capitalism. Only subsequently would the event have world-wide repercussions.

After the Russian Revolution, the Third International included in its strategy the insurrection of colonies against the capitalist metropolitan powers, while maintaining the priority of revolution conducted by the proletariat in these metropolises themselves. This often led to more or less elaborated attempts at analysis, both on the part of communist parties (and eventually dissident factions) established in the colonial and dependent countries, including Islamic countries, and on the part of those of the metropolises whose duty it was to support, even encourage, the revolt of their colonies.

In Soviet Russia itself (subsequently transformed into the Union of Soviet Socialist Republics), the Tatar Mir Sa'id Sul'tan Qhaliev and his companions, originally from nationalist and reformist [see ւալըռ 5. Central Asia, in Suppl.] circles but impregnated with Marxist ideas, adhered to the Bolshevik Communist Party and initially collaborated with the new power. Sul'tan Qhaliev then elaborated his doctrine on the specificity and the globally "proletarian" nature of Muslim society, the primacy of the Muslim East in the struggle against world capitalism, the "progressive" and "democratic" nature of the Muslim religion. Expelled from the Party in 1923, his ideas evolved still further. He drew up plans for a Colonial Communist International and for a Socialist State of Turan (researching Muslim and Turco-Mongolian sources under Marxist concepts). He was forced to go underground and finally eliminated.

Studies of Islam and of the Muslim peoples have been developed in the USSR, naturally on Marxist lines as soon as the level of somewhat generalised conclusions has been reached. Particular attention is paid to the Muslim peoples of the Union, from among whom specialists have emerged. Advantage has been taken of the pre-revolutionary tradition of Russian orientalism which took a special interest in problems of economic and social history. In the communist states of Eastern Europe, studies have followed the same model on the basis of somewhat different academic orientalist traditions. In addition to numerous detailed studies, attempts at synthesis have been hampered by the ideological monopoly of the Party which reserves for itself the right to any general conclusion, however minor. Interpretations have also been required to follow the lines inspired by fluctuations of official ideology in general and above all by successive strategic attitudes adopted in relation to Islam, the Muslim populations of the interior and the Muslim states of the exterior.

The communist parties of the capitalist countries or of the Third World have undertaken virtually no research in general on Islam, other than sometimes encouraged their members to study a particular Muslim country or patronised their works. Outside or
on the margin of the orbit of communist states and parties, Marxist or quasi-Marxist studies have been published in increasing numbers with, in general, a great deal more originality.

Among the most interesting studies are economics-based analyses of contemporary developments in the Muslim world, some of them written by natives of these countries. More generally, intellectuals of the Muslim world tend to take as their guide in numerous domains the neo-Marxist synthesis codified in the Soviet Union, presented as “the authentic Marxism” and regarded as a kind of new science throughout the Third World. For this reason there is frequent recourse to the works inspired by this synthesis even in circles hostile to the political, social and ideological options of the states and parties laying claim to Marxism.

MARMARA DENİZI, the Turkish name of the Sea of Marmara.

1. The Sea itself.

(a) Geography. This is a small sea within the borders of Turkey, communicating with the Aegean Sea through the Dardanelles [see ÇANAK-KALE' BOĞAZI] and with the Black Sea through the Bosporus [see BOŞPORUS]. Istanbul is the most prominent city on its shore.

The Sea has a surface area of 11,550 km²; its greatest length, from the Dardanelles to the end of the Gulf of İzmit, is 260 km; its width between Silivri on the Thracian side and Bandırma on the Anatolian side is 80 km. Its greatest depth reaches 1,355 m roughly in its geographical centre, but it is much shallower around the central depression, mostly under 200 m. The salinity of its water is relatively low, from 22/1000 near the surface to 38.5/1000 at 30 m. and deeper. A surface current flows towards the Dardanelles, while a deeper counter-current moves in the opposite direction.

In antiquity, it was called Propontis, and was thus distinguished from the Dardanelles and the Bosporus; this distinction was continued by mediaeval European authors, but not by the Muslim ones, who usually bracketed all three phenomena under the term al-Khalīja “The Strait”, often specified as that of Constantinople: Kahlīj al-Kustantīniyya or al-Khalīj al-Kustantīni. This lack of terminological discrimination on the part of early Muslim authors was symptomatic of their unfamiliarity with the exact configuration of the area, although some seem to have been aware of the considerable variation in the width of this “Strait”; thus al-Masʿudi, writing in 934/966 (Tanbih, 66) states that the width at “Filās” is 40 miles. A hint of this sea appears on al-Idrīsī’s map of A.D. 1154, although there too we find the usual single name of Kahlīj al-Kustantīniyya. The attempt by the Arabs to conquer Constantinople, especially those of 979–9715–17, during which their fleets sailed through the Sea of Marmara, were obviously too brief and transitory to leave a clearer idea of this sea. The difficulty of sailing through the Dardanelles, and the fact that armies and travellers usually crossed from Anatolia to Thrace through this strait, may also have attracted the Muslims’ attention thither and have obscured the small sea between it and Constantinople. A better understanding of the actual geographical nature of the area appears in Abu ’l-Fidāʾī’s Tākīm al-buldān, composed by 721/1321, where the Sea of Marmara is described without, however, being assigned a name: “When travellers have entered it [i.e. the Kahlīj al-Kustantīniyya], it widens and resembles a lake (bi‘rā).” Abu ’l-Fidāʾī’s lack of any specific name for the Sea of Marmara is also illustrated by his description of the passage to the Marmara Island as “one of the islands of the Mediterranean (Bahr al-Rūm)”, with the remark that “it is in the midst of al-Kahlīj al-Kustantīnī” (Tākīm, 34, 188-9).

(b) History. The Sea of Marmara came permanently within the Dār al-Islām with the Turkish conquest of Byzantine territory. The beylik of Karaf [q.v.] was the first Turkish principality to reach the Sea of Marmara, occupying, during the first half of the 8th/14th century, its southern shore from the Kapatdagi peninsula to the Dardanelles. Karaf, extending also along the Anatolian side of the Dardanelles and along the adjacent part of the Aegean shore, became a maritime power: its principal naval base was Edineği on the Gulf of Erdik. The experience of Karaf sailors, gained in their encounters with the Byzantines, proved useful to the Ottomans after the latter had absorbed Karaf towards the middle of the 8th/14th century and after they had further extended Turkish domination to the remaining, eastern part of the Anatolian coast of the Sea of Marmara. At that point, the arsenal of Edineği was joined by other naval installations such as Mudanya, Karamürsel and İzmit. Although these shipyards and bases were eventually eclipsed by those of Gallipoli [see GELİBOLU] and Kâşımğaç, those on
Marmara's southern shore, so significant in the incipient period of Turkish maritime history, retained their importance, some of them to this day.

In contrast to the northern, Thracian shore of the Sea of Marmara, the northern, Thracian shore was occupied by the Turks more gradually and as byproduct of the Ottoman penetration into the Balkans and of the eventual conquest of Constantinople. Lacking the bays and natural or man-made harbours characteristic of the southern shore, the northern shore never played a similar role in Turkish maritime affairs, except for Istanbul itself, of which the Kadırga Limanı was developed by Mehmed II and had some importance until Selim I founded the arsenal of Kâşifpaşa on the Golden Horn.

After the Ottomans had established themselves in Rumelia and had taken Constantinople, the Sea of Marmara became a Turkish lake and has remained so to this day; a certain limitation on Turkish sovereignty over this sea, however, has existed since the 19th century, for the special status of the Straits of the Dardanelles and the Bosphorus affects Marmara as well. Its secure domination by the Ottomans was in part responsible for the relatively uneventful place this sea had in Ottoman naval history, and for the neglect it received in Ottoman literature. The Sea of Marmara is not described in the text of the Kilâb-i Bahriyye, the 10th/16th century Turkish portolan by Piri Re'is [q.v.], although the first, “draft” version of the work does include brief chapters on the Marmara Island and the Princes' Islands, and its map does appear in some manuscripts. It is still anonymous in the Tuhfat al-kibrî fi asfar al-bîhâr by the 11th/17th century author Kâtip Celebi [q.v.]: “It (i.e. the Mediterranean) ends at Bûzqâ-ada (= Tenedos). Between the inner side of the Strait (i.e. the Dardanelles) and Istanbul, there is a small sea whose circumference amounts to 700 miles... There are islands in it: Marmara, Imlâlî, Kîzîl adalar (= the Princes' Islands)...” (1729 ed., p. 2b). In the Liḥân-nâmâ, the cosmography by the same author, however, there is already a reference to this sea as “Bahr-i Marmara” (1732 ed., p. 667). This name, derived from that of the Marmara Island, had received in Ottoman literature. The Sea of Marmara, the northern, Thracian shore was usually within the eyâlet of Djaza'î al-Kustantiniyya); Pauly-Wissowa, s.vv. MARRAKUSH (popular pronunciation Merrdksh, Merrâkush, Marrakkush, Merrâksh, Merrâksh, Marraksh), one of the residences of the Turkish Republic, the island remained uninhabited until in 1955 a penitentiary was placed on it, the inmates practising some of the traditional occupations of the former inhabitants.

2. The island after which the Sea of Marmara is named.

Marmara, the classical Proconnesos, is the largest island in this sea, with an area of 200 km². It is the principal one in a cluster that includes Avşa (also called Türkeli), Pashalimani, and a few other smaller ones, near the Kaplâdağ peninsula, the latter originally also an island but eventually linked to the southern shore by a process of marine sedimentation. Marble quarries, exploited on Marmara Island since antiquity, gave rise to its later name. The population of these islands was until the recent exchange chiefly Greek-speaking, but was then replaced by Turkish immigrants from Crete and Bulgaria. While fishing, fruit and olive growing, and vegetable gardening (and until recently, lumber exportation, which has disappeared with the completion of deforestation), were the traditional occupations of the population, tourism has now taken precedence as the main industry of these islands, with regular boat service between Istanbul, Marmara (the chief town and harbour on Marmara Island) and Avşa. Administratively, the Marmara Islands form a bucakt within the ilâ of Edeke of the il of Balıkesir. The second group of islands within the Sea, the Princes' or Prince Islands, in Turkish simply Adalar or Kızıl Adalar, is a cluster situated between 15 and 22 km from the northernmost point of Istanbul and about 5 km from the Anatolian coast. They consist of four larger islands (Kınalı, Burgaz, Heybeli and Büyükada) and five small ones. Together they form an ilçe within the il of Istanbul; Büyükada, Heybeli, and Burgaz-Kinah form individual bucaks within this ilçe. The largest of these, Büyükada, lit. “the large island”, was called in Byzantine times Frinkibo, but its classical name as mentioned by Pliny, that of Megale (Naturalis historiae...), v, 151 was a semantic ancestor of the Turkish name. In the Byzantine period, these islands were the occasional place of banishment or seclusion for members of the ruling family or for other important persons; in recent times, they have been the favourite resort of Istanbul's wealthier citizens. Heybeli harbours two establishments which train officers for the Turkish navy: the preparatory Deniz Lisesi, and the higher Deniz Harp Okulu, the latter the continuation of an older school at Kâşifpaşa, whence it had moved in 1851.

Aside from these two groups of islands, there is the isolated İmralı, Byzantine Kalolimni, an elongated island near the beginning of the Gulf of Gemlik. After the departure of its Greek-speaking population during the period of exchange, it was seen by the Turks as a by-product of the Turkish Republic, the island remained uninhabited until in 1955 a penitentiary was placed on it, the inmates practising some of the traditional occupations of the former inhabitants.

3. Administrative organisation.

In administrative terms, during the Ottoman period the greater part of the coast of the Sea of Marmara was usually within the eyâlet of Dja'ârî-alî-Bâhriî (q.v.); the special province under the Kapudan Paşa [q.v.] administered from Gallipoli.

Today, these shores are distributed among six ilçes, named after their administrative centres: Istanbul, İzmit (also called by its historical name of Kocaeli), Bursa, Balıkesir, Çanakkale and Tekirdağ.

about 1890 the town was always known as Morocco.

The kingdom of Morocco, distinct in origin from those of Fás and the Súís, finally gave its name to the whole empire. At one time it only consisted of the country south of the wádí Umm Rabís as far as the range of the Great Atlas.

Marrakesh is situated in 31° 37' 35" N. lat. and 7° 59' 42" E. long. (Greenw.). Its mean height above sea-level is about 1,510 feet. The town is 150 miles south of Casablanca. It is through the latter that the main road to Marrakesh and Europe passed.

The temperature which is very mild in winter is very hot in summer. The average maxima of 39°6 in the month of August 1927 have nothing unusual and imply extreme temperatures reaching or passing 50° on certain days. Rainfall is low (284.5 mm. in 1927, against 706.5 in Rabat and 1,007.3 in Tangier). But water fed by the snows of the Atlas is found at a great depth. It is collected by a system of long subterranean tunnels (khattdra, plur. khadir; [see KANAT] which bring it to the surface by taking advantage of the very slight slope of the terrain. This method of obtaining water has enabled the vast gardens which surround the town to be created. The Almohads and the dynasties which succeeded them also built aqueducts and reservoirs to supply the town with water from the springs and streams of the mountains.

Contrary to what was until quite recently believed, Marrakesh has for long been the most thickly populated town of the empire. The census of 7 March 1926 gave 149,263 as the total population, 3,652 Europeans, 132,893 Muslims, 12,718 Jews. In 1936 the figures were respectively 190,314, 6,849, 157,819 and 25,646; in 1947, the city had a total of 241,000 inhabitants. The probable growth of the population is not sufficient to explain the difference between the present-day figures and the old estimates, almost all far too low. The figures vary greatly among themselves: from 20,000 (given by Dieudonné de Torres in 1585 and Hóst in 1768), 25,000 (Saint Olon, 1693), 30,000 (Ali Bey al-Abbassi, 1804), 40 to 50,000 (Gatell, 1864, and E. Aubin, 1902), 50,000 (Lambert, 1868), 60,000 (Beaumier, 1868), 80 to 100,000 (Washington, 1830) up to the obviously exaggerated figure of 270,000 given by Jackson in 1811.

About 40 miles north of the Atlas, the vast silhouette of which, covered by snow for eight months of the year fills the background, Marrakesh is built in a vast plain called the Hawz which slopes very gently towards the wádí Tansift, which runs 3 miles north of the town. The extreme uniformity of the plain is broken only in the north-west by two rocky hills called the Tansift and to the east stretches a great forest of palm-trees, the only one in Morocco north of the Atlas. It covers an area of 18,000 hectares and possesses over 100,000 palm-trees but the dates there only ripen very imperfectly.

The town is very large. The ramparts of sun-dried mud which run all round it measure at least 7 miles in length. The town in the strict sense does not occupy the whole of this mass. The town consists mainly of little low houses of reddish clay, often in ruins, among which were scattered huge and magnificent dwellings without particularly imposing exteriors built either by the viziers of the old Makhzen (e.g. the Bāhiya, the old palace of Bā Hmād [q. e. in Suppl.], vizier of Mawlāy al-Ḥasan) or by the great kāşiks, chiefs of the tribes of the country around. The narrow and overhanging streets in the central area broaden towards the outskirts into sunny and dusty squares and crossroads. The colour, the picturesque architecture, the palm trees, the branches of which appear over the walls of the gardens, the presence of a large negro population, all combine to give the town the appearance of a Saharan ksar of vast dimensions.

The centre of the life of the city is the Djámā al-Fná, an irregular, ill-defined open space, surrounded in the early years of this century by wretched buildings and reed huts, overshadowed by the high minaret of the Kutubiyya Mosque. Its name comes, according to the author of the Tarīḥ al-Sūdān, from the ruins of a mosque which Ahmad al-Manṣūr had undertaken to build there; "As he had planned it on a wonderful scale, it had been given the name of mosque of prosperity (al-ḥanā); but his plans being upset by a series of unfortunate events, the prince was unable to finish the building before his death and it was therefore given the name of mosque of the ruin (djamā' al-ḥanā')." This origin having been forgotten, an attempt was made later to explain the name of the square from the fact that the heads of rebels used to be exposed there. It was there also that executions took place. Lying on the western edge of the principal agglomeration of buildings, it is the most thickly populated part, close to the sāk, connected with the principal gates by direct and comparatively quiet roads, Djámā al-Fná is the point of convergence of the roads. At all hours swarming with people, it is occupied in the morning with a market of small traders: barbers, cobblers, vendors of fruit and vegetables, of medicines, of fried grasshoppers, of tea and of soup (harīta); in the evening, it is filled with acrobats and jugglers (Awlād Sīlīm ʿAbbās ʿUz Mūsā of Tazaerwalt), sorcerers, story-tellers, fire-eaters, snake charmers and gūlāb dancers. The audience consists mainly of people from the country who have come into town on business and want to enjoy the distractions of the town for a few hours before going home. These visitors are always very numerous in Marrakesh. Besides the regular inhabitants there is a floating population, the number of which may be of the order of 10,000 persons. For Marrakesh is the great market for supplying not only the Hawz but also the mountain country, the Sūís and especially the extreme south, Dādes, Dar'ā (Dra') and the Anti-Atlas. Marrakesh used to be the starting-point for caravans going through the Sahara to trade with Timbuktu. They brought back chiefly Sudanese slaves from Marrakesh was an important market. The conquest of the Sudan by France put an end to this traffic.
To the north of the Djama al-Fna begin the suks, which are very large. As in Fas and in the other large towns of the valley, the suks are extended by the authority of the muhtasseb [q.f.]. The most important suks are those of the cloth merchants (kisiriyya), of the sellers of slippers, of pottery, of basket work, of the embroiderers of harness, of the dyers and of the smiths. An important Thursday suk (al-khamis) is held outside and inside the walls around the old gate of Fas which has taken the name of the market (Bab al-Khamis). This suk was already in existence in the 10th/11th century.

There is no industry to speak of in Marrakesh. The most important is the making of leather (tanning). The manufacture of slippers occupied 1,500 workmen who produce over 2,000 pairs each working day. There are the only articles manufactured in the town that are exported. They are sold as far away as Egypt and West Africa. For the rest, Marrakesh is mainly an agricultural market. The whole town is a vast fondouk (funduk) in which are warehoused the products of the country, almonds, carraway seeds, goat-skins, oils, barley, wool, to be exchanged either for imported goods (sugar, tea, cloth) or for other agricultural produce (wheat, oil, which the tribes of the mountains and of the extreme south for example do not have).

The town is divided into 32 quarters, including theMuslim law is administered in Marrakesh by three kadis: one is established at the mosque of Ibn Yusuf; the other at the mosque of al-Mwāsīn and the third at the mosque of the kisba. The latter's competence does not extend beyond the limits of his quarter. That of the others extends over the whole town and even over the tribes of the area governed from it who have no local kādis.

Marrakesh is not numbered like Fas, Rabat and Tetuan among the kadārisiya towns, i.e. it has not, like them, an old-established citizen population, of non-rural origin, with a bourgeoisie whose tone is given by the craftsmen and by the merchants driven from Spain. In the 10th/11th century, however, Marrakesh did receive a colony of Moriscoes large enough to give one quarter the name Orgiba Diadjida, a reminiscence of Orgiba, a town of Andalusia from which they came. The foundation of the population consists of people of the tribes for the most part Berbers or Arabs strongly mixed with Berber blood. Shīlah (shaghīla) is much spoken in Marrakesh although the language of the tribes around the town (Rḥámma, Īḍāya) is Arabic. The movements of the tribes, the coming and going of caravans, the importation of slaves from the Sudan have resulted in a constant process of mixing in the population, and the old Masmūda race which must, with the Almoravids, have been the primitive population of Marrakesh is only found in combination with amounts difficult to measure of Arab, Saharan and negro blood. Even to-day this process is going on: the newcomers come less from the valleys of the Atlas than from the Sūs, the Dra and the Anti-Atlas, from the extreme south which is poor and overpopulated. The greater number of these immigrants soon become merged in the population of the town; but the Enquête sur les corporations musulmanes, conducted by L. Massignon in 1923-4 (Paris 1925) yielded some very curious information about the survival in Marrakesh of vigorous groups of provincials, specialising in particular trades: the makers of silver jewellery (at least those who are not Jews) owe their name of tāgānasīyin to the fact that they originally came from Tagmut in the Sūs; the Meshîwa are charcoal-burners and greengrocers, the Ghrîba, the Ghîrâba, the Todgî, the ghâfas, the khatībīyin, i.e. diggers of wells, who specialise in water-channels (khatībi); those of Tafîlîl, porters and pavers; those of Warrâzîr, watercarriers and of Tātâa (Anti-Atlas), restaurateurs; of the Dra, water-carriers and khatībīyin, etc. This division is not the result of specialisation in their original home nor of privileges granted by the civic authorities but arises from the fact that artisans once settled in Marrakesh have sent for their compatriots when they required assistance. Thus groups grew up, sometimes quite considerable. The list of the corporations of Marrakesh gives a total of about 10,000 artisans. These corporations lost much of their power under the pressure of the Makhzen. Some of them, however, still retained a certain social importance: in the first authorities that arose from the fact that artisans once settled in Marrakesh have sent for their compatriots when they required assistance. Thus groups grew up, sometimes quite considerable. The list of the corporations of Marrakesh gives a total of about 10,000 artisans. These corporations lost much of their power under the pressure of the Makhzen. Some of them, however, still retained a certain social importance: in the first authorities that arose from the fact that artisans once settled in Marrakesh have sent for their compatriots when they required assistance. Marrakesh was in ruins. In the inter-war period, in the town of the Kutubiyya there was not a single bookseller. A certain number of Jews still live in the medina (Youssef, 'Abd al-'Aziz, 'Abd al-Salih, M. Beretta, K. H. Abi Asaf), but the teaching in Marrakesh has neither the prestige nor the traditions which still give some lustre to the teaching at al-Karawiyyin in Fāṣ, much decayed as it is. Although they attempt to imitate the customs of Fāṣ (they celebrate notably the "festival of the sultan of the jura") every spring, the students are far from holding in spring), the students are far from holding in

Even though a dahir of 1357/1938 established Marrakesh the position their comrades enjoy in Fāṣ, neither the prestige nor the traditions which still give some lustre to the teaching at al-Karawiyyin in Fāṣ, the teaching in Marrakesh has now possesses a modern university.

One should note that the city for the training of the Jews had no permission to settle in the town. They are limited to certain trades. The Jews have little influence on the corporations and various demonstrations of piety. The Jews early began to leave the bounds of the town of Marrakesh and the cemeteries which stretch to the east, where the people of Fāṣ share with the people of Fāṣ the wholesale trade. They trade particularly with the Lūhūn of the mountains.

History. The Roman occupation never extended so far as the region of Marrakesh. It is quite without probability that some writers, following the Spanish historian Marmol, have sought at Agmāṭ or at Marrakesh the site of Bocanum Emerum (Boxxocvov Μαλλαχ), a town of Tingitana, the site of which is now unknown. The earliest historians agree that the place where Marrakesh was built by the Almoravids was a bare marshy plain where only a few bushes grew. The name Marrakesh gives no clue to the origin of the city. The etymologies given by the Arab authors are quite fanciful (see Deverdun, Marrakesh, 64 ff.). It was, it appears, in 449/1057-8 that the Almoravids advanced from Sūs north of the Atlas and took Agmāṭ Urika. It was there that they settled at first. But after the campaign of 452/1060 in the course of which they conquered the country of Fazāz, the Almoravids also affiliated to the religious brotherhoods. In Massignon's investigation may be found details of the attraction which some of the latter had for certain trades.

The Jews. At the foundation of Marrakesh, the Jews had no permission to settle in the town. They came there to trade from Aghmat Aylan where they lived. 'Abd al-Ghalib, the sultan of Marrakesh, in about 967/1560, settled the Jews on the site they occupied later, along the wall of the kasba to the east, where the stables of the palace had been. At the beginning of the 11th/17th century, there was here, according to the French traveller Mocquet, "like a separate town, surrounded by a good wall and having only one gate guarded by the Moors; here live the Jews who are over 4,000 in number and pay tribute". A century later, there were about 6,000 Jews and many synagogues. The Jewish quarter, called melih (see MALLAH) after the example of the Jewish quarter of Fāṣ (the name melih is attested for Marrakesh as early as the end of the 10th/16th century), was placed, as regards policing, under the authority of the kasba but otherwise is administered by an elected Jewish committee. Questions of personal law were judged by a rabbinical tribunal of three members nominated and paid by the Mahzen. The Jews of Marrakesh early began to leave the bounds of the melih. The older ones wore the ritual costume: gaber-dine, skullcap and black slippers, but the younger Jews were more Westernised and participated in the general world of Marrakesh. The Jews have little influence on the corporations of Marrakesh. They are limited to certain trades (jewellers, tinsmiths and embroiderers of slippers) and share with the people of Fāṣ the wholesale trade. They trade particularly with the Lūhūn of the mountains.
would threaten the Masmuda of the mountains and could be used as a connecting link between the south from which they came and the kingdom of Fäs. Yusuf b. Tabghin therefore purchased from its owner an estate on the frontier between two Masmuda tribes, the Haylana and the Hazmira, and pitched his camp there. So far was he from thinking of founding a great capital, a thing for which this Saharan nomad felt no need, that at first he lived in a tent here, beside which he built a mosque to pray in and a little kasha in which to keep his treasures and his weapons; but he did not even attempt to build a surrounding wall. The native Masmuda built themselves dwellings surrounded by palisades of branches beside the Almoravid camp. The town grew rapidly to a considerable size, if it is true, that, in the reign of 'Ali b. Yusuf it had at least 100,000 hearths, but it did not lose its rural character until Ibn Tumart appeared and the threat of the Almohad movement revived by him forced 'Ali b. Yusuf to defend his town and surround it by a rampart which was built in eight months, probably in 520/1126. Some historians give the date 526/1132, but it is certain that the walls were already built in 524/1130, when the Almohads attacked Marrakesh for the first time. Marrakesh, the creation and capital of the Almoravids, was to be the last of their strongholds to yield. When Ibn Tumart had established his power over the tribes of the mountains he tried to attack Marrakesh; he then sent an Almohad army under the command of the shaykh of the Banu Amghar, brothers of the Mahdi Ibn Tumart, against the town and tried to raise the inhabitants against 'Abd al-Mu'min who was away at Salé. The rising was speedily put down and ended in the massacre of the rebels and their accomplices. But on the decline of the dynasty, i.e. after the battle of Las Navas de Tolosa (609/1212 [see AL-I^4AS]) and the death of al-Nasir, son of al-Mansur, Marrakesh became the scene of the struggle between the royal family descended from 'Abd al-Mu'min and the Almohad shaykhs descended from the companions of Ibn Tumart who, quoting traditions of the latter, claimed the right to grant investiture to the sultans and to keep them in tutelage. Abü Muhammad 'Abd al-Wahid, brother of al-Mansur, was strangled in 621/1224. His successor al-Adil was drowned in a bath in the palace (624/1227) and the Almohad shaykhs appointed as his successor the young Yahya b. al-Ma'mun, brother of al-Adil, was proclaimed in Spain. The whole country was soon in the throes of revolution. Yahya, fearing the defection of theickle Almohads, fled to Tinmal (626/1228). Disorder reigned in Marrakesh, where a governor named by al-Ma'mun was finally appointed. But four months later, Yahya returned to Marrakesh with fresh troops, put al-Ma'mun's governor to death and after staying seven days in the town was forced to go to Gililiz to fight a battle (627/1229), for al-Ma'mun had arrived from Spain to take possession of his kingdom. Ferdinand III, king of Castile, had given in return for various concessions, a body of 12,000 Christian horsemen with whose assistance al-Ma'mun defeated Yahya and his followers, entered Marrakesh and installed an anti-Almohad regime there, marked not only by a terrible massacre of the inhabitants and a flagellation of the community but by new oriental practices in religious matters quite opposed to that of the preceding reigns. On his arrival in Marrakesh, al-Ma'mun mounted the pulpit of the mosque of the kasha, recited the khatba, solemnly cursed the memory of Ibn Tumart and announced a whole series of measures, some of which are given by the Kitâb and Ibn Khaldun in which show he intended to do everything on opposite lines to his predecessors. His innovations revived the discontent so that two years later (629/1232) while al-Ma'mun and his militia were besieging Ceuta, Yahya again occupied Marrakesh and plundered it. Al-Ma'mun at once turned back to the rescue of his capital but died on the way (30 Dhî 'l-Hijja 629/17 October 1232). His widow, al-Habab, succeeded in getting her son al-Ra^qid, aged 14, proclaimed by the leaders of the army, including the commander of the Christian mercenaries. In return she gave them Marrakesh to plunder if they could reconquer it. But the people of the town, learning of this clause in the bargain, made their own terms before opening their gates to the new sultan. The latter had to grant them amân and pay the Christian general and his companions the sum they might have expected from the plunder of the capital—according to the Kita'b ad-Dhull of 40,000 dinars. In 633/1235-6, a rebellion of the Khlot [see KHLIT] drove al-Ra^qid out of Marrakesh, and he took refuge
in Sidjilmasa while Yahya recaptured Marrakesh. Al-Ra'iqat, however, succeeded in retaking it and Yahya fled. It was assigned to the governor of the Almohad al-Sa'id (645/1242-8) that the Marinids who had arrived in the east of the country in 613/1216, seized the greater part of the kingdom of Fas. His successor 'Umar al-Murtadā proclaimed in 646/1248, found himself in 658/1260 reduced to the solitary kingdom of Marrakesh, to the south of the Umm al-Rabī'. In 660/1261-2, the Marinid Abū Yusuf Ya'qūb b. 'Abd al-Hakk came to attack Marrakesh. He encamped on mount Gizzīl, whence he threatened the town. Al-Murtadā sent his cousin, the sayyid Abū 'l-Ulā Idrīs, surnamed Abū Dabbūs, to fight him. The amīr 'Abd Allāh b. 'Abū Yusuf was slain in the battle and his father lost heart, abandoned his designs on Marrakesh and returned to Fas at the end of Rajāb 661/beginning of June 1262.

From this time, one feels that the dynasty was lost although peace was made, which moreover showed the humiliation of the Almohads who consented to pay tribute; but they were to destroy themselves. Falling into disfavour with his cousin al-Murtadā, Abū Dabbūs, this great-grandson of 'Abd al-Mu'min, who in the preceding year had defended Marrakesh against the Marinid sultan, sought refuge with the latter and obtained from him the assistance necessary to overthrow al-Mu'tamid. The custom of giving the governorship of Marrakesh to a prince of the ruling family was kept up. Towards the end of Dhū 'l-Ka'dā 706/May 1307, under the walls of Tlemcen, the sultan Abū Ḥabīb gave his cousin Yusuf, son of Muhammad b. Abī Tyād b. 'Abd al-Hakk, the governorship of Marrakesh and the provinces depending on it. By the end of the year, Yusuf rebelled and proclaimed himself independent at Marrakesh after putting to death the governor of the town, al-Hādīj Mas'ūd. Defeated by the imperial troops on the banks of the Umm al-Rabī', the rebel fled to the mountains, plundering Marrakesh on his way (Rajāb 707/January 1308). The punishment inflicted on the rebels was severe. Yusuf b. Abī Tyād, handed over by a ḥaddār with whom he had taken refuge, was put to death and the heads of 600 of his followers went to adorn the battlements of the town. Abū Sa'id Uthmān stayed at Marrakesh on several occasions. He did much rebuilding in 720/1320. Peace and comparative prosperity seems to have reigned there under the rule of Abū 'l-Hasan until this prince, as a result of reverses suffered in his struggle with the Hafsids, found his own son, the ambitious Abī 'Inān, rebelling against him.

During the troubles which now broke out, Ibn Khaldūn tells us, the town was serious threatened by being sacked by the Masmūda of the mountains led by Abī Allāh al-Saksīwī. Abī 'Inān was able to consolidate his power and avert this danger. The struggle between father and son ended in the region of Marrakesh. Abū 'l-Hasan, defeated at the end of Safar 757/May 1350, near the town, sought refuge in the mountains with the amīrs of the Hintātā and died there just after becoming reconciled to his son and designating him his successor (Rabī' II 753/June 1352).

During the course of the 8th/14th century, the amīrs of the Hintātā played a very important part in the country. The position of the tribe on an almost inaccessible mountain, from which it commanded Marrakesh, gave its chiefs comparative independence and protected them from the influence of the Masmūda tribes. Abī 'Inān took no steps against the amīr Abū al-'Azīz who had given asylum to the fugitive Abū 'l-Hasan. He retained him in the command of his tribe, which he gave a few years later to his brother Abī 'Amir. In 754/1353 the latter, becoming chief of all the Masmūda tribes and sufficiently powerful to keep under his thumb the governor of Marrakesh al-Mu'tamid, son of Abī 'Inān, very soon succeeded in making himself completely independent. He received and for a time held as hostages two rebel Marinid princes Abū 'l-Fadl, son of the sultan Abū Šālim, and Abī al-Rahmān, son of sultan Abū 'Ali. Quarrelling with his protegé Abū 'l-Fadl whom he had made governor of Marrakesh, he retired into his mountains and for several years defied the armies of the sultan. He was in the end captured and put to death in 771/1370.

After the death of Abū al-'Azīz, the pretender Abū 'l-'Abbās, son of Abū Šālim, had himself proclaimed in Fas with the help of his cousin Abū al-Rahmān b. Abī Ḥellūsīn, a pretender to the throne. The latter as a reward for his services was given the independent governorship of Marrakesh and the country round it (Muharram 776/June 1374). The empire was thus completely broken. The old rulers soon began to quarrel but then signed a treaty of peace in 780/1378. There was a new rupture and a
new truce two years later after Marrakesh had been besieged for two months without result. Abu 'l-Abbas in the end took Marrakesh in Dhumâdâ 784/July-August 1382, and 'Abd al-Rahman b. Nasir was slain. Abu 'l-Abbas, dispossessed in 1384 and exiled to Granada, succeeded in reconquering his kingdom in 789/1387 and sent to Marrakesh as governor his son al-Muntasir. This event is the last recorded by Ibn Khaldûn. From the time when his record ceases and throughout the 9th/15th century, we are incredibly poor in information about the history of Marrakesh. The south appears to have continued to form a large and independent governorship in the hands of princes of the royal family. The only information at all definite that we have comes from a Portuguese historian who records that during the three years which followed the capture of Ceuta by the Portuguese (1415-18), Morocco was a prey to the struggles among the pretenders. While Abu Sa'id 'Uhmân was ruling in Fás, Mawlay Bû 'Ali, king of Marrakesh, was fighting against another Marind prince called Fâris. The "kingdom" or governorship of Marrakesh does not seem to have completely broken the links which bound it to the kingdom of Fás, for the governors of Marrakesh supplied contingents to the army which tried to retake Ceuta. But they very soon ceased to take part in the holy war in the north of Morocco, and their name is not found among the opponents of the Portuguese. Marrakesh by 914/1508 seems to have been of very little importance if not de jure independent but we do not know within fifty years at what date theHintâta amirs established their power; they were descended from a brother of 'Amir b. Muhammad. They were "kings" of Marrakesh when in 914/1508 the Portuguese established themselves at Safi, taking advantage of the discord that had broken out in the enemy ranks. cAbd al-Malik, son and successor of Zaydan, has left only the memory of his cruelty and massacres and punishments so terrible that a portion of the population having sought refuge in the Gillz, zaydan withdrew into Marrakesh on 21 Shawâwí 986/1578 to 1594 the famous al-Badî palace. The sultan, enriched by several years of peace and good government, and by the gold brought from the conquest of the Sûdân (1000/1591-2), lived almost continually in Marrakesh, to which he restored a splendour and a prosperity that it had not enjoyed since the end of the 6th/12th century. But the death of al-Mansûr opened a period of trouble and civil war "sufficient to turn white the hair of an infant at the breast", to use the expression of the historian al-Fârûnî. While Abu Fâris, son of al-Mansûr, was proclaimed at Marrakesh, another son, Zaydân, was chosen sultan at Fás. A third brother, al-Shâykh, came and took Fás, then sent against Marrakesh an army led by his son 'Abd Allah. He was defeated on 21 Shawâwí 1015/22 December 1606. But Zaydan, who sought refuge first in Tlemcen, then made his way to the Sûs, via Tafilaât and coming suddenly to Marrakesh, had himself proclaimed there while 'Abd Allâh b. al-Shâykh, while escaping with his troops, was attacked in the midst of the gardens (jânâ Bekkâr) and completely defeated (29 Shawâwí 1015/25 February 1607). In Dhumâdâ II/October of the same year, 'Abd Allâh returned after defeating Zaydan's troops on the Wad Tifâlîfât (10 Dhumâdâ II/2 October, 1607), fought a second battle with them at Râs al-'Ayn (a spring in Tansift), regained possession of the town and revenged himself in a series of massacres and punishments so terrible that a portion of the population having sought refuge in the Gilliz, zaydan withdrew into Marrakesh on 19 Shawâwí 1015/20 May 1612. But Yahyâ, succumbing to ambition, rebelled himself at the end of 19 Shawâwí 1022/30 November 1613. But Yahyâ, succumbing to ambition, rebelled himself at the end of 1027/1618, against the ruler whose cause he had once so well sustained. Zaydân had again to take refuge in Fâs. He was soon able to return to Marrakesh, taking advantage of the discord that had broken out in the enemy ranks. 'Abd al-Mulk, son and successor of Zaydân, has left only the memory of his cruelties and
debauchery. He was murdered in Shawwal 1040/May 1631. The renegades, who killed him, also disposed of his horse and successor al-Walid in 1636. A third brother, Muhammad al-Shaykh al-Asghar, succeeded him but had no subjects. His son, Abu Bakr, succeeded him however to reign till 1065/1655, but his son Ahmad al-Abbas was completely in the hands of the Shabbana, an Arab tribe who assassinated him and gave the throne to his kadi 'Abd al-Karim, called Karram al-Hadjd, in 1659. "The latter", says al-Ifrani, "united under his sway all the kingdom of Marrakesh and conducted himself in an admirable fashion with regard to his subjects. He managed to return to Marrakesh again after the battle, died a few days later in the palace (Qumada II 1206/February 1792). Marrakesh remained faithful to the party of Mawlay Higham, but very soon the Rhamna abandoned him to proclaim Mawlay Husayn, brother of Higham, as the new governor in the kasaq (1209/1794-5). While the partisans of the two princes were exhausting themselves in fighting, Mawlay Sliman, sultan of Fas, avoided taking sides in the struggle. The plague rid him at one blow of both his rivals (Safar 1214/July 1799), who had in any case to submit some time before. The last years of the reign of Mawlay Sliman were overcast by troubles in all parts of the empire. Defeated twice at the very gates of Marrakesh, he was taken prisoner by the rebel Shharda. He died at Marrakesh on 13 Rabi' II 1238/28 November 1822. Mawlay 'Abd al-Rahman (1824-59) did much for the afrocrestion of Agdal and restored the religious buildings. His son Muhammad completed his work by repairing tanks and aqueducts. These two reigns were a period of tranquillity for Marrakesh. In 1862, however, while Sidi Muhammad b. 'Abd al-Rahman was fighting the Spaniards at Tzetwan, the Rhamna deserted, plundered the Siiik al-Khamis and closely blockaded the town, cutting off communications and supplies, until the Sultan, having made peace with Spain, came to relieve the town (Dhu '1-Hidjdja 1278/June 1862). Mawlay al-Hasan hardly ever lived in Marrakesh, but he stopped there on several occasions, notably in October 1875, to punish the Rhamna and the Bu 'l-Sabas, who had rebelled, and in 1880 and 1885, to prepare his expiditions into the Siius. During the last years of the reign of Mawlay 'Abd al- 'Aziz (1894-1908), it was at Marrakesh that the opposition to the European tastes and experiments of the sultan made itself most strongly felt. The xenophobia culminated in the murder of a French doctor named Mauchamp (19 March 1907), and the spirit of separatism in the proclamation as sultan of Mawlay 'Abd al-Hafiz, brother of 'Abd al-'Aziz and governor of the provinces of the south (24 August 1907). But 'Abd al-Hafiz becoming ruler of the whole empire (24 August 1907) and having signed the treaty of 24 March 1912 establishing the protectorate of France and of Spain over Morocco, the anti-foreign movement broke out again in the south. The Mauritanian marabout al-Hiba [see AHMAD AL-HIBA in Suppl.] had himself proclaimed and established himself in Marrakesh. He only held out there for a brief period. His troops having been defeated at Sidi Bu 'Ug&mam on 6 September 1912, the French troops occupied Marrakesh the next day.

Relation with Europe. Five minor friars sent by St. Francis were put to death at Marrakesh on 16 January 1220, for having attempted to convert Muslims and having insulted the Prophet Muhammad in their discourses. Their martyrdom attracted the attention of the Holy See to Marrakesh. A mission and a bishopric were established by Honorius III in 1225 to give the consolations of religion to the Christians domiciled in Morocco: merchants, slaves and mercenaries in the sultan's army. In the Almoravid period, the sultans had Christian mercenaries recruited from prisoners reduced to slavery or from the Mozarab population of Spain whom they had from time deported to Morocco by entire villages. In 1227, Abu l-Ulai Idris al-Ma'mun, having won his kingdom with the help of Christian troops lent by the king of Castile, found himself bound to take up quite a new attitude to the Christians. He granted them various privileges, including permission to build a church in Marrakesh and worship openly there. This
was called Notre Dame and stood in the kasha, probably opposite the mosque of al-Mansur: it was destroyed as early as 1292. The Christian soldiery continued to enjoy the right to worship, at least privately, and the bishopric of Marrakesh supported by a source of income at Seville, existed so long as there was an organised Christian soldiery in Morocco, i.e. to the end of the 8th/14th century. The title of Bishop of Marrakesh was borne till the end of the 10th/16th century by the suffragans of Seville (cf. Father A. Lopez, Los obispos de Marruecos desde el siglo XIII, in Asuntos Ibero-Americanos, xlii [1920]). A Spanish Franciscan, the prior Juan de Prado, who came to re-establish the mission, was put to death in 1621 at Marrakesh. A few years later (1637), a monastery was re-established beside the prison for slaves in the kasha.

It was destroyed in 1659 or 1660 after the death of the last Sa'di. Henceforth the Franciscans were obliged to live in the mellah where they had down to the end of the 18th century a little chapel and a monastery. As to the Christian merchants, they had not much reason to go to Marrakesh in the Middle Ages. Trade with Europe was conducted at Ceuta from which the Muslim merchants carried European goods into the interior of the country. In the 16th century, 'Abd Allâh al-Ghâlibî had a fondak or "bonded warehouse" built in the sâd where the Christian merchants were allowed to live. A majority of the Sa'di began to come to Marrakesh preferred to settle in the Jewish quarter. It was here also that foreign ambassadors usually lodged, at least when they were not made to encamp in one of the gardens of the palace.

Monuments. The present enceinte of Marrakesh is a wall of clay about 20 feet high, flanked with rectangular bastions at intervals of 250 to 300 feet. Bâb Aghawîn, Bâb Ayâlan and Bâb Dâlîlûn which still exist more or less rebuilt, are mentioned in the account of the attack on Marrakesh by the Almohads in 524/1130. Bâb Yântân and Bâb al-Makhzen, mentioned at the same time, have disappeared. Bâb al-Sâliha (no longer in existence: it stood on the site of the mellah) and Bâb Dukkâla (still in existence) figure in the story of the capture of the town by the Almohads (524/1130-1). The plan of the wall has therefore never changed. It has been rebuilt in places from time to time, as the clay crumbled away, but it may be assumed that a number of pieces of the wall, especially on the west and south-west, are original, as well as at least three gates all now blocked up, to which they owe their survival, but have lost their name. According to Abu 'l-Fidâî (8th/14th century), there were in Marrakesh seventeen gates; twenty-four at the beginning of the 10th/16th century, according to Leo Africanus. It would be very difficult to draw up an accurate list, for some have been removed, others opened, since these dates or the names have been altered. Ibn Fâdl Allâh al-'Umari (beginning of the 8th/14th century) adds to the names already mentioned those of Bâb Ñifs, Bâb Muhrîk, Bâb Messûla, Bâb al-Râhâ, all four of which have disappeared, Bâb Taghûtû, Bâb Fâs (now Bâb al-Longûn) and Bâb al-Rabb, which still exist. The only important changes, which have been made in the walls of Marrakesh since they were built, have been the building of the kasba in the south and in the north the creation of the quarter of Sidi bel 'Abbas. The sâdâya which as late as the 10th/16th century stood outside the walls beyond the Bâb Taghûtû, was taken into the town with all its dependencies.

The kasba of the Gunyah and the palace of Dâr al-4Umma built by Yusuf b. Tashfin, lay north of the present "Mosque of the Booksellers" or Kutubiyya.

'Ali b. Yusuf added in the same quarter other palaces called Sûr al-Hadjjar, or Kâshr al-Hadjjar because they were built with stones from the Giljûs, while all the other buildings in the town were of brick or clay. It was here that the first Almohads took up their quarters. According to a somewhat obscure passage of the Istibâr, Abu Ya'qûb Yusuf seems to have begun the building of a "fort" in the south of the town but it was Ya'qûb al-Mansûr who built the new kasba (385-93/1189-97); that is to say he joined to the south wall of the town a new walled area within which he built palaces. A few years later, in the 10th/16th century a pleasure house of the sultans. The only remains of the Almohad palaces, but from pieces of wall and other vestiges one can follow the old wall, at least on the north and the east side. There also the line of the wall has hardly changed. The magnificent gateway of carved stone by which the kasba is now entered, must be one of al-Mansûr's buildings. Its modern name of Bâb Agnaw (the dumb mute's = Negro's Gate) is not found in any old text. It probably corresponds to Bâb al-Kuhi (Gate of the Negroes'), often mentioned by the historians.

Ibn Fâdl Allâh al-'Umari, in the 8th/14th century, Leo Africanus and Marmol in the 10th/16th have left us fairly detailed descriptions of the kasba, in spite of a few obscure passages. In the Almohad period, the kasba was divided into three quite distinct parts. One was the whole wall in which the Sa'di continued to enjoy the right to worship, at least privately, and the bishopric of Marrakesh stood outside the prison for slaves in the kasha.

The Almohads (542/1147). The plan of the wall has therefore never changed. It has been rebuilt in places from time to time, as the clay crumbled away, but it may be assumed that a number of pieces of the wall, especially on the west and south-west, are original, as well as at least three gates all now blocked up, to which they owe their survival, but have lost their name. According to Abu 'l-Fidâî (8th/14th century), there were in Marrakesh seventeen gates; twenty-four at the beginning of the 10th/16th century, according to Leo Africanus. It would be very difficult to draw up an accurate list, for some have been removed, others opened, since these dates or the names have been altered. Ibn Fâdl Allâh al-'Umari (beginning of the 8th/14th century) adds to the names already mentioned those of Bâb Ñifs, Bâb Muhrîk, Bâb Messûla, Bâb al-Râhâ, all four of which have disappeared, Bâb Taghûtû, Bâb Fâs (now Bâb al-Longûn) and Bâb al-Rabb, which still exist. The only important changes, which have been made in the walls of Marrakesh since they were built, have been the building of the kasba in the south and in the north the creation of the quarter of Sidi bel 'Abbas. The sâdâya which as late as the 10th/16th century stood outside the walls beyond the Bâb Taghûtû, was taken into the town with all its dependencies.

The kasba of the Gunyah and the palace of Dâr al-4Umma built by Yusuf b. Tashfin, lay north of the present "Mosque of the Booksellers" or Kutubiyya.
have been created in the 6th/12th century by 'Abd al-Mu'min. Mosques. Nothing remains of the early Almoravid mosques, in the building of one of which 'Abd Allah b. Tashfin himself worked along with the masons as a sign of humility. But the Friday mosque of 'Ali b. Yusuf, where Ibn Tümar had an interview with the sultan, although several times rebuilt, still retains its name. The Almohads, on taking possession of Marrakesh, destroyed all the mosques on the pretext that they were wrongly oriented. The mosque of 'Ali b. Yusuf was only partly destroyed and was rebuilt. 'Abd Allah al-Ghalib restored it in the middle of the 10th/16th century. The present buildings and the minaret date from Mawlay Sliman (1792-1822).

Kutubiyya. When the Almohads entered Marrakesh, Abd al-Mu'min built the first Kutubiyya of which some traces still remain and it has been possible to reconstruct its plan. As it was wrongly oriented he built a new mosque, the present Kutubiyya, in prolongation of the first but with a slightly different orientation. It takes its name from the 100 capitals and magnificent pulpit (minbar) orientation. It takes its name from the 100

kubbahs which cover the tombs of the Sa'dian dynasty must have been built at two different periods. The one on the east under which is the tomb of Muhammad al-Shaykh seems to have been built by 'Abd Allâh al-Ghalib. The other, with three chambers, seems to have been erected by Ahmad al-Mansûr (d. 1012/1603) to hold his tomb.

MARRASH, FRANSÉS B. FAT'I ALLÀH B. NAS, Syrian scholar and publicist of the Nahda (1835-74 according to M. 'Abbûd and S. al-Rayyûlî, or 1836-73 according to Brockelmann, Dâghîr and al-Zirîkî).

He was born and died at Aleppo, coming from a Melkite Christian family of literary men (Brockelmann, S II, 755), and in the opening stages of the modern Arabic literary renaissance, the Nahda [q.v.], tried to introduce "critical reasoning" into a sphere at that time in a state of cultural effervescence. For this, he employed pseudo-scientific terms in order to prove, in his early works, the need for freedom and peace in the world, and then in his later works, the existence of God and the divine law (the shari'a which, in his eyes, goes beyond the sphere of the Islamic law alone). In order to free human thought from the yokes of tradition and respect for the ancients, he used extra-literary methods, the discoveries of the botanical, geological and zoological sciences; but, so as not to frighten off his public, he did not endeavour to free himself from traditional signes of expression (wajh, the makâmû genre, numerous poetic citations). The whole of his work involved religion and history in an epistemological revision, and in this, he contributed with Faris al-Shîidyâk and Farah Antîn [q.v.] in the development of critical reasoning, fed by multi-disciplinary aspects of knowledge, in contemporary Arab thought.

He was aided in this by his milieu. Aleppo was at that time a lively centre of thought about the Arab future, within a society still under Ottoman rule. It was in the French religious schools that the Marrâgh family learnt Arabic with French and other foreign languages (Italian and English). The father, Fath Allâh, and the brother, 'Abbûd Allâh, achieved a certain literary fame. A young sister, Maryâna, born in 1848 (Brockelmann, S II, 756, erroneously calls her "daughter", Dâghîr, ii, 697), was to conduct a literary salon and seems to have been the first Arab woman to write in the daily newspapers (al-Djinân and Lisan al-hâfî).

Since he was 4 years old, as a consequence of measles, Fransís Marrâgh began to lose his sight. He studied science and learnt medicine with an English physician in Aleppo. He continued his studies in 1867 at Paris, where he had already been in 1850 for treatment for his eyes. But as his sight deteriorated, he had to return to Aleppo completely blind. During the last
years of his life, he was able to dictate a relatively abundant body of work.

His biographers approach him for using a linguistic style at times incorrect and inelegant (Dāghīr, ii, 693; al-Zirikli; Kustākī; M. ʿAbbūd, 115), but they speak with appreciation of the quality of his personal thought and insight (kātib mākūbi wa-tājīf... min al-tīrāz al-aʿwaqal, Dāghīr, ii, 693) at a time when bidʿa, innovativeness and originality, were still viewed with disfavour by traditional cultural circles. From the titles onwards, his works reveal a clearly marked-out form and a new range of contents: Daʿūlī al-burrīyya al-insānīyya “Guide to human liberty”, Aleppo 1861, 24 pp.; al-Mirāʾ al-jayfiyya fi l-mabādiʾ al-tabfayya “The clear mirror of natural principles”, Aleppo 1861, 60 pp. of pseudo-scientific text; Ṭaʿīzīyat al-makrib wa-bid`ār al-maṭlah “Consolation of the anxious and repose of the weary one”, Aleppo 1864, a philosophical and pessimistic discourse on nations of the past; Qāḥat al-hakk “The forest of truth” (Brockelmann, S II, 756; Ghayāl al-hakk), Aleppo 1865, Cairo 1298/1881, Beirut 1881, his most famous and most often printed work, “almost a novel” (Dāghīr, ii, 695; ʿAbbūd, 131; Kayyālī, 57), a kind of apocalyptic vision and pleading for the liberty of peoples and for peace; Riḥṭa al-Bārī, a description of his trip to Paris, Beirut 1867; al-Kabīr al-jayfī, a collection of poems. Artistic treasures concerning the symbolic visions of Maymūn, a poem of almost 500 verses, a kind of symbolic vision whose hero is called Maymūn; Māqṭāḥ al-abwāl “The witnessing of the stages of human life”, Beirut 1870, 1883 (Brockelmann, S II, 756, gives an edition of 1865 [?]), these editions testifying to the work’s success, as confirmed by ʿAbbūd—with 183 130 pp. (the in 1870 edition, 75 being in verse and 55 in prose), the book sets forth the author’s philosophical ideas on beings and things: minerals, vegetable and plant life, animals and human kind; Durr al-sadfi fi ḡanāb ʿal-sadf “The pearl of nacre concerning the curious aspects of change”, a social narrative which appeared at Beirut in 1872; Mirāʾ al-haṣna “The mirror of the beautiful one”, Beirut 1872—1873, a collection of poems; and his posthumous work, ʿAbdāḥat al-ṭabīḵa fi ṭamāl al-inbāl wa-l-taḥrīr “The proofs of nature for the existence of God and the divine law”, Beirut 1892.

In his articles published in al-Dīnān, Butrus al-Bustānī’s journal [see AL-BUSTANI, 2., in Suppl.], he reveals himself as favourable to women’s education, which he limited however to reading, writing, and a little bit of arithmetic, geography and grammar. He wrote that it is not necessary for a woman “to act like a man, neglect her domestic and family duties, or that she should consider herself superior to the man” (al-Dīnān, 1872, 769-70, cited by A. al-Makdisī, 268-9). He nevertheless closely followed his sister Maryānā’s studies not suspecting that the first poem which she would publish in the public press—actually in al-Dīnān—would be her elegy on him (ʿAbbūd, 173).

**MARRIAGE** [see S MAHR, MARA, NIKAH, ʿURS.]

**MARS** [see AL-MIRĪBKĀ.]

**MARSÁ [see MINĀ].**

**MARSĀL [see ʿIkīlīYYA.**

**MARRASH — MARSAD (A).** Originally means a place where one keeps watch, whence comes the meaning of obser-vatory, also described by the word raṣād. The first astronomical observations carried out in the Islamic world seem to date back to the end of the 2nd/8th century, i.e. to the period when Indo-Persian astronomical materials were introduced and the first Ptolemaic data appeared. According to Ibn Yūnūs (d. 399/1009), Abūd b. Mūḥammad al-Nīhāwī (174/790) made some observations in Dūndiẓhāpūr in the time of the minister Yahāb b. Ḵālīl b. ʿĀrām (i. d. 190/805) and used their results in his Ziqī maṣūfamī, unfortunately lost. The same Ibn Yūnūs informs us, on the other hand, that in 519/776 the first determination of the obliquity of the ecliptic was made with a result of 23° 31′, but he does not cite the one responsible for these observations, who may have been al-Nīhāwī himself.

The first systematic programme of observations concerning which we have solid information is that which was implemented under the patronage of the caliph Al-Maḏmūn (g.v.) (198-218/813-33) who gave an impulse to this research, perhaps because of his own interest in astronomy or his desire to achieve a permanent solution of the problem presented by the contradictory parameters used by the three astronomical schools known to Muslims: Indian, Persian and Greek (D. Pingree, The Greek influence on early Islamic mathematical astronomy, in JAOs, xciii (1973), 38-9). This second hypothesis would also explain the careful measurement of a meridian degree undertaken by al-Maḏmūn’s order, in the Syrian desert (between the towns of al-Raqqa and Palmyra) and in Irāk (between Baghdad and Kufa and on the Sindjar plain; see T. Backus, Measurement of one geographical degree undertaken and carried out by the Arabs in the 13th century, in Actes du IX Congrès International d’Histoire de Sciences, Barcelone-Paris 1960, 635-8). The observations encouraged by al-Maḏmūn were undertaken in Baghḍād and Damascus, not simultaneously, it seems, but consecutively, although we possess a reference to the collation of the results of an observation of the autumnal equinox carried out in the two towns. In Baghḍād, the observations took place in al-Shāmhīsyya quarter, but the sources do not say if there was an observatory, properly speaking, in a building reserved for this purpose; in any case, the insistence in the introduction of the ẓīq attributed to Ḫāyā b. Abī Maṣūr (d. ca. 215/830) on the use of the “circle” (al-ṭābīḵ) of al-Shāmhīsyya makes us think of a large scale instrument requiring a fixed installation and a minimal permanent space (cf. J. Vernet, Las “Tabulae Probatoriae”, in Homenaje a Millás Vallicrosa, ii, Barcelona 1956, 508, repr. in Estudios sobre historia de la ciencia medieval, Barcelona-Bellaterra 1979, 198). The situation was the same in Damascus, where the observations took place in the monastery of Dayr Murrān on Mount Kāsīyun (g.v.). A sun-dial ten cubits high (about 5 m.) was built there and a marble wall dial, whose interior radius also measured ten cubits, in any case, it was not necessary for the installations to be of a permanent character, for the
programmes were brief; in Baghda'd the observations were carried out in 213/828 and 214/829 under the direction of Yahyā b. Abī Ma'sūr with the collaboration of Sanād b. 'Ali and al-ʿAbbās b. Saʿīd al-Diwhārī. They had to be interrupted for a year, to be repeated later in Damascus, where they took place at the end of a solar year between 216 and 217/931-2, under the direction of Khālid b. 'Abd al-Malāk al-Marwarīdī, perhaps with the assistance of Sanād b. 'Ali and al-ʿAbbās b. Saʿīd al-Diwhārī. The question as to whether Baghda'd and Marwarīdī (ed. between 230 and 260/846-74) was involved in these observations, especially as head of the team in Damascus, has been much discussed, but there does not seem to be sufficient proof and Habash himself, in the introduction of his zij, where he alludes to these observations, does not say that he took part personally. The caliph's death, in 218/833, interrupted, according to some sources, the programme of observations, but the matter is not clear, for, on the one hand, some evidence shows that this work preceded al-Ma'mūn's death and, on the other, we possess some references to later observations carried out by al-Ma'mūn's astronomers in Damascus (Khālid in 219/834) and in Baghda'd (Khālid, 'Ali b. ʿIsā al-Harrānī and Sanād b. 'Ali in 230-1/843-4). It is furthermore possible that the observations in question survived to be followed up by a later imitator or that the latter's addition is to be made (such as those of Hābaš in Baghda'd between 210 and 220/823-33 and in 250/864) were carried out on the fringe of the official programme laid down by the caliph.

The observers of al-Ma'mūn's time seem to have given themselves to the systematic observation of the sun and moon, although observations were also made of the fixed stars and no doubt of the planets. The results of these labours were recorded in a certain number of zij̱s, outstanding among which are those attributed to Yahyā b. Abī Ma'sūr and Habash. As far as the sun is concerned, these zij̱s improve upon the Ptolemaic parameters, and it is also known that al-Ma'mūn's astronomers established a new method, which offers some advantages as against that of Ptolemy for establishing the parameters of the solar (W. Hattner and M. Schramm, Al-Birûnî and the theory of the solar apogee: an example of originality in Arabic science, in A.C. Crombie (ed.), Scientific change, London 1963, 208-9). Various calculations of the obliquity of the ecliptic (see al-Birûnî, Tahdīd nihdydt al-amādān, ed. P. Bouglakov, in RIMA, vii [1962], 90-1) and of the duration of the tropical year were undertaken. However, the observation of the moon, stars and planets proved to be less fruitful, and we can only say, by way of example, that the estimation of the preces- sion of the equinoxes (1 every 66 years) obtained by Yahyā b. Abī Ma'sūr (following an observation of the autumnal equinox carried out on the 27 Radjab 215/19 September 830) is suspect, for D. Pingree (Precession and trepidation in Indian astronomy before A.D. 1200, in Jnl. of the Hist. of Astronomy, iii [1972]), has demonstrated that the parameter cited above is of Sanskrit origin.

The status given to astronomical observations by al-Ma'mūn's patronage was to be followed by a period during which the same work had to be pursued, on a lower level, in small private observatories: this is the case with the brothers Muhammad and Abū Ahmad Mūsā b. Ṣāḥīk who observed the sun and fixed stars between 270-1/881-2 and between 290-1/900-1, but also in Sāmarrā and Nīghāpūr. This activity of the Banū Mūsā is easily explained, for they had at their disposal a considerable fortune and became patrons of other scholars, among whom figured Thābit b. Qurra [q. v.], who also made observations himself, but is distinguished essentially by his use of the results of those which dated back to antiquity and al-Ma'mūn's period. Between the 3rd and 4th/9th-10th centuries, attention should be drawn to the work undertaken by al-Mahānī (observation of conjunctions and eclipses of the sun and moon between 239 and 252/853-66), the 30 years (273-305) of systematic observations of al-Battānī [q. v.], in al-Raʾka which are crystallized in his famous zij (edited by C.A. Nallino, Milan 1899-1907) and the labours of the Banū Amīdūr in Baghda'd between 271 and 321/885-933, who made observations not only of the sun but also of the moon.

The 4th/10th century had already begun when the interest of the Buwayhid dynasty in astronomy brought a revival of official patronage which facilitated the undertaking of very extensive work. Abu l-ʿFaḍl Ibn al-ʿAbbās [q. v.], minister of the ruler of al-Rayy, Rukn al-Dawlā (d. 366/977), subsidised the construction of a large-scale instrument with which Abu l-ʿFaḍl al-Harawī and Abī Dījaʿarī (4th/10th century) made solar observations in 348/950. This same minister also had in his service Abī al-Rahmān al-Ṣūfī (d. 376/986), who was also patronized by al-Ma'mūn, by another Buwayhid, ʿAdūd al-Dawlā (d. 372/985). Al-Ṣūfī's observations resulted in a systematic revision of Ptolemy's catalogue of stars; simultaneously, Ibn al-ʿAṭām, also for ʿAdūd al-Dawlā, made some planetary observations which are recorded in his famous zij (cf. E. S. Kennedy, The astronomical tables of Ibn al-ʿAṭām, in JHAS, i [1977], 13-21). This work was further developed under Sharaf al-Dawlā (372-9/982-9), who commanded Abī ʿAllāh al-Khāṣībī to observe the seven planets, which resulted in the construction of an observatory in the royal palace garden at Baghda'd where some large-scale instruments were used. Astronomers such as Abu l-ʿWāfī al-Būzjānī [q. v.] and Ahmad b. Muhammad al-Sāḥībī must have taken part in the first observations, which took place in 378/988. Unfortunately, his three zij̱s, al-amāq, have very little existence, for its activities ended with the death of Sharaf al-Dawlā. Even so, the patronage of Fakhr al-Dawlā (366-87/977-97) supported the solar observations of al-Khudjandī [q. v.] (d. 390/1000) carried out in Rayy with the help of a large sextant called al-nadīd al-fakhrī. The Buwayhīs' example must obviously have awakened a desire to emulate it among members of other dynasties, and this was the case with the Kākhaydīd Alī al-Dawlā Muḥammad (d. 433/1041-2) who supplied Ibn Sinā (q. v.) (370/428/980-1037), with funds to carry out observations of the planets in Hamadān around 414/1023-4, and with Maḥmūd al-Ghaznī (d. 421/1030), under whose patronage al-Bīrūnī [q. v.] (362-442/977-1050) also made certain observations and wrote a main part of his astronomical work.

From the 4th/10th century onwards, observations began to take place further west. In Egypt, there emerges the remarkable figure of Ibn Yūnūs (d. 399/1009), despite the fact that the account according to which this astronomer is said to have had at his disposal a well-equipped observatory, thanks to the patronage of the Fāṭimid caliph al-Ḥākim (386-411/996-1021), appears entirely legendary; he probably had at his disposal only an armillary sphere, although a number of his observations (described in the introduction to his zij) were carried out in various places in the town between 367/977 (or 380/990) and
MARSAD 601

398/1007), such that we may assume that he used essentially portable instruments and obtained excellent results. In al-Andalus, the first observations known from documents are those of Maslama al-Madgrī [q.v.]. [d. ca. 398/1107; see J. Vernet and M. A. Catalá, Las obras matemáticas de Maslama de Madrid, in Al-And., xxx (1965), 15-47; repr. in Estudios sobre historia de la ciencia medieval, Barcelona-Bellaterra 1979, 241-71], while far more remarkable work in this respect was carried out by Azaquīl-al-Zarkāli (d. 493/1100), of whom we know that, with the assistance of several collaborators, he made observations of the sun, moon and fixed stars for more than 25 years, first in Toledo, then in Cordoba (J. M. Millas-Vallierosa, Estudios sobre Azaquīl, Madrid-Granada 1943-50, 279); yet there does not seem to be any proof of an organised observatory.

The observatory as an institution, if not permanent, at least longer lasting than the examples mentioned until now, seems to be an Eastern development dating from the later Middle Ages. The most obvious antecedent, although not well-known, is the observatory founded by Malik Şah (685-85/1092-93) around 467/1074, perhaps in Isfāhān and where ʿUmar al-Khayyām [q.v.] (440-526/1048-1131), in collaboration with other astronomers, completed a zīḏj and effectuated the revolution of the Persian solar calendar [see further, J. Vernet and M. [q.v.]], dated 1107. The first large-scale Islamic observatory whose organisa-

tion and structure we know about in detail, it contained several buildings, including a residence for Hūlegū, a mosque and a rich library (the sources speak of 400,000 volumes, which is a traditional figure). It had large-size instruments and was financed by the official revenues of pious foundations (waqf); this is the first time that we see an observatory subsidised in a manner ordinarily reserved for schools, hospitals and libraries. The motives behind this undertaking seem to have been, for Hūlegū, basically astronomical. The most important astronomers of the age, whose names are mainly associated with important modifications to the Ptolemaic system and undertakings, before the observa-

tory's foundation, by Muḥammad al-Kashi (932-93/1525-85), participated in the observatory's work. Outstanding among them, apart from al-Ṭūsī and al-ʿUrdī, are Muhīʾ ʿI-dīn al-Maghribī (d. between 680 and 690/1281-91) and Kūb al-Ḥānim al-Shīrāzī [q.v.] (634-710/1236-1311). The observatory, founded in 657/1259, survived Hūlegū. On the death of al-Ṭūsī (672/1274), the Zīḏj-i gurgānī had already been composed, i.e. some astronomical tables which constitute the basic result of the work completed in Marāgha. The observations thus lasted more than 12 years, and we know that they were pursued after al-Ṭūsī's death, until the end of the period of 30 years corresponding to a revolution of Saturn: following these new observations (around 672-703/1274-1304) some corrections were made to the Zīḏj-i gurgānī. It seems, on the other hand, that there was some activity at the observatory until around 715/1316 and that it was in ruins in 740/1340. So it was the first Islamic observatory to enjoy a remarkable longevity (55 or 60 years) and give birth not only to al-Ṭūsī's zīḏj but also to that of Muhīʾ ʿI-dīn al-Maghribī.

Marāgha provided a model for several imitations among which may be cited the observatory of Shāhm (a suburb of Tabrīz) which was built by the ruler Ghānī Khan (694-703/1295-1304) and survived 15 or 16 years (ca. 701-17/1300-17). However, no observatory of the size of that at Marāgha appears before the 9th/15th century. Thanks to the patronage of the great prince Ulugh Beg [q.v.], governor of the Samarkand region, in 823/1420 an important madrasa was founded in that town. It specialised in the teaching of astronomy at the heart of what constituted the nucleus of a scientific centre active for about 18 years, until the death of the ruler, whose son, Sandjar b. Malik Şah, patronised the planetary observations carried out in Marw by al-Khāzīmī (between about 509 and 530/1115-35). With regard to the observatory of Malik Şah, there appears for the first time the idea that the minimum time necessary to complete a programme of observations is 30 years (a revolution of Saturn). Naṣīr al-Ṭūsī al-ʿUrdī [q.v.], (597-672/1201-74) was to recall this minimum period in the course of his negotiations with the Mongol sultan Hūlegū with a view to creating the Marāgha observatory; facing resistance from the ruler, the astron-

omer agreed to complete the same work in twelve years (a revolution of Jupiter). In the 9th/15th century, al-Kāgilī (d. 835/1429), the principal astronomer of the Samarkand observatory, was also to speak of a minimum period of between 10 and 15 years.

Hūlegū Khan (d. 663/1265) founded, at the suggestion of Naṣīr al-Ṭūsī al-Ṭūsī, the Marāgha observatory, on a hill situated near the town. It is the first large-scale Islamic observatory whose organisation and structure we know about in detail, it contained several buildings, including a residence for Hūlegū, a mosque and a rich library (the sources speak of 400,000 volumes, which is a traditional figure). It had large-size instruments and was financed by the official revenues of pious foundations (waqf); this is the first time that we see an observatory subsidised in a manner ordinarily reserved for schools, hospitals and libraries. The motives behind this undertaking seem to have been, for Hūlegū, basically astronomical. The most important astronomers of the age, whose names are mainly associated with important modifications to the Ptolemaic system and undertakings, before the observatory's foundation, by Muḥammad al-Kashi (932-93/1525-85) founded one in 982/1575 thanks to the patronage of Sultan Murūd III (982-1004/1574-95); the building was completed in 985/1577. This establishment is said to have been a large observatory in a category analogous to those of Marāgha and Samarkand, but an unfortunate astrological prediction about a comet carried out by Naṣīr ʿI-dīn in this same year 985/1577, as well as the hostility of the most conservative sectors of society, made the sultan order the destruction of the buildings in 980/1580.

The last large Islamic observatories are those which were founded by Dājīg Singh (SavaJayāsinīhā, māḥānātīk of Ambrāt from 1111/1669 (d. 1156/1743) who, wishing to bring up to date the astronomy of his
time, dedicated himself to collecting manuscripts of Sanskrit, Persian and Arabic astronomical works, as well as other books and manuscripts on Islamic and Hindu themes. In 1826, the Maharaja Mansingh II Library in Jaipur, under the direction of Zayd-i ajadid-i Muhammad Shâhî. The library was intended to serve as a repository for Islamic language following the Arabic tradition) to lament the passing of a beloved person and to celebrate his achievements.

AL-MARSAFI, AL-HUSAYN, Egyptian scholar and teacher (1815-90) from a family originating from the village of Marâghâ, near Baha; his father taught at the al-Azhar Mosque. Al-Husayn became blind at the age of three; however, he underwent the education. If it is read in the light of the debates of the time, his position appears to be that of a moderate, an advocate of a reasonable modernity, legitimised by constant reference to moral and cultural examples from the glorious ages of Islam; the author seems to be following, if one wished to revive Arabic language and letters, by a great number of Egyptian writers and teachers who had a diffuse but effective influence on the educational system. The best known are 'Abd Allâh Fikri and Hifnî Nâsîf. This programme for reviving the language was gradually spread through almost all the Arab countries—with or without reference to al-Marsafi—from the last years of the 19th century thanks to the efforts of the reformists [see ISLÂM, i and MUHAMMAD SA'DUH].

Al-Marsafi was also interested in the history of political ideas; in October 1881, he published an essay, the Risâlat al-Kalim al-thâman (Cairo 68 pp.) on eight words of political vocabulary in frequent use, he said, in modern debates; umma, nation or community according to language, territory or religion; watan, fatherland; hukûma, government; adab, culture; zulm, injustice; siyasa, politics; harîyya, liberty; and tarbiya, education. If it is read in the light of the debates of the time, his position appears to be that of a moderate, an advocate of a reasonable modernity, legitimised by constant reference to moral and cultural examples from the glorious ages of Islam; the author seems to be following, if one wished to revive Arabic language and letters, by a great number of Egyptian writers and teachers who had a diffuse but effective influence on the educational system. merits; ṣitha*, from the same root, denotes both lamentation and the corresponding literary genre.

1. In Arabic literature.

The origin of the marṭiya may be found in the rhymed and rhythmic laments going with the ritual movements performed as a ritual around the funeral cortège by female relatives of the deceased, before this role became the prerogative of professional female mourners (cf. M. Gaudefroy-Demombynes, *Introduction au Livre de la poésie et des poètes*, Paris 1947, pp. xvii-xviii). It was in fact customary for the mother, a sister, or a daughter of the deceased, originally perhaps with the intention of appeasing his soul, and in any event as a means of perpetuating his renown, to commemorate his noble qualities and exploits and to express the grief of the family and the tribal group, in a short piece composed in ṣadḥ, normalisation in verse form being a later development. These improvisations, probably of a rather stereotyped nature, have not been handed down to posterity, but one fairly scanty specimen (see J. Wellhausen, *Skizzen und Vorarbeiten*, i, 1884, 47), said to be the work of the mother of Ta’abbata Sharīn [q.v.].

With the transition from ṣadḥ to verse, it seems that women retained their role in the lamentation and the celebration of the deceased, and there are many modern figures, traditionally credited to more or less obscure pre-Islamic poetesses; outstanding examples are Dakhṭan, mourning the death of her father Laktī b. Zūrār [q.v.] in the Shīb Djbala (Aghmīn, ed. Beirut, xi, 137-8) and al-Khīrnik, who was responsible for a number of elegies, most of them concerning her brother ɬa tarā[.q.v.] and his husband, preserved by the ṣawā (see L. Cheikho, *Shu‘asā‘* al-Najmīyya, 921-7); the most renowned is unquestionably al-Khansa* [q.v.], who gave ṣitha a polished form and to this very day enjoys unanimous admiration (see N. Rhodokan- skis, *al-Hansa* and ihre Trauerlieder, Vienna 1904).

In the early years of Islam, Laylā al-Akhayliyya [q.v.] enhanced her reputation with elegies, much appreciated by local critics, in which she mourns the death of Tawba b. al-Humayyir (Aghmīn, ed. Beirut, xi, 213-20) and even that of ɬulūmān b. Širāyš (Ibn Kutayba, Širī, ed. Cairo, ii, 123, 417-8). On account of their extreme sensitivity (and, according to Ibn Rāṣīk, *Umda*, ii, 123, their low capacity for endurance), women are able to express unreservedly their grief at the death of a member of the family and to celebrate merits which ultimately reflect upon the entire group; they give to their compositions a passionate tone of such intensity and spontaneity that the expert connoisseur of Arabic poetry, Père Cheikho, did not hesitate to gather together the more or less authentic works of these poetesses in his Riyād al-adab fi marṭīh ṣawādir al-ʿArab, Beirut 1897.

Men were also active in this area, and without entirely taking the place of women, composed verse pieces of various lengths which offer variations on the common themes. It is worthy of note that a number of pre-Islamic poets, Mutammīn b. Nuwāya [q.v.] for example, owe their reputations almost entirely to their elegies, and that among the four compositions regarded as most successful by the critics, there figures, alongside the marṭīh of Ibn al-Rūmī, al-Ṣāriḥ al-Radī and Mihyār al-Daylami (see below), an ʿaynīyya which has become proverbial (although it is probably in part apocryphal on account of the Kurʾānic influence discernible in it) by a poet of the last years of the Djbiliyya, Labīd [q.v.], who mourns his half-brother ʿAbī ṣirād, killed by lightning (Ibn Kutayba, Širī, ed. Cairo, 236-7; Aghmīn, ed. Beirut, xv, 300-1).

Some authors, no doubt sensitive to the sincere expression of profound emotions, go so far as to place the marṭīh of the Bedouin at the head of the other poetic works; al-Djbīḥī (Bayqīn, ed. Hārūn, ii, 320) quotes without comment the reply given by one of them when asked why their elegies were the best of their poems: “Because we speak [our verses], as our hearts burn [with grief]”. This affirmation of the sincerity and the poignancy of their feelings does not however explain the fact (judging from the texts currently available, which probably reflect the true position) that these poems continue to refrain from expressing their sorrow at the death of a mother, a wife, a daughter or a sister (the lines of a Bedouin on his wife in the ṣadḥ of Ibn ʿAbī ṣirād, ed. Cairo 1348/1926, ii, 181, are perhaps of a later date).

In fact, it is to a male parent or member of the group that the marṭīh are addressed; the intention is to exalt the deceased by presenting his death as a loss felt by the entire clan or tribe; there is, on the other hand, the hope of continuing to benefit from his protection, and to this end he is implored not to go far away (lā tabbād, the reading lā tabbūd, in LA, root bād, is inappropriate since it would mean “do not perish”), he is promised revenge if he has been a victim of murder, and there are forceful expressions of hatred for his enemies. In spite of the repetition, in the last years of the Djbiliyya, as for example to Dirār b. al-ʿAbī ṣirād, a group rather than that of an individual or members of the same family. During the wars and expeditions which took place in the lifetime of the Prophet, there were many poets, in both camps, who mourned the deaths of their comrades and hurled defiance at their adversaries. This applies, for example, to Dirār b. al-Khāṭāb, giving to the Kurayshites notice of the death of ʿAbī Djbāl [q.v.] at Badr and calling upon his fellow-tribesmen to avenge him (Ibn Ḥīṣām, Sīra, ed. Sakkā et alii, ii, 27-8), also to Umayyā b. ɬa Suṣal [q.v.] who, after the same battle, mourns the Kurayshites slain by the Muslims, against whom he likewise incites the members of his tribe (Sīra, ii, 30-3; Ibn ʿAbī ṣirād, Ṣad, Cairo 1346/1928, ii, 194-5); the Prophet is said to have forbidden the circulation of this poem (Aghmīn, ed. Beirut, iv, 126). Jewish poets did not hesitate to lament the massacre of their co-religionists and to threaten their enemies (e.g. Šammāk, in Sīra, ii, 198, 200, after the death of Ka’b b. al-ʿAshrāf [q.v.]).
Compositions of this type are sometimes ripostes addressed to Muslim poets, who were not slow to reply in their turn; the Sūrah echoes these exchanges, while giving prominence to the poems of Muslims, significant among whom are Ka'b b. Mālik, Ibn Rawāḥa and in particular Ḥassān b. Thābit [q.v.]. The Dīwān of the last-named contains a number of marāṭiḥ inspired by the death of Ḥamza b. Abd al-Muṭṭalib [q.v.], also by the deaths of the combatants who fell at Ḥirr al-Mu‘ānā and at Mu‘ātta (Dīwān, ed. W. ʻArafāt, GMS, xxvi/1, London 1971, respectively 321, 450 and 207-98; cf. 393). Among some thirty elegies which figure in this Dīwān, it is to be noted that one of them (234) breaks with tradition in that it concerns the poet’s daughter, that two or possibly three, where Kurānic inspiration is more clearly discernible, are dedicated to the Prophet (269, 272, 455), one to Abū Bakr (125), two to ʻUmar (273, 459), eight to ʻUkhmān (96, 120, 122, 311, 319, 520, 511) and the others to various individuals, but a large part of this enormous composition is definitely apocryphal. In general, it may be said that the difference between the works of the early Muslim poets and those of their pagan predecessors consists in the fact that they refrain from calling for vengeance and confine themselves to promising the fires of Hell to their adversaries killed in combat, while they stress the example set by the Prophet. To all these elements, and to the eulogy which later inspired the emergence of the genre -marāṭiḥ of the Bedouin. The latter are also perpetuated in the works of the major poets of the Umayyad era; thus some twenty elegies of classical construction are to be found in the Dīwān of al-Farazdāk [q.v.] and in that of Dājrī [q.v.] the latter, however, breaks with tradition—much to the indignation of the former (Dīwān, ed. Sāwī, Cairo 1354/1936, 465-74, in particular 471)—in devoting several verses addressed to the death of his wife Khālīda, at the beginning of a rather lengthy and highly-regarded poems. Dīwān, ed. Ghazali, Cairo 1953, 572-95; cf. E. Wagner, Abū Nuwas, 210, 611, 674, 676). The 2nd/8th century sees the birth of the poetic

The 2nd/8th century sees the birth of the poetic genre known as "ascetic poems" (zuḥdīyydt [q.v.]), which involves reflection on death and no doubt influences nihāḥ, in which gnostic themes, present since the pre-Islamic period, become increasingly numerous. Abū Nuwās [ar.], himself the author of zuḥdīyydt (see "A.A. al-Zubaydī, Zuḥdīyydt Abī Nuwās, Cairo 1959," has left no less than twenty marāṭiḥ in memory of distinguished persons, scholars and poets, friends and parents (although in some cases the individuals mourned were not yet dead), and even including himself (Dīwān, ed. Ghazali, Cairo 1953, 572-95; cf. E. Wagner, Abī Nuwās, Wiesbaden 1965, 349-60). It is often, in fact, the natural or violent death of an eminent person, the death of a distinguished scholar which inspires the poets. Thus Ibn Durayd [q.v.] writes funeral
orations for al-Shafici and al-Taban [q. vv.] and for his relatives slain in battle, demanding that they ...

... "ubi sunt qui ante nos in mundo mere 

There is no rule that forbids lamentations over the destruction of an object (see below, with regard to cities) or the loss of an animal (the funeral eulogy of a cat figures in Madżāni l’-adab, v, 135), and the poet is enticed to make reference to the sadness of Nature and of domestic animals; but he must beware of committing blunders, saying for example that a horse subjected to this sort of treatment in the course of his exploits is saddened by the latter’s passing, whereas in fact this is for him liberation. It is the moral qualities of the deceased which should be celebrated: intelligence, courage, generosity, decency.

The disintegration of the Abbasid empire brought virtually no change to the various aspects of marthiya, which seems however to become more and more influenced by “professional” exigencies. It is at the beginning of the 5th/11th century that Mihyār al-Daylami [q. v.] achieves renown with his successful tīgha† of ‘Ali or of al-Husayn (see Diwān, Cairo 1344-50/1925-31, ii, 259-62, 367-70, iii, 109, etc.) and especially with the mūfiyya in which he mourns the death of his master al-Sharif al-Radi (Diwān, iii, 366-70), regarded as a masterpiece. Previously, the proliferation of provincial dynasties had increased the number of occasions for the composition of elegies of a nature more formal and elaborate than personal and spontaneous; a tendency which has already been seen to emerge takes on a definitive form in the work of al-Mutanabbī [q. v.], who revives the classical theme of destiny, pays tribute to the deceased and adds a panegyric in praise of the latter’s lauds and treatment in the same reward, but without making mention of his own qualities (see R. Blachère, Mutanabbi, 46, 119, 250). This is not unlike the approach to the family of the

...
deceased noted by Aḥ. Dż. al-Tahir in the poetry of the Seljuk period (al-Shiār al-ʿarabī fi l-ʿIrāq wa-bi-ṣaḥāba al-Saljūqīn, Baghdād 1361, ii., 108-113). This author holds in high regard a ʿaybīya and a ʿaṣṣiya of al-Tuğhrāʾī (q.v.) dedicated, respectively, to the memory of a wife and of a concubine (see Diʿānūn al-Tuğhrāʾī, ed. ʿA. Dż. al-Tahir and Y. al-Jabābūrī, Baghdād 1396/1976, 151-5, 264-5), and rightly criticizes the matâlaʿ of the famous elegy of ʿUṯr (see above), in which his long ʿaṣṣiya manages to devote only a few verses to the memory of his wife. Otherwise, the marthiya continues to be largely conventional in character, and ʿUmār Mūsā Bāshā (Adab al-duwal al-mutāḥabīn ʿawwāʾ al-Zanġiyyin wa l-ʿAṣṣiyāwīyyin wa l-ʿMāmālīkī, Beirut 1386/1967, 579) finds nothing new that is worthy of note in traditional riṯāʾ; he does however make one honourable exception in the case of Usāma Ibn Munkiḏ (q.v.), who mourns, in a moving ʿaṣṣiya, the demise of members of his family who were victims of an earthquake at Shayzar (Diʿānūn, Cairo 1953, 304-5, 507-9). This same literary historian lays emphasis on the marthiya of Muslim warriors slain during the Crusades and is appreciative of certain poems by ʿImād al-Dīn l-ʿIṣḥānī (q.v.) on the death of ʿImād al-Dīn Zanģī, the death of Nūr al-Dīn and in particular that of Ṣalāḥ al-Dīn (Abū ʿAbd allāh ʿAlī, K. al-Rawdatayn, Cairo 1287-8, i, 4-5, 24-54, ii, 2, 53-85). These elegies bear emotional vigour in the description of events (Adab al-duwal al-mutāḥabīn, 305-12). As with the ḫāridiyya of former times, warriors are impelled to seek the pall of martyrdom (ṣalāb al-ṣahāda) which is the supreme reward (cf. E. Sivan, LʿIṣlam et la Croisade, 12). As with the Kharidjīs of former times, warriors upped their emotional tone to the wish, conventionally, that their fear of seeing recaptured cities falling again into the hands of the Christians, criticise those in authority for not having forestalled the defeats and mourn the loss of places seized by the Muslims.

The characteristic feature of this type of marthiya is the introduction, as objects of lamentation, on the one hand, of cities destroyed by foreign conquerors, on the other, of local dynasties which are overturned. Omissions excepted, the oldest specimen of this type is the long ʿaṣṣiya of 135 verses in which Abū Yaʿkūb al-Khuraymī (q.v.) describes in pathetic terms the desolation of Baghdād during the war which saw the confrontation between al-ʿĀmilī and his brother al-Maʿmūn (see al-Ṭabari, iii, 873-80; Diʿānūn al-Khuraymī, ed. ʿA. Dż. al-Tahir and M. Dż. al-Muʿayyibīd, Beirut 1971, 27-37); this poet is also the author of several interesting elegies, for his brother al-Maʿmūn (see ibid., 56-8). Another well-known ʿaṣṣiya is the mimiyā which begins, conventionally, with the evocation of sleeplessness and tears, and was dedicated by Ibn al-Rūmi to Basra, describing the condition of the town following its sacking by the Zandji (Diʿānūn), translated with commentary by J.T. Monroe, A curious Morisco appeal to the Ottoman Empire, in al-And., xxxi/1-2 [1966], 281-303). In general, when the lamentation is applied to places, the poets mourn over the alālī, ruins not to be regarded with greater significance than in the pre-Islamic period; they bewail the destruction of buildings (mosques in particular), atrocities committed by the enemy and the slaughter of peoples condemned to exile; the emotions experienced by the survivors give rise to lyrical developments which are supplemented by the nostalgia of emigrés and their desire to return to their lost homeland, where life was so enjoyable. 2. In Persian literature.

The term *marthiya* in Persian is used primarily to designate poems in memory of someone who has died, wherein that person's good qualities are mentioned and regret is expressed at his death. This discussion will include *marthiyas* written for secular public figures, those written for family members and close friends, and those written for religious figures, especially for al-Husayn. Sometimes included in the category *marthiya* but not discussed here are poems lamenting old age and the loss of youth, poems complaining about the unfortunate state of the times, conventional gravestone inscriptions and chronograms.

Unlike the classical elegy, the *marthiya* is not a genre defined by its form. It is a thematic category of Persian poetry, appearing principally in the monorhyme forms of the *kasida*, the *kiśa*, the *rubā‘i* and the *ghażal*; the strophic forms of the *tarkīb-band* and *targīd-band*; and the *maṯnawī* form of rhyming hemistiches. After 1500, the popular religious *marthiya* began to develop certain formal characteristics of its own. In general, the language and style of *marthiyas* followed the language and style of the times in which they were written. The conventional imagery differs, however, among the public, private, and religious *marthiyas*.

The earliest known *marthiya* in New Persian is a *kasida* in Manichean script reconstructed by Henning (*A locust's leg*, London 1962, 98-104) and dated before the first half of the 3rd/9th century. It shows a blending of Islamic and Manichean elements and is probably a crypto-Manichean allegory. It is spoken from the grave by the deceased himself. The poem that established many stylistic characteristics of the Persian *marthiya* is Farrukhi Sistāni’s *q.v.* striking *kasida* of 69 lines for Sultan Mahmūd of Ghazna [*q.v.*] (Diwan, ed. Dabīr-SiyākT, Tehran 1335/1956, 90-3). The poem begins with the speaker describing the changed look of Ghazna as he walks about the city after a year's absence. He notes what he observes by different classes of society, questions an anonymous companion about what has happened, and begins to imagine reasons why the ruler has not appeared that morning. Not until line 21 does he allude to Mahmūd’s death. He expresses his own grief at the loss, calls upon the dead ruler to arise and resume his normal activities, finally becomes reconciled to the situation, and concludes by mentioning Mahmūd’s successor and praying for the dead sultan’s happiness in heaven.

Some specific characteristics of Farrukhi’s poem that often appear in later *marthiyas* are (1) the device of the speaker questioning a companion, or posing rhetorical questions about what has happened; (2) the use of euphemisms for dying, such as “he has gone”; (3) the speaker addressing the deceased directly as if he were still living; (4) the speaker making excuses for the absence of the deceased; (5) the frequent use of words such as *darād* and *darātigh* meaning “alas”; (6) the use of images appropriate to the status of the deceased, often as a means to enumerate the subject’s praiseworthy qualities; (7) descriptions of man and nature grieving for the dead; (8) the frequent use of anaphora; (9) the mention of the successor to the deceased; and (10) the use of a prayer for the happiness of the deceased in heaven.

The influence of Farrukhi can be seen in *marthiyas* written up to the 20th century. For example, Maš‘ūd Sa‘d Salmān [*q.v.*] (d. 515/1121-2) in a *marthiya* for Imad-al-Dawla Abu ‘l-Kāsim has the speaker refuse to believe that the prince addressed the deceased directly, praise his successor and wish the deceased well in heaven. The theme of the infidelity and unpredictability of fortune, which becomes very common in *marthiyas* after this, is used prominently in this poem (*Diwan*, ed. R. Yāsīmi, Tehran 1339/1960, 215-18) Amīr Mu‘izzī [*q.v.*] (d. 519-21/1125-7) in a *marthiya* for Nizām al-Mulk, has the speaker ask questions in disbelief, uses anaphora, addresses the deceased directly and wishes him well in heaven (*Diwan*, ed. A. Iḥkāl, Tehran 1318/1939, 476). Anwāri [*q.v.*] begins his *marthiya* for Maḥd al-Dīn b. Abī Ṭālib b. Nī‘mā, the nābī of Bālkh, by stating that the city of Bālkh is in an uproar because Maḥd al-Dīn did not hold his audience that day. The speaker questions a chamberlain, thinks up excuses for the nābī’s absence, blames fortune for this loss, uses anaphora and the word *darātigh*, and prays for his well-being in heaven (*Diwan*, ed. Mudarris Rādwāi, Tehran 1337/1958, i, 46-8). Among other famous *marthiyas* that display these conventions one can mention Sa‘dī’s *marthiya* for Sa‘d b. Abū Bakr, Muḥtaqākh Kāhānī’s for Shāh Tahmāsp and Abu ‘l-Kāsim Lāhūtī’s for Lenīn.

A variant of this form of public *marthiya* is the poem which combines mourning for the deceased and congratulations to the successor in approximately equal proportions. The earliest example is by Abū ‘l-‘Abbās Rabiḍjānī (*f. 331/942-3*) where he mourns the death of the Sāmānid ruler Naṣr b. Ahmad and congratulates his successor Nūh b. Naṣr (text and tr. in G. Lazarz, *Les premières poètes persans*, 2 vols., Paris and Tehran 1964., i, 87; ii, 60). Other examples may be found in the *diwān* of Dāmid al-Dīn Muhammad b. ‘Abd al-Razzāk Isfahānī, Khādżū Khvānnī, and ‘Urfi Shīrāzī.

The *marthiyas* written for relatives and close friends are very personal in tone, in contrast with the more formal and distant tone of those written for public figures. Less emphasis is placed on the universal mourning of man and nature and more on the poet’s own feelings. The poet does not address the persona of a puzzled observer who must discover what has caused the public grief, although other themes and devices typical of Farrukhi may be present, such as the use of anaphora, the direct address of the deceased, words meaning “alas”, and prayers for well-being in heaven. Fate is often blamed for the untimely death, and if the deceased died young, much use is made of images of gardens, flowers, young shoots, and the seasons of spring and autumn. An early example is Firdawsī’s [*q.v.*] *marthiya* for his son which comes at the beginning of the story of Bahram Čubīn in the *Shāh-nāma*. Maš‘ūd Sa‘d Salmān’s *marthiya* for his son is apparently the first use of the *tarkīb-band* form for a *marthiya* (*op. cit.*, 543-8). The most moving expressions of grief for the loss of a relative in all of classical Persian poetry are those of Khākānī Shirvānī [*q.v.*] for his son Rashīd al-Dīn. Khākānī was one of the most prolific writers of *marthiyas* before the Safawid period, and his *Diwan* (ed. M. ‘Abbāsī, Tehran 1336/1957) contains over 50 of these poems. In three of his *marthiyas* for his son, Khākānī displays his mastery of language and the poetic tradition, and his freedom from the restrictions of conventional imagery. He begins one (*Diwan*, 147-50) with the son’s illness and ends with his death. The father orders many preparations to cure the boy, but when he dies, Khākānī demands these back. In a powerful use of the radif “bāz dāhīd” (“give back”) the
poet proceeds through a long list of folk medicines and spells, and ends by asking for his son back. Another (op. cit., 142-6) begins with 33 lines containing imperative verbs expressing the sense "weep and mourn and contemplate this tragedy". He then orders various parts of his house and articles of clothing to be destroyed, his hair to be cut, and his face scratched. The abundant use of images of death and mourning and imperative verbs constitutes an unusual and striking innovation within the poetic tradition. Equally as compelling is a third unusual and striking innovation within the poetic tradition. Equally as compelling is a third unusual and striking innovation within the poetic tradition.

characteristics of the post-Safawid religious marthiyas, especially the motif of a speaker anticipating his own death and describing the mourning that will follow it.

Some other particularly moving marthiyas of this sort are Kamâl al-Dîn Ismâ‘îl’s for his son who was drowned (Diwân, ed. H. Bâr al-‘Ulûmî, Tehran 1348/1969, 429-32), and Humâm Tâbrîzî’s cycle of 16 short ghasals on the death of his beloved (Diwân, ed. R. ‘Aywâdî, Tâbrîz 1351/1972, 170-6). Dâ‘îmî’s [q.v.] marthiyas for his brother in the form of a tarkib-band of seven stanzas (Diwân, ed. H. Râfî’, Tehran 1341/1962, 115-18) echoes closely in the first stanza a line from Sa’dî’s marthiya for Abû Bâk r B. Sa’d Zagînî (Hâdwî, ed. H. Râfî’, Tehran 1354/1975), and includes (ta‘dÏmî) a ghasal written by his brother. Muhammad Tâlî Bârâ’s [q.v.] marthiya for his father (Diwân, Tehran 1344/1965, i, 1-2) with its images of the setting sun, night, dark mourning clothes, and of the conventional images of verse and writing, shows a clear departure from convention.

A special category of “personal” marthiyas consists of the poems marthiyas written on the death of other poets. Among these may be mentioned Rûdâkî’s short marthiya for Shâhid Bâlkhî, Labîbî’s for Farrukhi (with invective against ‘Unsûrî), Sanâ‘î’s for Mu‘izzî, Bâhâr’s for Dâ‘îmî Sâlîkî al-Dhâhâwi, Īrâd Mîrsâ, Parwîn I’tîsâmî and ‘Ishkî, and the collection of marthiyas by twelve contemporary poets for Furâgh Farraghzâd which were published in Diwân-dân-i Furâgh Farraghzad (Tehran 1347/1969) and includes (ta‘dÏmî) a ghasal written by his brother. Muhammad Tâlî Bârâ’s [q.v.] marthiya for his father (Diwân, Tehran 1344/1965, i, 1-2) with its images of the setting sun, night, dark mourning clothes, and of the conventional images of verse and writing, shows a clear departure from convention.

An unusual exception to the rule that marthiyas are composed in verse is the prose marthiya for Muhammad b. Ghîyâh al-Dîn Balbân by Hasan Dihlânî [q.v.] (in M.A. Ghânî, Pre-Mughal Persian in Hindustân, Allahabad 1941, 428-34). This begins with a complaint about the tyranny of fate, then recounts the circumstances of Muhammad’s death, describes all nature as mourning and ends with prayers for his happiness in heaven. It uses many of the conventional images of verse marthiyas, and has poetry interspersed throughout.

With the spread of Shî‘î Islam in the early Safawid period came the mourning ceremonies associated with the month of Muharram and centring on ‘asâ’ira, the day of al-Husayn’s death. The religious marthiyas that were written to recall the events at Karbala developed in two directions: long courtly poems in the classical tradition, and various less formal popular genres.

Just as Farrukhi had established a model for writing secular courtly marthiyas, so Muhtâsham Kâshânî (d. 996/1587-8) created the model for the courtly religious marthiya with his famous twelve-stanza tarkib-band on the death of al-Husayn (Diwân, ed. M. ‘A. Kârnâmî, Tehran 1344/1965, 280-5). Reminiscent of Farrukhi’s marthiya, Muhtâsham’s begins with questions asking why the world and the heavens are weeping and tumult. Anaphora are used prominently. Important images are those of shipwreck, floods of tears, waves and seas of blood, thirst, date palms and gardens, and the world and the heavens weeping. These images, and those of light and darkness which later became common in the ta‘ziyeh [q.v.], are the basic images of the religious marthiya in Persian. A great number of tarkib-bands were written after the example of Muhtâsham, and this remained the principal courtly form for the religious marthiya until the 20th century. Kâfîdân were also written, the most strikingly original being that of Kâ‘ûnî [q.v.] for al-Husayn. Employing the device, first used by Rûdâkî, of short questions and answers in each line, Kâ‘ûnî produced a powerful, ritual-like poem describing and lamenting the tragedy at Karbala (text and tr. in Browne, LHP, iv, 178-81).

The popular forms of the Shî‘î marthiya are the ta‘ziyeh, the raouda and nauhâ. The raouda takes its name from Kamâl al-Dîn Husayn b. ‘Ali Kâshânî [q.v.] Raoufa al-‘ahdâhâd, from which readings and recitations, called raouâda-khâns, were given. The marthiyas in raouâda-khâns sometimes involve considerable oral improvisation on well-known Karbala themes, and thus do not necessarily follow a prescribed literary form. Two popular 19th century books of marthiyas and Karbala accounts which have been reprinted many times are the Tûfân al-bukâh of Muhammad Ibrahim b. Muhammad Bâkîr Harawi Kazwînî “Djaywârî” (d. 1253/1837-8) and Muhammad b. ‘Abd Allah Shâhrâbârî Arjâstânî’s Tarîk al-bukâh. The latter seems to have been written especially for naâkhâs and raouâda-khâns.

The nauhâs, which are sung on occasions involving breast-beating (sîna-zani) of self-flagellation with chains (zandjîr-zani), are a genre of strophic poems in classical metres which often have unconventional rhyme schemes and arrangements of lines and refrains within the stanza. The number and placement of stresses in each line are important in nauhâs, those for breast-beating having a more rapid rhythm than those for chain-flagellation.

Bibliography (in addition to references given in the text): a popular anthology of marthiyas was compiled by H. Kûhî Kîrnâmî under the title Sîyâh-e adabi dar 伊朗, Tehran 1333/1954 (uncritical); Zayn al-‘Abîdîn Muhtâmân, Shî‘î wa adab-i Fârsî, Tehran 1346/1967, 74-106; Zahâr Ibîl (Nâmdir), Eleyg in the Qajar period, in P. Chelkowski, ed., Ta‘ziyeh: ritual and drama in Iran, New York 1979, 193-209 (uncritical).

3. In Turkish literature.

Funeral laments, inscribed in stone or recorded in Uyghur manuscripts, belong to the pre-Islamic heritage of the Turks. For the marthiya proper to Islamic Turkish literature, the poetic forms were the kasîda, or among the Ottoman Turks, preferably the stanzaic tarkib-band or tarkib-band. Ottoman marthiyas present the same varied and cultivated style which we know from divân poetry. Bâkî’s (d. 1080/1660) elegy on sultan Suleyman is regarded as the classical masterpiece, but it has behind it a long tradition of formal marthiyas by Ahmedî, Sheykihi, Kiwânî, Ahmed Pasha, Nejâtî, Kemâlpâhâzâde and Lâmî, who composed “parallels” in the same metre and with the same radif (N. M. Çetin, art. Terci, in IA, xii, 172).

Underneath the high-flying imagery, a current of real feeling could flow. Closeness to the sultan could give power, office, and wealth; it was small wonder that there in the palace were profound anxiety. The favour of the princes, too, potential successors to the throne, could raise poets to high positions. When a
prince or a high dignitary died, the poets in his entourage lost not only a friend but often their livelihood. Nedjâri (d. 915/1509), who mourned two princes in moving marthiyas, lived on a pension, but survived his last patron prince Mâhmid by only two years. The abolition of the princes’ courts in the 16th/17th century removed from the Anatolian countryside many centres of culture. At the central court in Istanbul, fear and flattery did not always prevail. When the much-loved prince Muṣâfa was executed (960/1553), poets and prose writers expressed their grief, and Taṣāfi ʿIṣâf ʿAlî (d. 990/1582) in his famous marthiya took some risk when he openly accused the Grand Vizier.

Qâṣâlî (d. 942/1535 [q.v.]) lived in retirement in Mecca after he had written in praise of the executed Iskender Celebi. In the grand tradition of Ottoman marthiyas, but in a different vein, is the Marthiya-yi gurbi, in which the urbane Meṭâlî [q.v.] (d. 942/1535-6) commemorates his deceased cat with a mock solemnity in stanzas, from which also genuine affection emerges. In this way, the imagery of the marthiya, steeped in the panegyric convention, could be used for a deeper vein of feeling, for political criticism or for gentle irony. The form was in use until the end of the 19th century. The elegy written by Ǧâlib Dedê [q.v.] on the occasion of a visit from the Emperor of Russia documents to the last great examples of Turkish diwân literature. ʿAkîf Paşa (d. 1845) wrote a short moving marthiya on the death of his child. The lyrical poem Makbûr, written by ʿAbdulhâjj Hâmid Tarhan upon the death of his young wife in 1885, has been classed as the greatest marthiya after Bâlî’s elegy (S. E. Siyavûs Gil, in L4, i, 71). Not completely removed from the urban tradition, the unlettered and the peasants have marthiyas of their own. In Turkish folklore, lyrical compositions expressive of grief, ağhi, have survived; they commemorate the deceased, treat of general aspects of death or express sorrow over collective calamities (P. N. Boratav, in PhT, ii, cf. cahzon funèbre). Whereas the sufferings caused by the Russo-Turkish war of 1877-8 inspired Nâmîk Kemal [q.v.] to write his impassioned Waran marthiya, popular poets had already since 1683 turned to elegies upon the loss of Rumelian cities to the Christian enemy, such as Buda, Belgrade, Sarajevo, Banyaluka and Bugir- Rumelian cities to the Christian enemy, such as Buda, Belgrade, Sarajevo, Banyaluka and Bugir-

“4. In Urdu literature

Marthiya (pl. in Urdu, marthiyâ, marâdik) is one of the oldest forms of Urdu poetry. Two types exist, secular and religious, but the second is by far the more important; indeed, it is almost always assumed whenever Urdu writers mention marthiya. Moreover, it is usually about the Karbala martyrs, especially the Imâm al-Ḥusayn b. ʿAlî b. Abi Ṭâlib. Shorter poems on this theme may be termed naaâba or salâm, the latter normally containing a word such as salâm, salâmî, muârîd or muâryâ (see the first few verses). Urdu critics often begin their accounts with the pre-Islamic Arabic marthiya, and also postulate some slight debt to Persian elegists such as Muṭâshâm (Shibli, Mushâdama, 1-9). Yet they regard the form it took in 19th century Lucknow as peculiarly Indian—perhaps the only truly indigenous major Urdu poetical genre. Its early development goes back to the Dakhkani, that form of Urdu used in southern India, which is related to the literary language which emerged in northern India somewhat as Chaucer’s English is to that of Shakespeare. The ‘Adî Shâh [q.v.] sultans of Bîlgâpur (895-1047/1489-1686) and the Kûb Shâhs [q.v.] of Golkônda (901-1098/1496-1687) were Shîfl, patrons of poetry, and sometimes poets themselves. They encouraged the recitation of marthiya in Muhâr- ram, and even had ʿAṣhâr al-Ḥâdîn built specially for the purpose. Thus though, like other Urdu poetical forms, it was at first court poetry, because of its religious nature it was taken by princes to the people, to form a corporate religio-literary and social activity. It probably played an important part in the development of the muârîd (public poetical recital or competition) which became—and still remains—a phenomenon of Indo-Pakistani literary and social life. In the Deccan, from the 10th/16th century onwards, numerous poets composed marthiyas; some specialised in it. The researches of Nasîr al-Dîn Hâshîmî and Muhîy al-Dîn Kâdirîzor (see Bibl.) have brought hundreds of examples to light from manuscripts in the Subcontinent and Europe, including an important two-volume collection in Edinburgh University Library. Thus the Dakhkani marthiya can now be seen as the ancestor of the north-Indian marthiya which reached its apogee in the works of Anîs and Dabîr in the mid-19th century. Its spread northward was a by-product of the subjugation of the Deccan sultanes by the armies of the Emperor Awrangzîb (1657/8-1667).

Nevertheless, the 19th century Lucknow marthiya, varied in content but invariably in musaddas form, and frequently extending to between 100 and 200 stanzas (300-600 vv.), is a far cry from the modest elegies of early Dakhkani poets. To begin with, musaddas was rarely used in the Deccan. An isolated exception being Yâtim Ahmad (Hâshîmî, 379, gives two stanzas) dates from the Mughal period. It would appear that in Bîlgâpur and Golkônda, the great majority of marthiyas were in “ghazal form”—that is, monosyllabic, the rhyme also coming at the end of the first hemistich of the first verse. Among other forms occasionally used were muârîd and quatrains. To take an early poet, Sultan Muhammad Kuli Kûb Shâh (976-
MARTHIYA 611

1020/1568-1611) wrote 5 marathi (Kulltyydt, ^r - *£-,
57-60), one in mathnawi, the rest mghazal form. Of ... the suitability of
musaddas for long poems, Hall's famous musaddas,
Madd-o-jazr-i-Isldm, being a prime example.

Certainly, both Sawda and Mir tried out musaddas of various kinds in about 10% of their elegies; but it was in Lucknow, where both poets gravitated late in life, that marthiya became inextricably associated with musaddas, with the rhyme scheme aaba bba, ccccd, reef, etc. The credit is usually given to Mir Damir, of the generation before AnTs. It may be that AnTs' father, Mir Khallik, also had a hand in it, if only we could date poems attributed to him and could be sure they were not composed by his celebrated son (see Shibli, op. cit., 15).

The disturbed situation in Dilli, due to Afghan and Maradhincursions, attracted many of its poets to Lucknow, whose Nawwabs were poets and patrons of poetry; and as they were also Suhis, they encouraged elegiac poetry. In its progress from the Deccan via Dilli to Lucknow, the marthiya changed in length, scope and content, as well as in prosody. In the Deccan, it began as a short lament, ranging from 5 verses (10 hemistiches) to 20—rarely 30, even allowing for the possibility that some examples which have survived may have been mere fragments. Nor did its length increase significantly in the early Mughal era. In fact, it resembled the nasbat or salam of northern India. The poet's task was naan avr tulma (lit. "to weep and cause weeping"). Thus the rhyme often included repeated interjections of sorrow, such as sa'i, sa'y, wayha, dh, ha'ë and hayf; other evocative words such as Husayn, Husayna, Karbah and mushtaba were also used in rhyme. The effect was heightened by the chanting (sz khâdan) in which elegies were recited. There were also realistic, if brief, descriptions of the blood-stained body or shroud or the martyr. Heaven and earth were said to be thunderstruck by his death. Yet despite its small compass, the Dakkan marthiya foreshadows, spasmatically, almost all the elements in the content of that of the 19th century. The various characters, their words, their feelings, and their exploits, are to be found. For example, the unhistorical marriage of al-Husayn's daughter Sakhta to his nephew Kasmir is accepted into A'Tl's al-Musannaf (d. after 1169/1756) and his contemporary Ghulami (Kadiri, 293, 297).

Brevity inhibited the development of these themes. But some long mathnawis on the Karbala martyrdoms were written in the Deccan, predating the 19th century Lucknow "epic" marthiya. Whether they had any direct influence on it is hard to say. Both Shah Muhammad's Dang-nama and Wali Wullin's Rawdat al-shuhada' date from around 1730. However, the later Rawdat al-shuhada' which begins with the Prophet's death and ends with Karbalâ, might better be described as a sequence of separate elegies. Another Rawdat al-shuhada', by a certain Muhkam, dates from 1806.

Sawda was a major elegist, and composed 91 marthiya. Though their average length is only about fifty verses, he was able to extend the battle-scenes, characterisation and dramatic content. He seems an obvious halfway house between the marthiya of the Deccan and that of Lucknow. He was often criticised for his lack of sincerity in lamentation.

The Lucknow "epic" marthiya may be said to have begun with Mir Damir and reached its climax with Mir Babar 'Ali Anis (1802-74) and Mirza Salamat 'Ali Sabir (1803-75), who composed more than a thousand marthiya each. Sz-khân often gave way to declamation (taht al-lafz], thus enhancing the dramatic impact. Despite the great length of many elegies, which has already been mentioned, so varied and extended was the content that no one marthiya told the whole Karbala' story in full. This was doubtless necessitated by the circumstances and the popularity of the form which led the poets to go on writing marthiya. Variety was achieved by the selection of incidents as well as variation in treatment. Yet some readers may regret that no full-fledged Karbala epic resulted. Characterisation, dialogue, description of scenes and nature, battle preparation and the battle itself, all played their part, without neglecting the original aim of lamentation. From the literary point of view, no devices of sz-shuhada' or bâghat were neglected, with rich vocabulary and telling similes and metaphors. Critics have analysed the content-sequence as follows (Ridwi, Rih-i-Anis. Introd., 14-15: Afdal Husayn, Haydât-i-Sabir, i, 137-40):

1. ebu (matla'mamhid) - introductory verses setting the tone, with no restriction to at details.
2. râkiyat - the martyr-hero's farewell to his nearest and dearest.
3. sz-pa' - a description of the hero from head to foot.
4. amal - the army's preparation for battle, perhaps including a detailed description of the hero's horse.
5. raja'z - the hero's battle oration.
6. dzam (ariz') - the actual battle, stressing the hero's valour, often including a description of his sword.
7. sz-hâdât - the death of the martyr, either al-Husayn or some member of his family.
8. bâyn - the lamentation of the martyr's family and friends, of the poet himself, and of all believers.

But the above scheme was not mandatory: there were really only two thematic essentials to qualify a poem as a marthiya—it must be a lament, and must involve the martyr's Karbala.

There was both mutual influence and intense rivalry between Anis and Sabir. Lucknow split into two camps, and a considerable literature of comparison was generated. Both were outstanding poets, and some consider Anis the greatest of all Urdu poets. If he is preferred to Sabir, it may be because on the whole he exhibits less pedantry and straining after effect. Two such giants were hard to equal; and before their deaths, the Lucknow principalcy ended with the exile of Nawwab Wadjid 'Ali to Calcutta after the Indian Mutiny (1857-8). Though marthiya continued into the present century, with encouragement at other courts such as Rampur and Hyderabad, its great days were over. Those interested in the contemporaries and successors of Anis may consult 'Ishdiki, 713-39, and Saksena, 137-9. To the present writer, the marthiya of Anis's brother Mu'nis seems to merit reassessment.

The importance of marthiya in Urdu literary history has been widely recognised. Hâlî (Mukaddima-yi-dîr- e-ash'iri, 182-91) describes Anis's marthiya as "the creation of a new form which greatly extended the range of Urdu poetry, increasing its vocabulary, ending its stagnation and breathing new life into it." It is also said to have demonstrated the suitability of musaddas for long poems, Hâlî's famous musaddas, Madd-e-jazr-i-Islâm, being a prime example.
Secular marthiya has existed alongside the religious type throughout its history, but it has received scant attention in comparison. Zafar Bari (130-31, 258) gives an elegy on Awarangiz in 5 verses of mixed Dakhani-Persian maznawi. The poet, Mir Qa'far `Ali (1068-1125/1658-1713), was born in north India, but accompanied the Emperor's son to the Deccan.

In the 19th century, the ʿAliqafḥ Movement revived interest in secular marthiya. Ḥālī himself composed five of them plus two shorter elegiac pieces (Kulliyāt-i-nazm-i-Ḥālī, Lahore 1968, i, 327-62), in various verse-forms. His elegy of the poet Ghālīb in ten stanzas of ten verses each is an often-quoted masterpiece. Among others often praised are that of Shibli Nu'mani (1857-1914) on his brother and that of Munshī Nawbāt Rāe Nazar on his son. Nationalism and independence in the Subcontinent have led to a proliferation of the form in newspapers and magazines.

J. A. Haywood

5. In Swahili literature.

The word marthiya is not used in Swahili literature; the word for an elegy is islamiko "lament". It is very much a living tradition among Swahili men of letters to compose praising poetry for great men who have died. The custom is well-known in Bantu Africa outside the sphere of Islamic influence, so that it may well have been in use among the Swahili before the advent of Islam in the late Umayyad period. Among the Bantu peoples, songs of lament have been recorded by De Rop, Rycroft, Van Wing and others.

Few songs of lament in Swahili have come down to us from any earlier period than the present century, except the Inshũa, which lamens in eighty stanzas the fall of the ancient city of Pate (the ruins of which have not yet been excavated) written probably before 1232/1820, by Sayid Abdallah bin Ali bin Nassir, a Swahili of Arabic origin. His contemporary Muyaka bin Haji al-Ghassani (whose family name also betrays his Arabic ancestry) (d. ca. 1250/1837) wrote secular verse on personal as well as political subjects, and quatrains on love and philosophy. One of his poems may be called an elegy. It begins thus:

"Do not remind me of that time when both my parents were alive when friends and kinsmen filled the house... Today I have remained alone with none to help or console me..."

In Tanga, Hemeti al-Buburi, who also wrote in the second quarter of the 19th century, composed the Uluzii wa Kutanuufu Nabhi, the Epic on the Death of the Prophet, in which he inserts a few lines of what may have been an elegy on Muhammad, see J. W. Allen's edition, p. 39. In Lamu, Muhammad bin Abu Bakari Kijumwa wrote an elegy on the death of Professor Alice Werner, of the School of Oriental Studies in London, whom he had served as an informant in 1913. The poem is dated 1354/1935-6. It begins:

"The hearts are full of grief and their sadness cannot be measured..."

Mohamed Bin Nasor Shaksi wrote an elegy on the death of the Governor of the Kenya Coast, Sir Mbaraka Ali Hnawy, in 1939. It begins: "We pray to Thee, O Majesty, O Lord without a peer..." Some of the best elegies were written in the last twenty years, first at the death of the author Shaaban Robert (1962), then at the death of the poet and Minister of Justice in Tanzania. Sh. Amri K. Abedi, in 1964.

The latter had himself composed a now famous lament at the death of his friend Shaaban Robert, which begins thus: Hae misba mizo! "Woe! A grave misfortune...". The complete text was published, together with many other elegies that were composed by Swahili poets in both Kenya and Tanzania for the same sad occasion, by the present writer in Swahili, Journal of the East African Swahili Committee, xxxii (1963), in Dar es Salaam. The same journal published the elegies written at the death of Amri Abedi (Swahili, xxxi/1 [1965], 4-18).

It is evident that the majority of Swahili elegies which have been published belong to the secular tradition of mourning the death of great men. Some of the finest pieces of Swahili lyric are among them, which is all the more remarkable since very little real lyric verse in the Western sense has been written in...
Swahili; there is for instance hardly any nature-
lyricism. The probable reason for the excellence of
elegiac poetry in Swahili is the popular predilection
also among other Bantu-speaking peoples, notably the
Zulu. The mood of feeling that in the past everything
was better, when good men and great leaders were
still alive, is a natural one for people who are so deeply
attached to their parents, their grandparents, their
aunts and uncles, that they will always go to their
elders for advice and guidance. The demise of such
senior friends creates a mood of loneliness and
aimlessness which explains the refrains of several of
the elegies, e.g. Amri Abbé’s on Shaaban Robert (tr.
in the original metre): “Our language is still
tender/who will be its foster father? Now that Shaaban
has departed/he that nursed it like an infant!”

In the purely Islamic elegies, these feelings of
nostalgia and solitude are projected on the demise of
the Prophet Muhammad, as in the elegiac hymn
probably composed by Sharifu Badruddini in Lamu,
which begins: “Longing fills the hearts of people...”
The people need guidance in all matters of daily life
and so, in Swahili literature, the time when the Holy
Prophet walked on earth is described as one of
happiness, since all men knew then what to do.

In the elegies of the great Muslim literary
Bantu language, see especially A. de Rop, Gesprkos
Woordenboek der Nkundo, Tervuren 1956, 62-85. On
the Inkisihi, see Knappert, Four centuries of Swahili
verse, London 1979, 127-37; on Muyakina bin Haji,
see op. cit., 146, where the full text and translation
of this elegy are given; for text and full translation
of Amri Abbé’s elegy on Shaaban Robert, see op. cit.,
285-7. The same work gives a bibliography of
Swahili poetry including the treatise of W. T.
Allen, on 314-16. For Ahmad Basheikh Husayn’s
elegy on Sir Mbasar Ali Haynani, written in 1959
a few years before his own death, see Knappert,
op. cit., 258-60. (J. Knappert)

MARTOLOS, a salaried member of the
Ottoman internal security forces, recruited
predominantly in the Balkans from among chosen
land-owning Orthodox Christians who, retaining
their religion, became members of the Ottoman ‘askeri
 caste [q.v.]. The word almost certainly originated
from the Greek, either armatolos (armed), “corrupt”, “gone astray”, or armatolos (armed), “armed”, “weapon-carrying”. It was shortened to
martolos (sometimes martolue, with the occasional
plural martoloioun, [q.v.]) in Ottoman Turkish, whence it entered Bulgarian and then Serbian. By the end of
the 9th/10th century it had entered Hungarian and
was often used by Europeans to describe Christian
sailors on the Danube River who served the Ottomans as rowers on light wooden barques called nassad. Its
euse by the Ottomans, however, was much broader.

In the mid-9th/mid-10th century, the conquering
Turks assigned martolos in the Balkans as armed
police, mounted and foot, who occasionally
participated in war, but usually acted in their locales
as peace-time border patrols, castle guards, security
forces for important mines, guards for strategic passes
(derbend) and, occasionally, tax collectors. Because of
their military positions, martolos were able to keep
their lands within the inadari system [q.v.]. Martolos were
not limited to the Balkans, however, as some were used
as spies and messengers as early as the 9th/10th
century among the Macedonians (see Anagnostopoulos,
in IA, vii, 342). Martolos in the Balkans were almost
always led by Muslims (martolos bashi, martolos aghasi,
martolos bashbugha). They remained loyal to the Sultan

for more than two centuries because the Ottomans
rewarded them with daily-wage ‘askeri status, though
they remained Christian; their positions were hereditary; and they were exempt from the djizya [q.v.]
and various local taxes.

When in the 11th/17th century local Balkan
antagonisms against Ottoman rule increased, Christian
martolos serving against rebellious haikus caused
hostility, some martolos joining with the anti-Ottoman
revolutionaries. By 1104/1692 Istanbul no longer
allowed Christians to serve as martolos in the Balkans,
and by 1135/1722 the Rumeli governor, ‘Othmán
Pasha, merged the institution of martolos with the
Muslim pandor (local security police) (Orthonlu, 89).

By the 13th/19th century, a few martolos persisted
in northern Macedonia, but these were effectively
replaced by new institutions brought about by the
Turkish reforms.

Bibliography: The term is briefly explained in
Pakahn, s.v. Martolos, ii, 409-10, and Midhat
Sertoğlu, Rezimli Osmanliler tarhi asıllıklapedi, Istanbul 1958, 197. It exists in numerous western language
studies, e.g. S. Kakuk, Recherches sur l’histoire
ottomanies des XVII et XVIII siecles, s’elements ottomans
de la langue hongroise, Budapest 1973, 268.

References to the institution in standard sources for
Ottoman history may be found in E. Rossi’s
article and in his addition in EP Suppl. The
most extensive bibliography on the formation of the
institution is in R. Anhgger, Martolos, in IA, vii,
341-4, and in C. Orhonlu, Osmanlar imperatorlugunda
derbend tezkirli, Istanbul 1967, 79-90. For the
Balkans, see M. Vasic, Die Martoloss im
Osmancischen Reich, in Zeitschr. fur Bal.-skologie,
Jahrgang ii (1964), 172-89, or the Turkish translation
mentions, M. Vasic, Osmanlar imperatorlugunda
martoloslar, in TD xxxi (1977), 47-64; and M. Vasic,

Review, vii/1 (1977), 30-41. (E. Rossi: [W. J. Griswold])

MARTYR, MARTYRDOM [see SHAID; SHA-
HADA]

MÄRÜF AL-KARKHÎ. Abu MA’HÜZ b. FIRUZ or
FIRUZAN, d. 200/815-16, one of the most celebrated of
the early ascetics and mystics of the Baghdad
school.

While it is possible that the nisba al-Karkhi may be
connected with the eastern ‘Irāq town of Karkh
Baghadjād, it is more likely that it derives from his
association with the Karkh area of Bagdad. It is
generally thought that his parents were Christians,
although Ibn Taghribirdī (ed. Juynboll and Matthes,
i, 575) maintains that they were Sābiān of the district of Wāṣiṭ. Among his teachers in the tenets of Sūfīsm
were Bakr b. Khūnays al-Kūfī and Farkad al-Sabkāhī (al-Makki, Kūt al-kuhib, Cairo 1310, i, 9). He himself
was an important influence on another famous Sūfī of
the earlier period, Sārī al-Sākātī [q.v.], who was in
turn the teacher and master of one of the most famous
exponents of Sūfīsm, al-Djinayd [q.v.]. The story of
his conversion to Islam at the hands of the Shift’ Imām
“Ali b. Musa al-Ridā and his attempt to persuade his
parents to the same course is now generally regarded
as untrue. Among the sayings attributed to him are:
“Love cannot be learned from men; it is in God’s gift
and derives from His Grace”; “Saints may be known
as untrue. Among the sayings attributed to him are:
“Love cannot be learned from men; it is in God’s gift
and derives from His Grace”; “Saints may be known
as untrue. Among the sayings attributed to him are:
“Love cannot be learned from men; it is in God’s gift
and derives from His Grace”; “Saints may be known
as untrue. Among the sayings attributed to him are:
“Love cannot be learned from men; it is in God’s gift
and derives from His Grace}; “Saints may be known
as untrue. Among the sayings attributed to him are:
“Love cannot be learned from men; it is in God’s gift
and derives from His Grace”; “Saints may be known
as untrue. Among the sayings attributed to him are:
“Love cannot be learned from men; it is in God’s gift
and derives from His Grace}; “Saints may be known
as untrue. Among the sayings attributed to him are:

Tigris, is still an object of pious resort and pilgrimage. Al-Kushayri relates that prayer at his tomb was generally regarded as propitious in obtaining rain. Ma‘rūf’s name appears in many of the silās of the Sufi orders.

(R. A. Nicholson - [R. W. J. Austin])

Mā‘rūf al-Rūsāffi (1875-1943), leading poet of modern ‘Irāq and one extremely audacious and outspoken in expressing his political views. He was born in Baghdad in 1875 to his father ʿAbd al-Ḥanīn Maḥmūd, of Kurdish descent and from the Diabāriya tribe (between Kirkūk and Sulaymānīya in N. ‘Irāq), who was a pious man and worked as a gendarmerie outside Baghdad; for this reason, Ma‘rūf was brought up and educated by his devoted mother Fātima bint Djasim at her father’s house (she was of the Karaghul Arabic tribe, a branch of Shammar, who inhabited the Karaghul quarter in Baghdad).

Ma‘rūf was sent to a kutāb in Baghdad where he learnt reading and reciting the Qur‘ān by heart. After three years of primary school, he joined al-Ruḥiyya al-‘Askariyya school. In his fourth year there, he failed his examinations and was unable to continue his secular studies which would have paved the way for high military or government service. Hence he switched to religious studies under the supervision of the celebrated scholar Maḥmūd Shukrī al-ʿAlāṣī (1857-1924 [q.v.]), and others such as Shaykh ʿAbbās al-Ḵāṣṣib and Kāsim al-Kaysī, for twelve years. He was a distinguished student and became a devoted Şūţī. In appreciation of this, his master al-ʿAlāṣī gave him the name of Ma‘rūf al-Rūsāfī, in contrast to the name of the celebrated šūţī scholar Ma‘rūf al-Karkhī (which derived from the name of the western bank of the river Tigris), and thus Ma‘rūf’s family name became attributed to the eastern bank of the river.

There is no indication in the various biographical sources as to how he sustained himself during these years of his religious and literary studies and how he became a completely secular poet. What is known is that he was compelled to work as a teacher in two primary schools in Baghdad until he left for a third school in Mandali in Diyāwā because of a higher salary. Later, he attempted to return to Baghdad and passed there an examination in Arabic language and literature with distinction, so that he was appointed a teacher at a secondary school until 1908. During these years, he published poems in well-known Egyptian periodicals such as al-Mu‘aṣṣat and al-Muḥṣafat, as did others. He was poems of ‘Irāq, e.g. al-Ẓahīrī (i.a. Rūsāfī) there being no periodical of distinction in ‘Irāq at that time. He became well-known in other Arab countries as well as among the Arab emigrants in America.

However, by this stage of his life, his poetry was already devoid of religious tendencies and completely secular, with a longing for freedom of thought, against tyranny urging his people into scientific and cultural revival following the European model, describing and praising modern inventions, defending the victims of social injustice and lamenting the deteriorating conditions to which the Ottoman Empire, and especially ʿIrāq, was reduced. He also supported the slogan of the French Revolution, adopted by the Committee of Union and Progress (C.U.P.) as Ḥarīyāt, “Adālā, Ma‘ṣūdāt ("Liberty, Justice and Human Rights")." As it appears in his poem published in Dīva‘ī al-Rūsāfī, Beirut 1910.

After the Young Turk Revolution of 10 July 1908, he translated into Arabic the rallying-song of his poet Tewfik Fikret, which became a school song in many Arab countries. It seems that his sympathy with the ideology of the C.U.P. induced the Baghdad branch of the C.U.P. headed by Murād Bey Sulaymān (the brother of Maḥmūd Shekwat [q.v.]), to invite him to edit the Arabic part of the bilingual political and cultural journal (Baghdād (6 August 1908) which was the party’s bulletin.

Al-Rūsāfī celebrated the declaration of the Dūṣūr (or Constitution of 10 July 1908) with both poetry and action. According to Kāsim al-Ḵhāṣṣī (Ma‘rūf al-Rūsāfī, pp. 21-5), Ma‘rūf al-Rūsāfī arrived in Istanbul via Beirut in order to produce an Arabic version of his periodical, which it was hoped would create a new understanding between the two main groups of the Ottoman Empire, the Turks and the Arabs, and would serve as the voice of the C.U.P. Al-Rūsāfī was disappointed to learn that the editor had not been able to get the financial support needed to publish the Arabic part. So he left for Salonika, and there Maḥmūd Shekwat, the commander of the 3rd Army Corps of Macedonia, marched with his army on Istanbul, deposed the Sultan ʿAbd al-Ḥamīd II [q.v.] on 13 April 1909, and removed his supporters, the reactionaries headed by Darwīsh Wahdatī, who had been raised to power on 31 March 1909. In his poem Ruḥyat al-sarī ("An incantation for the fallen victim") (Dīva‘ī, 6th ed., Beirut (?) 1928, 162-4), al-Rūsāfī rebuked the Ottoman government for its tyranny, as being against Islamic tradition, and he called for a republican government (ṣumārīya, in order to achieve progress and freedom as in Europe. In his poem Fi Si‘lāt (ibid., 382-8), he described the revolution and his journey with the army to Istanbul against the Sultan. In his poem Tamnūs al-ḥarīyāt ("July, the month of freedom") (ibid., 388-9) he greeted the Young Turk Revolution, and expressed his joy at the deposition of ʿAbd al-Ḥamīd.

On his return to ʿIrāq via Beirut, where he received with courtesy by men of letters headed by there Amin al-Mahtab, he became short of money, but fortunately the owner of al-Maktaba al-Aḥliyya helped him by buying his Dīva‘ān. The poems were edited and rearranged by Muhāyī al-Dīn Khāyāyī and...
provided with a preface (Beirut 1910). This edition as well as the following ones were full of errors, but the new edition annotated by Mustafá ʿAlí, al-Ruṣafī’s close friend and disciple, published in 4 vols, by the ʿIrākī government, Bagdād 1974, is the only authorised and complete edition. The pornographic poems of al-Ruṣafī, except his poem ʿAfdāʾa la ḥalāʾa (Diwan, 6th edn., 283-3), are excluded from all editions, and the ʿIrākī authorities never allowed their publication. In the fourth edition, many verses and poems which were against King Faysal I, his officials, and against the Rēgīm ʿAbd al-Lāh, Nūrī al-Saʿīd and others, were not included.

Back home he resumed his work at the newspaper Bagdādī, but soon, in 1909, he reviewed a new invitation, this time from “The Arab Friends’ Association” headed by al-Zāhāwī and Fāhrī al-Mudarrīs in Istanbul, to edit their daily newspaper ʿAfdāʾ al-nāḥādī (“The Path of Reason”). In Istanbul he also gave lectures in two high schools on Arabic language and literature (collected in Naḥf al-tīf fī ʿl-khāṣṣa wa ʿl-khāṭib, Istanbul 1331/1917), and taught Taḥāf Pāḡa, a leading member of C.U.P., the Arabic language. It may be that his connection with Taḥāf helped him to be elected as a deputy in the Ottoman Chamber of Deputies, formed by the Mustafa ʿArab government being established in Damascus and headed by Prince Faysal b. al-Ḥusayn (17-23 June 1913) and commanded its members in his satiric poem Mā hākādhā (“Not in this way”) (Diwan, 402-5, cf. also 405-7), accusing them of jeopardising the unity of the Empire, besides encouraging French ambitions in Syria and causing enmity between Christians and Muslims. In fact, al-Ruṣafī was a great defender of the Arab spiritual and cultural revival within the framework of the Ottoman Empire, and a vehement critic of the European powers who were aiming at its destruction. When World War I broke out, he composed a poem al-Wāṣf wa ʿl-dījāḥū (“The homeland and the holy war”) (Diwan, 489-91) calling all the Muslims to defend Islam and criticising the Egyptians for backing the British, and he expressed his hope that ʿIrāk would defeat the approaching enemy. This solidarity with the Ottoman Empire explains also why al-Ruṣafī, in his poetry, did not lament those Arab nationalists who were hanged by Djamāl Pāḡa (1916). On the other hand, he attacked the ʿSharīf Ḥusayn of Mecca for his revolt against the Ottomans (10 June 1916); he neither celebrated an Arab government being established in Damascus and headed by Prince Faysal b. al-Ḥusayn (1918-21) where he became the focus of social and literary activities, together with the Palestinian writers, nor attended a new initiative headed by ʿIsāf Nāḥījī, ʿKhālid Sākākīnī and ʿAdīr Djabīr (Diwan, 141, 428, 515). In 1921 the Director of the College, ʿKhāṣf Tūṭāb, published al-Ruṣafī’s collection of 17 school songs with their musical settings under the title Madīʿaʿat al-nāḥāḥī ʿal-madarisayyī (Ith., Jerusalem 1921, with an introduction by ʿIsāf al-Nāḥījīn).

Safa Khulūsi in his article Maʿrūf al-Ruṣafī in Jerusalem (in Arabic and Islamic garden ... Studies presented to Abdal-Latif Tihawi ... London 1977, 147-52) has discussed this period in the life of al-Ruṣafī. Khulūsi thinks that the poem which al-Ruṣafī composed after attending a lecture which Prof. A. Sh. Yehuda gave on Arab civilisation at the invitation of ʿRāḥīb Nāḥījī, the Mayor of Jerusalem, and which was attended a new Hāfez in support of the British High Commissioner for Palestine, succeeded in diverting the attention from the resolutions of the Palestinian Arab Congress held at Haifa in December 1920 and deflated the opposition to Samuel’s policy. In this poem, al-Ruṣafī praised the lecturer and the speech of Sir Herbert Samuel, as well as the Arab-Jewish blood ties, denying the accusation of their mutual enmity, and finally expressing the Arab’s fear of being expelled from their homeland Ilā Ḥurūb Sāḥib, 1922, 149-57). The poem evoked strong protests from Arab nationalists, and the Lebanese Maronite poet Wādīl al-Bustānī, who lived in Haifa, composed a poem rebuking al-Ruṣafī. This strong campaign against him persuaded al-Ruṣafī to accept an invitation to return to Bagdād in order to become the editor of a new newspaper in support of Tālīb Pāḡa al-Nakīb, who claimed the throne of ʿIrāk.

One of the main questions asked by some Arab writers, and especially by the ʿIrākī writer ʿHilāl Nāḏījī in his al-Kawmīyya wa ʿl-tīfštīrīyya fī ʿl-ḥir al-Ruṣafī, Beirut 1939, 108-9, is why al-Ruṣafī did not deal with the Palestinian question and why he did not attack in his poetry the Zionist Movement in Palestine. The answer may be that al-Ruṣafī was a great supporter of science, progress, socialism, woman’s liberation, equality, freedom of thought and self-determination, as ʿHilāl Nāḏījī himself observed in his work and as is clear from several poems in al-Ruṣafī’s Diwan (see e.g. Yaʿūm Sīngalīfīn, 473). It seems that he found all these qualities among the Jewish settlers in Palestine, hence admired them and did not criticise their projects.

Al-Ruṣafī left for ʿIrāk, but the expulsion of al-Nakīb to India by the British in order to pave the way for Prince Faysal to become King of ʿIrāk put an end to the publication of the newspaper. Instead, al-Ruṣafī was appointed a deputy director of the office of translations, which he considered below his capability and his glorious previous career. He felt that he was being neglected and humiliated, at the time when what he called ‘flatters and those devoid of talents’ were attaining high and influential positions (Diwan, 426-8). At the end of 1922 he left for Beirut and decided not to return to ʿIrāk, but when he heard of the elections to the first ʿIrākī Parliament he returned
to Baghdad. There he published his daily newspaper al-Amal (1 October-20 December 1923) whose editors were later on being imperialized by the British in Iraq. He also tried to make peace with King Faysal I, but to his great disappointment was not elected as an M. P. At the end of 1923 he was appointed Inspector of Arabic language in the Ministry of Education and gave lectures at the Teachers' College in Baghdad on Arabic Literature, lectures that were partly published in Durus fi ta'rikh al-lugha al-'Arabiyya, Baghdad 1924.

During this period he was in bad financial circumstances, and wrote the most vicious poems against King Faysal I, his government (especially against officials of the Ministry of Education) and the British (Dīwān, 448-50, 460-71); some of these poems remained unpublished and circulated orally or in handwriting. In his poem Ḥukūmat al-mintīdū ("The Mandatory Government") (Dīwān, 461), he satirised the Iraqi government as "False flag, constitution and parliament", and affirmed that the government was enslaved by the British. In a poem, not included in his Dīwān (see Khaṭṭāt, Rūsafī, 139, and Hilal Nādīf, Ṣafātī min bāyāt al-Rūṣafī, Cairo 1962, 80), he accused King Faysal I of doing nothing but "counting days and receiving his salary" and cursed him and his palace, imploring its destruction. In order to escape from poverty, he wrote panegyric poems to Abd al-Muḥsin al-Ṣādūn and others, asking for financial support.

By the help of Sa'ūdīn, he succeeded in being elected as a member of the 'Irākī Chamber of Deputies (19 May 1928), but Sa'ūdīn's suicide on 13 November 1929 was a great loss to him, and he succeeded in several poems (Dīwān, 310-26). Later on, however, al-Rūṣafī succeeded several times in being elected for a period of eight years in all between 11 November 1930 and 22 February 1939.

Between 1933-4 al-Rūṣafī lived in Fallūdja in Diyalā; there he wrote his work al-Shabbāriyya al-Muḥarramiyya, 4u hāl al-lūṭqū al-mukaddas ("Muḥarram's personality, or the solving of the holy mystery"). S. A. Khulusi called it a magnum opus, adding that "after his self-made classical period, he advised that it should not be published before the year A.D. 2000," and stated that the book was described as "heretical and ... that it abounds in many objectionable views" (Mā'rūf al-Rūṣafī, in BSOAS, xiii/3 [1950], 619). A microfilm of the ms. is kept in the 'Irākī Academy of Sciences.

From the middle of 1941, after the coup d'état of Rashīd al-'Ālī al-Kallānī, he returned to Baghdad, where he lived in poverty. He supported the coup with his poetry, satirising the British and the Regent 'Abd al-Ilāh, as well as Nūr al-Ṣādī and other officials whom he accused of corruption. With the failure of the coup, followed by a massacre of the Jews known as the Farhād, the British occupied Baghdad (2 June 1941). Later on, al-Kallānī's four lieutenant-colonels ("The Golden Square") were caught and hanged. Al-Rūṣafī composed a long elegy on the failure of the coup and the hanging of some of its leaders, and threatened that a day would come and that the royal family would be destroyed by the army (Khaṭṭāt, 159-60; Nādīf, al-Ightirākiyya, 44-5). However, he was not arrested, and was left without support until he was forced to sell cigarettes in a small shop.

In 1944 he published his Rasūl al-lālūsī (Baghdād 1944), which contained three refutations of two of Zakī Mubārak's works al-Tasawwuf al-İslāmî (1938) and al-Nafr al-fannī (1934), and a third one of Caetani's work on the life of Muḥammad in his Annali de l'Islam (Milan 1905). Al-Rūṣafī's views on monism expressed in his refutation of al-Tasawwuf al-İslāmî caused tremendous criticism and anger and he was accused of apostasy. Fatwās were given against him and for the banning of his book. It seems that these attacks induced him to write his will, in which he affirmed that he was a Muslim who believed in God and in Muhammad, and that he believed in the essence of the religion but not in its trivialities (Muṣṭafā al-Ṣālih, al-Rūṣafī, ṣilāt bihi, wasta'yutahā, mu'allafītuh, Cairo 1946, 43, and Khaṭṭāt, 108-9).

By the end of 1944, he was allotted 40 'Irākī dinars a month by a rich and influential political personality, Muḥṣir al-Shāwī (d. 1958), to the end of his life, which came on 16 March 1945.

The great fame of al-Rūṣafī is based upon his political and social poetry. The 6th edn. of Dīwān al-Rūṣafī (Beirut 1958) is divided into 11 sections of different length: (1) On the universe (8 poems); (2) Social topics (63 poems); (3) Philosophy (9 poems); (4) Descriptions (59 poems); (5) Conflagrations (3 poems); (6) Elegies (24 poems); (7) On women (8 poems); (8) History (11 poems); (9) Politics (42 poems); (10) War (8 poems); (11) Short Poems (111 poems, the shortest being of 2 verses, some of them improvised at receptions and parties and the longest being of 29 verses). These sections contain altogether 454 poems of various types: 174 verses are monorhymed, 137 verses are arbitrary. Most poems are of monorhymes, in which each verse is divided into two hemistichs, and in the opening ones, both hemistichs are rhymed. A few poems are of stanzaic form, such as one poem in couplets; one poem is of three stanzas each stanza; two in quartets; four in quintets, and three ma'fuzahhaam in the classical ten hemistichs form. Of the four quintets, one is a versification according to the modern theory of the formation of the universe entitled al-Arfl ("The globe") (Dīwān, 27-32), and the second is a narrative poem on the consequence of the competition of the angel Jibril with the archangel 'Isā, rude composed poems in difficult rhymes which are avoided by other poets such as z,s,z,d,t and n, and at least eight poems, in the last hemistichs of which the numerical value of letters gives the date of their composition (ālā hisāb al-djamāl), a method which was used in the post-classical period. However, most of his poems are undated. Others were composed on the metre and rhyme of well-known classical examples, especially those of al-Mutanabbi and al-Ma'sārī [q. v.], and some have even quotations from pre-Islamic poets and others.

At the end of his life, he became free of this classical influence on style and metaphors and was able to use in his political poetry a spontaneous and more flexible style. The influence of al-Mutanabbi is clear also in his personal behaviour, his pride, his honesty and his daring way in expressing his ideas. Like al-Mutanabbi, he used proverbial sayings, and boasted of his character and poetry in his panegyrics in which he asked for alms, while the influence of al-Ma'ar'ī on him was clear in his philosophical outlook and his ideas on religion and God, including his scepticism and monism. Unlike Ibn Sinā [q. v.], al-Rūṣafī was sceptical about the eternity of the soul and its ascent to heaven (Dīwān, 182, 116, 189) and about religion as a divine revelation: for him, religion was, rather, an invention of wise thinkers for the benefit of mankind (ibid., 187, 189). But like William Blake, he
believed in the harmony and unity of body and soul (ibid., 192-3), and even if the soul was supposed to be eternal, he would be inclined to think that it had no awareness of life. On the other hand, he urged on the Arabs the need for a scientific and cultural revival, for unity and liberty, and he defended the freedom of women, especially of Muslim ones, in his poems on women’s affairs and in others. He also defended freedom of thought, behaviour and the press, and held that it was up to a free man to violate customs and traditions if he felt it necessary. He backed the oppressed, the persecuted and the victims of society, poverty and illness, and called for social security and equality. He rebuked the Arabs for their stagnation and apathy and for boasting of their old and glorious history. A unique poem which shows his attitude towards the oppressed and against religious fanaticism is his poem “The orphan’s mother” (Dīdān, 39-42).

In this, he relates the story of an Armenian widow and her orphaned son, both victims of religious fanaticism and racial hatred, her husband having been killed in the massacre of the Armenians in Turkey in 1915, and he declares that Islam is innocent of such cruelty. He also described new technical inventions such as the telegraph, the railway, the car, the watch, etc., and admired the inventions of the steam engine and of electricity.

He favoured long metres which suited his declamatory and rhetorical tone, such as tawil, wafir, kamil, bašt and khašt. Thought, not the emotions, dominated his poetry. He expressed his ideas in a direct and denotative style, not metaphorically or symbolically, and was fond of a classical vocabulary.

In his scientific works, he witnessed to his wide and profound knowledge of Arabic language and literature as well as of Islam and its history; yet he depended more on his talent and what he had studied during his youth. His published works, according to the chronological order of appearance are as follows:

1. al-Rusafī [a novel] by Namık Kemal, tr. from Turkish into Arabic by al-Rusafī, Baghdad 1909.
4. Dafʿ al-haḏaḏa fi tīrāḏāḏ al-lukṣa, Istanbul 1331/1912 (Arabic vocabulary used in the Turkish language and vice versa).
6. Taḥrīm al-harbiyya wa l-ta’lim, Beirut 1924 (versified didactic and scientific subjects, for school children).
11. ʿAlā bābṣīng Aḥī al-ʿĀlā, Baghdad 1946 (a commentary on Tahā Husayn’s Maʿṣūma Aḥī al-ʿĀlā; fiṣīḥah).
12. Aʿlam al-ṣūḥāb, Baghdad 1945 (a commentary on Risālāt ʿalām al-ṣūḥāb by Dr. Fāṭimah bint Aḥī al-ʿĀlā).

There are 6 other unpublished works which are still in ms., the most important of which is al-Saḥḥaḥiyya al-Muḥammatīyya.

In his works, he praises the generosity of ʿAbd al-Majīd and Muḥṣir al-Ṣawād. Another important book by Ṣāḥib al-Badrī ʿAbd al-Majīd al-Rusafī, Ṣaḥib Shukr, Baghdad 1959.

Al-Rusafī was also one of the friends and acquaintances of al-Rusafī, who was a compiler of Arabic proverbs. He also described new technical inventions such as the telegraph, the railway, the car, the watch, etc., and admired the inventions of the steam engine and of electricity.

He was also known for his scientific works, which were published in Baghdad, and also in Beirut in 1959, with the collaboration of other scholars. He also wrote a book on the geography of the region, which was published in Baghdad in 1959. His last book, published in 1962, contains poems and letters by al-Rusafī praising the generosity of his friend ʿAbd al-Majīd and Muḥṣir al-Ṣawād. Another important book by Ṣāḥib al-Badrī ʿAbd al-Majīd al-Rusafī, ʿAbd al-Majīd al-Rusafī, Ṣaḥib Shukr, Baghdad 1959.

In this, he relates the story of an Armenian widow and her orphaned son, both victims of religious fanaticism and racial hatred, her husband having been killed in the massacre of the Armenians in Turkey in 1915, and he declares that Islam is innocent of such cruelty. The geographers of the 4th/10th century describe it as being in a flourishing agricultural region, with dependent settlements such as Diza and Kazer (or Diz)-i Afnā and with its Friday mosque built on wooden columns in the middle of the covered market. al-Mukaddasi states that in his time (ca. 570/980) it depended administratively on the local rulers, the Shī'is of Gharāṣṭan and that the appearance and speech of the local people resembled that of the mountain peoples of Gharāṣṭan (314; see also al-Īṣṭakhrī, 269-70; Ibn Hawkal1, 441-2, tr. Kramers and Wiet, 427; Hudud al-sām, 105, comm. 328, spelling the name as Marūd). The district flourished under the Saljuqs. Malik-Shāh built defences at the nearby town of Pāng-dīh, and Sangjār built Marw al-Rudh's wall, 3,000 paces in circumference and still standing in Mumtahān's time (136-9, tr. 135). The area was much fought-over in the warfare of the Gūrūids and Khwārazm-Shāhs, and a sharp battle took place near Marw al-Rudh between the Gūrūids rivals for supremacy in Khurāsān Ghiyāḥ al-Dīn Muhammad and Sultān-Shāh (Dzhawayni-Boyle, i, 298). Marw al-Rudh must accordingly have escaped the devastations which the Mongols wrought at Marw al-Shāhīdjan, but appears to have become ruinous in Tiṃūrid times.

Bibliography (in additions to references given in the article): Le Strange, Lands, 404-5; Barthold, Mervez, in ZVOIRAO, xiv (1902), 028-032; idem, Istorioko-geografskiy obzor Iran, St. Petersburg 1903, 25, Eng. tr. S. Soucek, An historical geography of Iran, Princeton 1984, 35-6; Barthold, Turkestân, 76.

MARW AL-SHĀHĪDJĀN or simply Marw, the city which dominated the rich but notoriously unhealthy oasis region of classical and mediaeval Islamic times along the lower course of the Murghāb river on the northeastern fringes of Persia, also called "Great Marw". Formerly within the historic province of Khurāsān [q.v.], the seat of pre-Islamic wazirs of the marches and often of provincial governors in Islamic times, its site ("Old Merv") and the nearby modern settlement of Bairam Ali (see below) fall today within the Turkmenistan SSR. The name Marw al-Shāhīdīn "Royal Marw" clearly relates to Marw's role as the seat of representatives of royal authority, guarding this bastion of the Iranian world against barbarians from the Inner Asian steppes, and is contrasted with the name of the smaller town of Marw al-Rudh [q.v.] "Marw on the river", situated further up the river. Concerning the basic element of the name, Marw, we find in Avestan Maong, and in OP Marga, MP Marv, indicating the existence of both a tabellarian form like Marv and a spirantised one like Marg (see Markwart-Messina, A catalogue of the provincial capitals of Erdishvan, Rome 1931, 45-6). The Arabic nūzah is al-Marvāz, cf. al-Safarī, Dār al-Madhīf, ed. A. El-Mahādrugī, p. 126.

As a result of the work of V. A. Zhukovskiy (Rasvoltini starogo Merva) and W. Barthold (K istorii orogrenov Turkestana, reprinted in Sochinenia, iii, Moscow 1965, see 136-56), we are better informed on the history of Marv than on that of any other town in Persia or Central Asia. Literary sources alone are not sufficient to enable us to fix the date to which history goes back in the valley of the Murghāb. Archaeology alone could supply the information, but the archaeology of this region has not yet adequately been studied. We are therefore only able to give the following facts. In the Achaemenid period (6th-4th centuries B.C.), we find a highly developed agricultural community on the region of the Murghāb incorporated in the Persian state. Details on this point are given by Greek writers of antiquity, in particular, the geographers and historians of the campaigns of Alexander the Great (336-323 B.C.). The Greeks found in this region not only a settled population but also a rural society practising agriculture on a very high level. They grew the vine and made good wine.

Classical sources refer to the Murghāb as the Margus river and to the region of Marw as Margamata; authors like Pliny attribute the foundation of the city to Alexander, but it seems that we are on surer ground in attributing this, or conceivably its founding, to the slightly later Seleucid king Antiochus I (280-261 B.C.). To this same period belongs the building of the wall intended to protect the agricultural zone from the nomads of the steppe, then inhabited by the predecessors of the Turkish people. There is no reason, it seems, to doubt the date of the foundation of Marw, but only archaeology can settle the question definitely. To what date does the earliest building in the area of Marw, that is, the citadel, belong? The fact that already several centuries before our era we find agriculture highly developed shows that the valley of the Murghāb had a system of artificial irrigation. The rapid development of the oasis of Marw was due not only to this but also to the fact that in the Parthian period the great caravan route which linked Western Asia with China passed through Marw. The caravan from Western Asia went from Marw to Balh, thence via the Darwāz and the northern part of Badakhšān, then on to the Ālā, Kāshāvarz and finally to China. In the Sāsānian period, the trade-route was moved further north. Caravans went from Marw to Ārarg, Kāshāvarz and Semirechë or the land of the Seven Rivers. Marw was not only an emporium on the trade-route but a great industrial city. It is, however, only after the Arab conquest that history gives us ample details of the life of the city.

By utilizing the information supplied by the Arab historians and geographers, we can obtain a fair picture of what Marw was like in their period and in antiquity. To understand the part played by Marw in the economic life of Western Asia and Central Asia, we have to study all that the Arab geographers and administrative historians of the 4th/10th century tell us about the system of irrigation. These sources record a highly-organised system of supervision and upkeep of the irrigation canals, under a mutawalli or mutazim al-nār, corresponding to the general Persian term for a local irrigation official, mir-āb [see ma2, 6. Irrigation in Persia]. Ibn Hawkal and al-Mukaddasi report that this chief of irrigation had an extensive staff to keep the channels in repair, including a group of divers (ghawwūd). There was a dam across the Murghāb above the city, and the supply of water from this store was regulated and measured by a metering device called the famous Nilometer [see mishāx], comprising essentially a wooden plank with intervals marked at
The citadel of Marw, contemporary with the town built on the Gavur-Kala area, goes back to a date earlier than that of the town itself. The latter (Gavur-Kala) must be recognised as the earliest site (called shahrud), i.e. around the citadel itself. The shahrud can hardly be earlier than the beginnings of the town of Marw, but it will only be by excavation that the problem of the date of the earliest habitations in the citadel will be settled.

The Arabs on their arrival found the western quarter so much increased that it was by then the most important part of the town. It is to this part that the Arab geographers give the name of rabat. The market was at first on the edge of the oasis in the "Gate of the Town", not far from the western wall, and one part of it extended beyond this wall as the Razik canal. The great mosque was built by the Arabs in the middle of the shahrud (al-Muṣ̄ādh, 331). Little by little, with the moving of the life of the town towards the rabat and the raising of the houses in the oasis in the water. See, on all this, E. Wiedemann, Beitrag X. Zur Technik bei den Arabern, in SBPMS Ergl., xxxviii (1906), 307-13 = Aufsätze zur arabischen Wissenschaftgeschichte, i, Hildesheim 1970, 272-8; C. E. Bosworth, Abū ʿAbdālāh al-Khuwārizmi on the technical terms of the secretary's art, in JESHO, xii (1969), 131 ff.

It is to the 2nd/7th-8th-13th centuries that the great economic prosperity of the oasis of Marw belongs, with a highly developed system of exchanges. Numerous technical and agricultural methods of cultures were developed, except the cultivation of wheat, which was imported from the valleys of Kāḡkā-Daryā and Zaraftūn. The people cultivated the silkworm. Shortly before the coming of the Mongols, there was at Kāhārū to the south-west of Mārū a "house" called al-Diwakūgh where sericulture was studied. Al-ʿĪstakhri, 265, says that Marw exported the most raw silk; its silk factories were celebrated. The oasis was also famous for its fine cotton which, according to al-ʿĪstakhri, was exported, raw or manufactured, to different lands; see on the textiles of Marw, R.B. Serjeant, Islamic textiles, material for a history up to the Mongol conquest, Beirut 1972, 87-90. The district of Marw also contained a number of large estates which assured their owners considerable revenue. According to al-Tabārī (ii, 1952-3), in the 2nd/8th century whole villages belonged to one man. In the absence of legal documents, little is known of the life of the peasants. It is evident, however, that they were bound by feudal bonds to their lords (dīkānān), and paid them at the time of the Arab conquest, in kind and in the 2nd/8th-10th centuries in kind and money. No evidence of the amount of these payments has come down to us. The town, built in the centre of a highly cultivated area, was destined to have a brilliant future. If we also remember that it had become one of the great emporiums on the caravan routes between Western and Central Asia and Mongolia and China, we can easily realise how the city grew so rapidly with its manufactures, markets and agriculture. At the present day, within the area of the old region of Mārū, we can see three sites of ancient towns: 1. Gavur-Kala, corresponding to the town of Mārū of the Sāsānid and early Muslim period; 2. Sultan-Kala quite close to the preceding on the west side. This is the Mārū of the 2nd-7th/8th-13th centuries, which was destroyed by the Mongols in 1221; and lastly 3. ʿAbd Allāh-Khan-Kala south of Sultan-Kala, Marw, rebuilt by Šāh Rūkh in 812/1409. This is all that remains of the famous city, including its nearer environs.

The town was gradually occupying the site of the rabat, the town was moved thither also. On the bank of the Razikh Canal was built the second mosque which at the beginning of the 3rd/9th century was allotted by al-Maʿmūn to the Šāhīs. In the middle of the 2nd/8th century, in the time of the revolutionary leader Abū Muslim, the centre was moved still farther westward to the banks of the Māǧān Canal. At this date, the town was gradually occupying the site of the rabat. The town of Marw in the 2nd/7th-8th-13th centuries was therefore no longer Gavur-Kala, but the town of which ruins still exist to the west of the latter, now known as Sulṭān-Kala. But the shahrud did not lose its importance at once. The site of the old town on Sulṭān-Kala is in the form of a triangle, elongated from north to south with an area equal to that of Gavur-Kala. It is surrounded by a fine wall built of unbaked brick, with several towers and other buildings belonging to the fortress. The latter was rebuilt by order of Sultan Malik-Šāh [q.e.] in 462-72/1070-80. It is one of the most splendid buildings of the period.

In the time of the Arab geographers, the two towns with their suburbs were surrounded by a wall, remains of which still exist. As regards the wall built in the towns of Marw and Sultan-Kala, it is mentioned still visible in the 4th/10th century and arc mentioned by al-ʿĪstakhri, 260, under the name of al-Rāy.

The social structure of the town of Mārū in the period when it took the place of Sultan-Kala changed a great deal, like the social and economic life of Western and Central Asia generally. The growth of cities, the development of urban life, the exchange of products for those of the country and those of the nomads of the steppes, the expansion of caravan traffic, now no longer limited to the trade in luxuries, all these encouraged the growth of new classes of society. It was no longer the dīkānān who were the great lords of the town of Marw in the 2nd-7th/8th-13th centuries, although in Gavur-Kala, however, their khāleş existed down to the end of the 6th/12th century; it was the merchants, the officials who were masters. Although both were connected with the local aristocracy, it was no longer agriculture but trade and property in the town which were their sources of wealth. Similarly, a change was taking place in the position of the artisans who had long ceased to be the serfs of the dīkānān. Down to the 3rd/9th century, a number of men still paid feudal dues to the dīkānān. From then onwards, they seem to have been free. The appearance of the town also changed as regards both topography and buildings. While in the shahrud (Gavur-Kala) the bazaar was at the end of the town and in part outside of it, when the rabat attracted urban life to it, the markets and workshops became the centre of the town. Marw (Sultan-Kala) became in the 5th/11th century a commercial city of the regular oriental type. It was traversed by two main streets, one running north and south, and the other east and west; where they intersected was the īrās, the centre of the market, roofed by a dome; the shops had flat roofs. It was there also that were to be found the little shops of the artisans, and although the literary sources only mention the money-changers, the goldsmiths and the tanners' quarters, there also must have been the quarters of the shoemakers, of the tindermakers, etc. It was not only the administrative and religious centre, for it also contained the palaces, the mosques, madrasas and other buildings. For example, to the
north of the ārsīs was the great mosque, already built in the time of Abū Muslim, which survived till the Mongol invasion, if we may believe the Arab sources. It must, however, have been frequently rebuilt. Yākūt also says that beside the great mosque was a domed mausoleum, built on the tomb of Sultan Sānjār; its mosque was separated from it by a window with a grill. The great dome of the mausoleum of turquoise blue could be seen at a distance of a day's journey. Within the walls which surrounded the mosque was another mosque built at the end of the 6th/12th century which belongs to the Šaḥīfīs. In the period of Yākūt, it seems that the domed building erected by Abū Muslim in baked brick, 55 cubits in height, with several porticoes—which is said by al-ʻIstakhrī to have served as a dār al-μāra or "house of administration"—no longer existed. It used to stand close to the great mosque built by Abū Muslim. The town of Marw in this period—in addition to its great wall—had inner ramparts which separated the different quarters of the town. The city was famous for its libraries, and Yākūt spent nearly two years there just to visit the Mongol cataclysm working in these libraries (on the topography of mediaeval Marw, see Le Strange, Lands, 397-403).

Regarding the history of Marw, the city was under the Sānānid rulers the seat of the Marvdān of the north-eastern part of Persia, being the farthest outpost of the empire, beyond which lay the city-states of Soghdia, the kingdom of Khwārezm and steppe powers like the Western Turks. Marw may be the Homer (for Mo-ho) of the Chinese Buddhist traveller Huen-tsoang, and on a Chinese map of the early 14th century it appears as Ma-li-wu (Bretschneider, Medieval researches, ii, 103-4). Nestorian Christianity flourished there until the Mongol period, and its ecclesiastical leaders are often mentioned as present at synods; before 553 it was a bishopric, and thereafter a metropolitananate (see Marquist, Evéques de la Perse, 75-6).

It was the metropolitan code of law that bore the name of the town of Khwādezīr. The last Sānānid Yazīdīgīr III at Pāy-e Bābhān (al-Tabari, i, 2881, 2883), and there was a monastery of Masardjāsīn lying to the north of Sūltān-Kahlūn (ibid., ii, 1925; Yākūt, al-Madīnūn, 2, 210).

The last Sānānid Yazīdīgīr fled before the invading Arabs to Marw and was killed there in 31651 by the Masbān Māhū Sūrī, so that the city acquired in Persian lore the opprobrious name of khudūd-dushman ("imetical to kings") (al-Tabari, i, 2872). It was conquered in this year for the Arabs by the governor of Khūrāsān ʿAbd Allāh b. ʿAmir b. Kurayz [q.v.], who made a treaty with Māhū on the basis of a large tribute of between one and two million dirhams plus 200,000 ḍarībūs of wheat and barley; the local dīḥkān of the oasis were to be responsible for the tribute's collection, and the soldiers of the Arab garrison were to be quartered on the houses of the people of Marw. There was thus from the start a basic difference in settlement pattern from that in the great amirāt of ʿIrāk and Persia, where the Arabs built distinct encampments as centres of their power. ʿAbd Allāh b. ʿAmir left a garrison of 4,000 men in Marw, and then in 51671 Ziyād b. Abīhi [q.v.] sent out 50,000 families from Baṣra and Kūfā, who were then settled in the villages of the oasis by the governor al-Rabī b. Ziyād al-Ḥārīḥī. A process of assimilation with the local Iranian population now began, especially as some Arabs began to acquire taxable land in the countryside, and so both financially and ideologically to the dīḥkāns. These atypical social conditions of the Marw oasis may have contributed to Marw's role in the later Umayyad period as the focal point in the east for the

"Abbāsid āʿrawa, for the propaganda of the Ḥāǧimīyya duʿā'ī seems early to have made headway among the settled and assimilated Arab elements. Some ʿAbbāsid agents were discovered there and executed in 118736, and soon afterwards, a committee of twelve nukabāb, headed by Sulaymān b. Kāthir al-Khūzāʿī, was formed. Abū Salāma al-Khālīl [q.v.] was in Marw in 126746, and two years later Abū Muslim [q.v.] arrived as representative of the ʿAbbāsid imām ʿImām b. Muhammad b. ʿAlī b. ʿAbd Allāh b. ʿAbdūs. Abū Muslim took advantage of the tribal strife of Khwārezm and Yamān against the assimilated population of Arabs, whose fiscal grievances had not been fully redressed by the tentative reforms of the Umayyad governor Nāṣr b. Sayyār [q.v.] in 121739, aided by Yamanīs against Nāṣr and his North Arab supporters, so that by early 130748, Abū Muslim was in control of Marw (thus the interpretation of M.A. Shaban, The ʿAbbasid revolution, Cambridge 1970, 129 ff.; 138 ff.; idem, Islamic history A.D. 600-750 (A.H. 132), a new interpretation, Cambridge 1971, 84-5, 175-3, 182-5).

Under the early ʿAbbāsids, Marw continued to be the capital of the east, despite a humid and unpleasant climate (it was notorious for the guinea worm, filaria medinensis), and was for instance the seat of al-Maʿmūn whilst he governed the eastern provinces and was in charge of the post of kālīm al-Mutanabbi when he left for Baghdad. The Tāhirīd governors of Khūrāsān, however, followed here by their suppliants the Safarīds, preferred to make their capital at Nisbar, although Marw remained the chief commercial centre of Khūrāsān, and continued to flourish under the Sānānid rulers. Nevertheless, the disorders in Khūrāsān during the last decades of Sānānid rule, when power was disputed by ambitious military commanders, seem adversely to have affected Marw's prosperity. Al-Mukaddasī, writing ca. 980, says that one-third of the ṭabāʿ and outer town was ruinous, and the citadel too had been destroyed; moreover, the city was racked by the sectarian strife and factionalism which seems to have been rampant in the towns of Khūrāsān at this time (311-12; on the chief economic towns of Khūrāsān, see Wiesbaden 1974, 129 ff., 138 ff.; idem, "Die Ausbreitung der sīāfīschen Rechtsschule von den Anfängen bis zum 8./14. Jahrhundert", Wiesbaden 1974, 83-90).}

But under the Saljūqs, the fortunes of Marw revived. It transferred its allegiance from the Ghzāznawīs to the Tūrkmen in 428/1037, and became the capital of Caghrū Beg Dəwūd [q.v.], ruler of the eastern half of the newly-established Saljūq empire, and from ca. 1110, that of Sandjâr [q.v.], viceroy of the east. The latter's father Malik ʿShāh had built a wall of 12,300 paces round the city, which in Sandjâr's time underwent attack from various of the Sālđūq's enemies, such as the Khwārezm-Šāh Atsīz [q.v.], who in 536/1141-2 raided Marw and carried off the state treasury. It was at Marw that Sandjâr built his celebrated mausoleum, 27 m. square in plan and called the Dār al-Āqīna "Abode of the hereafter" (see on this, G. A. Pugachenkova, Puti razvitiya arkhitekturi Yuzhnogo Turkmenskogo, Moscow 1958, 315 ff.). Under Sandjâr's rule, the Tūrkmen of the steppes around Marw were under the control of a Sālđūq shībīn or police official, but when in 548/1153 these Ghzūz or Ghzūz rebelled against this control and defeated Sandjâr, Marw fell under the nomads' control, and the latter fled on to Tūrkestan, together with Balkh and Sarakhs, until the Khwārezm-Šāhs imposed their rule in northern Khūrāsān. Marw suffered terribly in the time of the first Mongol inva-
sions, when Khārazmian rule was overthrown. It was savagely sacked by Toluy's... to the 8th/14th century, and with the sands of the Kāra Kūm encroaching on the arable lands of the oasis (Nazha, 153-4).

What then remains of the town of the 2nd-7th/8th-13th centuries—in addition to the wall already mentioned? The whole site of Sultān-Kal’a is covered with mounds and hillocks, formed on the sites of ancient buildings. Everywhere one sees great piles of bricks, whole and broken, and fragments of pottery, plain and glazed. In the centre, like a memorial of the great past, rises the domed mausoleum of Sultan Sandjar mentioned by Yākūt, one of the finest buildings of the 6th/12th century. The question arises whether it had any connection with the “house of administration” with a dome and several porticoes mentioned by al-Isḥākhī. The Marw of this period contains numerous buildings within the area of Sultān-Kal’a, as well as outside its walls, especially the tower in the centre. The 946 of archaeological investigations by M.E. Masson. In 808/1406 the Timūrid ruler Shahruldi endeavoured to restore prosperity to this region, which had at one time been a flourishing oasis. Hāfiz-i Ābru gives us details of his scheme. The dam was rebuilt on its old site and the water restored to its old channel; but only a portion of the oasis could be irrigated. The town was rebuilt, but not on the old site because water could not be brought in sufficient quantity to Sultān-Kal’a. The town of Marw of this period corresponds to the old town of ‘Abd Allāh-Khān-Kal’a (popular legend wrongly attributing its building to the Shaybānīd ‘Abd Allāh b. Iskandar (991-1006/1583-98) [q.v.], the area of which was much less than that of Marw of the Mongol period, covering about three hundred square miles, and the Marw of this period could not be compared with that of the pre-Mongol period. In time, Marw and its oasis declined more and more. In the period of the Safawī kingdom, it was the object of continual attacks on the part of the Úzbegs, which could not help affecting it.

An almost mortal blow was dealt it at the end of the 18th century. Mu‘āmūr Khān (later called Shāh Murād), son of the atālik [q.v. in Suppl.] Dānṣūrī Bīy of the newly-founded Mangūt [q.v.] dynasty of amīrs in Bukhārā, attacked the Kādār Türkmen local lord of Old Marw, Bayram ‘Alī Khān, killing him in 1785. Shāh Murād also destroyed the Sultān-Band, the dam across the Murghāb 30 miles/48 km. above Marw, and thereby reduced the economic prosperity of the region (F. H. Skrine and E. D. Ross, The Heart of Asia, a history of Russian Turkestan and the Central Asian khantates from the earliest times, London 1899, 206). Consequently, the traveller Alexander Burnes found Marw in ruins and the surrounding district in complete neglect (Travels into Bukhara, London 1834, ii, 23 ff., 37-8, 258-60).

In 1884 the Marw oasis was occupied by the Russian army, and secured in the following year from an Afghan threat by General Egorov's victory. From 1887 onwards, attempts were made, with considerable success, to revive the agricultural prosperity of the devastated region by the building of two dams on the Murghāb, that of Hindu-Kūsh and that of Sultān-Band. The Transcaspian railway line from Krasnovodsk to Buhārā, Samarkand and Tashkent passed through Aḵūzbābād and Marw, and from Marw a branch was built southwards to Kūshāg on the Afghan frontier. In Tsarist times within the oblast of Transcaspia, Marw has since 1924 come within the Turkmenskia S.S.R. In 1935 the modern settlement of Bairam Ali was founded in the Marw region, and this town is now the chef-lieu of the rayon of the same name. In 1969 it had a population of 31,000, with flourishing cotton textile and dairy products industries (see BSF, ii, 344).

of Harb, Mu‘awiyah’s grandfather; Marwan himself had, according to al-Baladhuri, Ansab, v, 164, ten sons and two daughters, and al-Tha‘alibi, La‘ith, 136, tr. 107-8, states that he further had ten brothers and was the paternal uncle of ten of his nephews. It may have been fears of the family of Abu l-‘Aṣ that impelled Mu‘awiyah to his adoption (istihlāk) of his putative half-brother Ziyād b. Sumayya [see ziyād b. ʿaḥṭ] and to the unusual step of naming his son Yazīd as heir to the caliphate during his own lifetime. There was certainly a lack (with the exception of al-Walid b. ʿUthba, Mu‘awiyah’s nephew) of mature, experienced Sufyānids to succeed Mu‘awiyah, whereas at the time of the expulsion of the Umayyads from the Hijāz [see below], Marwan was the most senior of the Umayyads and the only one whom the Prophet had known (ṣayyīḥ kabīr) in the sources, probably referring as much to his prestige and authority as to his age.

When the difficulties arose in 60/680 over Yazīd b. Mu‘awiyah’s succession, involving a refusal of allegiance by the cities of the Hijāz, Marwan advised the governor of Medina, al-Walid b. ʿUthba, to use force against the rebels. After the withdrawal of the expeditionary force of Muslam b. ʿUkba al-Murri and its return to Syria (beginning of 64/autumn 683), the Umayyads’ forces, on whom Marwan had previously expulsed but had returned with Yazīd’s troops, comprising principally members of the lines of al-ʿAṣ under ʿAmr b. Sa‘id al-Aḥdab [q.v.] and of Abu l-ʿAṣ under Marwan, were forced by the partisans of the anti-caliph ʿAbd Allāh b. al-Zubayr [q.v.] to abandon their properties in the Hijāz and flee to Syria for a second time. Marwan was back in Syria by the beginning of 65/684, and some accounts say that he went in the first place to Palmyra rather than to the court of the caliph. Marwan was back in Syria by the beginning of 64/autumn 683, the Umayyads having succeeded in recovering much of their natural advantages beyond his own personal qualities and statesman of great skill and decisiveness, amply endowed with the qualities of ḥisāb [q.v.] and dhābiya, shrewdness, which characterised other outstanding members of the Umayyad clan. His attainment of the caliphate, starting from a position without many natural advantages beyond his own personal qualities (for he had no power-base in Syria and had spent the greater part of his career in the Hijāz), enabled his successor ʿAbd al-Malik to place the Ummayyad caliphate on a firm footing so that it was able to endure for over 60 years more and declared for

Marwan was now able to consolidate his position in Syria and Palestine. His short reign was filled with military activity, beginning with the expulsion of the Zubayrid governor, ʿAbd al-Rahmān b. ʿUthba al-Fihri, called Ibn Ḍajḥam, from Egypt. Marwan seems to have secured that province by Raḍajab 65/Febuary-March 685, leaving there as governor his son ʿAbd al-ʿAzīz. Although the sources are confused here, it seems that Marwan’s forces also repelled a Zubayrid attack on Palestine led by Muṣ‘ab b. al-Zubayr [q.v.]. It is possible, but not certain, that a Marwānid army itself invaded the Hijāz under Hubayr b. Duldja, but was repelled at al-Rabādha [q.v.] to the east of Medina. Marwan certainly took steps to secure Ṭirāk, which had declared for the Zubayrid cause, sending an army under ʿAbdāy Allāh b. Ziyād which by-passed the hostile Kaši centre of Kirkisiya in al-Ḍajzira and had reached al-Orkha when the news of Marwan’s death arrived.

This last event took place in the spring of 65/685, possibly as a result of a plague which was affecting Syria at this time. The date of Marwan’s death is variously given in the sources: Elias of Nisibn has 7 May, and the Islamic historians such dates as 3 Ramadān/13 April (al-Masʿādi, Ṭambih) and 29 Ṣā‘īnān/10-11 April (Ibn Sa‘d, al-Khalifā b. Khayyat, al-Ṭabarī). The place of his death is given by several authoritatively as Damascus (Ibn Sa‘d, al-Ṭabarī, al-Masʿūdi, Ṭambih), but by al-Ya‘kūbi and al-Masʿūdi, Murūd, as al-Sinnabrah on the Lake of Tiberias, a place used, it seems, as a winter residence by the early Umayyads. The length of his reign is placed at between six and ten months. Even less certain is Marwan’s age when he died; the sources make him at least 63, but he may well have been over 70.

On the occasion of the successful outcome of the Egyptian expedition, Marwan had taken the opportunity to promote a succession of Muḥammad b. ʿAbd Allāh b. ʿAbd al-ʿAzīz [q.v.], and it was accordingly the former who succeeded to the caliphate in Damascus after Marwan’s death, apparently without opposition (at least, at this moment) from the two heirs designated at al-Ḍajbiya, ʿAmr b. Sa‘id and Khalīd b. Yazīd, but now set aside.

Marwan’s life had been crowded with action, above all in its “ten years”, filled with military activity, beginning with the expulsion of the Zubayrid governor, enabled his successor ʿAbd al-Malik to place the Ummayyad caliphate on a firm footing so that it was able to endure for over 60 years more and declared for

Bibliography: 1. Sources. The main historical sources for early Islam all contain relevant material. See al-Khalīfa b. Khayyat, Ta‘līf, index; Ya‘kūbi, Ta‘līf, ii, 304-6 and index; Ṭabarī; index; Kindī, Wuldt Misr, ed. Guest, 42-8; Masʿūdi, Murūd, iv, 271-4, 277-9, v, 197-209 = §§ 1596-7, 1601-2, 1961-72 and index; idem, Ṭambih, 292, 304, 307-12, tr. Carra de Vaux, 383, 395, 425, 469, 471, 473, 474, 475, 476, 477, 478, 479, 480; there were also biographies devoted to Marwan in Ibn Sa‘d, v, 24-50; Balādḥurī, Ansāb al-ṣaḥāf, v, ed. Goitein, 125-64; Ibn Kutayba, Ma‘ṣūrī, ed. ʿUkāsha, 353-5; Ibn al-
Athir, Usd al-ghdba, ii, 33-5 (al-Hakam), iv, 348-9
(Marwan). Adab works like Ibn cAbd Allah al-Hakami by
his father's side, a grandson of the caliph Marwan I
HAKAM, the last of the Umayyad caliphs of
Armenia and Caucasus region. Following the death of
his general Ibrahim b. al-Ashtar in 72/691. Some
reports say that the woman was already pregnant
when Walld II was overthrown and killed and Yazid
II became caliph in Djamada II 126/September 744, but
Marwan's adopting the military formation known as
the kurdas (pl. karadis) and abandoning that called the
saff (pl. suuff). A kurdas was a relative small and
compact detachment of soldiers (usually cavalry),
and the saff were the more traditional long lines
in which the Arabs organised themselves for battle. It
has sometimes been suggested that Marwan was the
first to introduce the kurdas formation into the Muslim
armies and that his experience in fighting on the
northern borders where Byzantine influence was
strong (xooqor) has been proposed as the source of the
Arabic word; S. Fraenkel, Aramäischen Fremdwörter,
239) led him to do so. However, whether Marwan was
the first to use this formation among the
Muslims is doubtful (R. Levy, The social structure of
Islam, Cambridge 1957, 430) and it is notable that
Marwan's reports do not, in any case, relate to the
period of Marwan's fighting on the northern frontier
but to the later fighting against Khardidites in
Mesopotamia after he had seized the caliphate.

It seems that Marwan had already contemplated
marching south into Syria and taking a hand in affairs
when Walld II was overthrown and killed and Yazid
III became caliph in Djamada II 126/April 744, but
had been foiled by the dissent of the Kalbis in his
army led by Thaabib b. Nu'aym. During the short
period of Marwan's fighting on the northern frontier
but to the later fighting against Khardidites in
Mesopotamia after he had seized the caliphate.

battle the two sons of Walid II were murdered in Damascus, Ibrâhîm and Sulaymân b. Hîshâm fled to the Kalbî centre of Palmyra, and Marwan was able to enter Damascus. There, it is said on the initiative of Abu Natâma theal, the Sufyânî branch of the Umayyad family, who claimed that the two sons of Walid II had named Marwan as their successor, he was recognised as caliph and given the kâ'â'a in Sa'far 127/December 744. Subsequently, Ibrâhîm and Sulaymân b. Hîshâm accepted his authority and were granted amâs. Marwan did not, however, choose to remain in Syria but moved back to Harrân in Mesopotamia where, presumably, he felt more secure. For the first time an Umayyad caliph attempted to rule from outside Syria.

Faced, however, with a rebellion in Syria he soon had to return there. The rebellion started among the Kalb of Palestine led by Thâbit b. Nu'aym and quickly spread to the north where Hims came out in opposition to Marwan. In Shawwâl 127/July 745 Marwan in person obtained the submission of Hims and then sent a force south to relieve Damascus, under attack from Yazîd b. Khabîd al-Kâsîrî. Yazîd was defeated and killed, and Marwan's army went on to capture Thâbit b. Nu'aym who was attacking Tiberias. Thâbit was executed and the Kalb settlement of al-Mizzâ near Damascus put to fire. Finally, al-Abrâsh al-Kalbî in Palmyra agreed to surrender to Marwan, and it seemed that his rule over Syria was again secure. At this point he called the Umayyad family together and had the kâ'â'a given to his two sons as his successors. But the opposition to Marwan in Syria was not yet over. When he raised a Syrian contingent to join the Mesopotamian army under Yazîd Ibn Hubayra [see Ibn Hubayra], which was attempting to establish Marwan's authority in 'Irâk, it deserted and it passed over to 'Abd Allah b. Sulaymân b. Hîshâm lived, and the Syrians recognised Sulaymân in opposition to Marwan. Sulaymân took possession of Kinnâsrîn and attracted support from the rest of Syria. Withdrawing most of his Mesopotamian troops from Ibn Hubayra's force, Marwan attacked and defeated Sulaymân near Kinnâsrîn and the vanquished Umayyad fled with the remnants of his army to Hims where, being deserted, he was under the command of his brother, to Kufa via Palmyra. Marwan now besieged Hims for the second time, and when the town finally submitted after several months he had its walls razed together with those of several other major Syrian towns. By the summer of 128/746 Marwan had finally established his control over Syria.

The extension of his authority over 'Irâk and all of Mesopotamia took even longer. Initially, he had attempted to weaken the governor of 'Irâk appointed by Yazîd III, 'Abd Allâh b. 'Umar b. 'Abd al-'Azîz, and to replace him with the Kaysî al-Nâdîr b. Sa'id al-Harâshî. Both rival governors were then overwhelmed, in 127/745, by the Khârijîtî movement which had begun in Mesopotamia among the tribe of Shabîbân and which is associated with the leadership of al-Dalâhî b. Kayî al-Shaybânî. The latter established himself in Kufa but in the spring of 128/746 returned north and occupied Mawsîl, seeking to take advantage of Marwan's difficulties in Syria. Marwan's son 'Abd Allâh, however, was able to hold the Khârijîtîs in check until Marwan had completed his subjugation of Hims and could divert his forces to the east to deal with the threat. In the late summer Marwan defeated and killed al-Dalâhî, under whom Sulaymân b. Hîshâm now fought, and the Khârijîtîs had to abandon Mawsîl. In the following year they were finally driven out of Mesopotamia and their danger ended when Marwan was able to withdraw men from 'Irâk to deploy against them and their new leader Abu Dâlî. That Marwan was able to withdraw men from 'Irâk was in consequence of the victories there in late 129/spring 747 of his general Yazîd Ibn Hubayra, who had defeated both the Khârijîtîs governor of Kufa and the 'Alîd 'Abd Allâh b. Mu'amîwîa [q.v.], until then holding sway over large areas of western and south-western Iran.

The domination which Marwan had established by the end of 129/summer of 747 was to be ended two years later by the rising of the Hâshîmîyîn which had already begun in Khurâsân in Ramadan 129/June 747. By Rabî' II 132/November 749 the armies of the Hâshîmîyîn had destroyed Umayyad rule in Persia and 'Irâk and the 'Abbâsîd caliphate had been proclaimed in Kufa. In Dhu 'l-Qa'da 132/January 750 Marwan himself led his forces in a last attempt to defeat the insurgents at the battle of the Greater Zab, and the destruction of his army there signalled the end of Umayyad power. Marwan himself escaped with a small band of supporters and fled through Syria to Egypt pursued by an 'Abbâsîd force. They finally caught him in Dhu 'l-Ka'da 132/June 750 at Bûsîr in the province of Ushmunayn in Upper Egypt, and there the last Umayyad caliph fell after a short struggle.

Marwan's career illustrates some of the weaknesses affecting the later Umayyad caliphate. He had obtained power as a result of his close links with the predominantly Kaysî army of the north Mesopotamian frontier in opposition to the Kalbî-based régime of Yazîd III. This close identification of the caliph with a particular faction clearly diminished the religious and moral claims of the Umayyad caliphate. Furthermore, his attempt to move the centre of the caliphate to Mesopotamia reflects the way in which Syria, hitherto the base of Umayyad rule, had itself been engulfed by the factionalism among the Arabs. It may seem that Marwan was unfortunate in that, having finally consolidated his authority over the central provinces, he was so soon overthrown by a movement which originated outside his control. In reality, however, the Umayyad state had been so weakened by its fundamental inability to satisfy the demands of Islam and by the factionalism among the Arab soldiers that it is doubtful whether even Marwan's forceful and energetic personality could have significantly prolonged it.

Bibliography: In addition to the indices to the more important Arabic works of 'Uthmân and adâb, such as Tabârî, Ya'qûbî, Balâdûrî, Fâlî, Mas'ûdî, Murâdî, and Ibn 'Abd Rabbihi, 'Hai (for which the Analytical indices, to the Cairo 1321 edition, prepared by M. Shâ'î, Calcutta 1935, are useful), see the entries on Marwan II in Baladhuri, Anâsî al-âthirî, and Ibn 'Askârî, Ta'rikh madinat Dimashq, the relevant parts of which are still in ms.; for a summary of the latter, see the article on Marwan in Safî al-Dîn al-Munajjidî, Mu'jam Bani Umayya, Beirut 1970; for the references to Marwan in the K. al-Aghâni, the compiler of which, Abu 'l-Farajî al-Isfahânî, is claimed as a descendant of his, see Aghâni, Table alphabetiques. Furthermore, the Syriac, Armenian and Georgian sources listed in the secondary literature cited in the second paragraph above are important for specific aspects of Marwan's career from a non-Muslim viewpoint. Among modern works see J. Wellhausen, Das arabische Reich und sein Sturz, Berlin 1902 (Eng. tr., The Arab kingdom and its fall, Calcutta...
MARWÂN AL-ASGHAR B. ABI HAFSA and MARWÂN AL-ASHGHAR B. ABI 'L-DIJANUB, the most famous members of a family which included several poets; al-Tha'lîbi characterises it as the most poetic families in Islam, with six poets amongst its members.

The origins of the family’s ancestor Abû Hafsa Yazîd are obscure. He was a maulûd of the Umayyad Marwân b. al-Hakam, whom he aided on various historical occasions during the caliphate of 'Ummân and under 'Abd al-Malik. It is impossible to decide exactly whether he was of Persian or Jewish origin. Freed by Marwân, he was entrusted with certain posts, including the collecting of the taxation from Medina. He married a girl from B. 'Amir of the Yamama, and his descendants were always to have close relations with that region of Arabia. One of them, Marwân al-Asghar b. Abû Hafsa, who was the grandson of Nâbigha al-Djâlî, which would explain the poetic talent of the family. The ancestor Yazîd wrote verses (the Fihrist however, describes him as mukâllâ). His son Yahyâ was held in esteem by 'Abd al-Malik b. Marwân and had relations with Djârir. The Fihrist attributes to him a diwan of 20 leaves, of which only a small part has come down to us. The eulogy which he wrote to 'Abd al-Malik the Caliph on the occasion of his accession to the caliphate is especially prosaic and conventional.

It is his grandson, Abî 'l-Sîmî Marwân b. Sulaymân, who can be considered as the first important poet of the family. He left the Yamama for Bagdad, thus confirming the fact that it was impossible to attain literary fame when living remote from the capital. With a personality which was moreover strange, sordidly avaricious, clumsy and unscrupulous, he would arrive at the palace clad in rags, despite the enormous sums which the caliph gave him for his poems. He seems to have steered his career forward with intelligence and prudence, and attached himself to the great personality of Abû 'l-Walld Ma'mân. He would have a daughter, and it is the name of his grandson Abu '1-Walld that which people declare as the last good poet of this family. It is correct that this particular person knew how to take up a central position on the scene. He was even more a professional eulogist than his grandfather, and was successively brought into the circles of al-Ma'mûn, al-Mu'ta'asim and then al-Walid. The latter reproached him for being excessively close to his brother al-Mutawakkil and exiled him. Al-Mutawakkil’s succession signalled his return to grace, and he went on to become one of the liveliest elements of the caliphal circles of literature. As well as the considerable sums which he got for his poems, he was awarded the governorship of the Yamama and Bahrayn. Al-Muntasir ordered him to return to the Yamama, where all trace of him is lost.

Marwân b. Abî 'l-Dijanûb kept up the anti-'Alid tradition characteristic of the whole family since the time of its founder. The most shining part of his fame came from his remarkable gift as a satirist. Recovering once more the verse of the swashbucklers of the 1st/7th century, he directed his shafts against several members of the court circle, in particular, 'Ali b. al-Dijam, his favourite target, and 'Abî b. Yahyâ b. al-Munadjdîm. He was savage and coarse, and quick to discover chinks in people’s armour; he used any weapon to hand, and did not scruple to use mendacity when he was short of arguments, all of which gave great joy to the caliph, who took a keen pleasure in following these kinds of clashes.

Marwân al-Asghar seems to be inferior as a poet to his grandfather. He was most at ease in attacking people, and his eulogies, even if they contain some fine verses, use above all the conventional material of this type of poetry. Caught between Abû Tamâm on one side, and al-Buhtûrî and Ibn al-Rûmî on the other, it was hard for him to aspire to the top positions. Moreover, he lacked the inspiration of Di'alî and the nobility of tone of 'Ali b. al-Dijâm. After him, talent left the family. His son Muhammad and his grandson Furîbî, to whom the Fihrist attributes 50 and 100 leaves respectively, were merely hack versifiers.

MARWAN — MARWANIDS

Sufl, Abü al-Buhthari, index; Fuhrer, Cairo edn., 234-3; Ibn Abi Tayfur, Kitab Baghdādī, 125, 156; Shâhābū, Kitâb al-Diyârāt, 8 and n. 24; Ibn Katayba, Fihrist, Cairo edn., 234-5; Ibn Abi Tayfur, Kitab Baghdad, 126, n. 54; Ibn al-Mu'tazz, Tabakât al-

MARWANIDS, the branch of the Umayyad dynasty of Arab caliphs in early Islam, who formed the second, and most long-lasting line of this dynasty, the first line being that of Sufyanids, that of Mu'awwiyah I b. Abu Sufyān b. Harb [q. v.], his son and his grandson (41-64/661-750), his son and successor Abū al-Malik [q. v.] being the progenitor of all the subsequent caliphs with the exceptions of 'Umar II [q. v.], son of Abū al-Malik's brother Abū al-'Azīz, and the last caliph Marwan b. Mu'awwiyah b. Mu'ammar b. Abū 'Imrān al-Hakam. For the general history of the dynasty, see Umayyads, and also the articles on individual rulers. (Ed.)

MARWANIDS, a dynasty of Kurdish origin who, having ousted the Hamdānids [q. v.], ruled Diyar Ba'kr from 380/990-1 to 478/1085. The founder of the dynasty, a Kurdish chief named Bādh, seized the city of Māyyāfārīk in 377/988 after the death of the Buyd ruler ʿAqūd al-Dawla (373/983), and then took Āmid, Naṣībīn and Akhitā (Ibn al-Āthīr, ix, 25; Ibn al-Azraq, 49-52). Bādh successfully fend off attacks both from a Buyd army sent against him and from the Hamdānids, but was killed by a coalition of Hamdānids and Umayyad forces after his unsuccessful attempt to take Mawṣil (380/990).

The dynasty itself, however, takes its name not from Bādh but from Marwan, a miller who had married Bādh's sister. It was their son Abū ʿAlī al-Ḥasan b. Marwan who, having withdrawn after Bādh's death in 380/990 to Ḥṣn Kaftayn, married his uncle's widow, routed the Hamdānids on two occasions and took possession of Māyyāfārīk and Āmid (Ibn al-Azraq, 39-60; Ibn al-Āthīr, ix, 50). After his murder at Āmid in 307/917, his brother Muhammād al-Dawla Sa'id ruled until 401/1011. These two precipitous reigns paved the way for the accession of a third brother, Naṣr al-Dawla Ahmad [q. v.], whose rule marks the apogee of Marwanid power.

Naṣr al-Dawla was recognised as ruler of Diyar Ba'kr by the Buyd amir Sulṭān al-Dawla, by the Fāṭimid al-Hākim, and by the Byzantine emperor, all of whom soon sent envoys and congratulatory messages to him (Ibn al-Azraq, 307). Indeed, Naṣr al-Dawla in his long reign (401-83/1011-61) was to practise a skilful policy of accommodation and self-preservation with all three powers. He also had to contend with Bedouin Arab dynasties such as the ʿUkhaylids and the Madāsidās [q. v.], who wielded power in Northern Syria and al-Dārāzāra, and to whom he was forced to cede Naṣībin and Edessa respectively.

The 6th/12th century chronicler of al-Dārāzāra, Ibn al-Azraq al-Fārikī, gives in his chronicle a very full account of Marwanid rule. Naṣr al-Dawla was fortunate to have the services of two capable viziers, Abū l-ʿĀsim al-Husayn al-Maghribī, who died in office (420/1032), and whose biography is given by Ibn Khālidīn [see AL-MAGHRIBI, BANU] and the even more famous Fakhr al-Dawla Ibn Dājir [see DABIR, BANU]. Under Naṣr al-Dawla, Diyar Ba'kr enjoyed a high level of stability and commercial and cultural prosperity. The Marwanid court at Māyyāfārīk was frequented by prominent ʿulāmāʾ and poets, such as the ʿAllāh al-Kāzarūnī (d. 455/1063) (Ibn al-Athīr, ix, 52) and the poet al-Ṭūḥāmī (d. 416/1026-7) (Ibn al-Azraq, 82). Nāṣir-i Khusraw visited Māyyāfārīk in 438/1046 and was much impressed by it (Safar-nda, ed. Muhammad Dābir-Siyāk, Tehran 1335/1956, 8-11).

Naṣr al-Dawla emerges as a flamboyant ruler with political acumen and extravagant tastes. His religious stance appears to have been a pragmatic one, suitable for the ruler of a vulnerable buffer state surrounded by greater powers of the most divergent confessional loyalties. It seems likely that he ruled a predominantly Christian population in the towns of Diyar Ba'kr and that he enjoyed a good relationship with Byzantium. Indeed, the emperor Constantine X asked him for help in procuring the release of the Georgian prince Liparit from the Saldjuk sultan Toghrūl (Ibn al-Āthīr, ix, 372-3). It is probable that Naṣr al-Dawla was persuaded for a short while from 430/1040-9 to give the Khutba in favour of the Fāṭimid al-Mustansir (Ibn Khālidīn, ʿIbar, ix, 318), but it is also noteworthy that in that same reign, ʿAbd Allāh al-Kāzarūnī went to Māyyāfārīk and spread the ʿAllāhī madhhab throughout Diyar Ba'kr (Ibn al-Āthīr, ix, 52).

In traditional fashion, Naṣr al-Dawla is praised for strengthening the frontiers and for building bridges and cities, and in these laudatory statements of Ibn al-Azraq are confirmed by the evidence of Marwanid inscriptions found on the walls of Āmid. Indeed, according to the evidence of an inscription dated 445/1053-4 on a marble slab in the Bāb Ḥīťa in Jerusalem, Naṣr al-Dawla was also responsible for establishing two houses for the use of pilgrims there (Burgoine, 118-21). The sources comment on the immense wealth accumulated by Naṣr al-Dawla. He is also said to have possessed 360 concubines who did not, however, prevent him from meticulous observance of the morning prayer. He was interested in gastronomical pleasures, too, and sent his cooks to Egypt to learn to culinary arts of that country (Ibn al-Āthīr, x, 11).

When the Saldjuk sultan Toghrūl advanced into Diyar Ba'kr (448/1056-7), he did not aim at abolishing the Marwanid state, so Naṣr al-Dawla recognised his suzerainty and kept his lands. Toghrūl wrote to him confirming his role as a frontier lord fighting the infidels and exhorting him to continue in this task (Ibn al-Āthīr, ix, 275).

On the death of Naṣr al-Dawla (453/1061), the power and prestige of the dynasty declined markedly. His son ʿNīẓām al-Dīn Naṣr succeeded him, at first only in al-Dārāzāra and Māyyāfārīk and then two years later (having overcome his brother Sa'id) in Āmid too. On the death of ʿNīẓām al-Dīn (472/1079) his son Naṣir al-
Dawla Mansūr, the last Marwānid ruler, came to power. The vizier Ibn Dāhir, who had left Diyar Bakr for Baghdad, used his influence with Malik-Shāh and Nizām al-Mulk to persuade them to bring the Marwānid dynasty to an end and to seize their treasures. In 478/1085 Diyar Bakr fell to Ibn Dāhir and direct Seljuq control was imposed (Ibn al-Athir, x, 93-4). Ibn Dāhir took his treasury for himself and the last Marwānid ruler Mansūr was given Dżaffar Ibn Umar, where he lived on until 489/1096.

**MARWĀNIYYA**, a branch of the Khalwātī Sufi order [q.v.] in Egypt, named after Marwān b. ʿAbī al-Mutāʿal (d. 1329/1911). His father, ʿAbī al-Mutāʿal b. ʿAbī al-Mutāʿal (d. 1299/1881-2), had been initiated into the Khalwātīya order by Husayn al-Muṣayṭihi (cf. Muḥārak, *Kitāb* [q.v.] of Muḥammad al-Ḥifnī’s disciple Muḥammad b. ʿAbī Allāḥ al-Ḥusaynī, *ʿAbī al-Mutāʿal* later obtained al-ʿāqīqa and acted as a šaykh of his own Khalwātīya order, which had not yet differentiated itself, either in name or in practice, from Muṣṭafā Kamāl al-Dīn al-Bakrī’s version of the Khalwātīya, as transmitted by al-Bakrī’s ʿalīfī al-Ḥifnī. From early 1912 onwards, under ʿAbī al-Muṣṭaʿal’s son, Marwān, the order was presented under a name of its own, al-Marwānīyya. The original šāhāda was replaced by another šīlāha which was identical with ʿAbīd’s genealogy (cf. *Abū al-Mutūal* al-Ḥamzāwi al-Marwānī, *Ṭabākhī al-ʾiṣāfī al-rabbānīyya bi lʾ-ʿawār al-Marwānīyya*, Cairo 1330/1912, 61-4). In addition, the order’s link with the Khalwātīyya tradition, which had been cultivated and propagated by Muṣṭafā Kamāl al-Dīn al-Bakrī, was cut when the reading of Yāḥyā al-Shirwānī al-Bākūlī’s ʿīlīd al-gaʿīyat—which according to al-Bakrī, is the pivot of Khalwātīyya ritual—was abandoned and when, at the same time, private and communal reading in the hadīsa [q.v.] of al-Bakrī’s ʿāṣībb [see *Hizī*] was replaced by the reading of saʿādīl and other liturgical texts attributed to ʿAbīd’s ancestor Marwān al-Khalīlī (d. 799/1329-30).

A discussion of the various factors which account for the introduction of these alterations and for the concomitant rise of the Marwānīyya, in conjunction with additional details and references, is to be found in F. de Jong, *The Šūfi orders in post-Ottoman Egypt*, 111-1-1951 (in preparation), ch. 3. The Marwānīyya is one of the officially recognized Šūfi orders in Egypt (cf. *Mashūqī* Ṣūfī al-Turūk al-Ṣūfiyya, Kānān raʾīṣ 118 li-zana 1176 m. bi-buat Nīzām al-Turūk al-Ṣūfiyya*, Cairo 3 d, 29).

**Bibliography:** Given in the article. (F. DE JONG)
which was dedicated to Fakhr al-Dīn ʿĪsā b. Ibrahim al-Ma‘wāl (see the edition of the Fakhrīya by H. Derenbourg, Paris 1895, 14, no. 2, 16). The information available on Abū Tālib al-Marwazi (see for example al-Suyūṭī, Buḥṣyā, 194; F. Bustanī, Dīrist al-ma‘ārif, iv, 401-2) is derived exclusively from the article which Yākūṭ (d. 625/1229) devoted to him (in ʿUddāb, vi, 142-50) during his lifetime; this explains the fact that the date of his death is nowhere mentioned.

Bibliography: Given in the article.

(Ch. Pellat)

AL-MARWAZĪ, ʿSHAʿRĀF AL-ZAMĀN TĀHĪR, presumably a native of Marw [see marw al-ghāṣqānī] or a descendant of such a native, physician and writer on geography, anthropology and the natural sciences, died after 514/1120. He acted as physician to the Sāḥibīsīsīn Sultan Malik Shāh [q.v.] and possibly to his successors down to the time of ʿṢaḥīh al-Mawsīl (see the edition of the Fakhriya by H. Derenbourg, Paris 1895, 14, no. 2, 16); little else is known of his life. His main fame comes from the book the Tābābīsī al-hayawān, which is essentially zoological in subject, but also with valuable sections on human geography, i.e. the various races of the world, extant in an India Office ms., Delhi, Arab 1949. Sections of this, in which the author reveals borrowings from inter alia the lost Kitāb al-Masālik wa ‘l-mā买卖āl of Abī ‘Abd Allāh Muḥammad b. Ahmad al-Ḥanāfī and his family [see al-Bayānīnî in Suppl.], have been edited and translated by Minorsky as ʿShaʿrāf al-Zamān Tāhir Marwāzī on China, the Turks and India, London 1942.

Bibliography: Minorsky, op. cit.; Brockelmann, S.I, 903. (C. E. Bosworth)

MARY [see Maryam].

MßAYA or MAREA, a Tigre-speaking tribe strongly in the upland region of the left bank of the river Ṭigre, north-west of Keren in western Eritrea [q.v.]. They claim descent from a Saho warrior of the same name, who is said to have settled in the region with seventeen soldiers during the 14th century. This data seems to be confirmed by the Gadda Ewostēwaṭīsī (Turayev, Acta S. Eustathii, 37-8), where the Ethiopian saint Ewostēwaṭīsī is said to have visited “the two Mārāyā” on his way to Jerusalem in ca. 1337 (cf. C. Conti Rossini, in RSO, iv, 452-3; Bermudez, Breve relāciones, 117). Until today, the tribe is indeed split into two sections of nobles, the Mārāyā Kayīr or “Red Mārāyā” and the Mārāyā Sallīm or “Black Mārāyā”, who are by far the most numerous. The distinction must represent two migrations, for the “Black” are traditionally regarded as “the first born” and in a higher position than the “Red”, which is contrary to the meaning of kayīr (kayr) in Amharic. On several occasions, such as the death of the chief of the “Black”, the “Red” had to give presents to the other group. The tribe consists further of families who are vassals to the nobles. The descendants of the warrior Mārāyā became very numerous and subjugated the local tribes. Called tigre because of their origin—the term means “serf caste” in this context—these vassal tribes were in fact Ethiopians and Bedja [q.v.], whose language was taken over by the ruling class. The latter’s Saho language has been long since forgotten. Differences in the penal code between punishments for crimes committed by nobles or by vassals have been disappearing. Under Italian rule, the more onerous duties of the vassals were considerably lightened. The rigid noble-serf relationship was, however, still very strong until recently.

MARYAM, Mary, the mother of Jesus. The Arabic form of the name is identical with Hebrew מְרֵיָּם and Maryam, which are used in the Syriac and the Greek Bible, in the New as well as in the Old Testament. In the latter it corresponds to the Hebrew מְרֵיָּם. Al-Baydawī considers the name to be Hebrew; but the noun would seem to indicate a Christian source, according to A. Jeffery, Foreign vocabulary of the Qur’ān, Baroda 1938, s.v. The name Maryam, like others with the suffix, such as ʿArām, Bil’ām, points to the region between Palestine and Northwestern Arabia as its home. According to Muslim interpretation, the name means “the pious” (al-ṣāhid; cf. the commentators on sūra III,31). It occurs frequently in the Kur’ān in the combination [fās] ʿīsā Ibn Maryam “[Jesus] the son of Mary” (sūra II,8,254; III,31-2; IV, 156, 169; V, 19, 50, 76, 82, 109, 112, 114, 116; IX, 31; XIX, 35; XXIII, 52; XXXIII,7; XLI, 37; LVIII, 27, LXI, 6, 14), no further being mentioned, because, according to Muslim tradition also, “Isā had no earthly father. In the region between Palestine and Arabia, “Isā is clearly regarded as the higher of the two. Yet Maryam’s place is important [see [fās] and the Bibli. there listed].”
Maryam is mentioned in the Kurʾān, from the earliest to the later Medinan suras.

(a) Maryam's special privileges; the announcement.

To the first Meccan period belongs sura XXIII, 52: "And we made the son of Maryam and his mother a sign; and we made them abide in an elevated place, full of quiet and watered with springs". Here some have seen the first allusion in the Kurʾān to the virgin birth. This idea is accentuated in sura XIX, 20, where Maryam says to the spirit (i.e. the angel) who announces to her the birth of a male child: "How should I have a male child, no human man having touched me?" In sura LXVI, 12, the conception is ascribed to this divine spirit (cf. Luke, i, 34-5: "And Mary said to the angel, How can this be, since I have no husband? And the angel said to her, The Holy Spirit will come upon you, and the power of the Most High will overshadow you").

The virgin birth is also mentioned in sura LXVI, 12 (Medinan): "And Maryam bint ʿImrān who kept her body pure. Then we breathed into it from our spirit. She acknowledged the truth of the words of her Lord and of his book and she belonged to the obedient".

A third mention of the announcement and the virgin birth is in sura III, 37-8: "When the angels said, O Mary, surely God has chosen thee and elected thee above the women of all created beings. O Maryam, be obedient unto thy Lord and prostrate thyself and bow down with those who bow down" (cf. Luke, i, 28). The commentators remark on these verbs: īṣāfā (chosen: twice) and ḥabara: Maryam was miraculously preserved from all bodily impurity and from spiritual failings. There is discussion too as to whether Maryam is the best of all women without exception, bearing in mind the veneration accorded to Fātima. Al-Rāzī, followed by al-Kurtubi, takes it in an absolute sense, while most say "of that time" (R. Arnaldez, Jésus fils de Marie prophète de l'Islam, Paris 1980, 77). Maryam is generally held, in Muslim tradition, to be one of the four best women that ever existed, together with Asiya b. Fātimah, Fātimah b. al-Kuršān b. Fātimah (Abūtdāl B. Hanbal, Musnad, iii, 135), and the chief of the women of Paradise (Ibn Hanbal, iii, 64, 80). For a comparison of Mary with Fātima, based on Sunnī and Shiʿī interpretations of verses in sura III and XIX, see J.D. McAliffe, Chosen of all women: Mary and Fatimah in Qurʾānic exegesis, in Islamochristiana, vii (1981), 19-28.

According to tradition, the announcement took place in the following way: Djbīrī appeared to Maryam in the shape of a beardless youth with a shining face and curling hair, announcing to her the birth of a male child. She expressed her amazement, but, on the angel's reassuring answer, she complied with the will of God.

Thereupon the angel blew his breath into the fold of her shirt, which she had put off. When the angel had withdrawn, she put on the shirt and became pregnant. The announcement took place in the cavern of the well of Silwān, whither Maryam had gone, as usual, to fill her pitcher; she was then 10 or 13 years of age; and it was the longest day of the year. In Christian tradition also, the voice of the angel was heard by Mary for the first time when she had gone to fill her pitcher. According to a different tradition, Ḥisāʾ's spirit entered Maryam through her mouth (al-Tabarī, Taʾsīr, vi, 22).

(b) Maryam's religious importance.

It has been pointed out that the Kurʾān seems to refer to a belief that Maryam was considered as a third deity, or a divine person; and that she and her son were venerated together as gods. Such may be reflected in sura V, 79: "Al-Masīḥ, the son of Maryam, is an Apostle only, who was preceded by other Apostles, and his mother was an upright woman; and both were wont to take food". This verse would appear to refute any veneration of Ḥisāʾ and his mother as divine persons, elevated above human needs. With it may be compared sura IV, 169: "O people of the book, beware of exaggeration in your religion and say of Allah nothing but the truth. ... Maryam is only the Apostle of Allah and his word, which he conveyed unto Maryam and a spirit that came forth from him. Believe, therefore on Allah and his Apostles and say not 'three'. Beware of this, this will be better for you. Allah is but one God", etc. Clearer is sura V, 116: "And when Allah said, O Ḥisāʾ b. Maryam, hast thou said to the people, Take me and my mother as two Gods besides Allah? He answered: Far be it, that I should say to what I am not entitled. If I should have said it, thou wouldst know it", etc.

The commentators also describe the Trinity as consisting of Allāh, Ḥisāʾ and Maryam. Al-Bayḍāwī, however, admits that in sura IV, 169, there could be an allusion to the Christian doctrine of one God in three Persons. Father, Son, Ḥisāʾ.
(a) The birth of Maryam. This story is found in a Christian tradition corresponding closely with that which is contained in the _Protoevangelium Jacobi_ and _De nativitate Mariae_. Mary’s father is called ‘Imrân in the Qur’ân, Joachim in Christian tradition; Ibn Khaldûn’s _Ibar_, ii, 144) is also acquainted with the name Joachim. Maryam is called a sister of Hûrûn (sura XIX, 32), and the use of these three names ‘Imrân, Hûrûn and Maryam, has led to the supposition that the Kur’ân does not clearly distinguish between the two Maryams, of the Old and New Testament. The Kur’ân names two families as being especially chosen: those of Ibrâhîm and of ‘Imrân (sura III, 32). It is the family of ‘Imrân, important because of Moses and Aaron, to which Maryam belongs. It is not necessary to assume that these kinship links are to be interpreted in modern terms. The words “sister” and “daughter”, like their male counterparts, in Arabic usage can indicate extended kinship, descent or spiritual affinity. This second ‘Imrân, together with Hûrûn, can be taken as purely Kur’ânic. M. Hamidullah’s literal rendering of _sûra_ 32 (cf. _Schedl, op. cit._, in _Bibl._, 189-99, 402-10).

Sûra XIX opens with the story of Zakariyyâ and Yahyâ (1-15); then follows the story of Maryam and ‘Isâ (16-34). Sûra III, 31-42, contains: (a) the birth of Maryam; (b) the announcement of Yahyâ (33-6); and (c) the announcement of ‘Isâ (37-41). The comparison of sûra XIX with sûra III makes it probable that Muhammad became acquainted with the story of the birth of Maryam later than with those of Yahyâ and ‘Isâ.

For further discussion, cf. A. M. Charfi, _Christianity in the Qur’ân commentary of Tabari_ (English translation), in _Islamochristiana_, vi (1980, 110) and A. Ferre, _La vie de Jésus dans Tabart_ (English translation), in _Islamochristiana_, v (1979, 11).

‘Imrân and Hanna were old and childless. One day the sight of a bird in a tree, which was feeding her young, aroused Hanna’s desire for a child. She prays God to fulfil her desire, and vows, if her prayer should be heard, to dedicate the child to the temple. She had, however, forgotten that, according to Jewish law, this would be impossible if she should give birth to a female child (cf. _Proto. Jacobi_, chs. iii, iv; Syriac text, 4). Compare with this sûra III, 31: “How the wife of ‘Imran said, O my Lord, I have vowed to thee what is in my womb. Now accept [this vow] from me, thou art the hearing, the knowing. And when she had given birth to the child, she said, O my Lord, I have given birth to a female child... and I have called her Maryam.”

Then the Kur’ân relates how she invoked on behalf of Maryam and her posterity Allah’s protection from Satan. On this verse is based the well-known _hadith_ “Every child that is born, is touched (or stung) by Satan and this touch makes it cry, except Maryam and her son” (al-Bukhârî, _Akhbâr_; _The Prophet_, x, 359, 368).

Maryam’s protection is less certain of her safety until the time of Joseph._ (cf. _Protev. Jacobi_, vi, 233, 254, 288, 292, 319, 368, 523). It has also been suggested that this idea of unique privilege could come from a Christian source (Arnaldes, 46-7).

The Kur’ân further relates (vs. 32) that the child grows up in a chamber in the temple ( _mibrâh_; cf. the _xêlêm_ in _Protev. Jacobi_, vi; Syriac text 5-6) under the divine grace and under Zakariyyâ’s care. According to Muslim tradition, ‘Imrân had died before the birth of Maryam, and Zakariyya claimed authority over her on account of his being her uncle; the rabbis did not recognise his claim; his right was proved by an ordeal, consisting in the parties throwing their pens or arrows (_ahlum_ in a river; the only one that floated was that of Zakariyyâ. (cf. _sûra_ III, 39). Christian tradition knows of an ordeal only in the case of Joseph, who, because a dove comes forth from his staff, is recognised as Maryam’s guardian.

As often as Zakariyya enters Maryam’s _mibrâh_, he finds her provided with food in a miraculous way (vs. 32). This feature also belongs to Christian tradition (_Protoev. Jacobi_, ch. viii; Syriac text, 7). The person of Joseph is not mentioned in the Kur’ân. In Muslim tradition, he takes care of Maryam, his cousin, because Zakariyya is no longer able to do so, on account of old age.

Muslim tradition speaks of one Qurayyûdî a carpenter who is betrothed to Maryam; he is the first to notice her pregnancy and to be convinced by her of its miraculous nature, as brought about directly by the power of God. (A. Charfi, 115-16; Abd al-Jalîl; L. Cheikh, _Mawlid Maryam al-’adhra fi taklid al-Islam_, in _Machriq_, xxvi [1926], 682-6).

The undoubted parallels between the Kur’ânic account and the material found in the apocryphal gospels do not, however, indicate direct dependence, but are more indicative of the folklore aspect of religion, much fuller than would be implied by the canonical text of the Gospels, itself the product of careful selec-

(b) The annunciation of Yâhŷyâ. See this art. and also Zâkâriyâa.

(c) The annunciation and birth of Isâ. The more detailed narrative is that of sûra XIX, 16-17. Maryam retires to "a place situated eastward", where she hides herself behind a curtain. The commentaries do not know whether a place to the east of Jerusalem is meant, or the eastern part of her house, to which she retired every month. It is said that this is the origin of the *kibla* of the Christians.

In 17-21 the story of the annunciation is given (cf. above), followed by that of Isâ's birth, which, according to some Muslim traditions, followed the conception either immediately or very soon. The pains of childbirth came upon Maryam when she was near the trunk of a palm. "She said, would to God I had died before this, and had become a thing forgotten, and lost in oblivion. And he who was beneath her [i.e. the child, or Djbîrîl, or the palm] called to her, saying, Be not grieved; God has provided a rivulet under thee; and shake the trunk of the palm and it shall let fall ripe dates upon thee, ready gathered. And eat and drink and be of good cheer." This story may, perhaps, be considered as a parallel to the Christian tradition in which it is related that, during the flight to Egypt, the babe Jesus ordered a palm in the desert to bow down in order to refresh Mary by its dates; whereupon the palm obeyed and stayed with its head at Mary's feet, until the child ordered it to stand upright again and to open a vein between its roots in order to quench the thirst of the holy family (Apocryphal Gospel of Matthew, ch. xx). The Kur'ân goes on (v. 26): "And when thou seest any man, say, I have vowed a fast unto the Merciful; so I may not speak to any man to-day". The commentaries say this was meant to avoid importunate questions. This feature is not in Christian tradition; yet in the *Protoc. Jacobit* it is said (ch. xii; Syriac text, 11) that Mary, who was then 16 years of age, ordered herself to the Israelites. According to Muslim tradition, she stayed in a cavern during forty days. The Kur'ân continues (XIX, 28): "Then she brought him to her people, carrying him. They said, O Maryam, thy father was not a bad man, neither was thy mother a harlot. Then she pointed to the child". Then the child begins to speak, one of the well-known miracles ascribed to Isâ. The "very shameful calumny" which the Israelites brought forth against Maryam is also mentioned in sûra IV, 155. As to the words "O sister of Hârûn" (cf. above), it may be added that, according to the commentators, this Hârûn was not Moses' brother, but one of Maryam's contemporaries, who was either a wicked man, with whom she is compared in this respect, or her pious brother.

A legend about loaves of bread which Maryam gave to the Magi is mentioned by al-Mas'ûdî, iv, 79-80 = § 1405.

The flight to Egypt is not mentioned in the Kur'ân, unless the "elevated place" (sûra XXIII, 52; cf. above) should be an allusion to it. According to Muslim tradition, which is acquainted with it, the abode lasted 12 years. After the death of Herod the family returned to Nâṣîrâ.

After his alleged death (according to Muslim teaching: see Isâ), he consolèd his mother from heaven. According to others it was Mary Magdalene. The stories of the *Transitus Mariae* have not obtained a place in Muslim tradition. Instead of these, there is a narrative of how Maryam went to Rome in order to invoke the help of the Virgin before this, and had become a thing forgotten, and lost in oblivion. Possibly apocryphal gospels and the Kûhânic stories reveal a common folklore tradition. For such stories, cf. J. Robinson, *Muhammadan teaching about Jesus*, in *MW*, xxv (1939), 37-54, and idem, *Stories of Jesus and Mary*, in *MW*, xl (1950), 236-43.

Maryam in popular Muslim devotion.

Maryam is much venerated in Muslim folk tradition, often along with Fâtimâ (see above). Muslim women have taken her as an example and as a recourse in time of trouble, often visiting Christian shrines. Christian and Muslim traditions both honour her memory at Mâitiyâ near Cairo, and in Jerusalem. In Jerusalem is Hâmmâm Sitt Maryam (the bath of Maryam), near St. Stephen's Gate, where it was believed Maryam once bathed; the place would be visited by women seeking a cure for barrenness (R. Kris and H. Kriss-Henrich, *Volksgläube im Bereich des Islam*, i, Walfahrten und Heiligengewöhnung, Wiesbaden 1960, 169; T. Canaan, *Mohammedan saints and sanctuaries in Palestine*, in *Jabl. of the Palestinian Oriental Soc.*, iv/1-2 [1924], 1-84).

Some plants have been named after Maryam; (a) *Maryamiyya* or *Miriamyeh*, *Salvia triloba*, Labiatae, said to have acquired its sweet scent when Mary wiped her forehead with its leaves (T. Canaan, *Plant-lore in Palestinian superstition*, in *JPOS*, viii/3 [1928], 129-68). G.M. Crowfoot and L. Baldensperger, *From cedar to hyssop. A study of the folklore of plants in Palestine*, London 1932, describe the *Miriamiyya* or "Sage of Vertue", and mention references to it by earlier travelers in Palestine (79-81). (b) Kaff al-Âdhrâ, *Anastatica hierochuntia*, *Crucecere*, the dried seed-heads of which can last for years and are blown around the desert, the seeds germinating when water is available. The seed-head is thought to resemble a fist, hence the name; the kaff or "hand" is well-known as a protection against the evil eye [see KHAMSA]; it can be seen painted or carved, or worn as an amulet; generally known in Muslim circles as kaff Fâtima. This plant, however, has in time past been used not to avert the evil eye—though this concept may also have been present—but as a birth charm, soaked in water when a woman was in labour, and the water sometimes given to her to drink. Known as kaff Fâtima bint al-Nâsir or kaff Maryam, it was sold in Egypt (Crowfoot and Baldensperger, op. cit., 196; idem, *The Rose of Jericho*, in *JPOS*, xii/1 [1931], 7-14); Violet Dickson, *Wild flowers of Kuwait and Bahrain*, London 1955, 16, remarks on its frequency in Central Arabia. C. Delman, *Arbeit und Sitte in Palästina*, Gütersloh 1935, i, 54, for its location in Palestine. The plant can still be found, but its folk usage seems to have died out.

(A. J. WENSINCK - PENELLO JOHNSTONE)

MARZBAN-NAMA (also known in the Arabicised form Marzban-nāma), a work in Persian prose containing a variety of short stories used as moral examples and bound together by one major and several minor framework stories. It is essentially a work in Persian prose (or Malatī) and was dedicated to the Sālджuk sultan of many verses and phrases in Arabic. They were made several minor framework stories. It is essentially containing "wise counsels and useful directions for

...and the king and the vizier concerning his intentions, Warawīnī mentions in his official correspondence. Warawīnī mentions in his own work. Among these are the Makāmāt of Hamidi, lines of poetry have survived. Ibn Isfandiyar ascribes to Marzban a divān in Tabari verse called the Nikī-nāma.

The Marzban-nāma is mainly a collection of moralistic fables like the book of Kalīla wa-Dīmna, to which it is often compared. It also contains, however, tales in which animals play no part and anecdotes about ancient kings and philosophers. The major framework is provoking stories of a prince who, after the succession of his brother to the throne, wants to withdraw to a life of seclusion. At the request of the grandees of the state he agrees to compose a book containing "wise counsels and useful directions for the conduct of life in this world". Through this book the new king should be made aware of the wicked character of his vizier. In the course of a disputation with the king and the vizier concerning his intentions, the prince starts to tell a long series of stories.

The versions in classical Persian were both made by members of the caste of secretaries serving in the chancelleries of mediaeval Islamic states. Their principal aim was to transform a comparatively simple text into a model of the style which was current in official correspondence. Warawīnī mentions in his preface that works which are as close to his own work. Among these are the Makāmāt of Hamidi, historical texts, Ḇigha collections as well as other collections of tales.

The differences between the two versions are considerable. Warawīnī states that the original Marzban-nāma had nine chapters. In the Rauḍat al-'usūl, an additional chapter contains moral teachings of an Islamic nature which contrast with the rest of the book. The latter version has also many stories which are not present in the work of Warawīnī, who declares that he made a selection from the contents of the original. Houtsma suggested that the two adapters may have had access to different versions of the ancient text. The principal story is only in Warawīnī's case a true framework story, as Gabrieli noted, but it is impossible to make out whether this is conformable to the original design or not.

The Marzban-nāma of Warawīnī was rendered into Turkish by Sadr al-Dīn Sheykhoğlu in the second half of the 8th/14th century. The latter work was translated again into Arabic by Ibn 'Arabshāh [q. v.] in 852/1448 under the title Fikhaṭ al-kalīlāt wa-mufakhat al-zarāfīt. Another Turkish translation, also based on Warawīnī, is the Liiwer al-hik̲m of Urfali based on Warawīnī's work. Another Turkish translation, also based on Warawīnī, is the Liiwer al-hik̲m of Urfali Nūzhet 'Umar Efendi (d. 1291/1778).
by the Muslims in the Sāwād, along with that of the royal family. The great nobleman al-Hurmūzān is sometimes called a marzubān. However, in the early 7th century marzān was still used for the military governor of the frontier districts of al-Hira, Hadjar and the Djarīza, as well as for the governors of Bābil and Khūtarna andiyā and of Balad.

Arabic accounts of the Muslim conquest of Sasanian territories use marzāban for local leaders who organised the defence or concluded treaties at Anbar, al-Madhār/Maysan, Dast-i Maysan, Sūs, Iṣfāhān, Pakāy, Ardashīr/Ardušrāvāyī, Fās, Kirmān, Zarang/Sīdijīstān, Nishapūr, Tūs, Sarakhs and Marw. This may be due to the military nature of their activity or because some of them, such as al-Hurmūzān, were great nobles, and it need not be taken as a title in every case. Marzāban appears to have been used in a generic sense for the shahrdār of Fārs (just as Pāpak is called the marzān and shahrdār of Fārs in the Kār-nāmā), for the padghābān of Iṣfāhān, for the ispāhān of Sīdijīstān and for the kanārang of Khūrāsān. The Hepthātilh ruler of Ḥarāt, Bāḥdāq and Fūshāng is also called a marzāban. At Marw and Marw al-Rūd, marzāban survived as the title of local Iranian officials under Muslim rule, and in 1057/23 Muslim b. Sa’dī al-Kilābī appointed Bahrām Sīs as marzāban at Marw to collect taxes from the Zangīs who lived in its vicinity. Marzāban was also used for the local notables and the ispāhān of Tabaristān from the 1st/7th until the 3rd/9th century.

Meanwhile, Marzāban or Marzābān came to be used as a proper name, at first for powerful officials such as the second Persian governor of al-Yaman, al-Madhār b. Wahrīz. It is also said to have been the name of Dhu ’l-Karnayn, of a sword belonging to the Banū ‘Abī Ṭālib of Makkām and of a district north of Samarkand. Marzābānī was used as a woman’s name, and al-Marzābānī was used as a nisba for someone who had an ancestor named al-Marzāban. Marzāban was also used metaphorically in poetry for a ruler or master, or for a leader of the Magdūs; marzābān were compared to lions, and a lion was called “the marzāban of roaring” and marzābānī.

MARZUBĀN B. RUSTAM [see MARZBAN-NAMA]

AL-MARZUBĀNĪ ABū ʿUbayd Allāh Muḥam-
mad b. ʿImrān b. Muṣā b. Saʿīd b. ʿUbayd Allāh al-
Khurāsānī al-Baghdādī al-Kātib, was one of the
most versatile and prolific of Arab scholars in the
vast field of hadith and most of all in the well-known traditionists such as Abu Bakr Abd Allah b. Abl Dawud al-Sidjasti and hadith himself to the study of akhbār in Khurasan, and his father was deputy to the official, see Ya‘qūbī, Ta‘rīkh, x, 385), a narrow-
mined traditionalist. The latter accused the unorthodox and active scholar of being a drunkard, a Muʿtazili, an untrustworthy relater and—according to others—a liar. The last accusation is corrected by al-Khatīb with the remark that he was not a liar, but that it was the madhhab and riwaḍā which he followed. Both seemed ambiguous to the average intellect. Someone who published the akhbār of Abu Ḥanīfah alongside the akhbār of the Muʿtazila, or who collected the Shīʿī aṯār along the Shīʿī way of Yazīd b. Muʿawiyah, or who mingled the principle of iṣlaha with that of sama, could not possibly pass the rigid criteria of al-Khatīb. By the way it was the same tendency, that of form accepted by the guardians of tradition. Once these accusations, against a man who frequently moved in Shīʿī circles, had been taken up by the eloquent and influential Ibn al-Djawzī (d. 597/1200 [q.v.] ) (Muntazam, vii, 177) in Baghdad—at that time under the influence of Hanbalism—then a like judgment, more or less founded on prejudice, was decisive and emphatic. The reputation of the saḥīh akhbār wa-
rwaḍā li ʿl-ādāb, as al-Khatīb spoke of him, was thereby marred. The fact that the Al-Marzubānī’s contemporaries valued his works more than those of al-Djahīz [q.v.] or that his colleague in Baghdad, the well-known philologist Abu ’Alī al-Farisi (d. 377/987 [q.v.]) counted him, the younger of the two, amongst the maṣāḥif al-dunyad, could not improve his impaired reputation. His admirable—and admired—monu-
mental work was soon neglected and, later on, became almost completely obscured. This must have happened because it was not in agreement with the criteria of the customary forms of tradition and because people were prejudiced about the author.

Al-Marzubānī’s contemporary and admirer, the renowned bookseller in Baghdad, Ibn al-Nadim (d. 380/990 [q.v.]), has listed more than fifty titles, along with the number of folios and often with a short summary of the materials in his Kitāb al-Wafā‘ (London, 1888, 298–301, transl. Dodge, 289–95) of the year 377/987. The later bio-
bibliographers like Yākūt, Udbā‘, vii, 50 ff., Ibn al-
Kīfī, Inbāh, iii, 182 ff., and al-Saʿādi, Waḥf, iv,
2. Works. We know concerning al-Marzubāni’s 18-volume collection of biographies of scholars, the al-Mukhtabar fī ʾakhbār al-nuḥud wa ʾl-ʿudābāt wa ʾl-ʿasārāt wa ʾl-ʿulāmāt, that the autograph, consisting of over 3,000 folios, was kept in the library of the Nizâmiyya Madrasa, situated on the east bank of the Tigris. During the opening years of the 7th/13th century, two excerpts were made of this single manuscript, namely a mantakāb in four volumes and a mu$:khr in at least two volumes. In the middle of the same century, the Mantakāb was extracted into one volume, which has been preserved and bears the title Nūr al-kabas al-mukhabar min al-Mukhabar ( diarr. Die Gelehrtenbiographien des Abū ʿUbdallāh al-Marzubāni in der Rezension des Ḥafiz al-Yaγmūrī, ed. R. Selliheim, Teil I. Text. Wiesbaden-Beirut 1964 [Bibliotheca Islamica, 23a]). It contains 125—of about 150 in all—biographies, hence approximately only one-fifth of the original version. The compiler, the Mu$:khr, in which the first only the part has survived, has not as yet been published. The traditions in this volume which, as a rule, begin with an ʾinsād, only partially correspond to those in the Nūr al-kabas. The compiler diverges considerably, in the sequence of the 33 biographies as well as in the transmission within the individual biography. He has access to or uses the Nūr al-kabas, but extracts, which only the first part has survived, has not as yet been published. The traditions in this volume which, as a rule, begin with an ʾinsād, only partially correspond to those in the Nūr al-kabas. The compiler diverges considerably, in the sequence of the 33 biographies as well as in the transmission within the individual biography. He has access to or uses the Nūr al-kabas, but extracts, which only the first part has survived, has not as yet been published. The traditions in this volume which, as a rule, begin with an ʾinsād, only partially correspond to those in the Nūr al-kabas. The compiler diverges considerably, in the sequence of the 33 biographies as well as in the transmission within the individual biography. He has access to or uses the Nūr al-kabas, but extracts, which only the first part has survived, has not as yet been published.

(2) His K. al-Muwashshah fimaʾdkhidh al-ʿulāmāt ʾalāʾ ʾl-ʿasārāt consisted of 300 folios according to the bibliography of Ibn al-Nadim. It exists in its complete form and in two editions: Cairo 1343/1924 and ed. ʿAlī Muhammad al-Bidjawi, Cairo 1965. In this delightful piece of ṣaḥīḥ writing, an anthology compiled under the aspect of critical standard-biography based on those of the Nūr al-kabas, is quoted from the Autograph, completed, comprises three sheets, hence approximately 10,000 folios; cf. ʿShīrīyat al-Marzubānī b. Sūfyan, collected and edited by ʿAlī Muhammad al-Bidjawi, Beirut 1982. Bibliography (in addition to the works mentioned in the article): Brockelmann, S I, 190 f. S III, 1217; F. Krenkow, in Islamica, iv (1930), 272-82; O. Rescher, Abriss der arabischen Literaturgeschichte, ii, 264; Zakaria, Tām, viii, 210; Kahlbā, xi, 97 f. (R. Selliheim)

(3) His K. Mu$:muʾāṣ fī asmāʾ al-ʾazṣaʾ originally consisted of 1,000 folios with the infamous verses of about 5,000 poets, arranged in alphabetical order. Only the second half has been preserved, and that moreover with numerous omissions and lacunae. It exists in two editions: ed. F. Krenkow, Cairo 1354/1935, repr. Beirut 1402/1982 and ed. Ṭab,āʾ al-Ṣattār Ṣāḥib Farādī, Cairo 1379/1960; cf. Ibrahim al-Ṣamarrī, Min al-ḥādīt min Mu$:muʾāṣ al-ʾazṣaʾ li ʾl-Marzubānī, Beirut 1404/1984.

(4) His K. Ṭab ʿal-nisāʾ is supposed to have included 500 or 600 folios. Ṭab al-Ṣattār al-Baghdādī (d. 1303/1682) still quoted from it in his Khāṣṣāt al-ṣaḥāb, i, 10, and iv, 565. In an old manuscript, 59 folios of the third part are preserved and contain ʾakhbār and verses by almost 60 women, members of sixteen different ancient Arabian tribes. The fragment was published by Sāmī Makī al-ʿAnī and Khīlāl Nādirī, Baghdād 1396/1976.

(5) The ʾAghfār al-naṣīṣ is still quoted from it in his Khāṣṣāt al-ṣaḥāb, i, 10, and iv, 565. In an old manuscript, 59 folios of the third part are preserved and contain ʾakhbār and verses by almost 60 women, members of sixteen different ancient Arabian tribes. The fragment was published by Sāmī Makī al-ʿAnī and Khīlāl Nādirī, Baghdād 1396/1976.
and is characterised by the fact that the author adds to the traditional ideas gathered by the rauât in the Arabic peninsula and put in order by philologists of the Ibn Kurayba type, more general concepts and ideas in which outside pieces of information, which are used to make instructive comparisons, are also taken into account.

Bibliography: Given in the article.

(Ch. Pellat)

**MAŠA’il WA-ADJWIBA**

(a.), "questions and answers", a technique of argumentation in mediaeval Islam. The pattern of question (su‘îl, pl. su‘îlat, as‘îla) and answer (jawâb, pl. jawâbi, ājwiba) has strongly influenced, both in form and content, numerous Arabic writings in virtually all fields of knowledge. Unsolved problems, or questions and objections propounded by a third person, are followed by answers or explanations and refutations. Sometimes the author, at the request of a third person, composed a monograph on a group of themes, and even dedicated it to him. Besides, the pattern of questions and answers often became a literary topos: as a justification for his work, the author, in his introduction, advances the plea that he composed it because of solicitations and requests of another person (Freimark, 36 ff.). Finally, the pattern also turned into a kind of research or presentation, without any dialogue between teacher and pupil or between two opponents. Ancient and Patristic-Byzantine literature shows parallels with these structures: cf. έρωτήσεις, ἀποκρίσεις, ἡμιτονήσεις, λοιςες, προβλήματα and the Byzantine έρωτοποιήσεις, in evidence since the 12th century A.D. The mediaeval questions et responsiones also belong to this genre. Since the pattern may have sprung from motives which are inherent in the matter, external influence from similarly-structured works of Christian origin or from Aristotelian-Peripatetic methodology (cf. Aristotelis, *Metaphysics*, iii, 1; *Prior and posterior analytics*, *Topics*) can only be proved after study of each individual case.

The oldest Islamic questions-and-answer literature endeavours to solve philological and textual problems of the Kur'ān text. Mention may here be made of the answers given by 'Umar to questions about kiya ʿār, i‘rāb, tanzil and meanings (ma‘āni) of the Kur’ān (Abbott, 110), and of the Masâ’il (su‘ölät) of the Khâridji leader Nâfi' b. al-Azraq (d. 65/685) on 200 difficult words in the Kur’ān, to which ʿAbd Allâh b. ʿAbbâs answered with references to ancient Arabic poetry. This philological interest, especially present in the oldest Kur’ān exegesis, increasingly made way for textual interpretation as a source of Islamic law and as a starting-point of Islamic theology. Thus there have come down to us masâ’il collections of Mâlik b. Anas and Ahmad b. Hanbal [q.v.], containing answers to legal, dogmatic and ethical questions, transmitted and partly edited by their pupils. Probably the most important masâ’il collection of Ahmad b. Hanbal comes from al-Khâlidî (d. 311/923) and is called Kitâb al-Qâmî ʿl-ladâl al-Masâ’il or (al-Musâdil min masâ’il ʿl-Abd b. Hanbal). Its aim is to give answers on legal questions culminates in the development of the Islamic institution of the fitây, the act of giving a fatwâ [q.v.]. This institution can be compared with Roman jus respondendi; as Goldzihler has shown, it has influenced Jewish circles.

On the basis of Kur’ānic texts, an apologetic literature was developed which tried to prove the superiority of Islam by means of the question-answer pattern. An example is the Kitâb al-Masâ’il attributed to ʿAbd Allâh b. Salâm (d. 43/663–4), a Jew from Medina, and probably composed by a Jewish renegade. It consists of a collection of questions put before the Prophet, at whose answers and explanations the theory is said to have been converted to Islam. The work is based on a scholastic principle which appears in an already developed stage in the disputation of Leontius of Byzantium (d. ca. 543) with the heretics. Reaching back to Aristotelian dialectics, this Aristotelian, influenced by Neo-Platonism, was familiar with the scholastic technique of question and refuting answer (cf. Grabmann, i, 104 ff., 107 f.). It is conceivable that Leontius' contest with the Nestorians, which was to be continued and which, more than 200 years later, reached a climax in John of Damascus and, after him, in Theodorus Abû Kurra (cf. Griffith, *Controversial theology*, 33 ff.), favoured in Syrian circles the development of a similar scholastic technique. Through disputations and polemics between Christians and converts to Islam, this technique may have become known to Islamic circles and have been accepted as a stimulating example in the practice of Islamic disputation (cf. Cook, *Origins*). The pattern of question (in the form of a conditional clause) and refuting answer or argument (hûdjâja) (often presented in the form of a main clause expressing an irredeem) is already found in al-Hasan b. al-Ḥanâfiyyâ (d. ca. 100/718), MS Leiden Or. 2523, f. 64v-65r (ed. Hayek; cf. Griffith, *Anmâr*, 149 ff.), a defence of Christian doctrine against the Muʿtazila by the Christian apologist ʿAmâr b. ʿAbd Allâh (first half of the 3rd/9th century). The principle of thesis and antithesis used here follows the tradition of the Christian Aristotelians, and marked the apologetic literature of Christian converts to Islam. One may compare al-Hasan b. Ayyûb (4th/10th century) in Ibn Taymiyya (*al-Daâbûq*, ii, 318, 319 in fine, etc.). Moreover, the question-answer pattern is also found in the exegesis of the Kûrânic literature of Islam, as well as in its learned literature in general.

At an early stage, debates with opponents from their own circles took the place of disputes with non-Islamic doctrines. One may quote the above-mentioned refutation of the Kadariyya by al-Hasan b. Muhammad b. al-Ḥanâfiyya; the debate on knowledge (maʿrîţa) inside the Muʿtazila as related by al-Dhâbiḥ (d. 255/868–9) in his Maṣâ’il wa l-ʿājwiba fi l-maʿrîţa; the discussion on the theodicy problem between al-Nazzâm, ʿAli al-Awsâwî, Abu ʿl-Hudhayl, Bighr b. al-Muʿtamîr, al-Mudîrî, al-ʿAṣbaḥî, al-ʾIsâkî and Dja ʿfar b. Har (see Daiber, *Muʿammâr*, 260 f.), noted down in a protocol by ʿAbd al-ʿAîr b. Tâhir al-Baghîdârî (d. 196/718), shorter version in al-Mîlîd, 136,11-138,3); and also the protocol of a discussion on the Kur'ān between the Hanâbî Ibn ʿAbd al-Muxaddis and an Arâfî opponent from Damascus (ms. Leiden Or. 2523), which took place between 589/1193 and 595/1199. This protocol, rewritten as an independent theological treatise (ms. Manisa 6584-5), clearly shows the traces of the tradi-
The Islamic technique of disputation is directly linked to the questions discussed (cf. Van Ess, Beginnings) and in particular cases, Christian peripatetic examples of perhaps Syriac origin may have been followed (cf. Cook, Origins). Like Judaco-Christian Hellenism (see Van Ess, Disputationspraxis, 54 ff.), Islam in the sphere of disputation developed a technique which became more and more the pattern of scientific treatises. In Ibn Sai’s works (see Ullmann in the Maghrib, there was even compiled a handbook of theological disputation, the Kitâb al-Dhâjâlîdâh, whose actual form (terminus ante quern 5th/11th century) certainly contains older material (Van Ess, Untersuchungen, 43 ff.). The question-answer pattern has become here a didactic principle, used to prepare future missionaries for their task. Later, this technique was elaborated in the so-called djalâl literature, developed under the influence of the Organon of Aristotle, and intended to teach Islamic theologians as well as jurists the art of dialectic discussion. One may compare the Hanbalis Ibn ‘Askil (see G. Makdisi, Scholastic method, 650 ff.; idem, Dialectic) or Ibn Surur al-Makdisi, whose Kitâb al-Djalâl (composed ca. 605/1209) has been preserved in manuscript (ms. Berlin 5319, fols. 7a-32). Makdisi has called attention to the resemblance between Ibn ‘Askil and the sic et non method used by Peter Abelard (Scholastic method, 648 f., 657 ff.; revised in Ruse, 253 ff.). It remains to be proved in detail whether the method of Abelard (see for this, Grabmann, ii, 200 ff.) and his predecessors offers more than “mere parallels”, and whether its origin is due to Arabic models (Makdisi). In medical literature, the question-answer pattern served an exclusively didactic purpose, namely the transmission of specific knowledge. The al-Masâ’il al-‘îthâbiyya, or al-Masâ’il ‘îthâbî, of Hunayn b. Ishâq [q.v.], preserved also in Syriac and Latin, which summarises in catechetical form the most important medical knowledge (see Ullmann, Medizin, 117 f.; idem, Natur- und Geheimwissenschaften, 450), became wide-spread. In medical education in Egypt and in the East, the orality of Hippocrates was summarised in the same way by Hunayn (see Ullmann, Medizin, 117, 206). For other medical handbooks in the question-answer pattern, see ibid., 110, 166, 209, etc. From the fields of philosophy, physics and logic, mention may be made of the Masâ’il al-mutâfarrîka of al-Fârâbî, and of the anonymous Syriac collection of definitions (ed. Furlani). From such didactical question-answer books it is only one step to the hadîd (definition) literature [q.v.] which could fall back on classical models (see Fuhrmann, part ii). Examples are al-Kindî’s Kitâb al-Hudud al-adâgh 3 wa- rustimikâh, and Ibn Sinâ’s Kitâb al-Hudud. Like in Syriac (cf. Baumstark, 131 ff.; Daiber, Bar Ze’bi), traditions of Greek-Hellenistic dhairesis literature may have been of influence here.

To the list of the above-mentioned works, which might be divided into question-answer literature of “diallectical” and “didactical” character, should certainly be added the Arabic-Greek tradition of the Problemata physica (al-Masâ’il al-‘îthâbiyya). The Problemata physica study the reasons and causes (fikâ 2î) of phenomena in nature, and often use the following paradox: “Why does phenomenon X have the effect Y, but does phenomenon Xa not have the effect Ya’?” The very treatment of the tradition of the Greek texts (see Flashar, 297 ff.) is reflected in the Arabic material (see, for the time being, Ullmann, Medizin, 92-6; idem, Natur- und Geheimwissenschaften, 458; Daiber, in Gnomon, xli [1970], 545 f.; Sezgin, iii, 50; v, vii, 216; on further mass., see Daiber, Graeco-Arabische und Philologische_ImageLibrarian archives. Numerous Arabic collections of the Problemata, ascribed to Aristotle, are closely related to the Problematia inedita, ascribed to Alexander of Aphrodisias, while others appear to be extracts from the Problemata physica, ascribed to Aristotle (cf. e.g. Book x in ms. 2234 of Tehran University, and see for this R. Kruk). The only, almost complete, manuscript of Hunayn b. Ishāq’s Arabic translation in 17 makâlîdâh (mentioned also by Ibn Abi Umayyâbî’s [q.v.] in his History of Physicians, is ms. Manisa 1790/3; an edition of the Arabic text, with its translation in Hebrew, is in preparation. The Arabic text goes back to a Greek original, which was definitely more complete than the Greek text known so far. Moreover, Syriac (Job of Edessa, 769-835 A.D.) and Arabic (Bâlinâs, at the turn of the 8th century A.D.) traditions seem to have utilised collections of the Problemata of Greek origin, which have not been preserved (cf. Weisser, 55 ff., 210, 215). For the Problemata, which have not been identified so far, and which, in the Arabic texts, are ascribed to Theophrastus, Proclus and Galen, see Ullmann, op. cit. The Problemata physica are often quoted and commented upon in Arabic: Rhazes, Kustâ b. Lûkâ, “Abd al-La’îf al-Baghdâdi [Makdisi]). An example is the change of ideas between Frederick II of Hohenstaufen and the Orient. In his 1178 A.D. youthful letters to his scholars from Damascus (ed. Daiber, Briefe), Ibn Ya’âshî (d. 643/1245) answers fourteen questions on logic, physics and metaphysics asked by Ibn Abî Shâ’d b. ‘Uglmân b. Sa’îd al-Mawâlî (see Endress, 97 f.); the Bûyîd vizier Abu 1- Fadîl Ibn al-Amîd (d. 360/970) informs A’dal al-Dawla [q.v.], at the latter’s request, on all sorts of questions on human physiology, i.e. Ri’sâl, has become known (Sezgin, iii, 203) and published (by al- ‘Azzâwî) under the title al-Muhâsîbârî fî ‘îthâbî baynahu wa-bayna Nâshirîn. The text is one of the numerous examples in which the question-answer pattern serves only to transmit knowledge, and thus has a didactic purpose. The master, the scholar, answers questions of a pupil, someone who tries to find information, but whose name is often not mentioned. This transmission of knowledge occasionally takes the form of learned correspondence. Thus the Christian Yahyâ b. 2îrî (d. 974 A.D.) answers fourteen questions on logic, physics and metaphysics asked by Ibn Abî Sa’îd b. ‘Uglmân b. Sa’îd al-Mawâlî (see Endress, 97 f.); the Bûyîd vizier Abu 1- Fadîl Ibn al-Amîd (d. 360/970) informs A’dal al-Dawla [q.v.], at the latter’s request, on all sorts of questions on natural science in letters, preserved in manuscript (‘Irâk Museum, Baghdad 594; a different text in ms. Leiden Or. 184) (see Daiber, Briefe), Ibn Ya’âshî (d. 643/1245) answers grammatical questions put before him by a group of scholars from Damascus (ed. R. Sellheim). A famous example is the change of ideas between Frederick II of Hohenstaufen and the Orient. In his Adâjîbâ ‘an al-‘âbîta al-‘alâbiyya (cf. Kattoura 42 f.; al-Tafâzzi, 308 ff. 283 al-‘adâjîbâ fi mutâtima tawhîdîyya, Kuwait 1972), Ibn al-Haylîmâ, Fâhkî al-Dîn al-Râzî û ‘îsâ b. Mâssa. To this can be added the adaptations of two different collections of Problemata by Abu 1- Farâdî b. al-Tayyib in ms. Nurusmâniye 3610 (new number 3095), written before 1076/1665: fol. 1b-21b (Alex- ander of Aphrodisias) and fols. 22a-33b (Aristotle). Moreover, there is the short extract (starting with Aristotle, Problemata physica, ii, 3) in ms. Princeton 2988 by Sulaymân b. Ahmad, not further known.

Not related to the Problemata physica is the Ri’sâl fî ‘î- ar’î ‘al-‘af a’ 2îyya (ms. Washington, Army Medical Library A 82), a question-answer discussion, possibly fictitious, between al-Hârîth b. Kalâda [q.v. in Suppl.] (an older contemporary of the Prophet) and the Sâsànî ruler Kûsrâ Anûnhîrân on practical questions of human physics, ii, 144. Ri’sâl has become known (Sezgin, iii, 203) and published (by al- ‘Azzâwî) under the title al-Muhâsîbârî fî ‘îthâbî baynahu wa-bayna Nâshirîn. The text is one of the numerous examples in which the question-answer pattern serves only to transmit knowledge, and thus has a didactic purpose. The master, the scholar, answers questions of a pupil, someone who tries to find information, but whose name is often not mentioned. This transmission of knowledge occasionally takes the form of learned correspondence. Thus the Christian Yahyâ b. 2îrî (d. 974 A.D.) answers fourteen questions on logic, physics and metaphysics asked by Ibn Abî Sa’îd b. ‘Uglmân b. Sa’îd al-Mawâlî (see Endress, 97 f.).
tr. M. Grignaschi), and the categories, the soul and the difference, in this subject, between Aristotle and his commentator Alexander of Aphrodisias. In his Kitāb al-Itibār fī-r-ci tadhkihu ʿl-abṣār, preserved in manuscript (Brockelmann, i, 385), the Egyptian scholar al-Kārīf reports on physico-astronomical and physiological-optical questions which Frederick II put before the Arab scientist Kamāl al-Dīn b. Yūnus (tr. Wiedemann). The texts mentioned show the extent of the scientific relations of Frederick II with the Orient (see also Suter).

As against the geographers who preceded them, they were for the most part travellers who, to the data already taken traditionally by their predecessors from

For the most part, the works of the Arab geographers have been published. The most recent and comprehensive is M. Ullman, Die Abhandlung des Abu Hâmîd al-Gazzâlî. Antworten al-Masâlik wa 'l-Mamâlik, present common characteristics. Nevertheless, not all those whom, in his eyes, constitute this genre were given the title which has been retained, and furthermore, the K. al-Masâlik wa 'l-mamâlik which is perhaps the oldest, that of Ibn Khurrodadbih (d. between 272 and 367/885 and 977), then as a group, the K. al-Sawar al-ard of al-Balqhi (d. 322/934), the K. al-Masâlik wa 'l-mamâlik of al-Idnîsî who (269, n. 1) "hardly do anything more than complete the data of the Masâlik wa 'l-mamâlik", does not seem to have come to light. A. Miquel, who often cites the Masâlik wa 'l-mamâlik (in La géographie humaine du monde musulman, i, Paris 1967, 2nd ed. 1973, index), devotes to this genre a fairly long chapter (267-330) which he entitles "l'advent of genuine human geography" and in which he studies separately the works of al-Istakhri and Ibn Hawkal, adds to Blâchère's list the K. al-Masâlik wa 'l-mamâlik of al-Muhallabî (d. 380/990) and simply mentions al-Bakri and al-Idnîsî who (269, n. 1) "hardly do anything more than complete the data of the masâlik works for Spain and the Maghrib".

Leaving aside the two latter ones cited, all the authors illustrative of the genre isolated by Blâchère are easterners living at the end of the 3rd/9th century or in the 4th/10th one, i.e. in a period when the Shî'a movement began to enjoy some remarkable successes. As against the geographers who preceded them, they were for the most part travellers who, to the data already taken traditionally by their predecessors from treatises of cosmography and geography based directly or indirectly on Greek science and particularly on Polýmê (see Baylamûs), and to the information relating to the routes, distant lands and peoples who inhabit them that they could derive from

Regarding the form given to these works, these authors (with the exception of al-Idrīsī) do not follow the geographical literature that has established the division of the world into climates [see ʿiklīm], but distinguish large regions, roughly corresponding to the mazālik [see mamlakā], within which they describe the routes that they traverse, their localities and the men who live there.

"The authors of whom we are about to speak," writes Blācher [Extrait, 115], "are concerned purely with description. All their attention is directed to the recording of the general features of a country, assessing how the details relating to each place, in the past, bear on their present life. All this is no doubt written down in a generally monotonous style". However, this genre assumes a literary aspect which contrasts with the dryness of the administrative manuals, without giving as important a place to adāb as do a Dājjāz or an Ibīn al-Fakhī, just as it avoids the fables and marvellous accounts of certain other travellers who had the opportunity to go beyond the borders of the Islamic empire. Nevertheless, the eastern authors of the group do not know the Christian world and even have a poor acquaintance with the Muslim West, with the exception of Ibn Hawkal whose work constitutes, on certain points, a unique historical source, for his chapters on the Maghrib, Spain and Sicily can be regarded as original. Generally, history in these works occupies a place which is not negligible, but it is doubtless the sedentary al-Baḵrī who supplies in this regard the most information, while al-Idrīsī, who questioned, at the court of the Normans of Sicily, some travellers and Christian pilgrims, is quite well-informed on the routes, towns and states of Europe, not to mention the fact that he himself navigated the length of the coasts.

It was with a purely didactic purpose that Blācher marked out from the rest of the geographical literature the concept of mazālik wa ʿl-mamālik, or geographical works of various written or oral sources, now added first-hand documentation gathered in the regions that they describe. In this regard, a passage of the Kitāb al-arḍ of Ibn Hawkal is very revealing; for it presents a totally characteristic layout [see Blācher, Extrait, 110-1; Ar. text in the 2nd ed. of the Sūrat al-arḍ, 329, and Fr. tr. Kramers-Wiet, almost identical to that of Blācher, i, pp. IX-X and ii, 321-2).

The most famous member of the family, sought for ʿĀshīa at the battle of the Camel (allegedly already then at commander of the Bakr b. Wāʾil and threw in his lot with the Umayyads thereafter [al-Tabārī, i, 3179, 3220 f.; ii, 765 f.]), in the civil war which broke out at the death of Yazīd b. Muʿawīya, he negotiated the alliance (hilf [q.v.]) between the Bakr b. Wāʾil and Aṣīd in Basra and played a major role in the subsequent feud between these two tribes and the Ṭāmīn (668-675), emerging as the undisputed leader of the Bakr b. Wāʾil, whom he later conducted in battle against al-Mukhtar in 67/668-67 ([al-Tabārī, i, 448 ff., 720, 726; al-Baladhurī, Anāb, ibv, 105 ff.; v, 253, 259). Having joined the pro-Umayyad Dūfriyya, a group of Basrans who unsuccessfully tried to oust Muḥammad ibn Basra in 69/689 or 70/689-90 (not 71/690-1, as stated by C. A. Pellegrino, ii, s.v. Mīṣmāʾī), he fled to the Yamama, but returned on ʿAbd al-Malik b. Ṭārīq’s reconquest of Ṭārīq in 72/691. He died shortly thereafter (al-Tabārī, ii, 799 ff.; al-Baladhurī, Anāb, ibv, 156 ff.; 160 ff.; Pellegrino, Mīṣmāʾī, 270). His brothers Makṭūbī b. Mīṣmāʾī and ʿĀshībī b. Mīṣmāʾī were also men of some prominence (for references, see Crone, loc. cit.).

Under the Marwānids, the family retained its leadership of the Bakr. Ṣībīl and, on the whole, its Umayyad sympathies. Thus Nūḥ b. Ṣlaybān b. Mīṣmāʾī commanded the khums [q.v.] of Bakr b. Wāʾil against the Muḥallabīds in Basra in 101/720 (al-Tabārī, ii, 1580), while other members of the family were at various times governors of Fāṣā and Dārāb-gīrī, Sīstān and Sind (Crone, op. cit., 117 f.). But they played no role in the third civil war or the ʿAbbāsid revolution.

In the caliphate of al-Mahdī, ʿAbd al-Malik b. Ṣīlābān b. Mīṣmāʾī commanded a naval expedition to Sind and acted as deputy governor there for a short while (al-Tabārī, iii, 460 f.; 476 f., 491). Yet, unlike the Muḥallabīds or the Kūṭaybīds, also Basran families of major importance in the Umayyad period, the Māṣamīʿīs failed to effect a political comeback under the ʿAbbāsids.

Bibliography: Practically all chronicles dealing with the Umayyad period have something to say about the Māṣamīʿīs. The most important references are given in the article, to which however should be added Ibn Ḥazm, Qanāḥa, ed. Hārūn, 29 f. (P. Crone)
ians from the Umayyad period who are known by name, and probably the first to translate a work into Arabic. So far, endeavours to identify and date him have been unsuccessful. He is said to have been of Judeo-Persian origin and to have lived in Baṣra. Occasionally he is indicated as a Syrian (ṣūrānī), which is probably to be explained by the translation which he allegedly made from Syriac into Arabic of the Kannāš (kwānūṣ, kwān) of Aḥrun [q.v. in Suppl.], translated into Syriac by a certain Gosios. According to Ibn Djulduj [q.v.], this was done under the caliphs Marwān (64/978-85) or ʿUmar b. ʿAbd al-Ḥādī. This, according to Masāwr, was doubtless copied by Cosmas Indicopleustes who visited the area in 177 A.C., mentions on this coast the port of Saba, identified with the Biblical Seba of the Bible. The actual port, is mentioned in the famous inscription carved in the port of Adulis about 240 B.C. at the time of Ptolemy III Epiphanes (246-221 B.C.), whose name is derived from Ethiopic mesu-wa “cry, loud call”. A fisherman from Dahlak, driven by a storm to the then inhabited island, is said to have related that its size was such that a man, shouting in a high voice (sauw), could make himself heard from one end to the other (Conti Rossi, Il Gadda Filipso, 162). According to another version (Conti Rossi, Documenti, 16; cf. Esteves Pereira, História de Minas, 62), Ethiopian caravan leaders, arriving at Djärar, had to cry aloud for the barks of the island to come and fetch them. The island is in fact one km. long and ca. 250 m. wide.

The Masawa region, known as Samhar, may have been visited as early as the third millennium B.C. when Egyptian ships sailed down the Red Sea. It became better known in history when the Greek Ptolemies developed a series of stations along the African coast [see also, 1876]. Djärar, the region, is mentioned in the famous inscription carved in the port of Adulis about 240 B.C. at the time of Ptolemy III Euergetes (246-221 B.C.), and copied by Cosmas Indicopleustes who visited the area about 525 A.D. (M.Crindle, The Christian topography, 57). Armadores of Ephesus (ca. 100 B.C.), whose work is known through extracts by Strabo (ca. 20 B.C.), mentions on this coast the port of Sabah, identified with Djärar by Conti Rossi (Storia, 60, 103; Comenti e notezze, 17). In connection with Adulis, now Zula, the region is also mentioned in the well-known Periplus of the Erythraean Sea (tr. Schoff, 22-3, cf. 60). This Aksumite port in the gulf of the same name must have ceased to function somewhere about the middle of the first millennium A.D. (Kammerer, Essai, ch. 5), and its rôle may then have been taken over by another, presumably larger port, by Masawa, lying about 30 miles to the north. In early Islam, Masawa is mentioned as a place of exile and thus considered by Conti Rossi (Storia, 212), as being in Muslim hands. Because of his love of wine, the Arab poet Abū Bihjān [q.v.] was banished “from Umar to Bāṣīr” in 14/634 (Caetani, Annali, v, 224 ff.; Brockelmann, 1, 40, 21, 701; Conti Rossi, Documenti, 212). At the death of Marwān, the last Umayyad caliph, his son ʿAbd Allāh, on his flight to Djudda, arrived at Bāṣīr (al-Masaw, Tanbih, 330).
According to al-Mas'ūdī, who wrote in the 4th/10th century, the coastal plains, and consequently Masawwā', were tributary to Ethiopia, and Bāḏī lay on the littoral of al-ma'sūd, “the mind”, the territory of the Bedja [g.v.]. If by this term the hinterland of Masawwā' is meant (Bāḏī is not to be identified with Badi or Afīr island lying further north, see Crowfoot, *Some Red Sea ports*), al-Mas'ūdī indicates that the Bedja were working the Eritrean gold mines (Conti Rossini, *Storia*, 278) and that the port played a role in the gold traffic.

During the 6th-8th/12th-14th centuries, Masawwā' is under the sovereignty of the amir of Dahlab, who called himself sulṭān. The Ethiopians, however, as in the time when the amir depended on Aksum, continued to indicate him as sīyūna bāhīr “prefect of the sea”, in opposition to the bāh bāhīr “ruler of the sea [-province]”, who resided at Debārāwā (Debaroa).

Relations between Ethiopia and the naʿūb of the amir at Masawwā' must have been uneasy, at least occasionally, as may be concluded from the capture of the port by Isaak, son of Negus Dawit I (1381-1410). In the 10th/16th century still, the sovereignty of Masawwā' was linked to that of Dahlab (de Barros, *Decada*, ii, i. viii, ch. 1; Basset, *Inscriptions*; Esteves Pereira, *Os Portugueses*) The (Is) di ma's(u) on Fra Mauro’s map is perhaps identical with Masawwā' (Kammerer, *La Mer Rouge*, iii,5, 20). An impression of the commercial activity in this and other ports on both sides of the Red Sea in the early 16th century can be gained from Ludovico di Varthema (*Travels*, 31, 37-8). Andrea Corsali (*Historale description*, 32-3), Tomé Pires (*Sama oriental*, 43) and Duarte Barbosa (*The Book*, 16). According to the author of the *Cartas das novas* (Thomas, *Discovery of Abyssinia*, 67), there was a large number of boats at anchor at Masawwā', including two from Gudjarat, when he arrived there in 1521. Soon, however, foreign trade in the Horn of Africa was to suffer severely from the Portuguese interference with local commerce. The discovery and development of the trade route round Cape of Good Hope, Ahmad Grā'ī’s invasion of the highlands [see Ḥabash, Ḥabashu] and the emergence of Turkish influence in the Red Sea caused the decline of Masawwā', which remained however the main port of Ethiopia.

When a Portuguese exploratory mission landed in Masawwā' in 1520, the town was completely Muslim. According to Álvarez (Beckingham-Huntingford, *The Prester John*, i, 58), the Portuguese transformed the mosque into a church, but did not occupy the port, although the Ethiopian king Lebna Dengel strongly wished them to build a fortress there. However, the Ethiopian king Lebna Dengel strongly tried to prevent the Portuguese from building a fortress there, which remained however the main port of Ethiopia for Western missionaries until 1520, when it was completely Muslim. According to Álvarez (Beckingham-Huntingford, *The Prester John*, i, 58), the Portuguese transformed the mosque into a church, but did not occupy the port, although the Ethiopian king Lebna Dengel strongly wished them to build a fortress there. However, the Ethiopian king Lebna Dengel strongly tried to prevent the Portuguese from building a fortress there. The Portuguese, however, as in the time when the amir depended on Aksum, continued to indicate him as sīyūna bāhīr “prefect of the sea”, in opposition to the bāh bāhīr “ruler of the sea [-province]”, who resided at Debārāwā (Debaroa).

Relations between Ethiopia and the naʿūb of the amir at Masawwā' must have been uneasy, at least occasionally, as may be concluded from the capture of the port by Isaak, son of Negus Dawit I (1381-1410). In the 10th/16th century still, the sovereignty of Masawwā' was linked to that of Dahlab (de Barros, *Decada*, ii, i. viii, ch. 1; Basset, *Inscriptions*; Esteves Pereira, *Os Portugueses*) The (Is) di ma's(u) on Fra Mauro’s map is perhaps identical with Masawwā' (Kammerer, *La Mer Rouge*, iii,5, 20). An impression of the commercial activity in this and other ports on both sides of the Red Sea in the early 16th century can be gained from Ludovico di Varthema (*Travels*, 31, 37-8). Andrea Corsali (*Historale description*, 32-3), Tomé Pires (*Sama oriental*, 43) and Duarte Barbosa (*The Book*, 16). According to the author of the *Cartas das novas* (Thomas, *Discovery of Abyssinia*, 67), there was a large number of boats at anchor at Masawwā', including two from Gudjarat, when he arrived there in 1521. Soon, however, foreign trade in the Horn of Africa was to suffer severely from the Portuguese interference with local commerce. The discovery and development of the trade route round Cape of Good Hope, Ahmad Grā'ī’s invasion of the highlands [see Ḥabash, Ḥabashu] and the emergence of Turkish influence in the Red Sea caused the decline of Masawwā', which remained however the main port of Ethiopia.

When a Portuguese exploratory mission landed in Masawwā' in 1520, the town was completely Muslim. According to Álvarez (Beckingham-Huntingford, *The Prester John*, i, 58), the Portuguese transformed the mosque into a church, but did not occupy the port, although the Ethiopian king Lebna Dengel strongly wished them to build a fortress there (*ibid.*, i, 479 ff.). The information of the “*Zorz Itineraries*” (Crawford, *Ethiopian itineraries*, 90, 159), according to which king David (= Lebna Dengel) gave the port to the Portuguese, may refer to the mission of 1520, to some negotiations by the Portuguese, or to mere rumour. According to Álvarez (*op. cit.*, Appendix iv; Bruce, *Travels*, iii, 54; Beccari, *Rerum*, index s.v. *Maçuq*). In 1693 the naʿūb Mūsā b. ʿAmir b. Ḥunnī tried to use extortion against the Armenian merchant Khōdār Murād, who had returned from the Dutch East Indies with gifts for the Ethiopian king. When Ḥunnī refused to pay, his goods were confiscated. King Lyāsū I ordered the delivery of foodstuffs to Masawwā' to be suspended, and started preparations to attack the naʿūb, who then submitted (Van Donzel, *op. cit.*, 83). According to the French traveller Charles Jacques Poncet (ca. 1700, see Foster, *The Red Sea*, 154), the fortress in Masawwā' was not very strong, and the arrival of an English vessel “cast terror into the whole island”. On learning of the arrival of this ship at Masawwā', the Ethiopian monks made a disturbance before the palace in Gondar, probably fearing a punitive expedition from what they thought to be Portuguese. Poncet also relates that the Pāṣa received him with great civility, at the recommendation of the emperor of Ethiopia, who was greatly afraid because he could easily starve the port or refuse to furnish it with water. The inhabitants of the island, however, thought that it would not pay tribute either to him or to the Ethiopian king (Bruce, *Travels*, iii, 5-6).

The number of Banians or Indian merchants, in whose hands trade had formerly been (Van Donzel, *Foreign relations*, index s.v.), was reduced to six, who made but a poor livelihood (Bruce, *Travels*, iii, 55). In the first decades of the 19th century, the naʿūb still exercised some power. According to Salt (A voyages, *Cond. I*, 138, 147), the naʿūb ldrīs tried to prevent the English from opening a communication with Ethiopia, but came then under pressure from both the Sharīf of Mecca on the one side and from Ras Wolde Sellāsē of Tigre on the other. Salt was told by the Ras that the road by Bure, south of Amphiła Bay (see the map in Salt, A *voyage*, opp. p. 137), was preferable to the route by Masawwā', but Nathaniel Pearce wrote to him that the only road into Ethiopia was by
Masawwa' (ibid., 152). He added that the na^ib would not allow guns to pass through his country. In 1844, almost three centuries after their first attempt, the Turks tried again to get a foothold on the mainland by occupying Arkiko. But again they were forced back on to Masawwa', which in 1846 was leased to Muham- mad 'Ali [q.v.], and now became an important ele-
ment in Egyptian, British, Italian and Ethiopian politics. The lease, having expired at the death of Muhammad 'Ali in 1849, was renewed in 1865 in favour of Isma'il Pasha [q.v.]. Egyptian rule was welcomed by the local nomads who, during the an-
archy of the last years of King Tewodros of Ethiopia, had been suffering from the hill tribes. Soon some of the latter too began to seek Egyptian protection. In 1872 the Swiss Werner Münzinger, consul of France in Masawwa' since 1865, resigned from his post and entered the service of the Egyptians. Having allegedly paid £1,000,000 to the Porte, Isma'il Pasha created the so-called Eastern Sudan, i.e. Takti, Su'akkin and Masawwa', and appointed Münzinger as governor in 1873. Münzinger initiated a plan to link Masawwa' with the Egyptian possessions in the north-east, and constructed the causeways to the mainland. On each of them was a gate, watched by a guard who collected a toll from every passer-by (Rohlfs, Meine Mission, 31 ff.; Conti Rossini, Documenti, 16). He also fortified the port, made himself "protector" of the Bilen tribes and occupied the Kerri region. The Turkish practice of having a na^ib of Balaw origin was continued, and a member of his family was appointed sirdar [q.v.] of the troops in Masawwa'. When the European powers left Egypt with a free hand with regard to Ethiopia, Isma'il Pasha appointed the Dane Søren Adolph Arendrup as commander of the Egyptian troops in Masawwa', and three Egyptian expeditions set out against Ethiopia [see HABASH, i]. After the Egyptian dehâle near Gura in 1876, rumours spread in Masawwa' that the Ethiopian King Yohannes was going to attack the port. But the king wanted peace with Egypt, insisting however that Masawwa' should be restored to his kingdom. The peace treaty, arranged by C. G. Gordon, left Egypt still in control of the Kerri region and the port, where the anti-
Ethiopian policy of the British was maintained by the Egyptian governor of Masawwa'. He gave asylum to Fitawrari Debbeb, an Ethiopian rebel and cousin of King Yohannes, who sold his loot openly in the markets of Arkiko and Masawwa' and who had brought trade with the coast to a standstill. After Mukhtar Bey had been replaced by Mason Bey, an American who had been in the service of the Egyptian government, a treaty between Great Britain, Egypt and Ethiopia was signed at Adowa in 1884 by King Yohannes and Rear-Admiral Sir William Hewett. The actual control of Egypt, and consequently of the ports on the Red Sea coast which had been occupied by the Egyptians, lay indeed in the hands of Great Britain after the revolt of 'Urabi Pasha [q.v.]. Under British protection, free transit through Masawwa' was given for all goods, including arms and ammunition, to and from Ethiopia. A general reservation with respect to the lawful claims of the Porte, explicitly mentioned in Lord Granville's instruction to Admiral Hewett, was ignored in the Treaty. Nor did the Treaty contain any concrete agreement about the possession of Masawwa'. In a letter to Queen Victoria, King Yohannes, aware that the removal of the Egyptian garrison would leave the port open to him, expressed the wish that "the gates of heaven would open for her as she had opened Masawwa' for him". In her answer, the Queen regretted being unable to accede to the King's wish regarding the port (Zewde Gabre-Sellasie, Yohannes IV, 152). Indeed, by now another European power had appeared on the scene. Wary of the huge expenditure that the port would entail, the British purchased the port of Suakim, and in view of financial difficulties in Egypt, Great Britain had been seeking an alliance with Italy. Already in 1881, an Egyptian appeal to use force against Italy after the establishment of an Italian colony in Assab [q.v.], had been rejected by the British government. In 1882 Egypt had even been invited to participate in restoring order in Egypt. In the years 1881-3, the port of Masawwa' (Zewde Gabre-Sellasie, op. cit., 160), hence retaining possession of the port was not con-
considered to be "in the true interests of Egypt" (ibid., 161). Having thus been given a free hand in the Red Sea, Italy landed a military expedition in Masawwa', where on 5 February 1885, the Italian flag was flying side-by-side with the Egyptian one over the palace and the forts. King Yohannes was outraged, while Menelik, who was building up his own power in Shoa and had signed a secret treaty of friendship and trade with the Italians in 1883, acted as mediator between the Ethiopian king and Italy. The Italians quickly occupied Arafale and Arkiko, and when the Egyptian garrisons were gradually withdrawn, almost all major places between Assab and Masawwa' came into their power. Notwithstanding the Treaty of Adowa, the Italians did not allow free transit of ammunition and arms to King Yohannes, nor in the quantities which he desired. They also rejected any form of Egyptian authority, although this was recognised at first. Tension between the Ethiopians and the Italians led to an armed encounter at Dogali (1887), where the latter suffered defeat. Menelik offered mediation, which was accepted by Yohannes but refused by the Italians, who concluded another treaty with the future Negus. Yohannes, meanwhile convinced that Great Britain and Italy were acting in accord, and considering Sir Gerald Portal's mission to him as a feint, marched against Masawwa' in 1887. However, before reaching it he turned his attention again to the Mahdist forces. After his death in the battle of Kallabat (Metemma), the Italians signed the Treaty of Ucciali (Wuchali) in 1889. Italian possession of Masawwa' was confirmed, but Menelik permitted to import arms duty-free through the port (see the text of the famous Treaty in Zaghi, Grisi, 152; cf. Marcus, Menelik II, index s.v. Treaties). After their defeat at Adowa in 1896, the Italians were able to retain Eritrea and the port of Masawwa', which played an impor-
tant role during the Italo-Ethiopian war. Conquered by British forces in 1941, Masawwa' remained under British administration until the federation of Eritrea with Ethiopia in 1950. In 1931 the population was estimated at 9,300 and in 1970 at 18,490. Imports consist mainly of industrial goods, while exports comprise oilseeds, nuts, hides, coffee, salt, fish and pearl. Local industries include a salt works, fish and meat processing enterprises, a cement plant and an ice factory. A thermal power plant serves outlying areas where manganese is mined. The volcanic deposits of the Danakil Plains contain sulphur, sodium and potassium, gypsum, rock salt and potash. During their brief occupation of Eritrea, the coastal settlements on the Red Sea and the Harar region, the Egyptians introduced their Hanafi legal code, which was kept on by the Italians. Thus the Hanafi maqāṣid is predominant in the coastal towns of Masawwa'. During their brief occupation of Eritrea, the coastal settlements on the Red Sea and the Harar region, the Egyptians introduced their Hanafi legal code, which was kept on by the Italians. Thus the Hanafi maqāṣid is predominant in the coastal towns of Masawwa'. Its
founder, "Abd al-Kadir al-Djilami [q.v.], is said to have died at the place of the mosque dedicated in his name. His anniversary (ziyadrat al-Djildni) is celebrated by a pilgrimage and the accompanying ceremonies on 11 Rabl al-Awwal of each year.

MASCARA [see AL-MA'SAKAR]

MASCULINE [see MUGHARKAR]

MASJID (A.), mosqej, the noun of place from sajdja "to prostrate oneself, hence 'place where one prostrates oneself [in worship]'". The modern Western European words (Eng. mosque, Fr. mosquée, Ger. Moschee, Ital. moschea) come ultimately from the Arabic via Spanish mezquita.

I. IN THE CENTRAL ISLAMIC LANDS
A. The origins of the mosque up to the Prophet's death
B. The origin of mosques after the time of the Prophet
C. The mosque as the centre for divine worship
D. The component parts and furnishings of the mosque
E. The mosque as a state institution
F. The administration of the mosques
G. The personnel of the mosque
H. The architecture of the mosque
II. IN MUSLIM INDIA
A. Typology
B. The actual monuments
III. IN JAVA
A. The mosque
IV. IN THE REST OF SOUTH-EAST ASIA
V. IN CHINA
VI. IN EAST AFRICA
VII. IN WEST AFRICA

I. IN THE CENTRAL ISLAMIC LANDS
A. The origins of the mosque up to the Prophet's death

The words masjid is found in Aramaic as early as the Jewish Elephantine Papyri (5th century B.C.), and appears likewise in Nabatean inscriptions with the meaning "place of worship", but possibly, originally "stele, sacred pillar". The Syriac form masjid and Amharic masqeg are late loans from Arabic, though Ge'ez masqegi "temple, church" may be a genuine formation from the verbal root m· s· g· d (itself certainly borrowed from Aramaic). The form m· s· gd is 'oratory, place of prayer' occurs also in Epigraphic South Arabian (A. F. L. Beeston et alii, Sabac dictionary, Louvain-Beirut 1982, 125). The Arabic masjid may thus have been taken over directly from Aramaic or formed from the borrowed verb (see A. Jeffery, The foreign vocabulary of the Quran, Baroda 1938, 263-4).

I. The Meccan period. The word is used in the Kur'an especially of the Meccan sanctuary (al- Masjid al-haram, sūra II, 139, 144, 145, 187, 192, 214; V, 3; VIII, 34; IX, 7, 19, 28; XVII, 1; XXII, 25; XLVIII, 25, 27). According to later sources, this was already the usage in the Meccan period (ca. al-Ya'kubi, Ta'rij, i, 285, 12). According to tradition, the term al-Masjid al-askār (sūra XVII, 1) means the Jerusalem sanctuary (according to B. Schrieke, in JST, vi [1915-16], 1, cf. Horovitz, in ibid., ix [1919], 159 ff., the reference is rather to a place of prayer in heaven); and in the legend of the Seven Sleepers,
masjid means a tomb-sanctuary, probably Christian, certainly pre-Islamic (sura XVIII, 20). The word is also applied to pre-Islamic sanctuaries, which belong to God and where God is invoked, although Muhammad was not always able to recognize the particular cult associated with them. It is undoubtedly with this general meaning that the word is used in this verse of the Kur`an: “If God had not taken men under his protection, then monasteries, churches and places of prayer (salaat) and masjids would have been destroyed” (sura XXII, 41). The word is also used in a hadith of an Abyssinian church (al-Bukhari, Salati, bdb, 48; 54; Muslim, Masajid, tr. 3) and in another of Jewish and Christian tomb-sanctuaries (al-Bukhari, Salati, bdb 55; Muslim, Masajid, tr. 3). Even Ibn Khaldun can still use the word in the general meaning of a temple or place of worship of any religion (Mukadima, jil, 6, at the end). There is therefore no question of a word of specifically Muslim creation. This is in entire agreement with Muhammad’s original attitude to earlier religions. Just as Abraham was a Muslim, so David had a masjid (al-Tabari, Ta’rikh, i, 2408, 7 ff.).

To the Prophet, the Meccan sanctuary always remained the principal mosque, known as Bayt Allah even before the time of the Prophet. It was a grave charge brought against the Kuraysh in the Meccan period that they drove the believers out of al-Masjid al-haram (sura II, 214; V, 3; VIII, 34; XXII, 25; XVIII, 25), which was considered all the more unjust as they worshipped the true lord of the sanctuary. To the true God belonged al-masjids (sura LXXII, 18, Meccan); it was therefore an absurdity for the godless to prevent the worship of God in “God’s own mosques” (sura II, 108). The result was that it was revealed in the year 9/630-1: “It is not right for polytheists to frequent the mosques of God” (sura LXXII, 18, Meccan); it was therefore an absurdity in entire agreement with Muhammad’s original attitude to earlier religions. Just as Abraham was a Muslim, so David had a masjid (al-Tabari, Ta’rikh, i, 2408, 7 ff.).

According to this tradition, the building of the mosque was not a fundamental necessity. Every place was the same to God, and humility in the presence of God, of which the ritual prayer was the expression, could be shown anywhere; hence the saying of the Prophet that he had been given the whole world as a masjid, while earlier prophets could only pray in churches and synagogues (al-Wakidi, tr. Wellhausen, 405; Corpus sertii di Sallb b. ‘Alli, ed. Haurmer, 50 and doc. Mecca, 60). Al-Bukhari, Salati, bdb 56; Tayammum, bdb 1; Muslim, Masajid, tr. 1), and also the saying: “Wherever the hour of prayer overtakes thee, thou shalt perform the salaat and that is a masjid” (Muslim, Masajid, tr. 1). That he nevertheless remained firmly attached to the traditional sanctuary of the Ka’ba, produced a confusion of thought which is very marked in sura 11, 136 ff. When in Medina he was able to do as he pleased, it must have been natural for him to create a place where he could be undisturbed with his followers and where they could perform the ritual salaat together.

2. The foundation of the Mosque in Medina. According to one tradition, the Prophet came riding into Medina on his camel with Abü Bakr as raf‘i’ surrounded by the Banu Nadir. The camel stopped on Abü Ayyub’s fina. Here (according to Anas) the Prophet performed the salaat, and immediately afterwards ordered the mosques to be built and purchased the piece of land from two orphans, Sahl and Suhayl, who were under the guardianship of Mu‘adhdh b. ‘Afra’, for 10 dinars, after declining to accept it as a gift; he lived with Abü Ayyub until the mosque and his houses were completed. During this period he performed the salaat in courtyards or other open spaces (al-Bukhari, Salati, bdb 48; Muslim, Masajid, tr. 1; Ahmad b. Hanbal, Musnad, iii, 212 above; Ibn Highām, 336; al-Tabari, i, 1258 f.; al-Mas‘ūdī, Munajjī, iv, 140-1 = § 1469). According to this tradition, the building of the mosque was intended by the Prophet from the first and the choice of the site was left to the whim of his mount. According to another tradition, the Prophet took up his abode with Abü Ayyub, but during the first period of his stay in Medina he conducted the salaat in the house of Abü Umama As‘ad, who had a private masjid, in which he used to conduct salaats with his neighbours. The Prophet later expressed the desire to purchase the adjoining piece of ground, and he bought it from the two orphans, who according to this tradition, were wards of As‘ad (al-Baladhuri, Futuh al-buldan, § 55, 7 and 52, etc., Cities of the Prophet). The site was covered with graves, ruins (khirbāb; also
harth, al-Tabari, i, 1259, 17; 1260, 1; cf. Ahmad b.
Hanbal, Munna, iii, 212, 7, perhaps due to an old
misreading) and palm-treed land was used as a place
for keeping camels (and smaller domestic animals,
al-Bukhārī, Waḍā', bāb 66). The site was cleared, the
palms cut down and the walls built. The building
material was bricks baked in the sun (labīn) (Ibn
Ḥīṣām, 337; al-Bukhārī, Salāt, bāb 62, 65; according
to one tradition they were baked at the well of Ṣafīm,
Wüstenfeld, Stadt Medina, 31); in plan it was a court-
yard surrounded by a brick wall on a stone foundation
with three entrances; the gateposts were of stone. On
the kibla side (i.e. the north wall), at first left open, the
stems of the palm trees which had been cut down were
soon set up as columns and a roof was put over them
of palm-leaves and clay. On the east side two huts of
similar materials were built for the Prophet's wives
Sawdā' and ʿAʾishah; their entrances opened on to the
court and were covered with carpets; they were later
increased so that there were nine little houses for the
Prophet's wives. When the kibla was moved to the south,
the archway at the north wall remained; under this
archway called sūfa or zula the homeless Companions
(Aḥūl al-Sūfa q.v.) found shelter (al-Bukhārī,
Salāt, bāhš 48, 62; Wüstenfeld, Medina, 60 f., 66; al-
Diāyārbakrī, Taʾrīkh al-Khamīṣ, Cairo 1302, i, 387 fl.;
on the sūfa, 387 in the middle; 391 after the middle;
cf. L. Caetani, Annali dell' Islam, i, 5 f.). In seven
months the work was completed (Wüstenfeld, Medina,
59), according to others in the month of Ṣafar
of the year 2 (Ibn Ḥīṣām, 339, 18 f.). The mosque
was very simple. It was only really a courtyard
with a wall round it; the sūfa already mentioned supplied
a shelter on the north side, while on the south side,
later the kibla side, an archway was probably built also,
for the Prophet used to preach leaning against a palm
trunk and this must have been on the kibla side. How
the archways were not be ascertained. The mosque was the
courtyard of the Prophet's houses and at the same time the
meeting-place for the believers and the place for common prayer.
According to the sources, it was the Prophet's
intention from the very first to build a mosque at once in Medina; according to a later tradition, Gabriel
commanded him in the name of God to build a house
for God (al-Diyāyārbakrī, i, 387 below); but this story is
coloured by later conditions. It has been made quite
clear, notably by L. Caetani (Annali dell' Islam, i, 432,
437 fl.) and later by H. Lammens (Moʿawia, 8, 5, 62;
ident, Ẓād, 30, 93 fl.; cf. that the earliest masjid had
nothing of the character of a sacred edifice. Much can
be quoted for this view from Ḥaddīth and Sīra (cf. Annali
dell' Islam, i, 440). The unconverted Thaqafīs were
received by the Prophet in the mosque to conduct
diplomacy and he even put up three tents for them in
the courtyard (Ibn Ḥīṣām, 916; al-Wākidī-
Wellhausen, 382); envoys from Ṭāʾimam also went
freely about in the mosque and called for the Prophet,
who dealt with them after he had finished prayers (Ibn
Ḥīṣām, 933 f.; al-Wākidī-Wellhausen, 386). Ibn
ʿUaysīs brothers came to masjid the head of the Ḥaḍīth
Sufyān, threw it down before the Prophet and gave his
report (Ibn Ḥīṣām, 981; al-Wākidī-Wellhausen,
225). After the battle of Ḫud, the Medina chiefs
spent the night in the mosque (al-Wākidī-Wellhausen,
149). The Awsīs tended their wounded here (ibid.,
215 f.; al-Ṭabari, i, 1491 f.); a prisoner of war was
tied to one of the pillars of the mosque (al-Bukhārī,
Salāt, bāb 76, 82; cf. 75). Many poor people used to
live in these huts (ibid., bāb 93); the government of the chiefs and
huts were put up in the mosque, one for example by
converted and liberated prisoners, another by the
Banū Ghīfār, in whose tent Saʿd b. Muʿādh died of his
wounds (ibid., bāb 77; Ibn al-ʿĀṣīr, Ud al-ghāba,
i, 297). People sat as they pleased in the mosque or
took their ease lying on their backs (al-Bukhārī, Ibn
bāb 6, Salāt, bāb 85; Ibn Saʿd, i, 124, 14); even so late as the reign of ʿUmar, it is recorded that he found
strangers sleeping in a corner of the mosque (al-
Mubahra, Kamīl, 118, 15 ff.); the Prophet received
gifts and distributed them among the Companions
(Bukhārī, Salāt, bāb 42); disputes took place over
business (ibid., bāb 71, 83) and in general, people
slept and conducted themselves as they pleased. Indeed, on
one occasion some Sudanese or Abyssinians with the
approval of the Prophet gave a display with shield and
lance on the occasion of a festival (ibid., Salāt, bāb 69;
Idayn, bāb 2, 25; Ḫidād, bāb 81); and on another
stranger seeking the Prophet, rode into the mosque on his
camel (ibid., bāb 6). So little "consecrated" was this,
the oldest mosque, that one of the Mudāfṣān or "Hypocrites",
executed for scoffing at the believers,
could call to Abū ʿAyyūb "Are you throwing me out of the
Mīratu Bani Ṭhāʾībān"? (Ibn Ḥīṣām, 362,
10 f.).
All this gives one the impression of the head-
quarters of an army, rather than of a sacred edifice.
On the other hand, the mosque was used from the
very first for the general divine worship and thus
became something more than the Prophet's private
courtyard. Wherever the Prophet's intentions had been from the first, the masjid, with the increasing
importance of Islam, was bound to become very soon
the political and religious centre of the new
community. The two points of view cannot be distin-
guished in Islam, especially in the earlier period. The
mosque was the place where believers assembled for
prayer around the Prophet, where he delivered his
addresses, which contained not only appeals for obe-
dience to God but regulations affecting the social life
of the community (cf. al-Bukhārī, Salāt, bāb 70, 71);
from here he controlled the religious and political
community of Islam. Even at the real old sanctuaries
of Arabia, there were no restrictions on what one
could do; what distinguished the mosque from the
Christian church or the Meccan temple was that in it
there was no specially dedicated ritual object. At the
Kaʾba also, people used to gather to discuss every day
affairs and also for important assemblies, if we may
believe the Sīra (Ibn Ḥīṣām, 183 f., 185, 1, 218, 9,
248, 257, 19). Here also the Prophet used to sit;
strangers came to visit him; he talked and they
disputed with him; people even came to blows and
fought there (Ibn Ḥīṣām, 183-4, 185-6, 187-8, 202,
19, 257, 259; Chron. d. Stadt Mekka, ed.
Wüstenfeld, i, 223, 11). Beside the Kaʾba was the Dār al-
Nadwa, where important matters were discussed and justice
administered (ibid., see index). From the Medina
mosque was developed the general type of the Muslim
mosque. It depended on circumstances whether the
aspect of the mosque as a social centre or as a place
of prayer was more or less emphasised.
3. Other mosques in the time of the
Prophet. The mosque of the Prophet in Medina was
not the only one founded by Muslims in his lifetime,
and according to tradition not even the first, which is
said to have been the mosque of Kubāb. In this
village, which belonged to the territory of Medina (see
Wüstenfeld, Geschichte der Stadt Medina, 126), the
Prophet on his ʿibrah stopped with the family of ʿAmr
b. ʿAwf, the length of his stay is variously given as 3,
4, 14, 22 and 50; ibid., bāb 71, 1; cf. that on this
found a mosque there on his arrival, which had been
built by the first emigrants and the Anṣār, and he per-
formed the salah there with them (see Wustenfeld, op. cit., 56; al-Baladhuri, Fadl al-salah Ji Masjid Makka
and the pillar is still shown beside which he conducted the service (al-Bukhan, Fadl al-salah Ji Masjid Makka
we 'l-Madina, bdb 2, 4; Muslim, Hodjâ, tr. 94; al-Diyârâbârî, 1, 382; al-Baladhuri, 5). We are occasionally
told that he performed his salah on the Sabbath in the mosque at Kuba' when he went to the Banû '1-
Nasser in Damascus of the year 4/625 (al-Wâkidî-Wellhausen, 161).

It is obvious that the customs and ideas of the later community have shaped the legend of this mosque.
The only question is whether the old tradition that the mosque was founded either by the Prophet himself or
even before his arrival by his followers is also a later invention. We thus come to the question whether the
Prophet founded or recognised any other mosques at all in Medina. A plethora of legends have been spread about this
fact that the first thought of the Muslim generals after the conquest was to found a mosque as a centre around which to gather.

Conditions differed somewhat according as it was a new foundation or an already existing town. Important
examples of the first kind are al- Başra, al-Kuľa and al-Fus'ét. The second was founded by 'Uthâ b. Ghâzwân as winter-quarters for the army in the year 14/635 (or 16/637 or 638). The mosque was placed in the centre with the Dar al-Imâra, the dwelling of the commander-in-chief with a prison and Diwân in front of it. Prayer was at first offered on the open space, which was fenced round; later, the whole was built of reeds and when the men went off to war the reeds were pulled up and laid away. Abî Mûsâ al-
Ashârî [q.v.], who later became 'Umar's vâli, built the edifice of clay and bricks baked in the sun (labûn) and used grass for the roof (al-Baladhuri, 346-7, 350; Ibn al-Fâkhî, 187-8; Yûkît, Bâdî‰, i, 642, 6-9; cf. al-
Tabari, i, 3277, 14 ff.). It was similar in Kûfa, which was founded in 17/638 by Sa'd b. Abî Wakkâs. In the centre was the mosque, and beside it the Dar al-
Imâra was laid out. The mosque at first was simply an open quadrangle, sabâ, marked off by a trench round it. The space was large enough for 40,000 persons. It seems that reeds were also used for building the walls here and later Sa'd used labûn. On the south side (and

MASDJID

Medina, 131; al-Sira al-Halabiyya, ii, 60; al-Baladhuri, 1-2; Muslim, Hodjâ, bâb 93). If the connection with the Tabari tradition, the masjîd al-Imâra, is to be sought north of Medina, the 'the mosque founded on piety' would then be the mosque of Medina rather than that of Kuba' which lies to the south of it. There is in itself nothing impossible about the rejection in principle of any mosque other than that of Medina.

We should then have to discard the whole tradition, for, according to it, the Prophet was at first not unfavourably disposed to the new mosque, and his wrath, according to the tradition, arose from the fact that it had been founded by a refractory party. But as a matter of fact, there are indications that a number of mosques already existed in the time of the Prophet; for example, the verse in the Kur 'ân, 'in houses, which God hath permitted to be built that His name might be praised in them, in them men praise Him morning and evening, whom neither business nor trade restrain from praising God and performing the salah and the giving of alms', etc. (sûra XXIV, 36-7). If this revelation, like the rest of the sûra, is of the Medinan period, it is difficult to refer it to Jews and Christians, and this utterance is quite clear: 'Observe a complete fast until the night and touch thou them (i.e. women) not while ye are in the mosques' (sûra II, 183). The time about which there is no doubt is the time of the Prophet several Muslim mosques which had a markedly religious character and were recognised by the Prophet.

That there were really public places of prayer of the separate tribes at a very early date is evident from the
tradition that the Prophet in the year 2 offered his sacrifice on 10 Dhu 'l-Hijjah/3 June 624 on the masjîd of the Banû Salîma. In addition, there are constant references to private masjîd where a few believers, like Abî Bakr in Mecca, made a place for prayer in their houses and where others sometimes assembled (al-Bukhârî, Salah, bâb 46, 87; Tabâhidjûd, bâb 30; cf. also Adhân, bâb 50).

B. The origin of mosques after the time of the Prophet.

1. Chief mosques. What importance the Medina mosque attained as the centre of administration and worship of the Muslims is best seen from the fact that the first thought of the Muslim generals after their conquests was to found a mosque as a centre around which to gather.
only here) there was an arbour, zulla, built (cf. al-Baladhuri, 348, i: suffa). The Ddr al-lmdra beside the mosque was later by 'Umar's orders combined with the mosque (al-Tabari, i, 2489, 12 ff.; 2485, 16; 2487 ff.; 2494, 14; Yākūt, Maṣgām, iv, 323, 10 ff.; al-Baladhuri, 275 ff., cf. Annali dell' Islam, iii, 846 ff.). The plan was therefore an exact reproduction of that of the mosque in Medina (as is expressly emphasised in al-Tabari, i, 2489, 4 ff.); the importance of the mosque was also expressed in its position, and the commander lived close beside it. There was no difference in al-Furat, which, although there was already an older town here, was laid out as an entirely new camp. In the year 21/642, after the conquest of Alexandria, the mosque was laid out in a garden where 'Amr had planted his standard. It was 50 dhird's long and 30 broad. Eighty men fixed its kibla, which, however, was turned too far to the east, and was therefore altered later by Kurra b. Shārik [cf. Annali dell' Islam, iii, 846 ff.]...
But that there were tribal mosques at a very early date is nevertheless quite certain. The mosque at Kufa was the meeting place of the tribe (Ibn Sa'd, i/1, 6 and cf. above) and according to one tradition, the Banu Ghainn b. 'Affa were jealous of it and built an opposition mosque (al-Baladhi, 3; al-Tabari, Tafṣīr, 1, 21). A Companion who had taken part in the battle of Badr, 'Uttān b. Malik, complained to the Prophet that he could not reach the masjīd of his tribe in the rainy season and wanted to build a mosque for himself (al-Bukhārī, Ṣaḥīḥ, bāb 46; Muslim, Masājid, bāb 47). The Prophet himself is said to have visited the masjīd of the Banū Zurayk (al-Bukhārī, Dīghād, bāb 56-8) and in the masjīd of the Banū Salima during the prayer, there was revealed to him sura II, 139, which ordered the new masjīd to be turned into mosques in (ibid., 30). It is also recorded of mosques in Cairo that they were converted churches. According to al-Tabari, 21, a Companion who had taken part in the battle of Badr, 'Uttān b. Malik, complained to the Prophet that he could not reach the masjīd of his tribe in the rainy season and wanted to build a mosque for himself (al-Bukhārī, Ṣaḥīḥ, bāb 46; Muslim, Masājid, bāb 47). The Prophet himself is said to have visited the masjīd of the Banū Zurayk (al-Bukhārī, Dīghād, bāb 56-8) and in the masjīd of the Banū Salima during the prayer, there was revealed to him sura II, 139, which ordered the new masjīd to be turned into mosques in (ibid., 30). It is also recorded of mosques in Cairo that they were converted churches. According to al-Tabari, 21, a Companion who had taken part in the battle of Badr, 'Uttān b. Malik, complained to the Prophet that he could not reach the masjīd of his tribe in the rainy season and wanted to build a mosque for himself (al-Bukhārī, Ṣaḥīḥ, bāb 46; Muslim, Masājid, bāb 47). The Prophet himself is said to have visited the masjīd of the Banū Zurayk (al-Bukhārī, Dīghād, bāb 56-8) and in the masjīd of the Banū Salima during the prayer, there was revealed to him sura II, 139, which ordered the new masjīd to be turned into mosques in (ibid., 30). It is also recorded of mosques in Cairo that they were converted churches. According to al-Tabari, 21, a Companion who had taken part in the battle of Badr, 'Uttān b. Malik, complained to the Prophet that he could not reach the masjīd of his tribe in the rainy season and wanted to build a mosque for himself (al-Bukhārī, Ṣaḥīḥ, bāb 46; Muslim, Masājid, bāb 47). The Prophet himself is said to have visited the masjīd of the Banū Zurayk (al-Bukhārī, Dīghād, bāb 56-8) and in the masjīd of the Banū Salima during the prayer, there was revealed to him sura II, 139, which ordered the new masjīd to be turned into mosques in (ibid., 30). It is also recorded of mosques in Cairo that they were converted churches. According to al-Tabari, 21, a Companion who had taken part in the battle of Badr, 'Uttān b. Malik, complained to the Prophet that he could not reach the masjīd of his tribe in the rainy season and wanted to build a mosque for himself (al-Bukhārī, Ṣaḥīḥ, bāb 46; Muslim, Masājid, bāb 47). The Prophet himself is said to have visited the masjīd of the Banū Zurayk (al-Bukhārī, Dīghād, bāb 56-8) and in the masjīd of the Banū Salima during the prayer, there was revealed to him sura II, 139, which ordered the new masjīd to be turned into mosques in (ibid., 30). It is also recorded of mosques in Cairo that they were converted churches. According to al-Tabari, 21, a Companion who had taken part in the battle of Badr, 'Uttān b. Malik, complained to the Prophet that he could not reach the masjīd of his tribe in the rainy season and wanted to build a mosque for himself (al-Bukhārī, Ṣaḥīḥ, bāb 46; Muslim, Masājid, bāb 47). The Prophet himself is said to have visited the masjīd of the Banū Zurayk (al-Bukhārī, Dīghād, bāb 56-8) and in the masjīd of the Banū Salima during the prayer, there was revealed to him sura II, 139, which ordered the new masjīd to be turned into mosques in (ibid., 30). It is also recorded of mosques in Cairo that they were converted churches. According to al-Tabari, 21, a Companion who had taken part in the battle of Badr, 'Uttān b. Malik, complained to the Prophet that he could not reach the masjīd of his tribe in the rainy season and wanted to build a mosque for himself (al-Bukhārī, Ṣaḥīḥ, bāb 46; Muslim, Masājid, bāb 47). The Prophet himself is said to have visited the masjīd of the Banū Zurayk (al-Bukhārī, Dīghād, bāb 56-8) and in the masjīd of the Banū Salima during the prayer, there was revealed to him sura II, 139, which ordered the new masjīd to be turned into mosques in (ibid., 30). It is also recorded of mosques in Cairo that they were converted churches. Accord-
ing to one tradition, the Rashida mosque was an un-
finished Jacobite church, which was surrounded by
Jacobite and a Nestorian Church into mosques (ibid.,
65). When Dżawhar built a palace in al-Kahira, a day
or monastery was taken in and transformed into a
Mosque (ibid., 269); similar changes took place at later
dates (ibid., 240) and synagogues also were
transformed in this way (Masjid Ibn al-Bannā',
ibid., 265). The chief mosque in Palermo was previously
a church (Yākūt, Būṣrā, i, 719). After the Crusades
several churches were turned into mosques in
Palestine (Sauvage, Hist. de Jérusalem. et h'lon, 1876, 7;

Other sanctuaries than those of the “people of the
scripture” were turned into mosques. For example a
Masjid al-Shams between al-Hilla and Karbalā‘ was
the successor of an old temple of Shaddāq (see Goldziher, Masalad, 3); and in the immediate vicinity al-Hākim turned a
place, the Rashida mosque was an un-
finished Jacobite church, which was surrounded by
the successor of an old temple of Shamash (see
al-Baladhurī, Bab 10. Thus in
Islam also, the old rule holds that sacred places sur-
vive changes of religion. It was especially easy in cases
where Christian sanctuaries were associated with
Biblical personalities who were also recognised by
Islam: e.g. the Church of St. John in Damascus and
many holy places in Palestine. One example is the
mosque of Job in Shaykh Sa‘d, associated with sūra
XXI, 83, XXXVIII, 40; here in Silvia’s time (4th
century) there was a church of Job (al-Masā‘il, i, 91
= § 84; Baedeker, Palast. u. Syrien, 1910, 147).

But Islam itself had created historical associations
which were bound soon to lead to the building of new
mosques. Even in the lifetime of the Prophet, the
Bani Sālim are said to have asked him to perform the
salat in their masjid to give it his authority (see above,
in I. A. 3). At the request of ‘Ithāb b. Malik, the Prophet performed the salat along with Abū Bakr in
his house and thereby consecrated it as a musalla,
because he could not reach the tribal mosque in the
rainy season (al-Bukhārī, Salāt, bāb 47; Tāhāfudjud, bāb 36; Muslim, Masalad, tr. 46; a similar story in al-
Bukhārī, Adab, bāb 47, Tāhāfudjud, bāb 33, is perhaps
identical in origin). After the death of the Prophet, his
memory became so precious that the places where he
had prayed obtained a special importance and his
followers, who liked to imitate him in everything, pre-
ferrred to perform their salat in such places. But this
tendency was only an intensification of what had
existed in his lifetime; and so it is not easy to decide
how far the above stories reflect later conditions.

Mosques very quickly arose on the road between
Mecca and Medina at places where, according to the
testimony of his Companions, the Prophet had prayed
(al-Bukhārī, Salāt, bāb 89; al-Wāṣīkī-Wellhausen,
421 ff.); the same was the case with the road which the
Prophet had taken to Tabūk in the year 9/630-1 (Ibn
Higham, 907; al-Wāṣīkī-Wellhausen, 394; there were
154 places, which were listed in Annali dell’Islam, ii, 246-
7). Indeed, wherever he had taken the field, mosques
were built; for example, on the road to Badr, where
according to tradition Abū Bakr had built a mosque
(al-Wāṣīkī-Wellhausen, 39, also Wustenfeld, Medina, 135). The mosque of al-Fādil was built on the spot
where the Prophet had prayed in a leather tent during
the war with the Banū ‘Nadīr in the year 10/625-6 (al-
Wāṣīkī-Wellhausen, 163; Wustenfeld, Medina, 132).
He is said to have himself built a little mosque in
Khaybar during the campaign of the year 7/628-9 (al-
Outside Tā’if, a mosque was built on a hillock,
because the Prophet had performed the salat there
during the siege in the year 8/629-30, between the
tents of his two wives, Umm Salama and Zaynab (Ibn
Higham, 872-3; al-Wāṣīkī-Wellhausen, 369); in
Liyya, the Prophet is said to have himself built a mosque
while on the campaign against Tā’if (Ibn
Higham, 872; al-Wāṣīkī-Wellhausen, 368-9).

Mosques arose in and around Medina, “because
Muhammad prayed here” (Wustenfeld, Gesch. d. Stadt
Medina, 31, 38, 132 ff.). It is obvious that for most of
these cases, later conditions are put back to the time
of the Prophet; in connection with the “Campaign of
the Trench” we are told that “he prayed everywhere
where mosques now stand” (al-Wāṣīkī-Wellhausen,
208). Since, for example, the Masjid al-Fādil is also
called Masjid al-Shams (Wustenfeld, Medina, 132), we
have perhaps here actually an ancient
sanctuary.

Mosques became associated with the Prophet in
many ways. In Medina, for example, there was the
Masjid al-Baghlā where footprints of the Prophet’s
mule were shown in a stone, the Masjid al-Idjābā where the Prophet’s appeal was answered, the Masjid al-Fath which recalls the victory over the
Meccans, etc. (see Wustenfeld, Medina, 136 ff.). In
Mecca, there was naturally a large number of places
sacred through associations with the Prophet and
therefore used as places of prayer. The most
honoured site, next to the chief mosque, is said to
have been the house of Khādijā, also called Mawlid
al-Sayyida Fatima, because the daughter of the
Prophet was born there. This house, in which the
Prophet lived till the hujja, was taken over by ‘Akkāl,
‘Ali’s brother, and bought by him through Mu‘āwiyah
and turned into the chief mosque in the 2nd Muh. Stud., d. Stadt Mecca, ed. Wustenfeld, i, 423; iii, 438, 440).
Next comes the house in which the Prophet held his first secret
meetings. This was bought by al-Khayzuran [q.v.],
mother of Hārūn al-Rašīd, on her pilgrimage in
171/788 and turned into a mosque (Chron. Mekka, iii, 112, 440). She also purchased the Prophet’s birth-
place, Mawlid al-Nahr, and made it into a mosque.
(ibid., i, 422, 439). If Mu‘āwiyah really bought the
Prophet’s house from his cousin, it was probably the
right one; but the demand for places associated with
the Prophet became stronger and stronger, and we
therefore find more and more places referred not only
to the Prophet, but also to his Companions. Such
are the birthplaces of Hamza, Umar and ‘Ali (Chron.
Mekka, iii, 445), and the house of Māriya, the mother of
the Prophet’s son, İbrahīm (ibid., i, 447, 466), who
also had a mosque at Medina (Wustenfeld, Medina,
133). There were also a Masjid Khādiţa (ibid., i, 324) and a Masjid ‘Aţīga (ibid., iii, 454), a Masjid of the “granted appeal” in a narrow valley near
Mecca, where the Prophet performed the salat (ibid.,
453), a Masjid al-Dīn, where the Dīn overheard his
preaching (ibid., i, 424; iii, 453), a Masjid al-
Rā‘ya, where he planted his standard at the conquest
(ibid., i, 424; ii, 435), a Masjid al-Bay‘a where the first homage of the Medinans was received (ibid., i, 428; iii, 441). In the Masjid al-Khāfy in Minā is shown the mark of the
Prophet's head in a stone into which visitors also put their heads (ibid., iii, 438). Persons in the Bible ... a saint (cf. Ibn Djubayr, Rihla, 114, 115; cf. Dozy, Supplement, s.v.). Makdām also means a little chapel and in Arafa there is still a Masdjid is shown, and in ba, beside which the Makdām Tl with the Kaaba is connected with mosques, Adam, Abraham and their heads (ibid., i, 415, 425) and another in al-Zahirah. The mosque founded by the Prophet's night journey and the journey to Paradise. The mosque founded by the Prophet was, as mentioned in sura XVII, 1, and therefore connected with the Mosque of the Splitting of the Moon (by the Prophet), etc. (see Ibn Djubayr, Rihla, 114 ff.; al-Makrizi, iv, 269). One other mosque was the Mosque of the Temple in Jerusalem was, as already pointed out, identified as al-Masjid al-Aqsa mentioned in sūra XVII, 1, and therefore connected with the Prophet's night journey and the journey to Paradise. The mosque founded by the Prophet on this occasion, and marks in a stone covering a hole are explained as Muhammad's footprints (sometimes also as those of Idrīs; cf. Le Strange, Palestine, 136; al-Batanūnī, Rihla, 165; Baedeker, Palastina, 1910, 52-3; cf. al-Yā’kūbī, Tāvīqī, ii, 311). The name al-Masjid al-Aqsa was used throughout the early period for the whole Harām area in Jerusalem, later partly for it, and partly for the buildings on its southern part (Ibn al-Fākhi, 100; Sauvageau, Hist. Jerus. et Hébrons, 95, 121; cf. Le Strange, Palestine, 96-7). Then there were the mosques which had specifically Muslim associations, like the Masjid of Umar on the Mount of Olives where he encamped at the conquest (al-Mukaddasī, 172).

In Egypt not only was an old Christian sanctuary called Masjīd Qubā on the east bank of the Nile (Ibn al-Makrīzī, iv, 269), but we are also told, for example, that the Mosque of Ibn Taymiyya was built where Mūsā talked with his Lord (al-Makrīzī, iv, 36); according to al-Kurdatī, there were in Egypt four Masjīdīs of Mūsā (Ibn Dūkmād, ed. Vollers, 92); there was a Masjīdī Yā’kūb wa-Yūsuf (al-Mukaddasī, 200) and a Joseph's prison, certainly dating from the Christian period (al-Makrīzī, iv, 315). There was also a Mosque of Abraham in Munyat Ibn al-Khaṣbah (Ibn Djubayr, 58). The chief mosque of Sanʿā was built by Shem, son of Noah (Ibn Rusta, 110). The old temple near Iṣṭaḵr mentioned above was connected with Sulaymān (al-Masʿūdī, Murāqī, iv, 76-7 = § 1403; Yākūt, i, 299). In the mosque of Ūmar ibn al-Khaṭṭāb, not only Ibrāhīm but one thousand other prophets and one thousand saints, described as wāṣi, are said to have offered their prayers; here was the tree Yākūt (sūra XXXXII, 146); here died Yāghūṭā and Yāsūk, etc. (Yākūt, iv, 325; also Ibn Djubayr, 211-12), and in this mosque there was a chapel of Abraham, Noah and Idrīs (Ibn Djubayr, 212); a large number of mosques were associated with Companions of the Prophet. What emphasis was laid on such an association is seen, for example, from the story according to which Ūmar declined to perform the salāt in the Church of the Resurrection in Jerusalem, lest the Church should afterwards be claimed as a mosque.

4. Tomb-mosques. A special class of memorial mosques consisted of those which were associated with a tomb. The graves of ancestors and of saints had been sanctuaries from ancient times and they gradually adopted into Islam. In addition, there were the saints of Islam itself. The general tendency to distinguish places associated with the founders of Islam naturally concentrated itself round the graves in which they rested. In the Kurān, a tomb-masjid is mentioned in connection with the Seven Sleepers (sūra XVIII, 20) but it is not clear if it was recognized. As early as the year 602-3 the companions of Abū Bakr are said to have built a mosque at the place where he died and was buried (al-Wākidī-Wellhausen, 262). The Prophet is also said to have visited regularly at al-Bakr in Medina the tombs of martyrs who fell at Ḫub and paid reverence to them (ibid., 143). Whatever the exact amount of truth in the story, there is no doubt that the story of the tomb-mosque of Abū Bakr is anecdoted. The accounts of the death of the Prophet and of the period immediately following reveal no special interest in his tomb. But very soon the general trend of development stimulated an interest in graves, which led to the erection of sanctuaries at them. The progress of this tendency is more marked in al-Wākidī, who died in 207/823, than in Ibn Iṣbāk, who died in 151/768.

The collections of Ḩadīth made in the 3rd/9th century contain discussions on this fact which show that the problem was whether the tombs could be used as places of worship and in this connection whether mosques could be built over the tombs. The Ḩadīth answers both questions in the negative, which certainly was in the spirit of the Prophet. It is said that “Salat at the graves (fi l-makṣūr) is makshūr” (al-Bukhārī, Salāt, bāb 52); “sit not upon graves and perform not salāt towards them” (Muslim, Qānāt, tr. 33); “hold the salāt in your houses, but do not use them as tombs” (Muslim, Salāt al-musāfīrīn, tr. 28). On the other hand, it is acknowledged that Anas performed the salāt at the cemetery (al-Bukhārī, Salāt, bāb 48). We are also told that tombs cannot be used as masjīd (al-Bukhārī, Salāt, bāb 48; Qānāt, bāb 62). On his deathbed the Prophet is said to have cursed the Jews and the Christians because they used the tombs of their prophets as places of salāt. Ḩadīth explains this by saying that the Prophet was not at first accessible (al-Bukhārī, Salāt, bāb 48, 55; Qānāt, bāb 62; Anbīyāʾ, bāb 50; Muslim, Masjīdī, tr. 3); as a matter of fact, its precise location was not exactly known (Qānāt, bāb 96). The attacks in Ḩadīth insist that tomb-mosques are a reprehensible Jewish practice: “When a pious man dies, they built a masjīd on his tomb”, etc. (al-Bukhārī, Qānāt, bāb 48, 54; Muslim, Qānāt, bāb 71). Although this view of tomb-mosques is still held in certain limited circles (cf. Ibn Taymiyya and the Wahhābīs), the old pre-Islamic custom soon also became a Muslim one. The expositors of Ḩadīth like al-Nawawī (on Muslim, Masjīdī, tr. 2, lith. Dihlt, 1319, i, 201) and al-ʿAskālānī (Cairo 1329, i, 354) explain the above passages to mean that only an exaggerated tāʿiṣ of the dead is forbidden so that tombs should not be used as a kibla; otherwise, it is quite commendable to spend time in a mosque in proximity to a devout man.

The name given to a tomb-mosque is often kaḥba [q.v.] a word which is used of a tent (al-Bukhārī, Qānāt, bāb 62; Ḩadīth, bāb 64; Fard al-šumr, bāb 19; al-Dığıyā, bāb 15; Tārafa, Dīwān, vii, 1), but later came to mean the dome which usually covers tombs and therefore it came to mean the general name of a tomb of a saint (cf. Ibn Djubayr, Rihla, 114, 115; cf. Dozy, Supplement, s.v.). Makām also means a little chapel and
a saint’s tomb (van Berchem, CIA, i, no. 72, etc.; cf. index). The custom of making a kubba at the tomb of a saint was firmly rooted in Byzantine territory, where sepulkral churches always had a dome (Herzog-Hauch, Realencyclopaedie, x, 784). The usual name however for a tomb-santa was maghadh; this is applied to places where saints are worshipped, among Muslim tombs particularly to those of the friends and relations of the Prophet (van Berchem, CIA, i, nos. 32, 63, 417, 544; al-Makrizî, iv, 265, 309 ff.), but also to tombs of other recognised saints, e.g. Mashhad Bird al-Din (Ibn Djughar, Ribha, 236), etc.

The transformation of the tombs of the Prophet and his near relatives into sanctuaries seems to have been a gradual process. Muhammad, Abû Bakr and 'Umar are said to have been buried in the house of 'A'isha; Fatîma and 'Ali lived beside it. 'A'isha had a wall built between her room and the tombs to prevent visitors carrying off earth from the tomb of the Prophet. The houses of the Prophet's wives remained as they were until al-Walîd rebuilt them. He thought it scandalous that Hasân b. 'Ali should live in Fatîma's house and 'Umar's family close beside 'A'isha's house in the house of Hâfîsa. He acquired the houses, had all the houses of the Prophet's wives torn down and erected new buildings. The tombs were enclosed by a pentagonal wall; the whole area was hallowed; it was not until later that a dome was built over it (Wüstenfeld, Medina, 66 ff., 72-3, 78 ff., 89). In the cemetery of Medina, al-Bakî [see Bakî, ed. Dahiry, Zoubdat Kachf el-Mamdlik, 42, ed. P. Ravaisse, 42, Dahiry, Zoubdat Kachf el-Mamdlik, 42, ed. P. Ravaisse, 42, ed. P. and partly sacred site (cf. Ibn Djubayr, Ribha, 114, 196); but this word does not seem to be used of ordinary tomb-mosques, although the distinction between these and mosques in honour of the departed disappeared. In these Kubbas, the regular recitation of the Qur'an was often arranged and the tomb was provided with a kiswa. The mausoleum might be built in connection with a great mosque and be separated from it by a grille (Yakut, iv, 509, 6 ff.).

3. Mosques deliberately founded. In the early period, the building of mosques was a social obligation of the ruler as representative of the community and the tribes. Very soon a number of mosques came into existence, provided by individuals. In addition to tribal mosques, as already mentioned, there were also sectarian mosques, and prominent leaders built mosques which were the centres of their activity, for example the Masjид Ali b. Hātim (al-Tabarî, ii, 130), the Masjid Simāk in Kūfa (ibid., i, 2653), the Masjid al-Asghar, etc. As old sanctuaries became Islamised the mosque received more of the character of a sanctuary and the building of a mosque became a pious work; there arose a badīth, according to which the Prophet said: "for him who builds a mosque, God will build a home in Paradise"; some add "if he desire to see the face of God" (Corpus tauri di Zaid b. 'Ali, ed. Griﬃnî, no. 239 on p. 239, 6 ff.; al-Makrlzî, i, 265; Masdjīd of Zuhd, al-Madrasa al-Shanﬁyya, ed. Bunz. 91, 17; Yakut, i, 245 ff.; al-Makrlzî, iv, 36). Like other sanctuaries, mosques were sometimes built as a result of a revelation in a dream. A story of this kind of the year 557/1162 is given by al-Samhūdī for Medina (Wüstenfeld, Medina, 91); and a similar one of a Masdjid, which seems a quite fantastic ﬁgure (there is probably an exaggeration), is added to the incomplete list of al-Makrlzî (d. 730/1330) according to al-Makrlzî counted 480, without a minbar and marked oﬀ, but quite in the open (cf. for Tiberias, Nasîr-i Khusraw, ed. Schefer, 36).

The word musalla may mean any place of prayer, therefore also mosque (cf. sūra II, 119; cf. al-Makrlzî KubI, iv, 25, 16; idem, Ittiâd, ed. Bunz. 91, 17; Yakût, Buldan, iv, 326, 3-5) or a particular place of prayer (al-Fitr, ii, 4, 3-7). In Cairo, the two festivals were celebrated on a musallâ opposite the hill Yāhmum (Al-Tadj al-Dīn built a mosque and a separate chamber in connection with a great mosque and be separated from it by a grille (Yakut, iv, 509, 6 ff.) and a madrasa might be called after its head or a teacher (ibid., iv, 235, 17; Yakût, Uldâbâ, vii, 82).

Lastly, a mosque might take its name from its situation or from some feature of the building.

6. Al-Muṣallā. In addition to the mosques proper, al-Makrlzî mentions for Cairo eight places for prayer (musallâ) mainly at the cemetery (iv, 334-5). The word musallâ may mean any place of prayer, therefore also mosque (cf. sūra II, 119; cf. al-Makrlzî KubI, iv, 25, 16; idem, Ittiâd, ed. Bunz. 91, 17; Yakût, Buldan, iv, 326, 3-5) or a particular place of prayer (al-Fitr, ii, 4, 3-7). In Cairo, the two festivals were celebrated on the Musalla Khawlan (a Yemeni tribe) was an open space, and the service was said (1659, 18); in Kufa, several are mentioned (ibid., ii, 628, 16; ii, 470, 8; iii, 367, 8-368) two in Marw (ibid., i, 2451). Shortly after 300/912-13 a musallâ outside of Hamadhân is mentioned (al-Masûdî, Murudjî, ix, 23 = § 3595). There was al-Musalla al-Atik in Baghdad; here a dakkâ was erected for the execution of the Karmatian prisoners (al-Tabarî, iii, 2244-5; cf. 1659, 18); in Kufa, several are mentioned (ibid., ii, 628, 16; 1704, 8; iii, 367; 8-368) two in Marw (ibid., i, 2451, 2; 1964, 19; cf. Nasîr-i Khusraw, Raw, tr. 274), one in Farghana (Ibn Hawūkli al-Asghar). It is also an exaggeration when Ibn al-Makrlzî mentions in Baghdad a mosque for the Anbā‘i officials of the tax-oﬃce (Buldan, 245), and several distinguished scholars practically had their own mosques. It occasionally happened that devout private individuals founded mosques. In 672/1273-4 Tâg al-Dîn built a mosque and a separate chamber in which he performed the salāt alone and meditated (al-Makrlzî, iv, 90). The mosque thus founded was very often called after their founders, and memorial and tomb-mosques after the person to be commemorated. Sometimes a mosque is called after some devout man who lived in it (al-Makrlzî, iv, 97, 265 ff.) and a madrasa might be called after its head or a teacher (ibid., iv, 235, 17; Yakût, Uldâbâ, vii, 82).

In Egypt, al-Hâkim in the year 403/1012-13 had a census taken of the mosques of Cairo, and these were found to amount to 800 (al-Makrlzî, iv, 264); al-Kudât mentions in Baghdad a mosque for the Banū Sâlih. A lance which the Negus of Ethiopia had presented to al-Zubayr was carried in front of him and planted before the Prophet as sura. Standing in front of it, he conducted the salât, and then preached a khutba without a minbar to the rows in front of him (al-Tabarî, i, 1281, 14 ff.; al-Bukhârî, Hadî, bâb 6; Salât, bâb 90; Ístdân, bâb 6). He also went out to the musallâ for the salāt al-istiksa by the place of prayer (al-masjīd, etc.) of the Banû Sâlih. A lance which the Negus of Ethiopia had presented to al-Zubayr was carried in front of him and planted before the Prophet as sura. In the year 16/637, it was expressly stated that it was sunna to go out to it; Sa’d b. Abi Waqâṣ built a mosque in Kûsa’s Ḫānân in al-Maḍâ‘; in, at the festival in the year 16/637, it was expressly stated that it was sunna to go out to it; Sa’d, however, thought it was a matter of indifference (al-Tabarî, i, 2451). Shortly after 300/912-13 a mussallâ outside of Hamadhân is mentioned (al-Masûdî, Murudjî, ix, 23 = § 3595). There was al-Musalla al-Atik in Baghdad: here a dakkâ was erected for the execution of the Karmatian prisoners (al-Tabarî, iii, 2244-5; cf. 1659, 18); in Kufa, several are mentioned (ibid., ii, 628, 16; 1704, 8; iii, 367; 8-368) two in Marw (ibid., i, 2451, 2; 1964, 19; cf. Nasîr-i Khusraw, Raw, tr. 274), one in Farghana (Ibn Hawūkli al-Asghar). It is also an exaggeration when Ibn al-Makrlzî mentions in Baghdad a mosque for the Anbā‘i officials of the tax-oﬃce (Buldan, 245), and several distinguished scholars practically had their own mosques. It occasionally happened that devout private individuals founded mosques. In 672/1273-4 Tâg al-Dîn built a mosque and a separate chamber in which he performed the salāt alone and meditated (al-Makrlzî, iv, 90). The mosque thus founded was very often called after their founders, and memorial and tomb-mosques after the person to be commemorated. Sometimes a mosque is called after some devout man who lived in it (al-Makrlzî, iv, 97, 265 ff.) and a madrasa might be called after its head or a teacher (ibid., iv, 235, 17; Yakût, Uldâbâ, vii, 82).

Lastly, a mosque might take its name from its situation or from some feature of the building.

6. Al-Muṣallâ. In addition to the mosques proper, al-Makrlzî mentions for Cairo eight places for prayer (musalla) mainly at the cemetery (iv, 334-5). The word musalla may mean any place of prayer, therefore also mosque (cf. sūra II, 119; cf. al-Makrlzî KubI, iv, 25, 16; idem, Ittiâd, ed. Bunz. 91, 17; Yakût, Buldan, iv, 326, 3-5) or a particular place of prayer (al-Fitr, ii, 4, 3-7). In Cairo, the two festivals were celebrated on the Musalla Khawlan (a Yemeni tribe) was an open space, and the service was said (1659, 18); in Kufa, several are mentioned (ibid., ii, 628, 16; ii, 470, 8; iii, 367; 8-368) two in Marw (ibid., i, 2451, 2; 1964, 19; cf. Nasîr-i Khusraw, Raw, tr. 274), one in Farghana (Ibn Hawūkli al-Asghar). It is also an exaggeration when Ibn al-Makrlzî mentions in Baghdad a mosque for the Anbā‘i officials of the tax-oﬃce (Buldan, 245), and several distinguished scholars practically had their own mosques. It occasionally happened that devout private individuals founded mosques. In 672/1273-4 Tâg al-Dîn built a mosque and a separate chamber in which he performed the salāt alone and meditated (al-Makrlzî, iv, 90). The mosque thus founded was very often called after their founders, and memorial and tomb-mosques after the person to be commemorated. Sometimes a mosque is called after some devout man who lived in it (al-Makrlzî, iv, 97, 265 ff.) and a madrasa might be called after its head or a teacher (ibid., iv, 235, 17; Yakût, Uldâbâ, vii, 82).

Lastly, a mosque might take its name from its situation or from some feature of the building.
then on al-Musalla al-Kadim where Ahmad b. Tulun erected a building in 256/870. The site was several times changed (al-Makrizi, iv, 306; al-Mukaddasi, 200, 14-20). In 302, 306 and 308 the salāt al-ṣalāt was performed for the first time in the Mosque of ʿAmr (al-Makrizi, iv, 20, 8 ff.; al-Suyūṭī, Ḥun al-muḥādara, ii, 137 below; Ibn Ṭabarī, iii, 194, 9 ff.). Ibn Bāṭṭaṭa notes the custom in Spain (i, 20) and Tunis (i, 22) and also in India (iii, 154). Ibn al-Ḥāḍid (d. 737/1336-7) says that in his time the ceremonies still took place on the musalla but conditions the bids associated with them (K. al-Makrāzī, Cairo 1320, ii, 82). It is also laid down in Muslim law, although not always definitely (see Juynboll, Handbuch d. Islam. Ges., 1910, 127; I. Guidi, II Muḥāṣar, i, 1919, 136). The custom seems in time to have become generally abandoned. In the 9th/10th century the Masjid Aṣḵunkur was expressly built for the ḵūba at the Friday services and at festivals (al-Makrizī, iv, 107, 17).

The mosque as the centre for divine worship.

I. Sanctity of the mosque. The history of the mosques in the early centuries of Islam shows an increase in its sanctity, which was intensified by the adoption of the traditions of the church and especially by the permeation of the cult of saints. The sanctity associated with tombs taken over by Islam was naturally very soon transferred to the larger and more imposing mosques. The expression Bayt Allāh “house of God”, which at first was only used of the Kaʿba came now be applied to any mosque (see Corpus iuris di Zaid b. Ἠλί, no. 48, cf. 156, 983; Chron. Mecca, ed. Wüstenfeld, iv, 164; van Berchem, CIA, i, 10, no. 1, 18; Ibn al-Ḥāḍid, K. al-Madkhal, i, 20, 29; ii, 64, 68; cf. Bayt Bankhārah, ibid., i, 23, 73; ii, 36). The alteration in the original conception is illustrated by the fact that the Mamlūk al-Malik al-Zahir Baybars declined to build a mosque on a place for tethering camels because it was unseemly, while the mosque of the Prophet had actually been built on such a place (al-Makrizī, iv, 91; Abū Dāwūd, Salāt, bāb 22).

In the house of God, the musḥbār and the minbar enjoyed particular sanctity, as did the tomb, especially in Medina (al-Bukhārī, Fadd al-salāt fi masjdī Makka wa ʿl-Madīna, bāb 5). The visitors sought baraka, partly by touching the tomb or the railing round it, partly by praying in its vicinity; at such places “prayer is heard” (Chron. Mecca, iii, 441, 442). In the Masjid al-Khayf in Mina, the visitor laid his head on the print of God”, which at first was only used of the Kaʿba and in the Azhar Mosque (al-Makrāzī, iii, 19, 52) or the Mosque in Jerusalem (al-Mukaddasi, 170), were especially visited. Pious visitors made ṭawaf [see ṭawaf] between such places in the mosque (al-Makrizī, iv, 20). Just as in other religions, we find parents dedicating their children to the service of a sanctuary, so we find a Muslim woman vowing her child or child yet unborn to the mosque (al-Bukhārī, Sahih, 74; al-Makrizī, iv, 20). The fact that mosques, like other sanctuaries, were sometimes founded after a revelation received in a dream has already been mentioned (see 1 B. 5). This increase in sanctity had as a natural result that one could no longer enter a mosque at random as had been the case in the time of the Prophet. In the early Umayyad period, Christians were still allowed to enter the mosque without molestation (cf. Lammens, Moʿawia, 13-14; Goldziher, in WZKM, vi, 1892, 100-1). Muʿawiyah used to sit with his Christian physician, Ibn Uṭṭil, in the mosque of Damascus (Ibn Abī ʿUṣaybiʿa, i, 117). According to Ahmad b. Hanbal, the Aḥī al-Kītāb (or Aḥī al-ʿAbd) and their servants, but not polytheists, were allowed to enter the mosque of Medina (Mardīd, iii, 339, 39). At a later date, entrance was forbidden to Christians and this regulation is credited to Umar (Lammens, op. cit., 13, n. 6). A strict teacher of morality like Ibn al-Ḥāḍid thought it unseemly that the monks who won the marks for the mosques should be allowed to lay them in the mosque (Makkāl, ii, 57). Conditions were not always the same. In Hebron, Jews and Christians were admitted on payment to the sanctuary of Abraham until in 664/1265 Baybars forbade it (Quaquemère, Hist. Sult. Maml., i/2, 27).

According to some traditions, a person in a state of ritual impurity could not enter the mosque (Abū Dāwūd, Tahāra, bāb 92; Ibn Mādira, Tahāra, bāb 123). In any case, only the pure could acquire merit by visiting the mosque (Muslim, Masājid, tr. 49; Corpus iuris di Zaid b. Ἠλί, no. 48). The custom was not always the same. In Hebron, Jews and Christians were admitted on payment to the sanctuary of Abraham until in 664/1265 Baybars forbade it (Quaquemère, Hist. Sult. Maml., i/2, 27).

According to some traditions, a person in a state of ritual impurity could not enter the mosque (Abū Dāwūd, Tahāra, bāb 92; Ibn Mādira, Tahāra, bāb 123). In any case, only the pure could acquire merit by visiting the mosque (Muslim, Masājid, tr. 49; Corpus iuris di Zaid b. Ἠλί, no. 48). The custom was not always the same. In Hebron, Jews and Christians were admitted on payment to the sanctuary of Abraham until in 664/1265 Baybars forbade it (Quaquemère, Hist. Sult. Maml., i/2, 27).

as there is no fitna connected with it, but they must not be perfumed (Muslim, Salât, bâb 29; al-Bukhârî, Djdîm’a, bâb 13; cf. Chron. Mekka, iv, 168). Other hadîths say they should leave the mosques before the men (al-Nâsî, Sahîb, bâb 77; cf. Abu Dâwîd, Salât, bâb 14, 48). Sometimes a special part of the mosque was railed off for them; for example, the governor of Mecca in 256/870 had ropes tied between the columns to make a separate place for women (Chron. Mekka, ii, 197 below). According to some, women must not enter the mosque during their menstruation (Abû Dâwîd, Tâhâra, bâb 92, 103; Ibn Mâdja, Tâhâra, bâb 117, 123). In Medina at the present day, a wooden grille shuts off a place for women (al-Batârînî, al-Rîhîl, tr. 58; al-Hîjâzî, y. 240). At one time, the women stood at the back of the mosque here (Yâkût, Udâbîb, vi, 400). In Jerusalem there were special maksûres for them (Ibn al-Fâhîm, 100). Ibn al-Hâdjî would prefer to exclude them altogether and gives Â’ûlîba as his authority for this.

Although the mosque became sacred, it could not quite cast off its old character as a place of public assembly, and in consequence, the mosque was visited for many other purposes than that of divine worship. Not only in the time of the Umayyads was considerable business done in the mosques (al-Tabârî, ii, 1118; cf. Lammens, Zind, 98) which is quite in keeping with the hadîth (Sâlît, bdb 71-90) which actually found it necessary to forbid the sale of wine in the mosque (ibid., bâb 73), but Ibn al-Hâdjî records with disapproval that business was done in the mosques: women sit in the mosques and sell thread, in Mecca hawkers even call their wares in the mosques. The list given by this author gives one the impression of a regular market-place (Makhkîl, ii, 54). Strangers could always sit down in a mosque and talk with one another (see al-Mukkaddasî, 205); they had the right to spend the night in the mosque; according to some, however, only if there was no other shelter available (Makhkîl, ii, 43 below, 49 above; see below f.D.1b). It naturally came about that people also ate in the mosque; this was quite common, and regular banquets were even given in them (e.g. al-Makrîzî, ii, 54, 57, 121-2; ibid., Salât, bdb 119; Ibn Masâdî, bdb 24, 29; Ahmad b. Hanîlî, ibid, 106, below 10). Ibn al-Hâdjî laments that in the Masjîd al-Âkṣa people even threw the remains of their repast down in the mosque; animals were brought in, and beggars and water-carriers called aloud in them, etc. (Makhkîl, ii, 53 ff.). It is even mentioned as a sign of the special piety of al-Shirazi (d. 476/1083) that he often brought with the people of his time, and in consequence, the mosque was visited for many other purposes than that of divine worship. The chief mosque, which for this reason was particularly large, was given a significant name. They talk of al-masâjid al-‘l-ajamî (al-Tabârî, ibid., 2494; ii, 734, 1701, 1702; Kuﬁ; al-Bâlûdhûrî, 35; al-Tabârî, Tâfîsr, xi, 21, centre; ibid. also al-masâjid al-akbar, Medina; cf. al-masâjid al-kabîr, al-Ya‘kûbî, Babûdân, 245) or masjid al-‘djm’a (Yâkût, iii, 896, Fustât; also al-Tabârî, ii, 1119; Ibn Kutayba, Mârifî, ed. Wûstenfeld, 106). Similarly conditions still prevail in the mosques.

2. THe mosque as a place of prayer. Fri-day mosques. As places for divine worship, the mosques are primarily "houses of which God has permitted that they be erected and that His name be mentioned in them" (sûra XXIV, 36), i.e. for His service demanded by the law, for ceremonies of wor- ship (manîsîk), for assemblies for prayer (djum’at) and other religious duties (cf. Chron. Mekka, al-Adhdîn, bdb 87, 1118; ibid., adhdîn, bdb 87, 1118; ibid., adhdîn, bdb 87; Bayûs, bâb 49). There are even hadîths which condemn private salâts: "Those who perform the salât in their houses abandon the sunna of their Prophet" (Muslim, Masîjid, tr. 45; but cf. 48 and al-Bukhârî, Salât, bâb 52). If much rain falls, the believers may, however, worship in their houses (al-Bukhârî, Djdîm’a, bâb 14). In this connection, a blind man was given a special roof; it is particularly bad to leave the mosque after the adhdîn (Muslim, Masîjid, tr. 45). It is therefore very meritorious to go to the mosque; for every step a man advances into the mosque, he receives forgiveness of sins, God protects him at the last judgment and the angels also assist him (Muslim, Masîjid, bâb 49-51; al-Bukhârî, Salât, bâb 87; Aqîhîn, bdb 36, 37; Djdîm’a, bâb 4, 10, 31; Corpus iuris di Zaid b. Ali, nos. 40, 156, 983).

This holds especially of the Friday salât (salât al-‘djm’a), which can only be performed in the mosque and is obligatory upon every free male Muslim who has reached years of discretion (cf. Juynboll, Handbuch, 86; Guidî, Sommario del diritto Malechita, i, 125-6. According to Ibn Hîghâm (290), this salât, which is distinguished by the kîba, was observed in Medina even before the hijâra. This is hardly probable and besides is not in agreement with other hadîths (see al-Bukhârî, Djdîm’a, bâb 11) but the origin of this divine worship, referred to in sûra LXII, 9, is obscure. The assemblies of the Jews and Christians on a particular day must have formed the model (cf. al-Bukhârî, Djdîm’a, bâb 1). Its importance in the earlier period lay in the fact that all elements of the Muslim camp, who usually went to the tribal and particular mosques, assembled for it in the chief mosque under the leadership of the general. The chief mosque, which for this reason was particularly large, was given a significant name. They talk of al-masâjid al-‘sâm (al-Tabârî, i, 2494; ii, 734, 1701, 1702; Kuﬁ; al-Bâlûdhûrî, 35; al-Tabârî, Tâfîsr, xi, 21, centre; ibid. also al-masâjid al-akbar, Medina; cf. al-masâjid al-kabîr, al-Ya‘kûbî, Babûdân, 245) or masjid al-‘djm’a (Yâkût, iii, 896, Fustât; also al-Tabârî, ii, 1119; Ibn Kutayba, Mârifî, ed. Wûstenfeld, 106). Similarly conditions still prevail in the mosques.

In the time of ‘Umar there was property in every town only one masjid for the Friday service. But when the community became no longer mainly military, this rule and the previous religion of the people, a need for a number of mosques for the Friday service was bound to arise. This demanded mosques for the Friday service in the

MASDJID

655
country, in the villages on the one hand and several Friday mosques in the town on the other. This meant in both cases innovation, competition, envy, and criticisms, and thus there arose some degree of uncertainty. The Friday service had to be conducted by the ruler of the community, but there was only one governor in each province; on the other hand, the demands of the time could hardly be resisted and, besides, the Christian converts to Islam had been used to a solemn service for the reason just mentioned (al-Makrizi, 176; cf. 538). Ibn Hawkal mentions in his book that has survived); al-Makrizi (d. 927/1521) gives twenty

djidmi (i, 236). The word djami* in al-Makrizi always

imposed on the one hand and recently 7,000 mosques 

mentioned (al-Makrizi, iv, 2-3). Ibn Dukmak gives 130

djami* in al-Makrizi, i, 2-3). Al-Mukaddasi, who wrote (375/985) shortly after the Fatimid conquest, mentions the

Al-Mudhaylas, also one in al-Djazira, in Djiza and in 
al-Karafa, which was regarded as a separate town (cf. Ibn Rusta (399/1009), but this list is apparently only a fragment (in Al-Mugaffal, ed. Schefer, 134-5, 147). This was altered in 569/1173-4 by Salah al-Din (see above), but the principle was not abandoned that each town had only one djami*. The Fatimids, however, extended the use of Friday mosques and, in addition to those already mentioned, used the djami* in the suburb of Kalwadha. Ibn Hawkal in 367/977 mentions the latter and also the Djami* of Harun al-Rashld in the suburb of Kalwadha. Ibn Hawkal in 367/977 also mentions only one

All the indications of the 3rd/9th and 4th/10th centuries in their descriptions of towns as a rule mention only

"the djami". Ibn al-Fakhri, ca. 290/903, sometimes says masjid djami* or minbar (304-6, also minbar simply, 305). In keeping with the oldest scheme of town planning, it was very often in the middle of the town surrounded by the business quarters (Ibn Hawkal, 298, 325; al-Mukaddasi, 274-5, 278, 298, 314, 316, 375, 376, 413, 426, 427, etc.; Nasir-i Khusrav, ed. Schefer, 35, 41, 56) and the dar al-imara was still frequently in the immediate vicinity of the chief mosque (Ibn Hawkal, 298, 314; al-Mukaddasi, 426).
means a mosque in which the Friday worship was held (vi, 76, 115 ff.), but by his time this meant any mosque of some size. He himself criticizes the fact that such a term [al djam'i] was in Al-Akmar, although another djam'i stood close beside it (iv, 76; cf. also 86).

The great spread of Friday mosques was reflected in the language. While inscriptions of the 8th/14th century still call quite large mosques masjid, in the 9th/15th most of them are called djam'i (cf. on the whole question, van Berchem, C.I.A. i, 173-4); and while now the maddris (q.v.) begins to predominate and is occasionally also called djam'i, the use of the word masjid becomes limited. While, generally speaking, it can mean any mosque (e.g. al-Makrizi, iv, 137, of the Mu‘ayyad mosque), it is more especially used of the smaller unimportant mosques.

While Ibn Dukmāk gives 472 masjid in addition to the djam'i, madrasî, etc., al-Makrizi only gives nine-teen, not counting al-Karāfa, which probably only means that they were of little interest to him. Djam'i is now on the way to become the regular name for a mosque of any size, as is now the usage, in Egypt and Turkey at least. In Ibn al-Haḍīdī (d. 737/1336-7), al-djam'i al-kurāfa, a whole society, the Banu Djawha, delivered wazāz discourses from a kursi for three zam, especially used of the smaller unimportant mosques.

The use of the djam'i, kursi, etc., al-Makrizi only gives nine-teen discourses are given by Ibn Battuta (i, 54, 94; cf. the older expression zam, maddris, etc., al-Makrizi only gives nine-teen, in addition to djam'i masjid mentioned in circles every evening and recited (205). In the expression as the chief mosque; we therefore find the expression maddris, etc., al-Makrizi only gives nine-teen, in addition to djam'i masjid in addition to while Ibn Dukmāk gives 472

CIA, van Berchem, i, 173-4); and 9th/15th most of them are called masjid, while now the djam'i, madrasî, etc., al-Makrizi only gives nineteen, not counting al-Karāfa, which probably only means that they were of little interest to him. Djam'i is now on the way to become the regular name for a mosque of any size, as is now the usage, in Egypt and Turkey at least. In Ibn al-Haḍīdī (d. 737/1336-7), al-djam'i al-kurāfa, a whole society, the Banu Djawha, delivered wazāz discourses from a kursi for three zam, especially used of the smaller unimportant mosques.

months on end; their servant collected money in a begging-bowl during the discourse, and the shaykh distributed some of it among the poor (ibid., iv. 121).

The ka‘as was completely taken over by popular Sufism and later writers would hardly reckon, as al-Makki does, the “story-tellers” among the mutakallimun (Kut al-kulub, i, 152). The whole system degenerated to trickery and charlatanry of all kinds, as may be seen in the Makama [q.v.] literature (cf. thereon Yākūt, Ušāba, ii, 167-8, and see also Mez and Goldzieher, op. cit.). Al-Makrizī therefore distinguishes between al-ka‘as al-hājji, the regular and undisturbed, and what he terms al-‘ṣāmma, which consisted in the people gathering round all kinds of speakers, which is makhrūf (iv, 17). Others also have recorded their objections to the ka‘as as well as a halak (al-Makrizī, iv, 17).

When Ibn al-Hādhījī denounces speaking aloud in the mosque, it is in the interest of the pious visitors who are engaged in religious works and meditation. Ṣītāfī [q.v.], retirement to a mosque for a period, was adopted into Islam from the older religions.

The word ṣāfī means in the Kur‘ān the ceremonial worship of the object of the cult (sūra VII, 134; XX, 93, 97; XXI, 53; XXVI, 71; cf. al-Kumayt, Ḥādhimyya, ed. Horovitz, 86, 15) and also the ritual washing of the sanctuary, which was done for example in the Meccan temple (sūra II, 119; XXII, 25). In this connection, it is laid down in the Kur‘ān that in the month of Ramazān believers must not touch their wives “while ye pass the time in the mosques” (‘akūfīn ft ‘l-masjidī, sūra II, 183), an expression which shows, firstly, that there were already a number of mosques in the lifetime of the Prophet, and secondly, that these had already to some extent taken over the character of the temple. The connection with the early period is evident from a hadith, according to which the Prophet decides that ‘Umar must carry out a vow of i‘tikāf for one night in the Masjid al-Ḥarmā made in the Dihiyiyā (al-Bukhārī, Ṣītāfī, bāb 5, 15-16; Fard al-khums, bāb 19, Ṣītāfī, bāb 54; Ayrūm wa‘l-nudhur, 19; al-khums, bdb 3), and by his orders (al-Makrizī, iv, 87, 97), of one we are told that he spent his time in the mosque of the “Amr in his booth and chatted for an hour with her (al-Bukhārī, Fard al-khums, bāb 4; Ṣītāfī, bāb 8, 11, 12). According to another tradition, his ṣītāfūf was broken on another occasion by his wives putting up their tents beside him, and he postponed his ṣītāfūf till Shāwawīl (al-Bukhārī, Ṣītāfī, bāb 6, 7, 14, 18). According to Zayd b. ‘Ali, the ṣītāfūf can only be observed in a chief mosque (dārūrī) (Corpus turī ti Zaid b. ‘Ali, no. 447). During the early period, it was one of the initiatory rites for new converts. In the year 14/1635 ‘Umar ordered the retreat (al-kāyām) in the mosque on the first day of Ramazān for the people of Medina and the provinces (al-Tabarī, i, 2377). The custom persisted and has always been an important one among ascetics. “The man who retires for a time to the mosque devotes himself in turn to salāt, recitation of the Kur‘ān, meditation, ḥākur, etc.” says Ibn al-Hādhījī (Madkhal, ii, 50). There were pious people who spent their whole time in a mosque (akāmā fīhi‘; al-Makrizī, iv, 121). Al-Samhūdī says that during the month of Ramazān, he spent day and night in the mosque (Wüstenfeld, Medina, 95). Sa‘d al-Dīn (d. 644/1246-7) spent the month of Ramazān in the Mosque of the Umayyads without speaking (Ibn Abī Usayyib, ii, 192). Nocturnal vigils in the mosque very early became an established practice in Islam. According to Ḥadīth, the Prophet frequently held nocturnal salāts in the mosque with the believers (al-Bukhārī, Quum, bāb 29), and by his orders ‘Abd Allāh b. Unays al-Ansārī came from the desert for twenty-three successive nights to pass the night in his mosque in rites of worship (Ibn Kutayba, Ma‘ārif, ed. Wüstenfeld, 142-3). Out of this developed the tahādīfūf [q.v.] salāt, particularly recommended in the law and notably the tarawīh salāt [q.v.]. In Dīhil on these occasions, women singers actually took part (Ibn Battīṭa, iii, 155).

During the nights of the month of Ramazān, there were festivals in the mosques, and on other occasions also, such as the New Year, sometimes at the new moon, and in the middle of the month. The mosque on these occasions was illuminated: there was eating and drinking; incense was burned and ḥākur and khutba were read.

The Friday salāt was particularly solemn in Ramazān, and in the Fāṭimid period, the caliph himself delivered the khutba (see al-Makrizī, ii, 345 ff.; Ibn Taghībirdī, i, ii, ed. Juynboll, 482-6, ii/2, ed. Popper, 331-3). The mosques associated with a saint had and still have their special festivals on his mawlid [q.v.]: they also are celebrated with ḥākur, khutba, etc. (cf. Lane, Manners and customs, chs. xxiv ff.). The saint’s festivals are usually local and there are generally differences in the local customs. In the Mağrib, for example, in certain places the month of Ramazān is opened with a blast of trumpets from the manābīr (Madkhal, ii, 69).

The mosque thus on the whole took over the role of the temple. The rulers from ‘Umar onwards dedicated gifts to the Ka‘ba (Ibn al-Fakhr, 20-1, and BOA, iv, Indices, glossarium, s.v. qamūs), and, as in other sanctuaries, we find women vowing children to the service of the mosque (al-Bukhārī, Salāt, bāb 74; al-Makrizī, iv, 20). Tawāf was performed, as at the Ka‘ba, in mosques with saints’ tombs as is still done, e.g. in Hebron; Maḏjur al-Dīn sees a pre-Islamic custom in this (Sauvaire, Hist. Jérusalem 4). Especially important business was done here. In times of trouble, the people go to the mosque to pray for help, for example during drought, for which there is
special ʿalāt (which however usually takes place on the ʿmāyād) [see isTiSKA], in misfortunes of all kinds (e.g. Wustenfeld, Medina, 19-20; al-Makrizî, iv, 57); in the bier of a Relation, and praying with Karbân uplifted, were held in the mosques or on the ʿmāyād, in which even Jews and Christians sometimes took part (Ibn Taghrîbidî, ii/2, ed. Popper, 67; Ibn Baṭṭûţa, i, 243-4, cf. Quatremerê, Hist. Sult. Maml., i/1, 35, 40; i/2, 199) or for a period a sacred book like al-Bukhârî’s ʿalîb was recited (Quatremerê, op. cit. ii/2, 35; al-Dîbarsî, Meravitis, biographique, French tr. vi, 13). In the courtyards of mosques in Jerusalem and Damasus in the time of Ibn Baṭṭûţa, solemn penance was done on the day of ʿArâfa (i, 243-4), an ancient custom which had already been introduced into Egypt in the year 27/647-8 by ʿAbd al-ʿAzîz b. Marwân (kuḥdâd after the ʿasr; cf. al-Kindî, Wulât, 50). Certain mosques were visited by barren women (Wustenfeld, Medina, 133).

An oath is particularly binding if it is taken in a mosque (cf. J. Pedersen, Der Eid bei den Semitten, 144); this is particularly true of the Karbâ, where written covenants were also drawn up to make them more binding (ibid., 143-4, Chron. Mecca, i, 160-1). It is in keeping with this idea of an oath that Jews who had adopted Islam in Cairo had to take oaths in a synagogue which had become a mosque (al-Makrizî, iv, 57, 144; c. of ʿIsmâʿîl, Mecca, also is often concluded in a mosque (Ṣanilltana, Il Muḥtasar, i, 548; Mâdhâbî, ii, 72 below; Snouck Hurgronje, Mecca, ii, 163-4), and the particular form of divorce which is completed by the bârân [g. j. t.] takes place in the mosque (al-Bukhârî, ʿalāt, bâb 44; cf. Pedersen, Der Eid, 114).

It is disputed whether a corpse may be brought into the mosque and the ʿalât al-dînî performed there. According to one hadîth, the bier of ʿAbî Wâlâ took into the mosque at the request of the Prophet’s widow and the ʿalât held there. Many disagreed of this, but ʿAbî Ḥanîfî pointed out that the Prophet had done this with the body of Suhayl b. Baydâ (Muslim, Qamarâz, tr. 34; cf. also Ibn Saʿūd, i/1, 14-15). The discussion on this point is not unconnected with the discussions regarding the worship of tombs. This is permitted by al-Shâbî, while the others forbid it (see Juynboll, Handbuch, 170; I. Guidi, Il Muḥtasar, i, 151). The matter does not seem to be quite clear, for ʿUtb al-Dîn says that only ʿAbû Ḥanîfî forbids it, but he himself thought that it might be allowable on the authority of a statement by ʿAbû Yusûf (Chron. Mecca, iii, 208-10). In any case, it was a very general practice to allow it, as ʿUtb al-Dîn also points out. ʿUmar conducted the funeral ʿalât for ʿAbû Bakr in the Mosque of the Prophet and ʿUmar’s own dead body was brought there; later it became a general custom to perform the ceremony in Medina close to the Prophet’s tomb and in Mecca at the door of the Karbâ; some even made a sevenfold tawâf with the corpse around the Karbâ. This was for a time forbidden by Marwân b. al-Ḥâkâm and later by ʿUmar b. ʿAbî Azîz (Kutb al-Dîn, loc. cit., Wustenfeld, Medina, 77). The custom was very early introduced into the Mosque of ʿAmr (al-Makrizî, iv, 7, 1 ff.). That later scholars often went wrong about the prohibition is not at all remarkable; for it is not at all in keeping with the ever-increasing tendency to found mosques at tombs. Even Ibn al-Ḥâdîṣ, who was anxious to maintain the prohibition, is not quite sure and really only for bids the loud calling of the karbâ, and this became a very usual custom. Mecca and Medina, however, still held the preference. Although those of Mecca and Jerusalem were recognised as the two oldest (the one is said to be 40 years older than the other; Muslim, Masâṣûdî, tr. 1; Chron. Mecca, i, 301), the Prophet is however reputed to have said “A ʿalât in this mosque is more meritorious than 1,000 ʿalâts in others, even in al-Masjîd al-Ḥāram” (al-Bukhârî, Fadl al-ʿalât fi masjîd Makka wa l-Madina, bâb 16; Quatremere, tr. 93). The three mosques, however, retained their pride of place (Ibn Khaldûn, Mukaddasi, 440, ii, 311). Although this competition did not last long, the significance of Jerusalem was thereby greatly increased. Pilgrimage to Medina developed out of the increasing veneration for the Prophet. In the year 140/757-8, Abu Dâفار al-Manṣûr on his hajj visited the three sanctuaries (al-Tabârî, i, 129) and this became a very usual custom. Mecca and Medina, however, still held the preference. Although those of Mecca and Jerusalem were recognised as the two oldest (the one is said to be 40 years older than the other; Muslim, Masâṣûdî, tr. 1; Chron. Mecca, i, 301), the Prophet is however reputed to have said “A ʿalât in this mosque is more meritorious than 1,000 ʿalâts in others, even in al-Masjîd al-Ḥâram” (al-Bukhârî, Fadl al-ʿalât fi masjîd Makka wa l-Madina, bâb 1; Muslim, Hadîṣî, tr. 89; Chron. Mecca, i, 303). These ʿalâts aimed directly against Jerusalem and therefore probably dates from the ʿUmâyad period. According to some, it was announced because someone had condemned performing the ʿalât in Jerusalem, which the Prophet was against (Muslim, loc. cit.; al-Wâkidî-Wellhausen, 349). The three mosques, however, retained their pride of place (Ibn Khaldûn, Mukaddasi, fâṣd 4, 6; Ibn al-Ḥâdîṣ, Madkhal, ii, 55), and as late as 662/1264 we find Baybars founding awâkî for pilgrims who wished to go on foot to Jerusalem (Quatremerê, Hist. Sult. Maml., i/1, 248).

Although these three mosques officially hold a special position, others also are highly recommended, e.g. the mosque in ʿUthmân (see al-Maḥdlî). A ʿalât in this mosque is said to be as valuable as an ʿumâra or two visits to the mosque in Jerusalem (al-Dîbarsi, Khamsî, i, 381-2). Attempts were also made to raise the mosque of Kûfâ to the level of the three. ʿAli is said to have told someone who wanted to make a pilgrimage from Kûfâ to Jerusalem that he should stick by the mosque of his native town, it was “one of the four mosques” and two nakîs in it were equal to ten in others (Ibn al-Fâkhî, 173-4; Yâkût, Muṣammî, iv, 323); in another tradition, ʿalâts in the provincial mosques are said to be of special value worth as much as the pilgrimage (al-Makrizî, iv, 4), and traditions are said about the special blessings associated at definite times.
with different holy places of Islam (al-Mukaddasi, 183) and especially about their superior merits (Ibn al-Fakih, 174). The Meccan sanctuary, however, always retained first place, which was marked by the hadjijaj. It was imitated by al-Mutawakkil in Sámmará: he built a Ka’ba as well as a Mi’na and an ‘Arafa there and made his amirs perform their hadjijaj there (al-Mukaddasi, 122).

D. The component parts and furnishings of the mosque.

The development of the edifice. Except in the case of Mecca the earliest mosques as described above (B. 1) were at first simply open spaces marked off by a zulla. The space was sometimes, as in al-Fustat, planted with trees and usually covered with pebbles, e.g. in Medina (Muslim, Hadjijaj, tr. 95; al-Baladhurí, 6) and Fustat (al-MakrlzT, iv, 95; Ibn Dukmak, iv, 62; Ibn Taghhrift, i, 77), which was later introduced in Basra and Kufa, the courtyards of which were otherwise dusty (al-Baladhurí, 277, 348). These conditions could only last so long as the Arabs retained their ancient customs as a closed group in their simple camps. The utilisation of churches was the first sign of a change and was rapidly followed by a mingling with the rest of the population and the resulting assimilation with older cultures. The best example of this is found in the mosque in Medina and in Mecca also. He extended the Mosque of the Prophet by taking in the house of ‘Abbas; but like the Prophet, he still built with lath, palm trunks and leaves and extended the booths (al-Bukhari, Salat, bbb 62; al-Baladhurí, 6). In Mecca also, his work was confined to extending the area occupied by the mosque. He bought the surrounding houses and took them down and then surrounding the area with a wall to the height of a man; the Ka’ba was thus given its first form like the mosque in Medina (al-Baladhurí, 46; Chron. Mecka, i, 306; Wüstefeld, Medina, 68). Ugâmán also extended these two mosques, but introduced an important innovation in using hewn stone and piers (ddjurr) for the walls and pillars. For the roof he used teak (ddjurr). The booths, which had been extended by ‘Umar, were replaced by him by pillared halls (arwika, sing. of pl., ‘Umar’s hall). The columns were added to meditate (al-Bukhari, Salat, bbb 62; al-Baladhurí, 46; Wüstefeld, Medina, 70). Sa’d b. Abi Wakkās is said to have already taken similar steps to relieve the old simplicity of the poorly-equipped mosque in Kufa. The zulla consisted of pillars of marble adorned in the style of Byzantine churches (al-Tabarí, i, 2489; Yākūt, iv, 324). This was little in keeping with the simple architecture of the original town, for Basra and Kufa had originally been built of reeds and only after several great fires were they built of labin (see above, I. B. 1; cf. Ibn Kutayba, Ma’sirif, ed. Wüstefeld, 279). As to Kufa, Sa’d by ‘Umar’s orders extended the mosque so that it became joined up with the Dar al-Imara. A Persian named Kuzbīb b. Buzurgjmhr was the architect for this. He used fired bricks (ddjurr) for the building, which he brought from Persian buildings, and in the mosque he used pillars which had been taken from churches in the region of Hira belonging to the Persian kings; these columns were not erected at the sides but only against the kibla wall. The original plan of the mosque was therefore still retained, although the pillared hall, which is identical with the zulla already mentioned (200 ddjurr’s broad), replaced the simple booth, and the mosque was altered in every way (al-Tabarí, i, 2491-2, 2494). Already under the early caliphs we can therefore note the beginnings of the adoption of a more advanced architecture.

These tendencies were very much developed under the Umayyads. Even as early as the reign of Mu’awiyah, the mosque of Kufa was rebuilt by his governor Ziyād. He commissioned a pagan architect, who had worked for Kisrā, to do the work. The latter had pillars brought from al-Ahwāz, bound them together with lead and iron clamps to a height of 30 ddjurr’s and put a roof on them. Similar halls, built of columns (here like the old booth in Medina called yaffa) were added by him on the north, east and western wall. Each pillar cost him 18,000 dirhams. The mosque could now hold 60,000 instead of 40,000 (idem, i, 2492, 6 ff., cf. 2494, 7; Yākūt, iv, 324, 1 ff.; al-Baladhurí, 276). Al-Hajdjid also added to the mosque (Yākūt, iv, 325-6). Ziyād did similar work in Başrā. Here also he extended the mosque and built it of stone (or brick) and plaster and with pillars from al-Ahwāz, which were roofed with teak. We are told that he made al-yaffa al-mukaddasima, i.e. the kibla hall, with 5 columns. This seems to show that the other sides also—as in Kufa—had pillared halls. He erected the Dar al-Imāra close to the kibla side. This was taken down by al-Hajdjid, rebuilt by others, and finally taken into the mosque by Harūn al-Rashid (al-Baladhurí, 347, 348 of his chron.); see above (B. 1) were at first simply open spaces marked off by a zulla. The columns were added to meditate (al-Bukhari, Salat, bbb 62; al-Baladhurí, 46; Wüstefeld, Medina, 68).

These tendencies were very much developed under the Umayyads. These tendencies were very much developed under the Umayyads. The Mosque of Amr was extended in 53/673 with 79/698 in the reign of ‘Abd al-Malik and al-Hajdjid also added to the mosque (Yakut, iv, 307, 309). The Mosque of ‘Amr was extended in 53/673 with Mu’awiya’s permission by his governor Maslama b. Mukhaddal to the east and north; the walls were covered with plaster (ddjurr) and the floor was covered with teak. It is evident from this that here also the original booth of the south side was altered to a covered hall during the early Umayyad period. A further extension was made in 79/698 in the reign of ‘Abd al-Malik (al-MakrlzT, iv, 7, 8; Ibn Dukmak, iv, 62). Thus we find that during the early Umayyad period, and in part even earlier, the original simple and vaulted mosque was replaced by a mcroscope, which was not only no longer simple, but they were built with the help of Christians and other trained craftsmen with the use of material already existing in older buildings. Al-Hajdjid, for example, used materials from the sur-

860 MASDJDID
rounding towns when building his foundation of Wāsiṭ (al-Tabari, iii, 321; al-Baladhuri, 290). Columns from churches were now used quite regularly (e.g. in Damascus: al-Mas′ūdī, Murād, ii, 408-§ 1292; Ramlā: al-Mukaddasī, 165; cf. al-Baladhuri, 143 ff.; for Egypt, see al-Makrīzī, iv, 36, 124-5). Sometimes, remains of the older style remained alongside the new. In Irāq, al-Mukaddasī found in the chief mosque wooden columns of the time of Abū Muslim along with round columns of brick of the time of ʿAmr b. al-Layth (316). The building activities of al-Walīd extended to Fustāt, Mecca and Medina (cf. Ibn al-Fakīh, 106-7) where no fundamental alterations were made, but complete renovations were carried out. With these rulers, the builders of mosques reach the level of older architecture and gain a place in the history of art. There is also literary evidence for the transfer of a style from one region to another. In Istakhr, for example, there was a ḍājmī in the style of the Syrian mosques with round columns, on which was a baqara (al-Mukaddasī, iii, 436-7; cf. for Shirāz, 430). Al-Walīd also rebuilt the Mosque of the Prophet, in part in the Damascus style (ibid., 80; al-Kaṣwīnī, ed. Wüstenfeld, ii, 71).

This revolution naturally did not take place without opposition, any more than the other innovations, which were discussed in the courtyard and the open space around the mosque (al-Makrīzī, iv, 362). The discussions on this point are reflected in hadiths. When ʿUmar enlarged the Mosque of the Prophet, he is reported to have said: “Give the people shelter from the rain, but take care not to make them red or yellow lest you lead the people astray”, while Ibn ʿAbbās said: “You shall adorn them with gold as the Jews and Christians do” (al-Bukhārī, ed. Schwally, 393; al-Baladhuri, 82, 158, 165), this seems to suggest that the halls were closed, with flat stone roofs; for example in the mosques of ʿAmr until Maslama b. Muḥallad covered it with mats (see above, 1. D. 1); but this was altered with a more refined style of architecture. Al-Mukaddasī mentions that this was only found in Tiberias, out of all the mosques in Palestine (182). Frequently, as in Ramla, the halls were covered with marble and the courtyard with flat stone (ibid., 165). In the halls also, the ground was originally bare or covered with little stones; for example in the mosques of ʿAmr until Maslama b. Muḥallad covered it with mats (see below). The floor of the Mosque of ʿAmr was entirely covered with marble in the Mamlūk period (al-Makrīzī, iv, 13-14, cf. in Shirāz, Ibn Baṭṭūṭa, ii, 53). But in the mosque of Mecca, the ʿabn is still covered with little stones (al-Bāṭnūnī, Ribāh, 99 below); 400 dinārs used to be spent annually on this (Chron. Mekka, ii, 10-11). In Medina also, little pebbles were used (Ibn Dunṣās, al-Bayhakī, 196); Ibn ʿAbd al-Rahmān al-Samḥī gives the history of the maksūra in Medina (Wüstenfeld, Medina, 71-2, 89). The traditions all agree that the maksūra was introduced to protect the ruler from hostile attacks. According to some authorities, ʿUṯmān built a maksūra of labīn with windows, so that the people could see the ima’m of the community (ibid., and al-Makrīzī, iv, 7). According to another tradition, Marwān b. al-Hakam, governor of Medina after an attempt had been made on him by a Yaman in the year 44/664, was the first to build a maksūra of dressed stone with a window (al-Baladhuri, 6 below; al-Ṭabarī, ii, 70). Muḥāwiya is then said to have followed his example. Others, again, say that Muḥāwiya was the first to introduce this innovation. He is said to have introduced the maksīrūt with the accompanying guard as early as the year 40/660 or not till 44/664-5 after the Khaḍījī attempt (al-Ṭabarī, 1, 3465, 9; Ibn al-Fakīh, 109, 3; al-Makrīzī, iv, 12, 11 ff.; according to one story because had had seen a dog on a minaret (al-Bayhakī, ed. Wüstenfeld, 393 below, cf. on the whole question, H. Lammens, Muḥāwiya, 202 ff.). This much seems to be certain,
that the maksura was at any rate introduced at the beginning of the Umayyad period, and it was an arrangement so much in keeping with the increasing dignity of the ruler that, as Ibn Khaldun says, it spread throughout all the lands of Islam (Mukaddamia, Cairo 1322/1904–5, 212–13, fasl 37). The governors built themselves compartments in the principal mosques of the provinces, e.g. Ziyād in Kufa and Basra (al-Baladhurl, 277, 348) and probably Kurra b. Shārīk in Fustāt (al-Makrizi, iv, 12). In Medina, we are told that ‘Umar b. ‘Abd al-‘Azīz as governor (80–97/695–705) raised the maksura and built up the minbar, but according to Ibn al-Mahdī it had taken place in 160/777 and a new one built on the level of the ground (ibid., 7; Wüstenfeld, op. cit.; al-Baladhurl, 7 centre). We are further told that in 161/778, al-Mahdī prohibited the maksār of the mosques, and the al-Ma’mūn even wanted to clear all the boxes out of the masjīd al-ajmadī, because their use was a zinna introduced by Mu‘awiya (al-Makrizi, iv, 12; al-Ya‘qūbī, Tahāf, ii, 571). But this attempt did not succeed. On the contrary, their number rapidly increased. In Cairo, for example, the Dīmāl al-‘Askar built in 169/785–6 had a maksāra (al-Makrizi, iv, 33 ff.) and the mosque of Ibn Tulūn had a maksūra beside the minbar which was accessible from the Dar al-Imāra (al-Makrlzi, iv, 36, 37, 42; Ibn Taghrībirdī, ii, 8, 14). The maksūra was found in the larger mosques. In the Dīmāl al-Kufa, Muhammad b. Kālwīn in 718/1318 built a maksūra of iron for the sultan’s salāt (al-Makrlzi, iv, 132). According to Ibn Khaldūn, the maksūra was an innovation peculiar to the Islamic world. The question must however be left open, whether in its introduction and development there was an innovation peculiar to the Islamic world. The question must however be left open, whether in its introduction and development there were large numbers of such establishments in the desert and the provinces, e.g. Ziyad in Kufa and Sulayman Rasād in Medina (al-Mukaddasī, 146). Kitchens were therefore erected with the necessary mills and ovens and cooked food (ghurfah) and 15–16,000 loaves (rāghif) were distributed to those who stayed there and to visitors (Sauvaire, Ist. Musul., ser. 5, iv [1854], 174) and also beside the mosques (for al-Azhar, see al-Dubayr, Rihā, 240; cf. in Harrān, 243) and as happened in Salāh al-Dīn’s time in the Mosque of the Umayyads (al-Ahwāl, Umayya, ii, 182). It was, however, very usual for them to live in the side rooms of the mosque, as was the case for example, in the Mosque of the Umayyads (Ibn Dībāyūr, 269; Ibn Bāṭtūta, i, 206). In particularly holy mosques like that in Hebron, houses for mu‘takhfūn were built around the sacred place (Sauvaire, Hist. Jerus. et Hebron, 11-12) and also beside the Masjīd Yūnis at the ancient Nīnīveh (al-Makrdhasī, 146). Kitchens were therefore erected with the necessary mills and ovens and cooked food (ghurfd) and 14–15,000 loaves (rāghif) were distributed to those who stayed there and to visitors (Sauvaire, 20; cf. Quatremère, Hist. Strat. Maml., i, 213). Bread was also baked in the mosque of Ibn Tulūn (Quatremère, op. cit., i, 233) and kitchens were often found in the mosques (for al-Ashahr, see al-Dubayr, Merceutes, iii, 238-9; Sulaymān Rasād, Kanz al-dawla‘īn, ‘aṣīrīs, 121-2). The men who lived in and beside the mosque were called mu‘adhdhīn (cf. al-Mukrdhasī, 146; for Jerusalem, Nāṣīrī Khusrāw, 82, 91; for Mecca, Ibn Dībāyūr, 149; for Medina, Ibn Bāṭtūta, i, 279, where we learn that they were organised under a kādir, like the North Africans under an amīn in Damascas; Ibn Dībāyūr, 277-8). They were pious ascetics, students and sometimes travellers. The students generally found accommodation in the madāris, but large mosques like that of the Umayyads or al-Ashahr had always many students, who lived in them. The name of the halls, riwâq, was later used for these students’ lodgings (cf. van Berchem, CIA, i, 43, 1 n. 1; perhaps al-Makrzī, iv, 54, 23). Strangers always found accommodation in the mosques (cf. above, 1. C. 1). In smaller towns, it was the natural thing for the traveller to spend the night in the mosque and to get food there (Yākūtī, iii, 385; al-Kiflī, Tu‘rīkh al-Hukbā, 2, 252). Travellers like Nāṣīrī Khusrāw, Ibn Dībāyūr, Ibn Bāṭtūta and al-‘Abdār (JA, ser. 5, iv [1854], 174) were able to travel throughout the whole Muslim world safe keeping in a mosque (Su‘aft-nāma, 51). Large mosques were bequeathed for the rugs of those who lived in the mosques (Ibn Dībāyūr, op. cit.; al-Taghībirdī, ii/2, 105 ff.).
In later times, the rulers often built a lodge or pavilion (manzard) in or near the mosque (al-Makrizi, ii, 345, iv, 13, cf. on the word, Quatremeré, Hist. Sult. Islam., ii, 20, 128). There was often a special room with a clock in the mosques; this also is probably an inheritance from the church, for Ibn Rusta tells of similar arrangements in Constantinople (126 above). Ibn Djubayr (270) describes very fully the clock in the Mosque of the Umayyads (cf. JA, ser. 9, vii, 205-6). It was made in the reign of Nūr al-Dīn by Fāṣhr al-Dīn b. al-Sāʾītī (Ibn Abī Usaybāʾa, ii, 103-4; an expert was kept to look after it, ibid., 191). There was a clock in the Mustansiriyya in Baghdad (Sarre and Herzfeld, Arch. Reise, ii, 170), and the Mosque of ʿAmr also a ghurfat al-sāʾīt (al-Makrizi, iv, 13, 15). In the Mosque of Ibn Tūlūn it is still kept a sundial of the year 696/1296-7; cf. van Berchem, CTH, i, no. 415), but the clocks were usually mechanical (see also Dozy, Supplement, s.v. mindjdna, and on the clock generally, E. Wiedemann, in Nova Acta der K. Leop. Carol. Akad., c [Halle 1915]). In the Maghrib also we find mosquesclocks, e.g. in the Būʿnaniemīya (JA, ser. 11, xii, 357 ff.). The very varied uses to which the mosques were put resulted in their becoming storehouses for all sorts of things. In 668/1269-70, the Mosque of the Umayyads was cleared of all such things; in the courtyard there were, for example, stores for machines of war, and the zāʿābī fāyān of al-ʿAbīnī was a regular jāmīʿ (JA, ser. 9, vii, 225-6).

c. The prayer- niche or Miḥrāb [see for this, Mihrāb].
d. The pulpit or Minbar [see for this, Minbar].
e. The platform or Dakka. In the larger mosques, there is usually a corner of the mosque which was made into a pulpit or a platform on which a staircase leads up. This platform (dakka, popularly often dakkā) is used as a seat for the muʿādhthīn when pronouncing the call to prayer in the mosque at the Friday service. This part of the equipment of a mosque is connected with the development of the service (cf. below, under I. H. 4, and C. H. Becker, Zur Geschichte des islamischen Cultus, in Isl., iii [1912], 574-99 = Islamstudien, i, 472-500; E. Mittwoch, Zur Entstehungsgeschichte des islamischen Gebets und Kultes, in Arch. Pro. Ak. W. [1913], Phil.-Hist. C., no. 2). The first adhān call is pronounced from the minaret, the second (when the khatib mounts the minbar) and the third (before the salāt, īkāma) in the mosque itself. These calls were at first pronounced by the muʿādhthīn standing in the mosque. At a later date, raised seats were made for him.

Al-Halabi records that Maslama, Muʿāwīya's son, was the first to build platforms (here called mandsīr) for the calls to prayer in the mosques (Sīta Halabiyha, ii, 111 below). This story, however, given without any reference to older authorities, is not at all reliable. It seems that a uniform practice did not come into existence at once. In Mecca, the muʿādhthīnis for a time uttered the second call (when the preacher mounted the minbar) from the roof. As the sun in summer was too strong for them, the amir of Mecca, in the reign of Ḥārīn al-Raṣīḥī, made a little hut (zulill) for them on the roof. This was enlarged and more strongly built by al-Mutawakkil in 240/854-5, as his contemporary al-Azrākī relates (Chron. Mecca, i, 332-3). The position in the mosque of ʿAmr in Cairo was similar. Here also the adhān was uttered in a chamber (ghūrfa) on the roof, and in 336/947-8 there is a reference to its enlargement (al-Makrizi, iv, 11). As late as the time of Baybars, when the minbar chamber was removed from the roof of the Mosque of ʿAmr, the old ghūrfa of the muʿādhthīn was left intact (ibid., 14; cf. al-Kindī, Wulāt, ed. Guest, 469, n. 2). In the Mosque of Ibn Tūlūn, the adhān was pronounced from the cupola in the central dome (al-Makrizi, iv, 60). Al-Mukaddasi records in the 4th/10th century as a notable thing about Ḩūrārasīn that the muʿādhthīnis there pronounced the adhān on a sarīr placed in front of the minbar (327). The dakkān "platform" in front of the minbar in the mosques of Ẓahrāratūn must have had the same purpose (ibid., 357).

In the 8th/14th century, Ibn al-Hādhīdī mentions the dakka as a kind of general store, which should be condemned as it unnecessarily prevents freedom of movement within the mosque (Madschi, ii, 45 above). In the year 827/1424 a dakka in the mosque of al-Ḥākim is mentioned (al-Makrizi, iv, 61); the dakkass mentioned in inscriptions from Cairo all date from the period before and after 900/1495. Ibn al-Hādhīdī mentions that, in addition to the large dakka used for the Friday worship, there was sometimes a lower one for ordinary salāts (Madschi, ii, 46-7) and says that in the larger mosques there were several dakkas on which the muʿādhthīnis pronounced the adhān in succession so that the whole community could hear it (Ibid., ibid., 45-6). Lane also mentions several muballīthīnas in the Azhār Mosque (Manners and customs, Everyday's Library edn., 87, 2).

f. The reading-stand or Kursī; Kurṭānas and relics. In the mosques there is usually a kursī [q.v.], that is, a wooden stand with a seat and a desk. The desk is for the Kurṭān, the seat for the kāṣī, or reader, kārīn? ʿImr Djubayr attended the worship in Baghdad at which a celebrated preacher spoke from the minbar, but only after the kūrā, sitting on kārāsī had recited portions of the Kurṭān (Rihla, 219, 222). The wūdīz, often identical with the kāṣī, sat on a kursī made of teak (Ibn Djubayr, 200. Yakūt, Uthārī, i, 319; al-Makrizi, iv, 121); sometimes he spoke from the minbar to which the wūdīz often had access (cf. Ibn Djubayr; see Mez, Renaissance des Islams, 320, tr. Eng. tr. 332). The kūsīs are called by al-Makki aṣḥāb al-kārāsī, which in is keeping with this (Kūt al-kulsūb, i, 152, quoting K. al-Madkhal, i, 159). Several kārāsīs are often mentioned in one mosque (cf. for the Mosque of Ibn Rusta, i, 19). Whether the kārāsīs mentioned for the earlier period always had a desk cannot be definitely ascertained. The kārāsī with dated inscriptions given by van Berchem in his Corpus all belong to the 9th/15th century (nos. 254, 302, 338, 359f, 491). According to Lane, at the Friday service, while the people are assembling, a kārīn on the kūsī recites sûra XVIII up to the adhān (Manners and customs, 86). The same custom is recorded by Ibn al-Hādhīdī and condemned because it has a disturbing effect (Madkhal, ii, 44, middle).

The Kurṭān very soon received its definite place in the mosque, like the Bible in the church (cf. al-Bukhārī, Salāt, bāb 91: they prayed at a pillar beside al-maṣṣaf). According to one tradition, ʿUṯmān had several copies of his Kurṭān sent to the provinces (e.g. Nīldeke-Schweitzer, Gesch. d. Qor., ii, 112-13; al-Hāṣidīdī, a little later, is said to have done the same thing (al-Makrizi, iv, 17). The mosques had many other copies beside the one kept on the kursī. Al-Ḥākim put 814 maṣāḥīf in the Mosque of Ibn Tūlūn, where the founder had already put boxes of Kurṭānas (al-Makrizi, iv, 36, 40; cf. al-Suyūṭī, Hāṣm al-mubāhārā, ii, 138) and in 403/1012-13, he presented 1,289 copies to the Mosque of ʿAmr, some of which were written in letters of gold (al-Makrizi, iv, 12; al-Suyūṭī, ii, 136). Even earlier than this there were so many that the kāḍī al-Ḥarīrī b. Miskin (237-45/851-9)
appointed a special amīn to look after them (al-Kindī, 469); there are still a very large number in the Mosque of ‘Amr, prepared by ʾAbd al-ʿAzīz b. Marwān, later bought by his son and afterwards by his daughter Amīn; her brother left it in 128/746 to the mosque and it was used for public readings (see its whole history in al-Makrizī, iv, 17-18). Besides it, another copy was for some time also used for reading, which was said to have lain beside Ṣamāʿīn, when he was killed and to have been stained with his blood, but this one was removed by the Fātimids (ibid., 19). In the time of Ibn Bāṭūṭa, a Kur’ān for which the same claims were made was kept in Baṣra (ii, 10). On New Year’s Day, when the Fātimid caliphs used to go in procession through the town, the caliph at the entrance to the Mosque of ‘Amr took up in his hands a mushaf said to have been written by Ḥawālī and kissed it (Ibn Taghirībirdī, ii/1, 472 middle); it was perhaps the mushaf Amīn. In Syria, Egypt, and the Hijāz, in the 4th/10th century, there were Kur’āns which were traced back to ʿUthmān (al-Mukaddasī, 143; cf. Ibn Hawẕālī, 117). One of the Kur’āns made for ʿUthmān was shown in the Mosque of the Unayyāds in Damascus in the time of Ibn Dūbayr. It was produced after the daily salāt and the people knelt on a cushion to lean upon. The doors were also covered with carpets in a particularly luxurious fashion (see Ibn Taghirībirdī, ii/1, 483). The puritanical rejected all this as bid’ah and condemned the reverence paid to the Prophet’s foot, which had been black through wear; as a rule, he used a mat woven of palm leaves, qamarna (al-Bukhārī, Salāt, bāb 19, 20, 21; Ḥayd, bāb 30; Muslim, Masjdīd, tr. 47; Ahmad b. Hanbal, Munndī, iii, 145). In any case, it is clear from al-Baladhurī that the salāt was at first performed in the mosque simply in the dust and then on pebbles (al-Baladhurī, 277, 348; cf. al-Zurkānī, ʿabd al-l-Muwaffaqī, i, 283-4). Later, when the halls were extended, the ground, or the paving, was covered with matting.

The first to cover the ground in the Mosque of Ḥamr was at first performed instead of ḥawārī by Muʿāwīya’s governor Maṣʿūd b. Muḥḥalad (al-Makrizī, iv, 353), then by al-Suyūṭī, ii, 136; Ibn al-Fakhīh, 194, 195; Ibn Dūbayr, 194), a tabūr for alms Maḥbūlī, ii, 44, below), for the bayt al-māl or the property of the mosque (see below). There were also carpets for rose-wreaths (Maddkhali, ii, 50) which were in charge of a special officer. In the Mosque of ‘Amr there was a whole series of tawābitī (al-Makrizī, iv, 9).

The Kur’āns were not the only relics to be kept in the mosques. Bodies or parts of bodies of saints (cf. above, B, 4, C, 1) and other ṣuḥrā were kept and revered in mosques: the rod of Moses (in Kufa, Yākūt, iv, 325, previously in Mecca, see Goldziher, Muh. Stud., ii, 361), the Prophet’s sandals (in Kufa, Ibn-al-Fakhīh, 101, also in Damascus, where the Madrasa Ashrāfīyya had his left and the Damāmīyya his right sandal; Jaʾ, ser. 9, iii, 271-2, 402), his cloak (in Adhrū, al-Mukaddasī, 178), hair from his beard (in Jerusalem among other places, al-Batānūnī, Rihla, 165) and many other things (see Goldziher, Muh. Stud., ii, 358 ff.; Mez, Renaissance des Musulmans, 235-246, 359-360; cf. Ibn Fakhīh, 195). Among other things (see Goldziher, Muh. Stud., ii, 358 ff.; Mez, Renaissance des Musulmans, 235-246, 359-360; cf. Ibn Fakhīh, 195). The head of Usayn was buried in a tabūrī in his mosque in Cairo (Ibn Dūbayr, 45). There was a black stone like that in the Kaʿba in a mosque in Shahrastān (al-Muẓaffarī, 433).

On the other hand, pictures and images were excluded from the mosques, in deliberate contrast to the crucifixes and images of saints in churches, as is evident from Ḥadīth (al-Bukhārī, Salāt, bāb 48, 54; Qaṭānīz, bāb 71; Muslim, Maṣjdīd, tr. 3; cf. on the question, Becker, Christliche Polemik und islamische Dogmengeschichte, in ZA, xxvi [1911] = Islamstudien, i, 445 ff.). It is of interest to note that in the earliest period, Ṣād b. ʿAbī Wakkāṣ used no scruples about leaving the wall-paintings in the ʿĪsān of Kūra in Madāʾin standing, when it was turned into a mosque (al-Ṭabarī, i, 2443, 2451). The case was somewhat different, when, before the chief mosque in Dihlī, which had been a Hindu temple, two old copper idols formed a kind of threshold (Ibn Bāṭūṭa, iii, 151), although even this is remarkable (cf. Snouck Hurgronje, Verspreek geschreven, ii, 451 ff. = ZDMG, lxi [1907], 186 ff.). In some circles the opposition to pictures extended to other relics also. Ibn Taymiyā was convinced the reverence paid to the Prophet’s foot-print, which was shown, as in Jerusalem, in a Damascenus mosque also (Quatremerè, Hist. Sult. Maml., ii/2, 246).

g. Carpets. Carpets [see on these, bišār in Suppl.] were used to improve the appearance of the mosques. The first to cover the ground in the mosque is described by Ḥadīth to be that of Abū Mālik, which was afterwards the property of Abū ʿAbd Allāh al-Salātī. In the time of Ibn al-Fakhīh, 194, 195; Ibn Dūbayr, 194), a tabūr for alms Maḥbūlī, ii, 44, below), for the bayt al-māl or the property of the mosque (see below). There were also carpets for rose-wreaths (Maddkhali, ii, 50) which were in charge of a special officer. In the Mosque of ‘Amr there was a whole series of tawābitī (al-Makrizī, iv, 9).

The Kur’āns were not the only relics to be kept in the mosques. Bodies or parts of bodies of saints (cf. above, B, 4, C, 1) and other ṣuḥrā were kept and revered in mosques: the rod of Moses (in Kufa, Yākūt, iv, 325, previously in Mecca, see Goldziher, Muh. Stud., ii, 361), the Prophet’s sandals (in Kufa, Ibn-al-Fakhīh, 101, also in Damascus, where the Madrasa Ashrāfīyya had his left and the Damāmīyya his right sandal; Jaʾ, ser. 9, iii, 271-2, 402), his cloak (in Adhrū, al-Mukaddasī, 178), hair from his beard (in Jerusalem among other places, al-Batānūnī, Rihla, 165) and many other things (see Goldziher, Muh. Stud., ii, 358 ff.; Mez, Renaissance des Musulmans, 235-246, 359-360; cf. Ibn Fakhīh, 195). Among other things (see Goldziher, Muh. Stud., ii, 358 ff.; Mez, Renaissance des Musulmans, 235-246, 359-360; cf. Ibn Fakhīh, 195). The head of Usayn was buried in a tabūrī in his mosque in Cairo (Ibn Dūbayr, 45). There was a black stone like that in the Kaʿba in a mosque in Shahrastān (al-Muẓaffarī, 433).

On the other hand, pictures and images were excluded from the mosques, in deliberate contrast to the crucifixes and images of saints in churches, as is evident from Ḥadīth (al-Bukhārī, Salāt, bāb 48, 54; Qaṭānīz, bāb 71; Muslim, Maṣjdīd, tr. 3; cf. on the question, Becker, Christliche Polemik und islamische Dogmengeschichte, in ZA, xxvi [1911] = Islamstudien, i, 445 ff.). It is of interest to note that in the earliest period, Ṣād b. ʿAbī Wakkāṣ used no scruples about leaving the wall-paintings in the ʿĪsān of Kūra in Madāʾin standing, when it was turned into a mosque (al-Ṭabarī, i, 2443, 2451). The case was somewhat different, when, before the chief mosque in Dihlī, which had been a Hindu temple, two old copper idols formed a kind of threshold (Ibn Bāṭūṭa, iii, 151), although even this is remarkable (cf. Snouck Hurgronje, Verspreek geschreven, ii, 451 ff. = ZDMG, lxi [1907], 186 ff.). In some circles the opposition to pictures extended to other relics also. Ibn Taymiyā was convinced the reverence paid to the Prophet’s foot-print, which was shown, as in Jerusalem, in a Damascenus mosque also (Quatremerè, Hist. Sult. Maml., ii/2, 246).

g. Carpets. Carpets [see on these, bišār in Suppl.] were used to improve the appearance of the mosques. The first to cover the ground in the mosque is described by Ḥadīth to be that of Abū Mālik, which was afterwards the property of Abū ʿAbd Allāh al-Salātī. In the time of Ibn al-Fakhīh, 194, 195; Ibn Dūbayr, 194), a tabūr for alms Maḥbūlī, ii, 44, below), for the bayt al-māl or the property of the mosque (see below). There were also carpets for rose-wreaths (Maddkhali, ii, 50) which were in charge of a special officer. In the Mosque of ‘Amr there was a whole series of tawābitī (al-Makrizī, iv, 9).
preferred the bare ground (Madkhal, ii, 46, 49, 72, 74, 76), as the Wahhabis still do.

h. Lighting. Where evening meetings and vigils were of regular occurrence, artificial lighting became necessary. Al-Azraki gives the history of the lighting of the Meccan Mosque. The first to illuminate the Ka'ba was 'Ukba b. al-Azrak, whose house was next to the Mosque, just on the makām, here he placed a large lamp (masbāh). 'Umar, however, is said previously to have placed lamps upon the wall, which was the height of a man, with which he surrounded the mosque (al-Balādhūrī, 46). The first to use oil and lamps (kandālūd) in the mosque itself was Mu'āwiyah (cf. Ibn al-Fakhī, 20). In the time of 'Abd al-Malik, Khalīd b. 'Abd Allāh al-Kasrī placed a lamp on a pillar of the Zamzam beside the Black Stone, and the lamp of the Azrak family disappeared. In the reign of al-Ma'mūn in 216/851, a lamp-post was put up on the other side of the Ka'ba, and a little later two new lanterns were put up around the Ka'ba. Harrūn al-Raṣādī placed ten large lamps around the Ka'ba and hung two lanterns on each of the walls of the mosque (guwāyif; cf. Ibn Djugārī, Rīhla, 149, 150, 155, 271; van Berchem, CIA, i, no. 506). Khalīd al-Kasrī had the mas'ās also illuminated during the pilgrimage, and in 119/737 the torches called nāfšūd were used in both jedārīd and tawrīd (Madkhal, ii, 54) as ostentatious. At the same time, candles (sham, shama^) or kandālūd already mentioned, hung on chains were kandālūd, which from their shapes were called tannūr (Ibn Djugārī, Rīhla, 200-2, cf. CIA, nos. 502, 506, 507, 511), as, for example, the celebrated candelabrum of the Mosque of Mu'ayyad (al-Makrizī, iv, 137) which was made for the mosque of Ḥasan but sold by it (ibid., 110).

This great interest in the lighting of the mosque was not entirely based on practical considerations. Light had a significance in the worship and Islam here, as elsewhere, was taking over something from the Christian Church. When, in 227/842 the caliph was on his deathbed, he asked that the yulūd should be performed the holy cell, to which light belongs (cf. e.g. the document for al-Malik al-Ashraf's mausoleum, van Berchem, CIA, i, no. 252). But in the mosque generally the use of lights had a devotional significance and lights might be endowed for particular individuals (cf. al-Mukadālī, 74, quoted above). The lamps so given by al-Hākim were therefore placed in the mosques with great ceremony, with blasts of trumpets and beating of drums (Ibn Taghrībirdī, ii/2, 105).

On ceremonial occasions a great illumination was therefore absolutely necessary. In the month of Ramadān, says Ibn Djugārī, the carpets were renewed and the candles and lamps increased in number, so that the whole mosque was a blaze of light (Rīhla, 143); on certain evenings, trees of light were made with vast numbers of lamps and candles and the minarets were illuminated (ibid., 149-51, 154, 155). In the Mosque of the Prophet in the time of al-Sālimūdī, forty was candles burned around the sacred tomb, and three to four hundred lights in the whole mosque (Wüstenfeld, Medina, 100). On the mawlid al-nabi, says Kurb al-Dīn, a procession went from the Ka'ba in Mecca to the birthplace of the Prophet with candles, lanterns (fawānt) and lamps (masbāhūd) (see Chron. Mecca, iii, 439). In the haram of Jerusalem, according to Madjīr al-Dīn, 750 lamps were lit by night and over 2,000 at festivals (Sauvaire, Hist. Jérusalem, 138). In the dome of the Ka'ba al-Sākjā in 452/1060, a chandelier and 500 lamps fell down (ibid., 69); at the taking of the town in 492/1099, the Franks carried off 42 silver lamps, each
of 3,600 dirhams, 23 lamps of gold and a tannur of 40 raths of silver (ibid., 71). It was similar, and still is, in Coptic and other churches in the Musulman world. For the Masdj al-waskh in the Mosque of ʿAmr, 18,000 lamps were made for the Mosque of ʿAmr, and every night eleven-and-a-half litzāns of good oil were used (al-Makrī, iv, 21 and more fully, ii, 345-6). The four “nights of illumination” fell in the months of Raddja and Ḡaḥib, especially nisf Ṣahib (Quatemère, Hist. Sult. Maml., ii/2, 131; cf. also Snouck-Hurgronje, Mecca, ii, 77). In 1908 electric light was introduced into the Mosque of the Prophet (al-Batānūnī, Rihla, 245-6).

(i) Incense. According to some traditions, even the incense burned in the mosque (al-Tirmidhī, i, 116; see Lammens, Recueil d’Archeologie Orientale, vii [1924], 183-228; on the copper candelabra, see A. Wingham, Report on the analysis of various examples of oriental metal-work, etc. in the South Kensington Museum, etc., London 1892; F. R. Martin, Allert Kupferarbeiten aus dem Orient, Stockholm 1902; on glass lamp, see G. Schmoranz, Alterorientalsche Glass-Gießerei, Vienna 1898; van Berchem, CIA, i, 678 ff.; M. Herz Bey, La Mosquee du Sultan Hasan (Comité de Conservation des Monuments de l’Art Arabe), 1889, 8 ff.; see also the Bibliography in Isl., xvii [1928], 217 ff.).

1. Incense. According to some traditions, even the incense burned in the mosque (ibid., i, 116; see Lammens, Moʿawiyah, 367, n. 8) and in the time of ʿUmar, his client ʿAbd Allāh is said to have perfumed the mosque by burning incense while he sat on the minbar. The same client is said to have carried the censer (maḍām: cf. Lammens, loc. cit.) brought by ʿUmar from Syria before ʿUmar when he went to the saḥl in the month of Ramaḍān (A. Fischer, Biographie von Gebrüdernmenn, etc., 55 n.). According to this tradition, the use of incense was adopted into Islam very early as a palatable imitation of the custom of the Church. In keeping with this is the tradition that, in Fustāṭ as early as the governorship of ʿAmr, the mujaddasih was used to burn incense in the mosque (Ibn ʿAbd al-Hakam, 132; cf. Annātī dell’Islam, iv, 565). The Kubbat al-Ṣakhrā Mosque had (in 1899) a great censer in front of the throne which in the consecration ceremony (Sauvage, Hist. Jér. et Hébr., 705). Under the Umayyads, incense was one of the regular requirements of the mosque (ṭīb al-masdjīd al-Ṭabarī, ii, 1234, 10). Muʿawiyah is named as the first perfumer of the Kaʿba with perfume (ḥalalak) and censer (yajaba: Ibn al-Ḥakīm, 20, 12). It became the custom to perfume the sacred tombs with musk and ṭīb (Chron. Mekka, i, 150, 10; Ibn Djbayb, Rihla, 191, 9). Baybars washed the Kaʿba with rose-water (al-Mākri, iv, 96, 14). Incense, as well as candles, was used at burials (cf. de Goeje, ZDMG, lxx [1905], 403-4; Lammens, Moʿawiyah, 436, n. 8). Al-Muʿtāṣim’s desire to be buried with candles and incense (butahir) exactly like the Christians (Ibn Uṣaybiʿa, i, 165, 12 f., cf. above) shows that they were aware that the custom bore much the same relation to the Christian usage as the mosque building did to the church. The consumption of incense in the mosques gradually became very large, especially at festivals (see for the Fātimids, Ibn Taghrībidī, ii/1, 484, 12; ii/2, ed. Popper, 106, 3; al-Mākri, iv, 51; on vessels for holding incense, see the Bibliography in Isl., xvii [1928], 217-18, and Maʿdīn. 4. in Islamic art).

2. Water-supply. Nothing is said of a water-supply in connection with the oldest mosques. The Muʿtaṣim was building a new one in connection with the Zamzam in the year 198/814-15, probably for drinking-water; later (8th/14th century) a large basin surrounded by a railing is mentioned in the centre of the court. It was intended for drinking purposes, but became used for bathing and was therefore removed. Baths and latrines were built anew by al-Nasir’s mother (Wüstefeld, Medina, 69 f.).

In Damascus, where every house, as is still the case, was amply supplied with water, Yākūt (d. 626/1229) found no mosque, madrasa or khānakāh which did not have water flowing into a birka in the saḥn (Yākūt, ii, 590). Ibn Djbayb describes the arrangements in the Mosque of the Umayyads. In the saḥn, as is still the case, there were three kubbas. The centre one rested on four marble columns, and below it was a basin with a spring of drinking-water surrounded by an iron grille. The water flowed into it from a cistern, or “pool” (birkah) about 23 metres (h. 6.3 m. = 20 ft.) in diameter. The “pool” was a Masdjīd al-Kallāsī, in the sahn of which there was again a shariṣ of marble with a
spring (Ibn Dhubayr, Rihla, 267). There was also running water in an adjoining mashhad (269), in the adjoining manzara. The Fatimids had also arranged for drinking water to be led to the fawwdra; there was a birka (basin with a tap) and spring water (269). There were also sikayat against the four outer walls of the mosque, whole houses fitted up with lavatories and closets (273); a century earlier, we are told that at each entrance to the mosque there was a mi'ya' (159). The whole arrangements correspond exactly to those made by Khalid al-Kaari in Mecca in the Umayyad period and must therefore date from the Umayyads.

It was the same in other Syrian and Mesopo-
tian towns. In Samarrâ', al-Mutawakkil built in his new djami a fawwdra with constant running water (al-Yâkubî, Bulânî, 265). In Nisâbûn, the river was led through the sahn of the mosque into a shrîj; there was also a şirîj at the eastern entrance with two şirîjâ in front of the mosque (Ibn Dhubayr, Rihla, 239). In Mawsil in the mosque, which dated from the Umayyad period, there was a spring with a marble cupola over it (ibid., 235). In Harran, there were in the sahn three marble kubbas with a bi'āt and drinking water (ibid., 246), in Aleppo, two (ibid., 253). In Kufa, there were three hawdâ with Euphrates water in front of the Djami (ibid., 212), but in the mosque of a covering already in existence for the water (Yâkût, iv, 325, 326, here called târnâ; cf. Ibn al-Fakhî, 173, Ibn Dhubayr, 89, 267). It was the same in Amid (Nâsîr-i Khusrâw, ed. Schefer, 28) and in Qarânj in Sîđistân (Ibn Hawkal, 298-9). The principal mosques of 'Irâk had mayâdâ at the entrances, for which, according to a remarkable note by al-Mukaddasî, rents were paid (129, read kadîst; cf. mazâ'ib; Ibn Dhubayr, 89). In Fâliûn also, in al-Mukaddasî's time there were conveniences for ab-
lations at the entrances to the djamiâ (matâhk: 182; mayâdâ; al-Istakhri, and in Sa'nâ in the 4th/10th century, beside each mosque, there was water for drinking and for wudû (Ibn Rusta, 111). In Persia also, it was the custom to have a hawd in front of the mosque (al-Mukaddasî, 318) and there was drinking water in the mosque itself on a bench (kari) in iron jar in the djamiâ (ibid., 327). Not only at the Zamzam well but also in the mosques of 'Irâk, men were appointed whose duty it was to distribute drinking-water (al-Tabârî, iii, 2165). The regular custom, therefore, was to have at the entrance to, or in front of the mosque, conveniences for wudû, and in the court of the mosque itself a fountain as the traditional ornament and for drinking water. It was the exception for the wudû to take place in the mosque itself.

In Egypt, at first the Mosque of Ibn Tulûn was arranged similarly to the Syrian mosques. In the cen-
tre of the sahn there was a gilt dome, supported by six
teen marble columns and surrounded by a railing. This upper storey was supported by nineteen marble columns and below was a marble basin (birka) with a running fountain (fawwdra); the âdâm was called from the dome (al-Makrizî, iv, 37; the description is not quite clear). People complained that there were no arrangements for washing (mi'âda) there. Ibn Tulûn replied that he had not made them because he had concluded the mosque would be polluted thereby. He therefore made a mi'âda with an apothecary's shop behind the mosque (ibid., 38, 39; al-Suyûtî, ii, 139; Ibn Taghirî, ed., iii, 10). This suggests that previously in Egypt, the washing arrangements had been made directly connected with the mosque. After the fire of the year 376/986-7, the fawwdra was renovated by al-'Azîz (al-Makrizî, iv, 40), and again in 696/1297 by Lâdîn, whose inscription still exists (CIA, i, no. 16). A new mi'âda was built in 792/1390 beside the old one on the north, outside the mosque (al-Makrizî, iv, 45).

The Mosque of Amr first got a fawwdra in the time of al-'Azîz. In 378-9/998-9 his vizier Ya'qûb b. Kiliis installed one in the cupola, already in existence for the bayt al-mâl. Marble jars were put there for the water (probably drinking-water) (al-Makrizî, iv, 9, 11; cf. al-Suyûtî, ii, 136; Yâkût, iii, 899). A new water basin was installed by Sa'd al-Dîn beside his manzara in the mosque. The water was led to the fawwdra at-fiskiyya from the Nile. This was prohibited in the reign of Baybars al-Bundûkdhârî (658-76/1260-77) by the chief kâdi, because the building was being affected by it (al-Makrizî, iv, 14; al-Suyûtî, ii, 137). The amir, who restored it, brought the water for the fiskiyya from a well in the street (al-Makrizî, iv, 15).

Like Ibn Tulûn, the Fâtimids do not seem to have considered the mi'âda indispensable. For the Azhar Mosque had originally no mi'âda; as late as al-
Hâkim's waqfî document for the provision of mi'âda, money is given only with the provision that something of the kind should be made (al-Makrizî, iv, 51, 54).

A later date we hear of two mi'âda's, one at the adjoining Aḫbâghîwîyya (ibid., 54). On the other hand, there was already a fiskiyya in the centre of the mosque (ibid., 57), and it had been replaced by a new one not known. It had disappeared, when traces of it were found in 827/1424 in laying-out a new şirîj (ibid., 54). The fiskiyya of the Mosque of al-Hâkim was not erected by the founder. Like that of the Mosque of ʿAmr, it was removed in 660/1262 by the kâdi Taḍî al-
Dîn, but after the earthquake of 702/1302-3, it was again rebuilt and provided with drinking-water from the Nile (ibid., 56, 57) and again renovated after 780/1378 (ibid., 61). A small mi'âda, later replaced by another, was in the vicinity of the entrance (ibid., 61).

Other Fâtimid mosques had basins in the sahn, which were supplied from the Nile and from the Khalîlî (ibid., 76, 81, 120).

The traditional plan was retained in the period following also. For example, we know that the amir Tughdân in 815/1412 placed a birka in the centre of the Djami al-Masjid in al-Makridiyya (ibid., 56, 57) and again renovated after 780/1378 (ibid., 61). A small mi'âda, later replaced by another, was in the vicinity of the entrance (ibid., 61). Other Fâtimid mosques had basins in the sahn, which were supplied from the Nile and from the Khalîlî (ibid., 76, 81, 120).

The importance of the birka of the mosque, as a drinking-place, diminished as pious founders erected drinking fountains everywhere (cf. for Mecca, Chron. Mekka, ii, 116-18; also BGA, Glossarion, 211, s.v. habb; 258, s.v. sâhid) and especially when it became the custom to build a sâhid with a boy's school in part of the mosque (see below, i, 4, 2). A hawd for watering animals was also sometimes built in the vicinity of the mosque (al-Makrizî, iv, 76). Sometimes also the birka of the sahn was used for washing. In the year 799/1397 the amir Yalbughâ made arrangements for this in the Akmâr mosque so that one could get water for wudû from taps from a birka put up in the sahn (al-Makrizî, iv, 76). Al-Makrizî condemns this addition, but only because there was already a mi'âda in the mosque, and whether it had existed from the first is not clear (ibid.), and not on grounds of principle; and it was only because the wall was damaged that the amir's gift was removed in 815/1412 (ibid., 77). The custom of
using the water supply of the ǧāmāʿ for ṭuḥūţ survived in many places in Egypt. The arrangements were therefore usually called miḍa‘a or rather miḍā (which is not found in the inscriptions). If they had taps, they were called hanāfyya; according to Lane’s suggestion, because the Hanafis only permitted ablutions with running water or from a cistern 10 ells broad and deep (Lexicon, s.v.; cf. Manners and customs. Everyman’s Library, 69; cf. on the question M. Herz, Observations critiques sur les bassins dans les ḫāṭerān des mosquées, in BIE, i/1/7 [1896], 47-51; idem, La mosquée du Sultan Hasan, 2; Herz wrongly dates the modern usage from the Turkish conquest in 923/1517). In quite recent times, the miḍa‘as have often been moved outside to special buildings. Ibn al-Hāḍījī in his Masjidīn, 668, 59, 66 (Ed. Widow, 2004, 58, 69, 99 below).

E. The mosque as a state institution.

1. The mosque as a political centre. Its relation to the ruler. It was inherent in the character of Islam that religion and politics could not be separated. The same individual was ruler and chief admistrator in the two fields, and the same building, the mosque, was the centre of gravity for both politics and religion. This relationship found expression in the fact that the mosque was placed in the centre of the camp, while the ruler’s abode was built immediately adjacent to it, as in Medina (and in Fustat, Damascus, Baṣra, Kufa). We can trace how this dār al-imāra or Ǧārū (so for Kufa: al-Tabarī, ii, 230-1; Ǧārū al-imāra, ibid., 234) with the growth of the mosque gradually became incorporated in it at Fustat and Damascus and was replaced by a palace. The tradition remained so strong that, in Cairo, when the new chief mosque Dār al-Imāra was being in 169/785-6, a Dār Ulmarā Ǧīṣr was built beside it with direct access to the mosque (al-Makrizī, iv, 33-4), and when Ibn Ṭulūn built his mosque, a building called the Dār al-Imāra was erected on its south side, where the ruler, who now lived in another new palace, had rooms for changing his robes, etc., from which he could go straight into the māqṣūra (ibid., 42).

The ʿAbbasids at the foundation of Baghdād introduced a characteristic innovation, when they made the palace the centre of the city; the case was similar with Fatimid Cairo; but Sulaymān b. ʿAbd al-Malik in Ramla had already built the palace in front of the mosque (al-Baladhuri, 143). Later rulers, who no longer lived just beside the mosque, had special balconies or something similar built for themselves in or beside the mosque. Šalāb al-Din built for himself a māqṣūra under the great minaret of the mosque of ʿAmar (al-Makrizī, iv, 13; al-Suyūṭī, ii, 137) and just to the south of the Azhar mosque, the Fāṭimids had a māqṣūra from which they could overlook the mosque (al-Makrizī, ii, 345).

The caliph was appointed leader of the ǧāmāʿ and the leader of the Muslim community. The significance of the mosque for the state is therefore embodied in the minbar. The installation of the caliph consisted in his seating himself upon this, the seat of the Prophet in his sovereign capacity. When homage was first paid to Abī Bakr by those who had decided the choice of the Prophet’s successor, he sat on the minbar. ʿUmar delivered an address, the people paid homage to him and he delivered a khutba, by which he assumed the leadership (Ibn Hīšām, 1017; al-Ṭabarī, i, 1828-9; al-Diyārībāri, ii, 75; al-Yaḥyābī, Taḥārī, ii, 142); it was the same with ʿUmar and ʿUṯmān (ibid., 157, 187).

The khutba, after the glorification of God and the Prophet, contained a reference to the caliph’s predecessor and a kind of formal introduction of himself by the new caliph. It was the same in the period of the Umayyads and ʿAbbasids (see for al-Walīd, al-Ṭabarī, ii, 1177 ff.; al-Amin, ibid., i, 764; al-Mahdī, ibid., i, 398, 454, 457; cf. on this question also al-Bukḥārī, Aḥkām, bāb 43). The minbar and the khutba associated with it was still more important than the imāmāte at the salāt, it was minbar al-mulk (Ḥamāda, ed. Freytag, 656, v, 4). According to a hadīth, the Prophet carried the little Ḥasan up to the minbar. It was the same with ʿAbd Allāh al-Maʾmūn and the deposition of Muḥammad al-ʿĀmin (al-Ṭabarī, iii, 861-2; cf. for al-Mahdī: ibid., 389).

There are other cases in which the solemn deposition of a ruler took place on or beside the minbar (Aḥqāḥi, i, 12; Wūstenfeld, Medīna, 15). Even at a much later date, when spontaneous acclamation by the populace was no longer of any importance, the installation on the minbar was still of importance (al-Makrizī, iv, 94). It had become only a formality but still an important one. Homage was paid to the ʿAbbasid caliphs in Egypt in the great ṭawāqūf of the palace or in a tent in which a minbar had been put up, and similarly to the sultans whose investiture was read out from the minbar (cf. Quatremère, Hist. Sult. Maml., i/1, 117, 149 ff., 183 ff.). If one dreamt that he was sitting on the minbar, it meant that he would become sultan (ibid., i/2, 103). The ʿAbbasid caliph had, however, long had his own throne after the old Persian fashion in his palace (Ps. al-Dīnābādī, al-Tādīfī, al-Halbī, al-Mulkī, ed. Ahmad Zaki, Cairo 1914, 7 ff.; tr. Pellat, Le livre de la couronne, Paris 1954, 35 ff.) and so had the Fāṭimids (Ibn Ṭabhrībīh, ii/1, 457) and the Mamluks (Quatremère, op. cit., i/1, 87; cf. 147). When later we find mention of the kursī l-ʾkhudūfa (van Berchem, CJA, i, no. 33), sarīr al-mulk (Chron. Mecca, iii, 115), sarīr al-saltana (al-Makrizī, ii, 157; cf. al-salīr, royal throne: Ibn Ḥawkāl, 282, 285; kursī similarly: cf. Ibn ʿArabīsh, Viva Timurī, ed. Manger, ii, 186) or marbat al-mulk (Quatremère, op. cit., i/2, 61), the reference is no longer to the minbar. This does not mean that the ruler could no longer make public appearances: thus 648/1250, al-Muʿizz Aybak regularly gave audiences on the Ǧāmāʿ al-ṭalīḥīyya (Quatremère, Hist. Sult. Maml., 17) and
memorial services for Baybars were held a year after his death in several mosques, madrasī and khawdnik in Ceylon (ibid., ii/1, 101; ii/2, 341). The caliph spoke chiefly from the minbar of the capital, but when he made the pilgrimage he also spoke from the manābir in Mecca and Medina (cf. e.g. al-Ṭabarî, ii, 1234; al-Yaḳūbî, ii, 341, 501; Chron. Mecca, i, 160). Otherwise, in the provinces, the governor stood in the same relation to the mosques as the caliph in the capital. He was appointed "over salāt and sword" or he administered "justice among the people" and the salāt (al-Ṭabarî, iii, 860), he had "province and minbar" under him (ibid., ii, 611), al-urāyf was l-khutba (al-Mukaddasî, 337). Speaking from the minbar was a right which the caliph had delegated to him and it was done in the name of the caliph. 4Amr b. al-ʿĀṣ therefore refused to allow people in the country to hold ḥajjâma except under the directions of the commander (al-Makrīzî, iv, 7). This point of view was never quite abandoned. The khutba was delivered "in the name of" the caliph (ibid., 94) or for him (lahâ, ibid., 66, 74, 198; Ibn Taghrībirdî, i/1, 85 below; al-Mukaddasî, 485 above), and in the same way an amir delivered a khutba for a sultan (al-Makrīzî, iv, 213, 214). The sultan did not have the "secular" and the caliph the "spiritual" power at the same time. 5Anam al-Malik asked from the khwādnik his death in several mosques, and sword" or he administered "justice among the people" (al-Yaḳūbî, ii, 341; al-Ḥadīdī, ii, 254). Salāt and sword were thus closely associated in reality.

It thus came to be the custom for the enemies of the ruler and his party to be cursed in the mosques. This custom continued the old Arab custom of regular campaigns of objurgation between two tribes, but can also be paralleled by Byzantine ecclesiastical anathematization of heretics (cf. Becker, Islamstudien, i, 485. Zur Gesch. d. islamischen Kultus).

The first to introduce the official cursing of the ʿAlids from the minbar of the Kaʿba is said to have been Khalîd al-Kasîrî (Chron. Mecca, ii, 36). The reciprocal cursing of Umayyads and ʿAlids became general (cf. al-Ṭabarî, ii, 12, 4; Ṭaḥârî, x, 102; Ibn Taghrībirdî, 248; see also Islamstudien, Meśâvi, 180-1). Like the blessing upon the ruler, it was uttered by the kusâs (al-Makrīzî, iv, 16); it was even recorded in inscriptions in the mosque (Ibn Taghrībirdî, ed. Popper, ii/2, 63, 64; cf. also Mez, Renaisance, 61. Eng. tr., 64). As late as 284/897, al- OVERRIDEword Maṭmîd wanted to restore the anathematisation of Muʿawiya from the minbar but abandoned the idea (al-Ṭabarî, iii, 216). Another type occurred upon other occasions, for example, Sulaymân had al-Ḥadīdī cursed (Chron. Mecca, ii, 37), and al-Muʿtamid had Ibn Tūlûn solemnly cursed from the manābir (al-Ṭabarî, iii, 2048, 5 ff.); and other rulers had Muʿtâzili heretics cursed from the pulpite (see Mez, op. cit., 198, Eng. tr. 206; cf. against Ibn Taymiyya, Quatremère, Hist. Sult. Maml., ii/2, 256). Ibn Baṭṭûtâ describes the tumultuous scuffle with thousands of armed men uttering threats in the mosque in Baghdad when a Shiʿî kāhîb was on the minbar (ii, 58).

It was very natural to mention with a blessing upon the ruler in whose name the Friday khutba was delivered. Ibn ʿAbbas, when governor of Baṣra, is said to have been the first to pronounce such a duʿâ over ʿAli (Ibn Khālid, Mukaddima, fskl 37, end); it is not improbable that the custom arose out of the recurrent cursing in mosques of Umayyads and the kusâs, who had to curse the ʿAlids in the mosques, used to pray for the Umayyads (al-Makrīzî, iv, 17). Under the ʿAbbâsids, the custom became the usual form of expressing loyalty to the ruler (Ibn Taghrībirdî, ii/1, 151). After the caliph, the name of the local ruler or governor was mentioned (ibid., 156, 161); even in Baghdadî in 399/795-80 by order of the caliph al-Taʾṣî, the actual ruler ʿAbd al-Dawla was mentioned in the duʿâ (Ibn Miskawayh, vi, 499; ed. Cairo 1915, 396) and the Buṭyids, according to al-Mukaddasî, were generally mentioned in the khutba even in the remotest parts of the kingdom (this is evident from the above-mentioned expression khutba lalu, for which we also find ʿalâsh: Ibn Ḥakâwî, 20; al-Mukaddasî, 337, 338, 400, 472, 485; cf. Glossarium, s.v.). There is also evidence that prayers used to be uttered for the heir-apparent (al-Makrīzî, iv, 37; Kitâb al-Wuzara, ed. Amenroz, 420). Under the Mamlûks also, the sultan's heir was mentioned (Quatremère, Hist. Sult. Maml., ii/1, 101; ii/2, 3). Under the Fâtimids, it was even the custom to call salām upon the ruler from the minaret after the adhān al-fajr (al-Makrīzî, iv, 45); this also took place under the Mamlûks, e.g. in 696/1297, when Lâḏûn was elected, or even earlier, in 691/1292, under the Mamlûk of Egypt and Syria, adhān al-fajr; this was repeated in the mosque (Quatremère, Hist. Sult. Maml., ii/2, 45). The prayer for the sovereign in the khutba did not find unanimous approval among the learned (see Snouck Hurgronje, Verstreide Geschriften, ii, 214-15).

In general, the mosque, and particularly the minbar,
was the place where official proclamations were made, of course as early as the time of the Prophet (al-Bukhari, Salat, b. 70, 71), 'Uthman's bloodstained shirt was hung upon the minbar (al-Tabari, i, 3255); messages from the caliph were read from it (ibid., iii, 2084). Al-Walid announced from the minbar the deaths of two distinguished governors (Ibn Taghribirdi, ii, 242); the results of battles were announced in khotas (Yaqut, i, 647; al-Istalfi, Cairo 1321, ii, 149-50). In the Fātimid and 'Abbāsid periods also, proclamations, orders, edicts about taxation, etc., were read on the minbar. Thus al-Maqrizi, in his work on the principal mosque on special occasions, states (al-Maqrizi, ii/2, 49; iv, 13; al-Suyūṭī, 267; Yākūt, iii, 899). Al-Kindī records an attempt to steal the chest in 145/762 (al-Kindī, 112-13). In the disturbed period around the year 300/912, the wailāt al-Nūgārī closed the mosque between the times of salāt for the safety of the chest, which was also done in Ibn Rusta's time (al-Kindī, Wulāt, 266; Ibn Rusta, 116). New approaches to the bayt al-māl were made in 422/1031 from the khāzīnā of the mosque and from the Diwan (al-Maqrizi, iv, 13).

Ibn Kūfa, the bayt al-amūsil, at least during the early period, were in the Dār al-Imāra (al-Tabari, i, 2489, 2491-2); in the year 38/658-9, during the fighting, it was saved from Baṣra and taken with the minbar to the Mosque of al-Hudhdān (ibid., 3414-15). In Palestine, in the chief mosque of each town, everywhere introduced (184); in Iranshahr, in the time of al-İstakhrl, the Syrian custom had been everywhere introduced (184); in İran-hār, in the centre of the court, there was a building with marble columns and doors (al-Madsī, 246). In Armenia, it is recorded that the bayt al-māl was kept in the Diwānī in the time of the Umayyads as in Miṣr and elsewhere (Ibn Hawkal, 241). The khub was usually of lead and had an iron door. Ibn al-Ḥadīd considers it highly illegal to shut off a diwan in a mosque, since this is the same as forbidding entrance to it. This shows that the custom still survived in his time. Ibn Diubayr's remark about Ḥarrān suggests that here again we have an inheritance from Byzantium. It was probably the building belonging to the piscina (cf. above) that the Muslims put to a practical use in this way. For the Byzantines had the treasury (skeleto) in the palace, and it is doubtful if the treasury-chambers of the church (skenophylakion) were built in this way (cf. F. Dölger, in Byzantinisches Archiv, Heft 9 [1927], 26, 34).

3. The mosque as a court of justice. That the Prophet used to settle legal questions in his mosque was natural (see al-Bukhari, Aḥkām, b. 19, 27; Ibn Ḥajar, 116). It was a court where church officials could also deliver judgments in other places (ibid., passim). In Ḥadīth, it is recorded that some kādig of the earlier period (Shurayh, al-Shābi, Yabā b. Ya'far, Marwān) sat in judgment beside the minbar, others (al-Ḥasan, Zurā'a b. Awfā) on the open square beside the mosque (al-Bukhari, Aḥkām, b. 18). The custom had all the better chance of survival, as churches were used in the same way (Joshua Stylites, ed. Wright, ch.
Sitting in judgment was primarily the business of the ruler, but he had to have assistants and Abū Bakr’s kādi is mentioned as assisting ʿUmar (al-Ṭabarī, i, 2135), and a number of judges appointed by ʿUmar are mentioned (Ibn Rusta, 227). In the reign of ʿUṯmān, ʿAbd Allāh b. Masʿūd is said to have been judge and financial administrator of Kūfa (Ibn Kutayba, Maʿārif, ed. Wüstenfeld, 128). On the other hand, we are told that ʿAbd Allāh b. Nawfal, appointed by Marwān in 62/622, was the first kādi in Islam (al-Ṭabarī, i, 2477), it is recalled that in the year 132/749-50 the kādi of Medina administered justice in the mosque (ibid., 2505). In Baṣra, we are told that al-ʿAwdāw b. Ṣaʿīd al-Tamīmī immediately after the building of the mosque (i.e. in the year 14/635) worked in it as kādi (al-Baladhūrī, 346). In the early period, ʿUmar wanted to choose a kādi, who had been already acting as a judge before Islam (al-Kindī, Ṭalātī, 301-2; al-Suyūṭī, ii, 86). Even the Christian poet al-ʿAlḥṭāl was allowed to act as arbiter in the mosque of Kūfa (see Lammens, Moʿādwa, 435-6).

In Fustat, as early as 23/643 or 24/644 by command of ʿUmar, ʿAmr b. al-ʿĀṣ appointed a kādi named ʿAṣā (al-Suyūṭī, ii, 86; al-Kindī, 300-1). The kādi held his sessions in the Mosque of ʿAmr but not exclusively. The kādi Muhammad b. Khayyāt (d. 120/738-45) held his sessions sometimes before his house, sometimes in the mosque, and for Christians on the steps leading up to the mosque (al-Kindī, 351-2). A successor of his (177-8/793-800) invited Christian judges who had lawsuits into the mosque to be heard (ibid., 391); of another judge (205/820-6) it is recorded that he was not allowed to sit in the mosque (ibid., 428). It seems that the kādi could himself choose where he would sit. A judge, officiating in the year 217/832, sat in winter in the great pillared hall, turning his back towards the kibāl wall, and in summer, in the sahn near the western wall (ibid., 443-4). During the Fāṭimid period, the subsidiary building on the north-east of the Mosque of ʿAmr was reserved for the kādi. This judge, from the year 376/980 onwards ḫāṣa kādi (cf. al-Suyūṭī, ii, 91; al-Kindī, 590), sat on Tuesday and Saturday in the mosque and laid down the law (al-ʿAḍrā’, ii, 246; iv, 16, 22; cf. al-Kindī, 587, 589; cf. Nāṣīr-i ʿAlawī, tr. Schefer, 149).

In al-Yaʿqūbī’s time in Baghdaḏd, the judge of the city used to sit in its chief mosque (al-Bulūḏ, 245), in Damascus the vice-kādi in the 4th/10th century had a special rūṭā in the Mosque of the Umayyads (al-Mukaddasī, 158), and the notaries (al-sharīʿayn) also sat at the Mosque of the Umayyads at the Bāb al-Salāt (ibid., 17). In Nāṣīr, every Monday and Thursday, the magdīs al-bukm was held in a special mosque (ibid., 328). In course of time, the judge was given a magdīs al-bukm of his own (cf. al-Suyūṭī, ii, 96), and in 279/892 al-Muʿtaḍād wanted to forbid the kādīs to hold sessions in the mosque (Ibn Ṭabarī, i, 87 above; perhaps, however, we should read ṫāṣ: see Goldzhder, Muh. Stud., ii, 164, n. 4). Justice was also administered in the dār al-sal (Quatremère, Hist. Sult. Mam., ii, 79). But the administration of justice did not end in the mosque. Even outside the mosque walls under the Fāṭimids, the custom had been introduced that the kādi should hold sessions in his house, but Ibn al-ʿAḍrā’, appointed just after 400/1009-10, held them either in the ḡāna at the Bayt al-Māl or in a side-room (al-Kindī, 612; cf. Ibn Ṭabarī, ed. Popper, ii, 69; al-Kalākhandī, Subḥ al-aʿṣā, iii, 487; for 459/1066, see Nāṣīr-i ʿAlawī, ed. Schefer, text, 51, tr. 149). In Mecca, the dār al-kādi was in direct connection with the mosque (Ibn Ḏubayr, 104). In the 8th/14th century, Ibn Ṭabṭābā joined a court presided over by an eminent jurist in a mosque (madrasa) in Ṣirāz (ii, 56, 63; cf. al-Maḍāhī, ii, 54 below), and in Damascus the ʿṢāḥib al-ʿAḍrā’ himself held his sessions in the Ṣāḥibiyā Madrasa (so Ibn Ḏahlīkān, in Quatremère, Hist. Sult. Mam., ii, 22, cf. also for Egypt: ibid., 87, ii/2, 235). The vice-kādīs sat in the Ẓāhiryya Madrasa (Ibn Ṭabṭābā, i, 218). The judgment might even be put into execution in the madrasa (ibid., 220). During the Mamluk period in Egypt, we occasionally find a small mosque being endowed (al-Maḍāhī, ii, 270; Ibn Dhūmāk, 98 above); Ibn Ḏahlīkān held legal sittings in the Madrasa al-Ṣāḥibiyā (ʿErb, vii, 453).

A mufīj, especially in the large mosques, was also frequently appointed; he sat at definite times in a baḥkā liʿfawāʾi, e.g. in Cairo (al-ʿAzwānī, in al-Suyūṭī, i, 182; ʿDjalāl al-Dīn, ibid., 187), in Tunis (al-Zarkaqqī, Chronicle, in Fāṣī, tr. Faghīrī, in Rec. Mon., Soc. Arch. Cent. Arch. Correspond., xxi [1895], 197, 202, 218, 248). In Baghdaḏd, Abū Bakr al-Dīnawarī (d. 405/1014-15) was the last to give fawāʾi in the Mosque of al-Ṣāḥib according to the magdīs al-mīḥf of Sufyān al-Ṭawrī (Ibn Ṭabṭābā, ed. Popper, ii, 120).

The administration of the mosque

I. Finance. The earliest mosques were built by the rulers of the various communities, and the members of the community did all the work necessary in connection with the primitive mosques. The later mosques as a rule were erected by rulers, amirs, high officials or other rich men in their private capacity and maintained by them. The erection of the mosque of Ibn Ṭullūn cost its builder 120,000 dinārs, the Mosque of Muʿayyad 110,000 (al-Maṭṭāri, 114; al-Ṭabarī, i, 2135). The upkeep of the mosque was provided for by estates made over as endowments (wakf, ḥabs) (cf. thereon besides the fīḥk books, I. Krcsmar, Das Wakfrecht, in ZDMG, xlv [1891], 511-76; E. Mercier, Le code du hbeus ou ouakf selon la législation musulmane, 1899). In the 3rd/9th century we thus hear of houses which belonged to the mosque, and were let by the Madrāsis: Ezherszeg Rainer, Fichte, nos. 773, 837), and Ibn Ṭullūn handed over a large number of houses as an endowment for his mosque and hospital (al-Matrīzī, iv, 83). This custom was taken over from the Christians by the Muslims (see Becker, in Ist., ii [1911], 404). According to al-Maṭṭāri, estates were not given as wakf endowments until Muḥammad Abū Bakr al-Maḍāhī (read thus) bequeathed Birkaṭ al-Habāsh and Suyūṭ as endowments (about 300/912-13; this was however cancelled by the Fāṭimids again (ibid.). Al-Hākim made large endowments not only for his own, but also for mosques previously in existence, such as the Azhar, al-Hākimī, Dār al-Ḥāflahī al-Mtasī and Dāmī Dālghidā; the endowments consisted of dwelling-houses, shops, mills, a kādariyya and baḥsāʾi, and the document (ibid., 50-1) specifies how and for what purposes the revenues are to be distributed. Baths were also given as endowments for mosques (ibid., 76, for 529/1135; cf. 81 for the year 543/1148-9). Saḥāl al-Dīn granted lands to his madrasa: in 566/1170-1, for example, a kāsīriyya to the Kamhātī Madrasa, and in 568/1172-3, the teachers received wheat from al-Fayyūm; in the same year he endowed the Nāṣīrīyya with goldsmiths’ shops and a village (ibid., 193-4; cf. another document, 196-7). During the Mamluk period also, estates were given as endowments (for documents of this period, see van Berchem, C.I.A., i, nos. 247, 252, 528; Moberg, in MO, xii [1918], 1 ff.; J.A., ser. 9, iii, 264-6; ser. 11, x, 158 ff., 222 f.; xii, 195 ff., 236 ff.). They
were often a considerable distance apart: the mosques in Egypt often had estates in Syria (van Berchem, CIA, i, no. 247; al-Makrizi, vi, 107, 137). Not only were mosques built and endowed, but already existing ones were given new rooms for teachers, minbars, stipends for Kur'an reciters, teachers, etc. There were often special endowments for the salaries of the imam and the mu'adhdhins, for the support of visitors, for blankets, food, etc. (see Ibn Djubayr, 277 with reference to the Mosque of the Umayyads). The endowments, and the purpose for which they might be used, were precisely laid down in the grant and the document attested in the court of justice by the kadi and the witnesses (cf. al-Makrizi, iv, 50, 196 below).

The text was also often inscribed on the wall of the mosque (cf. ibid., 76; the above-mentioned inscriptions amongst others. For documents from Tadhkent, see RMM, xiii [1911], 278 ff.). Certain conditions might have been laid down e.g. that no Persian or Jews should be appointed there (al-Makrizi, iv, 202 below), or that the teacher could not be dismissed or some such condition (van Berchem, CIA, i, no. 201); that no women could enter (JA, ser. 9, iii, 389); that no Christian, Jew or Hanbali could enter the building (ibid., 405); etc. Endowments were often made with stipends, and the purpose for which they might be used, were also precisely laid down in the grant and the document attested in the court of justice by the kadi and the witnesses (cf. al-Makrizi, iv, 50, 196 below).

Just as the bayt al-mal of the state was kept in the mosque, so was the mosque’s own property kept in it, e.g. the maleKBa'abSahib, which al-Hakim paid the descendants of Ibn Tulun (al-Makrizi, iv, 89); in the Akbughawiyya, the Shafi'is kadi was appointed but his successors were also found, however, in which descendants of the founder successfully claimed the office of nåzir (al-Makrizi, iv, 218, 255). This was the result of the increasing power of the kadi (see below).

A. Administration. As İmām of the Muslim community, the caliph had the mosques under his charge. This was also the case with the sultan, governor or other ruler who represented the caliph in every respect. The administration of the mosques could not however be directly controlled by the usual government offices. By its endowment, the mosque became an object sui generis and was withdrawn from the usual state or private purposes. Their particular association with religion gave the kadi special influence, and, on the other side, the will of the testator continued to prevail. These three factors decided the administration of the mosque, but the relation between them was not always clear.

1. Administration of the Separate Mosques. The mosque was usually in charge of a nåzir or wali who looked after its affairs. The founder was often himself the nåzir or he chose another and after his death, his descendants took charge or whoever was appointed by him in the foundation charter. In the older period, the former was the rule and it is said to have applied especially in the case of chief mosques, if we may believe Nāṣir-i Khurasān, according to whom al-Hākim paid the descendants of Ibn Tulun 30,000 dinārs for the mosque and 5,000 for the minaret, and similarly to the descendants of Amr b. al-As 100,000 dinārs for the mosque of Sufa (Sarfānuma, ed. Scheler, text 39-40, tr. 146, 148). In 378/988 we read of an administrator (mutawalli) of the mosque in Jerusalem (al-Makrizi, iv, 11). In the case of mosques and madrasa founded during the Mamlûk period, it is often expressly mentioned that the administration is to remain in the hands of the descendants of the founder, e.g. in the case of a mosque founded by Baybars (al-Makrizi, iv, 89), in the Dā'imis Máks when the vizier al-Maški renovated it (ibid., 66), the Sāhibiyā (ibid., 205), and the Karāsuntkuriyya (ibid., 292), etc.; so also in the Badriyya in Jerusalem (“to the best of the descendants”, cf. van Berchem, CIA, i, ii, 192). Other cases are also found. Sometimes an amir or official was an administrator, e.g. in the Mu'ayyad (al-Makrizi, iv, 140), the Taybarsiyā (ibid., 224), the Azhar (ibid., 54-5) or the Mosque of Ibn Tūlūn (al-Kalkashandi, Bayt Mdl al-Djami el-Askariyya, ed. Enger, 172 above, 176 above).

In Tustar, a descendant of Sahl as-Sāhibiyā and was therefore also the leading professor; the two offices were hereditary (ibid., 204, the Sāhibiyā al-Bahā'iyā; and 238 above, the Djamal-iyā). In Tustar, a descendant of Sahil al-nāzir and teachers had a madrasa, with the help of four slaves (Ibn Bāṭtūta, ii, 25-6).

The nåzir managed the finances and other business of the mosque. Sometimes he had a fixed salary (in Baybars' khanakāh, 500 dinārs a month, van Berchem, CIA, i, 252; in the Dulāmīyā in Damascus in 347/1443-4, only 60 dinārs a month, JA, ser. 9, iii, 261), but the revenues of the mosque were often applied to his personal use. His control of the funds of the mosque was however often limited by the central commission for endowments (see below). The nåzir might also see to any necessary increase of the endowments. He appointed the staff and he fixed their pay (cf. e.g. al-Makrizi, iv, 41). He could also interfere in the affairs of the madrasa, on the other side of administration; for example, the amir Sawdāb, the nåzir of the Azhar in 818/1415-16, ejected about 750 poor people from the mosque. He was however thrown into prison for this by the sultan (ibid., 54).

Generally speaking, the nåzir's powers were considerable. In 784/1382 a nåzir in the Azhar decided that the property of a muqāwar, who had died without heirs, should be distributed among the other students (ibid., 54).

In Mecca, according to Kūtib al-Dīn, the
Nāżir al-Hārām was in charge of the great festival of the mawlid of the Prophet (12 Rabī‘ I) and distributed robes of honour in the mosque on this occasion (Chron. Mecca, iii, 349). In the Azhar, no Nāżir was appointed after about 493/1100 but a learned man was appointed Shaykh al-Azhar, principal and administrator of the mosque (Sulaymān Rāsād al-Zayyātī, Kanz al-ażhāre fī ta’rīkh al-Azhar, 123 ff.). Conditions were similar in Mecca in the late 19th century (Snouck Hurgronje, Mecca, ii, 235-6, 252-3).

Nāżir al-Hārām was in charge of the great festival of the mawlid of the Prophet (12 Rabī‘ I) and distributed robes of honour in the mosque on this occasion (Chron. Mecca, iii, 349). In the Azhar, no Nāżir was appointed after about 493/1100 but a learned man was appointed Shaykh al-Azhar, principal and administrator of the mosque (Sulaymān Rāsād al-Zayyātī, Kanz al-ażhāre fī ta’rīkh al-Azhar, 123 ff.). Conditions were similar in Mecca in the late 19th century (Snouck Hurgronje, Mecca, ii, 235-6, 252-3).

This was especially the case in the madārīs, where the kāfīs were often teachers (cf. al-Makrīzī, iv, 209, 219, 222, 238, etc.); the kāfīs were particularly anxious to get the principal offices in the large schools (cf. Kalkaşhanı, xi, 235). Their influence was however further increased by the fact that, if a Nāżir qualified by the terms of the founder’s will no longer existed, the kāfī of the madhīb in question stepped into his place (cf. ZDMG, xlv [1897], 552). By this rule, which often gave rise to quarrels between the different kāfīs (e.g. al-Makrīzī, iv, 218, the Zāhīriyya), a kāfī could accumulate a larger number of offices and “milk the endowments” (ibid., i, 364). Sometimes their management was so ruthless that the schools soon declined (e.g. the Shāhīyya and the Djamāliyya, al-Makrīzī, al-Mihār, 204-5, 236). They also exercised influence through the committee of management of the mosque.

b. Centralisation in the management of the mosques. The large mosques occupied a special position in the Muslim lands, because the caliph had to interest himself particularly in them, especially those of Mecca and Medina, where the rulers and their governors built extensions and executed renovations (cf. Chron. Mecca, i, 145; iii, 83 ff.). During the ‘Abbasid period, the kāfī occasionally plays a certain charge of the work (ibid., i, 312; ii, 43). In 263/877, al-Muwaffak ordered the Tulunid mosque, a commission was appointed to take charge of the repairs of the mosques to certain amirs, one to each (al-Makrīzī, iv, 21-2). But at a quite early date they were much reduced. The sultan would forbade the kāfīs to settle the dispute between the different madhāb in the mosque on this occasion (Chron. Mecca, iv, 15, 53). This principle was several times applied in later times, and the amirs frequently gained influence at the expense of the kāfīs. Thus after the earthquake of 707/1303 (cf. thereon Quatremére de Quincy, Hist. Sult. Maml., ii/2, 214 ff.), the mosques were allotted to amirs, who had to see that they were rebuilt (al-Makrīzī, iv, 15, 53). From the middle of the 7th/13th century, we often find amirs as administrators of the chief mosques. The kāfī had however obtained so much authority that he was conceded a general administration over all the mosques, and was frequently placed in the first rank of men in full charge of the endowments of his madhīb (al-Umarī, al-Tawrī ḫī l-mustalah al-sharīf, 117; cf. ZDMG, xlv [1891], 559); according to this theory the kāfī could intervene to stop abuses. In Syria in 660/1262 Ibn Khallīkān became kāfī over the whole area between al-‘Arīsh and the Euphrates and superintendent of waqf, mosques, madrasas, etc. (Quatremére, Hist. Sult. Maml., i/1, 170).

Sultan Baybars reformed these endowments and...
restored the office of nāzir al-aufāk or nāzir al-‘abbas al-mabārun or n. ‘abī mūsā al-harr (al-Kalkashandi, iii, 54, 38; v, 465, ix, 256; xi, 257; cf. Khaṭṭ al-Zuhūrī, Zuhūr al-dīn, 109). According to al-Makrīzī, the endowments were distributed among the Mamlūks in three departments (dtāḥ): 1. qādhāi al-‘abbar, managed by an ‘āmir, the Dāwūdī: this looked after the lands of the mosques, in 740/1339-40, in all 130,000,000 dinars; 2. qādhāi al-aufām wa l-hukmīyā bi-Mūsā wa l-Khūshū, which administered dwelling-houses; it was delivered to ‘alā ‘mat al-aufām, with the title Nāzir al-Aufām. This department came to an end in the time of al-Malik al-Nāṣir Farādji because an ‘āmir, supported by the opinion of the Hāfiz chief ḥāfiẓ, spent a great deal and misused the funds; 3. qādhāi al-aufām al-ḥāzīyya, comprised all the endowments which still had particular nāzirs, either descendants of the teastar or officials of the sultan and the khādi. The ‘āmir seized their lands and Barkūk, before he became sultan, sought in vain to remedy the evil by appointing a commissioner. The endowments in general disappeared somewhat later because the ruling ‘āmir seized them (al-Makrīzī, iv, 83-6). In modern times, as a rule, endowments in Muslim lands have been combined under a special ministry, a Wizārat al-Aufām.

At the consecration of the mosque was managed by the Shāfi‘i kādi ‘l-kūfī, or his amir, copied by the opinion of the Hanafī chief kādi, spent 100,000 dinars; 2. kādi ‘l-kūfī, in conjunction with the Shāfi‘i, supervised the building of a mosque (e.g. al-Makrīzī, iv, 49). Under the Mamlūks, there was also a clerk of works, mutawwallī ṣadd al-‘amīr or nāzir al-‘imāra: he was the overseer of the builders (ibid., 102; see Zuhūr al-dīn, 75). The caliph or the ruler of the country was in this, as in other matters, supreme. As we have seen, he intervened in the administration and directed it as he wished. He was also able to interfere in the internal affairs of the mosque, if necessary through his usual officers. In 253/867 after the rising in the Fayyum, the chief of police issued strict orders by which it was forbidden to say the noon prayer, which had been introduced among the officials of the mosques and Sufis (al-Makrīzī, iv, 83). This is a representative from Baghdad was also able to interfere in the administration and directed it as he wished. He had the people of the villages to celebrate the two salāts, one after the other each in his place, the Fātimids on ceremonial occasions, especially in the month of Ramadān (Ibn Taghrībrī, ed. Jyunboli, ii, 482 ff; al-Kalkashandi, iii, 509 ff); in many individual mosques, probably the most prominent man conducted the service; according to the hadith, the only man who could be the best knowledge of the Kur‘ān and, failing him, the eldest, should officiate (al-Bukhārī, Ahdān, bāb 46, 49).

The imām appointed was chosen from among those learned in religious matters; he was often a Hāshimite (Mez, Renaissance, 147, Eng. tr., 150); he might at the same time be a ‘āmir or his nā‘ib (see al-Kīnī, 575, 589; Ibn Baṭṭūtā, i, 276-7). During the salāt he stood beside the miḥrab; al-Mukādī mentions the anomaly that in Syria one performed one’s salāt “in the presence of the imām” (202). He could also stand on an elevated position; on one occasion Abū Hurayra conducted the salāt in the Meccan mosque from the roof (al-Bukhārī, Salāt, bāb 17). In Mecca, in Ibn Dābair’s time, each of the four recognised maghribī (with the Zaydīs in addition) had an imām; they conducted the salāt on after the hadith, in the following order: Shāhīn, Mālikī, Hāfīz and Hanbalīs; they only performed the salāt al-maghrīb together; in Ramadān, they held the tawwīb in different places in the mosque, which was also often conducted by the kūra‘ (Rihla, 101, 102, 143-4). This is still the case; very frequently one performs the salāt, not after the imām of one’s own maghribī (Snouck Hurgrone, Mekka, ii, 79-80). In Jerusalem, according
to Mudjir al-Din, the order was: Malikis, Shafiis, Hanafis and Hanbalis, who prayed each in their own part of the Haram; in Hebron the order was the same (Sauvère, Hist. Jdr. et Hebron, 136-7). In Ramadān, extraordinary imāms were appointed (ibid., 138).

When the imām no longer represented a political office, each mosque regularly had one. He had to maintain order and was in general in charge of the divine services in the mosque. In al-Mu'addasī's time the imām of the Mosque of 'Amr read a qawwāl of the Qur'ān. The imām was his deputy to conduct every salāt, which is only valid if djamā'a. He must conform to the standards laid down in the law; but it is disputed whether the salāt is invalid in the opposite case. According to some, the leader of the Friday salāt should be a different man from the leader of the five daily salāts (al-Māwardi, al-Ahkām al-tulūbīyya, ed. Enger, 171, Ibn al-Hajjāj, Madkhāli, ii, 45; al-Jārā'ī, 56; al-Mutani, ed. Myhrman, 163-4; for hadiths, see Wensinck, Hand- book, 109-10). Many misgivings against payment being made for religious services held by certain authorities, who quoted in support of their view a saying of Abū Ḥanīfa (al-Mu'addasī, 127).

3. The Ḳaṣīṭ or preacher [see Ḳaṣīṭ].

On the subject see above, I. C. 3. Sometimes, in later usage, waḍ' is used of the official speaker, very like the Ḳaṣīṭ (cf. Ibn Battātah, iii, 9), while al-bāṣ is only applied to the street storyteller (al-Subkī, Muṣil al-niṣām, 161-2). The kūrā' were also frequently appointed to maḍāras and particularly to maḍāras and specifically to maṣūlūrans (al-Makrīzī, ii, 233, Yākūt, iv, 509; al-Subkī, 162; van Berchem, CEF, i, no. 252).

4. The Muḥadhdhin. According to most traditions, the office of muḥadhdhin was instituted in the year 1, according to others only after the irā', in the year 2, according to some weak traditions, while Muhammad was still in Mecca. At first, the people came to the salāt without being summoned. Trumpets (bāk) were blown and rattles (nākās) used, or fires lit at the custom of salāt of Christians and Muslims. 'Abd Allāh b. Zayd learned the ḥaḍīl formula in a dream; it was approved by the Prophet and when Bilāl proclaimed it, it was found that 'Umar had also learned the same procedure in a dream (Ibn Hishām, 357-8; al-Dīyārābāki, i, 404-5; al-Bukhārī, Ḥadīth, bāb 1; al-Ẓuhrī, i, 121 ff). There are also variants of the formula. The Prophet, according to 'Umar's vision, or Abu Bakr or seven or fourteen of the Ansār. He must conform to the standards laid down in the law. In al-Mukaddasī's time the occasion of calling from a raised position became necessary because prayer had to be organised lest confusion result, and threats to the evening prayer were frequent. A year 60/680 had his mundād, thus the right hand of the ruler. Al-Husayn had his mundād with him, and the latter summoned to the salāt. Mundād with al-Husayn's instructions (al-Tahārī, ii, 297, 298; cf. Ibn Ziyād, ibid., 260 and in the year 196/811-12, the άίμι in Mecca, ibid., i, 861, 13; also Chron. Mekka, i, 340). During the earliest period, the muḥadhdhin probably issued his summons in the streets and the call was very short: al-salāt al-djadiy at (Ibn Sa'd, 7; Chron. Mekka, i, 340; al-Tahārī, iii, 861; cf. also in the year 196/811-12, Sira Halabiyya, ii, 70; Dīyārābāki, i, 404-5). This brief summons was, according to Ibn Sa'd, also used later on irregular occasions (i, 7 ff.; cf. the passage in the Taḥārī). Perhaps also the summons was issued from a particular place even at a quite early date (see I. D. 2a). After the public summons, the muḥadhdhin went to the Prophet, greeted him and called him to prayer; the same procedure was later substituted, or fires lit, when he had come, the muḥadhdhin announced the beginning of the salāt (akāma 'l-salāt). Cf. al-Bukhārī, Wudū', bāb 5; Aḥmad, bāb 48; Sira Halabiyya, ii, 104-5; al-Makrīzī, iv, 45, and iṣrāma. The activity of the muḥadhdhin thus fell into three sections: the summoning of the community, the summoning of the salām and the announcement of the beginning of the salāt. In the course of time, changes were made in all three stages. The summoning of the community by crying aloud was not yet at all regular in the older period. During the civil strife in 'Irāk, 'Ubayd Allāh b. Ziyād in the year 60/680 had his muḥadhdhin summon people with threats to the evening salāt in the mosque, and when after an Muharram day he had summoned to prayer, the ifāra announced (al-Tahārī, ii, 260). When a large number of mosques had come into existence, the public call to prayer had to be organised lest confusion result, and the custom of calling from a raised position became general after the introduction of the minaret. While previously the call to prayer had only been preparatory to the prayer, it was the official announcement, the public call (muḥadhdhin) and the ikāma now formed two distinct phases of the call to prayer. Tradition has assemblies were made by criers. This crier was called munādī or muʿadhdhīn (Sira Halabiyya, ii, 170; Lammons, Le Mosquée, 62 ff., 146; idem, Beroua, i, 229 n.; ibid., Mevâst, 121). Muʿadhdhīn therefore means proclamation, sūra IX, 3, and adhdhīna, muʿadhdhīn, sūra VII, 70, "to proclaim" and "crier." Munādī (al-Bukhārī, Fard al-khams, bāb 15) and muʿadhdhīn (ibid., Sām, bāb 69; Salāt, bāb 10 = Dīyya, bāb 16; Sira Halabiyya, ii, 270) are names given to a crier used by the Prophet or Abū Bakr for such purposes. Official proclamations were regularly made by criers (cf. al-Tahārī, ii, 154-5; cf. Ibn Sa'd, i, 7; Chron. Mekka, i, 340).

In these conditions, it was very natural for Muhammad to assemble the believers to common prayer through a crier (nādā lil' ilā ilā 'l-salāt, sūra V, 63; xii, 9). The summons is called nādā and adhdhīna, the crier munādī (al-Bukhārī, Wudū', bāb 5; Aḥmad, bāb 7) and muʿadhdhīn; the two names are used quite indiscriminately (e.g. ibid., Wudū', bāb 5; al-Tahārī, bāb 297 sq.). Munādī = il-salāt, al-Mu'addasī, 182, 12, also saḥ 'crier' is used (al-Tahārī, ii, 861; Chron. Mekka, i, 340).

Among the other possibilities, which were also frequently appointed to maḍāras and particularly to maṣūlūrans, were other methods mentioned in the hadiths, or dubtingu, see Wensinck, Hand-book, 109-10). Many misgivings against payment being made for religious services held by certain authorities, who quoted in support of their view a saying of Abū Ḥanīfa (al-Mu'addasī, 127).
MASDJID

retained a memory of the summoning in the streets, now completely fallen into disuse, when it tells us that 'Uthmân introduced a third adhan, a call in al-Zawâra', which was made before the call from the minaret: this call, however, was transferred by Highâm b. ʿAbd al-Malik to the minaret (al-Bukhâri, Q. 2:22, 25; Sîra Halabiyya, ii, 110; Ibn al-Hâdjî, Madkâlî, ii, 45). This may be evidence of the gradual cessation of the custom of summoning the community by going through the streets. Ibn Baṭtûta (but this is exception) tells us that the muâdhâhdhins called first and the others followed together (al-Mâkîrizî, iv, 43), but very quickly other mosques were also given muâdhâhdhins: their calls were sufficiently audible in the whole town. The chief mosque reserved to itself the privilege, that its muâdhâhdhin called first and the others followed together (al-Mâkîrizî, iv, 43, below), 44).

The summoning by the imâm in Medina was therefore quite a natural thing. The custom, at first associated with the ruler’s mosque, was not observed in Medina only (see for 'Uthmân and 'All, al-Tabârî, ii, 3059-60), but was also usual under the Umayyads. The formula was al-salâm 'alâ šiyârat yârûd wa-râhmatu 'llâh wa-barakâthu, hayya 'alâ 'l-fâlidi, hayya 'alâ 'l-fâlidi, hayya 'alâ 'l-fâlidi, yarhamuka 'llâh (al-Mâkîrizî, iv, 45; Sîra Halabiyya, ii, 105). After the alteration in the adhan and the greater distance of the ruler from the mosque, to summon him was no longer the natural conclusion to the assembling of the community. In the 'Abbasîd period and under the Faṭimid, there was a survival of the old custom, as in much as the muâdhâhdhins ended the adhan call before the salât al-fâjdîr on the minarets with a salât upon the caliph. This part of the muâdhâhdhins’ work was thus associated with the first adhan call. When Sâlâm al-Dîn came to power, he did not wish to be mentioned in the call to prayer, but instead he ordered a blessing upon the Prophet to be pronounced a maghrib, the foremost muâdhâhdhin pronounced a du’â upon the Âbâsîd Imâm and on Sâlâm al-Dîn from the Zamzam roof, in which those present joined with them during the adhân (al-Mâkîrizî, iv, 48). In the time of Âhidâm b. Tûsîn and Khumârawâyah, the muâdhâhdhins recited religious texts throughout the night in a special room. Sâlâm al-Dîn ordered them to recite an ‘âshira in the night adhân and after 700/1300-1, du’â was performed on Friday morning on the minarets. In the 9th/15th century it was performed every hour to be heard by the muâdhâhdhins all through the night until fajr. This is explained as a polemical imitation of the Christians, for the governor was troubled by the use of the nauwâsît at night and forbade them during the adhân (al-Mâkîrizî, iv, 48). In the time of Muhammad b. Khâmil and Khûrûnî, similar litanies are kept up in modern times, as well as a special call about an hour before dawn (eshel, tarhim: see Lane, Manners and customs, Everyman’s Library, 75-6, cf. Snouck Hurgronje, Mekka ii, 84 ff.).

The original call of the muâdhâhdhins thus developed into a melodious chant like the recitation of the Kurân. Al-Mušâdâdî tells us that in the 4th/10th century in Egypt during the last third of the night, the adhân was recited like a dirge (205). The solemn effect was increased by the large number of voices. In large mosques, the muâdhâhdhins were called first from a minaret, then the others came in turn (Chron. Mekka, iii, 242-5; Ibn Dâubby, 145 ff.; cf. Ibn Rusta, 111, 1 ff. and above). But in the mosque itself, the ikâma was pronounced by the muâdhâhdhins in chorus on the donkâ (see above, I, D, 2e) erected for this purpose, which is also traced to Masmâlî. In the 3rd/9th and 4th/10th centuries we hear of these melodious recitations (atâbî) of the muâdhâhdhins on a raised podium in widely separated salâats between the two calls (al-Bukhârî, Adhân, bâb 14, 16). Some are said to have introduced the practice of the muâdhâhdhins calling hayya ‘alâ ‘l-salât at the door of the mosque between the two calls (Sîra Halabiyya, ii, 105). From the nature of the case, the ikâma was always called in the mosque; at the Friday service, it was done when the imâm mounted the mimbar (al-Bukhârî, Q. 2:22, 25; Sîra Halabiyya, ii, 110; al-Mâkîrizî, iv, 43) while the muâdhâhdhins stood in front of him. This muâdhâhdhin, according to some, ought to be the one who introduced the call in the mosque (Sîra Halabiyya, ii, 109), while Ibn al-Hâdjî ignoring the historical facts only permits the call from the minaret (Madkâlî, ii, 45). In Tunis, the ikâma was announced by ringing a bell as in the churches (al-Zarkashî, tr. Fâgman, in Rec. Soc. Arch. CONSTANCIE [1894], 111-12). A similarity to the responses in the Christian service is found in the fact that the call of the muâdhâhdhins, which contains a confession of faith, is to be repeated or at least answered by every one who hears it (al-Bukhârî, Q. 2:23); this is an action which confers religious merit (Ibn Kûtîlbûghâ, Tabakât al-Hanafîyya, ed. Flügel, 30). It is possible that we should recognise in this as well as in the development of the formulae the influence of Christians converted to Islam for whom the ‘âshira and the recitation of the five salâts are from the time of the imâm (Stark, Islam, iii [1912], 374 ff., and Islamstudi en, i, 472 ff., who sees an imitation of the Christian custom in the ikâma in general; on the possibility of Jewish influence, see Mitwocch, in Abh. Pr. A. W. [1913], Phil.-Hist. Cl. 2).
parts of the Muslim world (Sanqa, Egypt, Khurasan, al-Muqaddasi, 327; Ibn Rusta, 111; the expression al-mu'addhins, "the musicians", if correct, probably refers to the mu'addhaTins, al-Muqaddasi, 205; cf. also al-Kindi, Wulat, 469; for Fars we are expressly told that the mu'addhaTins call without tarih, al-Muqaddasi, 439, 17). Sometimes in large mosques, they were stationed in different parts of the mosque to make the iman's words clear to the community (tabligh). The singing, especially in chorus, was a prominent form of the tabligh. It was sometimes hereditary.

The new demands made on the mu'addhaTins necessitated an increase in their number, especially in the large mosques. The Prophet in Medina had two mu'addhaTins, Bilal b. Ribi'a, Abu Bakr's musâlah, and Ibn Umm Maktûm, who worked in rotation. 'Uthmân also is said occasionally to have called the adhdh in front of the minbar, i.e. the ikdam, (al-Makrlzi, iv, 76). Ibn Battuta reported that a certain mosque in Batnîya had two mu'addhaTins at a mosque (Muslim, Salât, tr. 4; cf. al-Subkl, Mu'd, 165). Abu Mahdîhâra was also the Prophet's mu'addhaTin in Mecca. Under 'Umar, Bilal's successor as mu'addhaTin was Sa'd al-Karaz, who is said to have called to prayer for the Prophet in Kûbâ (al-Makrlzi, op. cit.; cf. Sira Halabiyâ, ii, 107 ff.). In Egypt under 'Amr, the first mu'addhaTin in al-Fustat was Abu Muslim, who was a musâlah, i.e. the large mosques. The Prophet in Medina had two mu'addhaTins (al-Makrlzi, iv, 44) and Ahmad b. Tulun in Cairo had a mu'addhaTin (al-Bukhari, 132, 279), in Mecca, the sons of Abu Karaz officiating (Ibn Kutayba, Ma'â, ii, 104; cf. al-Subkl, Mu'd, 165-6; cf. also al-Makrlzi, iv, 14). In Mecca, the ra's al-mu'addhaTins was identical with the mu'addhaTin al-Zamami, who had charge of the singing in the upper story of the Zamam building (Chron. Mekka, ii, 424-5; cf. Ibn Djubayr, 145; cf. Snouck Hurgronje, Mekka, ii, 322). The ra's was next to the imam but subordinate to him; in certain districts, it was the custom for him to mount the pulpit during the sermon with the iman (when the latter acted as khatib) (Makrlzi, ii, 74). The position of the mu'addhaTin, therefore, was one that was seen from the part which they play in public processes of officials, e.g. of the Kâ'dî'l-Kudâ, when they walk in front and lead the ruler and his vizier (al-Makrlzi, ii, 246).

Closely associated with the mu'addhaTin is the muwaq-kti, the astronomer, whose task it was to ascertain the kibla and the times of prayer (al-Subkl, Mu'd, 165-6 and see Mu'âk), sometimes the chief mu'addhaTin did this (Snouck Hurgronje, Mekka, ii, 322).

5. Servants. According to Abu Hurayra, the Mosque of the Prophet was swept by a negro (al-Bukhari, Salât, bâb 72, cf. 74). The larger mosques gradually acquired a large staff of servants (khudddm), notably waqâb, farasâq, and water-carriers (cf. e.g. Ibn al-Fakfh, 100; van Berchem, CIA, i, no. 201). In the Mosque of Jerusalem in about 300/912-13, there were no less than 140 servants (khudddm; Ibn al-Fâkhî, 100); others give the figure 230 (Le Strange, Palestine, 163) and according to Muqîrî al-Dîn, 'Abd al-Malik appointed a guard of 300 black slaves here, while the actual menial work was done by certain Jewish and Christian families (Sauvageau, Hist. Isr. et Hbr., 56-7).

In other mosques, superintendents (kayyim, pl. kawama) are mentioned, a vague title which covered a multitude of duties: thus the Madrasa al-Madhdîyya had a kayyim who looked after the cleaning, the staff, the lighting and water-supply (al-Makrlzi, iv, 251). In the Azhar Mosque had one for the madrasa, who was paid twelve dinars (ibid., 51) and also 4 kawama, who were paid like mu'addhaTins (two dinars a month and are mentioned between them and the imâms, probably supervisors of the staff (ibid., 51). In other cases, a kayyim al-dîm (sometimes a kâ'dî), is mentioned, who was apparently the same as the imâm, the khatib or some similar individual of standing (ibid., 75, 121, cf. 122; cf. Ibn Djubayr, 51). A muqîrî, inspector, is also mentioned, e.g. in the Azhar (al-Makrlzi, iv, 51).

H. The architecture of the mosque

1. Introduction. Although generalise about regional variations in mosque architecture are fraught with difficulty and have often miscarried. One solution, admittedly a compromise, is to select a few of the most celebrated mosques, to imply in more or less arbitrary fashion that they are typical, and to base the requisite generalisations on them. This approach has at least the merit of clarity, and it could indeed be argued that it is the finest mosques of a given period and region that local peculiarities are apt to find their fullest expression. Nevertheless, such a broad-brush
approach, for all its superficial attractions, is simply not specific enough. Another approach, which might be termed typological, cuts across regional and temporal boundaries in order to isolate the significant variants of mosque design and trace their development. Yet, precisely because it ignores such boundaries, this approach tends to minimise the significance of regional schools and fashions. The categories and sub-species which it proposes tend to have a somewhat academic flavour; while technically defensible, they somehow lose the point. A third approach might be to rely on statistics and, by chronicling all known mosques of pre-modern date, to discover the types and distribution of the most popular varieties. The picture to emerge from such a study might indeed be literally accurate, but it would not distinguish between the djam* and the masdjid, that is, between the major religious building of a town or city and the neighbourhood mosque (on the djam* and its functions, see above, I. C. 2.). Since virtually all the mosques under discussion here fall into the category of djam*, such a study would be of limited value in this context, and would assuredly blur the sharp outlines of regional peculiarities of mosque design. After all, the simplest types of mosques not only vastly outnumber the ones in question but also tend to be found throughout the Muslim world. It is such mosques, therefore, which make up the standard distribution of this building type. They dominate by sheer weight of numbers, but—by the same token—they distort the overall picture, suggesting a uniformity that actually exists only at the level of the most primitive buildings. Only when a statistical survey of this kind is relieved of the effectively dead weight of such buildings can regional and temporal distinctions stand out in their full clarity.

Such are the difficulties attendant on venturing a tour d’horizon of formal developments in the pre-modern mosque. What, then, is the best way of tackling this problem? The most promising line of approach is probably to identify those mosque types which are most distinctive of a given area and period, describing their constituent features but avoiding a detailed analysis of individual buildings. It should be emphasised that the over-riding aim of highlighting significant regional developments entails the suppression of much corroborative detail and, more importantly, of those periods when a given region was simply continuing to build mosques in a style already well-established. Admittedly the lulls in innovation have their own part to play in the history of mosque architecture; but that part is too modest to rate any extended discussion here.

For that same reason, areas in which the pace of change was sluggish are allotted less attention in the following account than those which were consistently in the forefront of experiment. The Magrib, for example, receives less space than Iran, while Trak* and the Levant take second place to Egypt and Anatolia. These emphases, moreover, reflect the basic regional traditions, for they draw very heavily on a reservoir of ideas, practices and forms which owe very little to Islam. Thus for reasons which are as much historical as cultural, geographical they do not belong in the mainstream of mosque architecture. Yet the interconnections between these buildings are such as to make light of their geographical remoteness from each other.

Accordingly, a pan-Islamic survey of the early architectonic history of the mosque will preface the individual accounts of local developments. These accounts in turn will be of unequal length. Pride of place will go to the Arab mosque plan, which not only had the widest diffusion but also covers the longest chronological span. Next in length will be the survey of the Persian tradition, almost as ancient as that of the Arab plan but more restricted in geographical scope. Shortest of all will be the discussion of the Turkish mosque type, whose creative development is confined in time to the 8th-11th/14th-17th centuries and in space to Anatolia.

2. Early history of the mosque: 622-1000 A.D.

(a) The house of the Prophet. Beyond doubt, the genesis of the mosque is to be sought in a single seminal building: the house of the Prophet, erected to Muhammad’s own specifications in Medina in 1/622. It was a near-square enclosure of some 56 x 53 m. with a single entrance; a double range of palm-trunk columns thatched with palm leaves (a feature of many African mosques to this day) was added on the qibla side, with a lean-to for destitute Companions to the south-east and nine huts for Muhammad and his wives along the western perimeter. By a curious paradox, it was not built even secondarily as a mosque. This fact cannot be over-emphasised, since to ignore it is to misinterpret the subsequent history of mosque architecture. The venerated model for all later mosques itself became a mosque only, as it were, by the way and in the course of time. How is this to be explained? The accumulated deposit of many centuries of reverence makes it difficult to disentangle the full original context of the building. Yet this much is clear: it was first and foremost a house for Muhammad and his family to live in. It was also conceived from the beginning as a gathering place for the growing band of Muslims: in fact a kind of community centre, complete with the attendant associations of welfare. At the same time it served political, military
and legal functions, while its high walls and single entrance allowed it at need to act as a place of refuge for the community. To be sure, by degrees people began to pray in it; but they prayed in many other places too and there is no evidence that it was used as the regular place of worship in the earliest years of the community. The mere fact that dogs and camels were allowed free access to it effectively disposes of such a notion. In short, Muhammad had, it seems, no intention of building a place of worship. To be sure, by degrees people began to pray in it; but they prayed in many other places too and there is no evidence that it was used as the regular place of worship in the earliest years of the community. The mere fact that dogs and camels were allowed free access to it effectively disposes of such a notion. In short, Muhammad had, it seems, no intention of building a place of worship. To be sure, by degrees people began to pray in it; but they prayed in many other places too and there is no evidence that it was used as the regular place of worship in the earliest years of the community. The mere fact that dogs and camels were allowed free access to it effectively disposes of such a notion. In short, Muhammad had, it seems, no intention of building a place of worship.

At the Cordova mosque the column shafts bore piers braced by strainer arches; but this device, for all its ingenuity, served to reinforce the structure and the corners, with doorways after every second buttress. At Susa the exterior dispenses with buttresses in favour of rounded corner bastions, while in the mosque of al-Hākim in Cairo (381/991 onwards) the minarets at the corner of the façade rise from two gigantic square salients. The emplacement of the miḥrāb [q.v.] was marked by a corresponding rectangular projection on the exterior wall. Entrances were commonly allotted a measure of extra decoration—as in the series of shallow arches along the flank of the Cordova mosque—but massive portals on the scale of those in Western cathedrals found no favour in the early mosques of Arab plan. The absolute scale of some mosques (the mosque of Sāmarrā, for instance, could have accommodated 100,000 people) would have been all the more inappropriate for the actual fact that the actual number of worshippers was not so large. Whatever the scale, however, the courtyard was a standard feature of most large mosques. It is in part a propo to note that the earliest Christian places of worship, the so-called masdjid and its various functions, see above, I. A. 1.

The so-called "Arab plan". Although there were large measure of coincidence in the adoption of Muhammad’s house as the model par excellence of later mosques, that form could not have enjoyed the popularity it did unless it had answered to a nicety the needs of Muslim liturgy and prayer. Its components—an enclosed square or rectangular space with a courtyard and a covered area for prayer on the kibla side—could be varied at will so as to transform the original plan. Thus the addition of the so-called "Arab" or "hypostyle" mosque plan. From the first it showed itself capable of quite radical modification according to circumstances. At Kūfa in 17/638 the location of the mosque within one of the garrison cities (amṣār) allowed the builders to dispense with the element of security, and the perimeter—its dimensions fixed, according to al-Balāḏūrī, by four bowshots—is marked by ditches; elsewhere, as at Baṣra in the year 14/635, a reed fence served the same purpose. At Fustat in the rebuilt mosque of ʿAmr (53/673), corner turrets served simultaneously to articulate the exterior, to single out the mosque from afar and to provide a place from which the call to prayer could be made: the germ of the future minaret. Minarets, if they are to serve a dual function, were there evolved what is known as the first mosque of ʿAmr at Fustat (22/643), admitting exterior light to the musalla [q.v., and also above, I. B. 6] and allowing maximum ease of circulation.

The sunny climate of the southern Mediterranean and the Near East allowed the courtyard to accommodate the huge numbers of extra worshippers attending the Friday service. This was when its large expanse justified itself. For the rest of the week it was largely empty, and the heat and light emitted by this expanse could cause discomfort. This was especially likely if there were no provision for shade on three of the four sides, as in the early versions of the Great Mosques of Cordova (170/787), Kāravān (221/836) and Córdoba (250/864). Hence there arose the practice of adding arcades or smaller area of covered spaces, so that people could walk around the mosque in cool shade. In time these arcades could be doubled, tripled or even quadrupled. A change in the alignment of their vaulting from one side of the mosque to another brought welcome visual relief and excluded the danger of monotony; so too did variations in the depth or number of the arcades (the so-called "Amr mosque in Cairo). As the surface area of the covered sanctuary was increased so did new spatial refinements suggest themselves, such as the progressive unfolding of seemingly endless vistas in all direction. Rows of supports (often spolia) with fixed intercolumniations created hundreds of repetitive modular units, perhaps deliberately mirroring the long files of worshippers at prayer.

Externally, the accent was on simplicity, with regular buttresses giving the structure a warlike air. At the Great Mosque of Sāmarrā (completed 238/852) there are large and long side, not covering the corners, with doorways after every second buttress. At Susa the exterior dispenses with buttresses in favour of rounded corner bastions, while in the mosque of al-Hākim in Cairo (381/991 onwards) the minarets at the corner of the façade rise from two gigantic square salients. The emplacement of the miḥrāb [q.v.] was marked by a corresponding rectangular projection on the exterior wall. Entrances were commonly allotted a measure of extra decoration—as in the series of shallow arches along the flank of the Cordova mosque—but massive portals on the scale of those in Western cathedrals found no favour in the early mosques of Arab plan. The absolute scale of some mosques (the mosque of Sāmarrā, for instance, could have accommodated 100,000 people) would have been all the more inappropriate for the actual fact that the actual number of worshippers was not so large. Whatever the scale, however, the courtyard was a standard feature of most large mosques. It is in part a propo to note that the earliest Christian places of worship, the so-called masdjid and its various functions, see above, I. A. 1.
could not rival the popularity of superposed arcades in the fashion of Roman aqueducts (Damascus mosque, finished 98/716).

The apparently minor detail of whether the arcades ran parallel to the kibla or at right angles to it was sufficient to transform the visual impact of the roof. In the latter case, it focused attention on the kibla, and this was the solution that recommended itself to Maghribi architects (mosques of Cordova, Tunis and Kayrawân). Syrian architects, on the other hand, with only one major exception (Ağş mosque, Jerusalem), preferred arcades running in both directions (Great Mosques of Sfax and Susa, both finished 236/850), but with these exceptions the early experiments with this idea are all on a relatively modest scale which betrays some uncertainty of purpose. They comprise a small group of 9-bayed mosques with a dome over each bay and no courtyard: a type represented in Toledo, Kayrawân, Gharb, and perhaps also in small mosques of the eastern Islamic provinces, including the Damascus mosque of 69/690, the small mosque of 70/691, and the Umayyad mosque of 70/691. These buildings inaugurate the much more ambitious use of vaults in later mosques. No such solutions are to be found in the larger mosques built before the 5th/11th century. This early Islamic vaulting drew its ideas impartially from the Romano-Byzantine tradition and from Sassanian Iran, and产量 various articulating devices which cannot all be explained as public a way as the dictates of religious architecture would permit, the importance of the ruler in religious ceremonies. It was the duty of the caliph or of his representative to lead his people in prayer and to pronounce the khatûba (q. v.). The political overtones of the latter ritual, which proclaimed allegiance to the ruler in much the same spirit as the diphtychs in the contemporary Byzantine liturgy, in large part explain the physical form of the minbar (q. v.) from which the khatûba was pronounced. Similarly, the mihrâb, another latecomer to mosque architecture, can be interpreted in secular terms, most conveniently as a throne apse transposed into a religious setting. These royal connotations could only be intensified by the addition of a dome over the bay directly in front of the mihrâb. Understandably enough the first such building is the al-Hakîm, a tiny mosque of 316/928, with a small dome over the mihrâb, and a series of domes, three in number, over the entire kibla wall. This close juxtaposition of the secular and the sacred features in mosques located next to the residence of the ruler that places their political associations beyond any doubt. The relation of the ruler to mosque architecture is, however, more complex. The extra height of the gable and the way it cleaves the pointed vault soon dominated.

(c) The secular element in early mosque architecture. In some mosques, the desire to emphasise the covered sanctuary (musalla) was achieved simply by adding extra bays and thus increasing its depth. In other mosques, especially those with royal associations, the requisite emphasis was achieved by some striking visual accentuation of the musalla: a more elaborate façade, a higher and wider central aisle, a gable or a dome. Once this idea of glorifying the musalla had taken root it was enthusiastically exploited, for example by furnishing this area with several carefully placed domes (Cordova, al-Azhar). On occasion, indeed, the musalla became virtually a new sanctuary, especially if its greater width and the consequent break in the even linearity of the roof surface is, or at least is supposed to be, in front of the mihrâb and transversely vaulted bays adjoining the kibla—could itself become the mosque, with no attached courtyard (al-Ağş). The effect of singling out the musalla by these various means is to emphasise that this area is more important than any other in the mosque. Since this latter notion runs counter to the widely-expressed belief that all parts of the mosque are equally sacred, and that gradations of sanctity within it run counter to the spirit of Islam, its origins are worth investigating. It should be stressed at the outset that these various articulating devices cannot all be explained as efforts to counteract the kibla. Some measure of emphasis for this purpose was certainly required. Hence, no doubt, the greater depth of arcades on that side and the provision of an elaborate façade for the musalla alone. Similarly, the use of a different alignment or type of vaulting for the bays immediately in front of the kibla would make sense as a means of signposting this crucial area. Yet the addition of a dome or gable, or both, along the central aisle of the musalla, and the greater width and height of the aisle, cannot be explained—as is so often the case—simply as a means of highlighting the mihrâb. After all, the entire kibla wall served to mark the correct orientation for prayer, so that the mihrâb was technically redundant. The relatively late appearance of the mihrâb (no 1st/7th century mosque appears to have possessed one and it is described as an innovation introduced by al-Walîd I in his re-building of the Mosque of the Prophet in Medina in 84/703) further suggests that it was not devised to meet some liturgical imperative. The emphasis on the greater width, and—by virtue of the emphasis on the broader central nave terminating in the dome over the mihrâb remains unchanged. It seems likely that these articulating devices were intended to mark out a processional way, presumably the formal route by which the ruler approached the mihrâb.

So much, then, for the various elements in mosque design for which princely associations have been proposed. Yet their mere enumeration does not tell the full story. It is above all the occurrence of these features in mosques located next to the residence of the ruler that places their political associations beyond doubt. This close juxtaposition of the secular and the religious may well have had its roots in the Prophet’s house. Be that as it may, at Baṣra, Kûfa, Fuṣṭât, Damascus, to name only a few very early examples, the principal mosque and the private residence of the ruler adjoined each other, and the vicerey Ėṣâd b. Abîhi [q. v.] said of this arrangement ‘it is not fitting
that the Imam should pass through the people”—a sentiment, incidentally, not shared by many later Islamic rulers. The analogy with the palatine chapel in Byzantium and mediaeval Europe—at Constantinople and Ravenna, Aachen and Palermo—is striking. Perhaps the most public expression of the idea in the mediaeval Islamic world was in the Round City of Baghdad, where the huge and largely empty space at the heart of the city held only two buildings: the palace and the mosque, next door to each other. It would be hard to find the concept of Caesaropapism expressed more explicitly, or on a more gargantuan scale, than this. The local expression of the articulating features under discussion varied from one part of the Islamic world to another, but they had come to stay. Henceforth, the *diwan* of Arab plan only rarely returned to the simplicity of the 1st/7th century. Such, however, was the strength of the traditions formed at that time that the basic nature of the earliest mosques remained substantially unchanged. They were proof, for example, against immense increases in size and against a growing interest in embellishment by means of structural innovations and applied ornament. Even the conversion into mosques of pre-Islamic places of worship at Damascus and Hamah, was power on a smaller scale, than this.

In much the same way, their idiiosyncrasies of structure and decoration were purely cosmetic. The range of ornamental devices was gratingly small. Windows and lunettes bore *jouar* grilles in stone or plaster with geometric and vegetal designs (Damascus mosque); wooden ceilings were painted or carved and coffered (San`a` mosque, 1st/7th century onwards); a wide range of capitals, at first loosely based on classical models but in time featuring designs of Central Asian origin (Samarra) was developed; and piers with engaged corner colonnettes (Ibn Tulun mosque, Cairo) rang the changes on the traditional classical column. Finally, the aspect of these early mosques could be varied still further by the type of flooring employed—stamped earth, brick, stone or even marble flags—and by applied decoration in carved stone or stucco, fresco, painted glass, embossed metalwork or mosaic.

3. Later history of the “Arab plan” mosque.

The essentially simple components of the Arab plan set a limit to the degree of diversity that could be achieved within these specifications. Most of the room for manoeuvre had been exhausted within the first four centuries of Islamic architecture. Thus the subsequent history of the Arab plan cannot match the early period for variety and boldness; the later mosques, moreover, lie very much in the shadow of their predecessors, to such an extent, indeed, that it is hard to single out significant new departures in these later buildings. It can scarcely be doubted that the presence of Islamic rulers. The analogies for the palatine chapel at the period when the Islamic world was at the peak of its material prosperity, acted as a signal deterrent to later architects with substantially less money, men and materials at their disposal. In these early centuries the caliphal permission, not readily granted, had been required for the construction of a *diwan* making it therefore a major undertaking, and correspondingly hard to emulati. The 9th/11th century, moreover, most of the major Muslim cities had their own *diwan*, so that the need for huge mosques had much declined.

Although mosques of Arab plan have continued to be built throughout the Islamic world until the present day, in the mediaeval period there were only two areas where they achieved dominance: in the Western Islamic lands before they fell under Ottoman rule, and in pre-Ottoman Anatolia. These areas will therefore provide the material for most of the discussion which follows. Nevertheless, sporadic references will be made to mosques elsewhere, for instance in Egypt and the Maghrib, to catch other. It would be hard to find the concept of Caesaropapism expressed more explicitly, or on a more gargantuan scale, than this. The local expression of the articulating features under discussion varied from one part of the Islamic world to another, but they had come to stay. Henceforth, the *diwan* of Arab plan only rarely returned to the simplicity of the 1st/7th century. Such, however, was the strength of the traditions formed at that time that the basic nature of the earliest mosques remained substantially unchanged. They were proof, for example, against immense increases in size and against a growing interest in embellishment by means of structural innovations and applied ornament. Even the conversion into mosques of pre-Islamic places of worship at Damascus and Hamah, was power on a smaller scale, than this.

In much the same way, their idiiosyncrasies of structure and decoration were purely cosmetic. The range of ornamental devices was gratingly small. Windows and lunettes bore *jouar* grilles in stone or plaster with geometric and vegetal designs (Damascus mosque); wooden ceilings were painted or carved and coffered (San`a` mosque, 1st/7th century onwards); a wide range of capitals, at first loosely based on classical models but in time featuring designs of Central Asian origin (Samarra) was developed; and piers with engaged corner colonnettes (Ibn Tulun mosque, Cairo) rang the changes on the traditional classical column. Finally, the aspect of these early mosques could be varied still further by the type of flooring employed—stamped earth, brick, stone or even marble flags—and by applied decoration in carved stone or stucco, fresco, painted glass, embossed metalwork or mosaic.

3. Later history of the “Arab plan” mosque.

The essentially simple components of the Arab plan set a limit to the degree of diversity that could be achieved within these specifications. Most of the room for manoeuvre had been exhausted within the first four centuries of Islamic architecture. Thus the subsequent history of the Arab plan cannot match the early period for variety and boldness; the later mosques, moreover, lie very much in the shadow of their predecessors, to such an extent, indeed, that it is hard to single out significant new departures in these later buildings. It can scarcely be doubted that the presence of Islamic rulers. The analogies for the palatine chapel at the period when the Islamic world was at the peak of its material prosperity, acted as a signal deterrent to later architects with substantially less money, men and materials at their disposal. In these early centuries the caliphal permission, not readily granted, had been required for the construction of a *diwan* making it therefore a major undertaking, and correspondingly hard to emulati. The 9th/11th century, moreover, most of the major Muslim cities had their own *diwan*, so that the need for huge mosques had much declined.

Although mosques of Arab plan have continued to be built throughout the Islamic world until the present day, in the mediaeval period there were only two areas where they achieved dominance: in the Western Islamic lands before they fell under Ottoman rule, and in pre-Ottoman Anatolia. These areas will therefore provide the material for most of the discussion which follows. Nevertheless, sporadic references will be made to mosques elsewhere, for instance in Egypt and the Maghrib, to catch other. It would be hard to find the concept of Caesaropapism expressed more explicitly, or on a more gargantuan scale, than this. The local expression of the articulating features under discussion varied from one part of the Islamic world to another, but they had come to stay. Henceforth, the *diwan* of Arab plan only rarely returned to the simplicity of the 1st/7th century. Such, however, was the strength of the traditions formed at that time that the basic nature of the earliest mosques remained substantially unchanged. They were proof, for example, against immense increases in size and against a growing interest in embellishment by means of structural innovations and applied ornament. Even the conversion into mosques of pre-Islamic places of worship at Damascus and Hamah, was power on a smaller scale, than this.

In much the same way, their idiiosyncrasies of structure and decoration were purely cosmetic. The range of ornamental devices was gratingly small. Windows and lunettes bore *jouar* grilles in stone or plaster with geometric and vegetal designs (Damascus mosque); wooden ceilings were painted or carved and coffered (San`a` mosque, 1st/7th century onwards); a wide range of capitals, at first loosely based on classical models but in time featuring designs of Central Asian origin (Samarra) was developed; and piers with engaged corner colonnettes (Ibn Tulun mosque, Cairo) rang the changes on the traditional classical column. Finally, the aspect of these early mosques could be varied still further by the type of flooring employed—stamped earth, brick, stone or even marble flags—and by applied decoration in carved stone or stucco, fresco, painted glass, embossed metalwork or mosaic.
infill between the ribs; the overall effect is one of feathery lightness and grace. The light filtered through these domes suffuses the area of the mihrāb with radiance, perhaps as a deliberate metaphor of the heaven and the earth; the likeness of His Light was normally placed along the axis of the mihrāb in hypostyle plans. Flat-roofed prayer halls, some with wooden-roofed porches (Meram mosque, Konya, 804-27/1402-24) and others, especially in the Karaman (largely 6th/12th century) follow Iranian precedent in their emphasis on a monumental dome rearing up out of the low roofing of the sanctuary and set squarely in front of the mihrāb bay. Their foreshortened courtyards, however, owe nothing to Iranian precedent and instead presage later developments. So too did the increasing tendency to use domical forms rather than modular trabeate units as the principal means of defining space.

The buildings of the 6th/12th and 7th/13th centuries sufficiently demonstrate the embryonic state of mosque design in Anatolia, for the variety of plans is bewildering and defies easy categorisation. The absence of direct copies of the classical Arab type of plan is striking, though modifications of it were legion. A common solution was to do without the courtyard altogether—perhaps a response to the severe Anatolian winter—and reduce the mosque to a wooden structure resting on a monolithic base. Their trabeated construction is well marked even at this experimental stage. Whatever the roofing system adopted in these enclosed mosques, the scope for development in either direction was small, while poor lighting, a sense of cramped space and inadequate ventilation were virtually inevitable. Huge piers and low vaults gave many of these mosques a crypt-like appearance and thus served as a secondary accent for it, in the principal feature of Turkish mosque architecture, and as a natural corollary fostered a compact and integrated style. Sometimes a small courtyard was integrated into this design (Malatya, 655/1257; Kayseri, Mosque of Kâbed Khatūn, 633/1237; Harput, 560/1165). By degrees, however, the courtyard was relegated to one of two functions: as a forecourt, akin to the atrium of Byzantine churches and thus heralding the mosque proper, instead of being co-equal to the sanctuary; and as a bay within the mosque, furnished with a skyline and a fountain as a symbolic reminder of the world outside. Sometimes these two uses coincided. The skyline bay (şahâde’dan) was normally placed along the axis of the mihrāb and thus served as a secondary accent for it, in much the same manner as a central dome.

The 8th/14th century saw no major developments in hypostyle plans. Flat-roofed prayer halls, some with wooden-roofed porches (Merâm mosque, Konya, 804-27/1402-24), others, especially in the Karaman
region, without them, continued to be built. So too did hypostyle mosques with vaulted domical bays (Yivi Minare mosque, Antalya, 775/1373; the type recurs both in eastern Anatolia and Ottoman territory in Bursa and Edirne). Variations in the Damascene schema, with the transept replaced by one or more domes, a raised and wider central aisle, a skyline bay, or any combination of these were frequent (Īsā Bey mosque, Selcuk, 776/1374; Ulu Cami, Birgi, 712/1312; mosque of Aḥḥā Elūvān, Ankara, 760/1360). In all cases, the major domed bay in front of the miḥrāb spread from their earlier base in south-eastern Anatolia, an area bounded to the east by the Ulu Cami in Van (791-803/1389-1400) and to the west by that of Manisa (778/1376). In the latter mosque the kibla side is dominated by the dome and takes up almost half the mosque; a large arcaded courtyard with a portico accounts for the rest. With such buildings the stage is set for Ottoman architecture and Arab prototypes are left far behind.

These Anatolian mosques depart still further from the norm of the hypostyle type in their predilection for elaborate integrated façades. While earlier mosques of Arab type frequently singled out the principal entrance by a monumental archway, often with a dome behind it, the tendency was to keep the façade relatively plain. The later development of elaborate Mamluk building areas of the major cities of the Near East, such as Cairo, Jerusalem, Damascus and Aleppo, did the extreme shortage of space, and often the small scale of the mosques themselves, oblige architects to decorate mosque façades if they wished to draw attention to them, e.g. the Akmar mosque, Cairo, 519/1125. In Anatolia, however, the Islamic tradition, which favoured extensive external sculpture and articulation, may well have predisposed Muslim architects in Anatolia to develop integrated decorative schemes for the main façades of their mosques. A monumental stone portal or pīṭḥāk (q.v.), often an iwan (q.v.) was the standard centrepiece for such designs. It could be strongly salient and tower above the roofline (Divriği Cami). Further articulation was provided by ranges of recessed arches with decorative surrounds (Dunavīsir), open or blind arcades along the upper section of the façade (Mayyāfārīḵīn and ʿAlāʾ al-Dīn mosque, Konya), and windows with densely carved frames (Īsā Bey mosque, Selcuk).

(c) Egypt and Syria. It seems possible that some of these elaborately decorated mosques in the Yemen proved models for the foundations of those built in the Islamic states of Egypt and Syria. The mosque of Baybars (660/1262) and Sultān Hasan (757/1356) may derive, if at several removes, from Anatolian prototypes of the kind discussed above. It is noteworthy, however, that in general the mosques of the Ayyubid and Mamluk period offer little scope for large-scale reworking of the hypostyle plan, since they were too small. The major cities of the Near East, such as Cairo, Imam da, 4th/10th century and others), frescoes with epigraphic, floral and geometric decoration, may well have predisposed Muslim architects in Anatolia to develop integrated decorative schemes for the main façades of their mosques. A monumental stone portal or pīṭḥāk (q.v.), often an iwan (q.v.) was the standard centrepiece for such designs. It could be strongly salient and tower above the roofline (Divriği Cami). (d) The Yemen. Apart from the Maghrīb, it was principally in the Yemen that the large hypostyle mosque maintained its popularity throughout the mediaeval period. Inadequate publication has meant that these buildings are less well known than they deserve, and without excavation the dating of many of them remains problematic. This is particularly regrettable because several of the early mosques, in the site of pre-Islamic temples, churches or synagogues (e.g. al-Djīlāʾ mosque, Ṣanʿāʾ), and spolia from these earlier buildings—such as columns, capitals, inscriptions and even sculptures of birds—are used very widely. Persistent local tradition attributes the djamiʿīs of Ṣanʿāʾ and al-Djānād to the time of the Prophet; both were probably rebuilt by al-Walīd I. The former has preserved much more of its original appearance: perimeter walls of finely cut stone in stepped courses enclose a roughly square shape with a central courtyard and the muṣalā only slightly deeper than the other sides. Al-Djānād, on the other hand, has had its similar original layout transformed by the addition of prayer halls, mausolea, ablutions facilities and the like is a recurrent pattern in the Yemen (djamiʿīs of Ṣabīb and Ibb).

Small hypostyle mosques of square form (al-ʿAbbās, 7th/13th century), or of rectangular shape, whether broad and shallow oblongs (Ṭiḥṣīd, 7th/13th century) or narrow and deep (Ṭaṃrūz, 5th/11th century or earlier), are common, and a few larger mosques of this kind, still without a courtyard, are known (Dhībin, after 648/1250). The commonest form, however, comprises a structure that is rectangular or trapezoidal (Masdjid al-Ṣawmâʾa, Ḥūt, 7th/13th century) with a central courtyard and extensive covered nūdās on all sides (Rawḍa Ḧāmā, 7th/13th century). Often this formula is enriched by a lavishly carved or painted wooden ceiling over the sanctuary area alone (Ṣhibām Ḧāmā, 4th/10th century or by the incorporation of mausolea (Zafār Dhībin, 7th/13th century; funerary mosque of the Imam al-Hādī Yahyāʾ, Saʿūdā, 4th/10th century and later) or of minarets (Ṭiḥṣīl, 480/1087; Dhī Al-Aqrāk, 410/1020). Indications from the courtyards and prayer halls explain the use of wider central aisles in the muṣalās (Zafār Dhībin, Ibb, Ḫībīl, Dhī Al-Aqrāk and a concentration of domes along the kwīla wall (enlargement of Ibb Ḧāmā, 7th/13th century). The glory of these Yemeni mosques as a group lies in their decoration: exceptionally long bands of stucco inscriptional (mosques of Dhāmār and Rada, 7th/13th century and later), frescoes with epigraphic, floral and geometric designs (Rasūlīd mosques of Tāʾizz) and a matchless series of carved and painted wooden ceilings (Zafār Dhībin, al-ʿAbbās, Sirha, Dhībin, Ṣibām, Ṣanʿāʾ and others).

4. The Iranian tradition.

(a) The early period. Such was the prescriptive power of the "Arab plan" that its influence permeated mosque architecture in the non-Arab lands too. It would therefore be an artificial exercise to consider the development of the Iranian mosque in isolation, the more so as many early mosques in Iran (Bīšāpūr, Sirāf, Susa, Ẓaďr) were of Arab plan. Some also had the square minarets which were an early feature of that plan (Dāmghān; Sirāf). Rather
did the Iranian mosque acquire its distinctive character by enriching the hypostyle form by two elements, the deep domed chamber and the mihrab, a vaulted open hall with a rectangular arched façade. The domed chamber derived from the mostly diminutive Sasanian fire temple with four axial arched openings, the so-called chahar tak. Set in the midst of a large open space, it served to house the sacred fire. This layout obviously lent itself to Muslim prayer, and literary sources record that it was a freestanding fire temple converted into mosques (e.g. at Bukhara) by the simple expedient of blocking up the arch nearest the kibla and replacing it with a mihrab; but conclusive archaeological evidence of this practice is still lacking, though the mosques of Yazd-i Khast and Kurwa may be examples of it. Such domed chambers, whether converted fire temples or purpose-built Muslim structures, may have served as self-contained mosques, converted fire temples or purpose-built Muslim structures, though the mosques of Yazd-i Khast and Kurwa may be examples of it. Such domed chambers, whether converted fire temples or purpose-built Muslim structures, may have served as self-contained mosques, converted fire temples or purpose-built Muslim structures, though the mosques of Yazd-i Khast and Kurwa may be examples of it. attenuated or otherwise modified. At Ashtardjan everything is subordinated to the principal axis announced by the double minaret façade, an emphasis which is taken up and intensified by the single great iwán which takes up the full width of the courtyard and leads into the domed sanctuary. At Warāmnīn, too (722/1322 onwards), which is of standard 4-iwān type, the sense of axial progression is strong, and is made rather more effective than at Ashtardjan by the absolute length of the mosque and the extreme clarity of the structure which distinguishes it in Tabrīz, by contrast (ca. 710-20/1310-20) deliberately returned, it seems, to much earlier models, for it comprised essentially a huge cliff-like iwán preceded by a courtyard with a central pool and clumps of trees in the corners—perhaps a deliberate reference to the Tāk-ī Kīsā itself. For smaller mosques, Qal‘alikār models were again at hand; hence, for example, the trio of domed chamber mosques virtually level at the entrance of Kāj and Dastspī, all datable ca. 725/1325. Yet another compliment to earlier masters was the Ishānīd tendency to add new structures to existing mosques: a madrasa to the Isfahān qāmī (776-8/1374-75), an iwán to the mosque at Ǧaz (ca. 715/1315), and so on.

(2) The Timūrid period. The Timūrid period took up still further ideas which had been no more than latent in earlier centuries. While some mosques of traditional form were built such as the Mosque of Gavhar Shāh, in Maḥjībd, of standard 4-iwān type (821/1421), attention focused particularly on the portal and kibla iwāns, which soared to new heights. Turquoise tiles were used and their magnified these proportions still further. This trend towards gigantism is exposed at its most eminently in the 4-iwān qāmī of Ziyāratgāh, near Ḥarāt (887/1482), where the absence of decoration accentuates the sheer mass of the sanctuary iwán looming over the courtyard. At its best, however, as in the mosque of Bībī Khānum, Samarkand (801/1399) where these exceptional proportions are consistently carried through to virtually every part of the plan is transformed by the use of a domed iwán dārī to the mosque at Gaz (ca. 715/1315), and so on.

chambers behind the lateral iwans give extra space for prayer, while two nāmasūs with courtyards flank the main courtyard to the south. Thus even at the height of its popularity, the 4-iwan mosque could accommodate quite major innovations without impairing its essential character. Later Safavid mosques, such as the ġāmān's of Sarm and Čashum, the Masdjīd-i Wazir in Kāhān and that of Šāh ʿAbbās in Isfahan, serve by their very modesty, however, to highlight the absurdity of vaulting for the two mosques on the Isfahan maqāma. Even such a spacious and handsome version of the traditional 4-iwan schema as the Masdjīd-i Hākim, Isfahan (1067/1656) could not fail to be an anticlimax in their wake.

5. The Turkish tradition.

(a) Early domed mosques. The earliest Anatolian mosques follow Arab prototypes, and by degrees some of them take on an Iranian colouring, especially in their free use of iwāns for portals and for sanctuaries entrances. Already by the 7th/13th century, however, an emphasis on the isolated domed chamber as a mosque type began to make itself felt. This idea too might have had Iranian origins, but it soon developed in ways that owed nothing to Iran, since the central courtyard was not a perpendicular feature for early mosques with no courtyard was itself enough to encourage experiments in the articulation of interior space. The dome quickly became the most favoured device to this end. In Iran, by and large, the domed chamber behind the kibla iwan remained spatially isolated from the rest of the mosque. In Anatolia, by contrast, architects were always seeking new ways of integrating the main domed space with the area around it. A consistent emphasis on domical forms created the necessary visual unity to achieve this. Already in the Saljuq period tentative experiments in this direction may be noted, for example the Ala-i-Din mosque, Nigde (620/1223), whose kibla is marked by three domed and cross-vaulted bays with further parallel aisles behind. In the Ulu Cami of Balıkesir (553/1160), a single great dome replaces these smaller bays, while in the Gök mosque and nāmasūs, Amasya (665/1266), the masjīd comprises a series of triple-domed aisles. Experiment with domical forms was therefore deeply rooted in Anatolian architecture from the beginning. It is above all, however, the hallmark of the great Ottoman mosques, and can be traced to the very earliest years of that dynasty.

(b) Ottoman architecture before 857/1453. The sequence begins very modestly with a series of mosques comprising a simple domed cube with a lateral vestibule (ʿAlāʾ-al-Dīn mosque, Bursa, 736/1335, a structure typical of well over a score of such Ottoman mosques built in the course of the 8th/14th century) and minor variants of this schema, such as the mosque of Orhan Gazi, Bilecik, and the Yeşil Cami, Iznik, 780/1378. Such structures have a natural affinity with larger mausolea throughout the Islamic world, and with the simplest forms of Iranian mosques. It is only with hindsight that their significance for later developments, in which the theme of the central courtyard becomes the central feature of the Ottoman mosque, can be traced to the very earliest years of that dynasty.

Yet a significant element, crucial to Hagia Sophia and a cliché of Ottoman architecture after 857/1453, had not yet entered the architectural vocabulary of the Turkish mosque before that date. This was the use of two full semi-domes along the mسبح axis to buttress the main dome. The long-rooted tradition of placing one central domed and two lower domes along the great dome rendered such a feature otiose. Once the decision had been taken to make the largest dome the central feature of a much larger square, the way was open for the adoption of this Byzantine feature, and with it the transformation and enrichment of interior space was a foregone conclusion. Otherwise, most of the architectural vocabulary of the Ottoman mosque was already to hand by 857/1453: flying buttresses, the undulating exterior profile created by multiple domes, tall pencil-shaped minarets and a cer-
tain parsimony of exterior ornament allied to exquisite stereotomy. It has to be admitted, however, that these features had yet to find their full potential, notably in the failure to develop a suitably imposing exterior to match the spatial splendours within. That potential could be realised only when these features were used in tandem with each other by masters seeking to express a newly-won confidence and bent on creating an integrated style for that purpose. The mosque was, moreover, their chosen instrument; indeed, its name, the Fatih Mosque (867-75/1463-70), this has a single huge semi-dome butressing the main one but also displacing it off the main axis; clearly, the spatial, aesthetic and structural implications of such a semi-dome had not yet been fully grasped. Within a generation, this anomaly at least had been rectified; the mosque of Bayazid II (completed 913/1506) has two such semi-domes on the main axis, and these are often called “clumsy and lopsided expedients with little functional justification. Yet the resultant lack of coordination and unity at the expense of the exterior. As the viewpoint changes, so too does the profile of the building binds it together and defines the sacred space. The layout is a model of clarity and logic. Flooded with light, their volumetric subdivisions apparent at a glance, these interiors are at the opposite pole from the dim mysteries of Hagia Sophia. Frescoes reminiscent of manuscript illumination and of carpet designs vie with Iznik tiles to decorate the interior surfaces, and often (as in the case of fluted piers) to deny their sheer mass.

Externally, these mosques attest a well-nigh fugal complexity by virtue of their obsessive concentration on a very few articulating devices like windows, arches and domes. The repetition of the same forms on varying scales intensifies the sense of unity. Even the most ornate and opulent mosques are clad in a skin of smooth limewash, and their façades are so constructed that the principal surfaces are incised by narrow horizontal bands. The mosque’s surface area are brought into play; for example, those of the Sultan Ahmed Mosque (completed 1025/1616) have the bases of their balconies so calibrated as to coincide with the top of the main dome, its collar and the collar of the main subsidiary half-domes, while their location at the corners of the building binds it together and defines the sacred space from afar. Detailing is sparse and crisp, with a strong linear emphasis, a flawless sense of interval and a pronounced attenuation of features like wall niches and engaged columns (Süleymaniye mosque). Nothing is allowed to impair the primary aesthetic impact of cliff-edge expanse of smooth grey stone. Most notable of all is the monumental ensemble whose outer edges are so accentuated in the great dome which crowns and develops the entire ensemble. These individual units are each locked into place within a gently sloping pyramidal structure whose inevitable climax is the central dome. From this peak the subsidiary domes, semi-domes and domed buttresses cascade downwards to form a rippling but tightly interlocked silhouette. These highly articulated exteriors are a triumphant realisation of the standard Islamic preference in mosque architecture for stressing the interior at the expense of the exterior.

As the viewpoint changes, so too does the profile of this feature re-appeared under numerous guises, especially in the doubled form (Mihırımah mosque, completed ca. 973/1565). The Şehzade mosque (955/1548) presents a much more streamlined appearance, with dome chamber and courtyard of approximately equal proportions. Within the sanctuary, the great central dome opens into semi-domes on all four sides, with small diagonal semi-domes opening off the main ones and corner domes. It is instructive thus to see Ottoman architects developing the possibilities of the centralised plan like the builders of Christian churches and martyria a millennium before, and coming to very similar conclusions. Smaller mosques with domes on hexagonal (Ahmed Paşa, completed ca. 970/1562) or octagonal bases (Mihırımah mosque) were scarcely less popular than domes on circular bases. So too did the various types of wooden-roofed mosques perpetuating earlier modes, and with their roots in the Arab tradition, survive (e.g. Razanaz Efendi in Koçamustafapaşa, 994/1585, and Tekkevi Ibrahim Ağa, 999/1590) as reminders of a very widespread type of Ottoman mosque now almost entirely eclipsed by more durable structures.

In the ferment of experiment which marks 10th/16th century Ottoman architecture, the key figure was undoubtedly Sinan, an Islamic equivalent to Sir Christopher Wren, who transformed the face of the capital city as of the provinces with some 334 buildings (mostly mosques) erected in his own lifetime, and whose pivotal role as chief court architect (effectively Master of Works) allowed him to stamp his ideas on public architecture from Algeria to Irāk and from Thrace to Arabia in the course of a phenomenally long career which spanned virtually the entire century. The Süleymaniye mosque in Istanbul (963/1556) is by common consent the masterpiece of his middle age. It takes up and refines the model of the Bayazid II mosque by adding ideas taken from the Şehzade mosque, like the succession of semi-domed spaces billowing out from the main dome, though only along the principal axis. Huge arches serve to compartmentalise the spatial volumes.
these mosques, from a continuous smoothly undulating line to a series of sharp angular projections formed by stepped buttresses and roof-turrets. The preference for saucer domes rather than pointed domes with a high stilt fosters the sense of immovable, rock-like stability, with the topmost dome clamped like a lid onto the mobile, agitated roof-lines beneath it.

This, then, can justly claim to be architects' architecture. It merits that term by virtue of its unbroken concentration on the single germinal idea of the domed centralised mosque. It is against that consistent unity of vision that the role of the Hagia Sophia must be assessed. Of course, Turkish architects were not blind to its many subtleties, and they freely quarried it for ideas. But it was as much a challenge that inspired them to emulate it as was a source for technical expertise. Finally, it was the Ottomans who succeeded where the Byzantines had failed: in devising for these great domed places of worship an exterior profile worthy of the splendours within. The triumphant issue of their labours to that end can be read along the Istanbul skyline to this day.

II. In Muslim India

A. Typology. The nature of the regional building styles and their characteristic decoration have been treated s.v. HIND.
The interior of the mosque admits of little variation outside two well-defined types. In one the western end (known in India as 
liwānid) is a simple arrangement of column-supported roof, usually of at least three bays in depth but possibly of many more; the roof may be supported by beam-and-bracket or by the arch; the former arrangement being by no means confined to compilations of pillaged Hindu/Djyaś material. The liwānid openings may be connected directly with the arcades or colonnades of other sides of the mosque. (This was the position of the Hindu temple enclosure whereby the kibla is composed into one or more halls; there is always an odd number of maksura arches, and it is common for the bay which stands in front of the principal mihrāb to be singled out for special treatment, either by being made taller than the rest, or by being specially decorated (the latter treatment common in the mosques of Bījāpur [q. v.]).) This is not invariably the central bay, as mosques are not necessarily symmetrical about the principal mihrāb axis; cf. the "Stonecutters' M." in Fatḥpur Sīkri, where a cill occupies two additional bays at the north end of the liwānid, or the Aḥā'ī Kangāra M. at Kāghi Banārās, where the side riwāds of the liwānid are of unequal length.) In one mosque at Bījāpur (Makkā M.), the liwānid stands within and unattached to the surrounding courtyard. A staircase is commonly provided to give access to the liwānid roof, either separately or incorporated within the walls or the base of a minaret, as was also done in Iran. Here this is not made the subject of special treatment; a staircase may be provided within a gateway for the same purpose. The liwānid roof may be surmounted by one or more domes. Inside the liwānid, the principal mihrāb stands within the west wall opposite the main opening; if there are other mihrābs, the central one is always the most sumptuously decorated and may be set deeper within the west wall than the other. The minbar is usually a permanent stone structure, with an odd number of steps, only occasionally made an object of decoration (splendid examples in the older Bengal mosques and in the Mālāw sultanate). A simple minbar is often provided when not liturgically necessary, as in the mosque attached to a tomb. There is an minbar at Bījāpur in the mosque built for the eunuch of Aḥā'ī Kangāra M. and the minbar is now often used as a mihrāb. The liwānid is two-storeyed, the two halls being exactly similar except that a minbar is provided only in the lower one. (In another first-floor mosque at Bījāpur, the Aḥā'ī M., there is no minbar; the ground floor is apparently a well-guarded sargāc, and the suggestion has been made that the whole structure was intended for sargāc use.) The floor of the liwānid is often marked out into musallās of mihrāb shape for each individual worshipper. Lamps may be suspended from the liwānid ceiling.

The continuous history of the mosque begins with the M. Kuwawt al-Īslām in Dihlī, founded immediately after the Muslim conquest in 587/1191. This mosque was the first in a series of large structures designed for access by the general public. The internal arcade or colonnade) is a later development, although the idea is occasionally met with in earlier, e.g. under the 'Abbasīd caliphate in Sind [q. v.], by small communities of Muslim traders, especially in Gudjarāt and the Malābār coast, and by individual Śūfī pīrs who gathered a community around them. The remains of these are mostly too exiguous to be of value in a general statement. Recent explorations by M. Shokoohy, not yet published, have revealed a few structures, of a century or two before the conquest, at Bhdherjwār in Gudjarāt. These, in common with the first structures of any fresh conquest of expansion, are constructed from the remains of Hindī buildings; in the case of mosques built after a conquest there has been a deliberate pillaging of Hindī or Dījan temples, as an assertion of Hindu supremacy as well as for the expediency of making use of material already quarried and of local impressed labour before the arrival of Muslim artisans. Examples of this are cited for different regions of India s.v. HIND, vii. Architecture, in Vol. III, p. 441 above. (It should be pointed out that the practice of pillaging the buildings of the conquered is known in India in the case of rival Hindī kings also.)

Mosques which might be described as "public"—i.e. not only the Masjid-i ġāmi of a particular locality (and of course in a conurbation there may be a separate ġāmi for each original mahalla) but also the indigenous type of mosque introduced within the town—are enclosed on all sides. This has not been required of mosques within a sargāc or a dargāh, or when the mosque is an adjunct of a tomb, and there are countless instances of small private mosques where there seems never to have been any enclosure. The enclosure for the public mosque is particularly necessary for Islam in partibus infidelium, and those courtyards which are not enclosed are protected from the infidel gaze in some other way, e.g. by the sargāc standing on a high plinth (examples: the ġāmi of M. at Ṣāḥibjāhānābād, Dihlī, Ṣāḥib M. at Dījanpūr, where in both the courtyard is limited only by an open arcade or colonnade). The principal entrance is usually on the east, although any gate may be on occasion in the west, a royal entrance; it is rare, though not unknown, for any entrance to be made in the western wall, and where this has happened it is not designed for access by the general public. The internal position of the principal mihrāb [q. v.], sometimes of subsidiary mihrābs also, is indicated on the outside of the west wall by one or more buttresses; a feature of mosques in India is the way the exterior elevation of the west wall is brought to life by decorative expedients.

vii. Architecture, in Vol. III above. This section deals with the essential typology of mosques in India, and excludes the simplest structures used only for occasional prayers, such as the kibla-indications at some tombs and graveyards [see MUKARRA. 5, India], and the special structures (ṣiqqā) provided for the "ītikāf; for these see MUSALLĀ. 2.

The continuous history of the mosque begins with the M. Kuvawt al-Īslām in Dihlī, founded immediately after the Muslim conquest in 587/1191. This mosque was the first in a series of large structures designed for access by the general public. The internal arcade or colonnade) is a later development, although the idea is occasionally met with in earlier, e.g. under the 'Abbasīd caliphate in Sind [q. v.], by small communities of Muslim traders, especially in Gudjarāt and the Malābār coast, and by individual Śūfī pīrs who gathered a community around them. The remains of these are mostly too exiguous to be of value in a general statement. Recent explorations by M. Shokoohy, not yet published, have revealed a few structures, of a century or two before the conquest, at Bhdherjwār in Gudjarāt. These, in common with the first structures of any fresh conquest of expansion, are constructed from the remains of Hindī buildings; in the case of mosques built after a conquest there has been a deliberate pillaging of Hindī or Dījan temples, as an assertion of Hindu supremacy as well as for the expediency of making use of material already quarried and of local impressed labour before the arrival of Muslim artisans. Examples of this are cited for different regions of India s.v. HIND, vii. Architecture, in Vol. III, p. 441 above. (It should be pointed out that the practice of pillaging the buildings of the conquered is known in India in the case of rival Hindī kings also.)

Where a mosque is actually constructed on the plinth of a destroyed Hindī building (e.g. M. Kuvawt al-Īslām at Dihlī; Ṣāḥib M. at Dījanpūr) the kibla [q. v.] will probably not be accurately located and the original cardinal west made to serve the purpose; but in general an effort is made to observe the correct kibla, which varies between 20° north of west in the south of India to 25° south of west in the extreme north, with a conventional west used only rarely in original buildings.

Mosques which might be described as "public"—i.e. not only the Masjid-i ġāmi of a particular locality (and of course in a conurbation there may be a separate ġāmi for each original mahalla) but also the indigenous type of mosque introduced within the town—are enclosed on all sides. This has not been required of mosques within a sargāc or a dargāh, or when the mosque is an adjunct of a tomb, and there are countless instances of small private mosques where there seems never to have been any enclosure. The enclosure for the public mosque is particularly necessary for Islam in partibus infidelium, and those courtyards which are not enclosed are protected from the infidel gaze in some other way, e.g. by the sargāc standing on a high plinth (examples: the ġāmi of M. at Ṣāḥibjāhānābād, Dihlī, Ṣāḥib M. at Dījanpūr, where in both the courtyard is limited only by an open arcade or colonnade). The principal entrance is usually on the east, although any gate may be on occasion in the west, a royal entrance; it is rare, though not unknown, for any entrance to be made in the western wall, and where this has happened it is not designed for access by the general public. The internal position of the principal mihrāb [q. v.], sometimes of subsidiary mihrābs also, is indicated on the outside of the west wall by one or more buttresses; a feature of mosques in India is the way the exterior elevation of the west wall is brought to life by decorative expedients.
The liwan façade is open to the sahn; i.e. there is never any portion closed off like the zimistdn of mosques, this seems not to have produced any overall adaptation of layout, unless in the development of the undercroft.

The sahn usually is an open courtyard, containing a hawd [q.v.] for the wudu; this is usually placed centrally, except that in some Shi'i mosques the hawd may be placed to one side of the central axis. There are rare cases where the sahn is completely or partially covered (e.g. the Diāmī M. at Gulbarga [q.v.]) is completely covered; in two mosques of the Tughlukid period at Delhi, the hawd of the Ballādī M. and of the Dhūn-dhūn (q.v.) is entirely open, with additional risalas leaving only four small open courts in the middle of the sahn). In such cases provision must be made for the wudu outside the sahn; some major mosques may also make provision, outside the sahn, for the khāwil. In some Gudjarāt mosques there is a water reservoir under the floor of the sahn, sometimes with chambers wherein to take refuge from the heat of the sun, with some sort of kiosk standing in the sahn from which water may be drawn; the idea is imitated on a small scale in the floor of the Diāmī M. in Fathpur Sikri. In one complex (Rādžūn ki bā‘īn) south of the M. Kuwāt al-Īslām the mosque and an associated tomb seem subordinate to an enormous step-well (bā‘īn [q.v.]).

In such cases provision may be made for the wudu outside the sahn; some major mosques may also make provision, outside the sahn, for the khāwil. In some Gudjarāt mosques there is a water reservoir under the floor of the sahn, sometimes with chambers wherein to take refuge from the heat of the sun, with some sort of kiosk standing in the sahn from which water may be drawn; the idea is imitated on a small scale in the floor of the Diāmī M. in Fathpur Sikri. The Arab conquest of Sind. It is recorded that the first mosque in Sind was built by Muhammad b. Kasim at...
framed, and supporting an octagonal cornice; above, round the base of the smooth dome, are 32 arched niches, four of them pierced to admit light. The grace of the interior is achieved by a balance between the four main arches, the squinches, and at a reduced scale the muhrab and pairs of small arches at each corner, sustaining interest at each level. Each arch, inside or out, is contained by bands of inscriptions on the extrados (derived from Cish?), set off by lotus buds lining the intrados, in recessed planes above the angle shafts for reinforced structural members, probably starting point for the Gudjarati style with latticed windows, coffered ceilings over carefully-grouped columns, and domes of two sizes over the iwán. The Djamî Masjîd at Khambayat (ca. 1325) owes a more direct debt to Dihí in its arches and massing, but local features are evident in the merlon parapet, pinnacles on the frontispiece, latticework set in a grid-like frame, and pillars carrying a cusped arch just inside the main archway. These examples attest to the diffusion of the style in western Hindustân.

An altogether different treatment of the mosque was to characterise Tughluk building. Most of the examples at Dihí are undated, and have been ascribed to Firûz Shâh, but it has been suggested (Burton-Page, op. cit. he Îbâd, 1974, 85) that the large Begampur Masjîd is better explained as built by Muhammad b. Tughluk for his new city of Dihánpanâh (ca. 725/1325). Raised on a high plinth, it is important in introducing the Iranian four-iwán plan to India. North and south, the iwânas are advanced well into the court between heavy walls, boxing entrances at each side; to each wall, a corner vault with single-aisled riwâq, its arch rises to twice the roof height between tapering round towers and massive walls had met the needs of mud construction, than to the need for defence (Ghîâyâh al-Dîn, a Kara‘una Türk, may have mediated this influence). The Djamî Masjîd at Firuzâgh Kôlî (755/1354), now ruined, was built to incorporate a tahkhânâ or undercroft, with arcaded vaults accessible from three sides, the east fronting the river. It once had three-aisled riwâq with multiple domes, and 216 stone pillars about 16 ft. (4.87 m.) high, around a central octagonal pool with its own dome. A single riwâq, one of these domes, was re-erected on a three-storey, arched pyramid as a marker. The materials for this and Firûz Shâh’s other mosques are rough rubble stonework faced with cûnâ plaster, once whitewashed or painted, with a minimum of mouldings. The common répertoire included tall plain walls with merlons, plain lintels on plain, squared quarzite piers set in twos or fours, with wide shadâr, the courts themselves were probably still Hindu in type, and two-centred arches of variable width sunk in panels, sometimes concentric. Domes were of a similar, helmet-like profile, set on framed, recessed squinch arches. Externally, the mass is emphasised by long flights of steps, projecting porches, and battered towers at the angles. The device of the tâhkhânâ, which allows easy access to the prayer space, is repeated at the Kalâqâb Kumbhâm (790/1397?) which exhibits these features, and an unusual corridor around the prayer hall, besides cannon-like guldâsta pinnacles crowning the angle-towers of the porch. The Khîrîk Masjîd, also on a tahkhânâ, repeats the three-aisled riwâq, but in combination with three-aisled passages which traverse the court on both axes, dividing it into four smaller square courts. This four-court plan is to be seen in a perhaps earlier form at the Sandîjar Masjîd (772/1370-1) at Nizâm al-Dîn, though there the riwâq and the passages are only one aisle deep, and the courts are rectangular. This scheme, possibly derived from Djąyn temple plans, was presumably intended to provide a more direct connection with single-aisled riwâq, but those covered by awnings, as in palaces at the time. It intruded on the essential unity of the sâhn and its congregation, and the experiment was not repeated. The mosque of Shâhî Âlam includes an early example of a mezzanine gallery in the northwest corner; the inaccessibility of such retreats leaves their purpose uncertain.

The Djamî Masjîd at Irîc (815/1412), some 40 miles north of Jhansi, demonstrates the transition from the Tughluk to the Sayyîd manner. The plan, with single-aisled riwâq, is centred on a prayer chamber whose dome spans the full depth of the hall, with two aisles and six smaller domes on each side. The structure is wholly arcuate, on low piers carefully detailed to articulate both axes, with frequent use of recessed planes; the arches are now stilted, with marked corbelling at the impost giving a shouldered effect, and set in deep panels. The riwâq has groined vaulting. The dome is single, a little pointed inside, with ribs, and still set on concentric squash arches. The generally ponderous effect is offset by the assurred but simple proportions, and the skyline is relieved with merlons (see Mem. ASI, xix, Calcutta 1926, for drawings).

The Lôdî mosque (Tughlukid) at Khaypur (900/1494) incorporates similar features, while its massing shows the continuity of Tughlukid tradition despite Timûr’s incursion. Attached by a walled court and connecting to the Bara Gumbhâm, the structure opposite: a significant precedent for later tombs. An arcade basement makes up the change in
level at the rear, with tapering round buttresses at each rear corner, and at each angle of the projecting bay of the central mihrāb, whose tops are alternately recessed below guidestān pinnacles; a Hindu window is corbelled out from the middle, and from either end wall. The hall has five bays; the three in the middle are domed, but the ends have low, flat vaults. The elevation reiterates the pattern, with three broad shouldered arches, and narrow ones at the extremities. At Iśtī, the central pishtāk is raised a little over the narrow side door piers, and the outer two bays are united by the line of a chadidjī. Like its dome, the central arch, thrice recessed, is a little higher than the others, and a muscular tension results from the contrast of line. The surfaces, worked outside and in with deeply cut plaster, vibrate with countless arabesques, each extrados is inscribed, and inscribed rossettes fill the spandrels. Inside, they enhance pendettive systems of oversailing lintels carved with makaraṇa [q. v.] niches. The vocabulary is further enlarged by blind merlon parapets, counterset trefoils around the octagonal dome bases (precursors of later foliation), and spreading lotus finials, makrābdma. The development of this type is apparent in the Mūḥār ki Masdjid (ca. 943/1535), whose central dome is related to the two end bays, in a much freer space. There they are supported on similar corbelled pendettives, as long used in Iran, while the central dome rests on squinch arches. The five façade arches are narrower, and a lancet window is added at each end. The pishtāk now encloses a lofty blind arch reching the parapet, which frames the entrance arch below, and a window above, as anticipated in the mihraḥ at Khayrpur. The two corner buttresses give way to polygonal towers, arcaded in two storeys. White marble is used to set off the red sandstone, with coloured tilework, notably on the chaturā at the courtyard corners, and painted claser plaster. Despite his dissatisfaction with this style, Bābur appears to have secured little improvement at his mosques (932/1526) at Kābuli Bāgh, Pānipat and Sambhal, beyond introducing Timūrid squinch netting. Hūmāyūn, however, developed it further in the Djamālī Masdjid (943/1535) at Delhi, in the same five-bay format. This only has one dome. The pishtāk is contained between engaged reeded shafts that anticipate the Mughal use of minarets. The four-coronet corbel arches are supported on superimposed niches, which help to maintain the rhythm, and their haunches are slight. Khālīṣi lotus buds are re-introduced on the central intradoses. The Masdjid-i Kuhna at the Purāṇā Kīl‘a (ca. 1535-60) shows further refinement. Each of its five arches is contained within a taller blind one, and that in a panel. The end bays, broken forward, resemble the Djamālī pishtāk, but the three middle ones are set deeper, with delicate angle shafts, and are proportionately taller. The fine ashlar incorporates the first geometric marble mosaic, after Timūrid models, and elaborate moulding profiles. Inside, the rippling recessed arches carry squinch arches below the prominent central dome, nched pendettives on either side, and intermediate "corner" buttresses; the central verandah dome has a roof with four curved eaves—a lauwīṭā. It was once tiled outside and in. The Gunmast Masdjid at Gāwī (ca. 880/1475?) has a single square chamber of brickwork surmounted by a single dome; it has single openings centred north and south, and three to the east giving on to a vaulted verandah running the full width, again with single doors to north and south, and three to the east. The piers between the arched openings carried aedicules set high, and glazed tilework. The Lattan Masdjid (880/1475-6) is similar, but with a more complete symmetry, having three openings to north and south, and three pishtāks opposite the doors, three domes over the verandah, and intermediate "corner" buttresses; the central verandah dome has a roof with four curved eaves—a lauwīṭā. It was once tiled outside and in. The Gunmast Masdjid at Gāwī (889/1484?) encloses four bays of three aisles, all domed, on either side of a central mukāra, the stonework of whose vault is carved in relief. A further variation is illustrated by three mosques at Gāwī (925/1519), in which the large central mihraḥ (988/1480) is rectangular, enclosing five bays of two large, with a single line of four stone pillars to carry its ten domes. Fine terracotta reliefs fill the spandrils and the two registers of aedicules on the piers outside. At the Chōţā Sonā Masdjid, built between 899/1493 and 925/1519, the plan is comparable, but of three aisles; its central bay is wider, and has three lauwīṭā roofs in lieu of domes. Its ashlar front is finely carved, and the dome was once gilded. The Bāfā Sonā Masdjid (932/1526) combines eleven bays of three aisles with a verandah forming a further aisle down the front, facing an open quadrangle with arched gateways; the stone is remarkably plain. Such forms continued well into the Mughal period, as seen in the Kutb Shahi mosques and the Masdjid-i Kuhna at Dwānpūr. A mosque begun in 778/1376 by FIRŪZ SHĀH TUGHLUQ was completed under the independent Šāhī sultans (811/1408); its name, Āţā Masdjid, apparently refers to the pylon-like pishtāk which was to become the dominant trait of subsequent buildings here (Sk. āţāla = "watch tower"); see Lehmann, op. cit., 22), exaggerating the great screen-arch at Dihāl. The four-tower plan is apparently derived from the Begampur Masdjid at
Dhāli, though the īwān walls are reduced to massive spurs outside the enclosure, and those to north and south have domes carried on clustered columns, leaving the three-aisled pishtāk arches, whose recessed tympanum is pierced in three registers, to reveal the open air beyond. This pylon, used for arching the continuity of the three prayer hall aisles; the axial symmetry, three arches on either side maintain the same triality is seen in the facade. The simply niched screen and the dome hidden behind is nowhere more than that of any other region on the Hindu and Jain traditions, two tendencies in mosque design had emerged in the Khaldji phase already referred to.

The Masdjid of Malik Alam ASWI, (ca. 852/1447), built on the same pattern, the structure behind the main īwān is still fighter, minimising obstruction of the prayer hall below the central dome, though mezzanines are set on either side; the absence of lateral domes, due to the smaller scale, leaves that as the central feature. The domes, with massive Hindu brackets, contrast oddly with the Islamic slenderness of the colonnades. In structural terms, the Dāmī Masdjid (842/1438, but finished under Husayn Sharki) is a reversion to the Begampur type, with boxed-in, domed īwāns on all four sides, and the same high undercut. In the prayer chamber the colonnades are eliminated except under the mezzanines where the central pillars are paired to match its piers, for the wings are again boxed in by heavy masonry supporting the roof of a single pointed barrel vault spanning east and west, on either side. The prayer hall is thus divided into three spaces free of supports, but separated by their cross walls and the two-storey mezzanines. The structure is divided under the façade. The three large towers and arcaded tympana of the earlier pishtāks are transmuted into a rhythmic display of framed and fretted openings. The dichotomy between high frontal screen and the dome hidden behind is nowhere more pronounced than here. Related mosques are to be found at Itāwā (Dāmī Masdjid) and Banārās (720/1320) Djami Masdjid

Gudjarāt. In a sandstone architecture, drawing more than that of any other region on the Hindu and Jain traditions, two tendencies in mosque design had already emerged in the Khaldji phase already referred to: the screening of the prayer-hall front between a series of archways, as at Khambāyat (after Niğām al-Dīn at Dhāli), or the treatment of the hall as an open colonnade, given additional rhythm by the surge of domes above the ābadāna line, as at Bharotā. In either case the domes were carried by the Hindu device of beams spanning between two columns grouped to convert each square bay to an octagon. Remaining square bays were panelled in intricately recessed layers of coferring, whose cellular carving matched that of the domes. Pillars with markedly stratified round shafts above squared, faceted pedestals, carry vigorously curved brackets never far from living movement. The proportions of the three-arched screen are carefully repeated at Dhōlkā in the mosque of Hīlāl Khān Kādī (733/1333), but with bracketed, tiered pinnacles marking the pishtāk so prominently as to suggest the minarets which followed; the central dome, raised a storey above the roof, is surrounded by pierced screens. The same scheme, with its lower wings on either side, recurs at Ahmādābād in Sayyid ʿAlām’s mosque (815/1412), with half-rounded, tiered and bracketed buttresses framing the central arch as bases for fully functional minārs in a comparable style. The larger domes are now true, hemispherical ones. The development reaches fruition in the Dāmī Masdjid at Ahmādābād (826/1423) where the roof at the front of the three central bays is raised for a clerestory, with mezzanine galleries between, and the central dome is raised a further storey, though the plan may be filtered by a pierced screen set in the usual Gudjarāt gridframe of stone: the remaining domes, three deep and five in the length of the hall, surround these three at the lower level. The minārs, once four times this height, fell in 1819 (see J. Forbes’ drawing of 1786 at AŚWī, vii [1906], 30). The Masdjid of Malik ʿAlām (1422?) combines a single arch with such minarets and an open front. Continuing interest in the open type of hall is seen, as at the mosque at Sarkhej (855/1451), where 140 pillars, grouped as usual to support two rows of five equal domes, are set throughout in pairs to achieve an elegantly simple unity below a continuous roof line; there is little carving but for the mihrāb. The Dāmī Masdjid at Čāmpānēr (Māhūmādī, 805/1402) works variations on that at Ahmādābād. The eleven main domes, are staggered, the central one being set over a single central bay rising through three roof levels, behind a pishtāk which now overlaps the minār on either side, and incorporates three corbelled bay windows. The hall wings (bāzūbā) thus maintain a single roof line, with a plain walled front pierced by arches each side, but there are two arches respectively above the minār, which is still corbelled, and the carved panels have filigree tendril-work. As at Ahmādābād, the pishtāk is one aisle deep; three entrance pavilions outside the wall carry prominent Dāris, and the wall itself is strongly modelled. The mosque of Rānī Rūpāwātī (ca. 916/1510) shows a hall of only three domes treated similarly, with heavily planted landing a more open space in modulating the front and ends. The culmination of the open hall design at the mosque of Rānī Ṣīpīr (Sabārī), also at Ahmādābād (920/1514), fronting her tomb, has two rows of three corbelled domes, with only one row of pillars down the centre, and another, paired, row of pilasters, similarly influenced by alternating pilasters. In the extreme delicacy of this small-scale scheme is most evident in the slender, but solid and purely decorative minār now set at each end of the façade—a device already introduced at the mosque of Muhāfīz Khān (897/1492) with full minarets. These two traditions were reconciled in the mosque of Shaykh Ḥasan Muḥammad Ǧūǧī (973/1563-6), a pillared hall of three minārs in which the front is arcaded between terminal minārs, and the central five bays are raised in an upper storey of verandahs around a single dome. Sīdī Saʿīd al-Ḥabšī’s mosque (980/1572-3), still at Ahmādābād, has five bays of three aisles with intersecting arches, supporting shallow domes over squinches, lintels and corbels, but is remarkable for its ten large traceried lunettes, of which two are univalved in the sinuous naturalism they bring to the interior. Mālwa. An initial phase of redeployed temple material is distinguished by a simple grace which remained typical of the kingdom. At the Dāmī Masdjid (or Lāt Masdjid) at Dāhr (807/1404-5) the proportions of a single smooth hemispherical dome impart a spaciousness to the centre of the prayer hall colonnades, complemented by a pattern of flagstones,
and a peaked, cusped mihrāb arch; outside, its coronet of merlons enhances the traces of a tiled merlon porch over the open front. One domed porch is surrounded by coved vaults, and in another false arch profiles are inserted between the pillars as in Gudjarāt temples. The first mosque at Māndū, that of Dīlāwār Khān (808/1405-6) is spartan, however, with its hall of elemental columns relieved only by seven mihrābs. Its successor, that of Malik Mughāh (835/1432) presents a true Tughlūkī mihrāb, with an arched undercroft in front between domed turrets, and the prominent stair often used here. The open, pillared prayer hall has three low, helmet-like domes. These, though still supported by an octagon of lintels, are partly enclosed by similar false arches below, with web spandrels, well integrated with the mihrābs behind. The Dījāmī Masjīd (858/1454) has the same reiteration of arched bays is already apparent larger thereby (997/1589). The interior of the open hall of 19 arched bays has square piers, and the five-aisle interior round pillars, carrying small domes on squinches. Heavy piers form a maṣjīda enclosing the central three bays, from which squinches on minarets carry a tall 16-sided drum lit by fine dūla, and a single large dome whose outer form is close to the domes at Mūltān [q.v.] while its supports recall the Tughlūkī iṣān at Begumpur. The small three-bayed Langar ki Masjīd at Gulgārga (ca. 838/1435) introduces a single pointed brick vault over two arched ribs.

At Bīdār, the use of tall arches on low impost is resumed at the Dījāmī Masjīd (ca. 926/1520?), recessed once, with angular matching squinches articulated with great clarity below plain domes (cf. those in southern Iran). A transition to the Bīdārī vocabulary can be seen in the Kālī Masjīd (1106/1694-5), where the three front arches are framed by a pointed, slender, formalised mihrāb, and the decagonal mihrāb recess is housed in a square octagonal tower carrying a cadrāj lantern, and a slightly bulbous dome as introduced at the Madrasa of Māhmūd Gawan (877/1472); a domical vault roofs the central bay. A small mosque at the tomb of ʿAlī Barīd (984/1576), handled similarly, has three domes on squinch-net pendientes, and a fretted cresting.

The Dījāmī Masjīd at Gālwāntī [q.v.], rebuilt in 893/1488, already combined a seven-arched hall façade on square piers with a square pylon at either end topped by a thātris with dūla-work in the sides, and thāthicā in serpentine brackets, but otherwise follows the Bahmani pattern of a dome over every bay, and a larger one raised on a tall drum at the centre; an arched screen wall surrounds its court. This is repeated at a smaller scale in the Dījāmī Masjīd at Rohankhed (990/1582), where four pylons with thātris now form the hall ends, with a single central dome: the imposing southern gateway has extensive carving.

Nīzām Shāhī. The Dāmīrī Masjīd at Ahmadnagar, in a similar façade flanked by ornate pylons, which carry four graceful minārs capped by bud-like domelots. Octagonal pillars form two arched aisles supporting a flat roof. At the centre of a decorative parapet two slim minarets frame an arch profile, as in the Bādāl Maḥallī Darwāza at Čandērī. No superstructure remains on the corner pylons of the Dīlāwār Khān mosque at Khed, but the exterior is enhanced by small domes set in the rear, and a series of crowned squares on the panelled bands running all round, and lotus medallions in relief. The central dome set on a square base imitates a tomb, complete with thāthicā and corner thātris. Inside, columns with volutes carry a coved ceiling.

Adil Shāhī. At Rāyūf [q.v.] in the disputed Dūbā, a series of liwāns were built, with their ceilings on black basalt Cālukiyan pillars whose short, heavy profiles are compensated by a deep parapet; the Ek Minār ki Masjīd has a tapering, free-standing minār.
MASDjid
20 m. high (919/1513). In Bidjapur [q.v.] the Bidar vocabulary was elaborated in dark stone. Thus in the Djami [q.v.] the Bidar vocabulary was elaborated in dark stone. Thus in the Djami of Ibrahim (ca. 957/1550?), where a flat, domeless roof with sturdy domed guldasta bulbs, set on a tall cylindrical drum, is Masdjid of Yusuf (918/1512-3) the slightly c pinnacles at each corner is relieved by a panelled mindr (ca. in the Djami above the roof line. The same three-bay format is used and the domed lanterns at each corner, well and characteristic, is the prominence given the dome, the Bidar masjid. In all of these have one of the first double domes in India. At the Djami of Ikhlas Khan (968/1560?) is (ca. The mosque of Ikhlas Khan [q.v.] may (985/1577-8?), these elements achieve mature expression. Its prayer hall, nine bays long and five aisles deep, is articulated with a calm strength, only an alternation of squinch detail varying a uniform structure with shallow domes; four piers at the centre are omitted, and intersecting pendentive arches are inserted in a miraculously change of scale to carry the dome (as already found in the tomb of Sultan Kahan Allah at Bidar and based on Timurid antecedents. Clerestory arches with fine ajalis light it through a square base rising above the roof, but the dome, still of the Multan shape above its foiling, remains dim, as usual here. Two features are innovations. At the east end of each seven-bayed nisaâ is an octagonal base for an unbuilt mindr; the entire external wall is modelled with two registers of arcing, the upper a corridor, and the lower blind. Both may be derived from the Musallah at Harat (841/1437-8) [q.v.]. A central courtyard tank anticipates Mughal practice. Stucco is partly replaced by carved stone at Malika Djanâ Begam’s mosque (ca. 995/1586-7), in which the square, hollowed sphere in its collar of leaves, is repeated at each stage of four corner minarets; guldasta lanterns, fretted cresting, and pendant stone chains compound a new elegance. The same character informs the Andâ Masdjid (1017/1608) in fine ashlar, set back above a sarat, and with a garden wall, and the mosque at the Mihâr-i Mahall, domeless, with rod-like mindrs, and four prolonged chadjid brackets, is not. Its acme is the mosque at the Ibrahim Rawda (1036/1626), facing the tomb across a plinth within a walled garden; brilliant use is made of elements repeated at a miniature scale to complement the whole. Afjâl Khan’s mosque (1064/1653) is on two floors, the upper probably for women, as at the Andâ mosque. The style was taken as far south as Sante Bennur. Much of the extraneous ornament is discarded in the Makk Masdjid, in the latter half of the century, free-standing within a risaâ continued to the west.

K. u. b Shâhi. At Golkonda [q.v.], the first capital, the ruins include a Djami Masdjud built by Suljan Kull Kuhl (1094/1681) in the style of the earlier Andâ mosque. The regional achievement is best represented by the mosques at Haydarabad [q.v.], which were given a new emphasis on height, accentuated by the concentration of external detail in the fascia between the chadjid and the skyline, and complemented by arcaded galleries around powerfully contoured mindrs. The multiple guldastas on fretted parapets, and foliated bulbous domes are, like the stucco, inherited from Bidjapur. The Djami Masdjid (1006/1597-8) has a spacious arched hall behind a front of seven bays divided unusually into two registers, the upper one of cusped arches being carved on struts from the pier impost; the central arch, broadest and tallest of all, is surmounted by a plain profile in the upper section. The Makk Masdjid, begun ca. 1026/1617, and continued until finished by Awrangzib in 1105/1693, is set behind a square courtyard reputed to hold 10,000 worshippers, with a hall two aisles deep and five tall bays wide. In the plain ashlar façade, the central arch is slightly larger, as the only variation below the strong horizontal of a chadjid on linked brackets, spanning between the broad galleries of the turrets at either end, each of which is crowned by a bulbous dome on a marked necking. The columns carry arched pendentives and domes, with a coved central bay. Verticality is particularly pronounced in the Tol Masdjid (1043/1633-4), where the five narrow arches of the front are stilted above a richly carved plinth. In the Djami above the roof level. Extensive use is made of cut plaster, syncretic in style. For other developments in the south, see MAHISUR. 2. Monuments. K. a. h. [q.v.]. The combination of a mountain climate and plentiful timber have resulted in a tradition of mosque building in a blockhouse technique of laid decord logs and pitched roofs with birch bark sarking topped by turf. In parallel with Dakhani mosques, the basic constructional unit had much in common with the local tomb type, a near-cubical volume set on a stone base, the corners emphasised by timber jointing, and roofed by a pyramid, sometimes tiered, with a slim spire at the centre. Frequent renewal after fires renders dating unreliable, though the type seems to have been used since the 8th/14th century. At Shirinagar in the mosque of Shâh Hamadan, the volume is modulated by large roofed balconies on each outside face, and the roof by a square arcaded muâdan’s gallery below the peaked spire. Four tapering galleries, with corbelled levings, are carried up to the parapet of arched screens joins the mindr galleries for their full height; each shaft has two further galleries above roof level. Extensive use is made of cut plaster, syncretic in style. For other developments in the south, see MAHISUR. 2. Monuments. M. u. h. E. During Akbar’s minority, the Timurid innovations introduced under Humâyûn remained in currency, associated with the mughal faction, as in the mosque and madrasa of Mâham Anaga (Anga), the Khayr al-Manâzil (969/1561-2) whose three bays to the court are close in format to the cen-
tral three at Purānā Kīla with a slightly raised *pishtak* advanced between clustered shafts, and four-centred arches whose tympana are pierced with archways at a lower level; only the single dome has an awkward old-fashioned stilt. The arch spandrels are inlaid. The screened upper storey of rooms enclosing the court on three sides appears to be unique for the period, while the portal is the first to use a semidomed *iwan*. At Fathpur Sikri [*q. v.*] these forms are less in evidence. Although the front of the Stonecutters' Mosque (ca. 949/1543) and the adjacent gate both feature a row of thin slabs set between thicker posts, the *chādāfis* is supported by long, sinuous brackets, and the internal row of pillars is Hindu. The organisation of the great Dājmī Masjid (979/1571-2) stems from Dājnwpur via Bayānān, where the technique of assembling cut stone components was already well-developed a century earlier (fieldwork by Shokohlī 1997). Although the front of the mosque is in one plane but still unlike the profile of the Dājmī Masjid, with blind arcuated screens which separate their courts from the outside, the lateral domes of the Atalā Masjid have been completely screening the stilted and lumpish dome behind. The wings are of half the height, and relieved by queues of little *chātris* along the skyline, like the *riwāsā* with their central *iwan*: these once served as stilt; the whole is in marble. On a larger scale, the Shah Dājmī Masjid at Agra, flanked by the same flaring turrets, has a fully bulbous dome, but a tall marble *pishtak* in front over a deep *iwan*, and low wings; its red stone is finely worked in relief, notably in the pendentes and inner dome. Like it, the Māṭī Masjid at Lāhwār (ca. 1055/1645) is fronted by cusped arches flanking the plain central one, but it offers a further solution to the problem with a barely raised *pishtak* linked to the wings by a continuous parapet in *partīn-kārī*. The three marble domes still have the cavetto and profile of Dājmī's mosque, now clearly visible. These smaller mosques owe much to the consonant detail of arcuate screens which separate their courts from the outside, and still have a fineness that extends to the *chātars*; the whole is inlaid in the floor. On a larger scale, the Shah Dājmī Masjid at Agra, completed in red stone in 1058/1648. Its plan is essentially that of the five-compartment prayer hall from Lāhwār, complete with its corner turrets and another pair at the east corners of the court. Its capacity is increased by the addition of a second row of compartments in front of the first, the central one forming a deep *iwan*, whose *pishtak* is thus spaced well forward from the domes over the main row behind; the two lateral domes are placed over the ends, for better balance, and all three are double and distinctly bulbous, with a pointed profile accentuated by inlaid chevrons of white marble (structural inner domes were from henceforward the norm). The front of the tall tapers, with pendentives on the axes, is the largest enclosed mosque in northern India. Gateway *iwan* on these axes regain their prominence,
and the *riwāk*s are open to the external air on all three sides. A collision between these and the *līwān*, a weakness at Agra, is avoided by returning them along the west, and then advancing the hall forward between full-size minarets at the corners. The *līwān* plan fuses those of Agra and Fatehpur Sikri, with alternating main compartments, and slimmer piers at the front; cusped arches are used throughout. The domes, now on tall drums are, like the *mindār* and the *līwān*, striped with marble inlay, and the entire front is panelled in marble, with plain merlons above. Such domes essentially the marble calyces topping the largest of the marble series, complete with domes on smooth pendentives, that rise bulbous to the courtyard, and the *līwān* of brick faced with red stone, is closed in. The *līwān*, of which the *mindār* however carry long foliations, lotus buds and floral relief playing on many surfaces; the domes, rebuilt after the Mutiny, were originally lower, and gilded.

The Mōtī Masdjid at Agra Fort (1063/1653), the largest of the marble series, complete with *riwāk* and axial gateways, combines a restraint of outline and of *pishtāk,* with elaborate marble calyces and floral relief playing on many surfaces; the domes, rebuilt after the Mutiny, were originally lower, and gilded.

The last of the great congregational mosques, the Bādhāhi Masdjid at Lāhawr (1084/1673-4) derives its plan almost entirely from the great mosque at Dihlī, its three low domes and the four octagonal *mindār*s are now set at the four corners of the court, and the *līwān* itself reverts to the local scheme with a domed octagonal turret at each corner. The *riwāk*s, too, are subdivided into an alternating series of *hādīras* for teaching, accessible only through doorways, and though raised as before, the court is thus closed in. The *līwān* of brick faced with red stone is rather taller than at Dihlī, and panelled in the local manner, but the surfaces swarm with relief carving; the marble domes formerly had dark drums to relate them to the wings. Internally the squinched dome chambers alternate with Bangālī vaults, and the walls, arch soffits and domes are panelled or worked in net-patterns. The central bay, set off by Bangālī vaults, rises from intersecting pendentive work over a zone of 16 arches, pierced for a clerestory at the angles, and tiled throughout in mosaic (more than 100 pieces per sq. ft.) in ranks of wheeling stars. The smallest sound at the *mibār*b can be heard throughout the mosque, perhaps by virtue of its domes. In both these mosques the red brick is defined by white pointing which accentuates the arches. Further excellent tilework at the *Djāmī* Masdjid of Khudābād has been badly damaged. The treatment of its façade shows stronger Lāhawr influence in proportions and panelling; the external walls, however, are noteworthy for three superimposed registers of repeated blind arches, a few feet pierced at the lower levels.

At Aḥmadābād, the mosque of Nawwāb Sārdrā Khān (ca. 1070/1660) combines a relatively orthodox Gujārātī treatment of a three-bayed *līwān*, having three plain arches between narrow piers, a *gharābāh* bay on each end wall, and balconied *mindār*s framing the front, with features that seem to bridge the styles of Bijāpur and Agra. The *līwān*s have long foliations, but have *hādīras* framing the arches. Further excellent tilework at the *Djāmī* Masdjid of Khudābād has been badly damaged. The treatment of its façade shows stronger Lāhawr influence in proportions and panelling; the external walls, however, are noteworthy for three superimposed registers of repeated blind arches, a few feet pierced at the lower levels.

In general, it may be seen that whereas the enclosure of the court only achieves full architectural expression in cathedral mosques, or the later court mosques, the prayer hall is the subject of consistent architectural development. The particular structural means adopted in each region for enclosing the space become the vocabulary for a series of variations which in fine glazed tilework, owning much to Iranian influence, and apparently that of Harāt [q.v.] in particular. This is already apparent in the Dābghī Masdjid at Thātārī (997/1589-9), of which the *līwān* remains in a ruined state, containing a square central compartment flanked by a rectangular one at each side, with arches connecting them between massive piers, and three deep *riwāk*s, set in slightly raised *pishtāk*s. The central dome, like the *līwān* below it, is notably larger than those either side, but all three are set on double octagonal drums of an Iranian type, the central cornice of each house a well-shaped arch within another; at the west the interval contains an arched window set on either side of the bluff carved sandstone *mibār*b. The tilework, floral, geometric and calligraphic, in cobalt and azure on a white ground, filled arch spandrels and soffits. The *Djāmī* Masdjid of Shāhjāhānī (1057/1647) in the same city is unusual in plan, the two large domes forming the two aisles of the broad *riwāk*, and the three of the prayer hall, around a very deep court, focussed on a great *pishtāk,* with small subsidiary courts on each side of an east entry passing under two domes in series (cf. the Masdjid-i *Djāmī* at Kirmān). The multiple bays are roofed by 80 small domes, with larger single ones over the corners. The central bay, set off by Bangālī vaults, has a dome replacing four bays in front of the *mibār*b; this rises from intersecting pendentive work over a zone of 16 arches, pierced for a clerestory at the angles, and tiled throughout in mosaic (more than 100 pieces per sq. ft.) in ranks of wheeling stars. The smallest sound at the *mibār*b can be heard throughout the mosque, perhaps by virtue of its domes. In both these mosques the red brick is defined by white pointing which accentuates the arches. Further excellent tilework at the *Djāmī* Masdjid of Khudābād has been badly damaged. The treatment of its façade shows stronger Lāhawr influence in proportions and panelling; the external walls, however, are noteworthy for three superimposed registers of repeated blind arches, a few feet pierced at the lower levels.
in most cases go far beyond the immediate needs of the liturgy or of mere shelter, and can be recognised as successive resolutions of the need for balance, harmony and unity at the chosen scale.

The walls of the mosque itself are rather low, but the roof of the mosque is of an ornamental type that includes a cupola, a type of roof that is typical of the Javanese style. The cupola is constructed with a series of domes that are gradually smaller, starting with a large dome at the center and gradually tapering off. This type of roof is found in many mosques in Java, particularly those built in the 19th and early 20th centuries.

Another characteristic feature of a mosque in Java is the presence of a minbar, which is a pulpit where the mosque's leader gives sermons and recites the Koran. The minbar is usually located in the central area of the mosque, facing the kibla, or the direction towards Mecca. In some cases, the minbar is elevated, with steps leading up to it. This feature is an example of the intricate woodcarving that is characteristic of Javanese architecture.

In Java, the mosque is not just a place of worship, but also a symbol of the social and cultural life of the community. The mosque is often the center of community gatherings, where people come together to discuss local issues, celebrate holidays, and participate in other community activities. The mosque is also a place where people can seek refuge in times of hardship, and where the community can come together to support each other.

In conclusion, the mosque in Java is a remarkable example of the unique blend of Islamic and Javanese architecture. It is a testament to the ingenuity and creativity of the people of Java, who have developed this form of architecture over many centuries. The mosque is not just a place of worship, but also a symbol of the rich cultural heritage of the Indonesian people.
tion, however, they prove to be representations of flowers and leaves of the lotus, arranged as wings ... but, on account of the Saracen traders who frequent the kingdom with their ships, they have been converted to

One mosque in Java possesses a drum, called bidug, stretched with buffalo-skin. Before the adhdin [q.v.] (Javanese and Sundanese: adhan) this drum is beaten vigorously at least five times a day. The adhdin itself is made either from the minaret (Javanese: mënara, Sundanese: munara) or, more often, in the mosque itself since not every mosque has its minaret. The mu'adhthin, called modin or bilal, stands at the entrance of the mosque or on its roof.

The highest official of the mosque is the panghulu (thus in Sundanese; Javanese: pangulu; Madurese: pangöl, Malay: pangkula), often a learned Malay, panghulu (Ar. 'alam) who has studied theology and is a pupil of the pesantren, the Indonesian religious school, or of the more modern madrasa; he may even have studied in Mecca. Traditionally, the panghulu are highly-considered in Indonesian society. Sometimes the function is hereditary. One of his tasks is to supervise and coordinate the functions of the lower officials of the mosque: the imam, the khatib, the mu'adhthin [q.v.] and the marbut, the official who is responsible for maintenance. According to the linguistic area, these officials are called imam, kátib or ketip, modin or bilal, and marbot, marbot or occasionally marboti.

In Java the mosque is also used for 'istíkla [q.v.], especially during the last ten days of Ramadán.

IV. In the rest of South-East Asia.

That the traditional South-East Asian mosque originated in Indonesia and that it is formally sui generis cannot be disputed. Whether, as has been claimed, it developed in Java is less certain. Indeed, the history of Islam in Indonesia would suggest another possibility. The building in question was of wooden construction. It consisted of a simple structure on a square groundplan, erected on a substantial base. This distinguished it from the classic Indonesian house on stilts. The existence of internal pillars probably depended on its size. It had openings in the walls, probably closed with shutters, and an entrance in the east side, opposite the later mibrab. It is not known how the kibla was originally indicated, but some mark on the west wall seems likely. Above this groundfloor hall, which had relatively low walls, there were a number of upper stories of decreasing area, up to a total of four: each individual storey, including the main hall, had its own roof, usually in palm thatch, with widespread eaves. The upper stories contained loft-like rooms which were functional. The whole building was topped by a finial which traversed the enclosure. There was no måraba, the adhdin was given either from the doorway of the mosque or from its top storey. The kibla was probably pointed by the vigorous beating of a large skincovered drum, as is generally the practice today. A more simple structure, essentially a traditional Indonesian dwelling on stilts, serves as the model for a prayer hall which does not have the status of the mosque. It is still to be found in communities which cannot muster the requisite forty souls to constitute a congregation or, on occasions, as a supplementary building in a compound where it serves as a meeting place, a rest-house for visitors, an administrative centre as well as for salāt when the mosque proper is closed.

This Indonesian prototype did not have the verandah, Javanese serambi, which is such a distinctive feature of the Central Javanese mosque. There is no evidence that this formed an original part of the mosque, from which it is, in fact, separated, both architecturally and dogmatically: shoes may be worn there. It seems to have derived from a royal building in pre-Islamic Central Java. Neither it, nor the externalised mibrab, belong to the original square mosque.

Various origins have been proposed for the basic Indonesian mosque. It has been derived from: (1) the candi, a sacred Hindu or Buddhist structure which is of widespread significance in Indonesian religions (the Balinese temple with multi-tiered thatched roofs known as a meru, after the Indian sacred mountain, is an architectural example of this). The objection to (1) is that, quite apart from its possible unacceptable to Muslim teachers, the candi does not occur in those parts of Indonesia where conversions to Islam first took place. The cockfight hypothesis appears to suffer from inherent implausibility. There is, however, good reason for holding the concept of the sacred mountain as one component in the sandhoulé complex, an origin of the Indonesian mosque. It differs so profoundly from mosques elsewhere in the Islamic world, not least in Cambay [see Khambay] and other parts of Gujurát [q.v.] from which the main impetus towards conversion seems to have come.

South-East Asia lies across the sea route from the Middle East and the Indian sub-continent to China and beyond. The Malay Peninsula and Sumatra mark the area where the monsoon system of the Indian Ocean meets that of the Pacific, and constitute a natural interchange point. For two millennia or more merchants have travelled and traded through this region. After the coming of Islam many of these travellers were Muslims, but, although there were without doubt Muslim communities in the ports and harbours of the region, some of whose members may have traded in the interior, there is no evidence as to the extent of conversion to Islam among the local peoples. (Nor, incidentally, is there any evidence for mosques to serve the needs of such Muslim traders.) The first instances of such conversion comes at the end of the 7th/13th century. A hint in a Chinese source dated 683/1281 receives striking confirmation from Marco Polo who spent several months in Sumatra, on his way home from China ten years later. Of Ferlec (Perlak) he noted "the people were all idolaters, but, on account of the Saracen traders who frequent the kingdom with their ships, they have been converted to
the Law of Mahomet", adding that this was only the townspeople, those of the mountains being like wild beasts. The ruler of Samudra (Pasai), where Polo spent some months waiting for the wind to change, and who died in 699/1297, certainly died a Muslim for his tombstone, which was imported from Cambay, gives his name as Malik al-Salih. It was from this remote, in Javanese terms, area of Aceh that Islam spread to the Malay Peninsula, above all to Malacca, [q. v.], to the north coast of Java and thence to other parts of Sumatra, to the coasts of Borneo and to the sources for the much sought-after spices, by way of the ports of Surawesi and Maluku. Over a period of some three centuries, Islam followed the trade routes and with it there went the Indonesian masjid, with its tiered, overhanging roofs. More than a dozen have been identified, notably by De Graaf. What is noticeable is that it was precisely in areas which had not been strongly influenced by Indo-Javanese architecture of Hindu or Buddhist tradition that the mosque of this type developed. Its origins have to be sought in the socio-religious structures of northern Sumatra in the communal house which, as elsewhere in Indonesia, once constituted the men's house. Now without windows or its original interior divisions, in Aceh it has become the meunasah which serves as a prayer house, a meeting place, and an administrative centre as well as a Kuranic school. It had the advantage that it had never housed idols, but this does not explain how the teachers from Gudjarat and elsewhere were persuaded to permit the adoption of such an aberrant form of mosque.

I. IN CHINA.

The Chinese term is Ch'ing-chiao or Ch'ing-ching mosque, which differs from those other mosques listed so far in that its foundation is ascribed to the arrival of Muslim soldiers from Persia, rather than sailors coming by sea. Undated epigraphic evidence and long-established tradition date this mosque to the early T'ang (late Umayyad) period, but this remains inconclusive, and Leslie suggests that "until further evidence is forthcoming its is better to reject a T'ang date and query a Sung one, whilst taking for granted a Yuan [Mongol] presence". Leslie continues by providing "Desultory Notes" for numerous other cities in Eastern, Central and Northern China (49-53), before concluding that many thousands (or even tens of thousands) of Muslims, mostly of Persian and Arab origin, were resident in China during T'ang Dynasty times, though little definitive evidence exists for the number of mosques which had been established during this early period. Chinese Muslim tradition is clear, however, that most of these, Hsi-yu yen or "Westerners" were semi-permanent or permanent residents, many of whom would have intermarried freely with the indigenous Chinese population, thereby giving rise to a nascent Chinese-speaking, increasingly Sinicised Muslim population which would, by Ming times, develop into the Hui Chinese Muslim community. Certainly by T'ang times, the distinction was already being made between "foreigners" and "native-born foreigners". Shari'a law requires the establishment of congregational mosques wherever communities of more than forty adult male Muslims are gathered together; the presence of many small mosques along the Chinese coast and (to a lesser extent) in the interior may, therefore, be taken for granted by late T'ang/Sung times. Doubtless, except in the more important coastal towns such as Canton (Khanfu) and Chuan-chou (Zaitun), these mosques would have been fairly insubstantial buildings, long since altered beyond recognition or destroyed; thus, definitive proof of the extent of mosque-building in China during this early period will depend upon future archaeological excavations.

The Yuan period (ca. 678-770/1279-1366) was characterised by a substantial expansion of Islam in the central and interior parts of China, most particularly in Yunnan, where Sayyid Adil Shahs al-Din Bukhari (who conquered and subsequently admin-
istered the former Nan-ch'ao area for the Mongols) is credited with establishing two mosques in the former Nan-ch'ao area for the Mongols) is credited with establishing two mosques in the

to the north and west. Certainly, the oldest mosques in Yunnan and the north-west are likely to have been established during this period, a trend which was continued under the Ming Dynasty (ca. 771-1368-1644) which is also known as a period of Sinicisation for the Chinese Muslim community—indeed, it may be that the Chinese-speaking Hui Muslim community emerged as a separate and distinct entity (paralleling, for example, the Swahili [q.v.] in East Africa and the Mappila [q.v.] of southern India) during this period.

It is probable that the mosques of the Hui (Chinese-speaking) Muslims, which are scattered throughout China but are particularly numerous in the provinces of Kansu, Ningsia, Taishan and Yunnan, evolved in their characteristic form during this period. Certainly under the Ming, the nascent Hui community expanded greatly as a result of intermarriage, overt and covert (and, perhaps more frequently covert) missionary work, and as a result of the establishment of a transcontinental commercial venture. Wherever Hui settled in any numbers, hādil establishments (caravanserais, restaurants, inns), mosques and attendant madrasas soon followed. As Israeli notes (op. cit. in Bibli., 29), many mosques constructed during the Ming period were built in a style reminiscent of indigenous Chinese temple architecture, either eliminating the minaret altogether, or eschewing the distinctive styles associated with the mosques of Central Asia, South Asia and the Middle East in favour of Chinese-style pagodas. As a result of this architectural development, the muezzin could no longer call the faithful to prayer in the usual way, but stood inside the mosque instead, calling the adhān behind the main mosque entrance.

When prostrating themselves before the Emperor's tablets, as required, the Muslims would avoid bringing their heads into contact with the floor... and thus did they satisfy their consciences in avoiding the true adorations, and verb "to prostrate oneself", sujūdū in Arabic, with heart and mind centred on Mecca. Once the believers were inside, they put on white caps, shoes were taken off, elaborate ablutions were ritually performed, and the prayers began in Arabic, with heart and mind centred on Mecca. When prostrating themselves before the Emperor's tablets, as required, the Muslims would avoid bringing their heads into contact with the floor... and thus did they satisfy their consciences in avoiding the true significance of the rite—this prohibited worship was invalid because "it was imperfectly performed" (Israeli, op. cit., 29).

Israeli defines this combination of external Sinicisation of mosque building and internal Islamic orthodoxy as a manifestation of the dichotomy of Chinese Islam. Certainly, the functions of the mosque remained immediately recognisable in their Islamic purpose. Thus, besides the area set aside for prayer, the interior of larger Chinese mosques is generally divided between lecture hall, dormitory, conference room and the deceased Muslims for burial. Amongst the best-known and most beautifully decorated of these traditional Chinese mosques are the Niú-cháh sù (Ox Street mosque) in Peking, and the Hua-chu-chhū sù in Shanghai.

By contrast with the Sinicised Hui Chinese mosques scattered throughout "China Proper", the mosques of the periphery are often very different. Thus the mosque architecture of Sinkiang conforms closely to that of neighbouring Western Turkestan, whilst in the far north-east (Heilungkiang Province), an area formerly much influenced by Russian culture, the mosque may sometimes outwardly resemble Orthodox churches. In this context, an informative trilingual study illustrating many of the best-known mosques in China and clearly depicting the different architectural forms has recently been published by the China Islamic Association (op. cit. in Bibli., 1981).

VI. IN EASTAFRICA

In East Africa the mosque is commonly spoken of in Swahili as mshikiti, pl. msikiti, but mishire, mishire in the Comoro Islands; and cf. Swahili sijita, the act of adoration, and verb sayada to prostrate oneself", from Ar. sayada. Nineteenth-century traditional histories claim the setting up of Muslim cities on the eastern African coast in the 7th and 8th centuries.
A.D. Of this there is no earlier literary evidence, but a mosque is mentioned in the Arabic History of Kilwa named Kibah (possibly a Banatu form of kibba) as existing on that island ca. 950 A.D. In spite of recent excavations at Kilwa [q.v.] by H. N. Chittick, there has so far been no positive identification of a mosque of this period. The first reliable evidence is from inscriptions. Cerulli reports one in the Friday Mosque at Barawa, Somalia, dated 498/1104-5, while on Zanzibar Island there is the well-known Friday Mosque at Kikwamik (q.v.) which has an inscription dating its foundation at 500/1107. The inscriptions are certainly of Sirafi provenance, which does not argue that Zanzibar was much Islamicised at this period. The 4th/10th century Kitab 'Agidh al-Hind of Buzurg b. Shahriyar of Rambhumz contains, however, the tale of the conversion of an eastern African king of a place of which no identification is given; he was followed by his people. In the same period the Al-Mas'udi, who visited eastern Africa, speaks of the people and their sovereigns as pagan. By the 6th/12th century al-Idnisi says that “the people, although mixed, are actually mostly Muslum” which would accord with the epigraphical evidence. Between 1962 and March 1964 the greater number of known mosques, from mediaeval times to the 18th century, both standing and ruined, were planned and photographed by P. S. Garlake. However, an important series of foundation inscriptions of mosques at Lamu [q.v.], some twenty in all, and ranging from the 14th to the 19th century. He rightly says that “the most sensitive indicator of change and development in style and decoration is bound to be the mosque mihrab”; he distinguishes a clear and unbroken development of style and technique from the early classic mihrab with a plain architrave of the 14th and 15th centuries; a developed classic mihrab in which the plain surfaces of the architrave are broken by decoration; a neo-classic mihrab of greater elaboration, both this and the foregoing in the 16th century; a simplified classic mihrab restricted to northern Kenya, and a derived classic mihrab on the Tanzanian coast in the 18th century, in which, however, there were new developments that led to the multiform arches of a more elaborate character. The dating of some of these mihrabs derives from inscriptions, but is based to a great extent upon the evidence of imported pottery and Chinese porcelain, the latter coming to be used as a decoration by insetting it into the architrave of the mihrab.

All the 19th century Swahili settlements in eastern Africa are on the edge of the shore: Gedi, two miles from the Mida creek, is the sole exception. Some earlier mosques, however, are found on cliffs or headlands, where they may have been placed to serve as mariners’ marks. Some of them are still of special veneration for seafarers. The population in these places was on the whole small, and only at Kilwa [q.v.] and at Mogadishu [see MADISHU] was the need felt for mosques of more than modest size. Throughout the coast from Somalia to Mozambique, the only available building material of a permanent character was coralline limestone, obtained either from old raised beaches or directly from coral reefs. Mouldings, arches, and all features wherever precision was required, were of finely dressed coral blocks. A fine concrete, whose aggregate was coral rubble, was used for circular and barrel vaults. The method of burning it has survived to this day. From it also was made the plaster which in the 18th century was used to decorate not only the mihrab but also elaborately decorated tombs. There was a limited repertoire of mouldings, used also on tombs, and—more sparingly—in domestic architecture. The planning of all buildings, religious and domestic, was restricted by the span of the timber rafters, always of mangrove wood, which never exceeds 2.80 metres or approximately 9 feet. Even the vaulted buildings conform to this as to a fixed and unalterable convention. Thus even in the Great Mosque of Kilwa, with its five aisles and six bays, there is a sense of constriction rather than of spaciousness. Walls may be built of dressed coral limestone but quite commonly of coral rubble plastered over. Piers occur in mosques in Kenya and Pemba during the 14th to 16th centuries, but not in the south. After the 13th century in Tanzania, columns alone are found, some square and some octagonal. Generally, these were of dressed coral, but occasionally, as at Kaole (southern mosque) and in the northern masulal of the Great Mosque of Kilwa, wooden columns fitted into coral sockets were used. Because of the difficulty imposed by the length of the rafters, the master-builders—for only rarely can architects have been employed, and perhaps only for the Fakhr al-Din Mosque at Mogadishu—in seeking to erect a building of a particular breadth, frequently encountered the perspective of the mihrab by constructing a central arcade of pillars. This clumsy feature (which occurs quite unconnectedly in certain mediaeval European churches) appears not only in the two-aisled mosques such as those of Tongoni and Gedi but also in the four-aisled Friday Mosque of Gedi and the original North Mosque which forms part of the Great Mosque of Kilwa.

Minarets [see MANARA. 3. In East Africa] are very rare, and minbars [q.v.] have certain idiosyncratic features. In all, the mosques of the eastern African coast have a distinct regional character of their own, deriving in early times from the common use of ogival or returned-horseshoe arches, and in later times from the elaborate plaster decoration of the mihrab and its architrave. Bibliography: H. N. Chittick, Kilwa, 1975, describes the Kilwa mosques, bringing up to date P. S. Garlake, The early Islamic architecture of the East African coast, Nairobi 1966, with its numerous plates and an extensive exhaustive bibliography up to that date; G. S. P. Freeman-Grenville, Some preliminary observations of medieval mosques near Dar es Salaam, in Tanganyika Notes and Records, no. 36 (1954), is wholly superseded by the finding of better evidence for date; see also J. S. Kirkman, Men and monuments of the East African coast, London 1964, and Fort Jesus, Oxford 1974; and, for inscriptions, G. S. P. Freeman-Grenville and B. G. Martin, A preliminary handlist of the Arabic inscriptions of the eastern African coast, in JRAI (1973).

VII. In West Africa.

In Muslim West Africa, the smallest hamlet has its mosque, and the quarters of an individual town compete with one another in the construction of cultic sites. In most villages, the mosque is situated in the middle of the public square, near the tree which is the traditional place for bargaining and discussion (“palaver”); it is generally constructed in the style of a large shed, roofed with zinc plates and bamboo partitions or with banco or with moulded clay, and has the appearance, in the majority of cases, of the most attractive building in the locality, often surrounded by bushy trees. The mosque is regarded with pious respect, and is kept clean. Volunteers, often women of a certain age, accept responsibility for maintenance, making regular offerings of food and the supply of drinkable water for the faithful.

In towns, the mosque is a more substantial building
and it dominates the neighbourhood with its minaret or minarets. Sometimes, as in the case of the Murids, has three, of which the tallest, known as the "Lamp" (Fall) measures 83 m. In fact, it is the modern mosques which possess minarets; the most ancient have none, but still dominate their surroundings with cubic pillars. In small villages, the floor of the mosque is covered with matting or with fine sand which is sifting every day. In the urban setting, oriental carpets cover the floor. A palisade of bamboo or zinc plates or even a cement wall forms an enclosure within which a spacious courtyard is set out, to enable those worshippers who cannot pray at the times when the mosque is crowded to perform their religious duties. On the left side of the larger mosques, the place reserved for women is separated from that where the men pray by a metal grill.

The imam leads the prayer standing in a niche (minbar) in the kibla wall. The Great Mosque is furnished with a throne, a kind of raised dais where the imam takes his place to preach his sermon and to harangue the faithful, first in Arabic and then in the local language. All the other facilities, including lavatories and taps for ablutions, are located on the exterior. In a corner of the courtyard there is a hut for the washing of corpses.

Each imam is served by a nādib or deputy who officiates in his absence. Two or more muezzins make the call to prayer from the tops of the minarets. In the larger mosques loud-speakers have been installed, to relay either the call to prayer or the sermon of the imam. The majority of imāms receive no monthly salary. The imām of the Great Mosque of Senegal is one of the few who receives regular payment and occupies an official residence; more often, the imām and his family are accommodated in the mosque.

The architectural style reproduces especially that of the Maghrib. It is thus that the Great Mosque of Dakar, inaugurated by King Hassan II, was built under the supervision of a Moroccan architect, as was the Islamic Institute which adjoins it. However the ancient mosques of northern Senegal, including those of Halwar, Ndoum, Guédé and Diamaré, are in the Sudanese style of the mosque-institutes of the towns of Mali (Djenne, Mopti, Timbuktu, etc.) and of the land of the Sahel (cf. J. Boulegu, Les Mosquées de style soudanais au Fouta-Tooro (Senegal), in Notes africaines, 136 (Oct. 1972), 117-19). This is a style characterised by its massive buttresses exceeding the height of the roof, in a rounded, conical form, with a small cubic minaret; the whole is constructed in brick made from dried earth and covered with a facing of the same material and ochre or beige in colour. The walls are very thick. An elaborate system of ventilation maintains a freshness similar to that provided by air-conditioning.

Religious function. In West Africa, the principal function of the mosque is still religious; each quarter possesses several, and in this context a genuine rivalry prevails between quarters or between members of different brotherhoods. It is thus that the mosque of the Tijānīs is found alongside those of the Murids [see MURIDS], of the Kādirīs [see KĀDIRĪ] and of the Hamülilites [see HAMULĪL]. The faithful fill the mosques without regard for their particular affiliation. The Tijānīs organise gatherings in the mosque after morning and evening prayers to recite, in chorus, the litanies (dhikr) peculiar to their religious order. This ritual is performed around a carpet and in darkness. But on Fridays or at times of canonical festivals, great crowds of Muslims are seen streaming towards the mosques clad in their splendid bouffous or flowing robes.

Special prayers for the dead are also offered in the mosque. In this case, the bier is placed before the faithful, who pray upright without bowing or sitting. After these funeral rites, the parents of the deceased arrange a ceremony of recitation of the Qur'an "for the repose of his soul".

The veneration of which the mosque is the object inspired Cheikh El-Hadjj Malik Sy (1853-1922), founder of the ṣawiyya tijānīyya of Tivaouane, to compose a poem in Arabic consisting of forty verses in nadjī style and revealing the details of a whole system of etiquette. Cheikh Aliou Faye, the chief marabout of the Gambia, revised and embellished his master's poem, entitled his version Takḥīrat al-murid or "The way of success for the disciple". The following are a few of the verses:

Whosoever wishes to enter Paradise without punishment and without the need to give an exact account of his actions at the Resurrection, should build a mosque for God the Merciful, and he will be granted one hundred and thirty paradises in Paradise. Every believer who enters this mosque to pray will obtain a pleasant dwelling in Paradise.

A mosque may be built in any place, even in the square of a church or a a synagouge.

There it is forbidden to grow crops, to dig wells, to sew and to compose [profane] poetry.

There it is forbidden to eat garlic, leek, onion, to shave, to cause an injury to a human being, to cut the nails, to cast lice or fleas and to kill them.

To tie animals, confine the mentally ill, to allow a criminal to enter and be seated.

All mosques are of equal worth, with three exceptions: those of Mecca, Medina and Jerusalem, which are the best mosques.

Social function. Besides this predominant religious role, the mosque also performs a very important social function. It is thus, in fact, that, under the patronage of the imām, marriages are contracted between the parents of the betrothed parties. The father or guardian of the prospective bride gives her hand to the father or guardian of the suitor and receives the dowry. This function is so important that when information is sought regarding the marital status of a female person, the question is asked: "Have the men gone to the mosque for her?" (in Wolof: Ndax demnah jaka ja?). As a form of pleasantry and to tell a girl that she is nubile, the remark is made: "I shall go to see the imām about it." Parents or guardians may be accompanied to the mosque by other parents and friends who act as witnesses. The relatives of the suitor bring the dowry which they entrust to the imām; the latter gives it to the father or guardian of the prospective bride and recites the sacramental formula. In the presence of all, the imām blesses the couple. Cola, non-alcoholic drinks or delicacies are distributed.

Even though, since the promulgation of a "Family Code" in Senegal, for example, some ten years ago, marriages must be contracted before the mayor or the representative of the public authorities, it is considered that, without the mosque playing a part, the matrimonial union is not valid. Thus the imām in fact represents the local religious and municipal mosque.

Often the elders of the village hold meetings not under the traditional tree, but inside or in the courtyard of the mosque at any hour of day or night to
discuss public matters; finance for the sinking of wells, construction of a market, division of the produce of common land, preparations for the reception of distinguished guests, etc. In this case, the mosque represents a kind of national assembly where all the affairs of the village community are the object of wide and democratic debate.

Sometimes the mosque performs the role of a tribunal where disputes between members of the village are laid public and closely examined. Solutions are always formed on the basis of the Shari'a, or of local custom, or of both. These may be disputes between spouses, between two dignitaries, between two families, between herdsmen and stock-breeders, between a representative of the state and local landowners, between traditional chiefs and religious leaders. Sometimes the division of bequests is performed in the mosque under the supervision of the imam.

Some mosques provide places of lodging for strangers. It is in this way that travelling Muslims are accommodated. Furthermore, any person who is regarded as having lived a pious life and who has contributed to the building of the mosque, is buried there after his death. Such is the case of Cheikh Ahmadou Bamba Mbacke, Cheikh El-Hadji Malik Sy, Cheikh Ibrahima Niasse, Cheikh Ahmadou Anta Samb, and Bouba Kounta respectively at Touba, Tivaouane, Kaolack, Kébémer and Ndianass (Senegal).

Many other men renowned for their piety or for their work in the service of Islam are entombed within or in close proximity to the mosque.

**Economic function.** The economic function of the mosque is explained by the fact that the temporal is always closely linked with the spiritual. Thus, for example, the sums raised from legal alms (zakat) are in most cases entrusted to the imam of the mosque who, as an expert in the matter, ensures that they are distributed to those entitled to them. Sometimes cattle are led to the mosque to be slaughtered by the imam, who distributes the meat to the needy. Every Friday, a whole army of beggars is seen flocking to the mosques, attracted by the prospect of receiving charity from the wealthier believers. The same spectacle is witnessed during the major Islamic feasts of Tabaski and Kurité.

The imam received a gratuity for his services when marriage is celebrated. Even though the sum is by no means considerable, it is important for the imam who is not salaried. In the course of one Sunday afternoon he may preside over several marriage ceremonies. Furthermore, numerous mosques receive requests for readings of the Kur'an in exchange for a certain sum, the amount being left to the discretion of the customer.

Mosques which incorporate tombs receive a profitable income as a result of daily, weekly, monthly and annual pilgrimages or on the occasion of major Islamic feasts. This applies in the case of the mosque of Touba during the well-known feast of Magal, which commemorates the departure into exile (in 1895) of Cheikh Ahmadou Bamba Mbacke, founder of the brotherhood of the Murids, and of Tivaouane at the time of the Mawlid [see MAWLID].

**Cultural function.** Although the mosque in West Africa fulfils a considerable economic role, its function in the cultural sphere is more striking. In the majority of cases, the courtyard of the mosque is the setting for a Koranic school. Sometimes dozens of young children, boys and girls, are seen squatting in a half-circle before their master, who sits either on the ground, on a sheepskin rug or reclining on a couch, holding a cane. Each pupil places on his knees a tablet on which the lesson to be learned is inscribed in ink made from Arabic ink and cooked-pot cooking-pots. In the evening, after twilight and before the meal, a large fire is lit and the verses to be learned are read by the light of the flames. By this educational method, in the shadow of the mosque, many scholars arrive at the point where they can recite the entire Holy Book by heart.

The mosque also serves as a high school and university when, having memorised the Kur'an, the pupils become students and learn the other Islamic sciences: exegesis, hadith, theology, mysticism, Muslim law and even literature, history, logic, astronomy, rhetoric, etc.

It is also in the mosque that lectures are held on various subjects relating to religion, as well as educational lectures given by scholars or distinguished guests from other Muslim countries. In the mosque, throughout the month of Ramadan, marabout exeges expound and comment on the Kur'an before an audience, either to recall the teaching of the Holy Book or to instruct the faithful. On the “Night of Destiny” nobody sleeps, and reverent vigil is held in the mosque. Also in the mosque, particularly at Tivaouane, the sanctuary of Tidjânism in Senegal, the head khâfifa of the disciples of the brotherhood founded by Ahmad al-Tidjâni (1737-1815 [q.v.]) expounds and comments on the Bûrûjûrî (608-ca.695/1212-ca.1295 [q.v. in Suppl.]).

**Political function.** Finally, the mosque performs in West Africa a political function which is far from insignificant, because the region contains a very substantial percentage of Muslims. This figure is increasing as a result of large-scale conversion to Islam of followers of other religions (Christianity and animism). Islam has enjoyed a revival of activity under pressure exerted both from the interior of this zone and, to a lesser extent, from the exterior. In Senegal, for example, the quite recent appointment of M. Abdou Diouf to the post of chief magistrate has had a considerable influence in this domain, to such an extent that, unlike his predecessor, the head of state, accompanied by the presidents of the National Assembly and the Economic and Social Council, parades in the mosques which incorporate tombs in exchange for a certain sum, the amount being left to the discretion of the customer.

This account of the activity of the present President of the Republic of Senegal applies to the other Muslim Heads of State of West Africa.

The imam often uses the occasion of the Friday Prayer to draw attention in his khâbba to themes of concern to the government such as the misappropriation of public funds, corruption, juvenile delinquency, drugs, prostitution, the degradation of morals, the urgent need to combat bush-fires and desertification. After this survey of the functions of the mosque in West Africa, it may be affirmed that it performs a multifarious role in this region by virtue of its status as the supreme place of prayer.

**Bibliography:** J. M. Cuq, Les Musulmans en Afrique, Paris 1973, 103-274, gives information and bibliographies concerning religious life in West Africa; see also, in particular, J. Schacht, *Sur la diffusion des formes d'architecture religieuse musulmane à
MASDJID — AL-MASDJID AL-AKSA, literally, "the remotest sanctuary." There are three meanings to these words.
1. The words occur in Kur‘ān, XVII, 1: "Praise Him who made His servant journey in the night (asrā) from the sacred sanctuary (al-masjid al-ḥaram) to the remotest sanctuary (al-masjid al-akṣā), which we have surrounded with blessings to show him of our signs." This verse, usually considered to have been revealed during the Prophet's last year in Mecca before the Hijra, is very difficult to explain within the context of the time. There is no doubt that al-masjid al-ḥaram is the then pegan sanctuary of Mecca. But whether the event itself was a physical one and then connected with a small locality near Mecca which had two mosques, a nearer one and a farther one (A. Guillaume, Where was al-Masjid al-Aqṣā?, in Andalus, xvii [1953]), or a spiritual and mystical night-journey (asrā) and ascension (mi`rāj [q. e.]) to a celestial sanctuary; a consensus was established very early (perhaps as early as the year 15 A.H., cf. J. Horovitz, Konanische Untersuchungen, Berlin 1926, 140) that al-masjid al-akṣā meant Jerusalem. By the time of Ibn al-Hajjām’s Sīra, nearly all the elements of what was to go on to be Jerusalem’s grandest and richest mosque were in place. Such ideas in Islam were in place. Their study and the diverse and at times contradictory interpretations found in early commentaries of the Kur‘ān derive from a complex body of religious sources (references in R. Blachère, Le Coran, Paris 1949, ii, 374) which have not yet been completely unravelled.
2. The words were occasionally used in early Islamic and later Arabic sources; more specifically for the Haram al-Sharif [q. v.], the former Herodian Temple area transformed by early Islam into a restricted Muslim space.
3. The most common use of the words is for the large building located on the south side of the Haram platform and, next to the Dome of the Rock (Kubbat al-Sakhra [q. e.]), the most celebrated Islamic building in Jerusalem. Its archaeological history has been superimposed by W. Hamilton, The structural history of the Aqṣā Mosque, and his conclusions were entirely accepted by K. A. C. Creswell and incorporated in his Early Islamic architecture, Oxford 1969, 373-80. Such points of debate as do exist (H. Stern, Recherches sur la Mosquée al-Aqṣâ et ses mosaïques, in Ars Orientalis, v [1963]) deal only with the precise dating of the archaeologically-determined sequences of building, not with their character. From the 4th/10th century onward, precious descriptions by al-Mukaddasi, Nasīr-i Khusraw and, much later, Muḥammad ibn al-Din's chronicle of Jerusalem, provide a unique written documentation which has been made accessible in several books, of which the more important ones are G. Le Strange, Palestine under the Moslems, London 1890, and M. S. Marmardji, Textes géographiques arabes sur la Palestine, Paris 1951, 210-60. An easily accessible survey of drawings and plans is found in Eli Silad, Meqsid al-Akṣā, Jerusalem 1978. For inscriptions, one should consult M. van Berchem, CIA, Jerusalem, Cairo 1927, ii, 2, and S.A.S. Hussein, Inscription of the Khatif El-Mustarshir, in QDAP, ix (1942); A. G. Walls and A. Abul-Hajj, Arabic inscriptions in Jerusalem, London 1980, 24-5, for a checklist. Finally, it is possible that a unique picture of Zion in the medieval period is preserved in the 14th century A.D. manuscript known as the Chludoj Psalter, in Harvard Ukrain.
drum with its brilliant panels of an idealised garden with Umayyad and possibly Antique reminiscences, transformed the mosque into a true masterpiece of Syrian woodwork was destroyed by an arsonist in 1969 before it had been possible to study it fully. The northern porch was restored in 1217 and the eastern and western vaults re-done in 1345 and 1350. Under the later Ottomans, numerous repairs, often of dubious quality, and plasterings or repaintings altered considerably the expressiveness of what was essentially a Fātimid building with major Crusader, Ayyūbid and Mamluk details. It was only in the nineteenth-twenties and especially between 1937 and 1942 that a major and carefully supervised programme of restoration took place.

In spite of scholarly debates which will continue to grow about this or that detail, and this or that date for specific features of the building, the chronology of the monument is reasonably set. What is far more difficult to define and to explain is its function, and on that issue the debate has barely begun. As a work of art, should the nineteen-twenties and especially between 1937 and 1942 that a major and carefully supervised programme of restoration took place.

The masjids, between the Ka'ba and the south-east of the mosque, the masākim (or masālīs) al-Ḥanbalī, to the south and east, the masākim al-Mālikī, to the west, and the masākim al-Ḥanbali. The latter has two stories; the upper one was used by the mu'ādhīhin and the muhābīthin, the lower by the imāms and his assistants. Since Wakhāri rule has been established, the Ḥanbalī imām, masākim has been given the place of honour; it is also reported that the ādal is conducted by turns by the imāms of the four rites (OM, vii, 25). The masākim al-Ḥanbalī site on the old Meccan council-chamber (dār al-nuḍūr) in which the course of centuries was several times rebuilt and used for different purposes. The masākim is marked by a row of thin brass columns connected by a wire. The lamps for lighting are fixed to this wire and in the colonnades. After the mosque, the masākim (Musalla) al-Hanbali, to the north-west of the mosque, the musallas, has for centuries been the centre of the intellectual life of the metropolis of Islam. This fact has resulted in the building of madrasas and risālas for students in or near the mosque, for example, the madrasa of Kā'īt Bey on the left as one enters through the Bāb al-Salām. Many of these mosques have however in course of time become devoted to other purposes (Burchhardt, i, 282; Snouck Hurgronje, Mekka, i, 17).

For the best off the mosque, cf. SHAYBA, BUN; Burchhardt, i, 287-91.

MASDĪDĪ (ṣ.), pl. masājjīyān, an adjective formed from masjid, but specifically concerning the Friday mosque of Basra and used to designate groups (see al-Djähīz, Hayawān, iii, 360) of adults or young people who were accustomed to meet together in that building, near the gate of the Banū Suhayl, as well as of poets, popular storytellers (kussād [see kāṭ]), and transmitters of religious, historical and literary traditions, in particular, those regarding poetic verses. The information which we possess on the masājjīyān in general comes from al-Djähīz, who seems clearly to have acquired them from his youth, part of his cultural formation and perhaps also some of the traits of his character. He was especially interested in a group which was probably composed of Basran bourgeois or, at all events, of idlers who exchanged ideas and held conversations on subjects which were probably more varied (see e.g. Bayān, i, 243) than those for which he puts forward some examples in his K. al-Bukāla'(ed. Hāfīz, 24-8; tr. Pellat, 41-8); the conversations thus reproduced are imitations of the masājjīy, but tell us to classify the persons taking part in these conversations as part of the class of misers.

Nevertheless, al-Djähīz frequented other masājjīyān: not only poets—al-Ḥāfīz (Muwattā, 116) could not appreciate their verses, and al-Marzubān (Mu'jam, 379) states that Abû 'Imrān Muḥammad b. al-Marzubān, was a masājjī, but also traditionists who themselves wrote books, since, in regard to two hadīths, he states that he did not gather them directly from the mouth of some scholar but that he had read them in some book of masājjīyān (Bayān, iii, 57-8). He mentions however (ibid., i, 220) that one tayammūm of the mosque only wanted to frequent persons amongst whom were included traditionists handing on hadīths on the authority of al-Ḥasan (M. al-Ṭārīqī [q. v.]) and ruwāt [see sawī] who were reciting the verses of al-Farāzādāk [q. v.]. It should be noted that it is concerning the transmitters of classical poetry installed at the Mirbād [q. v.], the mirhabiyān, or in the Friday mosque, that al-Djähīz observes the changes of taste among lovers of poetry which were discernable precisely in these ruwāt's audience (Bayān, iv, 23).

(CH. PELLAT)

AL-MASH 'ALĀ 'L-KHUFFAYN (A.), literally: "passing the moistened hand over the boots", designates the right whereby Sunni Muslims may, in certain circumstances, pass the hand over their shoes instead of washing their feet as a means of preparing themselves for the saying of the ritual prayer. Al-Djurjānī (Ta'rifāt, ed. Tunis 1971, 112) proposes a definition of the masākid: "passing the moistened hand without making (water) flow" (imrār al-yad al-muhallala bi-lā tasayl), which justifies the translation by "wetting of the shoes" which is adopted by L. Bercher and G. Bousquet (see below), but the term in question nevertheless remains ambiguous. In fact, if in the verses IV, 46/43, and V, 8-9/6, of the Kur'ān, the term mash refers to ablutions which necessarily entail the use of a certain quantity of water and consequently has the sense of "to wash", as is suggested by the Lisan, it is also employed in the same verses in reference to ritual purification with sand or soil (tayammum [q. v.] and therefore no longer has the same meaning. In his translation of the Kur'ān (iii, 1115), R. Blachère points out moreover that it is quite inaccurate to render this verb by "to wipe" or "to rub", since it properly signifies, in these contexts, "to pass the hand over". Unlike the tayammum, the mash 'alā 'l-khuffayn is not envisaged by the Holy Book, and it is probable that the practice in question, although ancient, was only tolerated at a relatively late date, to take into account difficulties which could face armies in the field, and after provoking debate in the very bosom of the Median school. Ultimately it constituted, along with, especially, mut'a [q. v.], one of the most manifest signs of the rift between Sunnis and Shi'is, for the latter, like the Khāridjis, do not recognise it. The different Sunni schools now base their doctrine, in this context, on a half-dozen hadīths whose authenticity is accepted by al-Bukāra and Muslim, and on a number of other more liberal, but nevertheless for that reason more suspect traditions.

From "authentic" hadīths it emerges that the Prophet was observed to practise the mash 'alā 'l-
khuffayn. However, Djarir b. cAbd Allah al-Badjah, who was converted after the revelation of the Meccan sura al-Muddathir (V), which contains instructions relating to ablutions and to the taqaffud (see above), claimed that he himself had seen Muhammad passing the hand over his shoes; but his colleagues contested the validity of his statements and declared that the revelation of the verses in question had ipso facto put an end to the legality of this practice. This testimony, which has not been retained by al-Baglari, does not seem to have shaken the conviction of later fukahdi, any more than another more or less controversial tradition which official doctrine has retained, no doubt because it provides an additional benefit: according to Khuzayma b. Thâbit and Abû Bakra, the Prophet was reported to have permitted the Muslim to observe the mash' 'alî 'l-khuffayn for a day and a night when he is in fixed residence (mâkin), and for three days and three nights when he is travelling. According to another 'authentic' hadîth, al-Mughirà b. Shu'ba, who travelled in the company of Muhammad, bent down to take off his shoes in order to perform his ablutions, but the Prophet said to him: 'Leave them, for I put them (+ the feet) into [my boots], when they were in a state of ritual purity (jâhînîn)', and he passed his hand over his shoes. From this hadîth, the fukahdi have retained the obligation of the believer who wishes to cleanse himself of a minor defilement (hadath [q.v.]) by means of this indulgence, to wash his feet and polish his shoes before putting them on, and not to take them off in the meantime.

Regarding the legal manner of performing the mash', Ibn Abî Zayd al-Kayrawâni, of the Malikî school, describes it clearly in his Risâla al-Madam, who has taken care to indicate in his text his sources. Ibn al-Kifti, 327, and Ibn al-Kifti, 193/809 (in Muntakhûf min al-sunan al-musnada '-an Rasul Allah, ed. C. T. Bercher, Algiers, 1949, 50/51): 'The believer will place the right hand on the upper part of the shoe [for the right foot], beginning with the extremity of the toes. He will place his left hand underneath and thus make the hands glide as far as and including the pegs. He will do the same for the shoe of the left foot, putting his left hand above and his right hand underneath. But he will not let his hand touch the ground which may be under his shoe, or touch the dung of a beast of burden. He must previously raise his foot when rubbing or washing.' The author adds that, according to another opinion, 'the believer must wet the underside of the shoes, beginning with the pegs and ending with the extremities of the toes.'

The classical manual of Western Malikism, the Mughâtasr of Khalîl b. Ishâk (tr. G. H. Bousquet, Algiers 1956, i, 34-5) presents an even more detailed account of the mash' 'alî 'l-khuffayn. It envisages in fact the use of a kind of slipper (jawrîb) inside the boot proper, and prescribes that the mash' should be performed on both pieces of leather; it forbids the use of a slipper which is too large or torn, because it must be firmly fixed to the foot, cover it completely and not let water penetrate through any crevice. This author also considers cases where the mash' is invalidated, for example if the ghûf [q.v.] is obligatory, if the individual has forgotten to pass his hand over the upper part of the shoe, etc.

Bibliography: All the hadîths concerning the mash' have been conveniently assembled by Ibn al-Djârûd al-Nâsûbî (d. 1307/1919-20) in his Kitâb al-Muntakhab min al-yunân al-masnâda 'an Rasûl Allâh, ed. Cairo 1932/1963 by 'Abd Allâh Hajjîm al-Yamani al-Madâni, who has added certain incipits in his notes (37-9) more or less important collections in which they figure; the same editor has proceeded in the same fashion with the Dhâms al-fawâ'id min al-Djâms al-asil (Medina 1381/1971, i, 104-7) for the Moroccan Mucadd al-Mcadd al-Sulaymân (1309/1603-83). See also R. Strothmann, Kultus der Zaiditen, Strasbourg 1912, 21 ff.; A. Wensinck, The Muslim creed, Cambridge 1932, index, s.v. shoes; J. Schlacht, The origins of Muhammadan jurisprudence, Oxford 1950, 263-4.

MÂSHÂ ALLâH (a.), a phrase occurring in the Kur'ân (VI, 126; VII, 188; X, 50; XVIII, 37; LXXVII, 7; cf. XI, 109-10, LXXII, 8) and widely used in the Islamic lands of the Middle East with the general meaning of 'what God does, is well done'. The formula denotes that things happen according to God's will and should therefore be accepted with humility and resignation. In a cognate signification, the phrase is often used to indicate a vague, generally a great or considerable, but some times a small, number or quantity of time (Lane, Lexicon, s.v.), who refers to S. de Sacy, Relation de l'Egypte, 246, 394). One might compare ilâ mà shâ'â Allâhu "forever and ever" (Wehr, Dictionary of modern written Arabic, s.v.). The phrase is also the equivalent of the English 'God knows what', and, as signifying 'what God has willed', expresses admiration or surprise.

According to TA, in Lane, Lexicon, s.v., a Jew addressed the Prophet, objecting to his people's saying mà shâ'â Allâhu "what God has willed and I have willed", as implying the association of another being with God. The Prophet then ordered them to say mà shâ'â Allâhu gâmuâ thî'â 'what God has willed and then I have willed'.

In Konya, blue hemispheres are found, representing half an eyeball, covered with silver-thread textile with which the phrase is embroidered. Because of the decorative character of the Arabic script, the hemispheres are also worn as ornaments (K. Kris and H. Kris-Heinrich, Volkskunde im Bereich des Islam, ii, 12, 65 and pl. 7). As a charm to protect from the effect of the evil eye, the phrase is found on zár [q.v.] amulets and on amulets worn by children and domestic animals (ibid., ii, 43, 66, 67, 153, and pl. 76; F. Th. Djeloma, The Ottoman historical monumental inscription in Edirne, Leiden 1977, 137; the amulet collection of the Ethnographical Museum, Cairo; Lane, Manners and customs, ch. xi). According to L. Einnsler, Das bösse Auge, in ZDPV, xii (1889), 200 ff., there were silver amulets in Jerusalem with the formula on the obverse, the reverse bearing the invocations yâ kâfî, yâ sîfî, yâ hâfî, yâ aîmîn. In Turkey, the phrase is often found on the fronts of trucks and cars.

MÂSHÂ ALLâH b. Âdâhari or b. Sâriya, Jewish astrologer of Basra (although the frequent confusion between Başrî and Misrî has sometimes led to his being considered an Egyptian). His Hebrew name was perhaps Manasseh (the Fihrist, 273-4, and Ibn al-Kifti, 327, call him Mîshâ) and in Persian he was known as Yâzdânîkâst which, like Mâshâ Allâh, signifies 'that which God wills'. According to the Fihrist, the period of his activity extended from the reign of al-Mansûr (327/838-73) to that of al-Mâmûn (198-218/813-33), but the last date to be placed definitely within his lifetime is 393/998 (in Furû' al-dhâlim, which states that he knew that of the death of al-Râshîd) With Nawbakht, 'Umar b. Farrâkân al-Tabâri and al-Fazâri, he drew the horoscope favourable to the foun-
MĀSHĀʾULLAH

dation of Baghdad (3 Djumada I 145/30 July 762); this horoscope, which has been preserved (see al-Birūnī, al-Azhār al-bārīyā, ed. Sachau, Leipzig 1923, 270-1), had probably been calculated on the basis of the Pahlavi original text of the Zīdī al-Shāh. On the evidence of his Kitāb al-Kirānat, it seems to have been of pro-Iranian and anti-AbūlBāsīd sentiment; he hoped in fact that the caliphate would be overthrown in 200/815 and that power would pass to the Persians.

In the Fihrist, Ibn al-Nadīm mentions 19 works of Māshāʾallah, and al-Kīfī reproduces this list in his Taʾrīkh al-Hukūmaṭ. The generally most complete and most recent studies which mention the titles of these works and the ms. in which they are preserved are those of D. Pingree, Māshāʾallah, in Dict. of scientific biography, New York 1974, 159-62, and F. Sezgin, GAS, vi, 127-9, viii, 102-8.

Of the corpus of known works, discussion here will be limited to the following:

1. Fi ʾl-kirānat wa ʾl-shāh wa ʾl-mīlāl ("On conjunctions, religions and communities"), an astrological history of mankind, and of Islam in particular, which is known to us by means of a summary by Ibn Hibīnāt, E. S. Kennedy and D. Pingree (The astrological history of Māshāʾallah, Cambridge, Mass. 1971, 1-25) have published a facsimile of the ms., with a translation and a study of the summary of this work, which is based on a copy of the Sasanian theoretical astrology which explains the major changes which have taken place in human history by reference to conjunctions of Jupiter and Saturn, and of the Zoroastrian theory of millennia which attributes a thousand years to each planet from the time of the creation of the world (-8291), the cycle being repeated up until the figure of 12 millennia which will be reached in the year 3799 A.D. Ibn Hibīnāt’s summary also contains 16 horoscopes, probably those of Māshāʾallah himself and calculated on the basis of the Zīdī al-Shāh: Kennedy and Pingree have made use of the numerical figuring in these horoscopes, combined with the sparse information supplied by other sources (essentially al-Birūnī) to reconstruct the principal parameters employed in the Persian tables mentioned above (see also J. J. Burckhardt and B. L. van der Waerden, Das astronomische System der persischen Tafeln I, in Centaurus, xxii [1968], 1-28).

2. Fi ʾkīmāt al-khālafa ʾmaʿma-rīfāt kīyām malāt ("On the accession of caliphs and knowledge of the accession of each king"), of which the original Arabic, preserved, has been translated and studied by Kennedy and Pingree, in The astr. history, 129-43. After a general theoretical survey, the work contains horoscopes of the spring equinoxes at which the Prophet and 18 caliphs (from Abu Bakr to Hārūn al-Raḍī) acceded to power. To calculate these, Māshāʾallah also made use of the Zīdī al-Shāh.

3. Kitāb al-Mawādīl ("Book of genethliac themes"), known only through some quotations made by a disciple of the author, Abu ʾAli al-Khayyāt, and through a Latin translation edited and studied by Pingree (The astr. history, 145-74). It contains 12 natal horoscopes dating from between 36 and 542 A.D.; three of them derive from the Pentateuch of Dorotheus of Sidon (50-75 A.D.), and the other nine from an unknown Greek astrological work dating from the 6th century. He interprets the horoscopes according to the doctrine of Dorotheus, whose work he probably knew through the Pahlavi translation. The influence of this writer is also perceptible in the Super significationsibus planetarum in nativitate of Māshāʾallah, which survives only in Latin translation.

5. De scientis motus orbis or De elementis et orbitus coelestibus or De sphaera mota, preserved in Latin translation, contains a study of the Physics of Aristotle (chs. 1-7), as well as an introduction to astronomy (chs. 8-24), both of these based on Syriac sources. The astronomical source mentions Ptolemy and Theod. of Alexandria, but the planetary models described are pre-Ptolemaic Greek (they do not, in fact, employ the equant and introduce no specific apparatus for the moon and Mercury) and similar to those found in Sanskrit texts since the end of the 5th century (cf. D. Pingree, Mashaʾallah: some Sasanian and Syrian sources, in G. F. Hourani (ed.), Essays on Islamic philosophy and science, Albany 1975, 5-14).

6. Kitāb al-Amīrāt wa ʾl-riyāḍ ("Book of the rains and the winds"), ed. and tr. by G. Levi Della Vida (Un opuscolo astrologico di Māšāʾallah, in RSO, xiv [1933-4], 270-81), concerns the astrological procedure for predicting rain. A Latin version also exists.

7. Epistola de rebus eclipsium, De ratione circuli et stellarum, Liber Messehalla in radicis revolutionum, De receptione, De elementis et orbitus coelestibus, published by B. R. Goldstein (The Book on eclipses by Māšāʾallah, in Physis, vi [1964], 205-13). It is divided into 12 chapters, of which the first contains a curious reference to magnetism in a cosmological context: the ascending node, the stars and the planets exert an influence on the earth in the same manner that magnetic stone attracts iron. It is appropriate also to mention the use, in this text, of a classification of planetary conjunctions distinct from that which figures in Fi ʾl-kirānat.

The work of Māšāʾallah is that of a writer who has
little interest in astronomy, but has cultivated all the branches of astrology which he has widely pro-
mulgated and popularised; nevertheless, it has con-
siderable interest from the astronomical point of view,
on account of the sources used (Persian, Syriac and,
directly or indirectly, Greek), which throw light on a
very early period in the history of Arab-Islamic astronomy.

**MASHAF** [see MUSHAF]

**MASHÅKA**, Muhammad, a person of secondary
importance of the *Naheda* [q.v.] (b. Raghmâyá
20 March 1800, d. Damascus 6 July 1888). Born in the
Greek Melkite rite, he began his studies in Egypt in
astronomy, mathematics and the natural sciences.
As a silk weaver, he studied music *Rüscâ fi'ann al-mâzîk*,
ed. René Révère, in al-Mahrâj [1899], pp. 146. As an
official, a representative of Şihâb and vice-consul for
the United States, and then merchant, he took up
medicine (doctor of medicine at Cairo, 1845). In 1848
at Damascus he joined the Protestant faith. The ensu-
ing polemics can be found in *al-Dalil il'dtd al-Indjîl*,
*al-Machriq* [1899], pp. 146). As an
official, a representative of Şihâb and vice-consul for
the United States, and then merchant, he took up
medicine (doctor of medicine at Cairo, 1845). In 1848
at Damascus he joined the Protestant faith. The ensu-
ing polemics can be found in *al-Dalil il'dtd al-Indjîl*,

Māliki, *Riyād, ii, 502* in order to convert to the Shi'i heresy. An assembly at al-Kayrawan brought together "Sunnis and *mashrika*" (*ibid., ii, 330*), i.e. Shi'i *mashrika*. See also examples in *ibid., ii, 425*, 427, and in *Tabī, op. cit.*, 369, 383, 394.

The terms *irākī* (or abī al-*Irāk*) and *Kāfī* were, on the other hand, more often reserved for Ifṣīkīyān Ḥanafī (al-Māliki, *Riyād, i*, 181, 256, 263, 264, 277, 374, 375, 451, 452, 463, 500, *ii*, 29, 73, 207, 339; and *Tabī, op. cit.*, index s.v. *Irākīyyāt*). These last, in contradiction from the Mālikīs who made up the spear-head of opposition to the Fātimids, showed themselves as much more receptive to Shi'i propaganda, which may be a contributory cause to their disappearance from the North African scene, after having formed the majority there (*Tabī, L'emirat aghlabide, 233*), once *ṣī'a* was itself extirpated.

Above all, it was in a dual role, religious and cultural, that the *mashrika* played an outstanding part in the Muslim West. Certainly, none of their outstanding stars went beyond the Nile valley. The *mashrika* is to some extent a land of exile where only persons relatively in the second rank sought their fortune, which does not however mean that their role was any the less decisive. Let us mention, for example, that ʿIyād *q.v.* had among his masters two Mashārikīs who had visited Ceuta, Abu ʿl-Ḥasan al-Rabīʿ al-Makdisī (d. at al-Nāṣiriyya in 531/1137, ʿIyād, *Ghunna, no. 81*) and the ʿShāfiʿī Sahl b. ʿUṭğmān al-Nisābūrī (no. 89; al-Makkarī, *Naḥf*, ed. Ihsān ʿAbbās, Beirut 1968, *ii*, 67). Naturally, one cannot give here an exhaustive survey. Such a survey, which has not yet been done, would however show itself as very suggestive and open up many directions for research. The sources and a tour de force at present have not, in any case, kept note of everything. Al-Makkarī, who devotes 86 biographical notices to the *mashrika* who resided in al-Andalus (*Naḥf, iii*, 5-149), remarks that "one cannot give an exhaustive list of them, even when limiting oneself to the most outstanding ones (*ibid., iii*, 5). For his part, Ibn Baḥḵuwail provides us with over 50 names of Mashārikīs whom he had visited in Muslim Spain (al-Nīsābūrī, *Naḥf*, classified in an approximately alphabetical order at the end of each section, under the rubric waʾ- *mn al-ghuraba* ...).

Among the top figures, three are especially representative of the role played by the *mashrika* in the Muslim West, comprising two philologist *adāb* and a musician. Abū ʿAli al-Kāfī (288-356/901-67 *q.v.*) arrived in Cordova in 330/942 and was received with great pomp (al-Makkarī, *ii*, 71-2). Drawing on his rich library, and also on his memory, he spread eastern culture over a wide range, and he thus occupies the position of "the key figure in the ʿIrākī tradition in the West" (*R. Sellheim, *EF* art. s.v.*). The figure of Sāʿīd al-Baḥgādī (d. 747/1062 *q.v.*) is in a sense even more representative and of heightened relief (see R. Blachere, *Un pionnier de la literatur arabes en Espagne au Xe siecle. Sāʿīd de Bagdad*, in *Analecta*, Damascus 1975, 443-65). This was that of "a fairly picturesque Bohemian" (*op. cit.*, 445), certainly, enough of a flamboyant figure to shine at court. Having been compelled to "give up the idea of making a name for himself in *Iraq*", he took the road for Cordova, where he became "something like the type of the pioneer of oriental literary culture in Spain during the second half of the 10th century" (*465*). Ziryāb (173-243/789-857 *q.v.*) was a black musician who had first of all gravitated into the orbit of the "Aṭbaʾī court in Baghdād. Having aroused jealousies there, he also had to renounce making an impression in ʿIrāk, and, after a brief stay in al- Ḥayrāj, was compelled to set off, little by little, finding there in 20/822. His enormous influence was not just in the musical sphere. "Under the unchallenged arbitration of Ziryāb, the court and the town altered their dress, their furnishings [and] their cuisine" (E. Lévi-Provençal, *Hist. Esp. mus.*, Paris 1950, i, 272).

**Bibliography:** There is no specific bibliographical treatment for this topic. In addition to references given in the text, information can be gleaned from all the historical works, from the *adāb* literature and, above all, from the *fahākāt*. (M. Tabī)

*MASHHAD* (a.), noun of place from the verb *ghāhid* "to witness, be present at" > "be a martyr,* ghāhid*" (a post-Kūrānī semantic development which Goldzweker thought was influenced by Eastern Christian Syriac parallel usage; see *Mashudi-Studien, ii*, 387-9, Eng. tr. *ii*, 350-2). In post-Kūrānī times also, the noun *mashhad* developed from its designating any sacred place, not necessarily having a construction associated with it, but often in fact a tomb in general, the burial place of an earlier prophet, saint or forerunner of Muhammad or of any Muslim who had had pronounced over him the *ghāhadā* or profession of faith. Later, it might mean a martyrdom specifically or be used for any small building associated with any religious feature like a *mihrab* [q.v.].

The earliest Islamic commemorative structures, notes and documents, in *Ars Orientalis*, vi [1966], 9-12. Literary sources, e.g. the early geographers, mention *mashhads* of what are clearly highly varying natures (see e.g. al-Mukkaddasi, tr. A. Miquel, *La meilleure repartition*, Damascus 1963, 6 n. 15), but an early epigraphic instance of the term's usage is on the frieze of the *Mashhad al-Riḍā* (288-356/901-67), the tomb tower in Gurgan erected by the Bāwāndīl local ruler, the Ḡubābādī Muhammad b. Wādārīn, in 407-11/1016-21, where this edifice is described as a *mashhad* (see M. Van Berchem, *Die Inschriften der Grabtürme, i*, in E. Diez, *Chasasische Baudenkmäler, i*, Berlin 1918, 87-90; *RCEA*, iv, nos. 2312-13; *Kitābāt 9*, Iran and Transoxiana and Pl. XIX no. 22).

For the tomb of the caliph and First Imam of the *Shīʿa*, ʿAli, the Mashāhīd ʿAlī, see *Al-Najaf*; for that of the Third Imam, al-Husayn, the Mashāhīd *al-Ibān*; for that of the Eighth Imam, ʿAli al-Riḍā, the Mashāhīd in *Khorāsān*, see the next article.

**Bibliography:** (in addition to references given in the article): See M. Hartmann, in *ZDPV, xxiv* (1901), 63-6 and 65 n. 2; Van Berchem, *Opera minora*, ed. A Louca and Ch. Genequand, Geneva 1978, index s.v.; and the arts. *Bakrī* in *Suppl., Kubba, Mashāhīd* 1. b. 4 Tomb-mosques, and *Tubbā*.

(C. E. Bosworth)

*MASHHAD*, a city of northeastern Persia, the capital of the present province of Khorāsān [q.v.] and the location since medieval times of one of the most important shrines of the *Shīʿa* world built around the tomb of the Eighth Imam ʿAli al-Riḍā [q.v.].

1. **Geography, history and topography** to 1914. Mashhad lies 3,000 feet above sea level in 59° 35' E. long. and 16° 17' N. lat. in the valley from 10 to 25 miles broad of the Kaghaf-Rūd, also called Ab-i Mashhad, which joins the Hari Rūd [q.v.] about 100 miles S.E. of Mashhad on the Russo-Persian frontier. Mashhad lies about 4 miles south of the bank of the Han Rud, which joins the Han Rud at Mashhad, which joins the Han Rud about 100 miles S.E. of Mashhad on the Russo-Persian frontier.

2. **Description** to 1914. Mashhad lies 3,000 feet above sea level in 59° 35' E. long. and 16° 17' N. lat. in the valley from 10 to 25 miles broad of the Kaghaf-Rūd, also called Ab-i Mashhad, which joins the Hari Rūd [q.v.] about 100 miles S.E. of Mashhad on the Russo-Persian frontier. Mashhad lies about 4 miles south of the bank of the Kaghaf-Rūd, which rises in the hills which run along the valley rise to 8,000 or 9,000 feet near Mashhad. In consequence of its high situation and proximity to the mountains,
the climate of Mashhad is in the winter rather severe, in the summer, however, often tropically hot; it is regarded as healthy.

Mashhad is a double town. It may in a way be regarded as the successor of the older pre-Islamic Tūs [q.v.], and it has not infrequently been erroneously confounded with it.

The fact that Tūs is the name of both a town and a district, together with the fact that two places are always mentioned as the principal towns of this district, has given rise among the later Arab geographers to the erroneous opinion that the capital Tūs was a double town consisting of Tābarān and Nūkān; e.g. Yakūt, iii, 560, 5 (correct at iv, 824, 23) and in the Lubāb of Ibn al-Azhur quoted by Abu 'l-Fidā'ī (T'isewīn, 453). Al-Kazwīnī (Ağār al-bilād, 275, 21) next made the two towns thought to be joined together into two quarters (mahalla). This quite erroneous idea of a double town Tūs found its way into European literature generally. Sykes (JRAS [1910], 1115-16) and following him, E. Diez (Churarzaniische Baudenkmäler, Berlin 1918, i, 53-4) have rightly challenged this untenable idea. The older Arab geographers quite correctly distinguish between Tābarān and Nūkān as two quite separate towns. Nūkān, according to the express testimony of the Arabic sources, was only 1/4 parasang (farsakh) or one Arabic mile from the tomb of Hārūn al-Rashīd and ¼Alī al-Riđā (see below) and must therefore have been very close to the modern Mashhad. The ruins of Tābarān-Tūs and Mashhad are about 15 miles apart.

In Nūkān, or in the village of Sanābādah belonging to it, two distinguished figures in Islamic history were buried within one decade: the caliph Hārūn al-Raḍīḍ and the 4Alī al-Riđā b. Mūsā [q.v.].

When Hārūn al-Raḍīḍ was preparing to take the field against Khurāsān, he was stricken mortally ill in a country house at Sanabadh where he had stopped, and died in a few days (193/809). The caliph, we are told (al-Tabari, iii, 737, 13-17), realising he was about to die, had his grave dug in the garden of this country mansion and consecrated by Kur'ān readers.

About 10 years after the death of Hārūn, the caliph al-Maʾṣūm on his way from Marw spent a few days in this palace. Along with him was his son-in-law 4Alī al-Rıđā b. Mūsā, the caliph designate, the eighteenth imām of the Twelvers. The latter died suddenly here in 203/818; the actual day is uncertain (cf. Strothmann, Die Zöwiler-Shīʿa, Leipzig 1926, 171).

It was not the tomb of the caliph but that of a highly venerated imām which made Sanābādah (Nūkān) celebrated throughout the Shīʿa world, and the great town which grew up in course of time out of the little village actually became called al-Mashhad (Mashhad) which means "sepulchral shrine" (primarily of a martyr belonging to the family of the Prophet). Cf. on the conception of mashhad, masjid. I. B. 4; the previous article; and M. van Berchem in Diez, op. cit., i (Berlin 1918), 89-90. Ibn Hawkal (313) calls our sanctuary simply Mashhad, Yakūṭī (ii, 153) more accurately al-Mashhad al-Riḍāwī = the tomb-shrine of al-Riḍā; we also find the Persian name masjīd-i mukaddas = "the sanctified shrine" (e.g. in Hamd Allāh al-Muṣawfī, 157). As a place-name, Mashhad first appears in al-Mukaddasī (352), i.e. in the last third of the 11th century. About the middle of the 8th/14th century the traveller Ibn Baṭṭūṭa (iii, 77) uses the expression "town of Mashhad al-Riḍā". Towards the end of the Middle Ages, the name Nūkān, which is still found on coins in the first half of the 8th/14th century under the Ilkhanids (cf. Cordrington, A. manual of Musalar numismatics, London 1904, 189), seems to have been gradually ousted by al-Mashhad or Mashhad. At the present day, Mashhad is often more precisely known as Mashhad-i Riḍā, Mashhad-i mukaddas or al-Mashhad al-Riḍāwī (so already in Ibn Baṭṭūṭa, iii, 66). Not infrequently in literature especially in poetry, we find only Tūs mentioned, i.e. New Tūs in contrast to Old Tūs or the proper town of this name; e.g. Muhammad Mahdi al-ʿAlawi, Taḥlīl Tūs aw al-Mashhad al-Riḍāwī, Baghdād 1927, 3.

The history of Mashhad is very fully dealt with in the work of Muhammad Hasan Khan Şānī al-Dawla entitled Maš'āl al-ṣāmī (3 vols., Tehran 1931-3 A.H.). The second volume is exclusively devoted to the history and topography of Mashhad; for the period from 528/1036-7 to 1302/1885 he gives valuable historical material. On this work, cf. E. Yate, Khurasan and Sistan, 313-14, and E. G. Browne, LHP, iv, 453-6. The Maš'āl al-ṣāmī forms the chief source for the sketch of the history of the town in Yate, 314-26. Cf. also the chronological notes in Muhammad Mahdi al-ʿAlawi, op. cit., 13-16.

The importance of Sanābādah-Mashhad continually increased with the growing fame of its sanctuary and the decline of Tūs. Tūs received its death blow in 791/1389 from Mirānghā, a son of Timūr. When the Mongol noble who governed the place rebelled and attempted to make himself independent, Mirānghā was sent against him by his father. Tūs was stormed after a siege of several months, sacked and left a heap of ruins; 10,000 inhabitants were massacred (see Yate, 316; Sir Percy Sykes, in JRAS [1910], 1118 and Browne, op. cit., iii, 190). Those who escaped the holocaust settled in the shelter of the ʿAlīd sanctuary. Tūs was henceforth abandoned and Mashhad took its place as the capital of the district.

As to the political history of Mashhad, it coincides in its main lines with that of the province of Khurāsān [q.v.]. Here we shall only briefly mention a few of the more important events in the past of the town. Like all the larger towns of Persia, Mashhad frequently saw risings and the horrors of war within its walls. To protect the mausoleum of ʿAlī al-Riḍā in the reign of the Ghaznavid Maš'ūd [q.v.], the then Ghaznavid governor of Khurāsān erected defences in 528/1036-7. Again (1115) a wall was built round the whole town which afforded protection from attack for some time. In 556/1161 however, the Ghuzz [q.v.] succeeded in taking the place, but they spared the sacred area in their pillaging. We hear of a further visitation by Mongol hordes in 695/1296 in the time of Sultan Qhāżān [q.v.]. Probably the greatest benefactors of the town and especially of its sanctuary were the first Timūrid Shah Rūh (809/1406-46 [q.v.]) and his pious wife Qjavār-Shāh. With the rise of the Safavid dynasty [q.v.], a new era of prosperity began for Mashhad. The very first Shah of this family, Ismāʿīl I (907-30/1501-24 [q.v.]), established Shīʿism as the state religion and, in keeping with this, care for the sacred cities within the Persian frontier, especially Mashhad and Kūmn, became an important feature in his programme as in those of his successors. Pilgrimage to the holy tombs at these places experienced a considerable revival. In Mashhad, the royal court displayed a great deal of building activity. In this respect Tahmāsp I, Ismāʿīl I's successor (930-84/1524-76 [q.v.]), and the great Shah Abbās I (995-1037/1587-1627 [q.v.] ) were especially distinguished.

In the 10th/16th century the town suffered considerable damage by repeated raids of the Özbek (Uzbek) hordes. In 913/1507 it was taken by the troops of the Shaybānī Khan [q.v.]; it was not till
The most important political event of the 19th century for Mashhad was the rebellion of Hasan Khan Sâlîr, the prince-governor of Khurâsân, a cousin of the reigning Shah Muhammad-i 'Abbâs. For two years (1847-9) he held out against the government troops sent against him. At the time of the accession of Nâşir al-Dîn (1848), Khurâsân was actually independent when only the people of Mashhad, under pressure of famine, rebelled against Sâlîr that Husâm al-Sâlîh, who had taken the town.

In 1911 a certain Yusuf Khân of Harât declared himself independent in Mashhad under the name of Muhammad 'Abbâs, and for a period disturbed Khurâsân considerably with the help of a body of reactionaries who gathered round him. This gave the Russians a pretext for armed intervention, and on 29 March 1912, they bombarded Mashhad in gross violation of Persia's suzerain rights and many innocent people, citizens and pilgrims, were slain. This bombardment of the national sanctuary of Persia made a most painful impression in the whole Muslim world. Yusuf Khân was later captured by the Persians and put to death (cf. Browne, The press and poets of modern Persia, 124, 127, 136; Sykes, History of Persia, London 1927, ii, 426-7).

Mashhad is now the centre of eastern Persia, the capital of the province of Khurâsân which, since its eastern part was taken by the Afghans in the 18th century, is barely half its former size (cf. Le Strange, Lands, 383-4; Isl., xi, 108-9). In the middle ages it was not Tus, Mashhad's predecessor, but Na'îsâbûr (modern Persian Nâshârâp) that was the capital of this extensive and important province. A royal prince has usually been governor since the fall of the Nâdirids. Since 1845, the lucrative and influential post of Mutawallî-nesâ'î, the controller or treasurer of the sanctuary of the Imâm, has usually been combined with the governorship (cf. Yate, 322).

Like most pre-modern Persian towns, Mashhad was enclosed by a great wall built early in the 14th century and afterwards lengthened in the 17th century. This wall, which the unity of the Persian empire was broken.

The making of this canal (see Yate, 315; Mahdl al-cAlawî, 13.

The town was divided into six great and ten smaller quarters (mahalla) (see Yate, 328). The six larger bore the names of their gates; see al-Mahdl al-‘Alawî, op. cit.

The principal street which divides the whole town into two roughly equal halves, the Khijâyân, is a creation of Shâh ‘Abbâs i, who did a great deal for Mashhad (see Yate, 319; cf. the pictures in Sykes, The glory of the Shiah world, 231). This street, a fine promenade, is, being the main thoroughfare, filled all day with a throng of all classes and nationalities, including numerous pilgrims, and caravans of camels and asses; the bustle is tremendous, especially in the middle of the day.

The canal, which flowed through the Khiyaban in the middle of the day.

The capital of the province of Khurâsân which, since its eastern part was taken by the Afghans in the 18th century, is barely half its former size (cf. Le Strange, Lands, 383-4; Isl., xi, 108-9). In the middle ages it was not Tus, Mashhad's predecessor, but Na'îsâbûr (modern Persian Nâshârâp) that was the capital of this extensive and important province. A royal prince has usually been governor since the fall of the Nâdirids. Since 1845, the lucrative and influential post of Mutawallî-nesâ'î, the controller or treasurer of the sanctuary of the Imâm, has usually been combined with the governorship (cf. Yate, 322).

Like most pre-modern Persian towns, Mashhad was enclosed by a great wall built early in the 14th century and afterwards lengthened in the 17th century. This wall, which the unity of the Persian empire was broken.
MASHHAD — MASHHAD-I MISRIYAN

\[\text{Alawi, 13), contributed essentially to the rise of Mashhad; for the greater part of its inhabitants relied on it for water, although after entering the town, the canal became muddy and marshy (which was often a subject of satire; cf. 4 Abd al-Karim, Voyage, 74), and used it for drinking, washing and religious ablutions without hesitation. There were also large and deep reservoirs before the main gates. The water was saline and sulphurous and therefore had an unpleasant taste (cf. Conolly, i, 333-4; Khanhoff, 105; Curzon, i, 153).}

The Haram-i Sharif or sacred area, often called the Bast [q. v., literally "place of refuge, asylum", straddles the lower part of the main street; for a detailed consideration of the shrine, see 3. below.

2. History and topography from 1914 to the present day [see Suppl.]

3. The shrine, and Mashhad as a centre of Shi‘a learning and piety [see Suppl.]

MASHHAD ‘ALI [see AL-MASHHAD]

MASHHAD HUSAYN [see KARBALA‘]

MASHHAD-I MISRIYAN, a ruined site in Transcaspia (the modern Turkmenistan SSR), north-west of the confluence of the Atrak and its right bank tributary the Sumbar, or more exactly, on the road which runs from Čat at right angles to the road connecting Cîkîghler with the railway station of Aydin.

The ruins are surrounded by a wall of brick and a ditch and have an area of 320 acres. The old town, situated in the steppes which are now peopled by Turkomans, received its water from the Atrak about 40 miles above Čat. Near the latter place, the canal converged northwards from the river, crossed the Sumbar by a bridge and finally followed...
an embankment 6 feet high on which the bed of the
canal was 12 feet broad.

The ruins of a fine mosque can still be seen, the
gateway of which, decorated with faience, has an
inscription according to which this
building was built by
Ala° al-Dunya wa '1-Din Ghiyath al-Islam wa '1-
Muslimln Zill Allah fi 'l-
Alamin Sultan Muhammad
b. Sultan Takish Burhan Amir al-Mu'minin. The
Kh[tarak]mshah Muhammad in question reigned 596-
617/1200-20 [see KH[WARAZM-SHAHS]. On one of the
two towers (minarets?) is written:
bismilldh...
barakat un
min Allah
1
, mimmd amara bihi Abu Dja^far
Ahmad b. Abu 'l-
azz(?)
sahib al-ribdt, a
azzahu 'lldh
u
.

The identity of this Ahmad is
unknown but the title "lord of the
ribdt" which he
gives himself, confirms the fact that Mashhad-i
Misriyan was a frontier fortress
(ribdt). Near the east
gate stood another white mosque.

Tradition (Conolly) ascribes the destruction of
Misriyan to the "Kalmuk Tatars". The appearance
of the Kalmuks in these regions may be dated about
1600.

The ruins of Mashhad-i Misriyan (variants: Mesto-
rian, Mest-Debran, Mest-Dovran, Mastan) is
obscure, unless Mestorian is to be explained as
*Nestorian Christians*; it may be
recalled that during his campaign in the Col
(*J^>), to the east of the Caspian, Yazdagird II
persecuted the Christians (Hoffmann, 50; J. Labourt,
Le christianisme dans l'Empire Perse, Paris 1904, 26).

1. In Egypt. The term derives from Arabic
shariba `to drink'. The connection between the
turned wood technique and drinking was established
last century by E. W. Lane, who describes the
mashraba as a niche attached to such lattice wooden

Damascus 1976, 98, and the
literature quoted there. (G. H. A. JUYNBOLL)

MASHRABIYYA (A.) designates a technique of
turned wood used to produce lattice-like
panels, like those which were used in the past to
adorn the windows in traditional domestic archi-
tecture.

1. (Top third) al-sahb al-malyan, "filled cross";
(lower two-thirds) kand'isikibi "Coptic church style".
windows and used to keep the water jars cool and fresh for drinking. This interpretation is confirmed by wakf [q. v.] documents, which since the 10th/16th century refer to such niches as mashraba also to the turned wood technique as mashrabiyya. Muhammad 'Ali [q. v.] is said to have prohibited the use of mashrabiyya windows, in order to replace traditional by European architecture. The mashrabiyya technique is a speciality of Cairo, where it was used with a multitude of patterns and combinations, as the collection of the Islamic Museum in Cairo shows, as well as the remains of some old houses of the Ottoman period. Each type of mashrabiyya has its own name, such as nudjumi "star-like", sakiya "like a water-wheel", madhabal "triangular", salibi sadi "cross-shaped and empty", salibi mudam "cross-shaped and filled in", kanacsisi kibd "Coptic church type", kanacsisi sad "church type and empty", ayn al-kukul "chick's eye, maymuni mudawwar "circular maymuni", maymuni nudjumi "star-like maymuni" and ma'kus "reversed".

Mashrabiyya panels are composed of small pieces of wood which are turned in various forms and are fixed together without glue or nails, but simply by being inserted into each other, thus giving the panel more resistance towards the flexibility of the wood with the change of temperature. Geometric patterns of great complexity and diversity can be obtained with the combination of the wooden pieces. The result is a transparent screen which is very decorative due to the variation of patterns and density, according to which the pieces, of various shapes, can be fixed together. The panel filters the light and the sun rays in a pleasant manner; at the same time, it allows a view to the exterior without exposing the interior to outside view. This device had an important impact on the fenestration system, since it allowed large surfaces, like a whole wall in a room, to be made in turned wood and thus offered a panorama to the inhabitants at the same time as the introduction of fresh air. This could be combined with the use of glass panels or curtains for additional protection. Mashrabiyya windows could be made of painted wood in various colours, or could simply show the natural colour of the wood. Hence Cairo’s façades in the 19th century as seen by orientalist painters and in early photographs, were characterised by the multitude of projecting mashrabiyya windows that almost touched each other on both sides of the narrow streets.

Historically, the technique of turned wood in Cairo seems to have been used first on other architectural objects before it was applied to windows. Mamluk wakf deeds, which include detailed descriptions of buildings, refer to turned wood, though not usually in connection with windows. Only in the very late Mamluk wakf deeds in the early 10th/16th century do we find, and then only sparsely, references to turned wood used on windows. It is referred to as khashab khart or sometimes as shykh al-kharrdt, i.e. "made by the turner", to distinguish it from shykh al-najdidr, which means "made by the carpenter".

Whereas Lane reports that in his time, the houses of the rich differed from those of the poor by their larger display of mashrabiyya panels, in the Mamluk period the windows of the rich had iron or bronze grills that were gilded like those of the royal palaces at the Citadel, whereas the more common ones were made of wood. Al-Makrizi, deploring the ruins of the palace of Tashirun, writes that its marble was replaced by stone, and its iron windows by wooden ones. Mamluk wakf deeds describe the windows of residences of the period as having the same system of fenestration used in the mosque architecture: the lower windows were rectangular, large and adorned with iron or bronze grills, whilst above them were...
Arched windows with stucco grills filled with coloured glass. The more common house type, or the less visible windows in a residence, were made of wood, in general without turned wood panels, according to the wa'af descriptions. Whenever this technique is mentioned in Mamluk wa'af descriptions, it usually refers to balustrades, like that which adorns the mak'kad, i.e. loggia, or the wooden lantern which surmounts the central part of a kā'a or reception hall, also found in late Mamluk mosques. *Khālad khātir* is also mentioned in connection with maghāni, also called ṣabānī, which are a pair of loggias that flank a kā'īn on both sides and which, as the name indicates, were intended for the singers and musicians, who traditionally performed behind curtains or screens.

There are three mediaeval mosques in Cairo that display magnificent examples of *mashrabiyya* technique. The mosque of al-Sāliḥ Ῥālā', built in the Fātimid period (555/1160) and restored more than once under the Mamluks, has a screen of turned wood, today at the portico but originally inside the mosque. The present one is a modern copy made after a 19th century illustration. The mausoleum of Sultan Kalāwīn (built 683-4/1284-5) also has a turned wood screen around the cenotaph, restored at the beginning of this century. Further, the mosque of al-Māridānī (739-40/1340) has its sanctuary screened by a *mashrabiyya*.

Regular reference to turned wood *mashrabiyya* in connection with windows in domestic architecture, starts after the Ottoman conquest of Egypt (925/1517) and is found in wa'af descriptions. Although windows of turned wood are a characteristic feature of the domestic type of architecture, there is one Ottoman mosque in Cairo that has a large *mashrabiyya* window, the mosque of Yūsuf Agha al-Ḥīn (1035/1625), which was erected along the shore of the Canal of Cairo. The *mashrabiyya* window must have been intended to allow the worshippers to enjoy the view of the water and the greenery.

Nowadays, after modern European architecture was definitely adopted in Cairo from the first half of the 19th century under the initiative of Muhammad 'All Pasha, *mashrabiyya* windows have disappeared from Cairo's façades. In the second half of that century, European architects introduced a kind of orientalist style in architecture and decoration which revived some traditional crafts, and turned wood became again fashionable, this time, however, with purely decorative functions. It was no more used in its original architectural context, but as decoration for European-style furniture and on small objects. With time, the *mashrabiyya* technique became a touristic craft only practiced in the bazaar, and the term *mashrabiyya* itself became equivalent to local traditional handicraft.

The type most frequently encountered consists of rectangular grilles, grilles with ogee arches and grilles of larger dimensions containing three or more panels with a verticall and stepped movement (urusi). The material most frequently used is wood, and in particular, plane (*linar* or *platanus orientalis*) which, since it could secure optimum durability, and, since it had a high and straight trunk, also came to be used for columnar porticoes (*talār*). Sometimes grilles of plaster or of coloured glass were employed (e.g. the specimen removed from the Darb-i Imām at Isfahān), as were grilles of stone or plaster and tile mosaic (e.g. the Masjidi-i Ṣayykh Lutf Allāh and the Masjidi-i Qūmā, both in situ in Isfahān).

The main decorative themes comprise vegetal, figural and animal motifs (cf. the above-mentioned grille of the Darb-i Imām); inscriptions (e.g. the large *urūfi* of the Hafidh Tan at Shāhri-Kurd); and, above all, geometric motifs.

In all the types recorded to date—rectangular, ogival, and stepped—the wooden grille is always subdivided for decorative purposes into two main parts, sc. an outer border and an inner field. The first of these, namely the border, always comprising a series of square “modules”, is obtained by the repetition of a single decorative motif all along the edge of the grille. This establishes an exact correspondence between the width and height of the grille. By contrast, the second—namely the inner field—constitutes the principal motif of the whole composition and is therefore subject to certain regulatory “laws”.

Such laws are illustrated above all by the use of rotations around precisely located axes; or of rotations of a single basic motif; or of various renderings of a given decorative theme—unless, indeed, a single part of the design is isolated. This makes it possible to obtain, with minimum artifice, a most varied range of compositions.

The geometric schemes highlighted in these various compositions consist in the main of equilateral or isosceles triangles or of squares often rotated at an angle of 45°, and, more rarely, of rectangles. The geometrical figures are above all regular polygons such as hexagons, octagons, decagons and dodeca- gons, which, with their numerous symmetrical axes, allow the creation of complex ensembles. The decorative motifs employed have very ancient origins and go back to the first centuries of Islamic art and even to the period of Near Eastern late antiquity.

This répertoire was used and elaborated for centuries, with the result that today it is possible to find identical decorative motifs in periods far removed from each other in time. With the Safawids, the decorative motif, initially simple and with a wide mesh, tends to thicken and to become more complicated with the creation of complex stellar figures or those with polygonal matrices. There is an increasing use of coloured glass, mirrors and perforated elements with a progressively increasing use of curvilinear motifs.

With the advent of the Kājārs, this love of curvilinear motifs increases apace and the decorative design changes totally. The mesh widens yet again, the geometric motifs disappear almost entirely while curvilinear motifs prevail. These include floral themes, in which large areas of coloured glass occur; their colour scheme is dominated by blue, red and green.

MASHRIK (A.), the East, linked with and opposed to the West (Maghrib [s.v.]), either in general or from the strictly geographical and point of view; for the Arab world, the Maghrib embraces all the lands to the west of Egypt, and the Maghrib all those to the east. Nevertheless, the parallelism is not absolute; whilst the term Maghrib is particularly applied either to the group North-Africa-Tripolitania or to North Africa properly so-called or to its most western part, Morocco (Maghrib, al-Maghrib al-Asqal [s.v.]), the word Mashrik seems to cover the Orient in general, without reference to any one country or another (the name of one of the miḥlāfāt of Yemen, cited in Yākūt, Buldān, s.v., but not in al-Hamdānī, can only be understood, from all the evidence, in a local context).

An interesting attempt was, however, made in the 4th/10th century to take to its logical conclusion a rigorous parallelism between the two geographical groupings. In this attempt, the term Mashrik was widely used, especially in the geography of Abu-Shakr ibn Haytal and its misr, Samarkand. It should be noted that parallelism between Gharb and Shark, one which by the Djayhun river (sc. the Oxus); to the south, Mashrik-Fars-Kirman-Sind. This last, Yemen, is also described to us as having two lands, one of seacoast and one of the mountains (Aṣḥān al-takāsim, 56, 69-70, 260-1); but the parallelism with the other two great provinces is not pushed any further. To the Maghrib, made up of two groups (al-Andalus and the Maghrib properly speaking) and with two metropolitan (miṣr) of Cordova and al-Kayrawān, there corresponds the Mashrik, defined as the assemblage of lands more or less strictly under the aegis of the Sāmānids, including Šijdīstān, Khurāsān and Transoxiana (mā wārā al-nahr), this assemblage being divided into two groups separated by the Džayhun river (sc. the Oxus); to the south, Khurāsān and its misr, Naysibār and to the north, Haytal and its miṣr, Samarkand. It should be noted that al-Mukaddasī, in the introduction to his work, adds to the distinction Maghrib/Mashrik a further parallelism between Gharb and Shark, one which does not however seem to be operative in the rest of the book; for the author, Gharb embraces the ensemble Maghrib-Egypt-Shām (sc. Syria-Palestine) and Shark the ensemble Maghrib-Fārs-Kirmān-Sīnād.

Bibliography: In addition to the references given in the text, see Mukaddasī, 7, 47, 57, 260 ff. and passim. (A. Miquel)

MASHRIK AL-ADHKĀR, a term used in the Bahā’ī movement for four related concepts: 1. In Iran (loosely) to describe early morning gatherings for reading of prayers and sacred writings. 2. Generally of any house erected for the purpose of prayer. 3. Most widely, to refer to Bahā’ī temples (maṣṣābād) or "houses of worship," of which six have been built in a sparsely populated area in the heart of the country in Ashkhabād, Russian Central Asia by the expatriate Iranian Bahā’ī community there (begun 1902; com-
but which al-Djahiz and other authors mention in the context of drinks (dushdb, dddhi, etc.) which can ferment and be alcoholic (see above), as well as Abū Hilal al-Askarī, Dīwān al-mašū'i, i, 331; nabhīd al-dīhs—identical to ḍašāhī; M. Ahsan, Social life under the 'Abbasids, (1977), 111). Certain jurists of the Hanafī and Muṭa'zīlis school had a tendency to permit the consumption of some of these drinks, under certain conditions, excluding only wine made from grapes. A more limited group of the Mutāzilīs (to which al-Djahiz did not belong) even tried to legalise wine made from grapes, and it is for this reason that Ibn Kutayba, Al-ʿAḏrāʾ, ed. M. Kurd (Beirut 1982, 91), supplied the plural ḍuṣḥīdī (or other details, see Sadan, op. cit., and for ḍašāhī, see also al-Balawi, Al-ʿAlībī, ii, 80, and S. D. Goitīn, A Mediterranean society, iv, 1983, 260).

Now these tendencies count for nothing in Islamic jurisprudence at present (even among the Hanafīs), and these numerous and rich testimonies from mediaeval texts are cited only to show the difficulty, in a given historical context, of distinguishing between the "permitted" and the "forbidden", the "soft" and the alcoholic, and above all, to underline the rich variety of fermented drinks, soft or relatively so, musts and beers. The term nighbīd (q. e.), for example, most often denotes a true wine made from dates (very potent according to pre-Islamic poetry; see Sadan, op. cit.), or from various berries, but—with reference to the nighbīd consumed by the Prophet—the religious texts stress the non-alcoholic nature of this drink, which was lightly fermented (or, rather, exposed to the sun for only a few hours, according to the definitions of the texts themselves), in order to prevent any other interpretation of this term in the context of the biography of the Prophet (see Ibn Hayyān, Aḵẖād al-naḥī, Cairo 1959, 225-8; Ibn al-Diwaṭrī, Al-[Wafī], Cairo 1966, 617; cf. al-Ḍabgūrī, [Commentary on] Al-Ṣ̄ḥāmaʿī by Al-Tirmidhī, Cairo 1301).

II. Beers.

In fact, beers were well-known in the civilisation of the Islamic world. For example: 1. Mīr, see Concordance, s.v.; Dozy, Suppl., under mīr, mazr, mīzdār; S. D. Goitīn, op. cit., iv, 261 (under "beer") and cf. al-Ḥalābī, Nuzhāt al-ʿudūdī, Camb. ms. or 1256(8), fol. 218b, where the Egyptian author describes mīr as the name of this drink of the Negros living in Egypt. See also al-ʿAkhfāšī, op. cit., fol. 3a, who calls mīr by the name of nabhīd al-ʿṣarīra, "beer" of maize or of sorghum, while "beer" of wheat is called in Egypt, apūl ad-ʿAkhfāšī, ḥāṭīʿā; as for barley beer, māʿ ṣahr, see below under the heading fūkāṭī. On mazzār = "brewer", see Ibn Mawlawī, Makhāma fi khamṣīn marʿā, B.L. ms. Add. 19, 411, fol. 94a: mazzārin = "brewer" in the fem.) and implements, her receptacles and the preparation of the drink. 2. Dījaʿī, (cf. for example, Ibn Ḥadīr, Fisāl al-ʿBūrī, x, 250-9; on the revised use of this term in this century, in place of the more widespread borrowing ẖānī = modern beer), see Maṭḥūt, ii, 401-7. 3. Māʿ ṣahrīʿ and akṣīmā, see below. 4. Baca, see towards the end of the article. 5. Fūkāṭī, see Ibn Kutayba, ʿUyīn, iii, 280; Kusdājīm, Dīwān, 1313, 84; al-Ṣarī al-Raʿīzī, Dīwān, Baghdād 1981, i, 180; fūkāṭī = sparkling drink; al-Ḥusnī, Zahr, ed. al-Blīḡāwī, i, 116: fūkāṭī = producer and vendor of this drink; al-Rāghib al-Ṣalāḥī, Maḥādīrī al-ʿudūdī, Beirut 1964, ii (4), 379; P. Kahle, in ZDMG (1935), 344; Darāṭ, L’acte de wafṣ of Darb Shahr., Cairo 1963, 52; Sadan, in REI (1977), 50, 56, n. 18; Goitīn, loc. cit. The long and narrow vessels which, among their other functions, were used for the preparation or storage of this "beer", were the kīzān (sing. fūkāṭ) (see above). The term, which found its way into English as an adjective (see al-Ghuzūlī, Matāʿīsī al-budur, Cairo 1299-1300, ii, 72) is frequently mentioned and described in Arabic literature. However, Goitīn, op. cit., iv, 146, translates kīzān as "bowls", a sense which the word possesses in certain dialects. With reference to the producer/vendor of this drink (fūkāṭī), see also the popular Story of the Caliph Hārūn al-Raṣīd and the fūkāṭī fūkāṭī; B.N. Ar. ms. 3658, fol. 26b-34a. On the fūkāṭī (fūkāṭī = brewer, see also al-Nawāǧīdī, Mīrāt al-ghīzāmī, B.N. ms. Ar. 3402, fol. 36a; al-Ṣarīfī, Nuzhāt al-ʿfarī, Oxford ms. Marsh 2, fol. 46a; al-Khāfāšī, Tirāz al-madāṣūsī, Cairo 1284, 71-3; S. de Sacy, Exposé de la religion des Druzes, i, pp. ccxxxi-iii.

There existed numerous kinds of fūkāṭī: they are mentioned in culinary literature, among sauces and drinks (see the ms. mentioned below and M. Rodinson, in REI [1949], 131, whose material is based on al-Wuṣāla (see below); ar. ṣajīṭā and H. Zayyāt, in Machriḥ, xli, 25). The sense of "beer" is clearly evident when the text describes the fermentation (fūkāṭ, mar, ṣahrī) of this drink. In addition to the references given above concerning the fūkāṭī, see anon., Kanz al-faṣādaʿ, Camb. ms. Qq. 196, fol. 108b-a, 109a-b: fūkāṭī sweetened and flavoured with fruit (the more abundant mediaeval equivalent of "sandy" or almost so; it may thus be with justification that Aḥṣān, loc. cit., attempts to conclude from a very partial reference of adāb that this drink was invariably soft or even non-alcoholic; however, apūl al-Ghuzūlī, op. cit., who accurately reflects life in mediaeval Egypt, various kinds of fūkāṭī were sweetened to a considerable extent), 108b, 109a-b: māʿ ṣahrī, literally "barley water", when fermented becomes "barley beer", of which a special variety exists for the nights of the month of Ramaḍān (according to this text and according to anon., K. al-Taḥkīth, Chester Beatty ms. 4018, fol. 48a), 107a, 110a, 111a: akṣīmā = liquid, syrup, but, since one of these recipes mentions the presence of yeast among the ingredients of this drink, it must presumably be a variety of sweetened beer and not a simple syrup as it is usually translated (for the Egyptian names of this "beer", see also al-Warrāk, Kanz), K. al-Taḥkīth, ms. Oxford, Hunt. 187, which contains recipes of fūkāṭī, fol. 148b, 151b, and cf. Zayyāt, loc. cit.; anon. al-Wuṣāla, B.N. ms. 6388, fol. 27a-b: akṣīmā and fūkāṭī, 28b-29a: fūkāṭī prepared with yeast, and various kinds of fūkāṭī; cf. Rodinson, loc. cit. Certain physicians are inclined to define fūkāṭī made of barley or rice, as a relatively soft drink, when compared to real intoxicants (al-Rāzī, Manṭābī al-ghāyba, Beirut 1982, 91; who notes, on the other hand, that the fūkāṭī "goes to the head"), but for the jurists, the mediaeval experts in Islamic law, this drink brings up some difficult legal questions (see al-Tūsī, Maṣūla fi taḥrīm al-fūkāṭī, Bodl. MS. Arab.1.64, fols. 94v-97v).

The same works of culinary art also provide a wide range of recipes of which the primary ingredient is milk, but it may be assumed, judging by the method
of preparation, that in the majority of cases the references are to sauces accompanying food rather than to drinks as such (cf. also Ahsan, op. cit., 97-8, and the references given below). Without refrigeration, it was not easy to preserve milk, except with the addition of preservative elements, e.g. salt, or allowing it to curdle. In fact, ever since the pre-Islamic period the Arabs were well aware of the importance of milk as a nutritive element, with numerous terms denoting its varieties and properties and verbs and adjectives used to identify the stages of curdling (ro’ib – clotting, for example), and it is thus that numerous pages are devoted to milk in the lexical literature (specialised works, including Kitâb al-Laban wa ‘l-liba’ by Abû Zayd al-Ansârî, ed. Haffner-Cheikh, in Dix traités, as well as entire chapters in longer works; see also the references in Sadan, op. cit.). The pre-Islamic Arabs were great breeders of camels and dromedaries, and it is often to their milk that these terms apply. Muslim civilisation was familiar with the milk of all kinds of beasts (see for example the work attributed to al-Suyûtî [Sidi-Siouti], Livre de la miséricorde, Paris 1856, 19-21) and geographical literature refers to it at times (see e.g. Ibn Hawkal, tr. Kramers and Wiet, ii, 364). Ibn Kutayba (al-Âshâbî) knew that it was possible to ferment these milks, e.g. that of the camel, although it was a process which was later popularly used for fermentation a few centuries later (koumiss [see kumîs] was often produced from fermented mare’s milk, as was kefîr, generally less potent; some varieties still exist today which are even given to children to drink). This came about through the influence of the peoples of Central Asia and those from the native lands of the Mamluks; the latter also drank koumiss, in spite of the hot climate of Egypt (see Khâmîr).

As has already been mentioned, curdling, or even salting, were effective means of preserving lactic drinks, in a period when refrigeration was still unknown, and in relatively hot regions. It is thus that a land may be renowned beyond its geographical borders for the quality of its lactic products (the Syro-Palestinian region, for example, is praised for its yoghourts, etc., in a humorous work on the gastronomic art which does not however include recipes: untitled B.L. ms., Add. 19.411, fols. 4b-5a). Moreover, it is thus that certain of these drinks are still known today, for example labân (originally laban means nothing more than “milk”, but in certain dialects the distinction has arisen of halîb = milk, laban = fully or partially curdled milk), ayyân, among the Turks, and there is an Iranian equivalent, dâgh, sometimes a little more salted. Some ancient texts describe yoghourts (yoghurt) and give the recipes: Kanz, the above-mentioned Cambridge ms., fol. 132a, with instructions on how to dilute it with water, producing a drink which would resemble the above-mentioned ayyân; al-Warrâq, op. cit., fols. 5b-5a6a (see also fols. 28b-30a): types of milk and their treatment; the untitled ms. mentioned above, B.L. Add. 19.411, fol. 4b: curdled milk and various yoghourts, including that made from the milk of the buffalo. Ibn Râzîn al-Tîjdînî, ed. Ibrahim Shânûn, Fadâlat al-îkhwân (La cuisine andalou marocaine au XIIIème siècle), Rabat 1981, 147: râ’îb (explained above).

In the course of the last two centuries, Egyptian scholars and physicians have developed a genre of polemical debate in favour of and against milk and its products: All al-Dabbâgh al-îl-halabî, Ra’d al-îdâh ‘an dâgh al-îl-kîf wâ ‘l-ma’âlî, ms. Taymûrîyya, Abad 370 (relying to a treatise against certain lactic pro-

ducts); and Ahmad al-Îbâdî, Fawd al-mînân, Cairo 1315 (relying to a treatise, al-Wâdîg al-basân, in favour of fish and against milk).

IV. Literary and semiotic questions.

In works of a moral and religious nature, milk is also a literary symbol (even a semiotic value) of the purity of Islam: it was chosen by the Prophet at the time of his nocturnal travels through the heavens (isrât and mi’rât), when he was offered water, wine, milk, etc. (on this and other symbolic senses attributed to milk, see Sadan, op. cit., and, regarding the importance of milk in the eyes of the Prophet, see also Ibn Kayyîm al-Dawizîyya, al-Tîbîh al-nabawî, Beirut 1957, 299 ff.). For certain mîdjin poets, wine characterises the sedentary life of Muslim society, especially that of ‘Abbâsîd society (the relatively more affluent circles), while milk, of less worth in their eyes, characterises the pre-Islamic Arabs. This is not a case of true contradiction, but of two semiotic and literary levels. After all, this is not an objective notion (in fact, the ancient Arabs were not unaware of the existence of wine, but they did not drink it very often) but one that arises from a variety of literary elements, showing, among other topics, the different roles that the pair “milk” and “wine” play as symbols in the various genres (see Sadan, op. cit.).

V. Water as a drink.

In spite of the above-mentioned preference for milk over other drinks on the part of the Prophet, he is also credited with such remarks as “Water is the mother of all drinks”, or “the master of all drinks” (on the importance of water in Muslim legal tradition, see also al-Kulînî, al-Kâtîf, vi, 380-1; Ibn Kayyîm al-Dawizîyya, op. cit., 302 ff.; al-Urmanwî, Siyâsîas, ms. Kûpûlû, 1200, fol. 164a; al-Mâjdîsî, Bîhûr, sîr. 752-5).

Water was an element of prime importance in the life of the ancient Arabs, especially those who lived in desert regions (see E. Brûnîlîch, in Islamicâ, i, 41-76, 288-343, 454-528). The literature of medical tradi-

tions speaks of the importance of this element as a drink, and gives detailed accounts of its properties and different varieties (see e.g. Sidi-Siouti, op. cit., 38). In fact, geographical and topographical conditions made it necessary for each region to be content with a given, and often unalterable, quality of water: water from wells (âbâr), from canals, rivers, etc. [see mâ’î], a subject of frequent interest to Arab geographers (in particular the so-called “classical” ones of the 4th/10th century; al-Mukaddasî, in his Ahsan al-takdîm, often adds at the end of each description of a region a sub-chapter entitled dâgh al-âshûn hâdîh al-lîdîm which contains, among other things, information concerning the different waters of the region, their qualities, etc.). Similarly, culinary literature (fols. 13a ff. of the Kanz, Cambridge ms., and cf. al-Ghûzûlî, op. cit., ii, 74-7) also devotes special chapters to water, in its capacity as a drink. Well-organised systems of provision of water were rare, but not unknown in the mediaeval period (see e.g. R. B. Parker and R. Sabin, A practical guide to Islamic monuments in Cairo, 91). The water of certain rivers was often neither pure nor clean (al-Dîhabîzî, al-Bukhârî, ed. al-Hâdirî, 113, describes how sewage was dumped in one of the channels of the Tigris; see also E. Lévi-Provencal, Trois traités hispaniques de hîdâya, 33; idem, Séville musulmane, 70). The quality of drinking water often depended on the social condition of the consumer, in particular the money available to him to pay the water-bearing (sakkâ); see Lane, op. cit., i, 161, but cf. also a few special constructions (sâbîl, pl. sabûl, testifying to the generosity of the benefactors who built them)
MASHRUBAT — MASHRÜTIYYA 723

designed for the use of the general public. By such means, water was distributed to travellers or to the poor (al-
Tabari, iii/1, 484). The vendors of snow, which was one of the most expensive products. The
Tabari, iii/1, 484). The vendors of snow, (thalldajun)
brought to him at the time of his pilgrimage (al-
Abyuth, 3/2, 331), such as, e.g., tamarind drink (samh hind, see
above, and al-Sakat, loc. cit.) and liqueuric drink (sa'i), which are very popular; the drink made from
dried grapes (sheeb according to Lane, loc. cit., zahib or zhib in colloquial speech), gjilab (which was known
to the mediaeval world, see the above-mentioned Cambridge ms., fol. 133; al-Ghuzuli, loc. cit.; Huici
Miranda, loc. cit.). These recipes are not always based
on dried grapes and the drink is most often non-
alcoholic, but, even today, some devout Muslims abstain from consuming this drink made from dried
grapes when it is prepared by non-Muslims, since it is feared that over-long soaking of the fruit produces
alcohol. Also worthy of mention here is the boza of the
Ottomans (whence biza in the Egyptian dialect, see
Sapiro, Dictionary, defining it as biSar, but it is necessary to
distinguish this term from boza, biza "ice cream" in
some dialects of colloquial Arabic, which must rather be, i.e. biza and Turkish bis "sweet". This may
contain alcohol (see, the series Le voyage en Egypte, I.F.A.O., Cairo, passim (e.g. vol. for 1634-6, tr. and
annot. by V. Volkoff, n.d., 255 and n. 157; bous)).
But soft varieties of boza/biza are known (see E. G.
Gobert, Usages et rites alimentaires des Tunisiens, in
Archives de l’Institut Pasteur de Tunis [1904], 64; see also
43, 72, on other drinks such as biza, for which see
Beaussier, s.v. biza and Turkish bis = "sweet"); these two
drinks recall the problem of the "permitted"
and the "forbidden" explored in detail at the
beginning of the present article (e.g. the naki", mentioned
above).

In this context of continuity, we may also compare the
sabuyah of the ancient texts (afore-mentioned Cam-
bridge ms., fols. 112a-113a, and afore-mentioned
London ms. of 1634-6, fol. 26b, although the
references here are to a fairly thick liquid) with the
sohiba described by Lane, op. cit., in the 19th century
(a similar drink, prepared from the pips of melons, is
also described by R. Khawam, La cuisine arabe, 172:
bozourate).

VIII. Hot drinks.
As regards hot drinks, see the articles kahwa "coffee"
(see also on this, R. J. Hattori, Coffee and Coffeehouses,
Washington D.C. 1985) and ghan "tea", but besides
these two drinks, the lands of the Near East are
familiar with a wide variety of infusions of flowers,
leaves, etc.

MASHRUTIYYA [see DUSTUR].
MASHWARA (A.) or MASHURA, a common term for consultation, in particular by the ruler of his advisers, the latter being various defined. The term sometimes also appears to mean some kind of deliberative gathering or assembly.

The practice of consultative decision was known in pre-Islamic Arabia [see MAQDISI, and MALA in Suppl]. Two passages in the Kurʾān (III, 153/159, wa-aamurum fi t-amir and XXII, 36/38, wa-aamurum sharâ baynahum) are commonly cited as imposing a duty of consultation on rulers. The merit of consultation (mushdara) is manifold, and the corresponding defects of arbitrary personal rule (istidādā) are supported by a considerable body of material both in ḥadīth and adab (on ḥadīth, see WENSINCK, Concordance, iii, 212; for examples of adab, see IBN KUTAYBA, ʻUṣūn, i, 27-36; Ibn ḎAb Rabīḥi, Iḥd, Cairo 1953, ii, 46-8).

Similar recommendations are made by the Kurʾān commentators (e.g. al-Zamakhshari, Khathāh, Cairo 1373/1955, i, 152-5, i, 179; Ibn Ḏazī, Mafāṭīḥ al-ḥakīm, iii, 120). The desirability of consultation by rulers becomes a commonplace in Islamic political literature. It is urged by representatives of the scribal literature. It is urged by representatives of the scribal tradition, though generally without formally condemning consultative decision, is not uniformly so. Some authorities, in particular the jurists, urge the need to consult bureaucrats, while ʻulāma lay greater stress on the importance of consulting the ʻulāma. Ibn Taymiyya (Minḥāb al-sunnah, Būlāh 1521, ii, 86; idem, al-Siydsat-ndma, 1958; and the corresponding defects of arbitrary personal rule (istīddādā) are supported by a considerable body of material both in ḥadīth and adab (on ḥadīth, see WENSINCK, Concordance, iii, 212; for examples of adab, see IBN KUTAYBA, ʻUṣūn, i, 27-36; Ibn ḎAb Rabīḥi, Iḥd, Cairo 1953, ii, 46-8).

General bureaucrats urge the need to consult bureaucrats, while ʻulāma lay greater stress on the importance of consulting the ʻulāma. Ibn Taymiyya (Minḥāb al-sunnah, Būlāh 1521, ii, 86; idem, al-Siydsat-ndma, 1958; and the corresponding defects of arbitrary personal rule (istīddādā) are supported by a considerable body of material both in ḥadīth and adab (on ḥadīth, see WENSINCK, Concordance, iii, 212; for examples of adab, see IBN KUTAYBA, ʻUṣūn, i, 27-36; Ibn ḎAb Rabīḥi, Iḥd, Cairo 1953, ii, 46-8).

In general, bureaucrats urge the need to consult bureaucrats, while ʻulāma lay greater stress on the importance of consulting the ʻulāma. Ibn Taymiyya (Minḥāb al-sunnah, Būlāh 1521, ii, 86; idem, al-Siydsat-ndma, 1958; and the corresponding defects of arbitrary personal rule (istīddādā) are supported by a considerable body of material both in ḥadīth and adab (on ḥadīth, see WENSINCK, Concordance, iii, 212; for examples of adab, see IBN KUTAYBA, ʻUṣūn, i, 27-36; Ibn ḎAb Rabīḥi, Iḥd, Cairo 1953, ii, 46-8).

In the early Islamic centuries there seems to have been no formal procedure of consultation. As Gibb remarks: "There is, in fact, nothing in the texts to justify the suggestion that 'Umar's consultation was more than informal, or that there was at Medina any recognized consultative committee, still less a cabinet." (H. A. R. Gibb, in Le traité de droit public d'Ibn Taimiya, Beirut 1948, 168-9) goes further than most of his colleagues. Citing Kurʾān and ḥadīth, he insists that the ruler must consult not only with the ʻulāma and with his political and military officials, but also with spokesmen of the general population.

In Egypt, under the Bahri Mamlūks there appears to have existed a supreme council of high ranking amirs. The members of this council were variously known as Amir Māshura and Māshhir al-Dawla. Its head was called Raʾī al-Maṣḥūra. References to appointments to this council and to its meetings are of frequent occurrence in the Mamlūk chronicles for the Bahri period (see D. Ayalon, Studies on the structure of the Mamlūk army. III, in BSOAS, xv [1954], 69; E. Tyan, Institutions de droit public musulman, ii, Paris-Beirut 1956, 171-81; Björkman, Beiträge, 153; al-Kalḵagandi, ʻUṣūl, vi, 20, xi, 153-6; al-Makrīzī, al-Bābi, i, 26-9; idem, Ibn Ḏakir, vi, 46-8; A. M. Meyer, Subh, ii, 46-8; W. B. H. Zirinezade, Paris dilliinde Azerbaycan səzleri, Baku 1962, 248-50).
MASHWARA — MASHYAKHA

(Lufl, Ta'rikh, 21; Yazidibechu ‘Ali, Seidbex-Name, cited in Agah Sirv Levend, Tavd dilinde gelisme ve savrnamesi, 21; Yazidibechu ‘Ali, Seidbex-Name, cited in Agah Sirv Levend, Turk dilinde gelisme ve savrnamesi; see for example Kemalpasha, 127).

References to such meetings are common in the Ottoman chronicles of the 16th, 17th and 18th centuries. Na’sima offers many accounts of military mawqewa held by the commanders as well as of civil gatherings held in Istanbul by official dignitaries. The Sultan was not normally present at such gatherings (see for example Na’sima, i, 131, 146, 155, 180, 273, 413, ii, 354, 560, iii, 54, iv, 298, 413, v, 60, 205, 281-3). Towards the end of the 18th century such gatherings become more frequent, particularly in the periods associated with the Russian and other wars, and were sometimes held in the presence of the Sultan (examples in Wäjs, i, 316-18, 221, 222, 274, Drewed, ii, 276 ff., iv, 289). A new phase began with the accession of Sultan Selim III who, at the start of his reign, on 20 Şa‘ban 1203/18 May 1789, convened a consultative assembly (mawqewet) of leading officials to discuss the problems of the Empire and the way to remedy them. Such gatherings were often held under Selim III and his successors.

The early 19th century historian Şahzadé [q.v.] makes frequent reference to such gatherings and ascribes to them a representative character and significance not mentioned by previous authors (Şahzadé, i, 66, 73-5, 159-201, 365, iv, 2-5, 201, 37 ff., 155-8, etc.). For a full treatment of these institutions see Mawqewa (diwdn-i humdyun [q.v.]).

Şahzadé’s account marks the transition from a purely traditional Islamic interpretation of mashyakha to a new approach influenced by the practice of European states, to which indeed he alludes under the polite euphemism diwdet-i mawqewa “well-organised states”. He may have been thinking of the British parliament, a description of which, by the young Ottoman diplomatist Mahmud Ra’di was available to him in Istanbul. Şahzadé notes that the holding of such mawqewet was common in these states, where they served a useful purpose. At the same time, he was naturally concerned to justify the holding of such meetings with both Islamic and Ottoman precedents [see further Murfiyya, ii].

Perhaps the earliest use of the term in a clearly western context occurs in the Turkish translation of the first volume of Carlo Botta’s History of Italy from 1789 to 1814, first printed in Cairo as Bonaparti ve Tâbki 1249/1833. This speaks of the parlemento mawqeweti established by the liberals in that country.

In the course of the 19th century, the term mashyakha or mawqewet was much used by Turkish and Arabic authors, first to describe European representative institutions, and then to justify their introduction into the Ottoman Empire. The Egyptian Rif’at Râdi al-Tahâwî, discussing the functioning of French parliamentary institutions, makes common use of the term mashyakha to describe the various consultative bodies (Tâbki, al-ibrid fi tâbkit Bânîz, ed. Mahdi Allâm et alir, Cairo n.d., ch. 3, 138-43). This importation of the term mawqewet into the Turkish language as well as in the original Arabic and provided in the first detailed and documented description, in these languages, of constitutional and representative government. The term was adopted by the young Ottoman liberal patriots of the mid-century [see Yenî OTOMANLILAR] and was much used in their writings. By 1876 it was sufficiently well-accepted in Ottoman usage to figure in the Sultan’s speech from the throne at the opening of the first Ottoman parliament (Kâ‘ide-yi Meshweret, in Dabîli Dîrîsîdî, 10), and in 1909 the speech from the throne even speaks of constitutional and consultative government (Mescerîyet ve-mawqewet), “as prescribed by the holy law as well as by both reason and tradition” (Tayyiot-i effat of 15 November 1909).

Biography: Given in the text. In general, see L. Gardet, La cité musulmane, Paris 1954, 172-5; H. Laoust, Essai sur les doctrines sociales et politiques de Taki-d-din Ahmad b. Taimiya, Cairo 1939, 301-2; Muhammad Diya‘ al-Din al-Rayyis, al-Nazariyyat al-siyasyya al-islâmîyya, Cairo 1952, 224-8. See also Mawqes, 4. A. In the Middle East and North Africa, sections i-ii, and Mawqes al-siyya, the latter work provides a bibliography.

MASHYAKHA or mashyakha, one of several plural forms of A. shaykh, literally “an elder, i.e. a distinguished person usually of an advanced age [q.v.]”. In its classical usage, mawqewa also served as an abstract noun denoting a shaykh’s position or authority (e.g. in mas’hakhat al-íslám, the authority of the shaykh al-íslám [q.v.]).

In the Muslim West mashyakha was used to designate the collective of urban elders and notables often wielding considerable political influence in the cities. Such groups of dignitaries sometimes acted as virtual advisory councils to local rulers, hence mawqewa also carried the sense of “a municipal council”.

This was so in Muslim Spain (D. Wasserstein, The rise and fall of the Party-Kings, Princeton 1985, 142-45) and, according to clues offered by Ibn Kâlidun, in North Africa as well (ref. in Dozy, Suppl., s.v. sha‘yj, Mukaddima, ed. Quatremère, ii, 269; tr. Rosenthal, ii, 305).

During Bonaparte’s Egyptian expedition, the word acquired a new meaning. Seeking an Arabic expression for “republic”, Bonaparte’s orientalist experts came to use mashyakha. This was apparently an intended allusion to the Directorio of which were governing France at the time; endeavouring to simplify an idea novel to their audience, the translators chose to refer to the persons making up the governing body (“the elders”) rather than to the abstract principle underlying it. The French administration employed the term extensively in its proclamations to the Egyptians—issued “on behalf of al-mawqewa al-faransaawiya”—using it interchangeably with diwan, the common Ottoman word for the notion [see gümûşviyya]. Mashyakha then became a popular name for “republic” in Arabic writings as well, in which it was considerably more common during the first half of the 19th century than either diwan or diwaniyya; the latter term was introduced by al-Tahtawî [q.v.] in the 1830s.

The choice of a word with established connotations to express a new idea was bound to produce some confusion. To full historians of Arabic thus understood “republic” to mean “government by elders”, erroneously identifying the foreign notion with a more familiar concept (e.g. Nikûla Türk, Müdîkhatı.)
AL-MASÍH, the Messiah; in Arabic (where the formal noun mashyakha in the sense of "council, government") mashyakhat al-bilad ("city council"), mashyakhat al-bilad ("the country's government"), mashyakhat Bārīt ("the Paris Commune") etc.—further attested to the vagueness of the term and, perhaps, of some of the concepts it was chosen to express.

In the second half of the 19th century, mashyakha in the sense of "political authority" gradually gave ground to ḫumānīya, although some writers continued to vindicate the older usage until the 1870s. Thenceforth, mashyakha lost this meaning, retaining only the loose import of an institution of elders at large or a sheikhdom.

**Bibliography:** For the classical usage, see Lane, Lexicon, s.v. ḫalkāhnādi, ṣūḥ ḫalq al-qāna, s.v. in index (ed. Muhammad Kandil al-Balāṭ), 425. For its use in French proclamations, see examples in Ahmad Husayn al-Sāwī, Fāḍir al-ṣīḥaṭ fī Mṣr, Cairo 1975, pls. 43, 48, 49, 70, 89, 97A-90. See further A. Ayalon, Language and change in the Arab Middle East, Oxford 1987, ch. vii. (A. Ayalon)

**AL-MASÍH AL-DJURDJANI, ʿĪsā b. Yahyā Abū Sahih, Christian physician born in Dūrjiān, and one of the teachers of Ibn Sinā, who dedicated some of his works to him.**

He studied in Baghdad, and then taught in Khurāsān and later in Khārāzam. He had no social connection with Judaism, but performed religious worship alone in his house (al-Bayhaki, Taʿṣīr, 95). In 401/1010, together with a number of other scholars who had settled in Khārāzam—among them al-Birūnī—he was summoned by al-Muḥammad b. Ḥanzāna [q. v.] to this city under the suspicion of heresy. In the company of Ibn Sinā he succeeded in fleeing to Mazandarān, but met his death in a sandstorm. So far, none of his works, in large part preserved, has been edited. The most important, existing in numerous manuscripts, is the K. al-Maʿa ("hundred [treatises]"), a comprehensive medical encyclopedia, arranged in a hundred sections, probably the oldest work of its kind and perhaps the model for Ibn Sinā's Kānān. An edition of this work is most desirable. A very much smaller work, the K. b. iṣlaḥ al-kullī, is devoted in 19 chapters to the precautions one must take before using the general fundamentals of medicine. The third work to be mentioned here is the K. Iṣlaḥ ḫimat Allāh taʿāla fi ḫahl al-insān, dealing with the physiology of the human organs and their meaning and purpose as intended by God. Ibn Abī Ṣaybān (i, 328,2) says explicitly that this work is based on Galen's [see ṣīratīn] K. fi manāḥiʾ al-ʿādīʾ, and its structure and contents are in congruence with those of the Arabic Galen-Übersetzungen, and also in congruence with the Syrian and Arabic Galen-Übersetzungen (AKM, xvii/2), no. 49. Already the title of al-Masīh al-Dūrijānī work reflects Galen's teleological way of thinking: in the latter's work just mentioned, the single chapters deal with "God's wisdom with regard to the perfect creation of the hands" and of the other organs (see Bergstrasser, loc. cit.). Al-Masīh indeed was "a philosopher for whom medicine was dominant" (al-Bayhaki, Taʿṣīr, 95); with some exaggeration, Niẓāmī ʿArūfī even calls him, together with Ibn Sinā, "successor of Aristotle in philosophy, which includes all sciences" (Cahār maqāla, 118, 8-9). His special investigations, which are smaller in extent, deal with smallpox, the pulse, and also with matters of geometry, psychology and the interpretation of dreams, and contain also an extract from the K. al-Miṣgīšī. A work on the plague he dedicated to his patron, the Kh. al-Maṣrāwīḥa b. ʿAbdī Abū Maʿmūn b. Maʿmūn.

Al-Masīh's knowledge of theoretical and practical
It was thus with the object of holding these hostile tribes in check that the thumping heir of al-Mahdi, Abu 'l-Kāsim Muhammad, the future al-Kālim bi-Amr Allāh [p. v.], took the decision to found Masīla at the time of the expedition which he conducted in the Zāb and then in the region of Tāhārt in 315/927-8, on territory occupied by the most troublesome tribe, that of the Kamālān. He entrusted the task to his officer ʿAli b. Hamdān, ordering him to station himself there with his troops, ʿAdīsā elements and slaves, and instructing the Kamālān to join with his army before going to establish themselves in the region of al-Mahdīyya on the route leading to al-Kayrawān. Called Muḥammadīyya after its founder, the new town was soon to bear the name of Masīla on account of its position on the edge of a water-course, the Wādī Sahr, currently the Wādī Koṣb.

It soon supplanted Tobna as regional capital of the Zāb and became, under the rule of Ibn Hamdān, in addition to its importance as a military base, a prosperous city and the seat of a powerful principality within the Fāṭimid realm. The father of ʿAli, Hamdūn, also known as Abū ʿAbd Allāh al-Andalusī, scion of a Djūδâm family of Yemen, had counted among the most valued Arab "auxiliaries" (awlīyāʾ) of the Fāṭimid cause, those who had been loyal from the outset. Sent to the canton of Elīvra in Muslim Spain and then to the region of Bougie, he had rapidly distinguished himself in the entourage of the sovereign, along with other Yemenis, notably the Kalībās, acting as a counterweight to rebellious Kutāmī elements and to certain elements of the Mudar Arab aristocracy who had remained loyal to the Aghlabīs. But it was with the foundation of Masīla that he reinforced his rôle in supporting the cause of his master, the Fāṭimid sovereign, al-Mahdī bi-'Abd Allāh. He rapidly distinguished himself in the entourage of the sovereign, along with other Yemenis, notably the Kalībās, acting as a counterweight to rebellious Kutāmī elements and to certain elements of the Mudar Arab aristocracy who had remained loyal to the Aghlabīs.

As early as the ancient period, in Roman and subsequently Byzantine Africa, a line of fortresses (lima), including the powerful stronghold of Lambes (Lambaeas), sealed this gateway to the Sahara at the western limit of the Zāb, where the renowned Third Augustan Legion was stationed on desert guard for a considerable period of time. Intended as a military base, Masīla was founded not far from the ancient Zābī, to the west of Lambaesī, inheriting from the latter the rôle of giving protection against the Berber tribes always eager to pillage the prosperous Irfīkiyyan regions, sc. the Birzāl, Muzāṭā, Kamālān and other Huwwara clans. The threat that they posed became still more serious since the Irfīkiyyan realm had come just under the control of the Shiʿī ʿAlīds, who were just as accursed, from the point of view of the Khāridī doctrine which the tribes professed, toward the summit of the Aglabīs. Furthermore, the "auxiliaries" of these new masters of the coveted land of Irfīkiyya were none other than the Kutāmān, long-standing enemies of the Zānātā clan of which they had taken advantage.
to fall back towards Hođna and to entrench himself in the mountains of Koyana, it was from Maslla that the Fāṭimid Imam al-Mansūr [q.v.] conducted the campaign against the rebels and ultimately crushed them in Muḥarram 336/August 947.

Henceforward, Maslla became, in addition to its strategic rôle, one of the most important provincial capitals of the realm and underwent rapid development, while, in the mountain range of Ṭitter, the amīr of the powerful neighbouring Sanhājā, Zirṭ b. Manūd, founded Agūr, an impregnable fortress intended to reinforce Fāṭimid control over the troublesome Zanātā. Maslla inspired its foundation and assisted its development.

Bordered, on the one hand, by Zanātā, on the other, by Sanhājā, who had recently become supporters of the ʿĀlīd cause on the side of the Kutāmā, Djaʿfar began to rule, within the limits of his prerogative, as a veritable suzerain, thus acting in rivalry to Zirī, and to raise Maslla to the status of a principality. Endowing it with castles and palaces and lavishising there large sums of money, he succeeded in making himself a conspicuous personality and even maintained a literary court frequented by numerous poets and scholars. The eminnet Ibn Ḥāṣā [q.v.], who spent some time there and sang the praises of Djaʿfar and his family, did not hesitate, in moulding the Žāb, to compare it to Ṭrāk. Moreover, the administrative status accorded to Maslla by the Fāṭimid monarch, which endowed Djaʿfar with almost unlimited authority over his territory, was that of istīlāf1, which conferred upon the governor of a province the right to exercise, like a viceroy, full powers and thus to maintain a high degree of military, judicial, financial and religious control. Djaʿfar was enabled to administer his territory “with trustworthiness” (biʿl-amdanā) without first being obliged to pay a fixed sum to the State Treasury (damān). The process of autonomous administration then being developed in the provincial organisation of the realm thus authorised him to deduct from the annual revenues of the Žāb, which were considerable, all his public expenses before paying the Žāb. The Žāb thus paid only the surplus as tax. Such a favourable status and organisation of the realm thus authorised him to mean-im to assert their domination over the region.

As a result of their struggles with the Žanātā, which was already its rival, the predominance of Aššīr was greatly reinforced with the designation of Bulūğlīn as viceroy of Maslla, when the latter finally left the al-Muḥammadīn control over the Ṣanḥājīn, when the latter finally left the region of the Žāb and Hođna. The presence at the court of Maslla of Umayyad agents, and the sentiments of allegiance to the Andalusian monarchy flouted by the Žanātā with the blessing of Djaʿfar, greatly worsened his relations with his sovereign. Not hesitating to defy his anger, Djaʿfar espoused the cause of the Žanātā in their contentions with his rival, the amīr of the Sanhājā, then embarked upon open rebellion against al-Muʿizz. Subsequently, he proclaimed his allegiance to the Umayyads of al-Ḥakam II and made haste to abandon Maslla with his family, arriving at Cordova in 360/971.

With the defection of the Banū Hamdūn, Maslla began to lose its importance to the advantage of Aššīr, already its rival. The predominance of Aššīr was confirmed with the designation of Bulūğlīn as vicerey of al-Muʿizz in Barbary, when the latter finally left the region for Egypt, to which the seat of the caliphate was transferred.

The first Sanhājā dynasties, supremacy over the Žāb and its regional capital Maslla became the object of the struggle in which they were continually embroiled with one of the components of the Žanātā clan, the powerful tribe of the Maghārīn commanded by Zirī b. ʿĀlīy. In the course of this struggle during the reign of Bādīs, distinction was achieved by his uncle Hammād who conceived the idea of founding, a score of kilometres to the northeast of Maslla, a new town, al-_KERNEL [see KALʿAT BĀNĪ HAMMĀD], destined to supplant the former in its role of provincial capital and military base capable of controlling the Žanātā tribes.

There then began for Maslla a long period of decline. Abandoned, to the advantage of its neighbour during the first half of the 5th/11th century, it conduced to it its status as the major city of the Žāb, where the Kalʿa became in its turn the seat of a principality founded by the powerful branch of the Sanhājā, the Banū Hammād. Then with the Ḥillālīn invasion, the regions of the Žāb and Hođna were, like Irīkiya, devastated by nomadic Arab tribes, the Ṭahhābi, Ṣarīḥ, Zaghāba and other elements of Sulaym. Maslla was ravaged, as was the Kalʿa. However, it outlived both the latter and Aššīr, which was laid to ruin under the empire of the Almohads, to the advantage of a new provincial capital, Bougie [see BAYA]. Then, despite the destruction caused by the Banū Ghanīya in revolt against the Almohads, it regained during the 6th/12th century a little of its lost glory. With the establishment of the Almoravid, scholar such as Abū ʿAlī al-ʿĀsīlī or Ahmad b. Harb. But Maslla was to suffer again under the Ḥafsids as a result of their struggles with the ʿAbd al- ʿWādīdīs [q.v.]. The Dāwīdiyya attempted in the meantime to assert their domination over the region. It regained for the last time some political importance and reputation with scholars such as Ahmad al-ʿĀsīlī, a disciple of Ibn ʿArabī, and especially as a result of the rôle played there in the mid-8th/14th century by the renowned Ibn Khalīdūn and his brother Yāḥyā in the service of the ʿAbd al-Walīd sultan Abū Hammū. Finally, with the ascendancy of nomadic Arab tribes over the Žāb and Hođna, during the 9th/15th century Maslla definitely lost its status as a major city, becoming nothing more than an undistinguished locality eking out a meagre existence through manufacturing and agriculture.

MAŞİR, a technical term of fiscal practice in the hydraulic civilisation of early Islamic Ṭrāk, doubtless going back to earlier periods there. It is defined by al-Khārazmi in his Maḥāfīl al-ʿulāmī, 70, as “a chain or cable which is fastened right across a river and which prevents boats from getting past”, and mentioned by Ibn Rusta in Waj al-ʿAdil 213, as a barrier across the Tigris at Hamwān near Dayr al-ʿĀkul [q.v.] consisting of a cable stretched
between two ships at each side of the river, preventing ships passing by night (and thus evading the tolls of a body of officials attached to the shurta [q.v.]) or shurta (')['ashdb al-sayydra wa 'l-ma^dsir). The levied by the official traffic and toll house regulators, massartu mussaru dary", "to fix a borderline", ma^dsiriyyun, police guard of Baghdad, called ma^dsiryyin, who collected tolls from river traffic on the Tigris.

MA^SIRA, an island to the north of a gulf of the same name, lying parallel to the eastern coast of Arabia. It is a member of the "Kuria-Muria" group. Some of the passengers and crew took to two boats, one of which was lost at sea. The islanders have long derived their livelihood from the sea. Large numbers of turtles provided both food and tortoise shell for export; dried fish and shark fins were also traded for rice and dates from the coast of the island meant that lumps of valuable metal for trial. Those found guilty were then returned to the island, and shot at the scene of their crime. A monument recording the execution of the murderers was erected nearby, and so too was a memorial slab in honour of the victims of the outrage. These events were very important in helping to establish the control of the Sultan of Masḳat over Ma^ṣira. The inauguration of air routes across the Middle East in the 1930s began to give the island a new significance. During the Second World War, the British Royal Air Force and the United States' Air Force used the island as a base for operations in the South-west Pacific. The British Broadcasting Corporation maintains a radio-relay station on the island. A severe and prolonged hurricane struck Ma^ṣira in June 1977, causing considerable loss of life and destroying most of the buildings there.

Bibliography: References to Ma^ṣira are scattered and often fragmentary. There is also a degree of repetition involved in some of the works cited here. Admiralty (Great Britain) Hydrographic Department, Red Sea and Gulf of Aden pilot, London 1955 and later; H. J. Carter, A geographical description of certain parts of the southeast coast of Arabia, to which is appended a short essay on the comparative geography of the Middle East and the islands of this coast, in ISAS, iii/2 (1841), 224-317; J. R. Povah, Gazetteer of Arabia, Calcutta 1887; J. G. Lorimer, Gazetteer of the Persian
MASJUMI (Maqdisi Syiro Indonesia, "Consultative Council of Indonesian Muslims"), the name of two different Indonesian Islamic organisations: (a) during the Japanese occupation of Indonesia 1942-5, and (b) in independent Indonesia. (a) During the Japanese occupation. The Japanese Military Government, during the first stage of its occupation of Indonesia after 1 March 1942, tried to mobilise the Islamic groups for its anti-Western political and military aims. Most of the Islamic leaders had, in different degrees, opposed actively Dutch rule and a number of Islamic nationalist organisations had been established in pre-war Indonesia, with the Majelis Islam A'la Indonesia (MIAI, "Supreme Indonesian Islamic Council") in 1937 as their coordinating organ.

In November 1943, Masjumi was founded more or less as the successor to MIAI. Membership was open only to those organisations which had been granted legal status by the Japanese authorities. These were, at that time, the traditionalist-oriented Nahdatul Ulama (NU, "Renaissance of the Scholars"), and the modernist social organisation Muhammadiyah, joined later by two smaller organisations of Islamic associations in Java and Madura, guiding and guarding the activities of these associations in order to improve cultural life and thus enable the Muslim community to help and contribute their efforts for establishing the Commonwealth of Greater Asia under the leadership of Dai Nippon, "in accordance with God's commandments" (cf. van Nieuwenhuize, 135; Soebagio, 67). Masjumi's pro-Japanese stand resulted in a certain estrangement with the more radical Islamic organisations which were still waiting for their legalisation, with the associations of Arab Muslims, and with the religiously "neutral" nationalists whose activities were severely restricted.

Masjumi was not a merger, but "constituted a working agreement between Muhammadiyah and Nahdatul Ulama" (Benda, 152). It may be presumed that the interest of the Japanese authorities originated in the personal influence and respect which most leaders of Muhammadiyah and NU exercised on the populace, mainly in the villages, as religious teachers. Winning their support would mean for the Japanese a guarantee for a certain degree of quiescence and stability among the people. As a consequence of this policy, the traditional power balance in the Muslim society shifted from the jurisdictional and administrative representatives, the penghulu, who had obtained some support from the Dutch administration, to the Muslim teachers and scholars. On 1 August 1944, the Shimabu was reorganised, its new leading personnel taken mostly from Masjumi. Thus Masjumi functioned practically as part of the government and was linked to its goals more than before.

As go-betweens, the religious leaders had to explain the Japanese policy to the people, endeavouring to gain their support in spite of all kinds of increasing shortages and suffering; at the same time, they were responsible to the military administration, especially in cases of turmoil or revolt.

On 7 September 1944, the Japanese government had announced its plan to prepare Indonesia for independence. Now, Masjumi's political agitation received new momentum. During a rally sponsored by Masjumi and held in Jakarta on 12-14 October, a statement was adopted which stressed the task to prepare the Indonesian Muslim community so as to "be ready and able to receive freedom for Indonesia, and freedom for the religion of Islam" (cf. also W. Hasjim, 341). Independence was understood as an opportunity to establish characteristics on Islamic principles, without restrictions imposed by a foreign or non-Islamic power.

The growing militancy in the country finally led to the formation of a military branch of Masjumi, the Barisan Hizbullah ("The Front of God's Party"), in December 1944. Already in September 1943, Masjumi had urged the Japanese, although in vain, to establish a Muslim volunteer corps, after the "secular" nationalists had made a similar plea and were allowed to form Peta (Pembela Tanah Air, "Defenders of the Home Country"). Hizbullah's aim was defined as to realise the solidarity of the Indonesian Muslim community, to stand and fight together with Japan, in the path of God (fit sabih Allah), and to realise Indonesian independence, all in accordance with the tenets of Islam. In addition, personal membership could be granted to those ulama? and kiyai (religious leaders) who had obtained the consent of the Office for Religious Affairs (Shimabu), established by the Japanese in March 1942 and since 1 October 1943 under Indonesian leadership. The aim and purpose of Masjumi was defined as sponsoring and coordinating the relations between the different Islamic associations in Java and Madura, guiding and guarding the activities of these associations in order to improve cultural life and thus enable the Muslim community to help and contribute their efforts for establishing the Commonwealth of Greater Asia under the leadership of Dai Nippon, "in accordance with God's commandments" (cf. van Nieuwenhuize, 159; van Djik, 73). Japanese officers were in charge of the military training, whereas religious instruction was given by Indonesian Islamic teachers, preferably members of Masjumi.

After January 1945, Masjumi broadened its field of activity and started to infiltrate into the "Neighbourhood Associations", a "grass roots control apparatus to the Dysea Hakoka" ("People's Service Association in Java"), which was under direct Japanese control and staffed with priyayi. This move, although apparently profitable for Masjumi, indicated that it had passed its climax as the favourite of the Japanese. These felt that Masjumi's agitation against the "infidel" (Western) imperialists became more and more ambiguous and could include the Japanese occupiers as well. The Japanese, therefore, began to deal with the different nationalist groups on more equal terms. This encouraged non-Masjumi Muslims to appeal for a larger basis of the Islamic movement. Finally, Masjumi lost its political monopoly among the Muslims, although its leaders remained the most eminent spokesmen of the Muslim community.

With the re-emergence of the "secular" nationalists, a fierce contest for ideological leadership in the national movement was inaugurated. This contest dominated the discussions in the "Study Committee for the Efforts to Prepare Independence" (Badan
MASJUMI

Penyelidikan Usaha Persiapan Kemerdekaan), established by the Japanese on 1 March 1945, of whose 62 members only six were from Masjumi. After Soekarno, as a representative of the “secular” nationalists, had presented his concept of Pancasila (“Five Pillars”) on 1 June, in which not Islam but more generally the belief in One Divinity (keithahan) should be the religious element in the state ideology, the Masjumi members led by Wahid Hasjim agreed to this principle on 22 June, after it was amended with the “seven words”: dengan kewajiban menjalankan Syari’at Islam bagi penelusup penelusukan (“with the obligation for its adherents to practice the Islamic Law”), and some other Islamic provisions. This “compromise”, later known as the “Jakarta Charter”, stimulated the acceptance of other religions considered to be monotheistic in the state, but it made it also obligatory for the state to force Muslims into obedience to the shari’ah.

In the last weeks before Indonesia’s independence, Masjumi as a political force speedily declined. Its aim to maintain the identification of nationalist and Islamic goals proved to be unrealistic. Opposition against the “Jakarta Charter” and its “seven words” were not only voiced by non-Muslims but also by Muslims, especially those coming from the Outer Islands. Some considered the shari’ah as a foreign juridical concept with only particular applicability, and they therefore favoured traditional or adat law as an inclusive Indonesian basis for legislation and ideology. Thus, when after the Proclamation of Independence issued by the “secularists”, and not Masjumi, on 17 August 1945, the draft of the Constitution was discussed, their repeated efforts to maintain, or include, Islamic precepts, were finally refuted, and even the “seven words” of the “Jakarta Charter” were dropped. Masjumi as an organisation vanished together with its former protectors.

In Indonesia, the office of “unity” and leadership, and a desire to form an inclusive Indonesian basis for legislation and ideology. Thus, when after the Proclamation of Independence issued by the “secularists”, and not Masjumi, on 17 August 1945, the draft of the Constitution was discussed, their repeated efforts to maintain, or include, Islamic precepts, were finally refuted, and even the “seven words” of the “Jakarta Charter” were dropped. Masjumi as an organisation vanished together with its former protectors.

(b) In independent Indonesia, the office of “unity” and leadership, and a desire to form an inclusive Indonesian basis for legislation and ideology. Thus, when after the Proclamation of Independence issued by the “secularists”, and not Masjumi, on 17 August 1945, the draft of the Constitution was discussed, their repeated efforts to maintain, or include, Islamic precepts, were finally refuted, and even the “seven words” of the “Jakarta Charter” were dropped. Masjumi as an organisation vanished together with its former protectors.

After the secession of PSII, there were three main groups within Masjumi (Ward, 10). The first one may be styled as “religious socialist”, and indeed, they were occasionally political partners of Sultan Sjahrir’s Socialist Party. Its members were mainly the above-mentioned intellectuals like Dr. Soekiman, Moh. Natsir, Mohammed Roem, Sjafruddin Prawiranegara, Jusuf Wibisono and others. After 1948 especially, they sometimes took over leading positions in government activities, including the negotiations with the Dutch which finally led to the recognition of Indonesia’s sovereignty in 1949. Another group left in Masjumi after 1947 were the traditionalist ulama related to NU under the leadership of K.H. Wahid Hasjim. Their participation in the government was usually focused on the Ministry of Religious Affairs, founded in January 1946.

The third group of Masjumi members, and the smallest one, was that of the “radical fundamentalists”. They represented the militant wing of the modernist movement, being more illiberal and anti-Western than the moderates of the first group. Isa Anshary, chairperson of Masjumi’s branch in West Java, became their spokesman. They became the most outspoken advocates of an “Islamic state”.

A serious blow to the integrity of Masjumi was launched in 1948 by S.H. Koesoemadi. A Masjumi leader in West Java, denounced the Renville Agreement of January 1948 between the Indonesians and for the Muslims added to the difficulties of this task.

Under the leadership of Masjumi, a women’s organisation was founded to promote knowledge and political awareness, as religious awareness, and to strengthen their feeling of responsibility at home and in society. Besides this women’s organisation, Masjumi established also an Islamic Youth Movement, an Islamic Labour Union, an Islamic Farmers’ Union, and it was closely related to the Islamic Students Organisation HMI (Himpunan Mahasiswa Indonesia), established in 1947.

Although the original Islamic goals were not achieved in the Republic proclaimed in August 1945, the leaders of Masjumi called for a general mobilisation of the Muslims to defend it against the returning Allies. Internally, it intensified its strike for controlling the state. There has been much discussion whether the aim of Masjumi at this time was to erect the Islamic State (Negara Islam), or whether its intention was to develop an Islamic society in the state which implemented the Islamic law, without changing formally the constitution or abrogating Pancasila. Both tendencies had their protagonists. Social responsibility, sometimes even expressed in socialist terms, was a constant factor in Masjumi’s working programs. In some areas with a strong feudal system, Masjumi presented itself as a forerunner of social renewal, or even social or Islamic revolution (H. Feith and L. Castles, Indonesian modernist thought 1945-1963, Ithaca and London 1970, 55 ff.).

After 1946, Masjumi became more and more dominated by intellectuals who had received a modernist or western education. Some of them had been expelled by PSII before the war and were, more or less, affiliated with organisations like Muhammadiyah, Persatuan Islam, and others. This led to internal conflict which finally caused the exodus of former adherents of PSII and the re-foundation of this party in 1947. A similar exodus, although less spectacular, had already taken place in 1946 when the traditionalist “Movement for Islamic Education” (Pergerakan Tarbiyah Islamiyyah Perti) of Central Sumatra, declared itself as a political party.

The TW-oriented Imam (Head of State) of the provisional leaders of Masjumi, although disagreeing with the Republican troops from West Java, which called for a withdrawal of

In the meantime, a new crisis developed in Masjumi. The NU-oriented •ulamad• felt a growing decrease of their influence. In both the Natsir and Soekiman cabinets of 1950 and 1951, only the portfolio of Religious Affairs was entrusted to a representative of NU. When in the Wilopo cabinet of 1952, Faqih Usman from Muhammadiyah was appointed as Minister of Religious Affairs, the time had come for NU to separate from Masjumi and establish itself as a political party on its own (H. Feith, Decline of constitutional democracy, 233-7).

With two great rival Islamic parties, the political atmosphere in Indonesia changed considerably. The cabinet presided over by Ali Sastroamidjojo (PNI) from July 1953 to July 1955 was supported by NU, whereas Masjumi opposed it as being too much compromising with the communists.

The uncompromising attitude against the Communists had been a characteristic of Masjumi since its very beginning. This led to conflicts with Soekarno, for whom Communism was one of the most powerful and therefore indispensable anti-imperialist ideological forces. In combining it with his understanding of nationalism, he outlined the ideology of his Partai Nasional Indonesia (PNI). A compromising attitude among some of Masjumi's leaders with the PNI had, however, already been apparent before the succession of NU, when Soekiman succeeded Natsir as Prime Minister, leading a Masjumi-PNI cabinet. Soekiman, being a Javanese, tried to counteract a PNI-PKI co-operation by strengthening ties with NU. On the other side, Natsir was more linked to the •radical fundamentalist• wing in his own party, and to the Socialist Party which was also strictly anti-Communist and opposing PNI.

After Soekarno's speech in Amuntai in January 1953 in which he attacked the concept of a Negara Islam and praised Pancasila as a guarantee for freedom of religious practice and civil rights of every single Indonesian, the different basic convictions of Masjumi leaders and their cultural and ideological roots became more apparent. Isa Anshary and his team stressed that their conception was based on divine revelation and therefore not open to compromise like the human-made concepts of Christians, secularists and others. He questioned the religious sincerity of Soekarno and those Muslims who were in favour of Pancasila as understood by the •religious neutral• nationalists, and he accused them of being hypocrites or unbelievers.

Natsir, like Soekiman, took a much more moderate position in this matter. He felt that the voters would reveal their aspirations in the coming elections and stressed that the people should be well prepared to cast their votes for the •right• party. Therefore he urged the start of new efforts in the fields of Islamic education and self-awareness.

During the election campaign in 1954-5, the voices heard from Masjumi and launched through its party organ Suara Masjumi, the daily newspaper Abadi and other media, became more and more adapted to the language of the radical fundamentalists. This was partly due to other Islamic revolts, besides the Darul Islam in West Java, which were making their way into South Sulawesi since 1953. Both provinces had a strong Islamic, and generally pro-Masjumi, population. They justified their revolt by pointing to, among other grievances, the neglect by the central government of the development of their provinces, and the growing influence of atheistic Communism in the state. If Masjumi wanted to obtain the votes of these groups, it had to show clearly its opposition to the incriminating trends and its struggle for Islamic goals.

The other Islamic parties taking part in the campaign had formed an Islamic anti-Masjumi bloc. Thus Masjumi became isolated; it was denounced as being extremist and even in sympathy with the Darul Islam, and therefore distorting the national brotherhood based on the Pancasila which had even been accepted by the PKI in 1954.

In the Parliamentary elections on 29 September 1955, Masjumi gained 20.9% of the votes. It was thus the second largest party, after PNI with 22.3%. Next were NU with 18.4% and PKI with 16.4%. There were no major differences in the elections to the Konstituante (cf. H. Feith, Elections, 57 ff.). All Islamic parties together gained 43.7% of the valid votes. During the years after the elections, Masjumi remained in opposition to the governments through a short initial period of co-operation. But in the debates in the Konstituante which started working on 10 November 1956 in Bandung and which had to draft the final Indonesian Constitution replacing those from 1945, 1949 and 1950, Masjumi was joined by NU and the other Islamic parties in its struggle for a constitution which would base state and society on the principles of Islam. Against this Islamic bloc, a Pancasila bloc formed itself from the other parties. Regarding the basic question, Pancasila or Islam, none was strong enough to reach the two-thirds majority needed for any decision. This deadlock encouraged Soekarno finally to dissolve the Konstituante on 5 July 1959 and to decree a return to the 1945 Constitution, together with the proclamation of Guided Democracy. In these years, after the elections, Masjumi experienced its political decline. This was partly due to its futile position, in that it still claimed to defend the interests of the Muslims or 90% of the Indonesian population and thus refrained from defining its role as constructive partner in the midst of Indonesia's pluralism of ideologies and religions. But more decisive for its decline than these failures was the involvement of some of its leaders like Moh. Natsir and Sjafruddin Prawiranegara in new regional uprisings which had broken out in North Sulawesi and in West Sumatra in 1957. This again led to serious clashes in Masjumi between the •regionalists• and the •Javanese• wing led by Soekiman, who was in favour of Soekarno's centralisation policy. Others like Moh. Roem feared that another split in Masjumi could only serve the Communists and their growing influence on Soekarno, and thus endanger Masjumi's political role. He therefore urged the maintenance of the unity of the umma. But finally, some leaders like Soekiman left Masjumi in early 1960 and joined PSI. Muhammadiya, too, terminated its affiliation as a •special member•. Thus the remaining faithful had to bear the consequences of Masjumi's image as •a party of separation and rebellion• (A. Sanson, quoted by Ward, 14). They were viewed, moreover, with suspicion by the military leaders who, although outspoken
anti-Communist themselves, had to fight the rebels. On 17 August 1960, Soekarno announced his decree that Masjumi, together with the Socialist Party (PSI), were to be dissolved because both parties refused to condemn their party members who were active in the regional rebellions.

**MASKANA, Greek Ma'kavrj**, from the Syriac Malkenô (cf. Pauly-Wissowa, xiv/1, col. 2963), a small town, now a village, in the northern part of Syria. The name is mentioned by Stephanus of Byzantium in regard to the war of Septimius Severus against the Parthians in 224 A.D. The region has been populated since the Bronze Age, as is attested by the Khybar, a barracks for gendarmes, a large khân and the residence of the head of the telegraph service. (Palmyrena, 89). At this time, camels browsed below the settled part. There was in the valley an ancient canal whose branches received, when the waters were high, water from the Euphrates for irrigating the cultivated lands.

Under the French mandate, the *kada* of Maskana, the second in the region of the province of Aleppo in 1923, was made up of 80% lands administered by the office of the head of the telegraph service, following the system of tenant farming; 15% lands with the system of métayage; and 5% small landowners. In this *kada*, situated on the periphery of the province,
and only linked with Aleppo in 1922 by a single track impracticable for cars which went along the telegraph line, hence lacking any means for transport or communications, the price of land was markedly less than that in other kada's. There were two classes of lands in this region. Those alongside the Euphrates, called hauer, with a covering of alluvium left by the river at periods of high water, were irrigated for both summer and winter crops. Yields were 15 to 30 for one measure for corn and barley, whilst maize and lentils were grown in the highlands. There were two classes of lands in this region. Those alongside the Euphrates, called kadd's.

In 1945 the village had 430 inhabitants. At the present time, the modern road network allows in this region, thanks to road bridges at al-Rakká, Dayr al-Zor [q. v.] and Mayyadin, the transportation of sheep in two-level lorries to Aleppo without any need to halt at Maskana.

Miskana is also the name of a village of Syria situated in a zone of cultivated land on the road linking Aleppo with Damascus, near al-Karà and in the kadd of Hims; in 1945 it had 900 inhabitants.

MASKAT (lat. 23° 28' N., long. 58° 36' E.), Eng. Muscat, Fr. Mascate, a port on the Golf of Oman and since the end of the 18th century notionally the capital of what came to be called the Sultanate of Muscat and Oman, since 1970 the Sultanate of Oman. 'Umání sources often write the name as Maskad, and even as Maska/Muska with a double s, a change in accordance with local dialectal pronunciation.

1. Geographical situation and demography.

The site of the town is a constricted one, in a cove where the mountains come almost down to the sea, with the Portuguese Fort Mirání at the western end of the cove and a second Portuguese fortress, that of Qalú, one of the two off-shore islets. The town itself is on a gravel plain, but until modern times, access to Maskat by land has always been difficult, and communication with it has more often been by sea. In effect, it is the cul-de-sac of the Bātina coastal plain, and the nearby port of Mafrâţ [q. v.] is in many ways the more favoured centre. But the natural mountain defences plus a line of fortifications have given Maskat a strategic significance, despite the limited space for settlement and the unattractive climate, with its high temperature and humidity.

The 19th century travellers and visitors commented unfavourably on the town's squalor and its narrow streets. Lorimer, in his Gazetteer, estimated the town's permanent population at 8,000, of which 3,000 lived within the town and the rest in the suburbs, whereas he estimated that of Mafrâţ at 14,000, reflecting the latter's superior commercial role. After a period of steep decline, the population of Maskat has been reliably estimated in 1970 at 6,000, mainly detribalised 'Umání Arabs or foreigners, including Bahraynís, Balúc, Persians and Hadaríms (southern Arabian tribesmen) and a lowest stratum of the bājísíra, slaves and ex-slaves from Africa. In the 19th century there was also a small Jewish population. But the most significant element was that of the Banians, Hindu merchants and middlemen, who had certainly been there since Portuguese times; see C. H. Allen, op. cit. in Bibl. Their quarter was in the east of the town, where they had their temples, traditionally since the 17th century.

2. History.

Maskat's real rise to prominence goes back to the Hurmuz period of the late 15th century, just before the arrival of the Portuguese; up to the 12th century, the main emporium of the 'Umání coast has been Suẖár [q. v.], and the town of Maskat's main importance was as the last watering place on the Arabian coast for ships trading with India (see the mediaeval Arabic sources, notably al-Mukaddasí, 93; Ibn al-Fakhî, 11; Yâkût, iv, 529; Ibn al-Mugjâwîr, ed. Lâlîgên, ii, 284; the merchant Sulaymân, Aghâr al-Sin wa 'l-Hind, ed. and tr. J. Sauvaget, Paris 1948, §§ 13-14). Now, in the later 15th century, Maskat grew at the expense of Kalhát [q. v.], apparently under the patronage of the Hurmuzi ruling family, and Ibn Mäджîd [q. v.] stresses that his home port had become the main centre of the 'Umání coast for trade with India (see G. R. Tibbetts, in Arabian studies, i, 87-101), the export trade in horses, bred in eastern Arabia as far away as al-Ḥasá, being especially important (see S. Digby, War horse and elephant in the Delhi Sultanate, Oxford 1971; Serjeant, op. cit. in Bibl., 27; J. Aubin, in Mare Luso-Indicum, ii, 112).

On 2 September 1507 Afonso d'Albuquerque arrived at Maskat after subduing Kalhát and destroying Kurayyát, seizing and sacking the town and massacring its population, perhaps amounting to 7,000 at that time, three days later. The Portuguese soon realised Maskat's strategic value, and it came to play an important part in their control of the Gulf,
above all after their loss of Hurmuz in 1622; previous
to that, the Portuguese operated as nominal vassals ... grown up at
nearby points, such as the oil port of Mma al-Fahl and
at the commercial centre of Matrah, with its moder-

who established a trade mission there (the Nawwab's
agreement (kawl-in-dma)

wea
nised port of Mina Kabus. Since the Sultan's real capital is Salāla, Maskat proper remains only a notionall capital, devoid of almost all functions and in effect a mere trading port.

Bibliography: The Bibl. of A. Grohman in his *El* art. contains detailed references to the classical and mediaeval Arabic geographical and historical sources on Maskat; see also that to *umān.*

Travellers' accounts are useful adjuncts, and D. G. Hogarth, *The penetration of Arabia,* New York 1904, still contains useful material. A valuable summary of their descriptions can be found in R. Bidwell, *Bibliographical notes on European accounts of Mascat 1500-1900,* in *Arabian Studies,* iv, 123-59. To his list of references may be added the account and drawings of E. Kaempfer discussed in G. Weinberg, *Muscat* in *Omdn* (ed. E. Engelbert Kaempfer's report and engravings, in *J. Oman Studies,* v (1979), 95-101; and C. G. Miles, *The countries and tribes of the Persian Gulf,* London 1919, where descriptions of Masqat (1966 repr., 462-9) really describe the period when he was living there (1872-86). Collections of photographs also provide interesting details, notably the Fuad Dababs Collection in Harvard University Semitic Museum, and W. D. Peyton, *Old Oman,* London 1983. This last contains a map which seems to derive from the unpublished *Mascat City planning survey* of 1972, a useful source for the state of the town before the impact of modern development; a description of that period may also be found in I. Skeet, *Mascat and Oman: the end of an era,* London 1974.

For the history of Maskat, the following sources are the most useful. E. de Barros, *Correia and Albuquerque.* The structural crisis in the European-Asian trade in the early seventeenth century, Thickness of material from British Office archives is in Lorimer's *Gazetteer,* whilst J. B. Kelly, *Water and tribal settlement in South-East Arabia,* London 1977, and his forthcoming *The Imamate of Oman* provide further information on the Maskat setting.

MÁSKH (a.) "metamorphosis", that is, according to *LA,* s.v., "transformation of an exterior form (judha) into a more ugly form"; the product of the metamorphosis is itself called *masik/misik* or *masikh/masikth.*

Belief in the fact that, as a result of supernatural intervention—divine punishment in the majority of cases—humans have been transformed into animals, statues or even into stars was as widespread, before Islam, among the Arabs as among the peoples of Antiquity whose mythologies are known to us. The growth of the belief in the punishment inflicted by God has led to the survival of this belief under Islam, not only among a populace conscious of ancestral tradition, but also in religious doctrine, since numerous Kur'ānic verses justify it: "You know of those among you who have broken the Sabbath; We have said to them: 'Be abject monkeys'" (II, 61/65; cf. VII, 166); "Those whom Allah has cursed, those on whom His wrath has fallen, those whom He has turned to the monkeys and the pigs" (V, 65/60); "If We wished, We would have transformed them where they stood" (XXXVI, 67). The verb *masikha* occurs only in the last-mentioned verse, which concerns deviants in general, whereas the others are applied to the Banū Isrā'il. Al-Dāhīz (*Hayānīn,* iv, 39) explains that God has chosen monkeys and pigs because they are uglier and more antipathetic than other animals, and adds (iv, 39) that if monkeys only are mentioned in II, 61/65 and VII, 166, it is because the punishment in question is more severe.

Jews are also the subject of the principal hadith relating to *masik* (apud al-Damārī, *Ḥṣāyiʿ al-bayānasīn,* i, 573, s.v. *dabb*; cf. ii, 192, s.v. *kād*; see also al-Kurūibli, *al-Dā'hīz* in *Ḥṣāyiʿ al-bayānasīn,* ii, 439-40). Seeing somebody eating the flesh of the lizard, the Prophet of the Al Bū Saʿīd, Bathurst, *op. cit.,* remains the main study until the end of the Yaʿārība period, while Anne Kroell, *Louis XIV, la Perse et Mascat,* Paris 1977, adds material from Foreign Office archives. Then comes a lucana, for which A. A. Amin, *British interests in the Persian Gulf,* London 1967, provides some background to the end of the 18th century and for which Mrs P. Risco's forthcoming thesis (Toronto University) should help fill the gap (son vid.).
said, "A nation of the Banū Isrā‘il has been transformed, and I fear lest this creature is a part of it; I do not eat this meat, but I do not forbid it". This text is absolutely characteristic because, while referring to the growth of traditions concerning punishments inflicted on the impious (cf. al-Damiri, i, 386, s.v. ḥimzir, where God changes to swim some Jews who have molested Jesus), it relates to an animal which is never mentioned in the Kur'ān and is corrobated by various anecdotes. In particular, al-Dājjāz (Ḥayawan, vi, 77) describes how a faḍāḥ, also seeing a person transformed into the form of the lizard, says to him: "Know that you have eaten a ḥakīk of the Banū Isrā‘il". The popular belief is in fact that two Israelite tribes have been transformed, one into lizards which have remained on dry land, the other into eels (dīrir) which have gone to live in the sea; the reason for this transformation is not indicated, and it is simply stated that it is likely because the foot of the lizard resembles a man's hand. Ibn Kutayba (Mukhtalif, 10, 362-3; tr. Q. Lecomte, §§15, 300 c) refutes the interpretation of the proverb a sāk min dabb ‘more irreverent than a lizard’, according to which a Jew showing disrespect towards his parents had been transformed (al-Maydānī, Mudjma‘al-almājāl, i, 509-10, proposes a different explanation). According to another ancient legend, all dishonest tax collectors were transformed (al-Dājjāz, Ḥayawan, vi, 80), and there is reference to one of them who changed into a lizard (Ḥayawan, vi, 81, 155); of two others, one became a hyena and the other a wolf (Ḥayawan, vi, 80, 148), while Canopus (Suhayl), Ḥayawan, iv, 69, vi, 81, 155; Tarbī, §41; Ibn Kutayba, Mukhtalif, 10, tr. Lecomte, §15) is none other than the fourth metamorphosed tax-collector. As for Venus (al-Zuhara), she was a prostitute who ascended into the sky by virtue of her knowledge of the greatest name of God (bi-smī lāh al-a‘sam) which Hārūt [q.e.] and Mārūt had communicated to her (al-Samarkandi, Bustān al-‘arfīn, Kāzān 1298/1880, 131) and was transformed into a comet (Ḥayawan, iv, 69; Tarbī, §41 and index; Ibn Kutayba, Mukhtalif, 10 – § 15).

The story of ʿIsā [q.e.] and Nā‘īla, turned to stone in the Ka‘bah, is well known, but it was noted that the Kur‘ān (XI, 83/81) does not say that the wife of Lot ‘became a pillar of salt’ (Genesis, xix, 26); al-Dājjāz (Ḥayawan, vi, 70) makes the comment in this context that the Aḥl al-Kītāb refer to no case of the metamorphosis of an human being into a pig or a monkey and simply state that this guilty woman was changed into a pillar of stone (sic). There are also encountered in the pre-Islamic period some individual instances of transformation into animals, but, after Islam, divine punishment does not seem frequently to take this form. There are however Shi‘ī legends according to which ʿUmar b. al-Khaṭṭāb wanders in the guise of an owl, and the murderer of Husayn b. ʿAlī, Ṣ̲hînir, “runs about incessantly in search of water, transformed into a dog with four eyes; he observes at least one spring which he never reaches, because at Karbalā‘ he forbade the family of Husayn to approach the water” (H. Massé Croyances et coutumes persanes, Paris 1938, 185). On the other hand, the Ira- persanes, Jews who have molested Jesus), it relates to an animal mentioned in the ancient Arab world. For example, it is stated, without undue emphasis, that the mouse (farr [q.e. in Suppl.] has for its ancestor a miller’s wife (Ḥayawan, i, 297) and that the shrimp (or the lobster, ʿirjāna) was a dressmaker who stole thread: this is why the creature has threads, to remind her of the crime that she committed (Ḥayawan, i, 297; Ibn Kutayba, Mukhtalif, 364 – § 300 c); the snake (hāyya) had the form of a camel but, as a punishment (Ḥayawan, i, 297), God compelled it to crawl on the ground. According to popular belief, the dog is also the result of a metamorphosis (Ḥayawan, i, 222, 295, 297, 308, vi, 79), but in i, 297-8, al-Dājjāz conjectures that the wolf would be the more likely case! Ibn ʿAbḥās (apud Ibn Kutayba, Mukhtalif, 167 – § 172 a) comes close to believing in this metamorphosis; he has elsewhere handed down a tradition according to which the elephant, the hare, the spider, the eel and, naturally, the mouse, the monkey and the pig, are humans transformed (Ḥayawan, i, 309).

Obliged by the Kur‘ān to accept the reality of maskh, jurists and theologians ponder the real meaning of such transformation and pose the question as to whether it is effected gradually or at a single stroke, whether it has led to the creation of new animal species and, consequently, whether the animals that are the result of it have survived and become numerous, in other words, whether the monkeys, pigs and lizards that we see today are their descendants and theirs alone. Al-Dājjāz (Ḥayawan, i, 309) adds this secondary question, which he refrains from answering: ‘Do they recognise one another and do they know what has brought about their origin?’.

To the first question, the author of K. al-Ḥayawān (iv, 70), one of whose most original ideas is the influence exerted by the soil and the climate on the somatic and psychological characters of living beings, replies by conveying, without however associating himself with it explicitly, the opinion of certain of the Dāhriyya [q.e.] who accept the concept of gradual modifications capable of leading ultimately to a total transformation; conversely, there are others who do not deny the existence of collective divine punishments such as ḥithf or engulfment (of Sodom and Gomorrah in particular), poisonous wind and flood, but do not recognise maskh. On the part of the Muʿtazila, al-Nazzām accepts the phenomenon and considers that it falls within the category of divine miracles, while Abū Bakr al-ʿAṣam and Ḥighām b. al-Hakam reject it and accept only kalb, modification (apud Ḥayawan, iv, 73). According to al-Baydawi (on II, 61/65; cf. al-Damiri, ii, 183, s.v. kirn), Mudjavīd [q.e.] interpreted in a limited fashion the verse relating to the maskh of the Banū Isrā‘il, stating that they were not metamorphosed, but that their heart was transformed and their spirit rendered similar to that of monkeys; he was, however, the only one to hold this opinion.

As to the question of whether the monkeys and pigs of which the Kur‘ān speaks and the above-mentioned animals in general derive exclusively from metamorphosis and were thus, originally, humans, or whether such species existed before the event in question, the answers are by no means unanimous, since points of view vary perceptibly, even though in II, 61/65, the words kirnā and ḡanāzar are defined by the article, which would seem to allow no freedom of interpretation. For some (Ḥayawan, iv, 68), the Kur‘ān refers only to individual cases designed simply to impress minds and teach a lesson. For others, on the contrary, the lizards, pigs and monkeys, as well as the eels, dogs, cats, etc., are all derived from the descendants of those who have been transformed. It is thus that, for example, Ibn Kutayba, in referring to verse V,
was a natural source of inspiration for the writers of fabulous tales. In the Thousand and one nights (see N. Elisseeff, Thèmes et motifs des Mille et Une Nuits, Beirut 1949, 274-81), it is generally by means of sprinkling with water that humans are changed into animals (cow, calf, gazelle, dog, mule, monkey, bird, ass, bear) or that metamorphosed beings are returned to their initial form. Culpits are sometimes petrified (ibid., 151), like Isaäf and Naßla, and rocks which present a vaguely human appearance are invariably considered to represent men who have suffered divine offerance (as, for example, the rocks of Hämämm Maskhûthin in eastern Algeria).

It may be noted finally that the metamorphoses of insects, well-known to the authors of zoological works, are not designated by the term maskh (a detailed example is to be found in al-Damiri, s.v. did). Bibliography: Given in the article.

**MASLAHA**, the concept in Islam of the public interest or welfare.

Maslaha (pl. maslîkh) is the abstract noun of the verb salaha (or salala), “to repair or improve”. Strictly speaking, maslaha, like manafa'a, means “utility” and its antonyms are madarra and masfada (“injury”); but generally speaking, maslaha denotes “welfare” and is used by jurists to mean “general good” or “public interest”. Anything which helps to avert masdah or furthers human welfare is equated with maslaha. As a legal concept, maslaha must be distinguished from istislah, a method of legal reasoning through which maslaha is considered a basis for legal decisions (see istislah and istislah). In this article, maslaha will be dealt with as a concept and as a legal principle.

The first important case in which the notion of public welfare (al-kharaj and naf) was invoked as a basis for legal decision was the land of southern Trak (al-Sawad), which the caliph 'Umar decreed should become state-land and a land tax (al-kharaj) was imposed on it. Earlier, the practice of the Prophet in such a situation varied from dividing the land among the participants in qiyas as, in the case of the land taken from the Banü Qurayyâ, to turning it into state-land as in the case of Khaybar (Abû Yusuf, Kithâ al-Kharajât, 51). Some of the Companions, like al-Zubayr and Bilal, urged 'Umar to divide the Sawad among the warriors, but others, like 'Uthmân, 'Ali and 'Abd Allah, suggested that it should become state-land. After consultation with several other Companions, the caliph came to the conclusion that the interests of the community as a whole would be better served if the Sawad were brought under state control rather than divided. “If it were divided among the warriors”, the caliph 'Umar asked, “what would be the position of the believers as a whole and their descendants?” Retention of the land under state control would, he argued, bring about greater welfare and utility for the believers (al-kharaj li-umum al-Muslimin ... [and] 'umum al-naf) li-umum al-Muslimin (Abû Yusuf, 27). Though 'Umar did not use the word maslaha per se, its notion was clearly implied in the words kharaj (“welfare”) and 'umum al-naf (“public utility”). Supported by the opinion of leading Companions, he issued instructions to the land of al-Sawad and required its people to pay the kharaj (Abû Yusuf, 23-7; Yahyâ b. Adam, Kitâb al-Kharajât, 17-21; M. Khadduri, War and peace in the law of Islam, 181-3). 'Umar’s decision on the basis of public interest may be said to have influenced other caliphs to make similar decisions, e.g. concerning the compilation of the Qur’an. But these cases, though often cited as precedents, did not
establish maslaha as a principle or source of law. It was indirectly used through the derivative sources of kiyyāt and istislah (al-Shāhibī, al-Fīṣāṣīm, ii, 285; al-Mustasfī, 179/795) in respect of having been the first jurist to make decisions directly on the basis of maslaha through the use of istislah or al-maslaha al-mursala. Although no reference to maslaha or istislah is to be found in Mālik’s writings, his disciples cited cases in which maslaha as a concept of law had been used by him. Both al-Shāhibī in the Risāla and Sahānūn in al-Muḍawwana cite the sale of dried dates for dried dates “in case of the sale of fresh dates having become a definite concept of law on the basis of which jurists could make legal decisions. Other jurists, called legal reasoning, however, istislah was developed later and used by jurists who claimed that Mālik was the first to initiate the use of it (al-Shāhibī, al-Fīṣāṣīm, ii, 281-316). No clear evidence, however, has yet come to light indicating that Mālik had used maslaha as a concept of law. Dūwānī (d. 478/1085) is mentioned as the first to call attention to it (al-Shāhibī, op. cit., 282), and other jurists have made their contribution before it suddenly appeared as a mature concept in the writings of Abū Hāmid al-Ghazālī (d. 1013). Al-Ghazālī states that in the narrow sense, maslaha may be defined as the furthering of the maḥrūm, and in a broad sense it is the ultimate purpose of the Shariʿa, consisting of the maintenance of religion, life, offspring, reason and property. “Anything which furthers these aims,” he adds, “is maslaha, and anything which runs contrary to them is maḥrūm” (al-Mustasfī, i, 139-40). Considering istislah and istislah as imaginary (i.e. subjective) legal methods, he confirms the use of kiyyāt as a positive method of legal reasoning on the grounds that the achievement of maslaha is a necessity (fi rubūt al-darūrāt) and develops the doctrine of necessity (darūrāt) as a means by which to realise the ultimate purpose of the Shariʿa. Al-maslaha, he maintains, consists of three categories: al-darūrāt (“necessities”), al-matāṣūdāt (“disabilities”) and al-istislahāt (“improvements”). In order to make a decision on the basis of the second and third categories, the jurists must find a textual reference by means of kiyyāt; but the first category—the darūrāt—constitutes itself a basis for legal decision without resort to kiyyāt or any other method, on the grounds that the maslaha of that description is the ultimate purpose of the Shariʿa. Thus by al-Ghazālī’s time, maslaha had become a definite concept of law on the basis of which jurists could make legal decisions. Other jurists called legal reasoning istislah, but al-Ghazālī rejected istislah. If such a method is needed, kiyyāt can adequately provide it. In the case of darūrāt, he argued, no dependence on a textual reference is needed. Thus maslaha of the highest rank itself becomes a source of the Shariʿa. Al-Ghazālī cites an example of the case of unknown who shield themselves with a group of Muslim captives. He maintains that the killing of innocent Muslims, though not allowed by the Shariʿa, would allow the unbelievers to gain mastery over the dār al-Islām and kill both the Muslims and the prisoners. Since minimising killing and the preservation of the community as a whole is closer to the purpose of the Shariʿa, a decision to strike at the enemy shielded with Muslims can be justified on the strength of maslaha. (Secrets its protection is a necessity (i.e. a necessity) and an implied purpose of the Shariʿa (op. cit., i, 141). But al-Ghazālī warns against the use of cases other than darūrāt, such as if a few men in a ship, afraid of sinking or starvation, should kill one of them to save the rest. It was, however, not a Mālikī or Shāhibī jurist who went further in the use of maslaha, but the Ḥanbālī jurist Naḍim al-Dīn al-Tawfī (d. 716/1316). In principle, he agreed with al-Ghazālī on the use of maslaha as a basis for legal decisions irrespective of others sources. He also argued that the other sources of the Shariʿa recognised maslaha as the ultimate purpose of the Divine Legislator. Al-Ghazālī restricted its use to other than the cases of necessity. Shariʿa’s basis, Tawfī seems to have said nothing innovative save that he universalised the principle to all cases of public interest. But when he then further by holding that, even if the principle of maslaha contradicts a primary source, it should override on the grounds that the Shariʿa itself was laid down to protect maslaha as the ultimate purpose of the Divine Legislator (for the text of al-Tawfī’s treatise on maslaha, see the appendix in Mustāfī Zayd, al-Maslaha fi l-taṣfīr al-ʾislāmī, 7-48). Although he cites textual references from the Kurʾān and Tradition in support of his argument, the principal textual evidence is the tradition lā darūr wa-l-darūr ("no injury should be imposed nor an injury to be inflicted as a penalty for another injury"). From this and other citations, he asserted that the principle of maslaha as a method of legal reasoning, however, if such a method is needed, kiyyāt must be overruled by an injury to be inflicted as a penalty for another injury”). From this and other citations, he asserted that the principle of maslaha as a method of legal reasoning, however, if such a method is needed, kiyyāt must be overruled by an injury to be inflicted as a penalty for another injury”.

The principle of riṣāʿat al-maslaha, though ably defended by some of its adherents, like the Mālikī jurist Abū Ḥaṣākh al-Shāhibī (d. 790/1388) and others, found no great supporters in an age in which ʿidāḥah was discouraged and tribal prevailed, mainly because it stressed dependence on evidence that cannot be clearly identified by kiyyāt or other derivative sources. In the modern age, however, under the impact of Western legal thought, the concept of maslaha has become the subject of an increasing interest among jurists who have sought legal reforms in order to meet the needs of the modern conditions of Islamic society. Although ʿAbd al-Razzāk al-Sanḥūrī (d. 1968) and others to provide for modern civil codes based partly on the Shariʿa, but mainly on Western law.

maslama, in Madīna rasūl fi waṣī al-fīb, Beirut 1324, 37-70; a more critical edition of Tawfīq's Risāla is in Muṣṭafā Zayd, al-Maslaḥa fi 'l-Sarā'ī al-Islāmiyya, Cairo 1954; Rashīd Riḍā, al-Khifāf, ou l-imāmā al-sūmā, Cairo 1341; M. H. Kerim, Islamic reform, Berkeley 1966. (MAJDID KHADDURI)

MASLAMA b. ABD AL-MALIK b. MARWĀN, son of the caliph 'Abd al-Malik and one of the most imposing Umaiyyād generals, whose siege of Constantinople 98/716-18 earned him lasting fame.Like his uncle Muhammad b. Marwān [q. v.], whom he succeeded in Asia Minor in many respects, he was, as the son of a Abbasid of the ‘Abd al-Walid dynasty, excluded from the succession to the caliphate. His date of birth is unknown. He died on Muharram 121/24 December 738.

Starting in 86/705, the last year of his father's reign, Maslama led the regular summer campaigns (jādān), sometimes prolonged over the winter, into the Byzantine territories of Asia Minor, often accompanied by al-‘Abbās b. al-Walid [q. v.] and other sons of his half-brother, the caliph al-Walid. The range of these campaigns stretched from the region of Malatya in the east to Amasya in the north and to Pergamon in the west. Among his early conquests, those of Ṭūwāna (Tyana) and ‘Ammuriyya (Amorium) in 89/707 and 90/708 are best known. In 91/710 he succeeded Muhammad b. Marwān in the governorship of Armenia and Adharbaydjan, which he reconstructed and fortified. In the summer of 108/726 which he reconstructed and fortified the town and station a permanent Syrian garrison in it, whereby he became the founder of Islamic Darband. In 114/732 he retired from the political stage, and seems to have passed the remaining years of his life in northern Syria, where he possessed large estates, especially in the region between Harrân and Rakka.

MASLAMA b. MUKHALLAD b. AL-SĀMIṬ AL-AMSÂRĪ, Abī Ma‘ān or Sa‘īd or ‘Umar), companion of the Prophet who took part in the conquest of Egypt and remained in the country with the Muslim forces. He was appointed governor of the coastal province of al-Abwāb (Darband) in the summer of 709/724, which he reconstructed and fortified the town and station a permanent Syrian garrison in it, whereby he became the founder of Islamic Darband. In 114/732 he retired from the political stage, and seems to have passed the remaining years of his life in northern Syria, where he possessed large estates, especially in the region between Harrân and Rakka.

MAŞMUDA

MAŞMUDA (the broken plural Masamida is also found), one of the principal Berber ethnic groups forming a branch of the Baraxis.

The Masmuda elements mentioned by al-Bakri in the neighbourhood of Bône, the post-Islamic Masmuda seem to have lived exclusively in the western extremity of the Magrib; and as far back as one goes in the history of the interior of Morocco, we find them forming with the Şanâhdja [q.v.], another group of Baraxis Berbers, the main stock of the Berber population of this country. Indeed, from the first Arab conquest in the 1st/7th century to the importation of the Hilâli by the Almohad sultan Ya’kûb al-Mansûr in 586/1190, it was the Masmuda who inhabited the great region of plains, plateaux and mountains, which stretches from the Mediterranean to the Anti-Atlas to the west of a line from north-east Wargha and of Azammur. To the north and to the south it was bounded by the land of the Dukkala; the only parts of this territory which were not occupied by them were three small Şanâhdja enclaves: the Şanâhdja of Tangier, of the valley of the Warga and of Azammûr. To the north and to the south west it was bounded by the land of the Şanâhdja. To the north were the Şanâhdja of the region of Taza and of those of Warga; in the centre, the Zanâga or Şanâhdja of the Central Atlas, to which should be added the Zanîna of Fâza; to the south, the Haskûra, the Lamta [q.v.] and the Gâzûla [see gazûla].

It was from the presence of this Masmuda block, extending continuously from Sus to the Mediterranean, that eastern Morocco generally must have received the name of Şus, a name found for example in Yâkût (s.v. Şus) who distinguishes a Hither Şus (capital Tangier) and a Farther Şus (capital Şarqalata) separated from the other by two months’ journey. It is also to this racial unity that are due the legends according to which all the northwestern corner of Morocco was once inhabited by the people of Şus (ahl Şû).

Before the coming of the Hilâli Arabs, the Masmuda peoples were divided into three groups:
1. In the north, from the Mediterranean to the Sabû and Warga, the Qumâra [q.v.]
2. In the centre from the Sabû to the Wadi Umm Rabî‘, the Baraghwâta [see baraghwâta]
3. In the south, from the Wadi Umm Rabî‘ to the Anti-Atlas, the Masmuda in the strict sense of the word.

Like the majority of the Baraxis, who in this respect are a contrast to the Butr, who are inclined to be nomads, the Masmuda were all settled; for, in one passage, Ibn Khaldûn mentions two nomad tribes, the Lâkha and the Zaggan, as forming part of the Masmuda confederation of the Hâha, he also points out that they were tribes of the Lamta, i.e. of the nomadic Şanâhdja, who finally became incorporated in the Dhawû Hassan, Ma‘kîli Arab nomads [see ma‘îli] of Şus. Ibn Khaldûn further makes special mention of the fortresses and fortified villages (mâṣ’il wa-bûsîn) of the Masmuda who lived in the mountains of Daran or the Great Atlas. Arab historians and geographers mention the many little towns (karya) in the plains occupied by the Dukkala or the Baraghwâta, a pastoral and agricultural people; but these were gradually ruined and destroyed in the course of the fighting which went on without interruption in their country from the establishment of the Zanàga or the Central Atlas by the Aghzur, and in the plains of the Aghzur, the Almoravid and Almohad conquests, repeated campaigns against the heretical Baraghwâta, the Hilâli occupation, the struggle between the Almohads and the Marçûnîs, the rivalry between the Marçûnîs kingdom of Fas and that of Marrakûsh and lastly the wars with the Portuguese. Exterminated as heretics, dispossessed of their lands and driven from them by the Arab or Zanàta nomads brought into their territory, transported to a distance (region of Fas) by the Waṭqâsîd sultans, for whose taste they showed too little hostility to the Portuguese, the central Masmuda, the original inhabitants of the Aghzur, of Tâmasnà and of the land of the Dukkala, finally disappeared; their place was taken by nomads, Hilâli Arabs (in the north, in Habût and Aghzûr, the Rîvi; in the south, the Djûsham, Sufûyan, Khûl and Banû Djâbir) and the Berbers (Zanàta Hawwârâ; in the 10th/16th century the coming to power of the Sa‘îdis dynasty brought about the immigration of Ma‘kîl Arab tribes to the same region: 3. Abûdî, Abîmar, Rabûâ, Barâbîb, Udûyâ, Awîdî Dulâyûn, Zu‘ayr, etc.

From the 10th/16th century onwards, as a result of the occupation of their central plains by the Arabs, Hilâli then Ma‘kîli, the Masmuda only survived in the mountainous regions which formed the northern and southern extremes of their old domains.

The Masmuda of the north (or Masamda al-Sâhibî: “M. of the shore” of al-Bayân) were chiefly represented by the Gümûrâ group. But, alongside of them, we find two small groups having the same racial origin:

1. The Masmuda of the Straits, settled between the district of Ceuta, which belonged to the Gümûrâ and that of Tangier, a Şanâhdja country. It was they who gave their name to the fortified port of Kaşr Masmûda, also called Kaşr al-Ma‘dâzâ, the modern al-Kasr al-Aşghîr. Their presence here is attested in the 10th/16th century, for it was written here against them that Hâ-Mîm, the prophet of the Gümûrâ, was slain; al-Bakri (5th/11th century) knew them in the same area corresponding to that of the modern Andjra.

2. Al-Bakri mentions another group of Masmûda (tribe of the Aşsâda) settled in the land lying between al-Kasr al-Kabîr and Wazzân; there is still a small Masmûda community between these two towns.

The Masmûda of the south, who inhabited the lands between the Wâdi Umm Rabî‘ and the Anti-Atlas, were divided into two groups: those of the plain and those of the mountain.
